Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Working knowledge of R and two core Biology courses. Note that the 155 offering is a writing intensive course for undergraduates only and requires instructor consent. (WIM).
Same as: BIOS 221, STATS 256, STATS 366

STATS 160. Introduction to Statistical Methods: Precalculus. 5 Units.
Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.
Same as: PSYCH 10, STATS 60

STATS 167. Probability: Ten Great Ideas About Chance. 4 Units.
Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
Same as: PHIL 166, PHIL 266, STATS 267

STATS 191. Introduction to Applied Statistics. 3 Units.
Statistical tools for modern data analysis. Topics include regression and prediction, elements of the analysis of variance, bootstrap, and cross-validation. Emphasis is on conceptual rather than theoretical understanding. Applications to social/biological sciences. Student assignments/projects require use of the software package R. Prerequisite: introductory statistical methods course. Recommended: 60, 110, or 141.

STATS 195. Introduction to R. 1 Unit.
This short course runs for four weeks and is offered in fall and spring. It is recommended for students who want to use R in statistics, science or engineering courses, and for students who want to learn the basics of data science with R. The goal of the short course is to familiarize students with some of the most important R tools for data analysis. Lectures will focus on learning by example and assignments will be application-driven. No prior programming experience is assumed.
Same as: CME 195

STATS 196A. Multilevel Modeling Using R. 1 Unit.
See http://rogosateaching.com/stat196/ . Multilevel data analysis examples using R. Topics include: two-level nested data, growth curve modeling, generalized linear models for counts and categorical data, nonlinear models, three-level analyses.
Same as: EDUC 401D

STATS 199. Independent Study. 1-15 Unit.
For undergraduates.

STATS 200. Introduction to Statistical Inference. 4 Units.
Modern statistical concepts and procedures derived from a mathematical framework. Statistical inference, decision theory; point and interval estimation, tests of hypotheses; Neyman-Pearson theory. Bayesian analysis; maximum likelihood, large sample theory. Prerequisite: STATS 116.

STATS 202. Data Mining and Analysis. 3 Units.
Data mining is used to discover patterns and relationships in data. Emphasis is on large complex data sets such as those in very large databases or through web mining. Topics: decision trees, association rules, clustering, case based methods, and data visualization. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

STATS 203. Introduction to Regression Models and Analysis of Variance. 3 Units.
Modeling and interpretation of observational and experimental data using linear and nonlinear regression methods. Model building and selection methods. Multivariable analysis. Fixed and random effects models. Experimental design. Prerequisites: A post-calculus introductory probability course, e.g. STATS 116, basic computer programming knowledge, some familiarity with matrix algebra, and a pre- or co-requisite post-calculus mathematical statistics course, e.g. STATS 200.

STATS 203V. Introduction to Regression Models and Analysis of Variance. 3 Units.
Modeling and interpretation of observational and experimental data using linear and nonlinear regression methods. Model building and selection methods. Multivariable analysis. Fixed and random effects models. Experimental design. This course is offered remotely only via video segments (MOOC style). TAs will host remote weekly office hours using an online platform such as Zoom. Prerequisites: A post-calculus introductory probability course, e.g. STATS 116, basic computer programming knowledge, some familiarity with matrix algebra, and a pre- or co-requisite post-calculus mathematical statistics course, e.g. STATS 200.

STATS 204. Sampling. 3 Units.
How best to take data and where to sample it. Examples include surveys and sampling from data warehouses. Emphasis is on methods for finite populations. Topics: simple random sampling, stratified sampling, cluster sampling, ratio and regression estimators, two stage sampling.

STATS 205. Introduction to Nonparametric Statistics. 3 Units.
Nonparametric regression and nonparametric density estimation, modern nonparametric techniques, nonparametric confidence interval estimates, nearest neighbor algorithms (with non-linear features), wavelet, bootstrap. Nonparametric analogs of the one- and two-sample t-tests and analysis of variance.

STATS 206. Applied Multivariate Analysis. 3 Units.
Introduction to the statistical analysis of several quantitative measurements on each observational unit. Emphasis is on concepts, computer-intensive methods. Examples from economics, education, geology, psychology. Topics: multiple regression, multivariate analysis of variance, principal components, factor analysis, canonical correlations, multidimensional scaling, clustering. Pre- or corequisite: 200.

STATS 207. Introduction to Time Series Analysis. 3 Units.
Time series models used in economics and engineering. Trend fitting, autoregressive and moving average models and spectral analysis, Kalman filtering, and state-space models. Seasonality, transformations, and introduction to financial time series. Prerequisite: basic course in Statistics at the level of 200.

STATS 208. Bootstrap, Cross-Validation, and Sample Re-use. 3 Units.
By re-using the sample data, sometimes in ingenious ways, we can evaluate the accuracy of predictions, test the significance of a conclusion, place confidence bounds on an unknown parameter, select the best prediction architecture, and develop more accurate predictors. In this course, we will describe the many ways that samples get reused to achieve these goals, including the bootstrap, the parametric bootstrap, cross-validation, conformal prediction, random forests, and sample splitting. We also develop basic theory justifying such methods. Prerequisite: course in statistics or probability.

STATS 209A. Topics in Causal Inference. 3 Units.
This course introduces the fundamental ideas and methods in causal inference, and surveys a broad range of problems and applications. Emphasis will be on framing causal problems and identifying causal effects in both randomized experiments and observational studies. Topics will include: the potential outcomes framework; randomization-based inference and covariate adjustment; matching, and IPW; instrumental variables, regression discontinuity and synthetic ncontrols. Examples and applications will be taken from the fields of education, political science, economics, public health and digital marketing.
Same as: MS&E 327

STATS 209B. Applications of Causal Inference Methods. 2 Units.
See http://rogosateaching.com/stat209/. Application of potential outcomes formulation for causal inference to research settings including: mediation, compliance adjustments, time-1 time-2 designs, encouragement designs, heterogeneous treatment effects, aggregated data, instrumental variables, analysis of covariance regression adjustments, and implementations of matching methods. Prerequisite: STATS 209A/MSE 327 or other introduction to causal inference methods. (Formerly HRP 239).
Same as: EDUC 260A, EPI 239

STATS 211. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.
Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
Same as: CHPR 206, EPI 206, MED 206

STATS 214. Machine Learning Theory. 3 Units.
How do we use mathematical thinking to design better machine learning methods? This course focuses on developing mathematical tools for answering these questions. This course will cover fundamental concepts and principled algorithms in machine learning. We have a special focus on modern large-scale non-linear models such as matrix factorization models and deep neural networks. In particular, we will cover concepts and phenomenon such as uniform convergence, double descent phenomenon, implicit regularization, and problems such as matrix completion, bandits, and online learning (and generally sequential decision making under uncertainty). Prerequisites: linear algebra (MATH 51 or CS 205), probability theory (STATS 116, MATH 151 or CS 109), and machine learning (CS 229, STATS 229, or STATS 315A).
Same as: CS 229M

STATS 215. Statistical Models in Biology. 3 Units.
Poisson and renewal processes, Markov chains in discrete and continuous time, branching processes, diffusion. Applications to models of nucleotide evolution, recombination, the Wright-Fisher process, coalescence, genetic mapping, sequence analysis. Theoretical material approximately the same as in STATS 217, but emphasis is on examples drawn from applications in biology, especially genetics. Prerequisite: 116 or equivalent.

STATS 216. Introduction to Statistical Learning. 3 Units.
Overview of supervised learning, with a focus on regression and classification methods. Syllabus includes: linear and polynomial regression, logistic regression and linear discriminant analysis;cross-validation and the bootstrap, model selection and regularization methods (ridge and lasso); nonlinear models, splines and generalized additive models; tree-based methods, random forests and boosting; support-vector machines; Some unsupervised learning: principal components and clustering (k-means and hierarchical). Computing is done in R, through tutorial sessions and homework assignments. This math-light course is offered via video segments (MOOC style), and in-class problem solving sessions. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60 or Stats 101), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

STATS 216V. Introduction to Statistical Learning. 3 Units.
Overview of supervised learning, with a focus on regression and classification methods. Syllabus includes: linear and polynomial regression, logistic regression and linear discriminant analysis; cross-validation and the bootstrap, model selection and regularization methods (ridge and lasso); nonlinear models, splines and generalized additive models; tree-based methods, random forests and boosting; support-vector machines; Some unsupervised learning: principal components and clustering (k-means and hierarchical). Computing is done in R, through tutorial sessions and homework assignments. This math-light course is offered remotely only via video segments (MOOC style). TAs will host remote weekly office hours using an online platform such as Zoom. There are four homework assignments, a midterm, and a final exam, all of which are administered remotely. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60 or Stats 101), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

STATS 217. Introduction to Stochastic Processes I. 3 Units.
Discrete and continuous time Markov chains, poisson processes, random walks, branching processes, first passage times, recurrence and transience, stationary distributions. Non-Statistics masters students may want to consider taking STATS 215 instead. Prerequisite: a post-calculus introductory probability course e.g. STATS 116.

STATS 218. Introduction to Stochastic Processes II. 3 Units.
Renewal theory, Brownian motion, Gaussian processes, second order processes, martingales.

STATS 219. Stochastic Processes. 3 Units.
Introduction to measure theory, Lp spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and Lp convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent. http://statweb.stanford.edu/~adembo/math-136/.
Same as: MATH 136

STATS 220. Machine Learning Methods for Neural Data Analysis. 3 Units.
With modern high-density electrodes and optical imaging techniques, neuroscientists routinely measure the activity of hundreds, if not thousands, of cells simultaneously. Coupled with high-resolution behavioral measurements, genetic sequencing, and connectomics, these datasets offer unprecedented opportunities to learn how neural circuits function. This course will study statistical machine learning methods for analysing such datasets, including: spike sorting, calcium deconvolution, and voltage smoothing techniques for extracting relevant signals from raw data; markerless tracking methods for estimating animal pose in behavioral videos; network models for connectomics and fMRI data; state space models for analysis of high-dimensional neural and behavioral time-series; point process models of neural spike trains; and deep learning methods for neural encoding and decoding. We will develop the theory behind these models and algorithms and then apply them to real datasets in the homeworks and final project.This course is similar to STATS215: Statistical Models in Biology and STATS366: Modern Statistics for Modern Biology, but it is specifically focused on statistical machine learning methods for neuroscience data. Prerequisites: Students should be comfortable with basic probability (STATS 116) and statistics (at the level of STATS 200). This course will place a heavy emphasis on implementing models and algorithms, so coding proficiency is required.
Same as: CS 339N, NBIO 220, STATS 320

STATS 221. Random Processes on Graphs and Lattices. 3 Units.
Covering modern topics in the study of random processes on graphs and lattices. Specifically, a subset of: Random walks, electrical networks and flows. Uniform spanning trees. Percolation and self-avoiding walks. Contact process, voter model and the exclusion process. Ising, Potts, and Random-Cluster model. Random graphs. Prerequisites: MATH 115 (or equivalent), STAT 217 (or equivalent).

STATS 222. Statistical Methods for Longitudinal Research. 2 Units.
See http://rogosateaching.com/stat222/. Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning, development, aging, and the effects of interventions. Topics include: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. Prerequisite: intermediate statistical methods.
Same as: EDUC 351A

STATS 229. Machine Learning. 3-4 Units.
Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, deep learning, model/feature selection, learning theory, ML advice, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: knowledge of basic computer science principles and skills at a level sufficient to write a reasonably non-trivial computer program in Python/numpy, familiarity with probability theory to the equivalency of CS109 or STATS116, and familiarity with multivariable calculus and linear algebra to the equivalency of MATH51.
Same as: CS 229

STATS 237. Investment Portfolios, Derivative Securities, and Risk Measures. 3 Units.
Asset returns and their volatilities. Markowitz portfolio theory, capital asset pricing model, multifactor pricing models. Measures of market risk and statistical models and methods for their estimation and backtesting. Financial derivatives and hedging. Black-Scholes pricing of European options and implied volatilities. Prerequisite: STATS 116 or equivalent.

STATS 237P. Investment Portfolios, Derivative Securities, and Risk Measures. 3 Units.
For SCPD students; see STATS237.

STATS 240. Statistical Methods in Finance. 3 Units.
(SCPD students register for 240P.) Regression analysis and applications to investment models. Principal components and multivariate analysis. Likelihood inference and Bayesian methods. Financial time series. Estimation and modeling of volatilities. Statistical methods for portfolio management. Prerequisite: STATS 200 or equivalent.

STATS 240P. Statistical Methods in Finance. 3 Units.
For SCPD students; see 240.

STATS 241. Data-driven Financial Econometrics. 3 Units.
(SCPD students register for 241P) Substantive and empirical modeling approaches in options, interest rate, and credit markets. Nonlinear least squares, logistic regression and generalized linear models. Nonparametric regression and model selection. Multivariate time series modeling and forecasting. Vector autoregressive models and cointegration. Risk measures, models and analytics. Prerequisite or corequisite: STATS 240 or equivalent.

STATS 241P. Data-driven Financial Econometrics. 3 Units.
For SCPD students; see STATS241.

STATS 242. NeuroTech Training Seminar. 1 Unit.
This is a required course for students in the NeuroTech training program, and is also open to other graduate students interested in learning the skills necessary for neurotechnology careers in academia or industry. Over the academic year, topics will include: emerging research in neurotechnology, communication skills, team science, leadership and management, intellectual property, entrepreneurship and more.
Same as: NSUR 239

STATS 243. Risk Analytics and Management in Finance and Insurance. 2-4 Units.
Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent.
Same as: CME 243

STATS 243P. Risk Analytics and Management in Finance and Insurance. 3 Units.
For SCPD students; see STATS243.

STATS 244. Quantitative Trading: Algorithms, Data, and Optimization. 2-4 Units.
Statistical trading rules and performances evaluation. Active portfolio management and dynamic investment strategies. Data analytics and models of transactions data. Limit order book dynamics in electronic exchanges. Algorithmic trading, informatics, and optimal execution. Market making and inventory control. Risk management and regulatory issues. Prerequisites: STATS 240 or equivalent.

STATS 244P. Quantitative Trading: Algorithms, Data and Optimization. 3 Units.
For SCPD students; see 244.

STATS 245. Data, Models and Applications to Healthcare Analytics. 3 Units.
Topics on fundamentals of data science, biological and statistical models, application to medical product safety evaluation, health risk models and their evaluation, benefit-risk assessment and multi-criteria decision analytics. Applications to environmental health, nutritional epidemiology, wellness and prevention will also be discussed. Prerequisite: Graduate students - STATS 202 or 216, or CS 229; Undergraduate students - consent of instructor.

STATS 245P. Data, Models, and Applications to Healthcare Analytics. 3 Units.
For SCPD students; see STATS245.

STATS 248. Clinical Trial Design in the Age of Precision Medicine and Health. 3 Units.
Overview of requirements, designs, and statistical foundations for traditional Phase I, II, and III clinical trials for medical product approval and Phase IV postmarketing studies for safety evaluation. As these methods cost too much and take too much time in the era of precision medicine and precision health, this course then introduces innovative designs that have been developed for affordable clinical trials, which can be completed within reasonable time constraints and which have been encouraged by regulatory agencies. Prerequisites: Working knowledge of statistics and R.
Same as: BIODS 248, BIODS 248P, BIOMEDIN 248

STATS 249. Experimental Immersion in Neuroscience. 1 Unit.
This course provides students from technical backgrounds (e.g., physics, applied physics, electrical or chemical engineering, bioengineering, computer science, statistics) the opportunity to learn how they can apply their expertise to advancing experimental research in the neurosciences. Students will visit one neuroscience lab per week to watch experiments, understand the technical apparatus and animal models being used, discuss the questions being addressed, and interact with students and others conducting the research. This course is strongly encouraged for students who wish to apply to the NeuroTech graduate training program.
Same as: NSUR 249

STATS 250. Mathematical Finance. 3 Units.
Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent.nnNOTE: Undergraduates require instructor permission to enroll. Undergraduates interested in taking the course should contact the instructor for permission, providing information about relevant background such as performance in prior coursework, reading, etc.
Same as: MATH 238

STATS 253. Analysis of Spatial and Temporal Data. 3 Units.
A unified treatment of methods for spatial data, time series, and other correlated data from the perspective of regression with correlated errors. Two main paradigms for dealing with autocorrelation: covariance modeling (kriging) and autoregressive processes. Bayesian methods. Prerequisites: applied linear algebra (MATH 103 or equivalent), statistical estimation (STATS 200 or CS 229), and linear regression (STATS 203 or equivalent).

STATS 256. Modern Statistics for Modern Biology. 3 Units.
Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Working knowledge of R and two core Biology courses. Note that the 155 offering is a writing intensive course for undergraduates only and requires instructor consent. (WIM).
Same as: BIOS 221, STATS 155, STATS 366

STATS 260A. Workshop in Biostatistics. 1-2 Unit.
Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: BIODS 260A

STATS 260B. Workshop in Biostatistics. 1-2 Unit.
Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: BIODS 260B

STATS 260C. Workshop in Biostatistics. 1-2 Unit.
Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student.
Same as: BIODS 260C

STATS 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.
(Formerly HRP 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS or R. Special topics: cross-fold validation and bootstrap inference.
Same as: BIOMEDIN 233, EPI 261

STATS 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.
(Formerly HRP 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.
Same as: EPI 262

STATS 263. Design of Experiments. 3 Units.
Experiments vs observation. Confounding. Randomization. ANOVA.Blocking. Latin squares. Factorials and fractional factorials. Split plot. Response surfaces. Mixture designs. Optimal design. Central composite. Box-Behnken. Taguchi methods. Computer experiments and space filling designs. Prerequisites: probability at STATS 116 level or higher, and at least one course in linear models.
Same as: STATS 363

STATS 264. Foundations of Statistical and Scientific Inference. 1 Unit.
(Formerly HRP 264) The course will consist of readings and discussion of foundational papers and book sections in the domains of statistical and scientific inference. Topics to be covered include philosophy of science, interpretations of probability, Bayesian and frequentist approaches to statistical inference and current controversies about the proper use of p-values and research reproducibility. Recommended preparation: At least 2 quarters of biostatistics and one of epidemiology. Intended for second year Masters students or PhD students with at least 1 year of preceding graduate training.
Same as: EPI 264

STATS 266. Advanced Statistical Methods for Observational Studies. 2-3 Units.
Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, and instrumental variables. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: EPI 261 and 262 or STATS 209 (EPI 239), or equivalent. See http://rogosateaching.com/somgen290/.
Same as: CHPR 266, EDUC 260B, EPI 292

STATS 267. Probability: Ten Great Ideas About Chance. 4 Units.
Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
Same as: PHIL 166, PHIL 266, STATS 167

STATS 270. A Course in Bayesian Statistics. 3 Units.
This course will treat Bayesian statistics at a relatively advanced level. Assuming familiarity with standard probability and multivariate distribution theory, we will provide a discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. In particular, we will examine the construction of priors and the asymptotic properties of likelihoods and posterior distributions. The discussion will include but will not be limited to the case of finite dimensional parameter space. There will also be some discussions on the computational algorithms useful for Bayesian inference. Prerequisites: Stats 116 or equivalent probability course, plus basic programming knowledge; basic calculus, analysis and linear algebra strongly recommended; Stats 200 or equivalent statistical theory course desirable.
Same as: STATS 370

STATS 271. Applied Bayesian Statistics. 3 Units.
This course is a modern treatment of applied Bayesian statistics with a focus on high-dimensional problems. We will study a collection of canonical methods that see heavy use in applications, including high-dimensional linear and generalized linear models, hierarchical/random effects models, Gaussian processes, variable-dimension and Dirichlet process mixtures, graphical models, and methods used in Bayesian inverse problems. Each method will be accompanied by one or more motivating datasets. Through these examples the course will cover: (1) Bayesian hypothesis testing, multiplicity correction, selection, shrinkage, and model averaging; (2) prior choice; (3) Frequentist properties of Bayesian procedures in high dimensions; and (4) computation by Markov chain Monte Carlo, including constructing efficient Gibbs, Metropolis, and more exotic samplers, empirical convergence analysis, strategies for scaling computation to high dimensions (approximations, divide-and-conquer, minibatching, et cetera), and the theory of convergence rates.
Same as: STATS 371

STATS 281. Statistical Analysis of Fine Art. 3 Units.
This course presents the application of rigorous statistical analysis, machine learning, and data analysis to problems in the history and interpretation of fine art paintings, drawings, and other two-dimensional artworks. The course focuses on the aspects of these problems that are unlike those addressed widely elsewhere in statistical image analysis, such as applied to photographs, videos, and medical images. These novel problems include statistical analysis of brushstrokes and marks, medium, inferring artists¿ working methods, compositional principles, stylometry (quantification of style), the tracing of artistic influence, and art attribution and authentication. The course revisits classic problems, such as image-based object recognition and scene description, but in the environment of highly non-realistic, stylized artworks.

STATS 285. Massive Computational Experiments, Painlessly. 2 Units.
Ambitious Data Science requires massive computational experimentation; the entry ticket for a solid PhD in some fields is now to conduct experiments involving 1 Million CPU hours. Recently several groups have created efficient computational environments that make it painless to run such massive experiments. This course reviews state-of-the-art practices for doing massive computational experiments on compute clusters in a painless and reproducible manner. Students will learn how to automate their computing experiments first of all using nuts-and-bolts tools such as Perl and Bash, and later using available comprehensive frameworks such as ClusterJob and CodaLab, which enables them to take on ambitious Data Science projects. The course also features few guest lectures by renowned scientists in the field of Data Science. Students should have a familiarity with computational experiments and be facile in some high-level computer language such as R, Matlab, or Python.

STATS 290. Computing for Data Science. 3 Units.
Programming and computing techniques for the requirements of data science: acquisition and organization of data; visualization, modelling and inference for scientific applications; presentation and interactive communication of results. Emphasis on computing for substantial projects. Software development with emphasis on R, plus other key software tools. Prerequisites: Programming experience including familiarity with R; computing at least at the level of CS 106; statistics at the level of STATS 110 or 141.

STATS 298. Industrial Research for Statisticians. 1 Unit.
Masters-level research as in 299, but with the approval and supervision of a faculty adviser, it must be conducted for an off-campus employer. Students must submit a written final report upon completion of the internship in order to receive credit. Repeatable for credit. Prerequisite: enrollment in Statistics M.S. program.

STATS 299. Independent Study. 1-5 Unit.
For Statistics M.S. students only. Reading or research program under the supervision of a Statistics faculty member. May be repeated for credit.

STATS 300A. Theory of Statistics I. 3 Units.
Finite sample optimality of statistical procedures; Decision theory: loss, risk, admissibility; Principles of data reduction: sufficiency, ancillarity, completeness; Statistical models: exponential families, group families, nonparametric families; Point estimation: optimal unbiased and equivariant estimation, Bayes estimation, minimax estimation; Hypothesis testing and confidence intervals: uniformly most powerful tests, uniformly most accurate confidence intervals, optimal unbiased and invariant tests. Prerequisites: Real analysis, introductory probability (at the level of STATS 116), and introductory statistics.

STATS 300B. Theory of Statistics II. 3 Units.
Elementary decision theory; loss and risk functions, Bayes estimation; UMVU estimator, minimax estimators, shrinkage estimators. Hypothesis testing and confidence intervals: Neyman-Pearson theory; UMP tests and uniformly most accurate confidence intervals; use of unbiasedness and invariance to eliminate nuisance parameters. Large sample theory: basic convergence concepts; robustness; efficiency; contiguity, locally asymptotically normal experiments; convolution theorem; asymptotically UMP and maximin tests. Asymptotic theory of likelihood ratio and score tests. Rank permutation and randomization tests; jackknife, bootstrap, subsampling and other resampling methods. Further topics: sequential analysis, optimal experimental design, empirical processes with applications to statistics, Edgeworth expansions, density estimation, time series.

STATS 300C. Theory of Statistics III. 3 Units.
Decision theory formulation of statistical problems. Minimax, admissible procedures. Complete class theorems ("all" minimax or admissible procedures are "Bayes"), Bayes procedures, conjugate priors, hierarchical models. Bayesian non parametrics: diaichlet, tail free, polya trees, bayesian sieves. Inconsistency of bayes rules.

STATS 302. Qualifying Exams Workshop. 5-10 Units.
Prepares Statistics Ph.D. students for the qualifying exams by reviewing relevant course topics and problem solving strategies.

STATS 303. Statistics Faculty Research Presentations. 1 Unit.
For Statistics first and second year PhD students only. Discussion of statistics topics and research areas; consultation with PhD advisors.

STATS 305A. Applied Statistics I. 3 Units.
Statistics of real valued responses. Review of multivariate normal distribution theory. Univariate regression. Multiple regression. Constructing features from predictors. Geometry and algebra of least squares: subspaces, projections, normal equations, orthogonality, rank deficiency, Gauss-Markov. Gram-Schmidt, the QR decomposition and the SVD. Interpreting coefficients. Collinearity. Dependence and heteroscedasticity. Fits and the hat matrix. Model diagnostics. Model selection, Cp/AIC and crossvalidation, stepwise, lasso. Multiple comparisons. ANOVA, fixed and random effects. Use of bootstrap and permutations. Emphasis on problem sets involving substantive computations with data sets. Prerequisites: consent of instructor, 116, 200, applied statistics course, CS 106A, MATH 114.

STATS 305B. Applied Statistics II: Generalized Linear Models, Survival Analysis, and Exponential Families. 3 Units.
This course uses exponential family structure to motivate generalized linear models and other useful applied techniques including survival analysis methods and Bayes and empirical Bayes analyses. The lectures are based on a forthcoming book whose notes will be distributed. Prerequisites: 305A or consent of the instructor.

STATS 305C. Applied Statistics III. 3 Units.
Methods for multivariate responses. Theory, computation and practice for multivariate statistical tools. Multivariate Gaussian and undirected graphical models, graphical displays. Hotelling's T-squared, principal components, canonical correlations, linear discriminant analysis, correspondence analysis, and recent variants of these. Hierarchical and k-means clustering. Bi-clustering. Factor analysis and independent component analysis. Topic modeling. Multidimensional scaling and variants (e.g., Isomap, spectral clustering, t-SNE). Matrix completion. Extensive work with data involving programming, ideally in R. Prerequisites: Stats 305A and Stats 305B or consent of the instructor.

STATS 310A. Theory of Probability I. 3 Units.
Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and Lp convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: STATS 116, MATH 171.
Same as: MATH 230A

STATS 310B. Theory of Probability II. 3 Units.
Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory,n(v) ergodic theory. http://statweb.stanford.edu/~adembo/stat-310b. Prerequisite: 310A or MATH 230A.
Same as: MATH 230B

STATS 310C. Theory of Probability III. 3 Units.
Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B. http://statweb.stanford.edu/~adembo/stat-310c/.
Same as: MATH 230C

STATS 311. Information Theory and Statistics. 3 Units.
Information theoretic techniques in probability and statistics. Fano, Assouad,nand Le Cam methods for optimality guarantees in estimation. Large deviationsnand concentration inequalities (Sanov's theorem, hypothesis testing, thenentropy method, concentration of measure). Approximation of (Bayes) optimalnprocedures, surrogate risks, f-divergences. Penalized estimators and minimumndescription length. Online game playing, gambling, no-regret learning. Prerequisites: EE 276 (or equivalent) or STATS 300A.
Same as: EE 377

STATS 314A. Advanced Statistical Theory. 3 Units.
Covers a range of topics, including: empirical processes, asymptotic efficiency, uniform convergence of measures, contiguity, resampling methods, Edgeworth expansions.

STATS 315A. Modern Applied Statistics: Learning. 3 Units.
Overview of supervised learning. Linear regression and related methods. Model selection, least angle regression and the lasso, stepwise methods. Classification. Linear discriminant analysis, logistic regression, and support vector machines (SVMs). Basis expansions, splines and regularization. Kernel methods. Generalized additive models. Kernel smoothing. Gaussian mixtures and the EM algorithm. Model assessment and selection: crossvalidation and the bootstrap. Pathwise coordinate descent. Sparse graphical models. Prerequisites: STATS 305A, 305B, 305C or consent of instructor.

STATS 315B. Modern Applied Statistics: Data Mining. 3 Units.
Two-part sequence. New techniques for predictive and descriptive learning using ideas that bridge gaps among statistics, computer science, and artificial intelligence. Emphasis is on statistical aspects of their application and integration with more standard statistical methodology. Predictive learning refers to estimating models from data with the goal of predicting future outcomes, in particular, regression and classification models. Descriptive learning is used to discover general patterns and relationships in data without a predictive goal, viewed from a statistical perspective as computer automated exploratory analysis of large complex data sets.

STATS 316. Stochastic Processes on Graphs. 1-3 Unit.
Local weak convergence, Gibbs measures on trees, cavity method, and replica symmetry breaking. Examples include random k-satisfiability, the assignment problem, spin glasses, and neural networks. Prerequisite: 310A or equivalent. https://web.stanford.edu/~montanar/TEACHING/Stat316/stat316.html.

STATS 317. Stochastic Processes. 3 Units.
Semimartingales, stochastic integration, Ito's formula, Girsanov's theorem. Gaussian and related processes. Stationary/isotropic processes. Integral geometry and geometric probability. Maxima of random fields and applications to spatial statistics and imaging.

STATS 318. Modern Markov Chains. 3 Units.
Tools for understanding Markov chains as they arise in applications. Random walk on graphs, reversible Markov chains, Metropolis algorithm, Gibbs sampler, hybrid Monte Carlo, auxiliary variables, hit and run, Swedson-Wong algorithms, geometric theory, Poincare-Nash-Cheeger-Log-Sobolov inequalities. Comparison techniques, coupling, stationary times, Harris recurrence, central limit theorems, and large deviations.

STATS 319. Literature of Statistics. 1 Unit.
Literature study of topics in statistics and probability culminating in oral and written reports. May be repeated for credit.

STATS 320. Machine Learning Methods for Neural Data Analysis. 3 Units.
With modern high-density electrodes and optical imaging techniques, neuroscientists routinely measure the activity of hundreds, if not thousands, of cells simultaneously. Coupled with high-resolution behavioral measurements, genetic sequencing, and connectomics, these datasets offer unprecedented opportunities to learn how neural circuits function. This course will study statistical machine learning methods for analysing such datasets, including: spike sorting, calcium deconvolution, and voltage smoothing techniques for extracting relevant signals from raw data; markerless tracking methods for estimating animal pose in behavioral videos; network models for connectomics and fMRI data; state space models for analysis of high-dimensional neural and behavioral time-series; point process models of neural spike trains; and deep learning methods for neural encoding and decoding. We will develop the theory behind these models and algorithms and then apply them to real datasets in the homeworks and final project.This course is similar to STATS215: Statistical Models in Biology and STATS366: Modern Statistics for Modern Biology, but it is specifically focused on statistical machine learning methods for neuroscience data. Prerequisites: Students should be comfortable with basic probability (STATS 116) and statistics (at the level of STATS 200). This course will place a heavy emphasis on implementing models and algorithms, so coding proficiency is required.
Same as: CS 339N, NBIO 220, STATS 220

STATS 322. Function Estimation in White Noise. 3 Units.
Gaussian white noise model sequence space form. Hyperrectangles, quadratic convexity, and Pinsker's theorem. Minimax estimation on Lp balls and Besov spaces. Role of wavelets and unconditional bases. Linear and threshold estimators. Oracle inequalities. Optimal recovery and universal thresholding. Stein's unbiased risk estimator and threshold choice. Complexity penalized model selection. Connecting fast wavelet algorithms and theory. Beyond orthogonal bases.

STATS 325. Multivariate Analysis and Random Matrices in Statistics. 3 Units.
Topics on Multivariate Analysis and Random Matrices in Statistics (full description TBA).

STATS 334. Mathematics and Statistics of Gambling. 3 Units.
Probability and statistics are founded on the study of games of chance. Nowadays, gambling (in casinos, sports and the Internet) is a huge business. This course addresses practical and theoretical aspects. Topics covered: mathematics of basic random phenomena (physics of coin tossing and roulette, analysis of various methods of shuffling cards), odds in popular games, card counting, optimal tournament play, practical problems of random number generation. Prerequisites: Statistics 116 and 200.
Same as: MATH 231

STATS 345. Statistical and Machine Learning Methods for Genomics. 3 Units.
Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.
Same as: BIO 268, BIOMEDIN 245, CS 373

STATS 350. Topics in Probability Theory. 3 Units.
See http://statweb.stanford.edu/~adembo/stat-350/concentration/ Selected topics of contemporary research interest in probability theory. May be repeated once for credit. Prerequisite: 310A or equivalent.

STATS 352. Topics in Computing for Data Science. 3 Units.
A seminar-style course jointly supported by the Statistics department and Stanford Data Science, and suitable for doctoral students engaged in either research on data science techniques (statistical or computational, for example) or research in scientific fields relying on advanced data science to achieve its goals. Seminars will usually consist of a student presentation of a relevant technical topic followed by discussion of the topic by all. Topics will be assigned to individuals to combine relevance for the course and suitability to the individual student's background and research interests. Prerequisites: Competence in the basic data science needed for the student's research goals plus preparation for presenting a suitable topic. Before enrolling, participants should have a topic approved as prescribed on the website https://stat352.stanford.edu.

STATS 359. Topics in Mathematical Physics. 3 Units.
Covers a list of topics in mathematical physics. The specific topics may vary from year to year, depending on the instructor's discretion. Background in graduate level probability theory and analysis is desirable.
Same as: MATH 273

STATS 360. Advanced Statistical Methods for Earth System Analysis. 3 Units.
Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on methodology, concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, extreme value analysis, time-series analysis, high-dimensional regressions and change-point models. Topics subject to change each year. Prerequisites: STATS 110 or equivalent.
Same as: ESS 260

STATS 361. Causal Inference. 3 Units.
This course covers statistical underpinnings of causal inference, with a focus on experimental design and data-driven decision making. Topics include randomization, potential outcomes, observational studies, propensity score methods, matching, double robustness, semiparametric efficiency, treatment heterogeneity, structural models, instrumental variables, principal stratification, mediation, regression discontinuities, synthetic controls, interference, sensitivity analysis, policy learning, dynamic treatment rules, invariant prediction, graphical models, and structure learning. We will also discuss the relevance of optimization and machine learning tools to causal inference. Prerequisite: STATS 300A, or equivalent graduate-level coursework on the theory of statistics.

STATS 362. Topic: Monte Carlo. 3 Units.
Random numbers and vectors: inversion, acceptance-rejection, copulas. Variance reduction: antithetics, stratification, control variates, importance sampling. MCMC: Markov chains, detailed balance, Metropolis-Hastings, random walk Metropolis,nnindependence sampler, Gibbs sampling, slice sampler, hybrids of Gibbs and Metropolis, tempering. Sequential Monte Carlo. Quasi-Monte Carlo. Randomized quasi-Monte Carlo. Examples, problems and motivation from Bayesian statistics,nnmachine learning, computational finance and graphics. May be repeat for credit.

STATS 363. Design of Experiments. 3 Units.
Experiments vs observation. Confounding. Randomization. ANOVA.Blocking. Latin squares. Factorials and fractional factorials. Split plot. Response surfaces. Mixture designs. Optimal design. Central composite. Box-Behnken. Taguchi methods. Computer experiments and space filling designs. Prerequisites: probability at STATS 116 level or higher, and at least one course in linear models.
Same as: STATS 263

STATS 364. Theory and Applications of Selective Inference. 3 Units.
This course focuses on the problem of inference under the presence of multiplicity or selection. Topics covered include classical topics multiple comparisons (FWER, FDR, FCR) as well as newer methods such as knockoffs. We will also cover inference when targeted parameters are determined only after inspection of the data, considering both conditional and simultaneous approaches. Both theoretical and computational considerations will be stressed throughout the course. Prerequisite: STATS 200 or equivalent.

STATS 366. Modern Statistics for Modern Biology. 3 Units.
Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Working knowledge of R and two core Biology courses. Note that the 155 offering is a writing intensive course for undergraduates only and requires instructor consent. (WIM).
Same as: BIOS 221, STATS 155, STATS 256

STATS 367. Statistical Models in Genetics. 3 Units.
This course will cover statistical problems in population genetics and molecular evolution with an emphasis on coalescent theory. Special attention will be paid to current research topics, illustrating the challenges presented by genomic data obtained via high-throughput technologies. No prior knowledge of genomics is necessary. Familiarity with the R statistical package or other computing language is needed for homework assignments. Prerequisites: knowledge of probability through elementary stochastic processes and statistics through likelihood theory.

STATS 368. Empirical Process Theory and its Applications. 3 Units.
This course is on the theory of empirical processes. In the course we will focus on weak convergence of stochastic processes, M-estimation and empirical risk minimization. The course will cover topics like covering numbers and bracketing numbers, maximal inequalities, chaining and symmetrization, uniform law of large numbers and uniform central limit theorems, rates of convergence of MLEs and (penalized) least squares estimators, and concentration inequalities.

STATS 369. Methods from Statistical Physics. 3 Units.
Mathematical techniques from statistical physics have been applied with increasing success on problems form combinatorics, computer science, machine learning. These methods are non-rigorous, but in several cases they were proved to yield correct predictions. This course provides a working knowledge of these methods for non-physicists. Specific topics: the Sherrington-Kirkpatrick model; sparse regression with random designs;.

STATS 370. A Course in Bayesian Statistics. 3 Units.
This course will treat Bayesian statistics at a relatively advanced level. Assuming familiarity with standard probability and multivariate distribution theory, we will provide a discussion of the mathematical and theoretical foundation for Bayesian inferential procedures. In particular, we will examine the construction of priors and the asymptotic properties of likelihoods and posterior distributions. The discussion will include but will not be limited to the case of finite dimensional parameter space. There will also be some discussions on the computational algorithms useful for Bayesian inference. Prerequisites: Stats 116 or equivalent probability course, plus basic programming knowledge; basic calculus, analysis and linear algebra strongly recommended; Stats 200 or equivalent statistical theory course desirable.
Same as: STATS 270

STATS 371. Applied Bayesian Statistics. 3 Units.
This course is a modern treatment of applied Bayesian statistics with a focus on high-dimensional problems. We will study a collection of canonical methods that see heavy use in applications, including high-dimensional linear and generalized linear models, hierarchical/random effects models, Gaussian processes, variable-dimension and Dirichlet process mixtures, graphical models, and methods used in Bayesian inverse problems. Each method will be accompanied by one or more motivating datasets. Through these examples the course will cover: (1) Bayesian hypothesis testing, multiplicity correction, selection, shrinkage, and model averaging; (2) prior choice; (3) Frequentist properties of Bayesian procedures in high dimensions; and (4) computation by Markov chain Monte Carlo, including constructing efficient Gibbs, Metropolis, and more exotic samplers, empirical convergence analysis, strategies for scaling computation to high dimensions (approximations, divide-and-conquer, minibatching, et cetera), and the theory of convergence rates.
Same as: STATS 271

STATS 374. Large Deviations Theory. 3 Units.
Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310. Offered every 2-3 years. http://statweb.stanford.edu/~adembo/large-deviations/.
Same as: MATH 234

STATS 376A. Information Theory. 3 Units.
(Formerly EE 376A.) Project-based course about how to measure, represent, and communicate information effectively. Why bits have become the universal currency for information exchange. How information theory bears on the design and operation of modern-day systems such as smartphones and the Internet. The role of entropy and mutual information in data compression, communication, and inference. Practical compressors and error correcting codes. The information theoretic way of thinking. Relations and applications to probability, statistics, machine learning, biological and artificial neural networks, genomics, quantum information, and blockchains. Prerequisite: a first undergraduate course in probability.
Same as: EE 276

STATS 376B. Topics in Information Theory and Its Applications. 3 Units.
Information theory establishes the fundamental limits on compression and communication over networks. The tools of information theory have also found applications in many other fields, including probability and statistics, computer science and physics. The course will cover selected topics from these applications, including communication networks, through regular lectures and student projects. Prerequisites: EE276 (Formerly EE376A).
Same as: EE 376B

STATS 385. Analyses of Deep Learning. 1 Unit.
Deep learning is a transformative technology that has delivered impressive improvements in image classification and speech recognition. Many researchers are trying to better understand how to improve prediction performance and also how to improve training methods. Some researchers use experimental techniques; others use theoretical approaches. In this course we will review both experimental and theoretical analyses of deep learning. We will have 8-10 guest lecturers as well as graded projects for those who take the course for credit.

STATS 390. Consulting Workshop. 1 Unit.
Skills required of practicing statistical consultants, including exposure to statistical applications. Students participate as consultants in the department's drop-in consulting service, analyze client data, and prepare formal written reports. Seminar provides supervised experience in short term consulting. May be repeated for credit. Prerequisites: course work in applied statistics or data analysis, and consent of instructor.

STATS 397. PhD Oral Exam Workshop. 1 Unit.
For Statistics PhD students defending their dissertation.

STATS 398. Industrial Research for Statisticians. 1 Unit.
Doctoral research as in 399, but must be conducted for an off-campus employer. A final report acceptable to the advisor outlining work activity, problems investigated, key results, and any follow-up projects they expect to perform is required. The report is due at the end of the quarter in which the course is taken. May be repeated for credit. Prerequisite: Statistics Ph.D. candidate.

STATS 399. Research. 1-10 Unit.
Research work as distinguished from independent study of nonresearch character listed in 199. May be repeated for credit.

STATS 801. TGR Project. 0 Units.
.

STATS 802. TGR Dissertation. 0 Units.
.

SYMBOLIC SYSTEMS

Courses offered by the Symbolic Systems Program are listed under the subject code SYMSYS on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SYMSYS&filter-catalognumber-SYMSYS=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SYMSYS&filter-catalognumber-SYMSYS=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SYMSYS&filter-catalognumber-SYMSYS=on).

The observation that both human beings and computers can manipulate symbols lies at the heart of Symbolic Systems, an interdisciplinary program focusing on the relationship between natural and artificial systems that represent, process, and act on information. Computer programs, natural languages, the human mind, and the Internet embody concepts whose study forms the core of the Symbolic Systems curriculum, such as computation, representation, communication, and intelligence. A body of knowledge and theory has developed around these notions, from disciplines such as philosophy, computer science, linguistics, psychology, statistics, neurobiology, and communication. Since the invention of computers, researchers have been working across these disciplines to study questions such as: in what ways are computers and computer languages like human beings and their languages; how can the interaction between people and computers be made easier and more beneficial?

The core requirements of the Symbolic Systems Program (SSP) include courses in symbolic logic, the philosophy of mind, formal linguistics, cognitive psychology, programming, the mathematics of computation, statistical theory, artificial intelligence, and interdisciplinary approaches to cognitive science. These courses prepare students with the vocabulary, theoretical background, and technical skills needed for study and research at the advanced undergraduate and graduate levels. Most of the courses in SSP are drawn from affiliated departments. Courses designed specifically for the program are aimed at integrating and supplementing topics covered by the department-based offerings. The curriculum includes humanistic approaches to questions about language and intelligence, as well as training in science and engineering.

SSP offers B.S. and M.S. degree programs. Both programs require students to master a common core of required courses and to choose an area of specialization.

Mission of the Undergraduate Program in Symbolic Systems

The undergraduate program in Symbolic Systems is an interdisciplinary program focusing on the relationships between natural and artificial systems that use symbols to communicate and to represent information. The mission of the program is to prepare majors with the vocabulary, theoretical background, and technical skills necessary to research questions about language, information, and intelligence, both human and machine. The curriculum offers a combination of traditional humanistic approaches to these questions as well as a training and familiarity with contemporary developments in the science and technology of computation. Students in the major take courses in cognitive science, computer programming, logic and computational theory, probability, cognitive psychology, philosophy of mind, linguistics, and artificial intelligence. The program prepares students for a variety of careers in the private and public sectors, especially those involving the human-facing sides of information systems/technology, as well as for further study and research in the cognitive and/or information sciences.

Learning Outcomes (Undergraduate)

The program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Symbolic Systems Program. Students are expected to demonstrate:

1. ability to apply formal, philosophical, and/or computational analysis to experimental designs and data and vice versa.

2. ability to understand multiple formal, philosophical, and/or computational frameworks and how they are related to each other.

3. ability to map real world problems or observed phenomena onto formal, philosophical and/or computational frameworks and vice versa.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Symbolic Systems and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses representing each of the core disciplines of Symbolic Systems as well as an individualized course program in support of the completion of a Master's thesis.

Bachelor of Science in Symbolic Systems

The program offers a Bachelor of Science in Symbolic Systems, as well as an Bachelor of Science with Honors in Symbolic Systems (p. 2179) and a Minor in Symbolic Systems (p. 2180). A major in Symbolic Systems qualifies as a Science, Technology, Engineering, and Mathematics (STEM) major under the U.S. Department of Homeland Security's Designated Degree Programs (https://studyinthestates.dhs.gov/eligible-cip-codes-for-the-stem-opt-extension/) list of STEM programs. Depending on the plan of study, Sym Sys students can be classified as studying Cognitive Science (2010 CIP Code 30.2501) and/or Informatics (2010 CIP Code 11.0104).

Students declaring the major prior to 2020-21 should consult previous Stanford Bulletins (http://exploredegrees.stanford.edu/archive/#text) for degree requirements. Such students should consult the student services office if they want to change to the new requirements.

How to Declare the Major

To declare a major in Symbolic Systems, a student must:

- Be enrolled in or have completed SYMSYS 1 Minds and Machines
- Declare the major in Axess, and have the declaration approved by the program student services officer.
- Submit a preliminary Course Plan (https://symsys.stanford.edu/undergraduates/forms/) form for the major to a declaration interview with one of the Advising Fellows (https://symsys.stanford.edu/undergraduates/advising-fellows/) or with the Associate Director of the Program; see the calendar of Office Hours (https://symsys.stanford.edu/undergraduatesundergrad-advisingadvising-fellows/advising-office-hours/) on the Symsys website for possible interview times.

Advising

Upon declaration approval, students are assigned to both the Program Director and Associate Director as major advisors. The student must also select and confirm a concentration advisor.

- Declared majors have until the Autumn Quarter of their junior year to select a concentration advisor. Juniors declaring the major must have a concentration advisor confirmed at the time of declaration.
- A hold is placed on Winter Quarter registration for juniors who do not have a concentration advisor by Autumn Quarter of their junior year.

(See the COVID-19 Policies (p. 2182) tab for a one-year extension to Winter Quarter for this requirement.)

- Any individual with an ongoing instructional appointment at Stanford (listed as such in Chapters 2, 6, or 9 of the Faculty Handbook (https://facultyhandbook.stanford.edu/)) may serve as the concentration advisor. To confirm a concentration advisor after an eligible faculty member has agreed to fill this role, student must send an email message to symsys-sso@stanford.edu and the concentration advisor, including a statement of how the student plans to fulfill the capstone requirement of the major. Changes to capstone plans require the approval of the concentration advisor.

Degree Requirements

The Symbolic Systems major requires completion of:

- The core: a common set of foundations, breadth requirements, and experiential requirements that all students in the program must complete
- An approved concentration: depth in a particular specialization chosen by the student. See a list of Concentrations (p. 2159) below.

Students must submit a course plan to the student services officer for Symbolic Systems at least two quarters prior to the planned graduation date, listing courses taken or that will be completed to fulfill the course requirements for the major.

Students must obtain approval for any courses not listed as approved for a major requirement.

All courses taken to fulfill a major requirement for Symbolic Systems must be passed for 3 units or more, with either a letter grade ('C-' or better for core courses, and a 'D-' or above for concentration courses) a no-option pass grade ('S' or its equivalent in the Graduate School of Business, Stanford Law School, or School of Medicine, or in an approved transfer credit course from another institution. A 'CR' cannot be used to fulfill a major requirement for Symbolic Systems), except as modified by the COVID-19 policies in effect during 2020-21. Students who have already completed a required course with a 'CR' grade may file a Replacement Petition to take a course in the same subject area at the same or a higher level in order to avoid having to retake the course.

Unless otherwise stated, each course that is counted for the major must be taken for 3 units or more. Taking a course for 3 units is sufficient unless the requirement specifically states otherwise.

Each course taken for the major may be counted toward at most one required course in either the Core or Concentration (not both), except in cases where double-counting is explicitly allowed.

Students in a dual degree program (p. 32), students taking a minor, or students in coterminal program (p. 56), may not double-count courses towards different degree programs or minors unless a course is an introductory skill requirement (https://symsys.stanford.edu/undergraduatesminor-requirements/introductory-skill-requirements/) for both majors.

The program is open to requests to approving courses not listed as options to fulfill major requirements. Consult the student services office for details of this process.

Core

Core requirements are typically completed earlier than a student's concentration, but the only requirements that impose explicit restrictions on when a course can be completed during a student's undergraduate career are the gateway and capstone requirements.

Course Requirements

		Units
1. Preparations		**4**
These courses should be completed early in the major.		
a. Gateway Course		
SYMSYS 1	Minds and Machines	4
b. Single Variable Calculus		**10**
One of the following:		
MATH 19, MATH 20, and MATH 21 (or MATH 21A): Calculus		
10 units of Advanced Placement Calculus credit		
Placement by the Mathematics Placement Diagnostic into MATH 20 or MATH 21 and completion of the rest of the series, or into MATH 51		
c. Multivariate Systems		**3-6**
One of the following:		
CME 100	Vector Calculus for Engineers	5
CME 100A	Vector Calculus for Engineers, ACE	6
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
MATH 51A	Linear Algebra, Multivariable Calculus, and Modern Applications, ACE	6
MATH 61CM	Modern Mathematics: Continuous Methods	5
MATH 61DM	Modern Mathematics: Discrete Methods	5
d. Further Study in Multivariate Systems		**3-5**
Optional, but recommended, and may be used as contingent electives in a concentration. One or more of the following courses, which may be needed as preparation for some Core options and other advanced courses in the major.		
CME 102	Ordinary Differential Equations for Engineers (and (optionally) CME 104)	5
CME 102A	Ordinary Differential Equations for Engineers, ACE (, ACE, and (optionally) CME 104A, ACE)	6
CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
ENGR 108	Introduction to Matrix Methods (formerly CME 103)	3-5
MATH 52	Integral Calculus of Several Variables	5
MATH 53	Ordinary Differential Equations with Linear Algebra	5
MATH 62CM	Modern Mathematics: Continuous Methods	5
MATH 62DM	Modern Mathematics: Discrete Methods	5
MATH 63CM	Modern Mathematics: Continuous Methods	5
MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
2. Breadth Requirements		**9-15**
One three quarter sequence of training in each of four methodological areas, plus a Cross-Area Requirement.		
a. Philosophical Analysis		
i. An introductory course in the Philosophy Department		
One of the following:		
Any course listed with a PHIL number (with the exception of PHIL 99/SYMSYS 1)		
THINK 69	Emotion	4
ii. Writing in the Major (WIM) course		
PHIL 80	Mind, Matter, and Meaning	5
iii. An advanced undergraduate Philosophy course that lists PHIL 80 as a prerequisite		
One of the following:		

PHIL 107B	Plato's Later Metaphysics and Epistemology	4
PHIL 167D	Philosophy of Neuroscience	4
PHIL 172	History of Modern Moral Philosophy	4
PHIL 173B	Metaethics	4
PHIL 175	Philosophy of Law	4
PHIL 180	Metaphysics	4
PHIL 180A	Realism, Anti-Realism, Irrealism, Quasi-Realism	4
PHIL 181	Philosophy of Language	4
PHIL 182	Advanced Philosophy of Language	4
PHIL 182A	Naturalizing Representation	4
PHIL 182H	Truth	4
PHIL 184	Topics in Epistemology	4
PHIL 186	Philosophy of Mind	4
PHIL 187	Philosophy of Action	4
PHIL 189G	Fine-Tuning Arguments for God's Existence	4

b. Formal Methods

Courses that focus on rigorous definitions, axioms, theorems, and proofs, and their use in developing mathematical theories and meta-theories. Each of the following:

i. Formal Logic

One of the following:

CS 157	Computational Logic	3
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic (Prerequisite: PHIL 150 or instructor permission)	4

ii. Theory of Computation. One of the following:

CS 103	Mathematical Foundations of Computing (Corequisite: CS 106B or X)	3-5
CS 154	Introduction to the Theory of Computation (Prerequisite: CS 103 or significant proof-writing experience.)	3-4

iii. Probability Theory and Statistics

A course that covers the theory of probability and is grounded in multivariable calculus. One of the following:

CME 106	Introduction to Probability and Statistics for Engineers	4
CS 109	Introduction to Probability for Computer Scientists	3-5
EE 178	Probabilistic Systems Analysis	3-4
MATH 151	Introduction to Probability Theory	3
MATH 63DM	Modern Mathematics: Discrete Methods	5
MS&E 120	Introduction to Probability	4
MS&E 220	Probabilistic Analysis	3-4
STATS 110	Statistical Methods in Engineering and the Physical Sciences	5
STATS 116	Theory of Probability	4

c. Computational Methods

Courses that focus on software design, data structures, algorithms, development, applications, evaluation, and simulation. Each of the following:

i. Programming 1

One of the following:

CS 106A	Programming Methodology	3-5

Equivalent preparation, as evidenced by successful completion of CS 106B or 106X

ii. Programming II

One of the following:

CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions (Accelerated)	3-5

iii. A post CS 106B course covering one or more broad computational methods with a programming component.

One of the following:

CS 107	Computer Organization and Systems	3-5
CS 107E	Computer Systems from the Ground Up	3-5
CS 129	Applied Machine Learning	3-4
CS 147	Introduction to Human-Computer Interaction Design (Plus one of the following:)	3-5
CS 193A	Android Programming	3
CS 193C	Client-Side Internet Technologies	3
CS 193P	iOS Application Development	3
CS 193X	Web Programming Fundamentals	3
CS 194H	User Interface Design Project	3-4
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 229	Machine Learning	3-4

d. Empirical Cognitive Science

Courses that focus on questions, hypotheses, models, predictions, and explanations that are derived from or testable in neural and behavioral data. Each of the following:

i. Overview of psychology.

PSYCH 1	Introduction to Psychology	5

ii. An introductory area course in cognition, language, and neuroscience.

One of the following:

BIO 150	Human Behavioral Biology	5
LINGUIST 145	Introduction to Psycholinguistics	4
LINGUIST 150	Language and Society	3-4
PSYCH 30	Introduction to Perception	4
PSYCH 45	Introduction to Learning and Memory	3
PSYCH 50	Introduction to Cognitive Neuroscience	4
PSYCH 60	Introduction to Developmental Psychology	3
PSYCH 70	Self and Society: Introduction to Social Psychology	4
PSYCH 75	Introduction to Cultural Psychology	5
PSYCH 141	Cognitive Development	3
PSYCH 154	Judgment and Decision-Making	3

iii. Linguistic Theory

A course introducing a core area of theoretical inquiry in linguistics. One of the following:

LINGUIST 105	Phonetics	4
LINGUIST 110	Introduction to Phonology	4
LINGUIST 120	Introduction to Syntax	4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 130B	Introduction to Lexical Semantics	3-4

Additional approved undergraduate courses offered on a semi-regular basis:

LINGUIST 21N	Linguistic Diversity and Universals: The Principles of Language Structure	3
LINGUIST 30N	Linguistic Meaning and the Law	3
LINGUIST 121A	The Syntax of English	4
LINGUIST 121B	Crosslinguistic Syntax	4
LINGUIST 134A	The Structure of Discourse: Theory and Applications	2-4
LINGUIST 160	Introduction to Language Change	2-4

Cross-Area Requirement

A non-introductory course, which has as a prerequisite at least one Core course (or equivalent), and which combines methods and subject matter from at least two Breadth areas in the Core. One of the following:		
i. Suggested courses for most students		
Only one course must be chosen to fulfill the requirement - categories are for guidance only:		
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 229	Machine Learning	3-4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 180	From Languages to Information	3-4
PHIL 152	Computability and Logic	4
PHIL 154	Modal Logic	4
PHIL 167D	Philosophy of Neuroscience	4
PHIL 181	Philosophy of Language	4
PSYCH 204	Computation and Cognition: The Probabilistic Approach	3
PSYCH 209	Neural Network Models of Cognition	4
ii. Any other course on the full list of courses approved for this requirement below.		
3. Experiential Requirements		
Each of the following:		
a. Advanced Small Seminar Requirement.		
An approved course which (a) builds on the Core Preparations and Breadth Requirements, (b) is small -- 20 students or fewer, and (c) is an interactive, discussion-based seminar. May be double-counted for an applicable Concentration requirement, but not for a Core requirement.		
b. Capstone		
A two-course requirement consisting of the following components, chosen in consultation with and approved by a student's Concentration Advisor (3 or more units each):		
i. Practicum		
A project or internship-accompanying course. One of the following:		
SYMSYS 190	Senior Honors Tutorial	1-5
An approved project course with a SYMSYS listing in the 195-series. Any of the following:		
SYMSYS 195A	Design for Artificial Intelligence	3-4
SYMSYS 195B	Design for Behavior Change	3-4
SYMSYS 195D	Research in Digital Democracy	3-4
SYMSYS 195E	Experimental Methods	3
SYMSYS 195G	Introduction to Game Design	3-4
SYMSYS 195I	Image Systems Engineering	1-3
SYMSYS 195L	Methods in Psycholinguistics	4
SYMSYS 195N	Natural Language Processing with Deep Learning	3-4
SYMSYS 195S	Service Design	3-4
SYMSYS 195U	Natural Language Understanding	3-4
SYMSYS 195V	Data Visualization	3-4
Supervised Research		
Taken with a faculty member on an approved symbolic-systems related project, taken as SYMSYS 196: Independent Study, or a department-based directed research course.		
SYMSYS 192: Symbolic Systems in Practice (must be taken in conjunction with an approved internship or service project)		
ii. Integrative Requirement		
Either an additional research project course (e.g., the second course of an Honors Project) or a Concentration-Specific Integrative Course, which must be completed no earlier than the Junior Year. Units must be applied to a student's concentration.		
One of the following (the first three bulleted options are the Standard Options available across all Concentrations):		
SYMSYS 190	Senior Honors Tutorial (continuation of the course taken for the Practicum requirement)	1-5
An approved project course with a SYMSYS listing in the 195-series		
(See list under "Practicum" above - may be either the second quarter of a 2-quarter course, or a one-quarter course)		
Supervised research with a faculty member on an approved symbolic-systems related project, taken as SYMSYS 196 Independent Study, or a department-based directed research course (may be either the second quarter of a 2-quarter course or a one-quarter course)		
An approved Concentration-Specific Integrative Course taken within a Concentration.		
Total Units		**75-90**

Full List of Cross-Area Requirement Courses

		Units
Cross-Area Requirement		
The full list of approved courses for the Cross-Area Requirement.		
Only one course must be chosen to fulfill the requirement - categories are for guidance only:		
Philosophical Analysis and Formal Methods		
PHIL 152	Computability and Logic	4
PHIL 154	Modal Logic	4
PHIL 162	Philosophy of Mathematics	4
PHIL 181	Philosophy of Language	4
Philosophical Analysis and Computational Methods		
CS 181	Computers, Ethics, and Public Policy	4
CS 182	Ethics, Public Policy, and Technological Change	5
PHIL 152	Computability and Logic	4
PHIL 167D	Philosophy of Neuroscience	4
Philosophical Analysis and Empirical Cognitive Science		
PHIL 167D	Philosophy of Neuroscience	4
PHIL 181	Philosophy of Language	4
PHIL 186	Philosophy of Mind	4
Formal Methods and Computational Methods		
CS 151	Logic Programming	3
CS 154	Introduction to the Theory of Computation	3-4
CS 161	Design and Analysis of Algorithms	3-5
CS 229	Machine Learning	3-4
CS 238	Decision Making under Uncertainty	3-4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 180	From Languages to Information	3-4
PHIL 152	Computability and Logic	4
PHIL 154	Modal Logic	4
PSYCH 204	Computation and Cognition: The Probabilistic Approach	3
PSYCH 209	Neural Network Models of Cognition	4
PSYCH 221	Image Systems Engineering	1-3
PSYCH 242	Theoretical Neuroscience	3
PHIL 249	Evidence and Evolution	3-5

Formal Methods and Empirical Cognitive Science		
PSYCH 253	Advanced Statistical Modeling	3
CS 229	Machine Learning	3-4
ECON 178	Behavioral Economics	5
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 180	From Languages to Information	3-4
PHIL 154	Modal Logic	4
PHIL 181	Philosophy of Language	4
PSYCH 204	Computation and Cognition: The Probabilistic Approach	3
PSYCH 209	Neural Network Models of Cognition	4
PSYCH 221	Image Systems Engineering	1-3
PSYCH 242	Theoretical Neuroscience	3
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience	1-3
PSYCH 253	Advanced Statistical Modeling	3
Computational Methods and Empirical Cognitive Science		
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 229	Machine Learning	3-4
CS 448B	Data Visualization	3-4
LINGUIST 130A	Introduction to Semantics and Pragmatics	4
LINGUIST 180	From Languages to Information	3-4
PHIL 167D	Philosophy of Neuroscience	4
PSYCH 164	Brain decoding	3
PSYCH 204	Computation and Cognition: The Probabilistic Approach	3
PSYCH 209	Neural Network Models of Cognition	4
PSYCH 221	Image Systems Engineering	1-3
PSYCH 204A	Human Neuroimaging Methods	3
PSYCH 242	Theoretical Neuroscience	3
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience	1-3
PSYCH 253	Advanced Statistical Modeling	3

Concentration Areas

Please note: the concentrations areas are being revised, and new ones being added.

Applied Logic

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/applied-logic-al-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Applied Logic. All courses must be taken for 3 units of more.

Metalogic		**3-5**
PHIL 151	Metalogic	
Computability		**3-5**
Select one of the following:		
CS 154	Introduction to the Theory of Computation	
PHIL 152	Computability and Logic	
Computational Approaches to Logic		**3-5**
Select one of the following:		
CS 151	Logic Programming	
CS 157	Computational Logic	
Set Theory		**3-5**
MATH 161	Set Theory	
Integrative Requirement. Must be completed no earlier than the Junior Year.		**3-5**
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
CS 151	Logic Programming	
CS 163	The Practice of Theory Research	
CS 204	Computational Law	
CS 227B	General Game Playing	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 242	Programming Languages	
CS 254	Computational Complexity	
CS 358A	Programming Language Foundations	
LINGUIST 130A	Introduction to Semantics and Pragmatics	
LINGUIST 230B	Advanced Semantics	
PHIL 154	Modal Logic	
PHIL 162	Philosophy of Mathematics	
PHIL 184B	Formal Epistemology	
PHIL 351D	Measurement Theory	
PHIL 356C	Logic and Artificial Intelligence	
PHIL 359	Topics in Logic, Information and Agency	
PSYCH 204	Computation and Cognition: The Probabilistic Approach	
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives	
Contingent Electives		**3-5**
If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:		
CS 254B	Computational Complexity II	
LINGUIST 230C	Advanced Topics in Semantics & Pragmatics	
MATH 56	Proofs and Modern Mathematics	
Additional courses may be added here in the future.		
Total Units		**15-25**

Artificial Intelligence

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/artificial-intelligence-ai-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-21 must complete the following requirements to qualify for a Concentration in Artificial Intelligence. All courses must be taken for 3 units of more.

Students in this Concentration are urged to take CS 161, either for the Core Cross-Area Requirement, or as a Contingent Elective, and prior to taking CS 221.		
Programming		**3-5**
Select one of the following:		

CS 107	Computer Organization and Systems	
CS 107E	Computer Systems from the Ground Up	
Introduction		**3-5**
CS 221	Artificial Intelligence: Principles and Techniques	
Artificial Intelligence Depth		**3-5**
Two courses chosen from the "select" list of AI courses (category B of the MSCS AI Track):		
CS 223A	Introduction to Robotics	
CS 224N	Natural Language Processing with Deep Learning	
CS 224S	Spoken Language Processing	
CS 224U	Natural Language Understanding	
CS 224W	Machine Learning with Graphs	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
CS 231N	Convolutional Neural Networks for Visual Recognition	
CS 234	Reinforcement Learning	
CS 238	Decision Making under Uncertainty	
Integrative Requirement		**3-5**
Must be completed no earlier than the Junior Year		
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
COMM 324	Language and Technology	
COMM 326	Advanced Topics in Human Virtual Representation	
CS 131	Computer Vision: Foundations and Applications	
CS 181	Computers, Ethics, and Public Policy	
CS 182	Ethics, Public Policy, and Technological Change	
CS 229M	Machine Learning Theory	
CS 325B	Data for Sustainable Development	
CS 329D	Machine Learning Under Distributional Shifts	
CS 379C	Computational Models of the Neocortex	
LINGUIST 180	From Languages to Information	
MUSIC 220C	Research Seminar in Computer-Generated Music	
NENS 220	Computational Neuroscience	
PHIL 356C	Logic and Artificial Intelligence	
PHIL 359	Topics in Logic, Information and Agency	
PSYCH 164	Brain decoding	
PSYCH 204	Computation and Cognition: The Probabilistic Approach	
PSYCH 209	Neural Network Models of Cognition	
PSYCH 242	Theoretical Neuroscience	
PSYCH 247	Topics in Natural and Artificial Intelligence	
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience	
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives	
STATS 220	Machine Learning Methods for Neural Data Analysis	
SYMSYS 202	Theories of Consciousness	
Contingent Electives		**3-5**
If any of requirements 1-3 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:		
BIOMEDIN 210	Modeling Biomedical Systems	
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	
CS 217	Hardware Accelerators for Machine Learning	
CS 227B	General Game Playing	
CS 236	Deep Generative Models	
CS 246	Mining Massive Data Sets	
CS 330	Deep Multi-task and Meta Learning	
CS 348I	Computer Graphics in the Era of AI	
CS 348K	Visual Computing Systems	
LAW 4039	Regulating Artificial Intelligence	
MS&E 135	Networks	
MS&E 234	Data Privacy and Ethics	
MUSIC 220B	Compositional Algorithms, Psychoacoustics, and Computational Music	
MUSIC 220C	Research Seminar in Computer-Generated Music	
PHIL 20N	Philosophy of Artificial Intelligence	
STATS 200	Introduction to Statistical Inference	
STATS 202	Data Mining and Analysis	
STATS 315A	Modern Applied Statistics: Learning	
STATS 315B	Modern Applied Statistics: Data Mining	
Total Units		**15-25**

Biomedical Applications

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/biomedical-applications-biomed-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Biomedical Applications. All courses must be taken for 3 units of more.

Philosophical and Ethical Inquiry		**3-5**
For example, any of the following:		
HUMBIO 174	Foundations of Bioethics	
HUMBIO 178A	Intro to Disability Studies: Disability and Technology	
NBIO 101	Social and Ethical Issues in the Neurosciences	
PHIL 85	Topics in Philosophy of Medicine	
PHIL 134A	Phenomenology: Animals	
PHIL 167D	Philosophy of Neuroscience	
PHIL 168M	Biological Individuality	
PHIL 178M	Introduction to Environmental Ethics	

PHIL 360	Grad Seminar: Philosophy of Neuroscience
PHIL 368A	Topics in Neuroscience
SYMSYS 202	Theories of Consciousness
SYMSYS 205	The Philosophy and Science of Perception

Theoretical and Mathematical Approaches **3-5**

For example, any of the following:

BIO 183	Theoretical Population Genetics
BIO 223	Stochastic and Nonlinear Dynamics
BIO 251	Quantitative Evolutionary Dynamics and Genomics
BIODS 215	Topics in Biomedical Data Science: Large-scale inference
BIOMEDIN 219	Mathematical Models and Medical Decisions
ECON 136	Market Design
EE 102A	Signal Processing and Linear Systems I
HUMBIO 88	Introduction to Statistics for the Health Sciences
HUMBIO 89	Introduction to Health Sciences Statistics
HUMBIO 154B	Principles of Epidemiology
MS&E 292	Health Policy Modeling
STATS 141	Biostatistics
STATS 215	Statistical Models in Biology

Computational and Design Methods **3-5**

For example, any of the following:

BIODS 220	Artificial Intelligence in Healthcare
BIOE 313	Neuromorphics: Brains in Silicon
BIOMEDIN 210	Modeling Biomedical Systems
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation
BIOMEDIN 273B	Deep Learning in Genomics and Biomedicine
BIOMEDIN 279	Computational Biology: Structure and Organization of Biomolecules and Cells
CS 247B	Design for Behavior Change
CS 247S	Service Design
CS 273A	The Human Genome Source Code
CS 372	Artificial Intelligence for Disease Diagnosis and Information Recommendations
CS 379C	Computational Models of the Neocortex
CS 448B	Data Visualization
GENE 211	Genomics
HUMBIO 51	Big Data for Biologists - Decoding Genomic Function
HUMBIO 151R	Biology, Health and Big Data
PSYC 223B	Topics in Neurodiversity: Design Thinking Approaches
PSYCH 204B	Computational Neuroimaging
STATS 220	Machine Learning Methods for Neural Data Analysis
SYMSYS 245	Cognition in Interaction Design

Experimental and Observational Science

For example, any of the following:

BIO 81	Introduction to Ecology
BIO 82	Genetics
BIO 84	Physiology
BIO 150	Human Behavioral Biology
BIO 151	Mechanisms of Neuron Death
BIO 204	Neuroplasticity: From Synapses to Behavior
BIODS 215	Topics in Biomedical Data Science: Large-scale inference
HUMBIO 51	Big Data for Biologists - Decoding Genomic Function
HUMBIO 151R	Biology, Health and Big Data
HUMBIO 154B	Principles of Epidemiology
MS&E 292	Health Policy Modeling
NBIO 206	The Nervous System
PSYC 124	Brain Plasticity
PSYCH 30	Introduction to Perception
PSYCH 45	Introduction to Learning and Memory
PSYCH 50	Introduction to Cognitive Neuroscience
PSYCH 60	Introduction to Developmental Psychology
PSYCH 121	Ion Transport and Intracellular Messengers
PSYCH 162	Brain Networks
PSYCH 169	Advanced Seminar on Memory
PSYCH 202	Cognitive Neuroscience
PSYCH 204A	Human Neuroimaging Methods
PSYCH 232	Brain and Decision
PSYCH 254	Affective Neuroscience

Integrative Requirement **3-5**

Must be completed no earlier than the Junior Year.

i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or

ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).

BIOMEDIN 210	Modeling Biomedical Systems
BIOMEDIN 220	Artificial Intelligence in Healthcare
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation
BIOMEDIN 273A	The Human Genome Source Code
BIOMEDIN 273B	Deep Learning in Genomics and Biomedicine
BIOMEDIN 279	Computational Biology: Structure and Organization of Biomolecules and Cells
COMM 326	Advanced Topics in Human Virtual Representation
CS 325B	Data for Sustainable Development
CS 372	Artificial Intelligence for Disease Diagnosis and Information Recommendations
CS 379C	Computational Models of the Neocortex
PHIL 167D	Philosophy of Neuroscience
PHIL 168M	Biological Individuality
PHIL 178M	Introduction to Environmental Ethics
PHIL 360	Grad Seminar: Philosophy of Neuroscience
PHIL 368A	Topics in Neuroscience
PSYC 223B	Topics in Neurodiversity: Design Thinking Approaches
PSYCH 121	Ion Transport and Intracellular Messengers
PSYCH 162	Brain Networks
PSYCH 169	Advanced Seminar on Memory
PSYCH 202	Cognitive Neuroscience
PSYCH 204A	Human Neuroimaging Methods
PSYCH 204B	Computational Neuroimaging

PSYCH 232	Brain and Decision
PSYCH 254	Affective Neuroscience
PSYCH 273	Changing Mindsets and Contexts: How to Create Authentic, Lasting Improvement
STATS 220	Machine Learning Methods for Neural Data Analysis
SYMSYS 245	Cognition in Interaction Design

Contingent Electives

If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

Additional courses may be added here in the future.

Total Units 15-25

Cognitive Science

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/cognitive-science-cogsci-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Cognitive Science. All courses must be taken for 3 units of more.

Cognitive Neuroscience 3-5

Select one of the following:

PSYCH 30	Introduction to Perception
PSYCH 45	Introduction to Learning and Memory
PSYCH 50	Introduction to Cognitive Neuroscience

Inferential Statistics 3-5

Select one of the following:

ANTHRO 116	Data Analysis for Quantitative Research
MS&E 125	Introduction to Applied Statistics
MS&E 226	Fundamentals of Data Science: Prediction, Inference, Causality
PSYCH 10	Introduction to Statistical Methods: Precalculus
PSYCH 253	Advanced Statistical Modeling
SOC 180B	Introduction to Data Analysis
STATS 101	Data Science 101
STATS 110	Statistical Methods in Engineering and the Physical Sciences
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis

Research Methods 3-5

A course on research practices and/or methods that are commonly used for studying cognition, language, and the brain. For example, one of the following:

CS 107	Computer Organization and Systems
CS 129	Applied Machine Learning
CS 229	Machine Learning
LINGUIST 180	From Languages to Information
LINGUIST 188	Natural Language Understanding
LINGUIST 245B	Methods in Psycholinguistics
PHIL 167D	Philosophy of Neuroscience
PSYCH 164	Brain decoding
PSYCH 187	Research Methods in Cognition & Development
PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 209	Neural Network Models of Cognition
PSYCH 221	Image Systems Engineering
PSYCH 240A	Curiosity in Artificial Intelligence
PSYCH 242	Theoretical Neuroscience
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience
PSYCH 251	Experimental Methods
PSYCH 253	Advanced Statistical Modeling
PSYCH 262	Measurement and the Study of Change in Social Science Research
STATS 220	Machine Learning Methods for Neural Data Analysis

Cognitive Science Depth 3-5

For example, one of the following courses:

BIO 150	Human Behavioral Biology
COMM 108	Media Processes and Effects
COMM 322	Advanced Studies in Behavior and Social Media
CS 131	Computer Vision: Foundations and Applications
CS 154	Introduction to the Theory of Computation
CS 224N	Natural Language Processing with Deep Learning
CS 227B	General Game Playing
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229M	Machine Learning Theory
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 234	Reinforcement Learning
CS 238	Decision Making under Uncertainty
ECON 160	Game Theory and Economic Applications
EDUC 266	Educational Neuroscience
EDUC 368	Cognitive Development in Childhood and Adolescence
LINGUIST 105	Phonetics
LINGUIST 110	Introduction to Phonology
LINGUIST 140	Learning to Speak: An Introduction to Child Language Acquisition
LINGUIST 180	From Languages to Information
LINGUIST 188	Natural Language Understanding
LINGUIST 236	Seminar in Semantics: Conditionals
LINGUIST 248	Seminar in Developmental Psycholinguistics
MUSIC 251	Psychophysics and Music Cognition
NBIO 206	The Nervous System
NBIO 258	Information and Signaling Mechanisms in Neurons and Circuits
PHIL 82T	Philosophy of Cognitive Science
PHIL 152	Computability and Logic
PHIL 153L	Computing Machines and Intelligence
PHIL 154	Modal Logic
PHIL 167D	Philosophy of Neuroscience
PHIL 181	Philosophy of Language
PHIL 184	Topics in Epistemology

PHIL 184B	Formal Epistemology
PHIL 186	Philosophy of Mind
PHIL 187	Philosophy of Action
PHIL 194A	Rationality Over Time
PHIL 194D	Capstone Seminar: Artificial Intelligence
PHIL 351D	Measurement Theory
PHIL 360	Grad Seminar: Philosophy of Neuroscience
PHIL 368A	Topics in Neuroscience
PHIL 385D	Advanced Topics in Philosophy of Language
PHIL 386	Truth as the aim of belief and inquiry
PSYCH 30	Introduction to Perception
PSYCH 45	Introduction to Learning and Memory
PSYCH 50	Introduction to Cognitive Neuroscience
PSYCH 70	Self and Society: Introduction to Social Psychology
PSYCH 75	Introduction to Cultural Psychology
PSYCH 140	Introduction to Psycholinguistics
PSYCH 141	Cognitive Development
PSYCH 154	Judgment and Decision-Making
PSYCH 160	Seminar on Emotion
PSYCH 162	Brain Networks
PSYCH 164	Brain decoding
PSYCH 169	Advanced Seminar on Memory
PSYCH 175	Social Cognition and Learning in Early Childhood
PSYCH 202	Cognitive Neuroscience
PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 204A	Human Neuroimaging Methods
PSYCH 204B	Computational Neuroimaging
PSYCH 205	Foundations of Cognition
PSYCH 209	Neural Network Models of Cognition
PSYCH 221	Image Systems Engineering
PSYCH 232	Brain and Decision
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience
PSYCH 250	High-level Vision: From Neurons to Deep Neural Networks
PSYCH 254	Affective Neuroscience
PSYCH 266	Current Debates in Learning and Memory
PSYCH 285	Graduate Seminar on Theory of Mind
PSYCH 287	Brain Machine Interfaces: Science, Technology, and Application
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives
SYMSYS 203	Cognitive Science Perspectives on Humanity and Well-Being
SYMSYS 207	Conceptual Issues in Cognitive Science
SYMSYS 208	Computer Machines and Intelligence

Integrative Requirement **3-5**

Must be completed no earlier than the Junior Year.

i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or

ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).

COMM 326	Advanced Topics in Human Virtual Representation
CS 131	Computer Vision: Foundations and Applications
CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 221	Artificial Intelligence: Principles and Techniques
CS 227B	General Game Playing
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 230	Deep Learning
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 234	Reinforcement Learning
CS 238	Decision Making under Uncertainty
CS 325B	Data for Sustainable Development
CS 379C	Computational Models of the Neocortex
EE 104	Introduction to Machine Learning
LINGUIST 180	From Languages to Information
MUSIC 220C	Research Seminar in Computer-Generated Music
MUSIC 257	Neuroplasticity and Musical Gaming
NBIO 101	Social and Ethical Issues in the Neurosciences
PHIL 134A	Phenomenology: Animals
PHIL 356C	Logic and Artificial Intelligence
PHIL 357	Research Seminar on Logic and Cognition
PHIL 359	Topics in Logic, Information and Agency
PHIL 360	Grad Seminar: Philosophy of Neuroscience
PHIL 368A	Topics in Neuroscience
PSYCH 164	Brain decoding
PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 209	Neural Network Models of Cognition
PSYCH 242	Theoretical Neuroscience
PSYCH 247	Topics in Natural and Artificial Intelligence
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives
STATS 220	Machine Learning Methods for Neural Data Analysis
SYMSYS 202	Theories of Consciousness
SYMSYS 205	The Philosophy and Science of Perception
SYMSYS 207	Conceptual Issues in Cognitive Science
SYMSYS 208	Computer Machines and Intelligence

Contingent Electives **3-5**

If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:	
Additional courses may be added here in the future.	
Total Units	**15-25**

Computational Foundations

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/computational-foundations-cofo-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Computational Foundations. All courses must be taken for 3 units of more.

Students in this Concentration are strongly encouraged to take either CS 181 or CS 182 as part of the major, either for the Core Cross-Area Requirement, for the Capstone Integrative Requirement, as a Contingent Elective, or (in the case of CS 182) for the Core Introductory Philosophy requirement.		
Computer Systems I		**3-5**
Select one of the following:		
CS 107	Computer Organization and Systems	
CS 107E	Computer Systems from the Ground Up	
Computer Systems II		**3-5**
Select one of the following:		
CS 110	Principles of Computer Systems	
CS 111	Operating Systems Principles	
Theory of Computation Depth		**3-5**
Select one of the following:		
CS 154	Introduction to the Theory of Computation	
PHIL 154	Modal Logic	
Algorithms		**3-5**
CS 161	Design and Analysis of Algorithms	
Integrative Requirement		**3-5**
Must be completed no earlier than the Junior Year.		
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
CS 151	Logic Programming	
CS 157	Computational Logic	
CS 163	The Practice of Theory Research	
CS 181	Computers, Ethics, and Public Policy	
CS 182	Ethics, Public Policy, and Technological Change	
CS 349T	Project Lab: Video and Audio Technology for Live Theater in the Age of COVID	
CS 379C	Computational Models of the Neocortex	
PHIL 154	Modal Logic	
PHIL 359	Topics in Logic, Information and Agency	
PSYCH 204	Computation and Cognition: The Probabilistic Approach	
Contingent Electives		**3-5**
If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:		
Any course of 3 units or more, listed with a CS course number greater than 110, excluding CS 196 or CS 198.		
Any course of 3 units or more, listed with an EE course number.		
Any course of 3 units or more, listed with a MATH course number.		
Any course of 3 units or more, listed with a STATS course number.		
PHIL 20N	Philosophy of Artificial Intelligence	
Total Units		**15-25**

Computational Social Science Concentration

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/computational-social-science-css-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Computational Social Science. All courses must be taken for 3 units of more.

Social Behavior		**3-5**
An introductory course in a broad area of social science. Select one of the following:		
BIO 30	Ecology for Everyone	
BIO 81	Introduction to Ecology	
COMM 1	Introduction to Communication	
ECON 1	Principles of Economics	
ECON 46	Networks and Human Behavior	
ECON 50	Economic Analysis I	
ECON 160	Game Theory and Economic Applications	
ECON 178	Behavioral Economics	
ECON 180	Honors Game Theory	
LINGUIST 150	Language and Society	
MS&E 135	Networks	
MS&E 180	Organizations: Theory and Management	
MS&E 232	Introduction to Game Theory	
POLISCI 1	The Science of Politics	
POLISCI 120C	American Political Institutions in Uncertain Times	
PSYCH 70	Self and Society: Introduction to Social Psychology	
PSYCH 154	Judgment and Decision-Making	
SOC 1	Introduction to Sociology	
SOC 126	Introduction to Social Networks	
SOC 130	Education and Society	
SOC 146	Introduction to Comparative Studies in Race and Ethnicity	
Statistical Interference		**3-5**
An introductory course in statistical methods. Select one of the following:		
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
MS&E 125	Introduction to Applied Statistics	

MS&E 226	Fundamentals of Data Science: Prediction, Inference, Causality
SOC 180B	Introduction to Data Analysis
STATS 110	Statistical Methods in Engineering and the Physical Sciences
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis

Computational Data Methods **3-5**

A course in machine learning, natural language processing, and/or probabilistic computational inference. Select one of the following:

CS 129	Applied Machine Learning
CS 224N	Natural Language Processing with Deep Learning
CS 224W	Machine Learning with Graphs
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 230	Deep Learning
CS 238	Decision Making under Uncertainty
CS 246	Mining Massive Data Sets
CS 448B	Data Visualization
ECON 102B	Applied Econometrics
LINGUIST 180	From Languages to Information
LINGUIST 188	Natural Language Understanding
PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 209	Neural Network Models of Cognition
STATS 216	Introduction to Statistical Learning

Social Data Science **3-5**

A course on applying statistical and computational methods to the study of social behavior. Select one of the following:

COMM 106	Communication Research Methods
COMM 173E	Data Challenge Lab
ECON 102D	Econometric Methods for Public Policy Analysis and Business Decision-Making
ECON 151	Tackling Big Questions Using Social Data Science
EDUC 143	Introduction to Data Science
MS&E 231	Introduction to Computational Social Science
POLISCI 150A	Data Science for Politics
POLISCI 150C	Causal Inference for Social Science
PSYCH 290	Natural Language Processing & Text-Based Machine Learning in the Social Sciences
SOC 180A	Foundations of Social Research
SOC 194	Computational Undergraduate Research
SOC 369	Social Network Methods

Integrative Requirement **3-5**

Must be completed no earlier than the Junior Year.

i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or

ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).

COMM 322	Advanced Studies in Behavior and Social Media
COMM 326	Advanced Topics in Human Virtual Representation
CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 206	Exploring Computational Journalism
CS 224W	Machine Learning with Graphs
CS 246	Mining Massive Data Sets
CS 278	Social Computing
CS 325B	Data for Sustainable Development
ECON 160	Game Theory and Economic Applications
ECON 178	Behavioral Economics
ECON 180	Honors Game Theory
MS&E 234	Data Privacy and Ethics
PHIL 171	Justice
PHIL 171P	20th Century Political Theory: Liberalism and its Critics
PHIL 359	Topics in Logic, Information and Agency
PSYCH 154	Judgment and Decision-Making
PSYCH 262	Measurement and the Study of Change in Social Science Research
PSYCH 290	Natural Language Processing & Text-Based Machine Learning in the Social Sciences
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives
SOC 154	The Politics of Algorithms

Contingent Electives **3-5**

If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

ANTHRO 116	Data Analysis for Quantitative Research
ANTHRO 132D	Thinking Technology: Anthropological Perspectives
BIO 61	Science as a Creative Process
BIO 85	Evolution
BIO 145	Ecology and Evolution of Animal Behavior
COMM 106	Communication Research Methods
COMM 158	Censorship and Propaganda
COMM 173E	Data Challenge Lab
COMM 176	Advanced Digital Media Journalism
COMM 177B	Big Local Journalism: a project-based class
COMM 177P	Programming in Journalism
COMM 177T	Building News Applications
CS 145	Data Management and Data Systems
CS 326	Topics in Advanced Robotic Manipulation
ECON 102B	Applied Econometrics
ECON 102C	Advanced Topics in Econometrics
ECON 106	World Food Economy
ECON 118	Development Economics
ECON 125	Economic Development, Microfinance, and Social Networks
ECON 144	Family and Society

ECON 150	Economic Policy Analysis
ECON 155	Environmental Economics and Policy
EDUC 260B	Advanced Statistical Methods for Observational Studies
LINGUIST 156	Language, Gender, & Sexuality
LINGUIST 157	Sociophonetics
LINGUIST 234	The Structure of Discourse: Theory and Applications
LINGUIST 250	Sociolinguistic Theory and Analysis
LINGUIST 258	Analysis of Variation
LINGUIST 278	Programming for Linguists
LINGUIST 285	Spoken Language Processing
MGTECON 634	Machine Learning and Causal Inference
MS&E 121	Introduction to Stochastic Modeling
MS&E 125	Introduction to Applied Statistics
MS&E 184	Future of Work: Issues in Organizational Learning and Design
MS&E 201	Dynamic Systems
MS&E 221	Stochastic Modeling
MS&E 223	Simulation
MS&E 230	Incentives and Algorithms
MS&E 231	Introduction to Computational Social Science
MS&E 234	Data Privacy and Ethics
MS&E 243	Energy and Environmental Policy Analysis
MS&E 280	Organizational Behavior: Evidence in Action
MS&E 292	Health Policy Modeling
PHIL 2	Introduction to Moral Philosophy
PHIL 60	Introduction to Philosophy of Science
PHIL 170	Ethical Theory
PHIL 171	Justice
PHIL 171P	20th Century Political Theory: Liberalism and its Critics
PHIL 174B	Universal Basic Income: the philosophy behind the proposal
PHIL 175B	Philosophy of Public Policy
POLISCI 1	The Science of Politics
POLISCI 120Z	What's Wrong with American Government? An Institutional Approach
POLISCI 150A	Data Science for Politics
POLISCI 150C	Causal Inference for Social Science
POLISCI 223A	Public Opinion and American Democracy
POLISCI 227C	Money in Politics
POLISCI 241A	Political Economy of Development
POLISCI 241S	Spatial Approaches to Social Science
PSYC 86Q	Psychology of Xenophobia
PSYCH 24N	Neuroforecasting
SOC 1	Introduction to Sociology
SOC 3	America: Unequal
SOC 10	Introduction to Computational Social Science
SOC 14N	Inequality in American Society
SOC 31N	Social Networks
SOC 114	Economic Sociology
SOC 118	Social Movements and Collective Action
SOC 124	Gender and Technology
SOC 130	Education and Society
SOC 133D	Globalization and Social Change
SOC 167VP	Justice + Poverty Innovation:Create new solutions for people to navigate housing, medical, & debt
SOC 168	Global Organizations: The Matrix of Change
SOC 179A	Crime and Punishment in America
STATS 101	Data Science 101
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis
STATS 203	Introduction to Regression Models and Analysis of Variance
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis
STS 191W	Doing STS: Introduction to Research
SYMSYS 201	Digital Technology, Society, and Democracy
Total Units	**15-25**

Computer Music

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/computer-music-cm-concentration/).

Symbolic Systems majors must complete the following requirements in addition to the Core requirements to fulfill the Concentration in Computer Music. All courses must be taken for 3 units of more.

Computer-Generated Music I		**3-5**
MUSIC 220A	Fundamentals of Computer-Generated Sound	
Computer-Generated Music II		**3-5**
MUSIC 220B	Compositional Algorithms, Psychoacoustics, and Computational Music	
Music and the Mind & Brain		**3-5**
Select one of the following:		
MUSIC 1A	Music, Mind, and Human Behavior	
MUSIC 251	Psychophysics and Music Cognition	
MUSIC 351A	Seminar in Music Perception and Cognition I	
PSYCH 30	Introduction to Perception	
PSYCH 50	Introduction to Cognitive Neuroscience	
Integrative Requirement		**3-5**
Must be completed no earlier than the Junior Year		
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
MUSIC 128	Stanford Laptop Orchestra: Composition, Coding, and Performance	
MUSIC 220C	Research Seminar in Computer-Generated Music	
MUSIC 250A	Physical Interaction Design for Music	
MUSIC 251	Psychophysics and Music Cognition	
MUSIC 253	Symbolic Musical Information	
MUSIC 254	Computational Music Analysis	
MUSIC 256A	Music, Computing, Design: The Art of Design	
MUSIC 257	Neuroplasticity and Musical Gaming	

MUSIC 351A	Seminar in Music Perception and Cognition I

Contingent Electives **3-5**

If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

CS 108	Object-Oriented Systems Design
LINGUIST 105	Phonetics
LINGUIST 110	Introduction to Phonology
MUSIC 1A	Music, Mind, and Human Behavior
MUSIC 222	Sound in Space

Total Units **15-25**

Decision Making and Rationality (DMAR)

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/decision-making-and-rationality-dmr-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Decision Making and Rationality. All courses must be taken for 3 units of more.

Philosophical Inquiry **3-5**

Select one of the following:

MS&E 234	Data Privacy and Ethics
MS&E 254	The Ethical Analyst
PHIL 164	Central Topics in the Philosophy of Science: Theory and Evidence
PHIL 166	Probability: Ten Great Ideas About Chance
PHIL 169	Evolution of the Social Contract
PHIL 170	Ethical Theory
PHIL 171	Justice
PHIL 172	History of Modern Moral Philosophy
PHIL 184	Topics in Epistemology
PHIL 184B	Formal Epistemology
PHIL 187	Philosophy of Action
PHIL 359	Topics in Logic, Information and Agency
PHIL 388	Topics in Normativity
POLISCI 131L	Modern Political Thought: Machiavelli to Marx and Mill
POLISCI 230A	Classical Seminar: Origins of Political Thought
PSYCH 160	Seminar on Emotion

Formal Decision Theories **3-5**

Select one of the following:

ECON 51	Economic Analysis II
ECON 136	Market Design
ECON 160	Game Theory and Economic Applications
ECON 180	Honors Game Theory
ECON 289	Advanced Topics in Game Theory and Information Economics
MS&E 232	Introduction to Game Theory
MS&E 232H	Introduction to Game Theory
PHIL 154	Modal Logic
PHIL 351	Representation Theorems
PHIL 351C	Formal Methods in Ethics
PHIL 351D	Measurement Theory
PHIL 359	Topics in Logic, Information and Agency
POLISCI 356A	Formal Theory I: Game Theory for Political Science
PUBLPOL 51	Microeconomics for Policy

Empirical Findings and Explanations **3-5**

Select one of the following:

BIO 150	Human Behavioral Biology
ECON 178	Behavioral Economics
ECON 179	Experimental Economics
ECON 279	Behavioral and Experimental Economics II
EDUC 375A	Seminar on Organizational Theory
GSBGEN 646	Behavioral Economics and the Psychology of Decision Making
POLISCI 351B	Economic Analysis of Political Institutions
POLISCI 351C	Institutions and Bridge-Building in Political Economy
PSYCH 154	Judgment and Decision-Making
PSYCH 160	Seminar on Emotion
PSYCH 205	Foundations of Cognition
PSYCH 212	Classic and contemporary social psychology research
PSYCH 215	Mind, Culture, and Society
PSYCH 223	Social Norms
PSYCH 232	Brain and Decision
PSYCH 254	Affective Neuroscience
SOC 114	Economic Sociology
SOC 115	Topics in Economic Sociology
SOC 126	Introduction to Social Networks
SYMSYS 203	Cognitive Science Perspectives on Humanity and Well-Being

Methods and Applications **3-5**

A course on methods that can be used to study decision making and rationality, or ways to apply research in decision sciences. For example, one of the following:

BIOMEDIN 251	Outcomes Analysis
CEE 206	Decision Analysis for Civil and Environmental Engineers
COMM 106	Communication Research Methods
CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 234	Reinforcement Learning
CS 238	Decision Making under Uncertainty
CS 239	Advanced Topics in Sequential Decision Making
CS 261	Optimization and Algorithmic Paradigms
CS 325B	Data for Sustainable Development
ECON 50	Economic Analysis I
ECON 102B	Applied Econometrics
ECON 102C	Advanced Topics in Econometrics
ECON 135	Foundations of Finance
ECON 136	Market Design
ECON 137	Decision Modeling and Information
ECON 141	Public Finance and Fiscal Policy
ECON 150	Economic Policy Analysis

ECON 155	Environmental Economics and Policy
ECON 162	Games Developing Nations Play
EDUC 247	Moral and Character Education
ENGR 62	Introduction to Optimization
MS&E 121	Introduction to Stochastic Modeling
MS&E 152	Introduction to Decision Analysis
MS&E 180	Organizations: Theory and Management
MS&E 231	Introduction to Computational Social Science
MS&E 250A	Engineering Risk Analysis
MS&E 250B	Project Course in Engineering Risk Analysis
MS&E 251	Introduction to Stochastic Control with Applications
MS&E 252	Decision Analysis I: Foundations of Decision Analysis
MS&E 332	Security and Risk in Computer Networks
MS&E 352	Decision Analysis II: Professional Decision Analysis
MS&E 353	Decision Analysis III: Frontiers of Decision Analysis
MS&E 355	Influence Diagrams and Probabilistics Networks
PHIL 49	Survey of Formal Methods
POLISCI 153	Thinking Strategically
PSYCH 10	Introduction to Statistical Methods: Precalculus
PSYCH 251	Experimental Methods
PSYCH 253	Advanced Statistical Modeling
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis
STATS 217	Introduction to Stochastic Processes I
STATS 218	Introduction to Stochastic Processes II
STATS 263	Design of Experiments
STATS 310A	Theory of Probability I
STATS 310B	Theory of Probability II
STATS 310C	Theory of Probability III
SYMSYS 195B	Design for Behavior Change
SYMSYS 195D	Research in Digital Democracy
SYMSYS 201	Digital Technology, Society, and Democracy
URBANST 132	Concepts and Analytic Skills for the Social Sector

Integrative Requirement **3-5**

Must be completed no earlier than the Junior Year.

i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or

ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).

CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 234	Reinforcement Learning
CS 238	Decision Making under Uncertainty
CS 239	Advanced Topics in Sequential Decision Making
CS 261	Optimization and Algorithmic Paradigms
CS 325B	Data for Sustainable Development
PHIL 184	Topics in Epistemology
PHIL 184B	Formal Epistemology
PHIL 187	Philosophy of Action
PHIL 359	Topics in Logic, Information and Agency
PSYCH 154	Judgment and Decision-Making
PSYCH 160	Seminar on Emotion
PSYCH 223	Social Norms
PSYCH 232	Brain and Decision
PSYCH 254	Affective Neuroscience
SYMSYS 201	Digital Technology, Society, and Democracy
SYMSYS 203	Cognitive Science Perspectives on Humanity and Well-Being

Contingent Electives **3-5**

If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

ECON 102D	Econometric Methods for Public Policy Analysis and Business Decision-Making
ECON 151	Tackling Big Questions Using Social Data Science
MS&E 33N	How We Decide: Social Choice in the Age of Algorithms

Additional courses may be added here in the future.

Total Units **15-25**

Human-Centered Artificial Intelligence Concentration

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/human-centered-artificial-intelligence-hai-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Human-Centered Artificial Intelligence. All courses must be taken for 3 units of more.

Digital Technology Ethics and Policy **3-5**

Select one of the following:

CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change

Human Impact **3-5**

One course aimed at understanding how AI interacts with humans as well as with vital social structures and institutions. For example:

AFRICAAM 200N	Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures
ANTHRO 132D	Thinking Technology: Anthropological Perspectives
ANTHRO 134A	Whose Ghost in the Machine? Cultures, Politics and Morals of Artificial Intelligence
COMM 120W	The Rise of Digital Culture
COMM 124	Truth, Trust, and Tech

COMM 145	Personality and Digital Media
COMM 154	The Politics of Algorithms
COMM 172	Media Psychology
COMM 184	Race and Media
COMM 322	Advanced Studies in Behavior and Social Media
CS 209	Law, Order, & Algorithms
ENGLISH 106A	A.I.-Activism-Art
INTLPOL 221	Politics of Data: Algorithmic Culture, Big Data, and Information Waste
LAW 4039	Regulating Artificial Intelligence
LAW 4045	Digital Technology and Law: Foundations
LAW 4050	AI and Rule of Law: A Global Perspective
MS&E 184	Future of Work: Issues in Organizational Learning and Design
MS&E 234	Data Privacy and Ethics
NBIO 101	Social and Ethical Issues in the Neurosciences
PHIL 174B	Universal Basic Income: the philosophy behind the proposal
SOC 124	Gender and Technology
STS 1	The Public Life of Science and Technology
SYMSYS 201	Digital Technology, Society, and Democracy

Augmenting Human Capabilities **3-5**

One course aimed at developing new human-centered design methods and tools so that AI agents and applications are designed and created with the ability to communicate with, collaborate with, and augment people more effectively, and to make their work better and more enjoyable. For example:

BIOMEDIN 220	Artificial Intelligence in Healthcare
COMM 166	Virtual People
COMM 177B	Big Local Journalism: a project-based class
COMM 326	Advanced Topics in Human Virtual Representation
CS 147	Introduction to Human-Computer Interaction Design
CS 152	Trust and Safety Engineering
CS 184	Bridging Policy and Tech Through Design
CS 247A	Design for Artificial Intelligence
CS 247B	Design for Behavior Change
CS 247I	Design for Understanding
CS 247S	Service Design
CS 278	Social Computing
CS 325B	Data for Sustainable Development
CS 335	Fair, Accountable, and Transparent (FAccT) Deep Learning
CS 372	Artificial Intelligence for Disease Diagnosis and Information Recommendations
CS 448B	Data Visualization
ECON 136	Market Design
EDUC 211	Beyond Bits and Atoms - Lab
EDUC 236	Beyond Bits and Atoms: Designing Technological Tools
EDUC 266	Educational Neuroscience
EDUC 281	Technology for Learners
EDUC 302	Behavior Design
GSBGEN 596	Designing AI to Cultivate Human Well-Being
HUMBIO 135S	Body Hacking: Applied Topics in Exercise Physiology
HUMBIO 151R	Biology, Health and Big Data
MUSIC 220C	Research Seminar in Computer-Generated Music
PSYC 124	Brain Plasticity
PSYC 223B	Topics in Neurodiversity: Design Thinking Approaches
PSYC 240	Designing for the 2 Billion: Leading Innovation in Mental Health
PSYCH 24N	Neuroforecasting
PSYCH 273	Changing Mindsets and Contexts: How to Create Authentic, Lasting Improvement
PSYCH 290	Natural Language Processing & Text-Based Machine Learning in the Social Sciences
SOC 167VP	Justice + Poverty Innovation:Create new solutions for people to navigate housing, medical, & debt
SYMSYS 245	Cognition in Interaction Design

Intelligence **3-5**

One course aimed at developing machine intelligence that understands human language, emotions, intentions, behaviors, and interactions at multiple scales. One of the following:

CS 129	Applied Machine Learning
CS 131	Computer Vision: Foundations and Applications
CS 221	Artificial Intelligence: Principles and Techniques
CS 223A	Introduction to Robotics
CS 224N	Natural Language Processing with Deep Learning
CS 229	Machine Learning
CS 230	Deep Learning
LINGUIST 188	Natural Language Understanding
LINGUIST 285	Spoken Language Processing

Integrative Requirement **3-5**

Must be completed no earlier than the Junior Year.

i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or

ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).

COMM 166	Virtual People
COMM 172	Media Psychology
CS 206	Exploring Computational Journalism
CS 221	Artificial Intelligence: Principles and Techniques
CS 223A	Introduction to Robotics
CS 229	Machine Learning
CS 230	Deep Learning
CS 238	Decision Making under Uncertainty
CS 247I	Design for Understanding
CS 278	Social Computing
CS 325B	Data for Sustainable Development
CS 335	Fair, Accountable, and Transparent (FAccT) Deep Learning
CS 372	Artificial Intelligence for Disease Diagnosis and Information Recommendations
CS 379C	Computational Models of the Neocortex

EDUC 234	Curiosity in Artificial Intelligence
EDUC 266	Educational Neuroscience
EDUC 281	Technology for Learners
LINGUIST 180	From Languages to Information
LINGUIST 285	Spoken Language Processing
PHIL 167D	Philosophy of Neuroscience
PHIL 168M	Biological Individuality
PHIL 359	Topics in Logic, Information and Agency
PHIL 360	Grad Seminar: Philosophy of Neuroscience
PHIL 368A	Topics in Neuroscience
PHIL 385D	Advanced Topics in Philosophy of Language
PHIL 386	Truth as the aim of belief and inquiry
PSYC 124	Brain Plasticity
PSYC 223B	Topics in Neurodiversity: Design Thinking Approaches
PSYC 240	Designing for the 2 Billion: Leading Innovation in Mental Health
PSYCH 121	Ion Transport and Intracellular Messengers
PSYCH 145	Seminar on Infant Development
PSYCH 154	Judgment and Decision-Making
PSYCH 162	Brain Networks
PSYCH 164	Brain decoding
PSYCH 169	Advanced Seminar on Memory
PSYCH 202	Cognitive Neuroscience
PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 209	Neural Network Models of Cognition
PSYCH 232	Brain and Decision
PSYCH 242	Theoretical Neuroscience
PSYCH 247	Topics in Natural and Artificial Intelligence
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience
PSYCH 254	Affective Neuroscience
PSYCH 273	Changing Mindsets and Contexts: How to Create Authentic, Lasting Improvement
PSYCH 293	What makes a good explanation? Psychological and philosophical perspectives
STATS 216	Introduction to Statistical Learning
STATS 220	Machine Learning Methods for Neural Data Analysis
STATS 315B	Modern Applied Statistics: Data Mining
SYMSYS 202	Theories of Consciousness
SYMSYS 205	The Philosophy and Science of Perception
SYMSYS 245	Cognition in Interaction Design
Contingent Electives	
If requirements 1-4 are fulfilled partly from courses taken for Core requirements, then additional approved Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:	
PHIL 20N	Philosophy of Artificial Intelligence
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
Total Units	**15-25**

Human-Computer Interaction

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/human-computer-interaction-hci-concentration/).

Symbolic Systems majors must complete the following requirements in addition to the Core requirements to fulfill the Concentration in Human-Computer Interaction. All courses must be taken for 3 units of more.

Students in this Concentration are urged to take CS 107 or CS 107E, either for the Post-CS 106B Computation Core requirement, or as a Contingent Elective, and prior to completing requirement 4 below.		
Introduction to HCI		**3-5**
CS 147	Introduction to Human-Computer Interaction Design	
Design Methods		**3-5**
Post-CS 147 courses teaching fundamentals of the human-centered design process, featuring a major project component (including any course in the CS 247 series). One of the following:		
CS 194H	User Interface Design Project	
CS 247A	Design for Artificial Intelligence	
CS 247B	Design for Behavior Change	
CS 247G	Introduction to Game Design	
CS 247S	Service Design	
HCI Theory		**3-5**
Courses teaching design, behavioral, and critical theories that underlie the design process. One of the following:		
COMM 145	Personality and Digital Media	
COMM 166	Virtual People	
COMM 172	Media Psychology	
CS 347	Human-Computer Interaction: Foundations and Frontiers	
ME 341	Design Experiments	
User Interface Implementation		**3-5**
An advanced course in programming for user interfaces. One of the following:		
CS 108	Object-Oriented Systems Design	
CS 142	Web Applications	
Integrative Requirement		**3-5**
Must be completed no earlier than the Junior Year.		
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
COMM 120W	The Rise of Digital Culture	
COMM 145	Personality and Digital Media	
COMM 166	Virtual People	
COMM 172	Media Psychology	
COMM 322	Advanced Studies in Behavior and Social Media	
COMM 324	Language and Technology	
COMM 326	Advanced Topics in Human Virtual Representation	
CS 181	Computers, Ethics, and Public Policy	
CS 182	Ethics, Public Policy, and Technological Change	

CS 206	Exploring Computational Journalism
CS 247I	Design for Understanding
CS 278	Social Computing
CS 347	Human-Computer Interaction: Foundations and Frontiers
CS 377E	Designing Solutions to Global Grand Challenges
CS 377G	Designing Serious Games
CS 377Q	Designing for Accessibility
CS 377U	Understanding Users
EDUC 230	Learning Experience Design
EDUC 281	Technology for Learners
EDUC 302	Behavior Design
EDUC 342	Child Development and New Technologies
EDUC 391	Engineering Education and Online Learning
ME 115B	Product Design Methods
ME 341	Design Experiments
SYMSYS 201	Digital Technology, Society, and Democracy
SYMSYS 245	Cognition in Interaction Design
Contingent Electives	**3-5**
If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:	
Any d.school course worth 3 or more units	
ARTSTUDI 130	Interactive Art: Making it with Arduino
ARTSTUDI 142	Mixed-Media Drawing: Art & Aesthetics of Social Media
ARTSTUDI 160	Intro to Digital / Physical Design
ARTSTUDI 168	Data as Material
ARTSTUDI 179	Digital Art I
COMM 1	Introduction to Communication
COMM 1B	Media, Culture, and Society
COMM 106	Communication Research Methods
COMM 124	Truth, Trust, and Tech
COMM 154	The Politics of Algorithms
COMM 230A	Digital Civil Society
COMM 230B	Digital Civil Society
COMM 230C	Digital Civil Society
COMM 314	Ethnographic Methods
CS 80Q	Race and Gender in Silicon Valley
EDUC 191	Introduction to Survey Research
EDUC 423	Introduction to Data Science
ENGR 150	Data Challenge Lab
HUMBIO 82A	Qualitative Research Methodology
ME 101	Visual Thinking
ME 105	Designing for Impact
ME 115A	Introduction to Human Values in Design
ME 203	Design and Manufacturing
ME 210	Introduction to Mechatronics
ME 216A	Advanced Product Design: Needfinding
MED 147	Methods in Community Assessment, Evaluation, and Research
MED 275B	Biodesign Fundamentals
MS&E 125	Introduction to Applied Statistics
MS&E 135	Networks
MS&E 234	Data Privacy and Ethics
PHIL 71H	Introduction to Aesthetics
PSYCH 10	Introduction to Statistical Methods: Precalculus
SOC 167VP	Justice + Poverty Innovation:Create new solutions for people to navigate housing, medical, & debt
STATS 101	Data Science 101
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis
STATS 203	Introduction to Regression Models and Analysis of Variance
STATS 263	Design of Experiments
STS 1	The Public Life of Science and Technology
Total Units	**15-25**

Learning

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/learning-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Learning. All courses must be taken for 3 units of more.

Students in the Learning Concentration must complete four courses from areas 1-3 below with at least one from each area, plus one course from area 4. If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses (see area 5) must be completed to total 5 courses beyond those that are taken for the Core.	
Computational Learning	**3-5**
CS 205L	Continuous Mathematical Methods with an Emphasis on Machine Learning
CS 221	Artificial Intelligence: Principles and Techniques

Contingent Electives		**3-5**
If any of requirements 1-3 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:		
PSYCH 10	Introduction to Statistical Methods: Precalculus	
STATS 191	Introduction to Applied Statistics	
STATS 200	Introduction to Statistical Inference	
Additional courses may be added here in the future.		
Total Units		**15-25**

Mathematical Foundations

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/mathematical-foundations-mafo-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Mathematical Foundations. All courses must be taken for 3 units of more.

Multivariate Calculus and Linear Algebra		**10**
One of the following two-course sequences (Note: The earlier courses in each series are included in the Core Preparations requirements. Students in this Concentration who began in the CME 100 series should switch to the MATH 52-MATH 53 series for the Concentration.)		
MATH 52 and MATH 53		
MATH 63CM and MATH 62CM		
MATH 62DM and MATH 63DM		
Matrix Theory and Applications		**3-5**
Select one of the following:		
CS 205L	Continuous Mathematical Methods with an Emphasis on Machine Learning	
MATH 113	Linear Algebra and Matrix Theory	
Applied Mathematics and Statistics		**3-5**
Select one of the following:		
CME 107	Introduction to Machine Learning	
CME 263	Introduction to Linear Dynamical Systems	
CS 229M	Machine Learning Theory	
EE 263	Introduction to Linear Dynamical Systems	
EE 276	Information Theory	
MATH 108	Introduction to Combinatorics and Its Applications	
MATH 110	Applied Number Theory and Field Theory	
MATH 136	Stochastic Processes	
MATH 158	Basic Probability and Stochastic Processes with Engineering Applications	
MATH 159	Discrete Probabilistic Methods	
MS&E 111	Introduction to Optimization	
MS&E 111X	Introduction to Optimization (Accelerated)	
MS&E 121	Introduction to Stochastic Modeling	
MS&E 201	Dynamic Systems	
MS&E 213	Introduction to Optimization Theory	
MS&E 221	Stochastic Modeling	
PSYCH 253	Advanced Statistical Modeling	
STATS 110	Statistical Methods in Engineering and the Physical Sciences	
STATS 191	Introduction to Applied Statistics	
STATS 200	Introduction to Statistical Inference	
STATS 202	Data Mining and Analysis	
STATS 216	Introduction to Statistical Learning

STATS 220	Machine Learning Methods for Neural Data Analysis	

Contingent Electives

If any of requirements 1-3 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

BIOMEDIN 219	Mathematical Models and Medical Decisions
CS 250	Algebraic Error Correcting Codes
CS 254B	Computational Complexity II
CS 263	Counting and Sampling
EE 377	Information Theory and Statistics
MATH 56	Proofs and Modern Mathematics
MATH 107	Graph Theory
MATH 115	Functions of a Real Variable
MATH 120	Groups and Rings
MATH 144	Introduction to Topology and Geometry
MATH 152	Elementary Theory of Numbers
MATH 171	Fundamental Concepts of Analysis
PHIL 3N	Randomness: Computational and Philosophical Approaches
STATS 203	Introduction to Regression Models and Analysis of Variance
STATS 206	Applied Multivariate Analysis
STATS 218	Introduction to Stochastic Processes II
STATS 221	Random Processes on Graphs and Lattices
Total Units	**15-25**

Media and Communication Concentration

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/media-and-communication-mediacomm-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Media and Communication. All courses must be taken for 3 units of more

Introduction		**3-5**
COMM 1	Introduction to Communication	
Statistical and Data Analysis Methods		**3-5**

Select one of the following:

ANTHRO 116	Data Analysis for Quantitative Research
COMM 173E	Data Challenge Lab
CS 229	Machine Learning
MS&E 125	Introduction to Applied Statistics
MS&E 226	Fundamentals of Data Science: Prediction, Inference, Causality
PSYCH 253	Advanced Statistical Modeling
SOC 180B	Introduction to Data Analysis
STATS 60	Introduction to Statistical Methods: Precalculus
STATS 101	Data Science 101
STATS 110	Statistical Methods in Engineering and the Physical Sciences
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
STATS 202	Data Mining and Analysis

Research Methods **3-5**

A course on empirical and computational methods that are commonly used for research on media and communication. One of the following:

COMM 106	Communication Research Methods
CS 142	Web Applications
CS 147	Introduction to Human-Computer Interaction Design
CS 347	Human-Computer Interaction: Foundations and Frontiers
CS 448B	Data Visualization
CSRE 433	Intersectional Qualitative Approaches
EDUC 143	Introduction to Data Science
EDUC 200B	Introduction to Qualitative Research Methods
EDUC 211	Beyond Bits and Atoms - Lab
EDUC 236	Beyond Bits and Atoms: Designing Technological Tools
HUMBIO 82A	Qualitative Research Methodology
ME 341	Design Experiments
MS&E 135	Networks
MS&E 231	Introduction to Computational Social Science
MS&E 348	Optimization of Uncertainty and Applications in Finance
PHIL 60	Introduction to Philosophy of Science
POLISCI 150A	Data Science for Politics
POLISCI 150C	Causal Inference for Social Science
PSYCH 251	Experimental Methods
SOC 10	Introduction to Computational Social Science
SOC 180A	Foundations of Social Research
SOC 194	Computational Undergraduate Research
SOC 369	Social Network Methods
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis
STS 191W	Doing STS: Introduction to Research

Effects, Ethics, and Policy **3-5**

A course on the effects of, and possible responses to, digital technology, media, and communication. For example, one of the following:

AFRICAAM 200N	Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures
ANTHRO 132D	Thinking Technology: Anthropological Perspectives
ANTHRO 134A	Whose Ghost in the Machine? Cultures, Politics and Morals of Artificial Intelligence
COMM 1B	Media, Culture, and Society
COMM 108	Media Processes and Effects
COMM 120W	The Rise of Digital Culture
COMM 124	Truth, Trust, and Tech
COMM 125	Perspectives on American Journalism
COMM 135	Deliberative Democracy and its Critics
COMM 145	Personality and Digital Media
COMM 153B	Free Speech, Democracy and the Internet
COMM 154	The Politics of Algorithms
COMM 162	Campaigns, Voting, Media, and Elections
COMM 164	The Psychology of Communication About Politics in America
COMM 166	Virtual People

COMM 172	Media Psychology
COMM 180	Ethics, Public Policy, and Technological Change
COMM 184	Race and Media
COMM 186W	Media, Technology, and the Body
COMM 230A	Digital Civil Society
COMM 322	Advanced Studies in Behavior and Social Media
CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 209	Law, Order, & Algorithms
ECON 46	Networks and Human Behavior
ECON 47	Media Markets and Social Good
ENGLISH 106A	A.I.-Activism-Art
INTLPOL 221	Politics of Data: Algorithmic Culture, Big Data, and Information Waste
LAW 4039	Regulating Artificial Intelligence
LAW 4045	Digital Technology and Law: Foundations
LAW 4050	AI and Rule of Law: A Global Perspective
LINGUIST 156	Language, Gender, & Sexuality
MS&E 135	Networks
MS&E 184	Future of Work: Issues in Organizational Learning and Design
MS&E 234	Data Privacy and Ethics
NBIO 101	Social and Ethical Issues in the Neurosciences
PHIL 174B	Universal Basic Income: the philosophy behind the proposal
POLISCI 223A	Public Opinion and American Democracy
POLISCI 227C	Money in Politics
PSYC 86Q	Psychology of Xenophobia
PSYCH 103	Intergroup Communication
SOC 31N	Social Networks
SOC 124	Gender and Technology
SOC 126	Introduction to Social Networks
SOC 141P	Public Interest Tech: Case Studies
STS 1	The Public Life of Science and Technology
SYMSYS 201	Digital Technology, Society, and Democracy
Integrative Requirement	**3-5**
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or	
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).	
COMM 164	The Psychology of Communication About Politics in America
COMM 166	Virtual People
COMM 172	Media Psychology
COMM 176	Advanced Digital Media Journalism
COMM 177B	Big Local Journalism: a project-based class
COMM 177P	Programming in Journalism
COMM 177T	Building News Applications
COMM 322	Advanced Studies in Behavior and Social Media
COMM 324	Language and Technology
COMM 326	Advanced Topics in Human Virtual Representation
CS 181	Computers, Ethics, and Public Policy
CS 182	Ethics, Public Policy, and Technological Change
CS 206	Exploring Computational Journalism
CS 224W	Machine Learning with Graphs
CS 278	Social Computing
LINGUIST 134A	The Structure of Discourse: Theory and Applications
LINGUIST 150	Language and Society
SOC 154	The Politics of Algorithms
SYMSYS 201	Digital Technology, Society, and Democracy
Contingent Electives	**3-5**
If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:	
ANTHRO 166A	Semiotics for Ethnography
EDUC 260B	Advanced Statistical Methods for Observational Studies
HUMBIO 82B	Advanced Data Analysis in Qualitative Research
LINGUIST 1	Introduction to Linguistics
LINGUIST 54N	Social Bias and Earwitness Memory
LINGUIST 127	Linguistic Meaning and Legal Interpretation
LINGUIST 234	The Structure of Discourse: Theory and Applications
LINGUIST 258	Analysis of Variation
LINGUIST 278	Programming for Linguists
LINGUIST 285	Spoken Language Processing
PSYCH 80	Introduction to Personality and Affective Science
PSYCH 155	Introduction to Comparative Studies in Race and Ethnicity
PSYCH 241	Psychometrics and automated experiment design
STATS 202	Data Mining and Analysis
STATS 203	Introduction to Regression Models and Analysis of Variance
Total Units	**15-25**

Natural Language

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/natural-language-nl-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Natural Language. All courses must be taken for 3 units of more.

Students in the Natural Language Concentration must take four courses from at least 3 of areas 1-7, plus a course from area 8. If any of requirements 1-7 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses (see area 9) must be completed to total 5 courses beyond those that are taken for the Core.	
Mathematical/Computational Foundations	**3-5**
CS 154	Introduction to the Theory of Computation

CS 221	Artificial Intelligence: Principles and Techniques

SYMSYS 207	Conceptual Issues in Cognitive Science
Contingent Electives	**3-5**

If any of requirements 1-7 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

PSYCH 10	Introduction to Statistical Methods: Precalculus
STATS 191	Introduction to Applied Statistics
STATS 200	Introduction to Statistical Inference
Additional courses may be added here in the future.	
Total Units	**15-25**

Neurosciences

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/neurosciences-neuro-concentration/).

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Neurosciences. All courses must be taken for 3 units of more.

Students in the Neurosciences Concentration must take a total of five courses. At least two of the five courses must be from the first two areas, and at least one must come from area 7. If any of the courses listed under areas 1-6 are taken for Core requirements, then additional approved Contingent Elective courses (see area 8) must be completed to total 5 courses beyond those that are taken for the Core. Area 9 (Recommended Add-ons) consists of one- and two-unit courses that supplement areas 1-8. Add-on courses do not count toward the 5-course requirement for the Concentration.

Basic Neuroscience		**3-5**
BIO 84	Physiology	
BIO 86	Cell Biology	
BIO 150	Human Behavioral Biology	
BIO 151	Mechanisms of Neuron Death	
BIO 153	Cellular Neuroscience: Cell Signaling and Behavior	
BIO 154	Molecular and Cellular Neurobiology

PSYCH 204	Computation and Cognition: The Probabilistic Approach
PSYCH 204A	Human Neuroimaging Methods
PSYCH 204B	Computational Neuroimaging
PSYCH 209	Neural Network Models of Cognition
PSYCH 232	Brain and Decision
PSYCH 242	Theoretical Neuroscience
PSYCH 247	Topics in Natural and Artificial Intelligence
PSYCH 249	Large-Scale Neural Network Modeling for Neuroscience
PSYCH 254	Affective Neuroscience
STATS 220	Machine Learning Methods for Neural Data Analysis
SYMSYS 202	Theories of Consciousness
SYMSYS 205	The Philosophy and Science of Perception
SYMSYS 207	Conceptual Issues in Cognitive Science
SYMSYS 245	Cognition in Interaction Design

Contingent Electives **3-5**

If any of the courses listed under areas 1-6 are taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core. These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:

Additional courses may be added here in the future.

Recommended Add-ons **3-5**

One- and two-unit courses that supplement the offerings above. These courses are recommended, but do not count toward the 5-course requirement for the Concentration:

NSUR 239	NeuroTech Training Seminar
NSUR 249	Experimental Immersion in Neuroscience

Total Units **15-25**

Philosophical Foundations

See also the Symbolic Systems website (https://symsys.stanford.edu/undergraduatesconcentrations/philosophical-foundations-concentration/).

Units

Symbolic Systems majors completing the new Core requirements effective for 2020-2021 must complete the following requirements to qualify for a Concentration in Philosophical Foundations. All courses must be taken for 3 units of more.

Philosophy of Mind and Language **3-5**

One course from the PHIL 180-series:

PHIL 180	Metaphysics
PHIL 180A	Realism, Anti-Realism, Irrealism, Quasi-Realism
PHIL 181	Philosophy of Language
PHIL 182	Advanced Philosophy of Language
PHIL 182A	Naturalizing Representation
PHIL 182H	Truth
PHIL 183	Self-knowledge and Metacognition
PHIL 184	Topics in Epistemology
PHIL 184B	Formal Epistemology
PHIL 184M	Topics in the Theory of Justification
PHIL 185	Special Topics in Epistemology: Testimony in science and everyday life
PHIL 185W	Metaontology
PHIL 186	Philosophy of Mind
PHIL 187	Philosophy of Action
PHIL 188W	Paradoxes
PHIL 189G	Fine-Tuning Arguments for God's Existence

Ethics, Historical, and Political Philosophy **3-5**

Courses must be numbered 100 or above.

Select one of the following:

PHIL 102	Modern Philosophy, Descartes to Kant
PHIL 107B	Plato's Later Metaphysics and Epistemology
PHIL 172	History of Modern Moral Philosophy
PHIL 173B	Metaethics
PHIL 175	Philosophy of Law
PHIL 194P	The Meaning of Life

Logic **3-5**

Select one of the following:

CS 154	Introduction to the Theory of Computation	
PHIL 152	Computability and Logic	
PHIL 154	Modal Logic	
PHIL 359	Topics in Logic, Information and Agency	
Philosophy of Science		**3-5**
Select one of the following:		
PHIL 20N	Philosophy of Artificial Intelligence	
PHIL 162	Philosophy of Mathematics	
PHIL 164	Central Topics in the Philosophy of Science: Theory and Evidence	
PHIL 165	Philosophy of Physics: Space and Time	
PHIL 167D	Philosophy of Neuroscience	
PHIL 169	Evolution of the Social Contract	
SYMSYS 207	Conceptual Issues in Cognitive Science	
Integrative Requirement		
Must be completed no earlier than the Junior Year.		
i. Any of the Standard Options for all Concentrations specified under the Core Capstone requirement, or		
ii. A Concentration-Specific Integrative Course: A course that integrates the themes of the Concentration with the Core requirements. Select one of the following (with more options to be added as they are approved -- some options may be removed if they are included in the list of SYMSYS 195* project courses, in order to avoid redundancy with the Standard Options).		
CS 181	Computers, Ethics, and Public Policy	
CS 182	Ethics, Public Policy, and Technological Change	
NBIO 101	Social and Ethical Issues in the Neurosciences	
PHIL 134A	Phenomenology: Animals	
PHIL 162	Philosophy of Mathematics	
PHIL 167D	Philosophy of Neuroscience	
PHIL 169	Evolution of the Social Contract	
PHIL 184B	Formal Epistemology	
PHIL 194D	Capstone Seminar: Artificial Intelligence	
PHIL 194Y	Capstone seminar: Common Sense Philosophy	
PHIL 350	What makes a good explanation? Psychological and philosophical perspectives	
PHIL 359	Topics in Logic, Information and Agency	
PHIL 360	Grad Seminar: Philosophy of Neuroscience	
PHIL 368A	Topics in Neuroscience	
PHIL 385B	Topics in Metaphysics and Epistemology: Situations and Attitudes	
PSYCH 160	Seminar on Emotion	
SYMSYS 202	Theories of Consciousness	
SYMSYS 205	The Philosophy and Science of Perception	
SYMSYS 207	Conceptual Issues in Cognitive Science	
Contingent Electives		
If any of requirements 1-4 are fulfilled with courses taken for Core requirements, then additional approved Contingent Elective courses must be completed to total 5 courses beyond those that are taken for the Core: These electives can be one or more courses from any of the areas above, or which are approved for a Core requirement that the student has fulfilled with a different course, or any of the following:		
Additional courses may be added here in the future.		
Total Units		**15-25**

Individually Designed Concentrations (IDCs)

Individually Designed Concentrations (IDCs) consist of five courses in a coherent subject area related to symbolic systems. This relationship may be established through inclusion in an IDC of two or more courses that connect the proposed concentration to the core, i.e. courses that (a) directly apply disciplines included in the core and (b) are related by topic or methodology to the other courses in the proposed concentration.

Course selection is to be made in consultation with the student's adviser and is subject to approval by the adviser, the Associate Director, and the Director. For examples of IDCs completed by past SSP students, consult the list of alumni and apply the filter "Individually Designed Concentration".

Approval of an IDC must take place no less than two full quarters before a student plans to graduate, e.g. prior to the first day of Winter Quarter of the senior year if a student intends to graduate in June of that year. Failure to obtain approval by the required date will necessitate either completing the requirements for one of the suggested concentrations, or delaying graduation to the end of the second full quarter following approval of an IDC.

To get a proposed IDC approved, send an email message to symsys-directors at lists.stanford.edu, cc'd to your prospective concentration adviser, stating that the adviser has approved your proposal, and giving a title, one-paragraph description, and course plan for your proposed concentration.

Additional Information

Undergraduate Research

The program encourages all SSP majors to gain experience in directed research by participating in faculty research projects or by pursuing independent study. In addition to the Symbolic Systems Honors Program (see below), the following avenues are offered.

Summer Internships: students work on SSP-related faculty research projects. Application procedures are announced in the Winter Quarter for SSP majors.

Research Assistantships: other opportunities to work on faculty research projects are typically announced to SSP majors as they arise during the academic year.

Independent Study: under faculty supervision. For course credit, students should enroll in SYMSYS 196 Independent Study.

Contact SSP for more information on any of these possibilities, or see the Symbolic Systems (http://symsys.stanford.edu) web site. In addition, see the Undergraduate Advising and Research (https://undergrad.stanford.edu/opportunities/research.html) web site for information on UAR grants and scholarships supporting student research projects at all levels.

Honors Program

Seniors in SSP may apply for admission to the Symbolic Systems honors program prior to the beginning of their final year of study. Students who are accepted into the honors program can graduate with honors by completing an honors thesis under the supervision of a faculty member. Course credit for the honors project may be obtained by registering for SYMSYS 190 Senior Honors Tutorial any quarter while a student is working on an honors project. SYMSYS 191 Senior Honors Seminar, is recommended for honors students during the senior year. Contact SSP or visit the program's web site for more information on the honors program, including deadlines and policies.

return to top of page (p. 2155)

Minor in Symbolic Systems

Students may minor in Symbolic Systems by completing either Option 1 or Option 2. For additional information see the Symbolic Systems minors web site (http://symsys.stanford.edu/viewing/htmldocument/13635/).

Degree Requirements

Option 1

		Units
One course in each of the following core areas (please note that several of these courses have prerequisites):		
a. Cognition		**3-4**
Select one of the following:		
SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	
PSYCH 45	Introduction to Learning and Memory	
PSYCH 50	Introduction to Cognitive Neuroscience	
b. Logic and Computation		**3-5**
Select one of the following:		
PHIL 150	Mathematical Logic	
PHIL 151	Metalogic	
CS 103	Mathematical Foundations of Computing	
c. Computer Programming		**3-5**
Select one of the following:		
CS 106B	Programming Abstractions	
CS 106X	Programming Abstractions	
CS 107	Computer Organization and Systems	
d. Philosophical Foundations		**4-5**
Select one of the following:		
SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	
PHIL 80	Mind, Matter, and Meaning	
e. Linguistic Theory		**3-4**
Select one of the following:		
LINGUIST 105	Phonetics	
LINGUIST 110	Introduction to Phonology	
LINGUIST 120	Introduction to Syntax	
LINGUIST 121A	The Syntax of English	
LINGUIST 121B	Crosslinguistic Syntax	
LINGUIST 130A	Introduction to Semantics and Pragmatics	
LINGUIST 130B	Introduction to Lexical Semantics	
f. Computation and Cognition		**3-4**
Select one of the following:		
APPPHYS 293	Theoretical Neuroscience	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 131	Computer Vision: Foundations and Applications	
LINGUIST 180	From Languages to Information	
LINGUIST 182	(no longer offered)	
NENS 220	Computational Neuroscience	
PSYCH 109	An introduction to computation and cognition	
PSYCH 204	Computation and Cognition: The Probabilistic Approach	
PSYCH 209	Neural Network Models of Cognition	
Total Units		**19**

[1] SYMSYS 1 Minds and Machines (formerly SYMSYS 100) may not be counted for both areas 'a' and 'd'.

Option 2

Introduction		**4**
SYMSYS 1	Minds and Machines (formerly SYMSYS 100)	4
Interdisciplinary Concentration		**15**
An interdisciplinary SSP concentration listed on the SSP web site. To qualify, the selection of courses used for the minor must be interdisciplinary; it must either include courses from at least three departments, or include more than one course from each of two departments.		
Total Units		**19**

Coterminal Master's Degrees in Symbolic Systems

The Symbolic Systems M.S. Program admits a handful of coterminal students each year. Coterminal students usually complete the program in one academic year.

Applications for Coterminal admission of active Stanford undergraduates are reviewed in the Winter and Spring Quarters. For more details, see the Coterm admissions information (https://symsys.stanford.edu/graduatesms-admissions/coterminal-admissions/) on the Symbolic Systems Program website. Admission to the program as a coterminal student is subject to the policies and deadlines described in the "Coterminal Bachelor's and Master's Degrees (https://exploredegrees.stanford.edu/cotermdegrees/)" section of this bulletin. The GRE is not required for coterminal applicants to the Symbolic Systems M.S. program.

Many SSP majors also complete coterminal M.S. or M.A. degrees in affiliated departments. In addition to the Symbolic Systems M.S. program, the Department of Philosophy offers a Special Program in Symbolic Systems track for interdisciplinary graduate level work leading to the Master of Arts in Philosophy (http://www.stanford.edu/dept/registrar/bulletin/6567.htm).

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Master of Science in Symbolic Systems

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

The M.S. degree in Symbolic Systems is designed to be completed in the equivalent of one academic year by coterminal students or returning students who already have a B.S. degree in Symbolic Systems, and in two years or less by other students depending upon level of preparation. Admission is competitive, providing a limited number of students with the opportunity to pursue course and project work in consultation with a faculty adviser who is affiliated with the Symbolic Systems Program. The faculty adviser may impose requirements beyond those described here.

Admission to the program as a coterminal student is subject to the policies and deadlines described in the "Coterminal Bachelor's and Master's Degrees (p. 56)" section of this bulletin. Applicants to the M.S. program are reviewed each Winter Quarter. Information on deadlines, procedures for applying, and degree requirements are available from the program's student services coordinator in the Linguistics Department office (460-127E) and at the Symbolic Systems (http://symsys.stanford.edu/viewing/htmldocument/13623/) web site.

Note, the GRE is required for external applicants.

Symbolic Systems also offers a Joint Degree with Law School (M.S./J.D.).

Director of Graduate Studies: Hyowon Gweon

Degree Requirements

A candidate for the M.S. degree in Symbolic Systems must complete a program of 45 units. All courses must be 100-level and above. At least 36 of these must be graded units, passed with an average grade of 3.0 (B) or better, and any course taken as part of the 45 unit program must be taken for a letter grade unless the course is offered S/NC only. None of the 45 units to be counted toward the M.S. degree may include units counted toward an undergraduate degree at Stanford or elsewhere. Course requirements for the M.S. degree in Symbolic Systems may be waived after a review by the program office. Waivers are granted at the discretion of the program, and only if evidence is provided that similar or more advanced courses have been taken and passed with a letter grade of B or its equivalent, either at Stanford or another institution, and as part of another degree program which the student has either completed or is pursuing in parallel with the Symbolic Systems M.S. degree. Course requirements that are waived rather than fulfilled by courses taken at Stanford may not be counted toward the 45 units required for the Symbolic Systems M.S. degree. For additional information, see the Symbolic Systems web site (http://symsys.stanford.edu/graduate_programs/).

Each candidate for the M.S. degree must fulfill the following requirements:

1. Submission to the Symbolic Systems Program office and approval of the following pre-project research documents:
   a. Project Area Statement, endorsed with a commitment from a student's prospective project adviser no later than May 1 of the academic year prior to the expected graduation year; and
   b. Qualifying Research Paper due no later than the end of the Summer Quarter prior to the expected graduation year.
2. Completion of a coherent plan of study, to be approved by the Program Director, Director of Graduate Studies, or Associate Director, in consultation with the student's primary adviser (for students with an approved Project Area Statement), and designed to support a student's project as well as the core course requirements for the M.S. degree (requirements 3 and 4 below). An initial plan of study should be delineated on the Program Proposal Form prior to the end of the student's first quarter of study, as required by the University. The final version of the Program Proposal, which should specify all the courses which the student has taken and proposes in fulfillment of both the Program's and the University's course and unit requirements for the degree, is due by the end of Finals Week in the quarter prior to the student's expected graduation quarter (i.e. end of Winter Quarter for a student graduating in the Spring).
3. Completion of the Master's Breadth Requirements. The Program Proposal must include courses taken for 3 units or more each that are more advanced than the Symbolic Systems undergraduate core in four main skill areas: formal, empirical, computational, and philosophical; and in at least three of the following departments (based on the listing as as any cross-listing departments): Computer Science, Linguistics, Philosophy, and Psychology. Courses to fulfill the Breadth Requirements must be taken for a letter grade if available.

Acceptable courses in each of the four required skill areas are defined as follows:

a) Formal: a course in logic and computational theory beyond the level of PHIL 151 Metalogic. The courses below have been approved. Other courses may be approved if appropriate.

- PHIL 252 Computability and Logic
- PHIL 254 Modal Logic
- PHIL 356C Logic and Artificial Intelligence
- PHIL 357 Research Seminar on Logic and Cognition
- CS 154 Introduction to the Theory of Computation
- CS 157 Computational Logic
- CS 161 Design and Analysis of Algorithms
- CS 261 Optimization and Algorithmic Paradigms

b) Empirical: a course drawing on experimental or observational data or methods, beyond the level of PSYCH 55, LINGUIST 120 or 130A. The courses below are examples of those that have been approved. Other courses may be approved if appropriate.

- CS 224N Natural Language Processing with Deep Learning
- CS 224U Natural Language Understanding
- CS 229 Machine Learning
- CS 376 Research Topics in Human-Computer Interaction
- LINGUIST 230B Advanced Semantics
- NBIO 206 The Nervous System
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- PSYCH 204 Computation and Cognition: The Probabilistic Approach
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 209 Neural Network Models of Cognition
- PSYCH 251 Experimental Methods
- PSYCH 252 Statistical Methods for Behavioral and Social Sciences
- STATS 200 Introduction to Statistical Inference
- SYMSYS 245 Cognition in Interaction Design

c) Computational: a course involving programming beyond the level of CS 107. The courses below have been approved. Other courses may be approved if appropriate.

- CS 108 Object-Oriented Systems Design
- CS 110 Principles of Computer Systems
- CS 124 From Languages to Information

- CS 142 Web Applications
- CS 143 Compilers
- CS 145 Data Management and Data Systems
- CS 148 Introduction to Computer Graphics and Imaging
- CS 210A Software Project Experience with Corporate Partners
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 224N Natural Language Processing with Deep Learning
- CS 224W Machine Learning with Graphs
- CS 246 Mining Massive Data Sets

d) Philosophical: a course in the area of Philosophy of Mind/Language/Science/Epistemology or Metaphysics at the 200 level or above, certified by the instructor as worthy of graduate credit. The courses below are examples of those that have been approved. Other courses may be approved if appropriate.

- PHIL 264 Central Topics in the Philosophy of Science: Theory and Evidence
- PHIL 267D Philosophy of Neuroscience
- PHIL 281 Philosophy of Language
- PHIL 281C
- PHIL 283 Self-knowledge and Metacognition
- PHIL 286 Philosophy of Mind
- PHIL 286A Self-fashioning
- PHIL 287 Philosophy of Action
- PHIL 327 Scientific Philosophy: From Kant to Kuhn and Beyond
- PHIL 348 Evolution of Signalling
- PHIL 359 Topics in Logic, Information and Agency
- PHIL 377 Social Agency

4. Completion of three quarters of SYMSYS 291 Master's Program Seminar.

5. Completion of a substantial project appropriate to the Program Proposal, represented by the M.S. Thesis. The project and thesis normally take three quarters or more to complete, and work on the project may account for up to 15 units of a student's 45-unit program. The thesis must be read and approved for the master's degree in Symbolic Systems by two qualified readers approved by the program, at least one of whom must be a member of the academic council. A hard copy of the thesis must be submitted to the Associate Director of Symbolic Systems, including the signatures of each reader indicating approval of the thesis for the degree of Master of Science, no later than 12 noon on the day of the University Dissertation/Thesis Submission Deadline (https://studentaffairs.stanford.edu/registrar/students/dissertation-thesis/) for the quarter of a student's graduation. A digital copy must be uploaded to the Stanford Digital Repository by the same deadline. For more details, see the Master's Thesis information (https://symsys.stanford.edu/graduatesmasters-program/masters-thesis/) on the Symbolic Systems Program website.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Symbolic Systems Program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade. The program also continues to count courses passed with a' C'- letter grade or above towards the satisfaction of all core requirements, and with a 'D-' or above towards the satisfaction of concentration requirements.

Other Policies

The deadline for juniors to declare a concentration advisor has been extended to Winter Quarter. A registration hold will be placed on juniors who have not declared a concentration advisor before registration opens for Spring Quarter 2020-21.

Graduate Degree Requirements

Grading

The master's program in Symbolic Systems counts all courses taken in academic year 2020-21 with a grade of 'D-', 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade, subject to a graduate GPA requirement of 3.0 or above in the courses that constitute a master's student's 45 required units.

Graduate Advising Expectations

The Symbolic Systems Program is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program. Students are expected to meet regularly with their advisers and to keep them informed about their academic progress. Each student and their adviser should mutually agree on the frequency of these meetings when the advising relation begins and reassess their frequency at the start of every quarter.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Faculty

Director: Michael C. Frank

Director of Graduate Studies: Hyowon Gweon

Associate Director: Todd Davies

Faculty Advisory Board: Jeremy Bailenson, Michael Bernstein, Ray Briggs, Todd Davies, Judith Degen, Michael C. Frank, Noah Goodman, Hyowon Gweon, Thomas Icard, Daniel Jurafsky, Daniel Lassiter, Krista Lawlor, Christopher Manning, James McClelland, Stanley Peters, Christopher Potts, Mehran Sahami, Johan van Benthem, Thomas A. Wasow

Executive Committee: Michael Bernstein, Todd Davies, Michael C. Frank, Hyowon Gweon, Thomas Icard, Christopher Potts

Program Faculty:

Aeronautics and Astronautics: Mykel Kochenderfer (Assistant Professor)

Biology: Deborah Gordon (Professor)

Classics: Reviel Netz (Professor)

Communication: Jeremy Bailenson (Professor), Jeff Hancock (Professor), Byron Reeves (Professor), Frederick Turner (Professor)

Computer Science: Maneesh Agrawala (Professor), Michael Bernstein (Assistant Professor), Emma Brunskill (Assistant Professor), David Dill (Professor, emeritus), Chelsea Finn (Assistant Professor), Michael Genesereth (Associate Professor), Oussama Khatib (Professor), Daphne Koller (Adjunct Professor), James Landay (Professor), Jean-Claude Latombe (Professor, emeritus), Marc Levoy (Professor, emeritus), Christopher Manning (Professor), Andrew Ng (Adjunct Professor), Chris Piech (Assistant Professor), Vaughan Pratt (Professor, emeritus), Eric Roberts (Professor, emeritus), Mehran Sahami (Professor, Teaching), Yoav Shoham (Professor, emeritus), Terry Winograd (Professor, emeritus)

Economics: Muriel Niederle (Professor)

Education: Nick Haber (Assistant Professor), Raymond P. McDermott (Professor, emeritus), Roy Pea (Professor), Daniel Schwartz (Professor)

Electrical Engineering: Chelsea Finn (Assistant Professor), Krishna Shenoy (Professor), Sebastian Thrun (Adjunct Professor)

French and Italian: Jean-Pierre Dupuy (Professor)

Genetics: Russ B. Altman (Professor)

Graduate School of Business: Baba Shiv (Professor)

History: Jessica G. Riskin (Professor)

Law: Mark Lemley (Professor)

Linguistics: Arto Anttila (Associate Professor), Joan Bresnan (Professor, emerita), Eve Clark (Professor, emerita), Cleo Condoravdi (Professor Research), Judith Degen (Assistant Professor), Penelope Eckert (Professor), Vera Gribanova (Associate Professor), Boris Harizanov (Assistant Professor), Daniel Jurafsky (Professor), Ronald Kaplan (Adjunct Professor), Lauri Karttunen (Adjunct Professor), Martin Kay (Professor), Paul Kiparsky (Professor), Daniel Lassiter (Assistant Professor), Beth Levin (Professor), Christopher Manning (Professor), Stanley Peters (Professor, emeritus), Christopher Potts (Professor), Meghan Sumner (Associate Professor), Thomas A. Wasow (Professor, emeritus), Annie Zaenen (Adjunct Professor)

Management Science and Engineering: Sharad Goel (Assistant Professor), Pamela Hinds (Professor), John Ugander (Assistant Professor)

Mathematics: Persi Diaconis (Professor)

Mechanical Engineering: Sean Follmer (Assistant Professor)

Medicine: Russ B. Altman (Professor), Mark Musen (Professor)

Music: Jonathan Berger (Professor), Christopher Chafe (Professor), Eleanor Selfridge-Field (Adjunct Professor), Ge Wang (Associate Professor)

Neurobiology: William T. Newsome (Professor), Jennifer Raymond (Professor)

Philosophy: Michael Bratman (Professor), Ray Briggs (Professor), Rosa Cao (Assistant Professor), Mark Crimmins (Associate Professor), John Etchemendy (Professor), Dagfinn Føllesdal (Professor, emeritus), Thomas Icard III (Assistant Professor), Krista Lawlor (Professor), Anna-Sara Malmgren (Assistant Professor), John Perry (Professor, emeritus), Brian Skyrms (Professor), Johan van Benthem (Professor), Thomas A. Wasow (Professor, emeritus)

Psychiatry and Behavioral Sciences: Vinod Menon (Professor)

Psychology: Herbert H. Clark (Professor, emeritus), Anne Fernald (Associate Professor), Michael C. Frank (Associate Professor), Justin Gardner (Assistant Professor), Noah Goodman (Associate Professor), Kalanit Grill-Spector (Professor), Hyowon Gweon (Assistant Professor), Brian Knutson (Professor), Ellen Markman (Professor), James McClelland (Professor), Russell Poldrack (Professor), Barbara Tversky (Professor, emerita), Anthony Wagner (Professor), Brian Wandell (Professor), Daniel Yamins (Assistant Professor), Jamil Zaki (Assistant Professor)

Statistics: Persi Diaconis (Professor), Susan P. Holmes (Professor)

Symbolic Systems: Todd Davies (Associate Director), Jeff Shrager (Adjunct Professor), Paul Skokowski (Adjunct Professor)

Other Affiliates: David Barker-Plummer (CSLI Engineering Research Associate), Keith Devlin H-STAR Operation Senior Researcher), Daniel Flickinger (CSLI Research and Development Engineer), Cheryl Phillips (Lecturer in Communications)

Courses

SYMSYS 1. Minds and Machines. 4 Units.
(Formerly SYMSYS 100). An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Students must take this course before being approved to declare Symbolic Systems as a major. All students interested in studying Symbolic Systems are urged to take this course early in their student careers. The course material and presentation will be at an introductory level, without prerequisites. If you have any questions about the course, please email symsys1staff@gmail.com.
Same as: CS 24, LINGUIST 35, PHIL 99, PSYCH 35, SYMSYS 200

SYMSYS 1P. A Practical Introduction to Symbolic Systems. 2 Units.
An optional supplement to "Minds and Machines" (SYMSYS 1), aimed at prospective majors in Symbolic Systems. Students will learn from the perspectives of faculty, alums, and advanced students about how to navigate the many paths available to a student: Sym Sys versus other majors, undergraduate core options, selecting courses and a concentration, research opportunities, internships, the honors program, graduate programs, careers, and life paths.

SYMSYS 2S. Introduction to Cognitive Science. 3 Units.
Cognitive Science explores one of sciences final frontiers; the scientific study of the human mind. It is a broad interdisciplinary field that encompasses research from areas in neuroscience, psychology, philosophy, linguistics, and computer science and covers topics such as the nature of knowledge, thinking, remembering, vision, imagery, language, and consciousness. All of which we will touch upon in this survey course and is intended to give students a sampler of each discipline. This introductory class will expose students to some of the major methodologies, experimental design, neuroscientific fundamentals, and different cognitive disorders. More importantly, it will help students refine their interest to a specific field within cognitive science for future studies at their respective institutions. This 6-week summer course will require a sizable amount of required reading, not all of the readings is covered in the lectures. To extend and complement topics in this field, there is material presented in the lectures that is not in the readings.

SYMSYS 8. The Logic Group. 1-2 Unit.
If all dogs bark and Fido is a dog, it follows that Fido barks. If Clark Kent owns a car, it follows that Superman owns a car, since Clark Kent is Superman. Yet you might wonder why these statements follow from the said assumptions. Can this perhaps be explained in terms of the statements¿ meanings or their grammatical form? Will the explanation be the same in both cases, or do statements follow from assumptions for a variety of different reasons? Are there laws or principles which conclusively prove the statements from the assumptions? Can these laws be doubted, or are they self-evident?nThe Logic Group will tackle these and similar questions. You will gain a solid understanding of both propositional and predicate logic, including a deductive proof system. You will familiarise yourself with the central concepts of formal reasoning, including syntax and semantics, truth and interpretation, validity and soundness, and the concept of logical consequence. Although formal and technical, the course is accessible to all students, and all may benefit. Studying logic will improve your analytic and critical thinking skills and help you develop a more rigorous and precise writing style. Only open to students residing at Stanford House in Oxford (UK).
Same as: Oxford

SYMSYS 20Q. The Data-Driven World. 3 Units.
Recent technological advancements have enabled us to measure, record, and analyze more data than ever before. How can we effectively use this data to solve real-world problems and better understand the world around us? In this course, we will learn how computers can create a statistical model to learn from human-generated data and find patterns or make predictions. We will explore different algorithms that create a wide variety of models, each with their own pros and cons. Through R programming exercises integrated across the course, we will apply these models to many different kinds of data sourced from urban development, education, business, etc. and analyze our findings. Based on individual interest, students will choose to investigate a specific research question using domain-specific data as part of a quarter-long project. Lastly, we will discuss important ethical debates on the possible uses of data and their implications in today¿s world. By the end of the course, students will develop a technical coding skillset to investigate hypotheses in any given dataset, and be able to connect the insights they derive to larger issues of society, equity, and justice.

SYMSYS 112. Challenges for Language Systems. 3-4 Units.
Parallel exploration of philosophical and computational approaches to modeling the construction of linguistic meaning. In philosophy of language: lexical sense extension, figurative speech, the semantics/pragmatics interface, contextualism debates. In CS: natural language understanding, from formal compositional models of knowledge representation to statistical and deep learning approaches. We will develop an appreciation of the complexities of language understanding and communication; this will inform discussion of the broader prospects for Artificial Intelligence. Special attention will be paid to epistemological questions on the nature of linguistic explanation, and the relationship between theory and practice. PREREQUISITES: PHIL80; some exposure to philosophy of language and/or computational language processing is recommended.
Same as: SYMSYS 212

SYMSYS 115. Critique of Technology. 3-4 Units.
What is the character of technology? How does technology reveal aspects of human nature and social practices? How does it shape human experience and values? We will survey the history of philosophy of technology -- from ancient and enlightenment ideas, to positivist and phenomenological conceptions -- to develop a deeper understanding of diverse technological worldviews. This will prepare us to consider contemporary questions about the "ethos" of technology. Specific questions will vary depending upon the interests of participants, but may include: ethical and existential challenges posed by artificial intelligence; responsible product design in the "attention economy"; industry regulation and policy issues for information privacy; and the like. PREREQUISITES: PHIL80.

SYMSYS 122. Artificial Intelligence: Philosophy, Ethics, & Impact. 3-4 Units.
Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems respect our ethical principles when they make decisions at speeds and for rationales that exceed our ability to comprehend? What, if any, legal rights and responsibilities should we grant them? And should we regard them merely as sophisticated tools or as a newly emerging form of life? The goal of this course is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines.

SYMSYS 167D. Philosophy of Neuroscience. 4 Units.
How can we explain the mind? With approaches ranging from computational models to cellular-level characterizations of neural responses to the characterization of behavior, neuroscience aims to explain how we see, think, decide, and even feel. While these approaches have been highly successful in answering some kinds of questions, they have resulted in surprisingly little progress in others. We'll look at the relationships between the neuroscientific enterprise, philosophical investigations of the nature of the mind, and our everyday experiences as creatures with minds. Prerequisite: PHIL 80.n(Not open to freshmen.).
Same as: PHIL 167D, PHIL 267D

SYMSYS 190. Senior Honors Tutorial. 1-5 Unit.
Under the supervision of their faculty honors adviser, students work on their senior honors project. May be repeated for credit.

SYMSYS 191. Senior Honors Seminar. 1 Unit.
Recommended for seniors doing an honors project. Under the leadership of the Symbolic Systems program coordinator, students discuss, and present their honors project.

SYMSYS 192. Symbolic Systems in Practice. 3 Units.
A professionalization course that fulfills the Practicum requirement of the Symbolic Systems undergraduate major Capstone. Online lectures, readings, assigned exercises, and live discussions relate the Sym Sys curriculum to a substantial work experience. Must be accompanied by an approved internship totaling 64 hours or more of total work time, which must be completed in the quarter prior to, during, or immediately following the course.

SYMSYS 195A. Design for Artificial Intelligence. 3-4 Units.
A project-based course that builds on the introduction to design in CS147 by focusing on advanced methods and tools for research, prototyping, and user interface design. Studio based format with intensive coaching and iteration to prepare students for tackling real world design problems. This course takes place entirely in studios; you must plan on attending every studio to take this class. The focus of CS247A is design for human-centered artificial intelligence experiences. What does it mean to design for AI? What is HAI? How do you create responsible, ethical, human centered experiences? Let us explore what AI actually is and the constraints, opportunities and specialized processes necessary to create AI systems that work effectively for the humans involved. Prerequisites: CS147 or equivalent background in design thinking.
Same as: CS 247A

SYMSYS 195B. Design for Behavior Change. 3-4 Units.
Over the last decade, tech companies have invested in shaping user behavior, sometimes for altruistic reasons like helping people change bad habits into good ones, and sometimes for financial reasons such as increasing engagement. In this project-based hands-on course, students explore the design of systems, information and interface for human use. We will model the flow of interactions, data and context, and crafting a design that is useful, appropriate and robust. Students will design and prototype utility apps or games as a response to the challenges presented. We will also examine the ethical consequences of design decisions and explore current issues arising from unintended consequences. Prerequisite: CS147 or equivalent.
Same as: CS 247B

SYMSYS 195D. Research in Digital Democracy. 3-4 Units.
Digital democracy refers to social activity that is organized democratically at a group, institutional, or societal level, and that takes place within or is augmented by digital technology. This is a project-based research seminar designed to teach students methods for studying digital democracy, as well as collaborating in a group, the organization of a research project, and academic writing. The first few weeks of the course will be an overview of digital democracy research and its methods, as well as a time for students to organize into a group research project, The remainder of the class (about 7 weeks) will be spent performing and writing up the research for a targeted publication venue. Application required for enrollment. Prerequisite: At least one course in empirical methods or statistics. Prerequisites: At least one course in empirical methods or statistics.
Same as: SYMSYS 295D

SYMSYS 195E. Experimental Methods. 3 Units.
Graduate laboratory class in experimental methods for psychology, with a focus on open science methods and best practices in behavioral research. Topics include experimental design, data collection, data management, data analysis, and the ethical conduct of research. The final project of the course is a replication experiment in which students collect new data following the procedures of a published paper. The course is designed for incoming graduate students in psychology, but is open to qualified students from other programs who have some working knowledge of the R statistical programming language. Requirement: Psych 10/Stats 60 or equivalent.
Same as: PSYCH 251

SYMSYS 195G. Introduction to Game Design. 3-4 Units.
A project-based course that builds on the introduction to design in CS147 by focusing on advanced methods and tools for research, prototyping, and user interface design. Studio based format with intensive coaching and iteration to prepare students for tackling real world design problems. This course takes place entirely in studios; please plan on attending every studio to take this class. nThe focus of CS247g is an introduction to theory and practice of the design of games. We will make digital and paper games, do rapid iteration and run user research studies appropriate to game design. This class has multiple short projects, allowing us to cover a variety of genres, from narrative to pure strategy. Prerequisites: 147 or equivalent background.
Same as: CS 247G

SYMSYS 195I. Image Systems Engineering. 1-3 Unit.
This course is an introduction to digital imaging technologies. We focus on the principles of key elements of digital systems components; we show how to use simulation to predict how these components will work together in a complete image system simulation. The early lectures introduce the software environment and describe options for the course project. The following topics are covered and software tools are introduced:n- Basic principles of optics (Snell's Law, diffraction, adaptive optics).n- Image sensor and pixel designsn- Color science, metrics, and calibrationn- Human spatial resolutionn- Image processing principlesn- Display technologiesnA special theme of this course is that it explains how imaging technologies accommodate the requirements of the human visual system. The course also explains how image systems simulations can be useful in neuroscience and industrial vision applications.nThe course consists of lectures, software tutorials, and a course project. Tutorials and projects include extensive software simulations of the imaging pipeline. Some background in mathematics (linear algebra) and programming (Matlab) is valuable.nPre-requisite: EE 261 or equivalent. Or permission of instructor required.
Same as: PSYCH 221

SYMSYS 195L. Methods in Psycholinguistics. 4 Units.
Over the past ten years, linguists have become increasingly interested in testing theories with a wider range of empirical data than the traditionally accepted introspective judgments of hand-selected linguistic examples. Consequently, linguistics has seen a surge of interest in psycholinguistic methods across all subfields. This course will provide an overview of various standard psycholinguistic techniques and measures, including offline judgments (e.g., binary categorization tasks like truth-value judgments, Likert scale ratings, continuous slider ratings), response times, reading times, eye-tracking, ERPs, and corpus methods. Students will present and discuss research articles. Students will also run an experiment (either a replication or an original design, if conducive to the student¿s research) to gain hands-on experience with experimental design and implementation in html/javascript and Mechanical Turk; data management, analysis, and visualization in R; and open science tools like git/github.
Same as: LINGUIST 245B

SYMSYS 195N. Natural Language Processing with Deep Learning. 3-4 Units.
Methods for processing human language information and the underlying computational properties of natural languages. Focus on deep learning approaches: understanding, implementing, training, debugging, visualizing, and extending neural network models for a variety of language understanding tasks. Exploration of natural language tasks ranging from simple word level and syntactic processing to coreference, question answering, and machine translation. Examination of representative papers and systems and completion of a final project applying a complex neural network model to a large-scale NLP problem. Prerequisites: calculus and linear algebra; CS124, CS221, or CS229.
Same as: CS 224N, LINGUIST 284

SYMSYS 195S. Service Design. 3-4 Units.
A project-based course that builds on the introduction to design in CS147 by focusing on advanced methods and tools for research, prototyping, and user interface design. Studio based format with intensive coaching and iteration to prepare students for tackling real world design problems. This course takes place entirely in studios; you must plan on attending every studio to take this class. The focus of CS247S is Service Design. In this course we will be looking at experiences that address the needs of multiple types of stakeholders at different touchpoints - digital, physical, and everything in between. If you have ever taken an Uber, participated in the Draw, engaged with your bank, or ordered a coffee through the Starbucks app, you have experienced a service that must have a coordinated experience for the customer, the service provider, and any other stakeholders involved. Let us explore what specialized tools and processes are required to created these multi-faceted interactions. Prerequisites: CS147 or equivalent background in design thinking.
Same as: CS 247S

SYMSYS 195T. Natural Language Processing & Text-Based Machine Learning in the Social Sciences. 4 Units.
Digital communications (including social media) are the largest data sets of our time, and most of it is text. Social scientists need to be able to digest small and big data sets alike, process it and extract psychological insight. This applied and project-focused course introduces students to a Python codebase developed to facilitate text analysis in the social sciences (see dlatk.wwbp.org -- knowledge of Python is helpful but not required). The goal is to practice these methods in guided tutorials and project-based work so that the students can apply them to their own research contexts and be prepared to write up the results for publication. The course will provide best practices, as well as access to and familiarity with a Linux-based server environment to process text, including the extraction of words and phrases, topics and psychological dictionaries. We will also practice the use of machine learning based on text data for psychological assessment, and the further statistical analysis of language variables in R. Familiarity with Python is helpful but not required. Basic familiarity with R is expected. The ability to wrangle data into a spreadsheet-like format is expected. A basic introduction to SQL will be given in the course. Familiarity with SSH and basic Linux is helpful but not required. Understanding of regression is expected.
Same as: PSYCH 290, SOC 281

SYMSYS 195U. Natural Language Understanding. 3-4 Units.
Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180/280, CS 124, CS 224N, or CS 224S.
Same as: CS 224U, LINGUIST 188, LINGUIST 288

SYMSYS 195V. Data Visualization. 3-4 Units.
Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of CS147, CS148, or equivalent.
Same as: CS 448B

SYMSYS 196. Independent Study. 1-15 Unit.
Independent work under the supervision of a faculty member. Can be repeated for credit.

SYMSYS 200. Minds and Machines. 4 Units.
(Formerly SYMSYS 100). An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Students must take this course before being approved to declare Symbolic Systems as a major. All students interested in studying Symbolic Systems are urged to take this course early in their student careers. The course material and presentation will be at an introductory level, without prerequisites. If you have any questions about the course, please email symsys1staff@gmail.com.
Same as: CS 24, LINGUIST 35, PHIL 99, PSYCH 35, SYMSYS 1

SYMSYS 201. Digital Technology, Society, and Democracy. 3 Units.
The impact of information and communication technologies on social and political life. Interdisciplinary. Classic and contemporary readings focusing on topics such as social networks, virtual versus face-to-face communication, the public sphere, voting technology, and collaborative production. Prerequisite: Completion of a course in psychology, communication, human-computer interaction, or a related discipline, or consent of the instructor.

SYMSYS 202. Theories of Consciousness. 3 Units.
Are fish conscious? Are fetuses? Could we build a conscious computer? Much of the philosophical work on consciousness has focused on whether consciousness is wholly physical, but that question is orthogonal to the more specific questions about consciousness that most of us really care about. To answer those questions, we need a theory of how consciousness works in our world. Philosophers and scientists have put forward a spectrum of different candidates, from very abstract, philosophical theories through theories more informed by cognitive psychology down to neural and even quantum theories. In this seminar, students will learn about the major theories of consciousness as well as conceptual issues that arise on different approaches. Particularly important will be the question of how we might gain empirical evidence for a theory of consciousness.

SYMSYS 203. Cognitive Science Perspectives on Humanity and Well-Being. 3 Units.
In recent years, cognitive scientists have turned more attention to questions that have traditionally been investigated bynhistorians, political scientists, sociologists, and anthropologists, e.g. What are the sources of conflict and disagreement betweennpeople?, What drives or reduces violence and injustice?, and What brings about or is conducive to peace and justice? In this advancednsmall seminar, we will read and discuss works by psychologists, neuroscientists, philosophers, and others, which characterize thisngrowing research area among those who study minds, brains, and behavior.nRequired: Completion of a course in psychology beyond the level of Psych 1, or consent of the instructor.

SYMSYS 205. The Philosophy and Science of Perception. 3 Units.
Our senses tell us about our immediate environment, but what exactly do they tell us? Our color experiences tell us that the things around us have color properties, but what in the world are color properties? Do we visually represent absolute size as well as relative size? When we see an apple, do we literally see it as an apple, or do we infer that it¿s an apple based on its color and shape? Can what we expect to see affect what we actually see? In this seminar we will bring both philosophical and empirical perspectives to bear on these and other issues related to figuring out just how our perceptual experiences represent the world as being. Prerequisite: PHIL 80 or permission of the instructor.

SYMSYS 207. Conceptual Issues in Cognitive Science. 3 Units.
This seminar will cover a selection of foundational issues in cognitive science. Topics may include modularity, representation, connectionism, neuroscience and free will, neuroimaging, implants, sensory experience, the nature of information, and consciousness. Course is limited to 15 students. Prerequisite: Phil 80, or permission of the instructor.

SYMSYS 208. Computer Machines and Intelligence. 3 Units.
It has become common for us to see in the media news about computer winning a masters in chess, or answering questions on the Jeopardy TV show, or the impact of AI on health, transportation, education, in the labor market and even as an existential threat to mankind. This interest in AI gives rise questions such as: Is it possible for a computer to think? What is thought? Are we computers? Could machines feel emotions or be conscious? Curiously, there is no single, universally accepted definition of Artificial Intelligence. However in view of the rapid dissemination of AI these questions are important not only for experts, but also for all other members of society. This course is intended for students from different majors Interested in learn how the concept of intelligent machine is understood by the researchers in AI. We will study the evolution of AI research, its different approaches, with focus on the tests developed to verify if a machine is intelligent or not. In addition, we will examine the philosophical problems associated with the concept of intelligent machine. The topics covered will include: Turing test, symbolic AI, connectionist AI, sub- symbolic Ai, Strong AI and Weak AI, Ai singularity, unconventional computing, rationality, intentionality, representation, machine learning, and the possibility of conscious machines.

SYMSYS 212. Challenges for Language Systems. 3-4 Units.
Parallel exploration of philosophical and computational approaches to modeling the construction of linguistic meaning. In philosophy of language: lexical sense extension, figurative speech, the semantics/pragmatics interface, contextualism debates. In CS: natural language understanding, from formal compositional models of knowledge representation to statistical and deep learning approaches. We will develop an appreciation of the complexities of language understanding and communication; this will inform discussion of the broader prospects for Artificial Intelligence. Special attention will be paid to epistemological questions on the nature of linguistic explanation, and the relationship between theory and practice. PREREQUISITES: PHIL80; some exposure to philosophy of language and/or computational language processing is recommended.
Same as: SYMSYS 112

SYMSYS 245. Cognition in Interaction Design. 3 Units.
Note: Same course as 145 which is no longer active. Interactive systems from the standpoint of human cognition. Topics include skill acquisition, complex learning, reasoning, language, perception, methods in usability testing, special computational techniques such as intelligent and adaptive interfaces, and design for people with cognitive disabilities. Students conduct analyses of real world problems of their own choosing and redesign/analyze a project of an interactive system. Limited enrollment seminar taught in two sections of approximately ten students each. Admission to the course is by application to the instructor, with preference given to Symbolic Systems students of advanced standing. Recommended: a course in cognitive psychology or cognitive anthropology.

SYMSYS 255. Building Digital History: Informatics of Social Movements and Protest. 3-5 Units.
A participatory course focused on the online representation of oral and archival history research. This year's thematic focus is the design and evaluation of history websites focused on social movements and protest. We will survey the field of digital history and its application to social movement research and teaching. The course will utilize materials developed in the 2014 version of the course, which focused on the history of student activism at Stanford. Class will apply lessons from digital history practice and theory to the design of an online repository and community for the collaborative representation and discussion of social movement history at Stanford, and to the further development of source material in a future version of the class. Topics will include participatory design, studies of historical learning, archiving issues, data integrity, and fair representation of different viewpoints, among others.

SYMSYS 255A. Building Digital History: Social Movements and Protest at Stanford. 1 Unit.
Lectures-only version of Symsys 255.

SYMSYS 271. Group Democracy. 2-4 Units.
This seminar will explore theoretical, empirical, and practical approaches to groups that come together around a common purpose or interest. Emphasis is on democratically structured, non-hierarchical and non-institutional decision making, e.g. by grassroots activists, student, or neighborhood organizations. Parliamentary, consensus, and informal procedures. How do groups form? How do they deliberate and make decision? What are the principles underlying different models for group process, and how well do different procedures work in practice? How do culture and identity affect the working of a group? And how are social technologies used? Readings from different disciplines and perspectives. Course is limited to 20 students. Prerequisite: A course in social psychology, decision making or group sociology. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.

SYMSYS 275. Collective Behavior and Distributed Intelligence. 3 Units.
This course will explore possibilities for student research projects based on presentations of faculty research. We will cover a broad range of topics within the general area of collective behavior, both natural and artificial. Students will build on faculty presentations to develop proposals for future projects.
Same as: BIO 175

SYMSYS 280. Symbolic Systems Research Seminar. 1 Unit.
A mixture of public lectures of interest to Symbolic Systems students (the Symbolic Systems Forum) and student-led meetings to discuss research in Symbolic Systems. Can be repeated for credit. Open to both undergraduates and Master's students.

SYMSYS 290. Master's Degree Project. 1-15 Unit.
.

SYMSYS 291. Master's Program Seminar. 1 Unit.
Enrollment limited to students in the Symbolic Systems M.S. degree program. May be repeated for credit.

SYMSYS 295D. Research in Digital Democracy. 3-4 Units.
Digital democracy refers to social activity that is organized democratically at a group, institutional, or societal level, and that takes place within or is augmented by digital technology. This is a project-based research seminar designed to teach students methods for studying digital democracy, as well as collaborating in a group, the organization of a research project, and academic writing. The first few weeks of the course will be an overview of digital democracy research and its methods, as well as a time for students to organize into a group research project, The remainder of the class (about 7 weeks) will be spent performing and writing up the research for a targeted publication venue. Application required for enrollment. Prerequisite: At least one course in empirical methods or statistics. Prerequisites: At least one course in empirical methods or statistics.
Same as: SYMSYS 195D

SYMSYS 296. Independent Study. 1-15 Unit.
Independent work under the supervision of a faculty member. Can be repeated for credit.

SYMSYS 297. Teaching in Symbolic Systems. 1-5 Unit.
Leading sections, grading, and/or other duties of teaching or helping to teach a course in Symbolic Systems. Sign up with the instructor supervising the course in which you are teaching or assisting.

SYMSYS 298. Peer Advising in Symbolic Systems: Practicum. 1-2 Unit.
Optional for students selected as Undergraduate Advising Fellows in the Symbolic Systems Program. AFs work with program administrators to assist undergraduates in the Symbolic Systems major or minor, in course selection, degree planning, and relating the curriculum to a career or life plan, through advising and events. Meeting with all AFs for an hour once per week under the direction of the Associate Director. Requires a short reflective paper at the end of the quarter on what the AF has learned about advising students in the program. Repeatable for credit. May not be taken by students who receive monetary compensation for their work as an AF.

SYMSYS 299. Curricular Practical Training. 1 Unit.
Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of advisor.

THEATER AND PERFORMANCE STUDIES

Courses offered by the Department of Theater and Performance Studies are listed on the Stanford Bulletin's ExploreCourses web site under the subject codes TAPS (https://explorecourses.stanford.edu/search/?q=TAPS&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-TAPS=on) and DANCE (https://explorecourses.stanford.edu/search/?q=DANCE&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-DANCE=on&filter-catalognumber-DANCE=on).

Mission of the Undergraduate Program in Theater and Performance Studies

The mission of the undergraduate program in Theater and Performance Studies is to provide a strong, non-conservatory program that joins the study and practice of performance within the context of a liberal arts curriculum. The department gives students a strong grasp of historical, cultural, and practical contexts in which live performance develops. With close faculty contact, department majors pursue areas of interest that may include acting, directing, writing, dance, devised theater, design, stage management, performance theory, and cultural studies. During the senior year students complete a senior project as part of fulfilling the 60 units required for the major.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to achieve the following learning outcomes:

1. the ability to write analytically about theater and performance
2. the ability to put aesthetic and creative skills into practice
3. the ability to find meaningful ways of integrating theory and practice
4. the ability to research effectively
5. the ability to articulate ideas about theater, dance and live arts.

Mission of the Graduate Program in Theater and Performance Studies

The mission of the graduate program in Theater and Performance Studies (TAPS) is to educate students who work on the leading edge of both scholarly and performance practice. The Ph.D. program includes the study of critical theory, dramatic literature, performance theory, theater history, and performance making. Graduate students complete a program with a rigorous study of critical theory, textual history, elements of production (directing, acting, choreography, writing, and design) and embodied research.

Learning Outcomes (Graduate)

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Theater and Performance Studies. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge and production of Theater and Performance Studies, and to interpret and present the results of such research.

Bachelor of Arts in Theater and Performance Studies

The B.A. degree in Theater and Performance Studies provides students with historical, critical, and practical knowledge about theater and performance. Students are encouraged to declare the major in their sophomore year, if not sooner.

Suggested Preparation for the Major

Prospective majors in the first two years of study at Stanford are encouraged to take part in casting opportunities in department productions.

Degree Requirements

The following chart is an outline of the TAPS major degree requirements. All majors must choose a major concentration in either Acting or Theater-Making. Specific requirements for these concentrations can be found in subsequent sections.

		Units
TAPS 1	Introduction to Theater and Performance Studies	4
16 units in Theater and Dance Studies		16
18 units in Practicum		18
8 units in Production		8
10 units of Electives		10
TAPS 200	Senior Project	4
Total Units		60

Note: A course may be listed in more than one area; however, each course can only satisfy one major requirement. There is no double credit for a course.

Concentrations

All TAPS majors are required to select a concentration in Acting or Theater-Making. General guidance on course sequencing is available from the TAPS Director of Undergraduate Studies, Samer Al-Saber; the coordinator of the Acting concentration, Amy Freed; and the coordinator of the Theater-Making concentration, Michael Rau.

Acting

The Acting concentration develops students' skills in acting for the theater and related performance contexts. In practicum classes, students enhance their creative abilities under the guidance of teaching artists. Students also complete complementary coursework in theater and performance studies and are encouraged to explore playwriting, directing, and/or devising in order to expand their exposure to major ideas and approaches in the field. Students in this concentration are encouraged to take the required courses TAPS 120A Acting I: Fundamentals of Acting, TAPS 121V Voice for the Actor, and TAPS 127 Movement for the Actor early in the major as a gateway for their further technique classes.

		Units
1. Core		**4**
TAPS 1	Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
2. Theater and Dance Studies [1]		**16**
TAPS 11	Introduction to Dance Studies	
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 13N	Law and Drama	

TAPS 40N	Family Drama: American Plays about Families	
TAPS 89N	Literature of Adoption	
TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 151	Dramaturgy	
TAPS 153P	Black Artistry: Performance in the Black Diaspora	
TAPS 164	Race and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 169R	Reality TV and American Society	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
DANCE 196	Dancing Black: Embodying the African Diaspora in the United States and the Caribbean	
TAPS 252	Objects and Things: Theater, Performance, and Material Culture	
3. Practicum		**18**
TAPS 120A	Acting I: Fundamentals of Acting (Gateway, Required)	
TAPS 121V	Voice for the Actor (Required)	
TAPS 127	Movement for the Actor (Required)	
TAPS 60	How We Sing: The Voice, How It Functions, and the Singer's Mind	
TAPS 103	Beginning Improvising	
TAPS 104	Intermediate Improvisation	
TAPS 115A	Vocal Audition for Musical Theater: Acting and Singing Technique for Musical Theater Auditions	
TAPS 120B	Acting II: Advanced Acting	
TAPS 122P	Undergrad Performance Project	
TAPS 122M	Main Stage Theater Project	
TAPS 124D	Acting for Non-Majors	
TAPS 125S	Shakespeare Now: An Actor's Lab	
TAPS 127W	Introduction to Clown	
TAPS 128	Acting Intensive: On Camera Acting Technique	
TAPS 183C	Interpretation of Musical Theater Repertoire	
TAPS 183E	Singing for Musicals	
TAPS 184C	Dramatic Vocal Arts: Songs and Scenes Onstage	
4. Production		**8**
TAPS 34	Stage Management Techniques (Required)	
TAPS 39	Theater Crew (Required)	
TAPS 134	Stage Management Project (Required)	
5. Electives [2]		**10**
6. Capstone Project [3]		**4**
TAPS 200	Senior Project	
Total Units		60

Note: Refer to Past Bulletins (https://exploredegrees.stanford.edu/archive/#text) to review courses that fulfilled the requirements above that were offered in previous years.

1 One of the courses completed for this requirement must be a Writing in the Major course. In 2019-20 the Writing in the Major courses are:
- TAPS 11 Introduction to Dance Studies
- TAPS 153P Black Artistry: Performance in the Black Diaspora
- TAPS 264S Race, Gender, Justice

2 All courses in TAPS and DANCE qualify as electives. 4 units of ITALIC or SLE can also count as electives.

3 All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution, such as directing a play, devising an original piece with a group, writing a script, choreographing a dance, designing a set, lights or costume for a show, creating a solo, acting a major role, writing an essay, or another creative enterprise agreed upon with advisors. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students enroll in 4 units of credit for senior projects through TAPS 200 Senior Project. Students pursuing senior projects must submit an adviser-approved proposal to the Production Manager, to be approved by the Artistic Director and Director of Undergraduate Studies no later than the end of Spring Quarter of the junior year.

Theater-Making

This concentration develops students' creative skills in theater-making. The theater-making concentration reflects the collaborative interdisciplinary nature of theater practice, with rich partnerships and dialogues between the crafts of directing, playwriting, producing, design and stagecraft. Students learn skills to build original theater productions. The disciplines grouped under this concentration offer a broad cross-section of theater-making skills and approaches. Students in this concentration are encouraged to take the required courses TAPS 30 Introduction to Theatrical Design and TAPS 101P Theater and Performance Making early in the major as a gateway for their further studies.

		Units
1. Core		**4**
TAPS 1	Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
2. Theater and Dance Studies [1]		**16**
TAPS 11	Introduction to Dance Studies	
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 13N	Law and Drama	
TAPS 40N	Family Drama: American Plays about Families	
TAPS 89N	Literature of Adoption	
TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 151	Dramaturgy	
TAPS 153P	Black Artistry: Performance in the Black Diaspora	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 164	Race and Performance	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 169R	Reality TV and American Society	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
DANCE 196	Dancing Black: Embodying the African Diaspora in the United States and the Caribbean	

TAPS 252	Objects and Things: Theater, Performance, and Material Culture	
3. Practicum		**18**
TAPS 30	Introduction to Theatrical Design (Gateway, Required)	
TAPS 101P	Theater and Performance Making (Gateway, Required)	
TAPS 31	Introduction to Lighting and Production	
TAPS 33	Introduction to Technical Theater and Production	
TAPS 119M	Special Topics: multi-hyphenate // liberating our artistic selves.	
TAPS 122M	Main Stage Theater Project	
TAPS 122P	Undergrad Performance Project	
TAPS 133	Set Design	
TAPS 135M	Introduction to Multimedia Production	
TAPS 136P	Introduction to Producing	
TAPS 136V	Design for Movement & Music	
TAPS 170A	The Director's Craft	
TAPS 177	Dramatic Writing: The Fundamentals	
TAPS 174	Digital Theater-Making: Creative Code and Performance	
TAPS 178C	Playwriting Workshop	
Up to 4 units of an acting class may count towards this requirement as well.		
With the approval of the Director of Undergraduate Studies, students may be able to count a limited number of the following special research or independent study courses towards the practicum requirement:		
TAPS 39	Theater Crew	
TAPS 134	Stage Management Project	
TAPS 140	Introduction to Projects in Theatrical Production	
TAPS 190	Special Research	
TAPS 231	Advanced Stage Lighting Design	
TAPS 232	Advanced Costume Design	
TAPS 233	Advanced Scene Design	
4. Production		**8**
TAPS 34	Stage Management Techniques (Required)	
TAPS 39	Theater Crew (Required)	
TAPS 134	Stage Management Project (Required)	
5. Electives [2]		**10**
6. Capstone Project [3]		**4**
TAPS 200	Senior Project	
Total Units		60

Note: Refer to Past Bulletins (https://exploredegrees.stanford.edu/archive/#text) to review courses that fulfilled the requirements above that were offered in previous years.

1 One of the courses completed for this requirement must be a Writing in the Major course. In 2019-20 the Writing in the Major courses are:
- TAPS 11 Introduction to Dance Studies
- TAPS 153P Black Artistry: Performance in the Black Diaspora
- TAPS 264S Race, Gender, Justice

2 All courses in TAPS and DANCE qualify as electives. 4 units of ITALIC or SLE can also count as electives.

3 All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution, such as directing a play, devising an original piece with a group, writing a script, choreographing a dance, designing a set, lights or costume for a show, creating a solo, acting a major role, writing an essay, or another creative enterprise agreed upon with advisors. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students enroll in 4 units of credit for senior projects through TAPS 200 Senior Project. Students pursuing senior projects must submit an adviser-approved proposal to the Production Manager, to be approved by the Artistic Director and Director of Undergraduate Studies no later than the end of Spring Quarter of the junior year.

Honors Program

For a select number of students, the department confers the degree of Bachelor of Arts with Honors in Theater and Performance Studies. To qualify for departmental honors, students must meet the following requirements in addition to the other requirements of the TAPS major.

1. Applying to the honors program involves a written application, including a project proposal and transcript, which establishes the student's work to date in the department and outlines the area of research that the student wishes to pursue. Students must have at least an overall University GPA of 3.3 and a 3.5 GPA in courses counting towards the major.
2. Students must have completed a significant portion of their major coursework before enrolling in honors. It is recommended that students have taken courses that have prepared them for advanced study in the proposed area of research.
3. Students enroll in TAPS 202 Honors Thesis, which is worth four units total. Students need to enroll in this course each quarter during the senior year (1 unit in Autumn; 1 unit in Winter; 2 units in Spring). It is graded S/NC (grade determined by the student's adviser).
4. The honors thesis (described below) is due on May 15th in the Spring quarter and is double-marked by the primary adviser and one other Stanford faculty member.
5. Entry into the honors program does not guarantee an honors degree. The final decision to confer an honors degree is made by the student's thesis adviser upon evaluating the quality of the thesis.

Honors Thesis

There are two ways to undertake an honors thesis. The first is to write a 40-50 page essay, presenting research on an important issue or subject of the student's choice. The second option is for a student to use their involvement in a creative project as a case study. In this situation, the honors thesis critically analyzes the creative work. Typically, the creative project is the student's capstone, but subject to the advisor's approval, a student may be able to write on a substantial creative project other than the capstone. This essay is shorter (about 30 pages) because the creative work constitutes part of the honors project. Students are expected to work consistently throughout the year with their adviser, whom they identify at the time of application. Advisors can be selected from Academic Council faculty or artists-in-residence.

Minor in Theater and Performance Studies

The TAPS Minor is offered with two distinct concentrations: The Theater and Performance Studies concentration provides students with historical, critical, and practical knowledge about theater and performance. The Dance concentration examines the field of dance.

All minors must complete 30 units in a chosen concentration in Theater and Performance Studies or Dance. Specific requirements for these concentrations can be found in subsequent sections. Each course can only satisfy one minor requirement. A student may petition to the Director

of Undergraduate Studies Samer Al-Saber to have additional courses offered by the department count towards the requirements. The minor is declared in Axess.

Degree Requirements

Theater and Performance Studies Concentration

		Units
1. Core		**4**
TAPS 1	Introduction to Theater and Performance Studies (Must be taken for a letter grade.)	
2. Theater and Dance Studies		**4**
TAPS 11	Introduction to Dance Studies	
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 13N	Law and Drama	
TAPS 40N	Family Drama: American Plays about Families	
TAPS 89N	Literature of Adoption	
TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 151	Dramaturgy	
TAPS 164	Race and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 169R	Reality TV and American Society	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
DANCE 196	Dancing Black: Embodying the African Diaspora in the United States and the Caribbean	
TAPS 201	Theater History	
TAPS 252	Objects and Things: Theater, Performance, and Material Culture	
3. Production		**1**
TAPS 39	Theater Crew	
4. Practicum [1]		**7**
5. Electives [2]		**14**
Total Units		30

Note: Refer to Past Bulletins (https://exploredegrees.stanford.edu/archive/#text) to review courses that fulfilled the requirements above that were offered in previous years.

1 All theater and dance practice classes (such as those in acting, design, playwriting, directing, and dance practice) may count towards this requirement.

2 All courses in TAPS and DANCE qualify as electives.

Dance Concentration

The Dance concentration offers diverse approaches to dance as a performing art, cultural practice, political act, and embodiment of ideology and beliefs. The minor requirements integrate academic and creative studio work to help students develop a command of dance as an art form and as a subject of critical inquiry. Students study a range of techniques grounded in Western dance practices as well as a variety of global dance forms, and have regular opportunities to perform, choreograph, and collaborate. Guidance on course sequencing is available from the TAPS Director of Undergraduate Studies, Samer Al-Saber and/or from the coordinator of the Dance concentration, Aleta Hayes. Students in this concentration are encouraged to take the required course DANCE 11 Introduction to Dance Studies early in the major as a gateway for their further studies.

		Units
1. Core		**4**
DANCE 11	Introduction to Dance Studies (Must be taken for a letter grade.)	
or TAPS 1	Introduction to Theater and Performance Studies	
2. Theater and Dance Studies		**4**
TAPS 11N	Dramatic Tensions: Theater and the Marketplace	
TAPS 12N	To Die For: Antigone and Political Dissent	
TAPS 13N	Law and Drama	
TAPS 40N	Family Drama: American Plays about Families	
TAPS 89N	Literature of Adoption	
TAPS 108	Introduction to Feminist, Gender, and Sexuality Studies	
TAPS 151	Dramaturgy	
TAPS 164	Race and Performance	
TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
TAPS 167	Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice	
TAPS 180Q	Noam Chomsky: The Drama of Resistance	
DANCE 196	Dancing Black: Embodying the African Diaspora in the United States and the Caribbean	
TAPS 252	Objects and Things: Theater, Performance, and Material Culture	
3. Production		**1**
TAPS 39	Theater Crew	
4. Dance Practice [1]		**7**
5. Electives [2]		**14**
Total Units		30

Note: Refer to Past Bulletins (https://exploredegrees.stanford.edu/archive/#text) to review courses that fulfilled the requirements above that were offered in previous years.

1 Minimum 7 units of dance practice in technique, choreography, and performance are required. At least three classes chosen from a specific dance form (e.g. Contemporary, Modern, Jazz, Hip-Hop, Ballet, or Social), and the attainment of intermediate or advanced level. At least two classes in a style other than the student's primary chosen dance form.

2 All courses in TAPS and DANCE qualify as electives.

Doctor of Philosophy in Theater and Performance Studies

The mission of the graduate program in Theater & Performance Studies (TAPS) is to educate students who work on the leading edge of both scholarly and performance practice. The Ph.D. program includes the study of critical theory, dramatic literature, performance theory, theater history, and performance making. Graduate students receive a rigorous education in scholarly and creative practice that encompasses elements of production (directing, acting, choreography, and/or design).

Admission

Applicants for the Ph.D. program can visit our Theater and Performance Studies (http://taps.stanford.edu/phd.html) web site for information.

Online graduate applications are available at the Office of Graduate Admissions (http://gradadmissions.stanford.edu) web site. All applicants must submit the following as part of their application: statement of purpose, three recommendations, artistic statement, summary of production experience and resume/CV, and a sample of written work (one or two papers no more than 25 pages long). The GRE is not required. An invitation to interview may be extended by the end of January. Graduate students in the Department of Theater and Performance Studies begin study in Autumn Quarter of each academic year; there are no mid-year admissions.

University Degree Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (http://stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Degree Requirements

Units and Course Requirements

Stanford Ph.D. students must complete a minimum of 135 units of graduate courses and seminars in support of the degree. Within the 135 unit minimum, TAPS Ph.D. students must complete the following:

		Units
REQUIRED COURSES		
Core Seminars		**17**
TAPS 301	World Theater History [1]	
TAPS 311	Performance and Historiography	
TAPS 313	Performance and Performativity	
TAPS 314	Performing Identities	
TAPS Workshops		**12**
TAPS 371P	Theater and Performance Making [2]	
TAPS 372	Directing Workshop: The Actor-Director Dialogue [2]	
TAPS 376	Projects in Performance [3]	
Production Requirement		**1**
TAPS 335	Introduction to Graduate Production	
Elective Seminars		**20**
At least five additional graduate seminars (for a minimum total of 20 units) within the Department of Theater and Performance Studies to be worked out with the advisor.		
Total Units		50

1. TAPS 301 World Theater History is a two-quarter required course in which students enroll for two units in Autumn and two units in Winter.
2. In the first year students take TAPS 371P Theater and Performance Making, which focuses on generating original creative work through a range of techniques. TAPS 372 Directing Workshop: The Actor-Director Dialogue is also usually taken in the first year.
3. TAPS 376 Projects in Performance is taken in the second year. In 2020-21 only, second-year students who are not participating in graduate repertory are permitted to substitute another TAPS course for TAPS 376.

Note: All substitutions to the required courses must be in the department and approved by the Director of Graduate Studies in response to a written request by the student. Students are allowed to take up to 6 units of TAPS 390 Directed Reading, to count towards the 135 units required for graduation.

Language Requirement

The student must demonstrate reading knowledge of one foreign language in which there is a major body of dramatic literature. The language requirement must be met before the student can be advanced to candidacy. The language requirement may be fulfilled in any of the following ways:

1. achievement of a sufficiently high score (70th percentile) on the foreign language examination prepared by the Educational Testing Service (ETS). Latin and Greek are not tested by ETS.
2. a reading examination given each quarter by the various language departments, except for Latin and Greek.
3. pass with a grade of 'B' or higher a 100-level or higher foreign language course at Stanford.

Assistantships

Students must participate in seven quarters of assistantship in Theater and Performance Studies:

Research Assistantship: Three quarters of supervised RA-ship at half time with faculty members are required. Generally, this requirement is fulfilled in the third year.

Teaching Assistantship: Four quarters of supervised TA-ship at half time are a required part of the Ph.D. program. The requirement is normally met by serving as a TA for three courses during the fourth year and one course during the fifth year.

Examinations

Students must successfully complete three examinations (comprehensive, qualifying, and department oral) by the end of the first three years of study at Stanford. As these are considered critical milestones indicating satisfactory academic progress, each student must pass their relevant Exam (whether First-Year, Second-Year, or Third-Year) in order to advance in the TAPS Ph.D. program. Failure to pass a required Exam will result in the student not making satisfactory progress and may result in the student's dismissal from the program.

First-Year Comprehensive Exam: The First-Year Comprehensive Exam is taken within the context of a required seminar, TAPS 301 World Theater History. This is a two-quarter required course in which students enroll for two units in Autumn and two units in Winter. The exam itself takes place at the end of Winter quarter. The format of the exam is that students receive prompts for writing argument-driven essays, roughly 8-10 pages each. These essays should demonstrate skills of close reading and historically rigorous analysis, and the ability to synthesize multiple source materials.

Second-Year Qualifying Exam: The qualifying examination consists of a 25-30 page essay on a pre-1900 historical topic, relevant to the field of Theater and Performance Studies. The student selects a TAPS faculty adviser to guide them through the writing process. The essay is due to the Student Services Officer in the 8th week of Autumn Quarter. The Graduate Studies Committee selects two additional TAPS faculty readers who evaluate and provide readers' reports for the student. The student substantially revises and resubmits the essay in the third week of Spring Quarter. Evaluation criteria include clarity of expression, ability to undertake original historical research, and capacity to sustain a persuasive argument. The readers, together with the adviser, evaluate the revised essay and determine if the exam constitutes a pass. The performance project is completed in the Winter Quarter. A faculty adviser works with the student throughout Autumn and Winter quarters on the production and attends a combination of dress rehearsals or final performances as part of the evaluation. After the performance, the student participates in a *viva voce*, or talk-back, with the supervising faculty. Students register for TAPS 376 Projects in Performance for 4 units while completing their performance project.

Third-Year Department Oral Exam: This exam is based on a literature review and annotations for three reading lists created by the student in consultation with the three faculty members with whom they meet about their readings. The form of the exam is an opening 20 minute overview

by the student integrating the readings followed by questions from the committee about the reading lists.

Admission to Candidacy

At the end of the second year of study, the Graduate Studies Committee makes a decision on whether or not to admit an individual student to candidacy. Based on its evaluation of the student, the Graduate Studies Committee certifies the student's qualifications for candidacy. Candidacy is an important decision grounded in an overall assessment of a student's ability to complete the Ph.D. program at a high level. As detailed in the department's Graduate Handbook, there are prerequisites for admission to candidacy: the completion of specified coursework, the first-year qualifying exam, the second-year qualifying papers and the language requirement. However, fulfillment of these prerequisites and grades in courses constitute only a part of the evidence weighed by faculty in making this judgment. Since the Ph.D. is conferred upon candidates who have demonstrated through their dissertation the ability to conduct substantive, original research that contributes to knowledge in theater and performance studies, the candidacy decision also rests upon indicators of the student's ability to conduct work in the field. Upon favorable action, the student files a formal application for candidacy, as prescribed by the University, by the end of Summer Quarter of the second year. By University policy, candidacy is valid for five years unless terminated by the department. Failure to advance to candidacy results in the dismissal of the student from the program.

Dissertation Prospectus

The dissertation prospectus must be approved by the candidate's adviser and by the departmental Graduate Studies Committee two quarters after taking the department oral. This should be done in, or before, the autumn quarter of the fourth year. Within 30 days of approval, a student should schedule a prospectus colloquium with the proposed reading committee (the dissertation director and two other faculty members). The prospectus must be prepared in close consultation with the dissertation adviser during the months preceding the colloquium. The prospectus should be 5-8 pages and minimally cover three things: the research question and context, the methodology for research, and a complete chapter by chapter plan.

University Oral Examination

In Theater and Performance Studies, the University oral examination takes the form of a dissertation defense. A full draft of the dissertation must be submitted at least 75 days before the proposed degree conferral. The examining committee consists of five faculty members: one faculty chair from outside the department who does not share an appointment with the department of any of the examiners, the student's primary adviser, two additional readers who are familiar with the dissertation project, and a fifth faculty member attending the oral examination.

Dissertation

The dissertation is an original work of scholarship created under the supervision of a primary dissertation adviser. The dissertation is the capstone of the Ph.D. in Theater & Performance Studies.

Satisfactory Progress and Annual Review

The program and progress of each student must be evaluated by the Graduate Studies Committee at the end of each academic year. At the end of the first year, the Graduate Studies Committee evaluates the work of each student in classes, seminars, examinations, and performance. Production planning in the spring of each year for the following season is contingent upon students making satisfactory progress. Continuation in the program depends upon the recommendation of this faculty group. At the end of the second year, the committee reviews the student's work in consideration of being admitted to candidacy. By the beginning of the fourth year, students are expected to have developed an approved dissertation prospectus. Funding is contingent upon satisfactory progress. Failure to make satisfactory progress may result in dismissal from the program.

Ph.D. Minor in Theater and Performance Studies

Students pursing the Ph.D. minor in Theater and Performance Studies must complete a minimum of 20 units. Within the 20 units, students must complete the following:

		Units
TAPS 313	Performance and Performativity	5
TAPS 371P	Theater and Performance Making	4
Any additional TAPS courses at the 200- or 300-level to reach the minimum of 20 units total.		11
Total Units		20

An Application for Ph.D. Minor (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf) outlining a program of study must be approved by the major and minor departments and submitted to the Student Services Center. This form is submitted at the time of admission to candidacy or at the appropriate time thereafter.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Theater and Performance Studies counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Department of Theater and Performance Studies counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Department of Theater and Performance Studies is committed to providing academic advising in support of graduate-student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. Advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisee and the adviser are expected to maintain professionalism and integrity throughout this important relationship.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy,

navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

At the start of the first year in the program, students are assigned a faculty adviser based upon common research interests. The adviser's role is to serve as an intellectual adviser and professional mentor to their graduate students, to understand the academic and non-academic policies that pertain to graduate students, and to prepare students to be competitive for future employment.

In the fourth year, Ph.D. students consult closely with their Academic Council faculty adviser to form a dissertation committee. Together, the student and the adviser determine which members of faculty comprise the dissertation committee. The formation of a dissertation committee is a required part of the dissertation prospectus milestone. At this time, the student must decide which faculty will fulfill the following dissertation committee roles:

- Principal Dissertation Adviser: The principal dissertation adviser provides guidance and direction to the doctoral student's research, as well as evaluation of the student's progress. As a mentor and a role model, the dissertation adviser plays a critical role in the student's development as an academic researcher.
- Dissertation Reader: Dissertation Readers participate in the dissertation defense. They read and evaluate the final version of the dissertation, and offer their comments and suggestions for revisions.

Further information about the roles and responsibilities of the dissertation committee can be found in GAP 3.3.1 (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) and GAP 8.4.1 (https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-8/page-4-8-1/).

Advisers and advisees are expected to meet quarterly, perhaps more frequently during exams and milestones. There may likely be variation of meeting frequency, depending on the individual adviser and advisee. Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program. Students are also encouraged to consult with the Director of Graduate Studies and the student services officer as needed.

Students are encouraged to communicate and meet frequently with their adviser. It is important to set expectations with your adviser and to revisit those expectations periodically. VPGE (https://vpge.stanford.edu/) has a number of helpful advising resources, including an advising workshop, as part of their professional development programs.

Students wishing to change their adviser may do so. Contact department staff for more information.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Jean-Marie Apostolidès (TAPS; French and Italian), Harry Elam, Michael Ramsaur, Alice Rayner, *(Associate Professor)* William S. Eddelman, *(Senior Lecturer)* Patricia Ryan, *(Senior Lecturer)* Connie Strayer

Chair: Matthew W. Smith

Director of Graduate Studies: Diana Looser

Director of Undergraduate Studies: Samer Al-Saber

*Professors:*Jennifer DeVere Brody (TAPS, Center for Comparative Studies in Race and Ethnicity), Branislav Jakovljevic, Peggy Phelan (TAPS, English), Rush Rehm (TAPS, Classics), Matthew W. Smith (TAPS, German Studies)

Associate Professor: Young Jean Lee, Jisha Menon (Center for South Asia, Stanford Arts Institute)

Assistant Professors: Samer Al-Saber, Diana Looser, Michael Rau, Aileen Robinson

Professor (Teaching): Janice Ross (On Leave)

Senior Lecturer: Becky Bodurtha

Lecturers: Kathryn Amarotico-Kostopoulos, David Bresenham, Jane Casamajor, Matt Chapman, Katie Faulkner, Diane Frank, Aleta Hayes, Stephanie Hunt, Alex Ketley, Daniel Klein, Laxmi Kumaran, Haruna Lee (Mohr Visiting Artist), Anton Pankevich, Richard Powers, Ronnie Reddick, Amanda Reid (Mellon Fellow), Lisa Rowland, Tony Shayne

Artists-in-Residence: Amy Freed, Amara Smith

Director of Finance and Operations: Beth McKeown

Student Services Officer: Katie Dooling

Administrative Associate: Janet Pineda

Production Staff: Daniel Cadigan, Jane Casamajor, Tony Kramer, Brendon Martin, Kenny McMullen, Heather Patterson Miller, Stefanie M. Okuda, Paul Strayer, Emma Vossbrink

Overseas Studies Courses in Theater and Performance Studies

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPBER 101A	Contemporary Theater	5
OSPOXFRD 52	Shakespeare and Performance	4-5

Courses

DANCE 1. Contemporary Modern I: Liquid Flow. 1 Unit.
Students in Liquid Flow will participate in a dance and movement class that 1) teaches the fundamentals of dance technique, and 2) addresses the way that you already dance in the world. Through discovering your own DIY movement signature and being aware of one another's dance, motion, and energy in space, we will transform the way that we move and connect to one another to inhabit flow states from the dance studio, into everyday life, and ultimately onto the stage. nAccompanied by contemporary and live music, Students will develop articulation, flexibility and "grace", learn contemporary and classic dance vocabulary, gain freedom dancing with others and mine dance's potential for social transformation and connection. Designed for beginners, we welcome student movers from diverse dance traditions, non-dancers, athletes, and more advanced dancers, who desire fluidity in their daily life, from thought to action.

DANCE 2. Introduction to Dance & Movement: Afro Flows. 1 Unit.
Students in Afro Flows will focus on fundamentals of contemporary dance, gain fluid movement in everyday life and develop a rhythmic sensibility. This class invites participants to be more expressive and spontaneous in their movement choices. In addition to set movement warm ups, students will also learn footwork from different traditions, including tap and current social dance styles to expand their dance vocabulary. Through this approach and live percussion, students will discover their own natural rhythmic capability, as well as learn to attune with the environment and with others. No previous is experience required. Questions? Contact: Aleta Hayes (ahayes1@stanford.edu).

DANCE 3SI. Bollywood Balle Balle. 1 Unit.
This is a survey course of Bollywood dance styles throughout history, with particular focus on the modern filmi dance. Throughout the course, students will learn the history and context of particular dance styles through discussions of integration with popular Indian cinema.

DANCE 11. Introduction to Dance Studies. 4 Units.
This class is an introduction to dance studies and the complex meanings bodily performances carry both onstage and off. Using critical frames drawn from dance criticism, history and ethnography and performance studies, and readings from cultural studies, dance, theater and critical theory, the class explores how performing bodies make meanings. We will read theoretical and historical texts and recorded dance as a means of developing tools for viewing and analyzing dance and understanding its place in larger social, cultural, and political structures. Special attention will be given to new turns in queer and feminist dance studies. TAPS 11 has been certified to fulfill the Writing in the Major (WIM) requirement.
Same as: TAPS 11

DANCE 16AX. ReVIVAL: A Site-Specific, Multi media Dance Theater Production. 2 Units.
ReVIVAL: November 14-16, 2019 at Roble Studio Theater. Stanford Artist in Residence Amara Tabor-Smith leads the creation of a site-specific, multi media, dance theater work titled, ReVIVAL. ReVIVAL is a survival research performance work that is launched from the history of the student activism that took place on the Stanford Campus in the late 1960s, and has a particular focus on the student actions that led to the founding of the Committee on Black Performing Arts (CBPA). During the three week intensive, students will engage in a researched creative process which includes daily movement classes rooted in Afro-contemporary dance and improvisation techniques, theater training practices, and mining the Stanford archives: this will be the foundation for the creation of text and choreography. The question that each student will begin the process with is What parts of history do you/we choose to recall, remember, recreate and re-invent in order to carry us forward repaired, restored and revived? Students enrolled in this Arts Intensive course are expected to continue into the fall quarter culminating in the premiere of ReVIVAL the weekend of November 14-16.

DANCE 25. Studio to Stage: Student Choreography Projects. 1 Unit.
Make your own dance! In Studio-to-Stage, student choreographers propose, develop, rehearse, and perform their own dances under the close guidance of a faculty mentor. Together, mentor and dance maker discover rehearsal processes that will support and realize the proposed work, including movement investigation, music/sound choices, costuming, and lighting. The course culminates in a group concert showing. Dance is broadly defined as any intentional movement, including fusion forms and innovation. Dance makers of all levels, styles, and training backgrounds are strongly encouraged to enroll. Concert format, logistics, and level of theatrical production will be determined by the collective ambition and imagination of the participants. TAPS will provide some technical support towards the culminating showing of works.

DANCE 27. Faculty Choreography. 1-2 Unit.
Creation, rehearsal, performance of faculty choreography. For detailed project descriptions and full rehearsal/performance schedules, contact instructors directly.nnStudents enrolled in Aut 2019-20 will participate in Revival with Amara Smith. nnFor students enrolled in Spring 19-20, the course description is below: nIn online Zoom work sessions, project participants will create together a Phrase Bank for the Future, contributing to, and drawing from, a growing Google account of shared phrase material. Our focus will be on shared movement invention and development. That large growing bank of fragments and phrases will provide source material to create solos. By the end of the term, we will have created a Phrase Bank together, as well as a video-recorded solo line for and by each dancer. All this material will be available for a future site-specific live dance performance at the Anderson Collection Museum, exact date tbd/tba, but likely Autumn 2020.

DANCE 29. Roots Modern I. 1 Unit.
In this course students will be introduced to a series of contemporary dance warm ups and dance combinations that are drawn from a broad range of modern dance techniques, somatic practices and dance traditions of the African diaspora with a particular focus on Afro Brazilian, Afro Cuban and Haitian dance forms. No prior dance experience is required. Each class will be comprised of a series of warm up exercises and fun dance combinations that express the connection between western contemporary technique with dance traditions of the African diaspora. Dance combinations will consist of dynamic movement patterns that condition the body for strength, flexibility, endurance, musicality and coordination. Through these exercises students learn how to become expressive and dynamic movers and gain a deeper appreciation of the multiple expressions of what is known as contemporary or modern dance.

DANCE 30. Contemporary Choreography: Chocolate Heads Performance Project. 2 Units.
The Chocolate Heads Movement Band attracts dancers and beginner movers from diverse dance styles and cultures (Hip-Hop to Contemporary, Skateboarding to Wushu). Students participate in the dance-making/remix process, alongside storytellers, musicians, visual artists, and filmmakers, to co-design a multimedia production. Autumn 2020, we will pioneer the ¿visceral in the virtual¿ to create a gestural portrait of a brilliant artistic community. Where are you in the world? Imagine moving through a sensorial landscape while traveling in place. What personal passion will drive your exploration? Audition: Tuesday (9/15) during class. Callbacks and Alternate Audition: Thursday (9/17), with instructor permission. Dancers, interdisciplinarians, and artists of all stripes are encouraged to contact the instructor, ahayes1@stanford.edu.
Same as: AFRICAAM 37

DANCE 30S. Contemporary Choreography: Chocolate Heads On-Screen: Dance and Video Project. 2 Units.
Cinematography plus choreography equals Screendance. Now, all dance is screendance. Think of your favorite youtube videos, tik toks, and all your favorite movie musicals. This is your chance to star in a Chocolate Heads film production. During Fall quarter, the Chocolate Heads Movement Band conducted a series of dance and film experiments at home, that culminated in a fantastic Zoom Dance called 'Traveling in Place'. We started in our own homespaces, came together virtually, and made magic. If you'd link to see what we did in the fall, visit the Chocolate Heads Youtube channel: https://www.youtube.com/watch?v=ykDVlai-c2s Our goal is to cultivate the talents of all dancers through teamwork to touch, move, and inspire the audience. We will be partnering with the Stanford Doc Film Program, featuring guest workshops on storytelling through motion and film. We'll ultimately come together as a dance & filmmaking posse to create a screendance with both live and virtual elements. Be one of the brilliant dancers and choreographers who are shaping dance, art and video, integrating different dance styles and cultures, to unite the world.

DANCE 45. Dance Improvisation from Freestyle to Hip Hop. 1-2 Unit.
This class is an arena for physical and artistic exploration to fire the imagination of dance improvisers, cultivate sensation and perception within and without studio practice and to promote interactive intelligence.nStudents will learn to harness and transform habitual movement patterns and dance trainings as resources for new ways of moving: expand their awareness of being a part of a bigger picture, while being attentive to everything all at once: and to use visual, aural and kinesthetic responses to convert those impulses into artistic material. Class will be accompanied by live and recorded music and include weekly jam sessions. Open to students from all dance, movement, athletic backgrounds and skill levels. Beginners welcome.
Same as: AFRICAAM 45

DANCE 46. Social Dance I. 1 Unit.
Introduction to non-competitive social ballroom dance. Adapted to online Zoom format so that individuals can take the course without a partner. The social dances found in today's popular culture include 3 kinds of swing, 3 forms of waltz, tango, salsa, bachata, cha-cha and nightclub two-step. The course also includes tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. The emphasis on comfort, partnering and flexibility will enable students to dance with partners whose experience comes from any dance tradition. Many students are taken from the waiting list. If the class is filled, register to get on the waitlist.

DANCE 48. Ballet I: Introduction to Ballet. 1 Unit.
Fundametals of ballet technique including posture, placement, the foundation steps, and ballet terms; emphasis on the development of coordination, balance, flexibility, sense of lines, and sensitivity to rhythm and music. May be repeated for credit.

DANCE 50. Contemporary Choreography. 1 Unit.
Each day Ketley will develop a new phrase of choreography with the students and use this as the platform for investigation. Consistent lines of inquiry include; sculpting with the body as an emotional, instinctual, and graphic landscape, how the fracturing and the complication of strands of information can feel generative of new ways of moving, discussions around how our use of time is directly correlated to our sense of presence, and the multitude of physical colors available to each of us as artists as we expand our curiosity about movement. Classes will be very physical, trusting that much of our knowledge is contained in the body. For questions please e-mail aketley@stanford.edu.

DANCE 58. Hip Hop I: Introduction to Hip Hop. 1 Unit.
Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

DANCE 59. Hip-Hop II. 1 Unit.
Steps and styling in one of America's 21st-century vernacular dance forms. May be repeated for credit.

DANCE 71. Introduction to Capoeira: An African Brazilian Art Form. 1 Unit.
Capoeira is an African Brazilian art form that incorporates, dance, music, self-defense and acrobatics. Created by enslaved Africans in Brazil who used this form as a tool for liberation and survival, it has since become a popular art form practiced around the world. In this course students will learn basic movements for both Capoeira Angola and Capoeira Regional, and the history of this rich and physically rigorous art form. Students will learn basic acrobatic skills, be introduced to Capoeira songs, and learn to play rhythms on the drum, pandeiro (tambourine), and the Berimbau -- a single stringed bow instrument. This course will be physically rigorous and fun! No previous experience necessary.
Same as: AFRICAAM 71

DANCE 100. Dance, Movement and Medicine: Immersion in Dance for PD. 1-2 Unit.
Combining actual dancing with medical research, this Cardinal Course investigates the dynamic complementary relationship between two practices, medicine and dance, through the lens of Parkinson's disease (PD), a progressive neurological disease that manifests a range of movement disorders. "Dance for PD" is an innovative approach to dancing --and to teaching dance --for those challenged by PD. Course format consists of: 1. Weekly Lecture/Seminar Presentation: Partial list of instructors include Ms. Frank, Dr. Bronte-Stewart and other Stanford medical experts & research scientists, David Leventhal (Director, "Dance for PD") and Bay Area "Dance for PD" certified master teachers, film-maker Dave Iverson, Damara Ganley, and acclaimed choreographers Joe Goode, Alex Ketley, Judith Smith (AXIS Dance). 2. Weekly Dance Class: Stanford students will fully participate as dancers, and creative partners, in the Stanford Neuroscience Health Center's ongoing "Dance for Parkinson's" community dance class for people with PD. This Community Engaged Learning component provides opportunity to engage meaningfully with people in the PD community. Dancing together weekly, students will experience firsthand the embodied signature values of "Dance for PD" classes: full inclusion, embodied presence, aesthetic and expressive opportunity for creative engagement, and community-building in action. A weekly debriefing session within Friday's class time will allow students to integrate seminar material with their movement experiences.nnnNO PRE-REQUISITES: No prior dance experience required. Beginners are welcome.
Same as: NENS 222

DANCE 102. Musical Theater Dance Styles. 1 Unit.
Students will be able to demonstrate period specificity, character of style through learning different musical theater dances from the early 20th C.to the present. ALL students will participate in an end of quarter showing of the choreography developed and composed in class. Class will be supplemented with the occasional guest, DJ accompaniment and video viewing.
Same as: MUSIC 184E

DANCE 104. Duets Project. 1 Unit.
Deepen partnering & rehearsal skills by learning contemporary duets from the repertory of acclaimed choreographers, some set by the choreographers themselves. Rehearsals culminate in an informal open performance. Expect different partners throughout the quarter; roles not gender-specific. Dances will vary highly in movement content, tone, form, ranging from uninflected to dramatic to humorous; from sparse to dense; from relatively simple to technically difficult. Each work requires a different approach and skill set. Exploring and cultivating these skills ¿ i.e., physical intention and agreement, weight-sharing and -bearing, breath phrasing, spatial awareness, kinetic problem-solving -- will help you dance eloquently and make you into a strong and versatile performer. Intermediate level, or permission of the instructor.

DANCE 105R. Contemporary Choreography: Choreographic Realization Project. 1 Unit.
Choreographic Realization Project will focus on the creation of a choreographic work created collaboratively between participating students and the instructor. Student dancers with all levels of choreographic experience will be invited to work in tandem with the instructor on the creation of rigorous and detailed movement statements as material for the larger group work. The course will function both as an introduction to choreographic methods and tools as well as an experiential investigation of collaborative processes. The course will culminate in an informal public showing on the final class day. Dancers of all levels and movement backgrounds are welcome.

DANCE 106I. Stanford Dance Community: Inter-Style Choreography Workshop. 1-2 Unit.
Designed for adventurous dancers, choreographers and student dance team leaders across Stanford campus. Students will explore a multiplicity of dance styles presented both by peer choreographers, as well as professionals in the field, to create a community of dancers who want to experiment and innovate within their form. The emphasis of the class is on individual growth as a dancer and dance maker through exposure to new and unfamiliar styles. Student dance team leaders and dancers with a strong interest in both choreography and learning different forms are highly encouraged to attend. Interested participants encouraged but not required to contact instructor, Aleta Hayes: ahayes1@stanford.edu. Course will consist of weekly choreography master classes taught by peers, composition intensives facilitated by the instructor, and guest professional master classes, not represented by the class participants. Same as: AFRICAAM 106I

DANCE 108. Hip Hop Choreography: Hip Hop Meets Broadway. 1 Unit.
What happens when Hip Hop meets "Fosse", "Aida", "Dream Girls" and "In the Heights"?nThe most amazing collaboration of Hip Hop styles adapted to some of the most memorable Broadway Productions.nThis class will explore the realm between Hip Hop Dance and the Broadway Stage. Infusing Acting thru dance movement and exploring the Art of Lip Sync thru Hip Hop Dance styles.

DANCE 109. Choreography: Strategies to Building Movement, Dance, and Time Based Art. 2 Units.
A class for students interested in contemporary methods of devising movement for performance. At the forefront of current dance culture hybridity has become the new normal, with movement blended from everyday actions, classical forms, hip-hop, and beyond. The body as a vehicle for expression is an ever expanding landscape and the class will focus on the plethora of ways movement can be derived including; the many ways improvisation can engender movement, how systemic approaches to performance can enhance a creators understanding of the body in space, the ways chaos and ugliness can redefine our notions of beauty, and how environment, sound, music, and context can inform our physical sensibilities. The class is open to all students from any movement background or those new to dance with a curiosity about how the body can be a vibrant and multifaceted artistic tool. For more information please contact choreographer and lecturer Alex Ketley at aketley@stanford.edu.

DANCE 114. Movement for Actors/Acting for Dancers: Techniques for the Contemporary Performer. 1 Unit.
Designed for the performing artist in the contemporary theatrical environment, this class will expose students to various training modalities from contemporary dance, popular dance styles, physical theater, musical theater, Greek theater and other somatic techniques. Students will undertake various practices such as, but not limited to: Viewpoints, Laban, Gaga, Butoh and Grotowski in a workshop format. Other activities include creating studies from widely sourced prompts as given by the instructor and developing a personal performance preparation playbook. The course will include special guests from the TAPS faculty in Dance, Theater and Performance. In an age where the triple threat performer is in high demand, and movement, text, narrative, production and space are not necessarily treated hierarchically, the well-rounded performer will be better equipped to handle current multi-genre stages. While all levels are welcomed, the committed dance and/or theater student is especially encouraged to apply. Questions? Contact: Aleta Hayes (ahayes1@stanford.edu).

DANCE 118. Developing Creativity In Dance. 1 Unit.
This introductory course explores the creative process in dance. Two fields will constantly overlap and feed into each other. One is the Creative Process, with dozens of tips and suggestions which will be useful in your other work beyond dance, and the other is the Art of Choreography. Processes will include design by analogy, musicality, effective use of contrast, intuitive leaps, creation by accident, lateral thinking, overcoming creative blocks, and stress reduction to relax into a more creative state of mind. This will be an online course; students must have this time slot available for Zoom participatory sessions. Class sessions will alternate between theory and practice, with student choreographies submitted and discussed within an encouraging, supportive group of new creators. Previous dance experience is not required to take this course.

DANCE 119. Special Topics: Dance, Architecture, Technology. 1 Unit.
DANCE 119 Special Topics courses feature the annual Mohr Visiting Artist. The Mohr Visiting Artist program brings acclaimed and emerging artists to campus for a one-term period to teach a credited course and provide a presentation, exhibition or performance for the Stanford community and the public.nnIn Winter 2018-19, Mohr Visiting Artist Jonah Bokaer, a celebrated international choreographer, will address his work which expands on the movement lineage of both Merce Cunningham, and Robert Wilson. Bokaer is a Co-Founder of CPR - Center for Performance Research in New York City.

DANCE 123. Choreography: Hot Mess & Deliberate Failure as Practice. 2 Units.
A dance class in how we become the worst dancer possible. The foundation of this class has many parts. One is that, in almost every respect the way we gain insight into anything is to understand more clearly its polarity. As a class we purposely explore chaos, failure, and "bad" dancing, with the hope that then we will have a greater chance to understand and refine our personal notions around beauty. The class also acknowledges that creativity is at times born from the loss of control. Instead of looking at this idea obliquely, Hot Mess looks at this directly by having dancers confront a number of movement and vocal prompts that are literally impossible to execute in any good way. This class embraces and celebrates destabilization, with all the exuberance, fear, and learning that can happen when we accept and practice being lost.

DANCE 128. Roots Modern Experience - Mixed Level. 1 Unit.
In this course students will be introduced to a series of Afro-contemporary dance warm ups and dance combinations that are drawn from a broad range of modern dance techniques, somatic practices and dance traditions of the African diaspora with a particular focus on Afro Brazilian, Afro Cuban and Haitian dance forms. Our study of these dance disciplines will inform the movement vocabulary, technical training, class discussions, and choreography we experience in this course. Students will learn more about the dances and rhythms for the Orishas of Brazil and Cuba, and the Loa of Haiti with an additional focus on other African diaspora dance forms such as, Cuban Haitian, Palo, Samba and Samba-Reggae. Dance combinations will consist of dynamic movement patterns that condition the body for strength, flexibility, endurance, musicality and coordination. Through this approach to our warm ups and class choreography, we will deepen our analysis and understanding of how African diaspora movement traditions are inherently embedded in many expressions of the broadly termed form known as contemporary dance.
Same as: AFRICAAM 128

DANCE 131. Beginning/Intermediate Ballet. 1 Unit.
Structured studio practice reviewing the basics of ballet technique including posture, placement, the foundation steps and ballet terms, and progressing to more complex positions and combination of steps. Emphasis is placed on improving forms, developing coordination and connectivity, securing balance, increasing strength, flexibility, sense of lines, and sensitivity to rhythm and music.

DANCE 132. Ballet Technique & Classical Variations. 1 Unit.
For Intermediate/Advanced Students. Structured studio practice reviewing the basics of ballet technique including posture, placement, the foundation steps and ballet terms, and progressing to more complex positions and combination of steps. Emphasis is placed on improving forms, developing coordination and connectivity, securing balance, increasing strength, flexibility, sense of lines, and sensitivity to rhythm and music and as well as learning the variations from existing ballets: Sleeping Beauty, Swan Lake, Paquita(just to name a few).

DANCE 133. History of the Waltz. 1 Unit.
Two hundred years of waltzing: Regency era waltz (1816), Vienna in the 1830s, redowa and mazurka waltz variations, waltz in 5/4 time, the Russian Mazurka Quadrille, pivots, 20th-century hesitation waltz, tango waltz, Parisian valse musette, 1930s Boston, 1950s Bandstand-style waltz, swing waltz. Each form is explored for possible adaptation to today's non-competitive social dancing. May be repeated for credit two times.

DANCE 140. Contemporary Modern II. 1 Unit.
This intermediate level course will cover fundamental principles underlying the evolving style of modern/contemporary dance both technical and artistic in nature. Students will perform creative and technical exercises that develop strength, flexibility, musicality, increased range of motion, functional efficiency, and performance quality as a means towards developing more, efficient, expressive, and communicative bodies. The contemporary technique taught in this class prepares the student to perform with clarity and artistry, and with deeper anatomical knowledge and connectivity.

DANCE 141. Contemporary Modern III. 2 Units.
This advanced level technique course will cover the fundamental principles underlying modern/contemporary dance both technical and artistic in nature. Students will perform technical exercises that develop functional efficiency, strength, flexibility, musicality, range of motion and performance quality as a means towards honing their own artistic expression and physicality. More advanced concepts such as qualitative versatility, phrasing awareness, innovative physical decision-making, and attention to performance will be explored in greater depth. The contemporary technique taught in this class prepares the student to perform with clarity and artistry, and with deeper anatomical knowledge and connectivity. Short written reflections and concert attendance will supplement studio work. May be repeated for credit.

DANCE 142. Intermediate/Advanced Contemporary Dance Technique. 1 Unit.
This intermediate/advanced dance technique class is grounded in the technical training, aesthetic sensibilities, and choreographic processes of Merce Cunningham, American dancer/master choreographer. This studio work at an intermediate/advanced level will build technical strength, speed, line, and rhythmic acuity/musicality and amplitude in dancing. The class will provides solid technical training useful and applicable to other forms of dancing. Dancers must be ready to work at an intermediate/advanced level to enroll. Studio practice will be supplemented by readings, video viewing, concert attendance, and participation in special workshops with guest artists. Though Cunningham-based dance technique is particularly well-suited to dancers with prior training in ballet, dancers with prior training in all forms of dance are welcome and strongly encouraged to enroll. May be repeated for credit.

DANCE 146. Social Dance II. 1 Unit.
Intermediate non-competitive social ballroom dance. The partner dances found in today's popular culture include Lindy hop, Viennese waltz, hustle, traveling foxtrot, plus intermediate/advanced levels of cross-step waltz and nightclub two-step. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46. Many students are taken from the waiting list. If the class is filled, register to get on the waitlist.

DANCE 147. Social Dance History: Living Traditions of Swing. 1 Unit.
A survey of 110 years of American swing dancing, as one form evolved into the next. Adapted to online Zoom format so that individuals can take the course without a partner. Swing dances will include the Texas Tommy, early Lindy of the 1920s; 6 and 8-count Lindy hop, Shag, Big Apple, 1950s Rock 'n' Roll swing, disco Hustle and West Coast Swing, with tips for partnering, improvisation and personal creativity. This will be an online Zoom course; students must have this time slot available for Zoom participatory sessions. Previous dance experience is not required to take this course.

DANCE 148. Ballet II. 1 Unit.
Intermediate Ballet at Stanford is designed for students who have done ballet in their past, but maybe have stepped away from the form for awhile. The class focuses on technique, musicality, vocabulary, coordination and artistic choice. The class looks at ballet as an enduring and vibrant movement system that can be used for classical purposes or as a way to strengthen and diversify the movement vocabulary inherent in other dance forms like modern, hip-hop, or social dancing.

DANCE 149. Ballet III. 1 Unit.
Advanced Ballet at Stanford is offered for students who are interested in rigorous, complex, and artistically compelling ballet training. The class focuses on technique, but in the broad sense of how ballet as a movement system can be used for a wide range of dance disciplines. The class honors the historical training legacy that defines classical ballet, but is in no way shackled to that history in an antiquated fashion. The students are encouraged to explore the form as artists, to question its foundations, and find their own sense of agency within classical dance. Students with a strong background in ballet are encouraged to come, but also students with less ballet training are welcome as long as they have an email dialog with the lecturer beforehand. Any questions can be directed to Lecturer Alex Ketley at aketley@stanford.edu.

DANCE 153D. Creative Research for Artists. 1-2 Unit.
This generative lab is dedicated to juniors and seniors in Comparative Studies in Race and Ethnicity, African and African American Studies, or related fields in the arts who are pursuing an advanced creative honors thesis or capstone project around questions of identity, diversity and aesthetics. Students sharpen methodologies, get feedback on works in progress, and make formidable connections between their academic and artistic pursuits.
Same as: CSRE 153D

DANCE 156. Social Dance III. 1 Unit.
Intermediate non-competitive social ballroom dance. Intermediate/advanced waltz variations, redowa and Bohemian National Polka are followed by intermediate/advanced tango, cha-cha, salsa and bachata. The course continues further tips for great partnering, enhancing creativity, developing personal style, stress reduction, musicality, and the ability to adapt to changing situations. Prerequisite: Dance 46. Dance 156 may immediately follow Dance 46. Many students are taken from the waiting list. If the class is filled, register to get on the waitlist.

DANCE 160J. Conjure Art 101: Performances of Ritual, Spirituality and Decolonial Black Feminist Magic. 2 Units.
Conjure Art is a movement and embodied practice course looking at the work and techniques of artists of color who utilize spirituality and ritual practices in their art making and performance work to evoke social change. In this course we will discuss the work of artists who bring spiritual ritual in their art making while addressing issues of spiritual accountability and cultural appropriation. Throughout the quarter we will welcome guest artists who make work along these lines, while exploring movement, writing, singing and visual art making. This class will culminate in a performance ritual co-created by students and instructor.
Same as: AFRICAAM 160J, CSRE 160J

DANCE 160M. Introduction to Representations of the Middle East in Dance, Performance, & Popular Culture. 3-4 Units.
This course will introduce students to the ways in which the Middle East has been represented and performed by/in the 'West' through dance, performance, and popular culture in both historical and contemporary contexts. A brief look through today's media sources exposes a wide range of racialized and gendered representations of the Middle East that shape the way the world imagines the Middle East to be. As postcolonial theorist Edward Said explains, the framework we call Orientalism establishes the ontological character of the Orient and the Oriental as inherently `Other'. Starting with 19th century colonialism and continuing into the post-9/11 era, this course will trace the Western production, circulation, and consumption of representations of the Middle East as 'Other' in relation to global geopolitics. We will further examine dance forms produced in mid-twentieth century Iran and Egypt, with particular attention to nation-state building and constructions of gender. Finally, we will examine artistic productions and practices from the Middle East and Middle Eastern diasporic communities that respond to colonialism, war, displacement, secularism, and Euro-American Empire. Using dance studies, postcolonial feminist, and critical race theoretical frameworks, we will consider the gender, racial, political, and cultural implications of selected performance works and practices in order to analyze how bodies produce meaning in dance, performance art, theater, film, photography, and new media. Students will engage in multiple modes of learning; the course will include lectures, engaged group discussions, viewing of live and recorded performance, embodied participation in dance practice, student oral presentations, and a variety of writing exercises. Course assignments will culminate in a final research project related to class themes and methods.
Same as: CSRE 160M, FEMGEN 160M, TAPS 160M

DANCE 161D. Introduction to Dance Studies: Dancing Across Stages, Clubs, Screens, and Borders. 3-4 Units.
This introduction to dance studies course explores dance practice and performance as means for producing cultural meaning. Through theoretical and historical texts and viewing live and recorded dance, we will develop tools for analyzing dance and understanding its place in social, cultural, and political structures. This uses dance and choreography as a lens to more deeply understand a wide range of identity and cultural formations, such as gender, race, sexuality, (dis)ability, (trans)nationality, and empire. We will analyze dancing bodies that move across stages, dance clubs, film screens, and border zones. We will examine dance from diverse locales and time periods including ballet, modern and contemporary dance, contact improvisation, folkloric dance, burlesque, street dance, queer club dance, drag performance, music videos, TV dance competitions, and intermedia/new media performance. In addition to providing theoretical and methodological grounding in dance studies, this course develops performance analysis skills and hones the ability to write critically and skillfully about dance. No previous experience in dance is necessary to successfully complete the course.
Same as: CSRE 61, FEMGEN 161D, TAPS 161D

DANCE 161P. Dance and the Politics of Movement. 4 Units.
This course examines how the dancing body has been viewed, exhibited, analyzed, and interpreted from the late nineteenth century to the present. We will discuss how ideologies about race, gender, and sexual orientation are mapped onto the body, as well as investigate the body's place in discourses on religion, health, war, performance, and consumer culture. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices. The course's structure challenges the Western/non-Western binary by comparing dance forms across the globe.
Same as: LIFE 161P, TAPS 161P, TAPS 361P

DANCE 162L. Latin/x America in Motion: An Introduction to Dance Studies. 3-4 Units.
This course introduces students to the field of Dance Studies by examining the histories of Latin American and Caribbean dances and their relationship to developing notions of race and nation in the Americas. We will study the historical emergence and transformation of ¿indigeneity,¿ ¿blackness,¿ ¿whiteness,¿ and ¿Latin/@/x¿ and consider how dance practices interacted with these identifications. No prior experience with Dance or Latin America and the Caribbean necessary.
Same as: CHILATST 162, CSRE 162D, TAPS 162L, TAPS 262L

DANCE 162V. Advanced Research in Black Performing Arts. 1 Unit.
What is the history of Committee for Black Performing Arts (CBPA)? How did it come into being and how do we carry/re-member the legacy forward and into the future? In this course students will engage in the research and archiving process as we dig into the history of CBPA on the eve of its 50th anniversary. Activities will include, digitizing and cataloguing film,video and documents,conducting interviews with former students and professors of CBPA, and guest lecturers with professional archivists.
Same as: CSRE 162V

DANCE 166. History of Social Dance in Western Culture. 1 Unit.
A survey of movement and historical dance from the past five centuries to today, with the technique and general deportment that is distinctive to each era. Historic dances will include the Galliard, Pavan, Minuet, Waltz, Tango, Jazz Age and Swing Era dances, through today's social dance forms. The course will include techniques for historical dance reconstruction, with students creating their own dance reconstructions. This course will culminate by utilizing the understanding of five centuries of dance evolution to envision a better, more evolved, future of social dance forms. This will be an online Zoom course; students must have this time slot available for Zoom participatory sessions. Previous dance experience is not required to take this course.

DANCE 190. Special Research. 1-5 Unit.
Topics related to the discipline of dance. May be repeated for credit.

DANCE 196. Dancing Black: Embodying the African Diaspora in the United States and the Caribbean. 4 Units.
What does it mean to dance black? How can studying comparative dance practices across the United States and the Caribbean expose continuities and differences in African diaspora experience? How can we draw strategies from black performance to inform our current movements for social change? This class will explore how dance and writing about performance have shaped notions of what it means to identify or be marked as an African diaspora subject. From the ring shouts of captive Africans to the 20th-century concert dance stage, from New York queer ballroom culture to Tiktok fads, this class will expose students to both historical and ethnographic methods for using dance to study the formation of black community in the New World. Looking beyond the surface of skin, we¿ll explore how race is experienced in muscle and flesh, and how black performers have historically taken advantage of or disavowed racialized ideas of how they can/should move. We will read theories of diaspora, queer of color critique and black feminist theory, and performance theory. We will search for the common questions and conversations about embodiment, the spectator¿s gaze, and black belonging that run through all three disciplines. Students will be required to do some movement research (through accessible, at-home dance practice), write weekly journals, and complete short essay projects. Students develop will skills for writing, speaking, and making performance to explore the intersections between race, sexuality, and dance.
Same as: AFRICAAM 196, TAPS 196, TAPS 396

DANCE 197. Dance in Prison: The Arts, Juvenile Justice, and Rehabilitation in America. 3 Units.
This class uses the lens of performance, and particularly dance, to explore the aesthetic, cultural, historical, and legal issues in the lives of incarcerated youth. In the process students gain an understanding of incarceration and its cultural dimensions. Class readings and discussions foreground the legal and social contexts surrounding prisons in the U.S., Particular attention will be paid to the nexus of art, community, and social action, and how dance might be used to study the performing arts effects on self-construction, perception, experiences of embodiment, and social control for incarcerated teenagers. The class includes guest speakers who bring important perspectives on criminal justice including returned citizens, a juvenile justice attorney, a restorative conferencing facilitator and a dancer who teaches women in prison to be their own dance instructors.
Same as: AMSTUD 197, TAPS 197

DANCE 290. Special Research. 1-18 Unit.
Individual project on the work of any choreographer, period, genre, or dance-related topic. May be repeated for credit.

URBAN STUDIES

Courses offered by the Program on Urban Studies are listed under the subject code URBANST on the (https://explorecourses.stanford.edu/search/?q=urbanst&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-urbanst=on&filter-catalognumber-urbanst=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=URBANST&filter-catalognumber-URBANST=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=URBANST&filter-catalognumber-URBANST=on).

The Program on Urban Studies treats urbanism as an interdisciplinary field; it brings together students, faculty, and outside specialists concerned with cities, and the impacts of cities on society and people's lives. The Urban Studies major encourages students to inquire deeply into the nature of cities and the techniques used to modify urban environments. It prepares students to address urbanization, and gives students a knowledge base and theoretical, analytical, and practical skills to understand urban social systems and effect social change.

Mission of the Undergraduate Program on Urban Studies

Cities are now home to more than half of humanity. The mission of the undergraduate Program on Urban Studies is to develop students' understanding of the nature of cities and their impact on the world. The dynamic and complex nature of cities challenges traditional disciplinary boundaries, so the program is interdisciplinary in nature, drawing from fields in the social sciences, the humanities, engineering, and education. Courses in the program focus on issues in contemporary urban society, and on the forces and practices that shape urban life. Courses also address how cities have changed over time and how they continue to change today in societies around the world. Through a comprehensive program that includes course work, community engagement, and independent research, a major in Urban Studies prepares students for careers and graduate study in fields including architecture, business, education, environmental planning, law, public policy, real estate development, social services, urban design, and urban planning. It also prepares students to be critical thinkers, engaged citizens, and informed leaders who can help to transform cities for the better.

Learning Outcomes (Undergraduate)

The Program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program on Urban Studies. Students are expected to demonstrate ability:

1. to formulate a research question and assess its significance in relation to one or more relevant scholarly or professional literatures and, where relevant, to theoretical writings.
2. to collect data to answer the proposed research question.
3. to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. to write clearly and persuasively.

Coterminal Programs for Urban Studies Majors

Undergraduates in Urban Studies may enter coterminal master's degree programs in a number of departments and schools in the University. In recent years, Urban Studies majors have developed coterminal programs in the fields of African Studies, Anthropology, Civil and Environmental Engineering, Communication, Community Health and Prevention Research. Earth Systems, Education, Public Policy, and Sociology. Information and applications for coterminal degree programs are available at Undergraduate Advising and Research. Students should discuss the coterminal program with a program director during their junior year.

University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Bachelor of Arts in Urban Studies

Declaring the Major

Students interested in declaring Urban Studies as a major are required to meet first with the co-director and one of the program's advisors; they then declare the Urban Studies major on Axess.

Degree Requirements

The Urban Studies major requires students to complete five types of courses totaling at least 70 units:

1. 18 units in the core (23 for those who declared before September 1, 2019)
2. 9 units (minimum) of skills courses in at least 3 courses of 3 units each
3. 20 units (minimum) in an area of concentration
4. 3 units (minimum) of a Cardinal service-learning course or internship approved by Urban Studies to meet this requirement
5. 10 units in the capstone sequence

If units in these categories total less then 70, the remaining units may be fulfilled by courses in other concentrations or in Urban Studies courses numbered 100 or higher (except URBANST 196, Senior Research in Public Service and URBANST 199 Senior Honors Thesis).

Majors must complete one prerequisite: ECON 1 Principles of Economics or ECON 1V Principles of Economics; this prerequisite course may be taken S/NC, as the units for this course do not count toward the 70 units required for the major. URBANST 196 Senior Research in Public Service, URBANST 199 Senior Honors Thesis, and prerequisites for required courses and for electives also do not count towards the 70-unit minimum.

Urban Studies students interested in graduate school in business or urban planning are advised to obtain basic quantitative skills by completing MATH 19 Calculus, MATH 20 Calculus, and MATH 21 Calculus, preferably before the junior year.

A course in statistical methods, such as STATS 60 Introduction to Statistical Methods: Precalculus, ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists or POLISCI 150A Data Science for Politics, is recommended for students interested in business or urban planning.

Urban Studies students are encouraged to spend at least one quarter studying overseas to learn how cities vary across societies. Some Urban Studies concentration courses, as well as electives, can be satisfied at Stanford overseas campuses. Courses offered overseas vary from year to year, and students should check in advance with Overseas Studies and Urban Studies concerning which courses meet Urban Studies requirements. Students may arrange to fulfill the service learning requirement through an internship placement at one of Stanford's overseas locations.

Courses counted toward the 70-unit graduation requirement for the major must be taken for a letter grade, and a minimum grade of 'C' is required. The only exceptions are Urban Studies courses numbered 100 and higher

that are offered only on an S/NC basis, such as URBANST 201A Capstone Internship in Urban Studies. Students may count up to three non-Stanford courses, for a maximum of 15 units, toward the major. These units must first be approved by the Office of Transfer Credit in the Registrar's Office and subsequently approved by the Urban Studies program. Transfer credit is not awarded for internship. Students may not count more than 5 units of URBANST 197 Directed Reading, toward the major without permission of the Director.

Qualified students may write a senior honors thesis and graduate with honors; see details in "Honors Program (p. 2208)" below.

Course Requirements

Urban Studies Core

Urban Studies majors should complete URBANST 110 Introduction to Urban Studies, before Spring Quarter of the junior year. The courses below, totaling 18 units, are required (23 including URBANST 111 for those who declared before September 1, 2019).

Required Courses

		Units
Core Courses		**18**
URBANST 110	Introduction to Urban Studies	
URBANST 112	The Urban Underclass	
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice	
URBANST 114	Urban Culture in Global Perspective	
or URBANST 142	Megacities	
Skills Course		**9**
A minimum of 9 units in 3 courses of at least 3 units each are required and should be taken before the end of the junior year. The following courses are recommended for most Urban Studies majors.		
SOC 180A	Foundations of Social Research	
EARTHSYS 144	Fundamentals of Geographic Information Science (GIS)	
or URBANST 124	Spatial Approaches to Social Science	
The additional skills courses vary depending on a student's needs and interests. Student consult with an advisor to determine the best choice. Courses that fulfill the skills requirement are:		
ANTHRO 91	Method and Evidence in Anthropology	
ANTHRO 93B	Prefield Research Seminar: Non-Majors	
ARCHLGY 125	Archaeological Field Survey Methods	
CEE 31	Accessing Architecture Through Drawing	
CEE 31Q	Accessing Architecture Through Drawing	
CEE 124X	Shaping the Future of the Bay Area	
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	
CEE 139	Design Portfolio Methods	
EARTHSYS 142	Remote Sensing of Land	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
EDUC 123	Community-based Research As Tool for Social Change:Discourses of Equity in Communities & Classrooms	
ENGR 150	Data Challenge Lab	
ESS 165	Advanced Geographic Information Systems	
HUMBIO 82A	Qualitative Research Methodology	
HUMBIO 82B	Advanced Data Analysis in Qualitative Research	
MED 147	Methods in Community Assessment, Evaluation, and Research	
MS&E 125	Introduction to Applied Statistics	
PEDS 202C	Qualitative Research Methods and Study Design	
POLISCI 150A	Data Science for Politics	
POLISCI 150B	Machine Learning for Social Scientists	
POLISCI 150C	Causal Inference for Social Science	
SOC 180B	Introduction to Data Analysis	
STATS 60	Introduction to Statistical Methods: Precalculus	
STATS 101	Data Science 101	
URBANST 123B	Approaching Research in the Community: Design and Methods	
Concentration Focus		**20**
Service Learning or Internship		**3**
Complete one course from the following or a course approved by Urban Studies (see "Degree Requirements" above):		
URBANST 141	Gentrification	
URBANST 145	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	
URBANST 164	Sustainable Cities	
URBANST 194	Internship in Urban Studies	
URBANST 201A	Capstone Internship in Urban Studies	
Capstone		**10**
Complete each of the following:		
URBANST 202A	Junior Seminar: Preparation for Research	
URBANST 203	Senior Seminar	
Electives		**10**
If units in the above categories total less then 70, the remaining units may be fulfilled by courses in other concentrations or in Urban Studies courses numbered 100 or higher (except URBANST 196, Senior Research in Public Service and URBANST 199 Senior Honors Thesis).		
Total Units		70

Concentrations

Students must complete at least 20 units in one of the following concentrations:

- Cities in Comparative and Historical Perspective
- Urban Education
- Urban Society and Social Change
- Urban Sustainability
- Self-Designed

Courses may not be double-counted within the major.

Students should consult an advisor to develop a program that meets their intellectual goals; relevant courses not listed here, may be counted toward the concentration with the prior consent of an advisor.

These concentrations are declared to the department; they are not declared on Axess, and they do not appear on the transcript or the diploma.

Cities in Comparative and Historical Perspective

Approximately half of the world's population now lives in cities, and the proportion grows greater every day. Urban issues cannot be understood in the context of a single nation or a single moment in time. This concentration draws on disciplinary approaches including

anthropology, archaeology, art history, geography, and history to help students understand how cities have developed and how they relate to each other today. By placing urban issues in perspective, students improve their comprehension of the United States as well as the world, and of the present as well as the past.

Students in this concentration are encouraged to study off campus, and preferably overseas, for at least one quarter. Many courses offered through the Overseas Studies Program can be counted toward the concentration. Similarly, internships offered at many of Stanford's overseas locations can be used to fulfill the Urban Studies internship requirement.

DLCL 100 CAPITALS: How Cities Shape Cultures, States, and People or URBANST 119 Ancient Urbanism (offered alternate years) is required for the cities in comparative and historical perspectives concentration:

		Units
Required Course		
DLCL 100	CAPITALS: How Cities Shape Cultures, States, and People	3-5
Concentration Electives		
The following courses may be counted towards concentration:		
AMSTUD 58Q	American Landscapes of Segregation	3-4
ANTHRO 39	Sense of Place	3
ANTHRO 42	Megacities	5
ANTHRO 108B	Gender in the Arab and Middle Eastern City	5
ARTHIST 3	Introduction to World Architecture	5
ARTHIST 142	Architecture Since 1900	4
ARTHIST 143A	American Architecture	4
CEE 32G	Architecture Since 1900	4
CEE 33B	Japanese Modern Architecture	4
CEE 32R	American Architecture	4
CLASSICS 83	The Greeks	4-5
CLASSICS 84	The Romans	3-5
CLASSICS 156	Design of Cities	3-5
CSRE 147D	Studies in Music, Media, and Popular Culture: Music and Urban Film	3-4
DLCL 100	CAPITALS: How Cities Shape Cultures, States, and People	3-5
EARTHSYS 112	Human Society and Environmental Change	4
ENGLISH 83N	City, Space, Literature	3
FRENCH 140	Paris: Capital of the Modern World	4-5
HISTORY 62S	From Runaway Wives to Dancing Girls: Urban Women in the Long Nineteenth Century	5
HISTORY 106A	Global Human Geography: Asia and Africa	5
HISTORY 106B	Global Human Geography: Europe and Americas	5
HISTORY 150C	The United States in the Twentieth Century	5
ME 120	History and Ethics of Design	3
OSPBER 30	Berlin vor Ort: A Field Trip Module	1
OSPBER 60	Cityscape as History: Architecture and Urban Design in Berlin	5
OSPCPTWN 16		
OSPCPTWN 43		
OSPFLOR 58	Space as History: Social Vision and Urban Change	4
OSPFLOR 71	A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence	4
OSPFLOR 115Y	Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization	4
OSPMADRD 8A	Cities and Creativity: Cultural and Architectural Interpretations of Madrid	4
OSPMADRD 60	Integration into Spanish Society: Service Learning and Professional Opportunities	4
OSPPARIS 92	Building Paris: Its History, Architecture, and Urban Design	4
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	5
OSPSANTG 71	Santiago: Urban Planning, Public Policy, and the Built Environment	5
POLISCI 110C	America and the World Economy	5
REES 204	Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean	3-5
SINY 114	Writing in the City	4
SINY 116	Off the iPhone and Into the City: Creating a Photography Project	4
SINY 152	Film: The City as Muse	4
URBANST 27Q	The Detective and the City	3
URBANST 140F	Casablanca - Algiers - Tunis : Cities on the Edge	3-5
URBANST 141	Gentrification	5
URBANST 145	International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development	4-5
URBANST 147	Archaeology of Human Rights	5
URBANST 150	From Gold Rush to Google Bus: History of San Francisco	4
URBANST 156	St. Petersburg: Imagining a City, Building a City	1-2
URBANST 169	Race and Ethnicity in Urban California	4-5
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	3-4
URBANST 184	Paris: Capital of the Modern World	4-5

Urban Education

Providing education that is both high in quality and fair to all is one of the greatest challenges facing cities today. This concentration prepares students for careers in educational policy and practice. It is a popular choice for students who have been admitted by the Stanford School of Education (https://ed.stanford.edu/) to pursue a coterminal master's degree in the Stanford Teacher Education Program (STEP) (http://suse-step.stanford.edu/) or the Policy, Organization, and Leadership Studies Program (POLS) (http://suse-pols.stanford.edu/). Stanford undergraduates can apply to the Stanford Teacher Education Program (STEP) in their junior or senior year.

Coterminal students applying to STEP are encouraged to take EDUC 101 Introduction to Teaching and Learning before applying to the program. Additionally, students interested in STEP Secondary (Single Subject) must demonstrate subject matter competency in their intended teaching area. Transcripts should reflect coursework in the intended teaching subject even if it was not a student's undergraduate major.

For additional information please contact the STEP Admissions Officer at 723-2110, or consult the STEP web site (http://suse-step.stanford.edu/).

		Units
Required Course		
EDUC 112	Urban Education	3-5
Concentration Electives		

The following courses may be counted towards concentration:		
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	3-5
EDUC 101	Introduction to Teaching and Learning	4
EDUC 103A	Tutoring: Seeing a Child through Literacy	3-4
EDUC 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5
EDUC 107	Education and Inequality: Big Data for Large-Scale Problems	3-5
EDUC 123	Community-based Research As Tool for Social Change:Discourses of Equity in Communities & Classrooms	3-5
EDUC 131	Raza Youth in Urban Schools: Mis-educating Chicana/o/x and Latina/o/x Communities	3-5
EDUC 148	Inglés Personal: Coaching Everyday Community English	1-5
EDUC 149	Theory and Issues in the Study of Bilingualism	3-5
EDUC 195A	Origins and Legacies of Educational Progressivism: A Community Engaged Learning Course	3-5
EDUC 201	History of Education in the United States	3-5
EDUC 202	Introduction to International and Comparative Education	3
EDUC 204	Introduction to Philosophy of Education	3
EDUC 220C	Education and Society	4-5
EDUC 220D	History of School Reform: Origins, Policies, Outcomes, and Explanations	3-5
EDUC 221A	Policy Analysis in Education	4-5
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4
EDUC 283	Child Development In and Beyond Schools	1
HUMBIO 142	Adolescent Development	3-4
or PSYCH 60	Introduction to Developmental Psychology	

Urban Society and Social Change

Many students are drawn to Urban Studies by their desire to understand and address the unique problems confronting cities today. This concentration focuses on issues in contemporary urban society, and on the tools and concepts that can bring about change to improve urban life.

Courses focus on a diverse range of issues, from public health crises to racial and class inequality. Students also learn how community action, urban planning and design, and organizations in nonprofit, for-profit, and government sectors address these challenges. This concentration prepares students to enter graduate programs concerned with urban affairs, community service, and public policy, and to work with local governmental agencies and for-profit and nonprofit organizations engaged in community service and development.

		Units
Required Course		
URBANST 156A	The Changing American City	4
Concentration Electives		
The following courses may be counted towards concentration:		
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	3-5
AMSTUD 58Q	American Landscapes of Segregation	3-4
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
ASNAMST 123	Asian Americans and Environmental Justice	3-5
CEE 32A	Psychology of Architecture	3
CEE 32B	Design Theory	4
CEE 124S	Sustainable Urban Systems Seminar	1
CEE 131A	Professional Practice: Mixed-Use Design in an Urban Setting	4
CEE 141A	Infrastructure Project Development	3
CEE 141B	Infrastructure Project Delivery	3
CEE 246	Venture Creation for the Real Economy	3-4
CEE 265F	Environmental Governance and Climate Resilience	3
CSRE 157P	Solidarity and Racial Justice	4-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
EARTHSYS 105	Food and Community: Food Security, Resilience and Equity	2-3
ECON 150	Economic Policy Analysis	4-5
ECON 155	Environmental Economics and Policy	5
EDUC 107	Education and Inequality: Big Data for Large-Scale Problems	3-5
ENGR 150	Data Challenge Lab	3-5

URBANST 173	The Urban Economy	4
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	3-4
URBANST 178	The Science and Practice of Effective Advocacy	3-5
URBANST 179	The Social Life of Neighborhoods	4
URBANST 183	Team Urban Design Studio	5

Urban Sustainability

The Urban Sustainability concentration provides the basis for a holistic understanding of cities through the lens of environmental and social sustainability. By combining coursework in urban studies, history, sociology, and design with the STEM fields (science, technology, engineering and mathematics), students in the Urban Sustainability concentration are exposed to the environmental and infrastructural aspects of cities, as well as to issues of human development, public policy, and social equity.

Students in the concentration acquire a foundation in sustainability concepts and skills for research and professional practices. The Urban Sustainability concentration helps prepare students to serve as social change agents in future roles as scholars, urban planners, designers, entrepreneurs, public servants, and advocates, to address the most pressing issues of urban development and its human impacts in cities around the world.

The following courses may be counted toward the Urban Sustainability Concentration. Students must select at least one course from each of the following categories:

1. environmental sustainability
2. social sustainability
3. project-based courses.

Students interested in pursuing the concentration in urban sustainability should meet with an Urban Studies advisor to determine an appropriate course of study. Consult the Urban Studies website or see an advisor for sample course plans in this concentration.

		Units
Required Course		
EARTHSYS 112	Human Society and Environmental Change	4
Concentration Electives		
Students must take at least one course in each of the categories listed below for the Urban Sustainability concentration.		
Environmental Sustainability		
Environmental sustainability refers to the biosphere, environmental planning and policy, natural resource planning and development, sustainable building design, and urban infrastructure systems.		
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CEE 100	Managing Sustainable Building Projects	
CEE 107A	Understanding Energy	
CEE 124S	Sustainable Urban Systems Seminar	
CEE 165C	Water Resources Management	
CEE 171		
CEE 172	Air Quality Management	
CEE 176A	Energy Efficient Buildings	
CEE 177X	Engineering and Sustainable Development: Toolkit	
CEE 199D		
CEE 243	Intro to Urban Sys Engrg	
CEE 265F	Environmental Governance and Climate Resilience	
CEE 308	Topics in Disaster Resilience Research	
CHEMENG 60Q	Environmental Regulation and Policy	
EARTHSYS 10	Introduction to Earth Systems	
EARTHSYS 41N	The Global Warming Paradox	
EARTHSYS 101	Energy and the Environment	
EARTHSYS 104	The Water Course	
EARTHSYS 188	Social and Environmental Tradeoffs in Climate Decision-Making	
ECON 17N	Energy, the Environment, and the Economy	
ECON 155	Environmental Economics and Policy	
ENGR 90	Environmental Science and Technology	
OSPSANTG 29	Sustainable Cities: Comparative Transportation Systems in Latin America	
SINY 162	Sustainable and Resilient Urban Systems in NYC	
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	
Social Sustainability		

Social sustainability refers to land use planning and its human impacts, distribution of public goods, human-centered design, human and community development, citizen participation, and social equity.

ASNAMST 123	Asian Americans and Environmental Justice	
EARTHSYS 105	Food and Community: Food Security, Resilience and Equity	
ENVRES 221	New Frontiers and Opportunities in Sustainability	
PEDS 150	Social and Environmental Determinants of Health	
POLISCI 31Q	Justice and Cities	
SINY 122	The Agile City	
SOC 3	America: Unequal	
SOC 135	Poverty, Inequality, and Social Policy in the United States	
URBANST 103C	Housing Visions	
URBANST 125	Shades of Green: Redesigning and Rethinking the Environmental Justice Movements	
URBANST 130	Planning Calif: the Intersection of Climate, Land Use, Transportation & the Economy	
URBANST 138	Smart Cities & Communities	
URBANST 147	Archaeology of Human Rights	
URBANST 156A	The Changing American City	
URBANST 169	Race and Ethnicity in Urban California	
URBANST 170	Urban Policy Research Lab	
URBANST 173	The Urban Economy	
URBANST 174	Defining Smart Cities: Visions of Urbanism for the 21st Century	
Project-Based Courses		

Project-based courses enable students to work on a real-life urban sustainability issue in collaboration with local and international community partners. Students grapple with sustainability concepts while practicing community engagement and capacity building, fluency in crosscultural collaboration, human-centered design thinking, and developing a sense of one's place in relation to global society and the praxis of urban sustainability.

CEE 177X	Engineering and Sustainable Development: Toolkit	
URBANST 164	Sustainable Cities	
URBANST 171	Urban Design Studio	
URBANST 172A	Introduction to Urban and Regional Planning	3
URBANST 183	Team Urban Design Studio	

Self-Designed Concentration

Students who wish to concentrate in an area of urban studies other than one of the above concentrations must complete the Urban Studies core, skills, and capstone requirement, and design additional units to bring the total to at least 70 units. The self-designed portion of the major should concentrate on a particular area of urban study, such as urban health care or urban technologies. Additional units must be approved by both the Director of Urban Studies and an academic advisor who is a member of the Academic Council and has expertise in the particular area of interest to the student. A proposal for a self-designed concentration should include a list of courses and a description of how each course meets the student's educational objectives. A proposal for a self-designed concentration must be accompanied by a letter to the Director of Urban Studies indicating that the academic advisor has examined and approved the student's plan.

Students pursuing a self-designed concentration must submit proposals for approval by the Director of Urban Studies by the beginning of the third quarter of the student's sophomore year. Applications received after that deadline are not considered. Students interested in designing their own concentration are strongly encouraged to meet with the Director of Urban Studies before the end of fall quarter of their sophomore year.

Additional Information

Overseas Studies

Urban Studies students are encouraged to spend at least one quarter studying overseas to learn how cities vary across societies. Some Urban Studies concentration courses, as well as electives, can be satisfied at Stanford overseas campuses. Courses offered overseas vary from year to year, and students should check in advance with Overseas Studies and Urban Studies concerning which courses meet Urban Studies requirements. Students may arrange to fulfill the service learning requirement through an internship placement at one of Stanford's overseas locations.

Service Learning

Urban Studies students are required to engage in a service learning experience as part of their course of study. Students can fulfill their service learning requirement in two ways:

1. enroll in an approved course such as URBANST 164, URBANST 145, URBANST 141, SINY 101, or
2. complete an independent internship with a government agency or non-profit/community organization relevant to the major, while enrolled in URBANST 201A Capstone Internship in Urban Studies before Autumn Quarter of the senior year.

Students planning to carry out an internship should consult with the Director of Community Engaged Learning no later than Winter Quarter of junior year and complete the internship before Autumn Quarter of senior year, or three quarters before graduation. Students who intern for a private sector organization may receive credit for URBANST 194, but cannot use URBANST 201A credits to meet the capstone requirement. Urban Studies majors who wish to receive academic credit for additional internship work may enroll in URBANST 194. Students may not count more than 7 units of internship credit, including URBANST 194 Internship in Urban Studies and URBANST 201A Capstone Internship in Urban Studies, toward their major. Students can consult the Haas Center for Public Service for other courses with internship placements at community organizations.

Capstone

All majors are required to complete a sequence of two seminars, totaling 10 units, in which students design a senior project, and write the results of their project. The capstone seminars can be used to satisfy the Writing in the Major requirement and to complete some work on an honors thesis. URBANST 202A Junior Seminar: Preparation for Research, should be taken in the junior year, and URBANST 203 Senior Seminar in the senior year. Students who plan to be away during Winter Quarter of their junior year are advised to take URBANST 202A Junior Seminar: Preparation for Research in the Winter Quarter of their sophomore year.

		Units
URBANST 203	Senior Seminar	5
URBANST 202A	Junior Seminar: Preparation for Research	5

Honors Program

The honors program offers qualified students an opportunity to conduct independent research and to write a thesis summarizing the results. Before being accepted to the honors program in Urban Studies, a student must:

1. declare a major in Urban Studies and complete at least 30 of the 70 required units including all prerequisites and core classes
2. complete URBANST 202A Junior Seminar: Preparation for Research (offered Winter Quarter)
3. have an overall GPA of 3.3 and a GPA of at least 3.5 in Urban Studies
4. submit an application, including a one-page abstract and the signatures of an advisor and, if applicable, a second reader. If the advisor is not a member of Stanford's Academic Council, the student must have a second reader who is an Academic Council member. The application must be submitted to the program office no later than April 30 of the junior year, and it must then be approved by the Director of the Urban Studies honors program.

Honors students are expected to complete a portion of their honors work in URBANST 203 Senior Seminar, in Autumn Quarter. Additionally, they must register for 5-10 units total in URBANST 199 Senior Honors Thesis, over the course of their senior year. The units of URBANST 199 Senior Honors Thesis are in addition to the 70-units required for the major. Honors students are required to present their theses at the Senior Colloquium in Spring Quarter of senior year.

To graduate with honors, students must receive a grade of at least 'A-' in the honors work and have a GPA of at least 3.5 in courses for the Urban Studies major at the time of graduation.

return to top (p. 2202)

Minor in Urban Studies

The minor in Urban Studies is designed to introduce students to several disciplinary approaches to the study of cities, and provides the opportunity to explore one of four specialized options:

- Cities in comparative and historical perspective
- Urban education
- Urban society and social change
- Urban sustainability

The minor in Urban Studies requires completion of seven courses for a letter grade, including the four core courses, the required course in the student's chosen concentration area, and two additional course in that option as listed in the "Bachelor of Arts in Urban Studies (p. 2202)" section of this bulletin.

Degree Requirements

		Units
Core Courses		
URBANST 110	Introduction to Urban Studies	4
URBANST 112	The Urban Underclass	4
URBANST 113	Introduction to Urban Design: Contemporary Urban Design in Theory and Practice	5
URBANST 114	Urban Culture in Global Perspective	5
or URBANST 142	Megacities	
Concentration Electives		**6**
Complete two courses from Concentration course lists outlined on the Bachelor's in Urban Studies. Cannot be duplicated with core coursework.		
Total Units		24

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Program on Urban Studies counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade. If a course is taken for a letter grade, a minimum grade of 'C' is required.

Director: Tomás Jiménez (Sociology)

Co-Director: Michael Kahan (Senior Lecturer, Sociology)

Executive Committee: David Grusky (Sociology), Michael Lepech, (Civil and Environmental Engineering), Jennifer Trimble (Classics)

Affiliated Faculty: Michelle Anderson (Law), Asad Asad (Sociology), Arnetha Ball (Education, African and African American Studies), Eric Bettinger (Education), Bryan Brown (Education), Scott Bukatman (Art and Art History), Samuel Chiu (Management Science and Engineering), Matthew Clair (Sociology), Rebecca Diamond (Business), Paulla Ebron (Anthropology), Paula Findlen (History), James Fishkin (Communication), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Richard Ford (Law), Zephyr Frank (History), Angela Garcia (Anthropology), Sharad Goel (Management Science and Engineering), David Grusky (Sociology), Thomas Hansen (Anthropology), Gabrielle Hecht (History), Allyson Hobbs (History), Ian Hodder (Anthropology), Jackelyn Hwang (Sociology), Miyako Inoue (Anthropology), Rishee Jain (Civil and Environmental Engineering), S. Overseas Studies Courses in Urban Studies

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

Courses

URBANST 16SI. Environmental Justice in the Bay Area. 2 Units.
Hands-on, discussion-based class that seeks to expose students to the intersectionality of social justice and environmental well being. Through student-led talks and field trips around the Bay, the course pushes participants to think about connections between issues of privilege, race, health, gender equality, and class in environmental issues. Students from all experiences and fields of study are encouraged to join to gain a sense of place, engage critically with complex challenges, and learn about environmental justice in and out of the classroom.
Same as: EARTHSYS 16SI

URBANST 27Q. The Detective and the City. 3 Units.
This seminar will analyze the social reality of three historic cities (London in the 1880s and 90s, San Francisco in the 1920s and 30s, and contemporary Shanghai) through the prism of popular crime fiction featuring three great literary detectives (Arthur Conan Doyle's Sherlock Holmes, Dashiell Hammett's Sam Spade, and Qiu Xiaolong's Chief Inspector Chen). As a student in this course, you will explore why crime fiction is so popular, why the fear of crime is so much a part of modern urban culture, and why the police detective and the private investigator have become iconic code heroes of pulp fiction, movies, TV shows, and even video games. If you take this class, you will have the opportunity to write a paper and present your research on one of the classic literary detectives or on one of today's related manifestations of the same impulse in mass-market tales of superheroes, vampires, and the zombie apocalypse.

URBANST 83N. City, Space, Literature. 3 Units.
This course presents a literary tour of various cities as a way of thinking about space, representation, and the urban. Using literature and film, the course will explore these from a variety of perspectives. The focus will be thematic rather than chronological, but an attempt will also be made to trace the different ways in which cities have been represented from the late nineteenth century to recent times. Ideas of space, cosmopolitanism, and the urban will be explored through films such as The Bourne Identity and The Lunchbox, as well as in the writings of Arthur Conan Doyle, Walter Mosley, Virginia Woolf, James Joyce, Fiston Mwanza Mujila, Karen Tei Yamashita, and Mohsin Hamid, among others.
Same as: ENGLISH 83N

URBANST 101. Public Service Internship Preparation. 1 Unit.
Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.
Same as: EARTHSYS 9, EDUC 9, HUMBIO 9, PUBLPOL 74

URBANST 101A. The New York City Seminar. 3-5 Units.
*This class is being offered in collaboration with Stanford in New York, Bing Overseas Studies Program, and must be taken in conjunction with an internship. Registration code required.n nThe (Remote) NYC Seminar will employ a structured, experiential education model to enrich the value of a remote internship experience arranged in advance through Stanford in New York. Through goal setting, deep reflection on experiences, and expression and documentation of learning outcomes, students will gain greater awareness of work-related interests, skills, and abilities and how they integrate with intellectual and personal interests and pursuits. Through readings, virtual experiences, and class discussions, the seminar will also consider the critical qualities and tensions that make New York City special and how the fields and organizations represented by student internships contribute to making New York what it is and vice versa. For more information, please contact stanfordNY@stanford.edu.
Same as: Remote

URBANST 103. Digital Humanities and African American History Black History in the Age of the Digital Database. 1 Unit.
The focus of this workshop is on the social and cultural histories and present conditions relating to social movements and the role of leaders and heroes in urban settings. The workshop seeks to foster historical consciousness of past struggles for justice through collective action as well as to introduce students to a diverse range of leaders of contemporary social justice movements. Additionally, as an underpinning concept, the course explores the changing meaning and importance of social and cultural heroes through history, literature, and music. Workshop activities will divided between sessions with guest speakers and classes held to discuss background concepts and material.
Same as: CSRE 13

URBANST 103C. Housing Visions. 3 Units.
This course provides an introduction to American Housing practices, spanning from the Industrial Age to the present. Students will examine a range of projects that have aspired to a range of social, economic and/or environmental visions. While learning about housing typologies, students will also evaluate the ethical role that housing plays within society. The course focuses on the tactical potentials of housing, whether it is to provide a strong community, solve crisis situations, integrate social services, or encourage socio-economic mixture. Students will learn housing design principles and organizational strategies, and the impact of design on the urban environment. They will discuss themes of shared spaces and defensible spaces; and how design can accommodate the evolving demographics and culture of this country. For example, how can housing design address the changing relationship between living and working? What is the role of housing and ownership in economic mobility? These issues will be discussed within the context the changing composition of the American population and economy. n nThis course will be primarily discussion-based, using slideshows, readings and field trips as a departure points for student-generated conversations. Each student will be asked to lead a class discussion based on his/her research topic. Students will evaluate projects, identifying which aspects of the initial housing visions were realized, which did not, and why. Eventually, students might identify factors that lead to ¿successful¿ projects, and/or formulate new approaches that can strengthen or redefine the progressive role of housing: one inclusive of the complex social, economic, and ethical dimensions of design.
Same as: CEE 33C

URBANST 106. City, Society, Literature- 19th Century Histories. 4 Units.
This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s.
Same as: HISTORY 206A, HISTORY 306A

URBANST 108. Grassroots Community Organizing: Building Power for Collective Liberation. 3-5 Units.
Taught by long-time community organizer, Beatriz Herrera. This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.
Same as: AFRICAAM 100, CSRE 100, FEMGEN 100X

URBANST 108B. Gender in the Arab and Middle Eastern City. 5 Units.
What are the components of gendered experience in the city, and how are these shaped by history and culture? How do meanings attributed to Islam and the Middle East obscure the specificity of women¿s and men¿s lives in Muslim-majority cities? This course explores gender norms and gendered experience in the major cities of Arab-majority countries, Iran and Turkey. Assigned historical and sociological readings contextualize feminism in these countries. Established and recent anthropological publications address modernity, mobility, reproduction, consumption, and social movements within urban contexts. Students will engage with some of the key figures shaping debates about gender, class, and Islam in countries of the region typically referenced as North Africa and the Middle East (MENA). They will also evaluate regional media addressing concerns about gender in light of the historical content of the course and related political concepts.
Same as: ANTHRO 108B, FEMGEN 108B

URBANST 108H. Housing Affordability Crisis in California: Causes, Impacts, and Solutions. 4 Units.
This course will divided into three sections that when combined provide 1) the overall narrative of the precedents and adverse impacts of the worldwide, US west coast and California housing crises and the frameworks for California to create a balanced housing market without causing extreme displacement; 2) an overview of the planning, regulatory and development environments in California along with an opportunities/threats analysis to illuminate current opportunities to achieve a balanced housing market; and 3) an overview of the federal, state, regional and local housing policy environments and areas of policy work addressing and responding to the California housing crisis.

URBANST 109. Physics of Cities. 3 Units.
An introduction to the modern study of complex systems with cities as an organizing focus. Topics will include: cities as interacting systems; cities as networks; flows of resources and information through cities; principles of organization, self-organization, and complexity; how the properties of cities scale with size; and human movement patterns. No particular scientific background is required, but comfort with basic mathematics will be assumed. Prerequisites: MATH 19 and 20, or the equivalent.
Same as: CEE 6

URBANST 110. Introduction to Urban Studies. 4 Units.
Today, for the first time in history, a majority of people live in cities. By 2050, cities will hold two-thirds of the world¿s population. This transformation touches everyone, and raises critical questions. What draws people to live in cities? How will urban growth affect the world¿s environment? Why are cities so divided by race and by class, and what can be done about it? How do cities change who we are, and how can we change cities? In this class, you will learn to see cities in new ways, from the smallest everyday interactions on a city sidewalk to the largest patterns of global migration and trade. We will use specific examples from cities around the world to illustrate the concepts that we learn in class. The course is intended primarily for freshmen and sophomores.
Same as: HISTORY 107

URBANST 111. Political Power in American Cities. 5 Units.
The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 121.
Same as: AMSTUD 121Z, POLISCI 121, PUBLPOL 133

URBANST 111A. The Politics of the American City. 4 Units.
This course will focus on American urban politics ¿- the distinctive nature of local government, its relationship to state government and the separation of powers between states and the federal government. Certain theories about political decision-making and power sharing will be explored. We will try to develop a national perspective on the political dynamics of urban governments and we will probe certain policy areas such as economic development to understand how political choice is embedded within the allocation of resources to meet human needs. The growing transformation among American urban areas due to the rise of the global economy will also be examined. The course will be composed of lectures, class discussions and graded exercises.

URBANST 112. The Urban Underclass. 4 Units.
(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.
Same as: CSRE 149A, SOC 149, SOC 249

URBANST 113. Introduction to Urban Design: Contemporary Urban Design in Theory and Practice. 5 Units.
Comparative studies in neighborhood conservation, inner city regeneration, and growth policies for metropolitan regions. Lect-disc and research focusing on case studies from North America and abroad, team urban design projects. Two Saturday class workshops in San Francisco: 2nd and 4th Saturdays of the quarter. Terms: Win | Units: 5 | UG Reqs: GER:DBSocSci | Grading: Letter (ABCD/NP).

URBANST 114. Urban Culture in Global Perspective. 5 Units.
Core course for Urban Studies majors. A majority of the world's population now live in urban areas and most of the rapid urbanization has taken place in mega-cities outside the Western world. This course explores urban cultures, identities, spatial practices and forms of urban power and imagination in Asia, Africa and Latin America.nParticipants will be introduced to a global history of urban development that demonstrates how the legacies of colonialism, modernization theory and global race thinking have shaped urban designs and urban life in most of the world. Students will also be introduced to interpretative and qualitative approaches to urban life that affords an understanding of important, if unquantifiable, vectors of urban life: stereotypes, fear, identity formations, utopia, social segregation and aspirations.
Same as: ANTHRO 126

URBANST 122. Ethics and Politics of Public Service. 3-5 Units.
Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D

URBANST 122Z. Ethics and Politics in Public Service. 4 Units.
This course examines ethical and political questions that arise in doing public service work, whether volunteering, service learning, humanitarian endeavors overseas, or public service professions such as medicine and teaching. What motives do people have to engage in public service work? Are self-interested motives troublesome? What is the connection between service work and justice? Should the government or schools require citizens or students to perform service work? Is mandatory service an oxymoron?.
Same as: CSRE 133P, POLISCI 133Z, PUBLPOL 103Z

URBANST 123. Designing Research for Social Justice: Writing a Community-Based Research Proposal. 3-5 Units.
This course will support students in designing and writing a community-engaged research proposal. In contrast to "traditional" forms of research, community-engaged research uses a social justice lens in seeking to apply research to benefit communities most impacted. Community-engaged researchers also aim to challenge the power relationship between "researchers" and "researched" by working side by side with community partners in the design, conceptualization, and actualization of the research process. In this course, students will learn how to write a community-engaged research proposal. This involves forming a successful community partnership, generating meaningful research questions, and selecting means of collecting and analyzing data that best answer your research questions and support community partners. The course will also support students in developing a grounding in the theory and practice of community-engaged research, and to consider the ethical questions and challenges involved. By the end of the course, students should have a complete research proposal that can be used to apply for a number of summer funding opportunities including the Chappell Lougee Scholarship, the Community-Based Research Fellowship, Cardinal Quarter fellowships, and Major Grants. Please note that completion of the course does not guarantee funding-- rather, the course supports you in learning how to write a strong community-engaged research proposal that you can use to apply to any number of fellowships). This course is also useful for students in any academic year who are interested in pursuing community-engaged theses or capstone projects.
Same as: CSRE 146A

URBANST 123B. Approaching Research in the Community: Design and Methods. 3 Units.
This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CBRF project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). This is a required course for students participating in the Haas Center for Public Service Community-based Research Fellows Program, but enrollment is open to all Stanford students.
Same as: CSRE 146B

URBANST 124. Spatial Approaches to Social Science. 5 Units.
This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.
Same as: ANTHRO 130D, ANTHRO 230D, POLISCI 241S

URBANST 125. Shades of Green: Redesigning and Rethinking the Environmental Justice Movements. 3-5 Units.
Historically, discussions of race, ethnicity, culture, and equity in the environment have been relegated to the environmental justice movement, which often focuses on urban environmental degradation and remains separated from other environmental movements. This course will seek to break out of this limiting discussion. We will explore access to outdoor spaces, definitions of wilderness, who is and isn't included in environmental organizations, gender and the outdoors, how colonialism has influenced ways of knowing, and the future of climate change. The course will also have a design thinking community partnership project. Students will work with partner organizations to problem-solve around issues of access and diversity. We value a diversity of experiences and epistemological beliefs, and therefore undergraduates and graduate students from all disciplines are welcome.
Same as: CSRE 125E, EARTHSYS 125, EARTHSYS 225

URBANST 126. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.
A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and WIlliam Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).
Same as: CSRE 162A, RELIGST 162X

URBANST 126A. Ethics and Leadership in Public Service. 3-4 Units.
This course explores ethical questions that arise in public service work, as well as leadership theory and skills relevant to public service work. Through readings, discussions, in-class activities, assignments, and guest lectures, students will develop a foundation and vision for a future of ethical and effective service leadership. This course serves as a gateway for interested students to participate in the Haas Center's Public Service Leadership Program.
Same as: CSRE 126C, EDUC 126A, ETHICSOC 79

URBANST 130. Planning Calif: the Intersection of Climate, Land Use, Transportation & the Economy. 3 Units.
Cities and urban areas have always been transformed by major external changes like pandemics and public health crises. California is both in the midst of its greatest economic recession since the Great Depression and experiencing a pandemic that has the potential to reshape many aspects of life. Planning for cities and regions, however, is a long game that requires follow-through on decisions made sometimes over many decades. How do we balance the shocks to our assumptions from the current Covid world with the need to plan long-term for issues like affordable housing and equitable cities, and perhaps most fundamentally, prepare our cities and communities for the inevitability of climate change and climate impact? nnnnThis course takes an interdisciplinary view of the key contemporary planning topics in California. It does so from looking at the intersection of climate laws, land use changes, the need for housing, travel patterns and the availability of high quality jobs and employment. This course will give you an understanding of the roles of key levels of government, from the state to the region/metropolitan scale, to the city and county, down to the neighborhood and parcel level. it will give students insight into leading themes and issues of the day in California such as the future of downtowns, the role of high speed rail, the impact of telework, automation in the construction of housing, drawing from examples in San Jose and San Francisco, the Central Valley, the state legislature, Southern California. Within each of these topics we will look at the impact of decisions on equity as well as climate and the economy. nnnnThe instructors are Kristy Wang, formerly SPUR¿s Community Planning Policy Director, and Egon Terplan, Senior Advisor for Economic Development and Transportation in the California Governor¿s Office, formerly SPUR¿s Regional Planning Director. (Affiliations for identification purposes only).
Same as: CEE 136, CEE 236, PUBLPOL 130, PUBLPOL 230

URBANST 131. VIP: Very Impactful People - Social Innovation & the Social Entrepreneur. 1 Unit.
Engage with founders of leading social enterprises, including Nobel Peace Prize Winner, Muhammad Yunus of Grameen Bank, Wendy Kopp of Teach for America, Paul Rice of Fair Trade USA, and Durreen Shahnaz of Impact Investment Exchange, among many others in this weekly speaker series. Students will be exposed to the perspectives and endeavors of global high-impact entrepreneurs who address social and environmental needs in the U.S. and internationally through for-profit, nonprofit and hybrid models. Each week after a live in-depth interview with a social entrepreneur via Zoom, students will have the opportunity to converse directly with each guest entrepreneur during Q&A. This class will expose students to pioneering thought leaders, diverse impact career paths, networking and potential internship and job opportunities.

URBANST 132. Concepts and Analytic Skills for the Social Sector. 4 Units.
How to develop and grow innovative not-for-profit organizations and for-profit enterprises which have the primary goal of solving social and environmental problems. Topics include organizational mission, strategy, market/user analysis, communications, funding, recruitment and impact evaluation. Perspectives from the field of social entrepreneurship, design thinking and social change organizing. Opportunities and limits of using methods from the for-profit sector to meet social goals. Focus is on integrating theory with practical applications, including several case exercises and simulations.One-day practicum where students advise an actual social impact organization. Enrollment limited to 20. Prerequisite:consent of instructor. Email lalitvak@stanford.edu.
Same as: EARTHSYS 137

URBANST 133. Social Enterprise Workshop. 4 Units.
Social Enterprise Workshop: A team based class to design solutions to social issues. In the class students will identify issues they are interested in, such as housing, food, the environment, or college access. They will join teams of like-minded students. Working under the guidance of an experienced social entrepreneur, together they will develop a solution to one part of their issue and write a business plan for that solution. The class will also feature guests who are leaders in the field of social entrepreneurship who will share their stories and help with the business plans. The business plan exercise can be used for both nonprofits and for-profits. Previous students have started successful organizations and raised significant funds based on the business plans developed in this class. There are no prerequisites, and students do not need to have an idea for a social enterprise to join the class. Enrollment limited to 20. May be repeated for credit.
Same as: EARTHSYS 133

URBANST 134. Justice and Cities. 5 Units.
Cities have most often been where struggles for social justice happen, where injustice is most glaring and where new visions of just communities are developed and tested. This class brings political theories of justice and democracy together with historical and contemporary empirical work on city design, planning, and policies to ask the following questions: What makes a city just or unjust? How have people tried to make cities more just? What has made these efforts succeed or fail? Each session will include a case study of a particular city, largely with a focus on the United States. Students will develop research projects examining a city of their choice through the lens of a particular aspect of justice and injustice.
Same as: POLISCI 233

URBANST 136. The Sharing Economy. 3 Units.
The rapid growth of the sharing economy, sometimes also called the peer to peer economy, is made possible by the ubiquity of smart phones, inefficiency of ownership, and measures designed to create and measure trust among participants. The course will explore not only the rapid rise of certain companies but also the shadow side of commercialized relationships. We will examine the economics and development consequences of the sharing economy, primarily with an urban focus, along an emphasis on the design of platforms and markets, ownership, the nature of work, environmental degradation and inequality.
Same as: PUBLPOL 136

URBANST 137. Innovations in Microcredit and Development Finance. 3 Units.
The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B.
Same as: PUBLPOL 137

URBANST 138. Smart Cities & Communities. 4 Units.
A city is essentially an organism, a complex system of systems and it inhabitants. A nexus of forces - IoT, data, systems of insight, and systems of engagement - present an unprecedented opportunity to increase the efficiency of urban systems, improve the efficacy of public services, and to assure the resiliency of the community against both chronic stresses and acute shocks.nnThe course will provide you with an understanding of the foundational elements of a smart city and address the breadth of systems that comprise it: built infrastructure, energy, water, transportation, food production/distribution, and public/social services. Case studies will be used to illustrate the approaches, benefits, and risks involved. It will discuss what IT can and cannot do, and most importantly given the control and privacy implications of many ¿smart¿ IT systems, what the smart city should and should not do. nnPanel discussions and guest speakers from the public sector and industry leading technology providers will give students an opportunity to engage with the architects and operators of Smart Cities.

URBANST 138SI. Scaling Impact with VIP. 2 Units.
Social entrepreneurship is innovating new ways to create social value. This course will focus on the challenges of scaling social enterprises during the many stages of maturity. This class will act an adjunct (auxiliary, complementary) class to VIP. Very Impactful People Speaker Series (URBANST 131). VIP speakers will stay after their lectures to provide insight on their experience in scaling, be it through detailed case studies or structured Q&A discussion. Note: students do not need to separately register for Urban Studies 131. The two credit units for this course is inclusive of the one credit unit a student would otherwise receive for Urban Studies 131.

URBANST 140F. Casablanca - Algiers - Tunis : Cities on the Edge. 3-5 Units.
Casablanca, Algiers and Tunis embody three territories, real and imaginary, which never cease to challenge the preconceptions of travelers setting sight on their shores. In this class, we will explore the myriad ways in which these cities of North Africa, on the edge of Europe and of Africa, have been narrated in literature, cinema, and popular culture. Home to Muslims, Christians, and Jews, they are an ebullient laboratory of social, political, religious, and cultural issues, global and local, between the nineteenth and twenty-first centuries. We will look at mass images of these cities, from films to maps, novels to photographs, sketching a new vision of these magnets as places where power, social rituals, legacies of the Ottoman and French colonial pasts, and the influence of the global economy collude and collide. Special focus on class, gender, and race.
Same as: AFRICAAM 236B, COMPLIT 236A, CSRE 140S, FRENCH 236, FRENCH 336, HISTORY 245C

URBANST 141. Gentrification. 5 Units.
Neighborhoods in the Bay Area and around the world are undergoing a transformation known as gentrification. Middle- and upper-income people are moving into what were once low-income areas, and housing costs are on the rise. Tensions between newcomers and old timers, who are often separated by race, ethnicity, or sexual orientation, can erupt; high rents may force long-time residents to leave. In this class we will move beyond simplistic media depictions to explore the complex history, nature, causes and consequences of this process. Students will learn through readings, films, class discussions, and engagement with a local community organization. (Cardinal Course certified by the Haas Center).
Same as: AFRICAAM 241A, CSRE 141

URBANST 141A. Urban Schools, Social Policy, and the Gentrifying City. 3-4 Units.
This course is designed to help students develop a more sophisticated understanding of educational inequality in the contemporary U.S. city. This course will survey existing literature about the intersection of gentrification and urban schooling, focusing on policies and practices that gave rise to the current urban condition, theory and research about urban redevelopment, collateral consequences for schools and communities, and how these issues relate to the structure and governance of urban schools as well as to the geography of opportunity more broadly.
Same as: CSRE 291, EDUC 390

URBANST 142. Megacities. 5 Units.
In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.
Same as: ANTHRO 42, ARTHIST 242B, LIFE 142

URBANST 145. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.
(formerly IPS 274) Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see internationalurbanization.org for details. Prerequisites: consent of the instructor(s).
Same as: CEE 126, EARTHSYS 138, INTLPOL 274

URBANST 146. Retaking the Commons: Public Space and Heritage for Sustainable Cities. 3-4 Units.
As cities develop and grow, green spaces, heritage sites, parks, and historic neighborhoods have come under increasing pressure. While common pool resources are held in the public trust, who governs them? Who advocates for them, and who enjoys them? Using economic, social, environmental and cultural lenses, this course explores how maintaining civic spaces, protecting heritage resources, and re-imagining the role of ¿public goods¿ in the life of a city can yield more sustainable and beneficial outcomes. We also consider best practices from UNESCO and UN HABITAT, and the crucial role of citizenship and democracy. Recommended field work in Hong Kong in September 2017.

URBANST 147. Archaeology of Human Rights. 5 Units.
This introductory seminar provides a critical vantage point about human rights discourse from an archaeological perspective. The seminar is organized around four main questions: (1) Is cultural heritage a human right? (2) What are archaeologists learning about how the material and temporal dimensions of power and resistance? (3) How is archaeological evidence being used in investigations of human rights violations? (4) Can research about the past shape the politics of the present? Topics to be discussed include archaeological research on mass internment, colonialism, enslavement and coerced labor, ethnic cleansing, homelessness, gender discrimination, indigenous rights, and environmental justice.
Same as: ANTHRO 112A

URBANST 148. Who Owns Your City?: Institutional Real Estate Seminar. 3 Units.
A hands-on introductory seminar designed to allow students to understand and interact with all aspects of the realnnestate investment process, including property development, local government interplay, value creation, assetnnmanagement, financial analysis, and capital markets.nnCourse activities will include asset tours, case studies, and project deep dives.nnThis class is intended for all students looking to better understand real estate as an investment asset class and anncritical part of the modern global economy. Course material will be appropriate for students interested in a variety ofnndisciplines, including Urban Studies - history, design, government, or community interests; institutional investment,nninvestment banking/consulting, construction/engineering, and general finance/economics.

URBANST 149. Monitoring the Crisis. 4-5 Units.
A course devoted to understanding how people are faring as the country's health and economic crisis unfolds. The premise of the course is that, as important and valuable as surveys are, it's a capital mistake to presume that we know what needs to be asked and that fixed-response answers adequately convey the depth of what's happening. We introduce a new type of qualitative method that allows for discovery by capturing the voices of the people, learn what they're thinking and fearing, and understand the decisions they're making. Students are trained in immersive interviewing by completing actual interviews, coding and analyzing their field notes, and then writing reports describing what's happening across the country. These reports will be designed to find out who's hurting, why they're hurting, and how we can better respond to the crisis. Students interested should submit the following application: https://docs.google.com/forms/d/e/1FAIpQLSfdOZsnpOCg4zTRbVny0ikxpZEd1AFEEJh3K9KjvINyfbWMGw/viewform.
Same as: PSYCH 145A, PUBLPOL 141, SOC 141, SOC 241

URBANST 150. From Gold Rush to Google Bus: History of San Francisco. 4 Units.
This class will examine the history of San Francisco from Native American and colonial settlement through the present. Focus is on social, environmental, and political history, with the theme of power in the city. Topics include Native Americans, the Gold Rush, immigration and nativism, railroads and robber barons, earthquake and fire, progressive reform and unionism, gender, race and civil rights, sexuality and politics, counterculture, redevelopment and gentrification. Students write final project in collaboration with ShapingSF, a participatory community history project documenting and archiving overlooked stories and memories of San Francisco. (Cardinal Course certified by the Haas Center).
Same as: AMSTUD 150X, HISTORY 252E

URBANST 152. Building Modernity: Urban Planning and European Cities in the Twentieth Century. 5 Units.
This seminar explores the history of urban planning in twentieth-century Europe. We will discuss visions of ideal cities and attempts at their implementation in the context of democratic and authoritarian systems as well as capitalism and socialism. Through case studies from eastern and western Europe--from Berlin in Germany to Nowa Huta in Poland--we will examine how broader historical trends played out in, and were shaped by, specific local circumstances. The seminar is intended for advanced undergraduate students.
Same as: HISTORY 237C

URBANST 153. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.
This course takes students on a trip to major capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Dante, Sor Juana, Montesquieu, Baudelaire, Gogol, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.
Same as: COMPLIT 100, DLCL 100, FRENCH 175, GERMAN 175, HISTORY 206E, ILAC 175, ITALIAN 175

URBANST 155A. Environmental Justice Colloquium. 1 Unit.
This colloquium brings the voices and vision of leading Environmental Justice (EJ) advocates to the Stanford community, in order to educate, inspire, and transform our understanding of environmental science. Environmental Justice advances a positive vision for policies and actions that fight environmental racism. EJ approaches involve centering the voices and leadership of marginalized communities in 1) ensuring equitable access to environmental benefits, and 2) preventing or mitigating the disproportionate impacts of environmental harms for all communities, regardless of gender, class, race, ethnicity, or other social positions. This colloquium highlights the work of leading EJ thinkers and practitioners, speaking from frontline organizations on a wide range of topics. These topics include acting on toxic exposures and health disparities for community resilience, climate justice and youth action, Indigenous land and water rights, green cities and Afrofuturism, food justice and intersecting social movements, queer ecologies, and more. The colloquium will host a weekly speaker, and final symposium at the end of the quarter. nnThe first meeting for this course will take place during WEEK 3.
Same as: EARTHSYS 194A, HUMRTS 194A

URBANST 156. St. Petersburg: Imagining a City, Building a City. 1-2 Unit.
St. Petersburg, the world's most beautiful city, was designed to display an 18th-century autocrat's power and to foster ties between Russia and the West - on the tsar's terms. It went through devastating floods and a deadly siege; it birthed the "Petersburg myth," poems and prose that explore the force of the state and the individual's ability to resist. This class addresses the struggle between the authorities and the inhabitants; the treacherous natural environment; the city as a node in national and international networks of communication; the development of urban transportation networks; and the supply of goods. NOTE: *This course is required of students attending the overseas seminar to St. Petersburg in September 2018.*Class times to be determined upon the availability of all enrolled students. Please contact instructor(s) via email if you have any questions.
Same as: SLAVIC 155

URBANST 156A. The Changing American City. 4 Units.
After decades of decline, U.S. cities today are undergoing major transformations. Young professionals are flocking to cities instead of fleeing to the suburbs. Massive increases in immigration have transformed the racial and ethnic diversity of cities and their neighborhoods. Public housing projects that once defined the inner city are disappearing, and crime rates have fallen dramatically. Do these changes signal the end of residential segregation and urban inequality? Who do these changes benefit? This course will explore these issues and strategies to address them through readings and discussion, analyzing a changing neighborhood in a major city in the Bay Area in groups (which will include at least one site visit), and studying a changing neighborhood or city of their choice for their final project. The course does not have pre-requisites.
Same as: CSRE 156, SOC 156A, SOC 256A

URBANST 164. Sustainable Cities. 4-5 Units.
Community-engaged learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. The focus will be on land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in remote team-based projects in collaboration with Bay Area community partners. Prerequisites: Consent of the instructor. (Cardinal Course certified by the Haas Center.).
Same as: EARTHSYS 160

URBANST 169. Race and Ethnicity in Urban California. 4-5 Units.
The course is part of an ongoing research project that examines the consequences of longterm social, economic, and political changes in ethnic and race relations in in urban California. The required readings, discussions, and service learning component all provide a platform for students to explore important issues, past and present, affecting California municipalities undergoing rapid demographic transformation.
Same as: AFRICAAM 169A, AMSTUD 169, CSRE 260

URBANST 170. Urban Policy Research Lab. 5 Units.
This collaborative reading and research seminar considers the numerous ways that governments conduct social policy by shaping and remaking geographic places. Representative topics include: housing aid programs, exclusionary zoning, controls on internal migration and place of residence, and cars' role in cities. Students will contribute to faculty field research on the consequences of these policies for economic, social, and political outcomes. Prerequisites: None.
Same as: POLISCI 220, PUBLPOL 225

URBANST 171. Urban Design Studio. 5 Units.
The practical application of urban design theory. Projects focus on designing neighborhood and downtown regions to balance livability, revitalization, population growth, and historic preservation.
Same as: CEE 131D

URBANST 172A. Introduction to Urban and Regional Planning. 3 Units.
An investigation into urban planning as a democratic practice for facilitating or mitigating change in society and the built environment. We will engage in professional planning practices in focused sessions on transportation, design, housing, environmental policy, demographic research, community organizing and real estate development. Strong emphasis on developing an understanding of the forces that shape urban and regional development, including cultural trends, real estate and labor economics, climate change and the environment, and political organizing and power dynamics.

URBANST 173. The Urban Economy. 4 Units.
Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation.
Same as: PUBLPOL 174

URBANST 174. Defining Smart Cities: Visions of Urbanism for the 21st Century. 3-4 Units.
Technological innovations have and will disrupt all domains of urban life, from housing to healthcare to city management to transportation. This seminar is aimed at future technologists, entrepreneurs, policymakers, and urban planners to define and evaluate the smartness of a city through three lenses: technology, equity, and policy. Through readings, seminar discussions, guest speakers, and a final project, we will explore how a smart city can leverage technology for a higher quality of life, less inequality in access to services, and tighter human communities. You will come away with a framework for understanding how to maximize the social good of emerging technologies. Course material is appropriate for students from all disciplines. Students who enroll in the course for 4 units will participate in an off-campus field component during Spring Break.
Same as: CEE 125, CEE 225

URBANST 176. New Technologies and Urban Change. 3 Units.
Cities are always changing, most times gradually, but sometimes very rapidly and with significant effects on urban space, form, culture, and society. Among the forces that have historically driven urban change are the dynamics of immigration, both local and international, and the impacts of new technologies. These two forces are closely related. Indeed, acting as a magnet for increased immigration may itself be one of the most important impacts of techno-logical innovation on urban development. The purpose of this course is to explore the way new technologies have impacted -- and continue to impact -- urban society. The first half of the course will consist of a series of lectures and discussions of how technologies have changed cities in the past: in the ancient world, in the early industrial period, and in the period of the twentieth-century regional metropolis. The second half of the course will consist of weekly oral reports by 3-4-person student working groups researching specific examples of how current and still-emerging new technologies are transforming cities and city life today and how those changes may need to be addressed by either new public policies and/or new personal or community accommodations.

URBANST 178. The Science and Practice of Effective Advocacy. 3-5 Units.
How can purposeful collective action change government policy, business practices and cultural norms? This course will teach students about the components of successful change campaigns and help develop the practical skills to carry out such efforts. The concepts taught will be relevant to both issue advocacy and electoral campaigns, and be evidence-based, drawing on lessons from social psychology, political science, communications, community organizing and social movements. The course will meet twice-a-week for 90 minutes, and class time will combine engaged learning exercises, discussions and lectures. There will be a midterm and final. Students will be able to take the course for 3 or 5 units. Students who take the course for 5 units will participate in an advocacy project with an outside organization during the quarter, attend a related section meeting and write reflections. For 5 unit students, the section meeting is on Tuesdays, from 3:00 to 4:00 p.m.
Same as: CSRE 178P, PUBLPOL 178

URBANST 179. The Social Life of Neighborhoods. 3-5 Units.
How do neighborhoods come to be? How and why do they change? What is the role of power, money, race, immigration, segregation, culture, government, and other forces? In this course, students will interrogate these questions using literatures from sociology, geography, and political science, along with archival, observational, interview, and cartographic (GIS) methods. Students will work in small groups to create content (e.g., images, audio, and video) for a self-guided ¿neighborhood tour,¿ which will be added to a mobile app and/or website.
Same as: AFRICAAM 76B, CSRE 176B, SOC 176, SOC 276

URBANST 181. Urban Agroecology. 3 Units.
The United Nations estimates that up to 15% of the world's food is produced in and around cities. Urban populations are projected to continue rising and urban agriculture in its many forms has been shown to provide multiple benefits to urban communities. This class will survey urban agriculture around the world while training you in small-scale food production practices. The emphasis will be on ecological approaches to the design and stewardship of urban farms and gardens. nnnIf permitted, given the challenges of COVID-19, the course will be taught in-person, outdoors at the Stanford Educational Farm. nn nThis is a 3-unit, Earth Systems practicum course that meets on Wednesdays from noon to 3pm. Space is limited and applications are due by Friday 8/28. Students will be notified if they are admitted to the course by 9/4. For the course application go to: https://stanforduniversity.qualtrics.com/jfe/form/SV_86udp8aEuWUCnNH.
Same as: EARTHSYS 181, EARTHSYS 281, ESS 181, ESS 281

URBANST 183. Team Urban Design Studio. 5 Units.
This new class offers an exciting variation on the 'individual project' studio format. Students work as a team to propose a single consensus solution to a real-world design challenge. This collaborative studio experience more closely reflects the creative process in the design and planning professions where a group of individuals works together to brainstorm, shape, develop, and illustrate a community design solution. There are a number of benefits to this team-oriented approach: it is a more nurturing environment for students that do not have design backgrounds, it allows for more peer-to-peer learning, and it takes best advantage of varied student skill sets. But perhaps the greatest benefit is that a team of students working together on a common project will be able to develop a more comprehensive solution than any one student working alone. This means that the class "deliverable" at the end of quarter could be detailed enough to be of significant value to a stakeholder or client group from the larger community. This studio class, working under the guidance of an experienced instructor, functions like a design firm in providing professional-grade deliverables to real-world community design "clients'.
Same as: CEE 131E

URBANST 184. Paris: Capital of the Modern World. 4-5 Units.
This course explores how Paris, between the eighteenth and twentieth centuries, became the political, cultural, and artistic capital of the modern world. It considers how the city has both shaped and been shaped by the tumultuous events of modern history- class conflict, industrialization, imperialism, war, and occupation. It will also explore why Paris became the major world destination for intellectuals, artists and writers. Sources will include films, paintings, architecture, novels, travel journals, and memoirs. Course taught in English with an optional French section.
Same as: FRENCH 140, FRENCH 340, HISTORY 230C

URBANST 194. Internship in Urban Studies. 2-4 Units.
For Urban Studies majors only. Students organize an internship in an office of a government agency, a community organization, or a private firm directly relevant to the major. Reading supplements internship. Paper summarizes internship experience and related readings.

URBANST 195. Special Projects in Urban Studies. 1-5 Unit.
.

URBANST 196. Senior Research in Public Service. 1-2 Unit.
Limited to seniors approved by their departments for honors thesis and admitted to the year-round Public Service Scholars Program sponsored by the Haas Center for Public Service. What standards in addition to those expected by the academy apply to research conducted as a form of public service? How can communities benefit from research? Theory and practice of research as a form of public service readings, thesis workshops, and public presentation of completed research. May be repeated for credit. Corequisite: 199.
Same as: EDUC 196

URBANST 197. Directed Reading. 1-5 Unit.
.

URBANST 199. Senior Honors Thesis. 1-10 Unit.
.

URBANST 201. Preparation for Senior Project. 5 Units.
First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).
Same as: SOC 201

URBANST 201A. Capstone Internship in Urban Studies. 3 Units.
Restricted to Urban Studies majors. Students work at least 80 hours with a supervisor, establish learning goals, and create products demonstrating progress. Reflection on service and integration of internship with senior research plans. Must be completed by start of Winter Quarter senior year. May continue for additional quarter as 194. Service Learning Course (certified by Haas Center). Corequisite: URBANST 201 or consent of instructor.

URBANST 201B. Capstone Internship Seminar. 3-4 Units.
Students carry out an internship of at least 80 hours with a community organization or government agency. Class meets weekly to discuss related issues, including ethics of service, combining service and research, navigating organizational dynamics, and setting and accomplishing internship goals. Students submit internship agreement and internship-related deliverables, and give in-class presentations.

URBANST 202A. Junior Seminar: Preparation for Research. 5 Units.
Required of all juniors in Urban Studies planning on writing an honors thesis . Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research.

URBANST 203. Senior Seminar. 5 Units.
Conclusion of capstone sequence. Students write a substantial paper based on the research project developed in 202. Students in the honors program may incorporate paper into their thesis. Guest scholar chosen by students. Sociology majors who are seniors may take SOC 204 as their sole Writing In the Major class, as a substitute for SOC 200, with no prerequisites required.

STANFORD IN WASHINGTON

The Bing Stanford in Washington program is normally offered during Autumn, Winter, and Spring quarters. Due to COVID-19, these offerings are subject to change; see the SIW website (http://siw.stanford.edu/) for updated information.

The Autumn Quarter Program for 2020-21 has been cancelled due to COVID-19. Some coursework will be offered remotely during Autumn. The program is currently planning for in-person Winter and Spring quarters in 2021. The Winter Quarter application is closed and the application for Spring Quarter will be posted here in late September.

Director: Adrienne Jamieson
On Campus Program Manager: Jill Vizas

The Bing Stanford in Washington program provides highly-qualified undergraduates with an opportunity to work and study in the nation's capital. In addition to providing students with an understanding of public policy making, the program offers an opportunity to take advantage of the city's unique cultural resources.

Central in the student's educational experience is a full-time internship. Students serve as interns at such institutions and agencies as the Senate, the House of Representatives, the Office of Management and Budget, the White House, the National Institutes of Health, the Smithsonian Institution, World Bank, the departments of State, Justice, Treasury, Education, and Health and Human Services.

In addition to the internship, students also complete an academic course of study consisting of seminars taught by policy experts and Stanford faculty members. Seminars are generally 3-5 units. Past topics have included congressional oversight and the press; economic growth and development patterns, policies, and prospects; critical health issues in the U.S. and abroad; policy making in the Washington community; and criminal justice policy. Speakers from the Washington policy community frequently join students and faculty for discussions. Course and seminar topics vary according to student and faculty interest.

The program is designed for students in their junior year or during the first or second quarter of their senior year. Applications must be completed two quarters in advance.

Students interested in the program should contact the campus office of the Bing Stanford in Washington program; see contact information above.

Courses

SIW 103. Economic Growth and Development Patterns, Policies, and Prospects. 5 Units.
This class is designed to provide an overview of the history of economic and social development, the evolution of thinking on the subject, and current debates regarding the best policy approaches to foster development objectives. To emphasize the constantly evolving nature of the policy debate on development, the text is supplemented by articles from a wide variety of sources, and some additional readings will likely by assigned from contemporary newspaper, blog and magazine articles. Grades will depend on weekly pre-class reading comments and questions, four short assignments, and class participation.

SIW 104. Congressional Oversight and the Press. 5 Units.
Who keeps watch of the federal government and its activities as they grow more complex at home and abroad? This seminar will look at oversight, or the lack of it, by the Executive Branch itself, by Congress, the Courts, outside groups, and the media, with some emphasis on the latter. We will establish the Constitutional basis for oversight through various readings, and we will look at some major scandals and issues from the past.

SIW 105. Education Policy. 5 Units.
This seminar has three primary goals: 1) introduce today¿s major education policy issues; 2) investigate the ways education policy questions are addressed at the federal level, and by implication, the state and local levels; and 3) develop skills to develop and recommend appropriate policy options and solutions. You will become familiar with major education policy questions and over the course of the quarter, analyze these issues, consider policy options, and provide written and oral support for possible solutions.

SIW 106. Criminal Justice Policy. 5 Units.
This class is designed to offer students a chance to explore how criminal justice policies and laws come into being, are executed, and end up changing. Through a different topic focus each week, students will grasp the actors that affect criminal justice policy (across all branches of government) and will learn the true recourse of the law in the United States (it¿s more surprising than you might think). Through an end-of-term paper, students will argue for and against a specific policy of their choosing.

SIW 107. Civil Rights Law. 5 Units.
This course analyzes the major civil rights laws that Congress has enacted since the 1960s, including Title VII of the Civil Rights Act of 1964, the Voting Rights Act of 1965, the Fair Housing Act, the Public Accommodations ACt, the AGe Discrimination in Employment Act, and the Americans with Disabilities Act. The course provides an in-depth study of the statutory language of each of these laws, examines how courts have interpreted the statutes, and explores the policy arguments in favor and against such laws. The course also reviews the history context surrounding the enactment of these statutes, including an examination of the civil rights movement as a political and social force.

SIW 113. Critical Health Issues in the U.S. and Abroad. 5 Units.
.

SIW 119. U. S. and Europe: Cooperation or Competition?. 5 Units.
How are Brexit, Trump, Merkel and Macron reshaping the key relationship between the US and Europe? At a time of rising international threats from Russia, China, the Middle East, and Africa, as well as the challenges of populism, Euro-Skepticism, and Islamist terrorism, this course explores the Trans-Atlantic alliance that has been the central axis of US and European relations. By the end of the course, students will have engaged in substantive readings and class discussion in order to investigate these topics.

SIW 129. Women's, Maternal, and Children's Health. 5 Units.
.

SIW 131. Presidential Transitions in an Era of Polarization and the Covid-19 Pandemic. 3-5 Units.
Presidential Transitions in an Era of Polarization and the Covid-19 Pandemic: Challenges to Governing, Policy-Making and Ethical Decision-Making. This seminar will explore the intertwining of several key challenges inherit in all transitions, while analyzing the effects of our current polarized politics and the Covid-19 pandemic on policy making. Drawing upon an array of disciplines and approaches, our weekly meetings will include a series of discussions of readings from the social science literature; studies of health policy from medical ethicists and policy experts; articles from think tanks and government, and conversations with individuals from the worlds of policy, politics, and public health. Collectively, we will seek to understand connections, systemic constraints and to formulate potential policy and political responses. Students will engage in small group exercises on building a team in the Biden administration, along with developing health policy strategies that meet COVID-19 goals and ethical standards. In addition, students will have the option to pursue a capstone project, based upon research conducted with the guidance of one of the instructors, another faculty member or policy maker.

SIW 136. Enduring Themes in American Politics: Inequality, Race and Elections in the Era of COVID-19. 3-5 Units.
This seminar will explore the intertwining of several key enduring themes in American political history through the lens of the Covid-19 pandemic, the movement for criminal justice reform and the election. Drawing upon an array of disciplines and approaches, our weekly meetings will be a series of conversations with individuals from the worlds of policy, politics and the arts. Collectively, we will seek to understand connections, systemic constraints and to formulate potential policy and political responses. Students will have the option to pursue a capstone project, based upon research conducted with the guidance of one of the instructors or another faculty member. Capstone projects can also be pursued in the context of a remote internship, which can be organized with the assistance of the instructors and Stanford in Washington staff.

SIW 137. Energy and Environment: Technology, Economics and Policy. 5 Units.
.

SIW 138. Game Theory and Mathematical Models of Politics. 5 Units.
.

SIW 139. Purposeful Advocacy - Changing Public Policy for Good: A Policy Maker/Advocate¿s Perspective. 5 Units.
.

SIW 140. Health and Environmental Policy Speaker Series. 2 Units.
.

SIW 142. Images of National Politics from Classics in Political Science. 5 Units.
.

SIW 144. Energy, Environment, Climate and Conservation Policy: A Washington, D.C. Perspective. 5 Units.
.

SIW 148. Art and the First Amendment: Testing the Limits of Expression. 5 Units.
This course will take place in Washington D.C.
Same as: ARTHIST 148

SIW 155. Images of National Politics from Classics in Political Science. 5 Units.
.

SIW 156. Washington Policymaking: A USER'S GUIDE. 5 Units.
Government Gridlock. Executive Orders. Court Challenges. Congressional Oversight. Presidential Tweets. Regulatory Rollback. Money in Politics. Foreign Agent Influence. Are the rules of the policymaking game changing? In this class, students will learn the advocacy and strategy tools necessary to participate effectively in the legislative and regulatory policymaking process. We will examine the practical aspects and complex intricacies of policy development at the federal level, using current and rapidly evolving topics as examples, while also drawing on historical precedents.

SIW 157. International Law. 5 Units.
.

SIW 158. Entrepreneurial Ventures in Washington: Valley Meets Mission. 5 Units.
Students in this seminar will investigate the intersection between government, entrepreneurship, technology, and mission with weekly discussions with local business, government, technology and social impact lenses. We will examine drivers behind government mission-oriented innovation and the role of entrepreneurship and venture capital.nStudents will meet with and engage directly with entrepreneurial, government, tech, and business leaders in and out of the classroom to understand the opportunities/challenges in building successful mission-oriented companies and social impact enterprises.

SIW 164. Debating the Nation. 5 Units.
.

SIW 165. Federal Science Policy. 5 Units.
The U.S. is the leading country in the world in science by several common measures, including Nobel prizes and spending on research and development. Yet some other important science leadership metrics tell a different story. Many countries spend a larger fraction of their wealth on science research and technology development. Also, there is a large and widening gap in science education levels for US citizens vs. Europeans and Asians. Likewise, we have lost our former leadership in some high-profile research fields. This course is designed to introduce the students to the convoluted but sometimes remarkably effective process by which the Federal Government establishes national science policy, sets priorities, and then funds and oversees the science. The course takes full advantage of the SIW location inside the beltway by inviting many of the leaders in various aspects of science policy.

SIW 170. DOCUMENTARY: Films of Persuasion, Advocacy and Change. 5 Units.
In recent years, documentaries have shed their identity as the "broccoli" of the film world - they were good for you, but not necessarily palatable. Audiences are now engaged, entertained, and enlightened by the work of Errol Morris, Laura Poitras, Michael Moore, Marshall Curry, and others. Has a documentary film ever provoked you, challenged your beliefs, motivated you to act or changed your mind about something? Was that the goal of the filmmaker? This course offers a conceptual overview of the forms, strategies, and conventions of a documentary film with a particular focus on the social and political documentary, i.e. documentaries that strive to explore issues, construct arguments about the world, and galvanize attitudinal change. A consideration of both form and content will foreground the mutable characteristics of the genre with respect to filmmaker voice and point of view, the objective/subjective conundrum, ethics of representation, aesthetic choices, and the implied contract between filmmaker and audience. Students will hone their critical viewing skills and consider the potential of film to effect attitudinal and behavioral change through a series of case studies of films that represent a wide range of styles and approach.

SIW 171. American Presidential Elections: A Brief History. 5 Units.
.

SIW 185. Modern America in Historical Perspective. 5 Units.
.
Same as: HISTORY 264D

SIW 190. Directed Readings. 1-5 Unit.

.

SIW 198Y. Health Policy. 5 Units.

.

SIW 198Z. International Economic Policy. 5 Units.

.

SIW 201A. CSRE Public Policy Seminar. 3-5 Units.

.

SIW 201B. CSRE Public Policy Seminar. 3-5 Units.

.

SIW 245. Art, Business & the Law. 4 Units.
This course examines art at the intersection of business and the law from a number of different angles, focusing on how the issues raised by particular case studies, whether legal, ethical and/or financial, impact our understanding of how works of art circulate, are received, evaluated and acquire different meanings in given social contexts. Topics include the design, construction and contested signification of selected war memorials; the rights involved in the display and desecration of the American flag; censorship of sexually charged images; how the value of art is appraised; institutional critique and the art museum, among others.
Same as: ARTHIST 245

SCHOOL OF LAW

Courses offered by the School of Law are listed on the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu/) web site under the subject codes LAW (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=LAW&filter-catalognumber-LAW=on) and LAWGEN (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=LAWGEN&filter-catalognumber-LAWGEN=on).

The School of Law, established in 1893, provides a legal education for students who are fitted by their maturity and academic training to pursue professional study under University methods of instruction. The curriculum leading to the first professional degree in law, the Doctor of Jurisprudence (J.D.), constitutes an adequate preparation for the practice of law in any English-speaking jurisdiction. Graduate work leading to the degrees of Master of Laws (L.L.M.), Master of the Science of Law (J.S.M.), and Doctor of the Science of Law (J.S.D.), and a non-professional degree, Master of Legal Studies (M.L.S.), is also offered. For the full curriculum, see the Course Schedule & Description on the Law School (http://www.law.stanford.edu/courses/) web site. Stanford Law School offers joint or dual degree options in combination with other Stanford graduate departments and universities across the country; see the "Joint and Dual Degrees in Law" below.

The school is on a three-term academic calendar. For a complete list of academic dates see the Academic Calendar on the Law School (https://law.stanford.edu/education/courses/calendar-deadlines/) web site.

For further information about admission, programs, curriculum, and faculty, see the Law School (https://law.stanford.edu/) web site.

Joint and Dual Degrees in Law

Formal admission to both the Law School and to the other cooperating school or department in accordance with the established admission standards of each school or department is required. In addition to the established joint degree programs offered, the school considers requests for a dual program on an individually designed basis. For additional information on Law School joint or dual degree programs, see the Law School (https://law.stanford.edu/education/degrees/joint-degrees-within-stanford-university/#slsnav-established-joint-degrees) web site. See relevant web sites or department sections of this bulletin for degree requirements.

Graduate School of Business

- See the GSB's M.B.A. web site (http://www.gsb.stanford.edu/programs/mba/)
- J.D./M.B.A. Master of Business Administration
- J.D./Ph.D. Business Administration

School of Earth Sciences

- J.D./M.S. Interdisciplinary Program in Environment and Resources (E-IPER)
- J.D./Ph.D. Interdisciplinary Program in Environment and Resources (E-IPER)

School of Education

J.D./M.A. Education

School of Engineering

- J.D./M.S. Bioengineering
- J.D./Ph.D. Bioengineering
- J.D./M.S. Computer Science
- J.D./M.S. Electrical Engineering
- J.D./M.S. Management Science and Engineering (MS&E)
- J.D./Ph.D. Management Science and Engineering (MS&E)

School of Humanities and Sciences

- J.D./Ph.D. Communication
- J.D./M.A. Economics
- J.D./Ph.D. Economics
- J.D./M.A. History
- J.D./Ph.D. History
- J.D./M.A. in degree granting programs in Stanford Global Studies (SGS):
  - African Studies
  - East Asian Studies
  - Latin American Studies
  - Russian, East European and Eurasian Studies
- J.D./M.A. International Policy
- J.D./Ph.D. Modern Thought and Literature
- J.D./Ph.D. Philosophy
- J.D./Ph.D. Political Science
- J.D./Ph.D. Psychology
- J.D./M.P.P. Public Policy
- J.D./Ph.D. Sociology
- J.D./M.S. Symbolic Systems

School of Medicine

- J.D./M.S. Health Research and Policy (HRP)
- J.D./M.D. Medicine
- J.D./Ph.D. Neurosciences

Cooperative Programs with Other Universities

Stanford J.D. students have also pursued degrees at other universities such as the Harvard Kennedy School, Johns Hopkins School of Advanced International Studies, and Princeton Woodrow Wilson School. The approval process for such a cooperative program begins after the student has been admitted, independently, to both programs. Students may enroll in either a joint degree among schools at Stanford or in a degree from an external university, but a student may not enroll in both a Stanford JDP and a cooperative program with another university.

Courses in Law

Some Law courses have special enrollment instructions and restrictions, but many Law courses are open to qualified graduate students in other departments of Stanford University with instructor consent. Non-Law students may not enroll in courses that are part of the required first-year J.D. curriculum. Stanford non-Law students intending to enroll in any course with a LAW subject code must consult the Office of the Law School Registrar in the Stanford Law School Administration Building, room 100, or see the Stanford Law School, Office of the Registrar (http://www.law.stanford.edu/organizations/offices/office-of-the-registrar/) web site.

Graduate Advising Expectations

The Stanford Law School is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed

and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

School of Law

The School of Law is in the process of making decisions concerning COVID-19 policies and will update this tab when the decisions have been made.

First-year Law School courses will be graded on the mandatory pass (MPH/R/F) grading basis for all the Autumn first-year courses.

Emeriti: (Professors): Janet Cooper Alexander, Paul Brest, Gerhard Casper, Joshua Cohen, Richard Craswell, Lance E. Dickson, Jack H. Friedenthal, Ronald J. Gilson, Robert A. Girard, William B. Gould IV, Thomas C. Grey, Thomas C. Heller, M. Elizabeth Magill, Margaret Jane Radin, Byron D. Sher, William H. Simon, Michael S. Wald

Dean: Jenny S. Martinez

Vice Dean: Mark G. Kelman

Associate Dean for Clinical Education: Jayashri Srikantiah

Associate Dean for Curriculum: Robert Weisberg

Associate Dean for Global Programs: Robert M. Daines

Associate Dean for Graduate Studies: Amalia D. Kessler

Associate Dean for Research and Intellectual Life: Bernadette Meyler

Associate Dean for Strategic Planning: David Freeman Engstrom

Senior Associate Dean for Administration and Chief Financial Officer: Frank Brucato

Associate Deans: Diane Chin, Faye Deal, Allison Fry, Sabrina Johnson, Susan Robinson, Jory Steele

Professors: Michelle Wilde Anderson, Joseph Bankman, R. Richard Banks, Robert M. Daines, Michele Landis Dauber, John J. Donohue III, David Freeman Engstrom, Nora Freeman Engstrom, George Fisher, Richard T. Ford, Barbara H. Fried, Lawrence M. Friedman, Paul Goldstein, Robert W. Gordon, Henry T. Greely, Joseph A. Grundfest, Deborah R. Hensler, Daniel E. Ho, Pamela S. Karlan, Mark G. Kelman, Amalia D. Kessler, Daniel P. Kessler, Michael Klausner, Mark A. Lemley, Robert MacCoun, Lawrence C. Marshall, Jenny S. Martinez, Michael W. McConnell, Michelle Mello, Bernadette Meyler, Curtis Milhaupt, Alison D. Morantz, Anne Joseph O'Connell, Lisa Larrimore Ouellette, Nathaniel Persily, A. Mitchell Polinsky, Robert L. Rabin, Deborah L. Rhode, Jane Schacter, Shirin Sinnar, David A. Sklansky, Norman W. Spaulding, James F. Strnad II, David Studdert, Alan O. Sykes, Barton H.Thompson, Jr., George Triantis, Barbara van Schewick, Robert Weisberg

Associate Professors: Gregory Ablavsky, Rabia Belt, Jacob Goldin, Colleen Honigsberg

Assistant Professors: Julian Nyarko, Diego Zambrano

Professors (Teaching): Juliet M. Brodie, Jeffrey L. Fisher, William S. Koski, Phillip R. Malone, Jay A. Mitchell, Deborah A. Sivas, James Sonne, Jayashri Srikantiah, Ronald C. Tyler

Associate Professor (Teaching): Brian Fletcher

Senior Lecturers: Janet Martinez, Allen S. Weiner, Beth Williams

Professors of the Practice of Law: Michael Callahan, Lucas Guttentag, Erik G. Jensen, A. Douglas Melamed, David W. Mills

Courtesy Professors: Jennifer Eberhardt, Michael Genesereth, David Larcker, Leif Wenar, Heidi Williams

Courtesy Assistant Professors: Matthew Clair, Sharad Goel, Keith Winstein

Visiting Professors: Geoffrey Berman, Mariano-Florentino (Tino) Cuéllar, Mohammad Fadel, Siegfried Fina, Rogelio Perez-Perdomo, Charles Tyler, Beth Van Schaack

Thomas C. Grey Legal Research and Writing Instructors: Yonina Alexander, Shirin Bakhshay, Anna Mance, Julia Mendoza, Ji Seon Song

Lecturers: Dasha Anosova, Todd Baker, Marilyn Bautista, Viola Canales, Ronald Chen, Diane Chin, Danny Cullenward, Gordon Davidson, Marilyn Dearborn, Michael Dickstein, Lisa Douglass, Jason Du Mont, Shay Elbaum, Bonnie Eskenazi, Michael Esquivel, Randee G. Fenner, Bertram Fields, Jay Finkelstein, Tara Ford, David Forst, Michelle Galloway, Kate Gordon, Elizabeth Gropman, Mehdi Hakimi, Adam Halpern, Lucianna Herman, Todd Hinnen, Steve Hirsch,Lara Hoffman, Zeba Huq, Andrew Jennings, Kirsten Jensen, David Johnson, Danielle Jones, Megan Karsh, Daphne Keller, Julie Matlof Kennedy, David Kleiman, Jiyun Lee, Grace Lo, Suzanne Luban, Taryn Marks, Beth McLellan, Jeanne Merino, Dinsha Mistree, Nader Mousavi, William Neukom, Jessica Notini, Jamie O'Connell, David Owens, B. Howard Pearson, Lisa M. Pearson, Amber Polk, Betsy Popken, Steve Ray, Susan Robinson, Michael Romano, Kevin Rothenberg, Betty Rowe, Tom Rubin, Richard Salgado, Matthew Sanders, Ticien Sassoubre, Alicia Seiger, Katie Ott Siler, Michelle Sonu, Shanin Specter, Robyn Stanton, Kimberly Summe, Milan Sundaresan, Dan Tan, Robert Tashjian, Alicia Thesing, Bruce Wagman, Juan Walker, Lisa Weissman Ward, Michael Winn, Joseph Yang, James Yoon

Law General Courses

LAWGEN 105Q. Law and Popular Culture. 3 Units.
(Same as AMSTUD 105Q) This seminar focuses on the interface between two important subjects: law and popular culture. Before class, students will see a series of films or television shows relating to law, lawyers, and the legal system. There is also a weekly homework assignment based on materials in the assigned text and the assigned film or TV show. We will discuss the pop culture treatment of subjects such as the adversary system, good and bad lawyers, female and gay lawyers, the work life of lawyers, legal education, ethical issues, the jury system, and criminal and civil justice. The seminar discussions will draw on film theory and film-making technique to deepen understanding of the interrelationship between law and popular culture. The discussions will illuminate the ways in which pop culture products both reflect and change social views about law and lawyers. The assigned text is Michael Asimow & Shannon Mader, "Law & Popular Culture: A Course Book" (Peter Lang, 2d edition, 2013).
Same as: AMSTUD 105Q

LAWGEN 112N. Law and Inequality. 3 Units.
Most Americans know that discrimination on the basis of race, sex, and religion is unlawful. Seems simple enough. But advertisements in the back of newspapers still announce: "Single White Female Seeks Single White Male?" Isn't that discrimination on the basis of race and sex? Most businesses don't consider men for women's locker room or bathroom attendant. And why aren't those men and women's bathrooms and locker rooms illegal segregation? After all we know what would happened if some business set up separate bathrooms for blacks and whites. Isn't it discrimination for an employer to insist that men wear a jacket and tie and women wear nylons and a skirt? Why are some forms of discrimination unlawful and others not? Why is discrimination against short people, overweight people, or people with annoying personalities not against the law? We will answer these and many other questions by looking at court cases, legal theory, and philosophy. We may also have conversations with guest lecturers who work in civil rights enforcement, and the seminar may include a field trip to visit the offices of civil rights lawyers (lawyers tend to be busy people so these opportunities will depend on their schedules). Class participation and a short final paper are required, but here are no prerequisites other than an open mind and a willingness to delve into unfamiliar material.

LAWGEN 115N. Human Rights Advocacy. 3 Units.
What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in human rights advocacy? In the space of seven decades, human rights advocates have transformed a marginal utopian ideal into a central element of global discussion, if not practice. In this seminar we will examine the actors and organizations behind this remarkable development as well as the vast challenges faced by advocates in the recent past and today. Together, we will learn to be critical of, as well as to think, and act, like human rights advocates. This seminar will introduce you to some the main debates and dilemmas within the human rights movement. We will consider and understand the differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the frequently non-western) developing world, as well as tensions between and among rights advocates along other important dimensions (civil and political vs. economic, social and cultural rights; rights promotion through engagement of powerful actors vs. challenging structures of power, etc.). The seminar seeks to develop your ability: 1) to understand human rights and social justice issues as contested political, legal and cultural phenomena; 2) to review advocacy texts, videos and other interventions critically; 3) to appreciate the political dimensions of efforts to promote human rights; 4) to understand how recent history constrains and structures options and possibilities for social intervention to promote rights and justice. During the course of the quarter you will be required to submit several short reflection papers and develop a human rights advocacy campaign.

LAWGEN 209Q. Community Police Academy. 2 Units.
The Community Police Academy is a combination of classroom instruction and "hands-on" activities that examine life as a police officer. This class looks to clarify and expand the participant's knowledge of the responsibilities, decisions and constraints that face law enforcement officers today, while also providing some perspectives on the national conversation about the role of law enforcement in society. Students can elect to earn two units of credit by completing the readings, short assignments, and attending 4 discussion section meetings, or students may opt to take the course for no credits and only attend the activities. The class is learning opportunity for all involved, an opportunity to build trust and develop partnerships between the Department of Public Safety and the Stanford community. While this course is open to all students throughout the University, the units will not accrue to Law Degree Candidates for credit toward a degree in Law (JD, JSM, JSD, or LLM). Prerequisites: Application and basic background check; minimum 18 years of age.

Law Courses

LAW 201. Civil Procedure I. 5 Units.
This course is part of the required first-year JD curriculum. This course is a study of the process of civil litigation from the commencement of a lawsuit through final judgment under modern statutes and rules of court, with emphasis on the federal rules of civil procedure. May include class participation, written assignments, or other elements. Your instructor will advise you of the basis for grading.

LAW 203. Constitutional Law. 3 Units.
This course is part of the required first-year JD curriculum. This course offers an introduction to American constitutional law. In addition to examining questions of interpretive method, the course focuses on the powers of the federal government and the allocation of decision making authority among government institutions, including both federalism and separation of powers. Class participation, attendance, written assignments, and final exam. This course is open to first-year Law School students only.

LAW 205. Contracts. 5 Units.
This course is part of the required first-year JD curriculum. It provides exposure to basic contract law. The course will identify the scope and purpose of the legal protection accorded to interests predicated on contract and will focus on problems of contract formation, interpretation, performance, and remedies for breach.

LAW 207. Criminal Law. 4 Units.
This course is part of the required first-year JD curriculum. It examines the traditional general issues in the substantive criminal law, including the purposes of punishment and the appropriate limits on the use of the criminal sanction. It focuses predominantly on how criminal statutes are organized around objective offense elements (conduct, causation, and attendant circumstances) and mental states, and to a lesser degree on inchoate crimes, complicity, justification and excuse.

LAW 217. Property. 4 Units.
This course is part of the required first-year JD curriculum. It deals with possession and ownership of land and with the incidents thereof, including private and public restrictions on its use and development, nuisance, trespass, concurrent interests, landlord and tenant, and eminent domain. Attendance and final exam. Your instructor will advise you of other basis of grading. This course is open to first-year Law School students only.

LAW 219. Legal Research and Writing. 2 Units.
Legal Research and Writing is a two-unit course taught as a simulation. Students work on a legal problem starting with an initial interview, and they conduct fact investigation and legal research related to that problem. Students receive rigorous training in reading and analyzing legal authority, and in using persuasive strategies--legal analysis, narrative, rhetoric, legal theory, and public policy--to frame and develop legal arguments. Students write predictive memos and persuasive briefs, and are introduced to the professional norms of ethics, timeliness, and courtesy. This course is part of the required first-year JD curriculum.

LAW 223. Torts. 5 Units.
This course is part of the required first-year JD curriculum. It considers issues involved in determining whether the law should require a person to compensate for harm intentionally or unintentionally caused. These problems arise in situations as diverse as automobile collisions, operations of nuclear facilities, and consumption of defective food products. Among other considerations, the course explores various resolutions in terms of their social, economic, and political implications.

LAW 224A. Federal Litigation in a Global Context: Coursework. 2 Units.
This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated global torts case set in a federal district court that raises complex issues of federal civil procedure. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and transnational lawyering. Elements used in grading: attendance, class participation, oral argument, assignments in preparation for written briefs (outlines, drafts, research and citation assignments), written briefs, and professionalism. This course is open to first-year Law School students only.

LAW 224B. Federal Litigation in a Global Context: Methods and Practice. 2 Units.
This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated global torts case set in a federal district court that raises complex issues of federal civil procedure. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and transnational lawyering. Elements used in grading: attendance, class participation, oral argument, assignments in preparation for written briefs (outlines, drafts, research and citation assignments), written briefs, and professionalism. This course is open to first-year Law School students only.

LAW 240A. Discussion (1L): Asian Americans and the Law. 1 Unit.
This discussion seminar will consider the legal treatment of Asian Americans. We will read materials about the history of citizenship, exclusion, and internment, and discuss contemporary issues affecting the individuals of Asian descent in the American legal system. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240B. Discussion (1L): Comparative Approaches to Law and Inequality. 1 Unit.
In this discussion seminar, we will examine how various countries across Europe and Latin American, as well as the United States, seek to deploy law to promote equality for subordinated groups---including especially racial minorities and women. We will examine how laws seeking to promote racial and gender equality, often developed first in the United States, came to be transplanted elsewhere, and how in the process these were transformed in significant ways. Topics will include anti-discrimination law, harassment law, affirmative action (including but not limited to quotas), and parental leave. How and why did the law change as it was transplanted from one legal system and culture into another? To the extent that different legal systems have adopted different approaches, which is preferable---and according to what metrics? Moreover, to the extent that we prefer an approach deployed elsewhere, what are the chances of adopting some version of it here in the United States (or vice versa)? This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240C. Discussion (1L): Corporate Social Responsibility. 1 Unit.
How can a company's managers safeguard the firm's financial value for its shareholders while, at the same time, operating ethically and purposively benefiting other stakeholders, including its employees and the communities in which the firm operates? Corporate social responsibility (CSR) is rooted in the idea that shareholder value is not the only measure of a firm's value and, indeed, that the exclusive pursuit of profits may produce social harms. The seminar will consider a variety of legal issues related to CSR, including: 1. The meaning and measure of environmental, social, and governance (ESG) criteria for corporations. 2. The voluntary or mandatory disclosure of a company's environmental and social harms or risks. 3. When is it legally and ethically appropriate for corporate managers or institutional investors to compromise shareholder value in the pursuit of social and environment goals? 4. Constituency statutes and benefit corporations that reflect interests other than profit maximization. 5. The power of investors to influence corporate behavior through capital allocation-investments (including impact investing) and divestments-and shareholder activism. 6. The power of other stakeholders, including consumers and employees, to influence corporate behavior. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240D. Discussion (1L): Criminal Legal Histories. 1 Unit.
This seminar will trace the roots of four critical aspects of the American criminal justice system: jury independence and the power of jurors to render verdicts according to conscience; plea bargaining and the progressive marginalization of juries; penitentiaries and the displacement of other forms of punishment; and the criminalization of recreational drugs. Though modern criminal justice policy will inform our conversation, the readings will be historical with an emphasis on primary source documents. We will examine the forces driving legal evolution and the historian's tools in mapping those forces. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240E. Discussion (1L): Dress Codes: Race, Identity and Personal Appearance. 1 Unit.
Dress Codes may seem a bit old fashioned, but in fact we are constantly told who should wear what and when. Rules---written and implied---divide formal from casual attire and children's clothing from that of adults. There are rules for what to wear in each season of the year and rules about the right attire for different times of the day. And, of course, there are rules about the types of clothing men may wear and about the clothing suitable for women. Adherence to such rules is considered by many to be an important signal of breeding and even character: accordingly, immediate social sanctions---and indirect professional consequences---can follow from breaking them. Some dress codes are job requirements or house rules of an organization or establishment---flouting them can get one fired, kicked out of school or barred from a restaurant. Finally, there are laws about clothing, enforced by police or government officials. Break these rules and you may find yourself facing a fine or even a jail sentence. Why is attire so rule bound? Why and when is clothing important enough to become the subject of written treatises, rules and regulations, legislative proclamations and judicial edicts? This seminar will explore dress codes, from the sumptuary laws of the late Middle Ages to the unstated norms of the 21st century, and discover what they can tell us about the significance of clothing---our most conspicuous medium of self-expression---and its relationship to individual identity, community cohesiveness and social order. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240F. Discussion (1L): Feminist Jurisprudence. 1 Unit.
This discussion seminar will consider some of the major theoretical writings of the past 40 years in feminist legal theory, and explore the application of different theoretical approaches to contemporary issues in the law. Likely readings include Catherine MacKinnon, Robin West, Janet Halley, and Angela Harris. Possible topics include campus sexual misconduct codes, the Me Too movement, the meaning of consent, and the legal treatment of the family. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240G. Discussion (1L): Innovation and Inequality. 1 Unit.
Throughout history, innovation has been a leading driver of economic growth and has helped lift communities out of poverty, and the importance of knowledge goods to the global economy has only increased with the rise of computing and information technologies. Legal institutions incentivize innovation and allocate access to knowledge goods through a variety of mechanisms, including intellectual property, direct funding through grants and national laboratories, tax incentives, and innovation inducement prizes. In this discussion group, we will examine how these bodies of law are used both to reinforce and subvert existing power structures and inequalities, including issues related to gender, race, geography, and income. We will discuss inequalities among innovators as well as inequalities in access to new innovations, or in who those innovations are made for. We will also consider how these issues might be addressed through legal reforms either internal or external to innovation laws. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240H. Discussion (1L): Measuring Access to Justice and Access to Information in Marginalized Communities. 1 Unit.
In this discussion seminar, we will explore the intersection of access to information and access to justice. Our current social and technological moment promises increased access to basic legal information without economic or geographic boundaries. But access and accessibility remain influenced by identity, privilege, and power. What are our collective expectations for governments to provide legal information in the digital age? How does access to free, easy-to-use, reliable legal information -- or the lack thereof -- have an impact on low-income and other marginalized communities, particularly in how they exercise their rights and protect themselves from harm? By examining how some of the most vulnerable populations access legal information, we can better assess the concept of open government with an eye toward informing and improving access to justice efforts. Topics to be explored through readings and discussion include: 1) the adequacy of pro se litigants' access to legal information within the American prison system; 2) measuring the impact of U.S. states and municipalities that contract with private companies to publish public laws; 3) ways in which technology might help close the justice gap in low-income communities v. how technology can expose vulnerable communities to new forms of victimization; 4) creative and unique systems of information-sharing within the homeless population and how legal organizations might penetrate those systems to combat disenfranchisement of the homeless and provide them with broader access to legal services; and 5) the fragility of freedom of information laws in democracies and whether these laws contribute to a more informed public. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240I. Discussion (1L): Prosecutors and Defense Attorneys as Agents of Change. 1 Unit.
What opportunities do prosecutors and defense attorneys have to help reform the criminal justice system and the wider society? And how can they best take advantage of those opportunities? We will explore these questions by reading and discussing three books: J Anthony Lukas, Big Trouble: A Murder in a Small Western Town Sets Off a Struggle for the Soul of America (1998); Gilbert King, Devil in the Grove: Thurgood Marshall, the Groveland Boys, and the Dawn of a New America (2013); and Emily Bazelon, Charged: The New Movement to Transform American Prosecution and End Mass Incarceration (2019). This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240J. Discussion (1L): Religion, Identity and Law. 1 Unit.
This seminar will focus on the dynamic interplay between religious identity, community, and worldview, and the study, practice, and profession of law. As a defining force for so many across the globe, and in the norms through which human beings recognize their rights and arrange their affairs, religion has a unique and abiding impact on the work and life of aspiring and practicing lawyers--for believers and nonbelievers alike. Whether as first-year law students or seasoned practitioners, the need to anticipate, appreciate, and reconcile religious perspectives is both a vital professional skill and an illuminating resource for self-understanding and mutual respect. The class will meet across three on-campus sessions and a closing offsite dinner, and will include a collaborative exploration of primary and secondary sources, as well as custom conversational frameworks. Topics will include religion and cross-cultural lawyering, religion and legal systems, the role of faith in judicial decision-making, and law as a vocation (with attendant self-care dynamics). Befitting the overarching goals of diversity and inclusion in the discussion series generally, and the central importance of particularized themes of bridgebuilding, this seminar is warmly and equally open to students of any religious tradition and those of no religion at all. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240K. Discussion (1L): Representations of Criminal Lawyers in Popular Culture Through the Lens of Bias. 1 Unit.
This discussion group will explore the portrayal of criminal lawyers in popular films and will engage in critical analysis of how misconceptions about the criminal justice system and biases against women, people of color and the poor are amplified on the big screen. Source materials will include numerous mass-market films juxtaposed against authoritative law review and other commentary to afford in-depth discussion. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240L. Discussion (1L): Robot Ethics. 1 Unit.
We will consider the developing legal and ethical problems of robots and artificial intelligence (AI), particularly self-directed and learning AIs. How do self-driving cars (or autonomous weapons systems) value human lives? How do we trade off accuracy against other values in predictive algorithms? At what point should we consider AIs autonomous entities with their own rights and responsibilities? And how can courts and legislatures set legal rules robots can understand and obey? This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240M. Discussion (1L): The Central Park Five Case. 1 Unit.
This discussion seminar will focus on racial factors in the criminal justice system, using the Central Park 5 case and the Netflix series "When They See Us" as the jumping off point for the discussion. Following each episode of the series, the seminar will discuss the investigation, the trial, incarceration and post incarceration experiences. Although there may be some readings, the primary material will be the Netflix series. I hope to have some additional help with the discussion by asking a few outside players to join the class. Participants could include George Gascon, the San Francisco District Attorney who has been a leader in the investigation of racism in enforcement of the laws, Linda Farstein, the main prosecutor in the case who was the Chief of the New York DA's sex crimes unit, and one of the Three Strikers whose release was secured by Stanford's Three Strike Project. If they are available, these outside participants will join the discussion in order to be a resource and to provide color and insight into the topics being covered. Note: This seminar will meet in San Francisco and transportation will be provided. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240N. Discussion (1L): Theories and Critiques of Legal Education. 1 Unit.
Much of the basic structure of twenty-first-century American legal education was put in place by late nineteenth-century Harvard Law School Dean Christopher Columbus Langdell. This seminar will begin by examining the impetus for and nature of Langdell's reforms then consider various twentieth- and twenty-first-century critiques and modifications of legal education, including Duncan Kennedy's Legal Education and the Reproduction of Hierarchy and the work of critical race theorists like Patricia Williams and Lani Guinier. We will conclude by examining the most significant change within law schools over the past century, the rise of clinical legal education, reading parts of the Carnegie Report on Legal Education and Sam Moyn's recent critique of clinical education as well as a range of responses to his piece. Throughout the seminar, we will pay attention to the historical and social contexts out of which proposals for changing legal education arose as well as to how we might assess the contemporary structure of legal education in light of its history. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240O. Discussion (1L): Whose Justice? Which Rationality?. 1 Unit.
Reasonable people sometimes disagree. How can reflective individuals hope to evaluate those disagreements? Fundamental notions of justice and rationality seem to dominate particular traditions in different places and different times. How can a twenty-first century product of American or other cultures decide which of various compelling ideas of justice and rationality is most persuasive to us? How can anyone escape the accidents of birth and tribal worldview? We will approach these questions through Alastair MacIntyre's provocative book of that name: Whose Justice? Which Rationality? (Univ. Of Notre Dame Press 1988). Whether or not MacIntyre¿s neo-Aristotelian approach to the fundamental questions of ethical theory ultimately prove persuasive, his attempt to find alternatives to the utilitarian and Kantian relics of the Enlightenment will, I hope, open a conversation about what we believe and why. This discussion seminar will meet four times during the Fall quarter. You will be notified of the meeting times by the instructor. Specific dates, time, and location will also be listed in "Notes" below. Elements used in grading: Attendance and class participation.

LAW 240P. Discussion (1L): Election 2020. 1 Unit.
The discussion group will examine key factors in the 2020 election. In the first three classes, we will consider (among other topics) how and why people vote; vote suppression; the demographics of the electorate and how to increase the participation of underrepresented groups; and the impact of COVID-19 on the 2020 election. The final class, which will take place after the election, will take stock of what just happened. Readings will include social science research, legal cases, and journalistic accounts. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240Q. Discussion (1L): Human Reproduction in the 21st Century: Legal and Ethical Issues. 1 Unit.
This group will discuss issues around human reproduction in the 20th and 21st centuries. We will talk about abortion and the problems of when life or rights begin, eugenics, embryo selection, and embryo editing (also known as "designer babies"). An underlying theme will be how "we"---a culture, as a legal system, as legal systems---decide what should and shouldn't be done. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240R. Discussion (1L): Litigating the 2020 Election. 1 Unit.
This discussion seminar will explore legal issues in the 2020 election. We will read the cases or litigation materials as they are filed. The discussion group will also consider the various logistical, administrative, and civil rights issues that jurisdictions are confronting as they attempt to run an election during a pandemic. Students may also participate in the work of the Stanford-MIT Healthy Elections Project (see HealthyElections.Org) which is dedicated to studying and implementing best practices in election administration to deal with the challenges the COVID pandemic poses. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240S. Discussion (1L): Monuments, Counter-Monuments, and the Law and Politics of Memory. 1 Unit.
In this reading group we will examine the intimate connection between the nation's retreat from Reconstruction in the 1870s, the constrained interpretation of the Reconstruction Amendments adopted by the Supreme Court, and the development of national and regional rituals that embedded a specific understanding of the Civil War, Emancipation, and Reconstruction in public spaces, most prominently, monuments to Union and Confederate military officers and Civil War battlefields. We will examine 20th century resistance to the forms of historical consciousness embedded in the architecture of these public spaces, 21st century movements to remove and replace this architecture and associated cultural representations of white supremacy, as well as longstanding debates in this and other cultures about how atrocities are remembered, and the socio-legal aspects of holding perpetrators to account. A central objective will be to interrogate the relationship between collective memory, identity, and legal interpretation, including "monumental" and "hagiographic" styles of legal reasoning. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240T. Discussion (1L): Race and Technology. 1 Unit.
There is sometimes a tendency to describe technology as value neutral, as simply a tool that can be used for good or evil, particularly when questions of race and racial justice are involved. But the technologies we develop and deploy are shaped by historical prejudices, biases, and inequalities and thus are no less biased and racist than the underlying society in which they exist. In this discussion group, we will examine how racial and other biases are inherent in a wide range of technologies, including "risk assessment" algorithms for predictive policing or other decisions in the criminal justice system, facial recognition systems, surveillance tools, diagnostic algorithms for medical diagnosis and treatment decisions, "digital redlining" through housing ads, programs that determine entitlement to credit or public benefits and/or purport to detect fraud by recipients, algorithms used in recruiting and hiring, digital divide access gaps, and more. Building on these various case studies, we will seek to articulate a framework for recognizing both explicit and subtle anti-black and other biases in tech and understanding them in the broader context of racism and inequality in our society. Finally, we will discuss how these problems might be addressed, including by regulators, legislators, and courts as well as by significant changes in mindset and practical engagement by technology developers and educators. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240U. Discussion (1L): Race, Civil Rights, and Human Rights. 1 Unit.
In this seminar, we will explore the evolution in the mid-twentieth century of the Civil Rights movement in the United States, at the same time that the international system for legal protection of human rights was also taking shape. Readings will discuss issues such as the relationship between civil and political rights and economic, social, and cultural rights; the relationship between anti-colonial movements and anti-racism; the context of the Cold War; the development of treaties such as the Convention on the Elimination of All Forms of Racial Discrimination; and U.S. attitudes of exceptionalism towards international legal regimes. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240V. Discussion (1L): Reform, Defund, or Reimagine? The Problem of Policing. 1 Unit.
The death of George Floyd at the hands of Minneapolis police in May 2020, and the nationwide wave of protests that followed, have brought new attention to the nature of policing in the United States and its connection with racial inequality. For many critics of the police, reform is inadequate response; instead the police should be defunded or even abolished. This reading group will address current controversies surrounding law enforcement in the United States, in particular the issue of police killings of African Americans and other people of color. We will also discuss the meaning of calls to defund the police, how they differ from call past efforts at reform, and what lessons, if any, can be drawn from those past efforts. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240W. Discussion (1L): Reimagining Capitalism. 1 Unit.
Scholars' and policy makers' thinking about political economy evolves as one understanding of the role of government ceases to reflect people's aspirations and views of social reality and is superseded by another. The laissez faire thinking of the 19th century was replaced by Keynesian management in response to the Great Depression. After WWII, Keynesian thinking was challenged, by 'neoliberalism'—a challenge that began to achieve success in the 1970s in response to perceived failures of government, high inflation, and other economic and social woes. By the mid-1980s, neoliberalism had become the new conventional wisdom, and liberals as well as conservatives accepted its core premises: that society consists of atomized individuals competing rationally to advance their own interests; that this behavior, in aggregate, produces good social outcomes and economic growth; that free markets are therefore the best way to allocate societal resources and government should intervene only to remedy market failures. Disagreements about what constitutes such failures and about corrective interventions persisted, but the general premises were widely embraced by policymakers and politicians. Today, that consensus is breaking down. Neoliberal policies and the particular systems of capitalism that accompany them have generated profound wealth inequality and have little to offer to address the perceived threats of globalization, climate change, and emerging technologies like artificial intelligence and robotics. The coronavirus pandemic has only served to highlight these and other problems.But what should come next? Our readings in the course will explore a variety of themes related to these issues. How did neoliberalism come to dominate political discourse? What are its core tenets? What kinds of challenges are being presented to them, and what might alternative approaches to political economy for the 21st century look like? This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240X. Discussion (1L): Tort Encounters. 1 Unit.
Lawsuits for compensation for personal injury often provide lay people with their first -- or even only -- interaction with the civil side of courts. Those interactions are rarely wholly happy, raising fundamental issues for plaintiffs about the definition of just desserts and fair procedure. There is a rich literature on these personal encounters, some autobiographical and others written by journalists who were given permission to closely follow victims' efforts to obtain compensation. These accounts paint a different picture of the tort liability regime than the one which 1Ls usually encounter in their Fall Torts course, which in recent decades have foregrounded a "law & economics" perspective that focuses on deterring defendants rather than on satisfying victims' desires for justice. In each session we will read a book about an individual's or family's personal encounter with tort law. Candidate books for discussion include an autobiographical take on the author's experience suing doctors for malpractice after her husband's untimely death, a journalist's close account of a working class family's pursuit of compensation for the death of their infants, a holocaust victim's response to the outcome of a class action against Swiss Banks, a journalist's account of a community seeking compensation and accountability for toxic exposure from a pharmaceutical facility. We'll each read the selected book for the session and discuss what the account tells us about the operation of tort law (and civil procedure) in real life and what potential legal reforms it suggests, if any. Each session will be led by one or two students who volunteer (at the beginning of the quarter) to start off and guide the discussion. Writing requirement: One short (5 or so pages) reflection paper on one of the assigned books or another related book of your choice. If you choose to reflect on a different book, it should also be an account of laypersons' experiences with the tort liability system (not a doctrinal analysis of tort law). This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation, written assignment.

LAW 240Y. Discussion (1L): Violence, Resistance, and the Law. 1 Unit.
This reading group will examine the force of law -- the ways in which law both depends upon and abjures violence, the ways it suppresses and invites resistance, and the identity of subjects against whom legal violence is deployed. A central object of focus will be excessive force, the legal doctrines that insulate government officers from accountability, and the ways this specific form of violence is tied to racial subordination. We will also attend to the role of force in non-violent resistance movements, the role of vulnerability in resistance movements (both revolutionary and reform-oriented), and problems of revictimization in rights assertion. Readings will be drawn from a wide range of interdisciplinary sources including law, history, political theory, critical race theory, fiction, and psychology. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 240Z. Discussion (1L): We Hold These Truths to Be Self-Evident? Race and Criminal Law in the 21st Century. 1 Unit.
There is no responsible person denying that those institutions that form the core of the "criminal justice system," with its explicit commitment to securing "justice," are the very institutions that have been (and continue to be) primary engines of injustice in the United States. We will explore that tragic phenomenon by looking at four subjects: (a) the history of the intersection between race and criminal law; (b) prison abolition; (c) defunding the police; and (d) sentencing disparities and the death penalty. The assignments for each session will include a variety of book chapters, articles, judicial decisions and podcasts. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 241A. Discussion (1L): Why is the USA Exceptional -- In Crime and Punishment?. 1 Unit.
It has long been a national controversy, and for many a international embarrassment, that the imprisonment rate in this country stands at the very top among nations (currently just behind) and several multipoles higher than other developed industrialized democracies. And for many years it has been almost a cliché that we also have an internationally anomalously high crime rate; crime gap between us and our "peer nations" has narrowed in recent years but is still remarkable, at least for violent crime. In the course we will read and an interdisciplinary set of explorations about whether there are things in "national DNA" that explain each of these phenomena and possibly both at once. The perspectives will include the political history of our roots in both revolution and slavery and the legacy of Reconstruction, an d cultural/anthropological theories about the "frontier mentality," as well as such distinct factors as our anomalous rate of gun ownership. Along all these dimensions we will speculate on which way the causation runs between crime or punishment and these various correlates.. But of course we will also look to the legal system, including our rights- and federalism-focused Constitution, as both cause and effect of our anomalies. While we will look at some more quantitively empirical perspectives, especially as they bear on recent changes in both crime and punishment rates, our main subject will be more of an "American Studies" approach to the undeniable overall stability of how we compare to other nations. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 241B. Discussion (1L): Race and Urban Law in the Bay Area. 1 Unit.
From the Black Power movement for self-governance that formed East Palo Alto to the battle to preserve the history of the "Little Manila" neighborhood in Stockton, from the anti-gentrification politics of San Francisco's historically Latinx Mission District to the settlement struggles of Vietnamese and Cambodian refugees in San Jose, the history of the Greater Bay Area offers a moving picture of the hardships and heritage of American diversity. Some readings and visual media in the class will draw on place-specific legal histories of discrimination, organizing, and reform in Bay Area cities/neighborhoods. Other thematic readings will focus on racial/ethnic discrimination in housing and land ownership; incorporation movements to form majority-minority cities; Latinx and Asian-American migration into post-industrial cities; neighborhood improvement efforts in segregated enclaves; and efforts to lead or resist local political change. Students will leave the course with a richer sense of their home region during law school, as well as a broader picture of "law" that includes local administrative proceedings, municipal codes, civil and criminal law enforcement practices, and taxes/spending decisions. This discussion seminar will meet four times during the Fall quarter. Meeting dates and times to be arranged by instructor. Elements used in grading: Attendance and class participation.

LAW 400. Directed Research. 1-4 Unit.
Directed Research is an extraordinary opportunity for students beyond the first-year to research problems in any field of law. Directed research credit may not be awarded for work that duplicates the work of a course, clinic, or externship for which the student has registered. Directed research credit may be awarded for work that expands on work initially assigned in, or conceived during, a course, clinic, or externship, but only if the continued work represents a meaningful and substantial contribution to the already existing project, significantly beyond mere editing or polishing. If a student seeks to continue or expand on work that the student initiated previously (whether for a course, clinic, externship, or otherwise) a student must (1) share the initial work with the professor supervising the directed research, to the extent that work is non-privileged, and (2) obtain permission for the expansion from the instructor or supervisor who supervised the initial project. The final product must be embodied in a paper or other form of written work involving a substantial independent effort on the part of the student. A student must submit a detailed petition of at least 250 words, approved by the sponsoring faculty member, outlining his or her proposed project and demonstrating that the research is likely to result in a significant scholarly contribution. A student may petition for "Directed Research: Curricular Development" when the work involves assisting a Law School faculty member in developing concepts or materials for new and innovative law school courses. Both the supervising faculty member and the Associate Dean for Curriculum must approve petition for "Directed Research: Curricular Development." Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. Students whose projects warrant more than four units should consider a Senior Thesis or the Research Track (See SLS Student Handbook for requirements and limitations). With the approval of the instructor, successful completion of a directed research project of two units or more may satisfy the JD writing requirement to the extent of one research writing course (R course). See Directed Research under Curricular Options in the SLS Student Handbook for requirements and limitations. Directed Research petitions are available on the Law School Registrar's Office website (see Forms and Petitions). Elements used in grading: Paper and as agreed to by instructor.

LAW 403. Senior Thesis. 5-8 Units.
An opportunity for third-year students to engage in original research and to prepare a substantial written-work product on the scale of a law review article. The thesis topic should be chosen no later than two weeks after the beginning of the seventh term of law study and may be chosen during the sixth term. The topic is subject to the approval of the thesis supervisor, who may be any member of the Law School faculty under whose direction the student wishes to write the thesis and who is willing to assume the responsibility therefor. An oral defense of the thesis before members of the faculty, including the thesis supervisor, will be conducted late in the student's ninth academic term. Acceptance of the thesis for credit requires the approval of the thesis supervisor and one or more other members of the faculty who will be selected by the supervisor. Satisfactory completion of the senior thesis will satisfy graduation requirements to the extent of (a) 5 - 8 units of credit and (b) two research courses. The exact requirements for a senior thesis are in the discretion of the supervising faculty member. Special Instructions: Two Research credits are possible. Elements used in grading: Paper and as agreed to by instructor.

LAW 406. Research Track. 9-12 Units.
The Research Track is for students who wish to carry out a research project of a scope larger than that contemplated for a Senior Thesis. Research Track projects are to be supervised by two or more professors, at least one of whom must be a member of the Law School faculty. At least one faculty member in addition to the supervisors must read the written product of the research, and the student must defend the written work orally before the readers. Students will be admitted to Research Track only if they have a demonstrated capability for substantial independent research, and propose a significant and well-formulated project at the time of application. Special Instructions: Two Research credits are possible. Elements used in grading: Paper and as agreed to by instructor.

LAW 411. Directed Professional Writing. 1-4 Unit.
Directed professional writing projects involve professional writing, such as motions, briefs, proposed legislation, and congressional testimony, undertaken with the assistance of --- and in collaboration with --- a faculty member. Directed professional writing credit is designed to allow a student, or a small group of students working together, to receive academic credit for their work tackling real-world problems. Only projects supervised by a member of the faculty (tenured, tenure-track, senior lecturer, or professor from practice) may qualify for Directed Professional Writing credit. It will not necessarily be appropriate to require each member of the team to write the number of pages that would be required for an individual directed research project earning the number of units that each team member will earn for the team project. The page length guidelines applicable to individual papers may be considered in determining the appropriate page length, but the faculty supervisor has discretion to make the final page-length determination. Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. A petition will not be approved for work assigned or performed in a course, clinic, or externship for which the student has or will receive credit. See Directed Professional Writing under Curricular Options in the SLS Student Handbook for requirements and limitations. Directed Professional Writing petitions are available on the Law School Registrar's Office website (see Forms and Petitions). Elements used in grading: As agreed to by instructor.

LAW 801. TGR: Project. 0 Units.
.

LAW 802. TGR: Dissertation. 0 Units.
.

LAW 805Z. Policy Practicum: Supporting INTERPOL's Efforts to Combat Transnational Crime. 2-3 Units.
Changes in the nature of transnational crime and developments under international law may necessitate adjustments of INTERPOL's policy and legal considerations in three broad areas: (1) online manifestations of support for extremist and terrorist conduct; (2) misinformation and fake new; (3) online incitement of violence and hatred, defamation, harassment, and cyber bullying. This Practicum aims to develop principles for INTERPOL to guide its interpretation and application of Article 3 to capture this new--online--manifestation of transnational crime. More specifically, it aims to establish general guidelines that INTERPOL can rely on in determining whether a request to process information on offenses arguably implicating freedom of expression online is in alignment with its constitutional obligation to remain neutral and adhere to international human rights standards. This Practicum is open to graduate students from law (2L, 3L, and Advanced Degree), business, international policy, communications, computer science, and other relevant programs. Highly qualified undergraduates are also invited to apply. The practicum meets 9-10:30 on Wednesdays. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper.Cross-listed with International Policy (INTLPOL 255) in Winter and Spring.

LAW 806Y. Policy Practicum: Justice By Design: Eviction. 2-4 Units.
Client: Judicial Council of California (https://www.courts.ca.gov/policyadmin-jc.htm). Three out of five people in civil cases have no lawyer, but are often navigating issues of profound importance to their lives. At the same time, the courts are trying to manage a massive volume of cases, with particularly large numbers of cases concerning debt collection and housing. How can courts help people resolve their problems, and still operate efficiently? This policy practicum partners student researchers with courts that are interested in reimagining how one very common type of case -- eviction -- could work better for all involved. We will work on site at court, with observations, interviews, ride-alongs, and workshops to understand how these cases work and what outcomes result. Students will map opportunities for change and a vision of what a redesign process might look like. This class is part of an ongoing partnership with the Judicial Council of California to redesign the civil justice system so that it works better for all litigants, especially those who are without lawyers. Students will learn how to do design research, facilitate multi-stakeholder system redesign, and envision a government innovation process. This work will feed directly into future pilots, reforms and studies on how to make housing court more efficient, accessible, and just. Though students need to be available for the 6 hours a week designated as class time -- (TBA) -- not all of that time will be used. Much of our time will be taken up with court visits and related activities. Group projects will be a major part of the work. Students must take both the fall and winter quarters in order to receive credit for the course. Special instructions: In Winter Quarter, new students may enroll in this policy lab for two units only. New students will focus on researching eviction laws and policies around the country. Students continuing in the policy lab from Autumn Quarter 2019, must enroll for four units. In Spring Quarter, the course will be offered for 2 or 4 units depending on the student's time commitment. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 806Z. Policy Practicum: "Every Vote Counts" Voting Verification Project. 2-3 Units.
Clients: Stanford Election Law Project <https://law.stanford.edu/stanford-university-election-law-project/> and the Stanford PACS Program on Democracy and the Internet <https://pacscenter.stanford.edu/research/program-on-democracy-and-the-internet/projects/>. California recently passed SB 759, the "Every Vote Counts Act," to codify requirements allowing voters a chance to fix their ballot in case of a signature mismatch. SB 759 requires elections officials notify voters of mismatched signatures at least 8 days prior to the certification of an election. Ballots would be counted by elections officials if a signature verification statement is returned no later than 5:00 p.m. two days prior to certification. However, the law does not specify in great detail the steps that counties should take to contact voters. Prior to the bill's passage, a report by the California Voter Foundation revealed substantial variation in how counties verified mismatched signatures and contacted affected voters. This Policy Lab research project will produce the first public report tracking how counties have implemented/are planning to implement the requirements of SB 759. This project maps how the implementation of state statutes and guidelines dealing with vote-by-mail signature verification varies among California counties. Research questions for each county include: (1) What criteria does a signature need to meet to "not appear to be the same" (and therefore result in a ballot being invalidated)? (2) What remedial steps are taken, with regards to SB 759, if an election worker determines there is a "signature mismatch" before the statutory deadline? To answer these questions, students will conduct a survey of county election officials and administrative material and produce a final report with findings and lessons to improve county procedures. Students will research legal and policy frameworks, interview policy makers and state administrative officials, develop targeted policy recommendations, and brief policy makers on recommendations. The final report will be publicly available and will inform California county election officials, state policy-makers, and voting rights advocacy groups. This policy practicum is offered for two to three variable units. Students may elect three units by special arrangement with the instructors. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807A. Policy Practicum: Federal Indian Law: Yurok Legal Assistance. 2-3 Units.
Client: Yurok Tribe. Students will assist the client, the Office of the Tribal Attorney of the Yurok Tribe (the largest federally recognized Native nation in California), by conducting legal research on a variety of possible topics, including tribal water rights, tribal police powers, tribal/county relationships, and the Indian Child Welfare Act. The exact scope and nature of the research will be determined in consultation with the client. Students will produce policy memos based on their research to share with the client. Coursework or background in federal Indian law is helpful but not required. The project may involve opportunity to present virtually to the tribal council. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807B. Policy Practicum: What we can do to Mitigate Climate Warming. 2-3 Units.
Client: Steyer-Taylor Center for Climate Energy and Finance. This is the winter quarter continuation of this practicum. We take as a given the well-established scientific evidence establishing the causal connection between greenhouse gas (GHG) emissions and global warming, and the likelihood that current trajectories of fossil fuel use are leading to catastrophic climate change. In addition to its global consequences, climate change threatens to compromise Stanford's core missions through fires, environmental damage, and other harms to the University's staff, students, and faculty. In the Autumn Quarter, in which the practicum was co-taught by Alicia Seiger, students undertook several research projects, including how Stanford researchers' broad-ranging expertise in energy-related finance issues could be most effectively deployed to inform policy makers; reducing food waste as a means of reducing GHG emissions; and Stanford health services' role in reducing GHG emissions. In the Winter Quarter, we will focus on the possible effects on GHG emissions of investment policies and practices, automobile and air transportation, and the consumption of beef and other foods. The mandate of Stanford Law and Policy Labs is to conduct impartial, evidence-informed policy analysis. Rather than deliver a set of specific recommendations, this practicum seeks to assess the pros and cons of plausible policies. While participants may have prior views on some of the issues, they should be open to revising their views in light of the evidence. Policy Lab practicums are research seminars. Although we will assign some readings and invite experts to meet with the seminar during the quarter, much of the research will be conducted by student teams. Policy Lab practicums are designed primarily for law students, but are open to students throughout the University. This practicum seeks students with knowledge of economics, finance, food systems, and environmental science. Admission is by petition. Elements used in grading: Autumn Quarter - Attendance, Performance, Class Participation, Written Assignments, Final Paper. Winter Quarter- Class Participation, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807C. Policy Practicum: Donor Advised Funds and Their Critics. 2-3 Units.
The donor advised fund (DAF) is an increasingly popular vehicle for charitable giving. Donors receive a tax deduction when they contribute money or appreciated assets to a DAF; at their discretion, donors (DAF "holders") may advise the DAF manager, or "sponsor," to distribute funds to tax-exempt charities. There are about 500,000 individual DAFs across the country, with total assets of over $100 billion. The major DAF sponsors are community foundations and the charitable arms of investment managers like Schwab, Fidelity, and Vanguard. Although donors can only "advise" rather than "direct" a sponsor to make a gift, their advice is almost always heeded. DAFs arguably incentivize giving by providing a vehicle for donating complex assets and reducing a donor's burdens by offloading administrative tasks to the DAF sponsor. Some DAF sponsors also offer advice to enable their DAF holders to give more effectively. Yet DAFs have been criticized on several grounds, and legislation has been introduced (but not enacted) to regulate them. One criticism is that while donors receive the tax deduction immediately upon contributing to a DAF, they can take as long as they wish to make gifts from the DAF, and even pass advisory authority on to their heirs, thus delaying putting the funds into the hands of charities that can use them. (In comparison, foundations are required to spend at least 5 percent of their assets annually.) Another criticism is that gifts made through a DAF can be anonymous, with only the DAF sponsor listed as the donor. (In comparison, gifts and grants by foundations must be reported on publicly available tax returns.) In addition, some DAF sponsors have concerns about requests to make gifts to putative hate groups: how to determine whether an organization falls in this category, and how to respond to the request if it does. At a time when the controversy around DAFs is only likely to grow, this Policy Lab practicum will provide an evidence-based analysis of the pros and cons of various self-reform and regulatory proposals. The research team will focus on understanding the perspectives of the recipients of DAF funding as well as those of DAF sponsors, DAF holders, regulators, and critics. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807D. Policy Practicum: Post-Ferguson Civil Rights Enforcement. 1-3 Unit.
Post-Ferguson Civil Rights Enforcement and Municipal Courts. The Ferguson Report prepared by the United States Department of Justice identified a number of procedural due process violations in the way the city's municipal courts functioned. These procedural defects amplified the consequences of racial disparities in who was arrested and charged in the city. In the wake of the Ferguson Report, civil rights litigation has been brought challenging similar procedural due process violations in other municipal courts around the country. Litigation has concentrated on excessive bail, fines, fees, and other court costs, conflicts of interests in having judges whose budgets depend on collection exercise discretion in setting these charges and collecting them, and failure to comply with Bearden v. Georgia (1983) (prohibiting imprisonment for failure to pay court charges without inquiring into a litigant's indigence and determining that a litigant's failure to pay is "willful"). This two-quarter sequence policy lab focuses on (i) gathering empirical, doctrinal, historical, and other research on municipal court practices associated with the setting, charging, and collection of court fines, fees, and other costs, including demographic research on vulnerable populations affected by procedural errors, (ii) gathering evidence regarding best practices to reform court procedures, particularly regarding compliance with Bearden v. Georgia, (iii) drafting initiatives for recommendation to the client, and (iv) closely editing and refining the proposals for distribution. Applicants should have interest and/or expertise in criminal or civil justice reform, civil rights litigation and enforcement, procedure, and judicial ethics. Strong legal research and writing skills are imperative. Applicants must also be willing to work under conditions that require strict confidentiality. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807E. Policy Practicum: Redesigning the Venezuelan Judiciary: The Venezuelan Constitutional Crisis. 2-3 Units.
Client: National Assembly of Venezuela, Special Committee for the Defense of the Constitution. Venezuela is undergoing a profound political, humanitarian, and economic crisis. Although a dictatorship currently reigns, reformers have begun to plan for a brighter and more democratic future. Students enrolled in this policy lab will have a unique opportunity to help set the terms of a future Venezuelan democracy (and institutional reforms) via a report to be submitted to the Venezuelan National Assembly, the only remaining democratic institution in the country. The report will inform efforts to create a new Venezuelan judiciary. Specifically, students will spearhead completion of a report designed to explore reforms and improvements to judicial independence, judicial appointments, the workings of the judiciary, and the broader legal system. Students will interact with Venezuelan congressional representatives, human rights experts, and research other countries¿ experiences with judicial reform. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807F. Policy Practicum: Assessing Alternative Approaches to Hate Crimes. 2-3 Units.
Partner: Brennan Center for Justice. Most states and the federal government have adopted laws enhancing penalties for hate crimes, but questions remain as to the effectiveness of these laws in deterring hate violence and making victims whole. Some within marginalized and civil rights communities seek alternative---or additional---approaches that do more to address the communal injuries hate crimes inflict, without an exclusive focus on lengthening incarceration for offenders. Yet many of these alternative models, including restorative justice approaches, are undertheorized, rare in practice, and insufficiently assessed. In conjunction with the Brennan Center for Justice, this policy lab assesses alternative approaches to hate crimes in theory and practice. Students will work in collaborative teams to analyze existing research in fields including criminal law and criminology, identify innovative hate crimes programs established by nonprofit organizations or local governments, review outcomes related to restorative justice models, and prepare for an expert convening in the Winter term. The project will conclude with a final report. This policy lab is open to 4-6 students and will be graded on an H/P basis. Students may take this policy lab for either 2 - 3 credits. Some students may continue in the spring. R credit is available to law students upon approval by the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807G. Policy Practicum: The Santa Clara County Litigation & Policy Partnership. 2-3 Units.
Partner: Santa Clara County Counsel's Office. This policy lab inaugurates a new kind of partnership between Stanford Law School and the Office of the County Counsel for the County of Santa Clara. SCCLPP students will work with the leadership and deputies of the office on both litigation and policy matters related to urgent local challenges. Over the long run, SCCLPP projects will relate to fields such as environmental protection, consumer protection, criminal justice, land use law, the rights of immigrant residents, public health, and local finance. During the 2020 Winter and Spring quarters, each student group will focus on one of the following projects: 1. Protecting farm workers and their children from pesticide exposure. 2. Protecting the rights of immigrant residents. 3. Protecting the privacy rights of criminal defendants. 4. Protecting Consumer Rights in Household Tax Preparation. The SCCLPP is open only to Stanford Law Students (both JD and Advanced Degree students). Students will be admitted by consent, with a preference for those with past coursework or experience in state or local government law, public interest lawyering, and public service generally. A strong preference attaches to students intending to enroll in both the Winter and Spring quarters, and we do not expect to enroll any new students in the spring quarter. (Students undertaking an externship at the County Counsel's Office during either term will be treated as two-term participants.)
The seminar portion of the course meets the first five Wednesdays of the quarter from 4:15-6:15; it meets again the last Wednesday of the quarter for a lengthy evening briefing at the SCCC's office starting at 5:15 PM. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.
Same as: SCCLPP

LAW 807H. Policy Practicum: Can Opening Up the Legal Services Market Increase Access to Justice?. 3 Units.
Several states --- including California, Arizona and Utah --- are considering or already moving forward with changes to the regulations on who can provide legal services --- regulations that are contained in the Rules of Professional Conduct for each state. These proposed reforms are designed to accelerate innovation in the delivery of legal services, and increase access to justice, in part by allowing technology and people without JDs to play a greater role than they can today. As states consider these reforms, there are many questions around the likely impact of these reforms on consumers and providers of legal services, and the most promising regulatory regime(s). Students will research and write about such questions as: (1) What are some of the most promising models from other industries for protecting consumers from harm, and providing redress? (2) What might an independent regulator that oversees entities that provide legal services look like? (3) What are the most promising innovations in states that have experimented with non- lawyer providers and other access to justice initiatives. (4) What lessons can we learn from other contexts, including other countries and other professions (for example the medical context, where nurse practitioners can provide services directly, and people other than physicians can own entities that provide health care)? The client will be one or more of the following non-profits working on these issues: the Institute for the Advancement of the American Legal System, National Center on State Courts, or Responsive Law. The deliverables will be a set of policy briefs and talking points that will inform the regulatory reform debate. Students from a range of disciplines are very welcome, including undergraduates interested in public policy. We will tentatively meet Tues 4-5, but if that doesn't work for everyone, we can find times to meet during the lunch hour as well. Elements used in grading: Performance, Written Assignments, Final Paper. This practicum continues for two quarters - winter and spring. Only students enrolled in the winter quarter may continue with the project in the spring term. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807I. Policy Practicum: Tools for Reentry: Practices, Apps, and Services. 2-3 Units.
Client: Various government agencies and nonprofit groups. Formerly incarcerated individuals face a range of personal and institutional challenges in their reentry into broader society. Considerable research and many programs have focused on systems reform and support and social programs to increase the likelihood of successful reentry. But technological tools also have the potential to help lower friction and increase the success of reentry. This policy lab will engage with challenging legal, social, government systems, and technological questions, with opportunities to design and/or implement new tools to aid in the reentry process. We will work with a variety of stakeholders including government organizations and programs, non-profit entities, and legal innovators to prototype and evaluate new technological solutions to facilitate the reentry process and reduce recidivism. This practicum will build a collaborative team of diverse backgrounds and skill sets to learn from each other and enhance the overall capacity of the research and tool development. We encourage students who are interested in criminal justice, technology for social impact, access to justice, and entrepreneurship and innovation for social good to join us, including upper-division and graduate students from Law, Computer Science, Electrical Engineering, Mechanical Engineering, MS&E, Public Policy, and the social sciences. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final PROJECT. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807J. Policy Practicum: California Penal Code Revision Committee Project. 2-3 Units.
This policy lab assists the newly formed California Committee for the Revision of the Penal Code in developing strategies for criminal justice reform in California. The Committee is directed by the Governor and state legislature with studying and making recommendations to simplify and rationalize the substance and procedure of criminal law in California. In 2020, the Committee will likely address five areas of the state's criminal justice system, and students will be responsible for helping set reform priorities within those subject areas, researching existing policy strengths and weaknesses, comparing California law with other jurisdictions, consulting with subject-matter experts, and suggesting and analyzing reform proposals. Students will work directly with Committee members and staff and attend Committee hearings in Sacramento and across the state. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807K. Policy Practicum: The Outlaw Ocean. 2 Units.
Illegal fishing and forced labor aboard fishing vessels have long plagued the world's oceans, undermining economic development, national security, food security, and human rights -- and nowhere is this more starkly evident than in the Pacific. From cans of tuna to shrimp cocktail, the legality of how seafood is caught and processed is often uncertain. This policy lab confronts the global environmental and human rights challenges associated with the existing framework of international laws and policies. The research delves into international laws that apply to the high seas, illegal fishing, supply chains, forced labor and human rights abuses to locate leverage points and explore innovative solutions, including how new technologies might be developed and deployed. The research contributes to a work of The Friends of Ocean Action -- convened by the World Economic Forum -- a coalition of public sector, private sector, and civil society leaders who are committed to accelerating action for sustainability. Solutions require cooperation among nations, international seafood companies, and nonprofit organizations, and the containment of rogue actors. In this policy lab, students will work with two clients. On illegal fishing, the client is Global Fishing Watch. Created through a collaboration among Google and other partners, Global Fishing Watch is a pioneer in harnessing satellite technology to enable better management of fisheries. On forced labor, the client is the International Seafood Sustainability Foundation, which brings together tuna processors who comprise more than 70% of the global market for canned tuna and is committed to developing solutions to address forced labor on fishing vessels in the tuna sector and beyond. Through the Stanford Center for Ocean Solutions, students will also connect to a broad range of additional actors on these issues, including UN agencies, large seafood companies, and human rights and environmental NGOs. Students will produce policy briefs that will be published by the Center for Ocean Solutions. The practicum seeks law students, business students, and graduate and well-qualified undergraduates in such programs as earth systems, computer science, product design, public policy, sociology, and marine biology. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. Class will meet meet on Wednesday, 9-11am, on Zoom in Autumn 2020. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807L. Policy Practicum: The Opioid Epidemic: Developing New Law and Policy Tools. 2 Units.
Same as PSYC 107. Client: Broken No More, http://broken-no-more.org/about-us/. More Americans die every year of overdose than died in the entire course of the 1955-75 Vietnam conflict. Overdose has helped reduce aggregate US life expectancy for three years in a row¿something that has not happened in 100 years, including at the height of the AIDS epidemic in the '80s and '90s. Measured by loss-of-life, opiate-related overdose is the most acute national health crisis of our lifetimes. Student researchers will work closely with the client, Broken No More, a national organization of parents and families who have lost family members to opioid use. The organization supports grieving members and also pushes forward evidence-based, public health interventions to the opioid epidemic. This practicum explores legal approaches to a more comprehensive and thoughtful understanding to the Opioid Epidemic. The research team will evaluate whether various stakeholders have fulfilled their legal and regulatory obligations to respond to the epidemic, including whether hospitals and insurers fulfill their implied "duty of care." The questions addressed in this practicum could have life-saving impact on people currently suffering from opioid use disorder. The course seeks to build a diverse research team with students from law, public policy, medicine, public health, and sociology. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807M. Policy Practicum: Designing a Curriculum in Social Problem Solving & Policy for SLS and GSB Students. 2 Units.
Stanford Law and GSB graduates will play important roles solving many of our greatest societal problems¿in areas such as education, health, energy, and domestic and global poverty¿that call for action by governments and nonprofit, business, and hybrid organizations. Faculty at the two schools are currently working to enhance courses and programs that prepare students for careers addressing such challenges. This policy lab practicum will complement and support their efforts. We will learn about the careers that graduates of the two Schools have had in social problem-solving, policymaking, and policy advocacy; what skills their work demands; and how they acquired those skills. We will examine the curricula of policy schools, law schools, and business schools to learn how they prepare students for these roles. We will also ascertain student interest in particular courses and programs at Stanford and other institutions, including what attracts or deters students from pursuing joint degrees in policy. Insights from this practicum will help the two Schools design changes to their programs. GSB as well as SLS students are encouraged to enroll. Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807N. Policy Practicum: Researching Diversity and Inclusivity in Classroom Dynamics. 2 Units.
This project will research and build an open-source resource library about diversity and classroom dynamics. The goal is to produce a well-curated collection linking to articles, books, and other reliable and authoritative materials to support faculty facilitation of dynamic and productive class discussions about issues of race, ethnicity, gender, sexual orientation, socioeconomic status, religion, exceptionalities, and more. Students will deeply engage with a broad range of literature in order to select the best resources for this unique collection. Students will also explore available trainings and workshops, including online programs, and create a resource list. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807O. Policy Practicum: Assessing the Impact of China's Global Infrastructure Spending on Climate Change. 2-3 Units.
Client: Steyer-Taylor Center for Energy Policy and Finance. China is investing in massive foreign-infrastructure construction, notably in emerging economies. Whether that infrastructure is high-carbon or low-carbon will largely determine the future of climate change. Many universities and institutions are studying the carbon impacts of China's foreign-infrastructure investment. That research tends to compare China's aggregate fossil-fuel-versus-renewable investments, assessing whether those investments meet a clean-energy ideal. New research at Stanford's Steyer-Taylor Center for Energy Policy and Finance is undertaking this analysis differently. It seeks to map the players and financial flows of global infrastructure investment in a way that compares the carbon intensity of Chinese-financed infrastructure projects in important emerging economies with the carbon intensity of energy infrastructure in those countries that has been financed by multilateral, bilateral, and other non-Chinese entities. This method is designed to reflect the way global infrastructure funding works, politically and economically, in actual practice -- and thus to elucidate particularly realistic ways to meaningfully decarbonize Chinese infrastructure financing. In this policy lab, which is the second phase of the spring 2020 lab, students will advance research toward two sorts of deliverables: a data-analysis and data-visualization tool to map players, financing structures, and carbon emissions from Chinese-financed infrastructure projects in key host countries; and a written account of how Chinese-financed infrastructure is playing out in those countries. The research will involve close interaction with key officials at key infrastructure-financing institutions in China and around the world. Graduate students from across Stanford are invited to apply. Data-analysis skills, energy-finance understanding, and proficiency in Mandarin are useful skills for this work, but they are not required. The lab seeks graduate students from the disciplines of law, business, engineering and environmental science, and East Asian Studies. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with International Policy (INTLPOL 371).

LAW 807P. Policy Practicum: New Regulatory and Policy Frameworks for Government Remote Work in Times of Crisis. 2-3 Units.
Background: With the sudden onslaught of the pandemic COVID 19 creating emergency requirements regarding professional and social distancing, government agencies in California have had to implement "telework" or remote work policies quickly, with limited guidance and limited awareness of best practices. Government agencies are complex institutions, performing diverse and vital functions and employing a wide variety of types of employees, some of whom are represented by labor bargaining units. They handle and manage information subject to privacy protections, and many of the communications engaged in between employees and with members of the public are also subject to public disclosure requirements. Public agencies also face financial, technological, and personnel resource limitations. California state agencies need to be able to anticipate work and access issues due to its experiences with natural and manmade disasters, frequently in the form of earthquakes and fires. The disruptions created by this pandemic, because of its impacts on the workforce and economy, are extreme but highlight the need for broad reconsideration of work functions, locations, and worker support. The Project: Working with one state agency, the California State Controller's Office (SCO), students will research and evaluate best practices for remote work by government employees and develop recommendations to ensure the critical government functions continue during a variety of disasters and emergencies. Students will also try to learn what remote work policies could be effectively implemented over the long term. After gaining an understanding of the key functions of the State Controller's Office, students will research and provide answers to several critical questions, which may include: What are legally required timelines for performance of key tasks and functions and how do these requirements implicate remote work? What are the best practices related to chain of command, communications, and redundancy protocols to ensure ongoing operations? How can remote work policies ensure that decision-making remains efficient and effective? What are the priority factors to analyze when determining which staff positions should be designated "essential" or "non-essential"? In the current coronavirus environment, how does this analysis implicate who can or should be physically onsite? What are the processes that are required to be in place should an employee whose work is designated essential have a person who is at risk at home? What are the implications for public employees related to FLSA, OSHA, and Workers' Compensation Insurance compliance? How have business, other government agencies, and nonprofits resolved these issues and what are their best practices? How can those practices be implemented within the SCO? What are the technology requirements that can effectuate remote work? What types of encryption are necessary to protect private and sensitive data? If workers are using their privately-owned technology (e.g., cellular phones, computers), what are the possible exposures due to public records act reporting requirements and in a litigation setting? What are the equity implications of operationalizing remote work policies? What are the demographics of the positions with functions that can and cannot most likely take advantage of remote work? What are implications for the worker experience of remote work in different demographic groups? What are the impacts of differential levels of access to adequate technology at home? What is a cost-benefit analysis of shifting to more remote work? Are there cost-savings through potential reduction of work force or physical space? If so, what are the equity implications? What are the environmental benefits of shifting to remote work? Student Skills and Interests: All students are welcome regardless of experience as long as you are interested in this topic. However, if you have any experience working with government agencies, in disaster or emergency prepared or response, or in applying an equity analysis to policies and programs, please note that in your consent form. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807S. Policy Practicum: Innovating Privacy Protection: Tools and Strategies for California Cities. 1-3 Unit.
Client: Office of the Vice-Mayor of the City of Berkeley, CA. Ensuring the privacy rights of residents and technology users in California remains a core responsibility of legislators and regulators in the state. Recent state legislation such as the California Consumer Privacy Act (CCPA), coupled with the state Attorney General's Office implementing regulations, have aimed to provide an expanded range of privacy and consumer protections, and an upcoming, follow-on ballot initiative may further alter the state regulatory landscape. But these efforts are imperfect and incomplete and have been subject to vigorous debate and criticism over both the details of their approach and their ultimate efficacy. Privacy risks can arise from the collection, aggregation, sharing, and use of data by both governments and private businesses and other private actors, and from lack of transparency of and accountability for such actions. This policy lab will explore the role that cities such as Berkeley can play in furthering efforts to protect privacy against government and private actions, including government acquisition and use of data that is initially collected and aggregated by private entities. We will work with the Office of the Vice-Mayor of Berkeley to engage questions surrounding the nature and scope of the authority held by California Charter Cities like Berkeley to exercise local control and enact legislation to address municipal affairs that include the privacy of their local residents and businesses. The lab will examine the range of powers and regulatory tools available to city governments that might be utilized for privacy protection as part of overall municipal responsibility to protect the health and safety of residents. Part of our focus will be to research and assess approaches from government entities around California and the rest of the country. Students will work with the vice-mayor and may also interview and consult other relevant stakeholders in Berkeley city government and other government entities, relevant privacy experts, community and consumer groups, businesses, and other interested stakeholders as appropriate. Ultimately, we will evaluate best practices and develop recommendations for possible local privacy and related consumer-protection legislation and regulation that is appropriately tailored to safeguard innovation and competition while ensuring that the best interests of local residents and businesses are served, particularly in situations where a city may be particularly well-positioned or have particularly appropriate tools to address privacy concerns. We encourage students who are interested in complex issues of privacy and consumer protection, and in helping identify and develop novel, alternative avenues for enhancing such protection, such as using the the authority of local governments, to join us, including upper-division and graduate students from law, MS&E, public policy, and the social sciences. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. In the winter quarter (1 unit), this policy lab is open only to students who were enrolled in the lab in the fall quarter.

LAW 807T. Policy Practicum: Creating a National Census on Women Imprisoned for Killing their Abusers. 2-3 Units.
Client: Rachel Louise Snyder, author of "No Visible Bruises" The Stanford Criminal Justice Center at Stanford Law School is partnering with the award-winning journalist Rachel Louise Snyder (author of No Visible Bruises; https://www.globalgrit.com/) to study the frequency with which women are imprisoned for killing their abusers. The research will entail the following methodological steps: 1. Requesting the list of women serving current sentences for homicide from each state department of correction. 2. Sending women serving current sentences for homicide a two-page survey asking questions about the circumstances of their current offense(s) and relevant intimate partner violence. Asking women to complete the survey and return it in a self-addressed stamped envelope. Assuring women that their responses will be kept confidential and giving them the choice to complete them anonymously. 3. Analyzing and aggregating responses from returned surveys. 4. Comparing results with data received from the National Violent Death Reporting System maintained by the Center for Disease Control and Intimate Partner Violence data collected by state departments of health. In addition, relying on court records and local press coverage to complement the results. 5. Publishing results in academic journals and policy reports. Collecting and making this data available will shed important light on the nature of the female correctional population, the largest growing segment of the U.S. prison population, and might guide policy discussions on charging, sentencing, prison programming, parole and reentry policies and decisions. The results may also inform laws regarding self-defense and other affirmative defenses, and strategies for addressing domestic violence. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course will meet on Thursday from 9:00-11:00 am.

LAW 807U. Policy Practicum: COVID-19 and the Effect of Video Technology on Indigent Defense Services. 2-3 Units.
Client: National Association of Criminal Defense Lawyers. As a result of COVID-19, most jurisdictions in the country rapidly moved court and court-related communications from in-person to audio- and video-conferencing. Providers of indigent defense services have identified concerns associated with this move, including the effect it has on attorney-client relationships and confidentiality and the ability of clients to access reliable technology. In partnership with National Association of Criminal Defense Lawyers (NACDL) and with the involvement of Stanford Sociology Professor Matthew Clair, the Stanford Criminal Justice Center is conducting a study on the uses, dynamics and effects of remote technology at different stages of criminal proceedings in light of COVID-19. The project will entail both a national survey (survey will be sent out nationally during August 2020 and students will analyze results) and in-depth interviews with a range of stakeholders in a handful of jurisdictions to assess how technology is being used and develop best practice for the delivery of indigent defense services during and after the pandemic. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course will meet on Fridays from 9:00-11:00 am.

LAW 807V. Policy Practicum: Election Protection in the Time of COVID. 2-3 Units.
Client: Stanford-MIT Healthy Elections Project (healthyelections.org). The administrative challenges local officials are confronting in the 2020 election are unprecedented in U.S. history. As the primary elections reveal, the COVID-19 pandemic threatens our democracy as much as it threatens public health. Jurisdictions around the country are scrambling to deal with massive shifts to mail balloting, polling place closures, and loss of poll workers. Students in this policy lab will investigate the measures state and local officials are taking to protect their elections from the effect of the pandemic. Students will research, write and/or update policy memos on election preparedness in battleground states, work with our partners to recruit poll workers to reduce the risk of polling place closures due to poll worker shortages, prepare materials for voter outreach and education, and help ensure polling place safety. After the election, students will assess the success of various aspects of the administration of the election, and, in the winter term, produce a detailed post-mortem group report. All students will produce team-based policy memos and internal presentations to be integrated into the final report. This policy lab will continue over two quarters with a small subset of students from the fall term selected to join the winter research team. The winter quarter will focus on finalizing the research and work product initiated in the fall term. Students from all disciplines are welcome to apply (including undergraduates). However, preference will be given to current team members of the Stanford-MIT Healthy Elections Project and those with experience in election law and policy. We especially welcome applications from students in the law, public policy, political science, and design disciplines, and from those with strong writing and editing skills. Students taking the course for R credit can take the course for either 2 or 3 units (Section 02), depending on paper length. The Fall term class meets remotely each week on Wednesdays, 4:15-6:15 p.m. Winter term TBD. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. We are accepting applications on a rolling basis through 9/14, but recommend that students apply early.

LAW 807W. Policy Practicum: Developing Best Practices for Clean Water Act Enforcement. 2-3 Units.
Client: The U.S. Environmental Protection Agency's Office of Enforcement and Compliance Assistance. Deliverables: Policy memos, briefing presentation, final policy report. The Clean Water Act is the premier law protecting the waterways of the United States. Yet based on facility self-reports, 29% of permitted facilities under CWA were in "significant non-compliance" (SNC) in 2018: that is, close to a third of all facilities either discharged substantially above their permit limits or otherwise failed to meet their permit obligations. Such pollution has serious consequences for the health and well-being of millions of Americans. One of the Environmental Protection Agency's ambitious national compliance initiatives aims to cut the SNC rate in half by 2022. To that end, EPA is hoping to research, compile, and disseminate information about the most innovative interventions that have been piloted and implemented by states, EPA regions, and federal EPA. This policy practicum will assist the Environmental Protection Agency's Office of Enforcement and Compliance Assistance to develop this "Best Practices" Compendium. Professors Dan Ho and Deborah Sivas will lead a team of students, in close coordination with the EPA team, to develop the compendium. The work will entail (a) conducting interviews of state, regional, and federal environmental regulators (most of which have been pre-identified by EPA), (b) drafting short case studies of each practice (e.g., early warning letters, technical assistance, simplified disclosures), (c) assessing benefits, costs, and evidence underpinning these practices, and (d) helping EPA disseminate this information. The learning objectives include: (i) a deeper understanding of the nation's principal regulatory framework to protect water, (ii) engaging with officials to learn and compile best practices, and (iii) developing a strong sense of environmental law and regulatory enforcement in action, including the promise and constraints of the behavioral and enforcement toolkit. This is a two-quarter policy practicum, which will be run virtually, for the fall and winter quarters. Students are strongly encouraged to participate in both quarters. Those who (a) have a strong interest or background in environmental law, administrative law, regulatory enforcement, or policy-oriented research, and (b) are able to enroll in both fall and winter terms will be given priority. R credit is available for students who extend the work into a significant research component. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807X. Policy Practicum: Selective De-Policing: Operationalizing Concrete Reforms. 2-3 Units.
The Stanford Criminal Justice Center and Stanford Center for Racial Justice at Stanford Law School are co-sponsoring this project to assess concrete ways to shift particular responsibilities from police departments to other agencies and organizations. We will explore whether there are policy possibilities lying at the intersection of the community policing movement - which advocated shifting police departments away from "chasing 911 calls" - and current calls to "defund" the police by shifting to other other agencies functions now performed by armed, uniformed officers. In particular, we will consider proposals to shift mental health response, school discipline, traffic enforcement, and homeless services away from armed, uniformed officers. What kinds of agencies should shoulder these responsibilities? How should the transfer be accomplished? We will also ask how these policy changes relate to, complement, or compete with other possible approaches to police reform and the transformation of public safety. Should such changes be part of an overall effort to shrink the footprint of police departments, to change the nature of what police departments do, or both? How, if at all, should changes in police budgets be used to drive reform? Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course will meet on Tuesdays from 2:00-4:00 pm.

LAW 807Y. Policy Practicum: Diversity, Equity and Inclusion Research Clearinghouse. 2 Units.
Client: Stanford Law School. Deliverables: Resources for national DEI database for law schools, final summary report. Law schools, other professional schools, and institutions of higher education all around the country have been reevaluating their structure, mission, curricula, pedagogy, hiring and admissions practices, climate, and other elements of academic life with the goal of ascertaining how best to promote a more just, fair, inclusive, and diverse environment for learning. Students, staff, administrators, and faculty have created listservs and other informal platforms to share ideas and resources, but to date there has been no single research-based platform that gathers cutting edge and canonical work on the wide range of potentially relevant topics to guide and provide structure to the design of reforms or support advocacy on DE&I issues. Stanford Law School and the Robert Crown Library have launched a beta version of the first national clearinghouse to index research of this kind. This policy lab provides interested students an opportunity to expand the index, help develop and implement standards for curation, incorporate feedback from users, engage in policy discussions about iterative design, and develop frameworks for assessment of the project. The primary work plan involves deepening the available research on a number of topics including: 1L and advanced doctrinal pedagogy, critical race theory, other critical approaches to law, cultural competence and cultural humility in training for law and other service professions, professional judgment, assessments of DE&I training in the private and public sector, published templates for university DE&I reforms, principles of academic freedom, global innovations in DE&I theory, as well as interdisciplinary research on anti-racism, implicit bias and other forms of cognitive bias, viewpoint discrimination, micro-aggression, trauma, and stereotype threat. Students will work with Prof. Norman W. Spaulding and reference librarians at the law school. There may also be opportunity to work with students, staff, administrators, and faculty at other law schools and other university departments. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 807Z. Policy Practicum: Creating a National Research Cloud. 2-3 Units.
Client: Stanford Human-Centered Artificial Intelligence (HAI). The productive interplay between federal government, research universities, and private enterprise has given rise to an American innovation engine that is the envy of the world. But with respect to artificial intelligence, the American research prowess that's powered decades of growth and prosperity is at risk. There are two reasons: public researchers' lack of access to compute power and the scarcity of meaningful datasets, the two prerequisites for advanced AI research. To address this problem, in 2020 the Stanford Institute for Human-Centered Artificial Intelligence (HAI) issued a call for the government to create a National Research Cloud (NRC), a close partnership between academia, government, and industry to provide academic researchers with affordable access to high-end computational resources, to large-scale government-held datasets in a secure cloud environment, and to the necessary expertise to benefit from this resource. Congress has responded to this call with its proposed National AI Research Resource Task Force Act of 2020. Investigating possible ways to implement the NRC according to the proposed legislation, the practicum research team will work closely with scholars at HAI to (1) propose ways to power the NRC with rich and easily-usable datasets while complying with important legal issues such as data privacy; and (2) recommend the proper level of government involvement in building and administering the NRC. The research team will draw from student expertise and familiarity with law, computer science, engineering, economics, and other interdisciplinary fields. Student researchers will conduct interviews with private sector tech companies, public sector administrative officials, and academic researchers. Students will also research adjacent federal policies and agencies that seek to stimulate innovation through similar or other means. This practicum will run winter and spring terms with preference for students who can enroll for both quarters. The project seeks students with law, engineering, computer science, economic, and policy backgrounds. Special Instructions: Students enrolled in Section 01 may elect credit for either Experiential Learning (EL) or Professional Writing (PW). Students enrolled in Section 02 may elect credit for Research (R). Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final.

LAW 808A. Policy Practicum: The Youth Justice Lab: Imagining an Anti-Racist Public Education System. 3 Units.
Clients: Public Counsel (http://www.publiccounsel.org/) and IntegrateNYC (https://integratenyc.org/). In the wake of the Black Lives Matter protests and calls for police reform, the United States is in the midst of a national reckoning that is forcing us to confront systemic racism and the institutions that perpetuate anti-Black racism, white supremacy, and discrimination against Black, Indigenous, and People of Color. Perhaps no institution has reproduced racial hierarchy in the U.S. more than our public education system. From state-sponsored racial segregation of schools to the more subtle, but no less insidious racially segregated academic placements (e.g., special education, advanced placement) to exclusionary school discipline policies to ostensibly "meritocratic" testing and grading policies and beyond, public schools have created and perpetuated racial hierarchy, despite the promise that schools should help all children achieve the American Dream. The Lab aims to critically analyze the structural racism in our schools and asks the question: What would an anti-racist public education look like? Specifically, partnering with Public Counsel and IntegrateNYC, the Youth Justice Lab will explore the history, current landscape, and racialized consequences of: (1) the educational caste system created by student assignment to various public schools, including selective schools, traditional schools, continuation and alternative schools, and court schools and (2) high-stakes standardized testing for student placement and assignment purposes. (Other topics may be covered, depending on client need and resource availability.) With that research in mind, the Lab will work with experts to develop specific policy and research interventions that aim to dismantle the systemic racism and interlocking oppressions built into those educational policies and practices. This course will take an interdisciplinary approach to these issues by enrolling students from the Law School and the Graduate School of Education. Students in the Lab will gather and analyze the relevant historical and empirical research, interview and consult with experts in the field, and draft a series of research and policy memos that summarize our research and provide recommendations. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with Education (EDUC 441).

LAW 881. Externship Companion Seminar. 2 Units.
The practice of public interest law -- whether in the criminal or civil context, or a government or non-profit setting -- requires an attorney to consider a host of issues distinct from one in private practice. How should decisions be made about priorities with limited resources? Where an organization has a broad social justice mission, where does litigation on behalf of individual clients or a group of clients fit in? Prior to initiating litigation or advancing a defense, what quantum of evidence should an attorney require? What role, if any, should an attorney's personal beliefs play in a course of representation? Through directed supervision of their externships, as well as participation in weekly seminars, students will evaluate such questions in the context of their practical experience. Students are required to write weekly reflection papers of 2 to 3 pages. Elements used in grading: Attendance, class participation, weekly reflection papers and final reflection paper.

LAW 882. Externship, Civil Law. 5-12 Units.
Following approval of a student's application, the Civil Standard Externship Program (SEP) allows second and third year students to obtain academic credit for externing with select non-profit public interest, public policy, and government agencies for one quarter. The Civil SEP allows students to (a) gain experience in a field where a clinical course is not offered, or (b) pursue advanced work in an area of prior clinical practice. Students may extern for 20, 24, 30, or 34 hours per week. For a complete description of the Civil SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0 . Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Students participating in the Civil SEP must also concurrently enroll in the Externship Companion Seminar (Law 881). An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of two to three pages. .

LAW 883. Externship, Criminal Law. 5-12 Units.
Following approval of a student's application, the Criminal Standard Externship Program (SEP) allows second and third year students to work for credit in criminal prosecutors' and defenders' offices for one quarter. Students may extern for 20, 24, 30, or 34 hours per week. For a complete description of the Criminal SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0 . Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Students participating in the Criminal SEP must also concurrently enroll in the Externship Companion Seminar. An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of two to three pages.

LAW 884. Externship, Special Circumstances. 12 Units.
Following approval of a student's application, the Special Circumstances Externship Program (SCEP) allows second and third year students to work for credit for one quarter in non-profit public interest, public policy, and government agencies outside of the Bay Area. Standards for approval of a SCEP placement are similar to those for Directed Research proposals, although they are higher. Because there is a preference for local civil and criminal SEP placements (see Law 882 and Law 883), your SCEP proposal must explain (a) how it meets the goals of the externship program; and (b) why a similar project cannot be accomplished in one of the placements offered in the Bay Area. SCEP placements outside the Bay Area must be full-time. Students wishing to undertake a SCEP placement obtain the supervision of a faculty member who will oversee their externship and an accompanying tutorial. For a full description of the SCEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0. Students wishing to enroll in an externship must meet the various requirements that are set out in the Handbook. An externship that otherwise meets the criteria for obtaining EL credit will be approved for EL credit when the field placement provides specialized experience complementary to a student's intended career path and comparable benefits cannot be obtained through other EL coursework at Stanford. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of three to five pages, and a final reflection paper of a length to be determined by your faculty supervisor.

LAW 902. Advanced Community Law Clinic. 2-7 Units.
The Advanced Community Law Clinic offers law students who already have some significant civil clinical experience the opportunity to work under supervision on more advanced projects and cases being handled by the Stanford Community Law Clinic, including litigation and other matters. Advanced Clinic students will also work with Clinical Supervising Attorneys to provide direction and guidance to those enrolled in the Community Law Clinic for the first time, in areas in which Advanced Clinic students have already acquired some expertise. In addition, Advanced Clinic students may function as team leaders on larger projects in which the Clinic is engaged. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Special Instructions: Completion of the Community Law Clinic (Law 902A,B,C) or its equivalent is a prerequisite for the advanced clinic. Elements used in grading: Participation, reflective paper and project.

LAW 902A. Community Law Clinic: Clinical Practice. 4 Units.
The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Skills emphasized include those trial lawyering skills, as well as time management and developing client-centered lawyering practices. Students may also have the chance to participate in outreach or policy-level projects, such as representing the clinic on a state or regional committee on a substantive issue, doing community education workshops at sites around the Peninsula, and/or legislative research and advocacy. In the clinic seminar and in regular supervision, students are encouraged to interrogate the effectiveness of the legal system at delivering "justice" for their clients and to explore creative ways that legal knowledge can be deployed to attack the social problems attendant to low wages, substandard and unstable housing, and other features of low-income life in Silicon Valley. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend a few inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the

LAW 902B. Community Law Clinic: Clinical Methods. 4 Units.
The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. LAW 904. Advanced Criminal Defense Clinic. 2-7 Units.
Advanced clinic allows students who have taken the Criminal Defense Clinic to continue working on cases. Participation in case rounds is required. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical units during their law school career. Students must have taken Criminal Defense Clinic (Law 904A,B,C). Elements used in grading: Class participation, attendance, written assignments and case work. Instructor permission required.

LAW 904A. Criminal Defense Clinic: Clinical Practice. 4 Units.
Students in the Criminal Defense Clinic represent local residents in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students are California Bar Certified and thus appear in court and argue cases with faculty standing by. Students take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with prosecutors, drafting and arguing motions, and examining law enforcement and other witnesses. Common charges include drug use and possession, assault, theft, and vandalism. While students have primary responsibility for all aspects of their cases, all work is closely supervised by experienced faculty. The Criminal Defense Clinic is an intensive, fast-paced, and demanding program of education and practical skills, taught through introductory training and ongoing workshops and skills practicums. The Clinic also addresses broader systemic issues such as implicit bias in the legal system, immigration consequences, economic disparities, and addiction. The goal of the Clinic is to train students how to conduct a criminal case while engaging in thoughtful reflection and providing holistic representation. The Clinic's broader goal is to provide lawyering skills and habits of mind transferrable to any student's chosen field of practice. While the work is often challenging and sometimes heartbreaking, it offers students a unique opportunity to put their skills, intellect, and compassion to use by serving people in a moment of great need. The emotional challenges of the Clinic's work are addressed through an integrated self-care curriculum. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office or other locations as directed during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students may not enroll in any clinic (full-time or advanced) that would result in them earning more than 27 clinical units during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were

LAW 906A. Criminal Prosecution Clinic: Clinical Practice. 4 Units. The six students enrolled in the Criminal Prosecution Clinic advocate before the San Jose Superior Court under the guidance of Santa Clara County prosecutors. Students formulate case strategy, identify and interview witnesses, and conduct evidentiary motions, preliminary hearings, and occasional nonjury trials. The cases concern thefts, burglaries, assaults, weapons possession, drunk driving, drug distribution, and a range of other crimes. Students offer testimony by police officers, crime victims, and other witnesses and cross-examine defense witnesses, including those defendants who take the stand. Clinic students spend at least four full days a week -- Mondays, Tuesdays, Thursdays, and Fridays -- at the D.A.'s office or in court. There generally will be two class sessions each week: a three-hour on-campus class on Wednesday mornings and a Tuesday lunch seminar at the D.A.'s office. Toward the beginning of our term, classes focus on skills training, including direct and cross-examination, admission of physical evidence, making and answering objections, and argument. Toward the end of the term our classroom focus shifts to an examination and critique of the local mechanisms of criminal justice. Topics include the impact of race, gender, and class on the quality of justice; the institutional strengths and weaknesses of the actors in the system; prison conditions and prison reform; and the ethical issues that confront prosecutors and defense lawyers. Students typically tour the Santa Clara County crime lab, Solano State Prison, FCI-Dublin (a federal women's prison), and the Chaderjian Youth Correctional Facility in Stockton and have the option to spend an evening on a police ride-along. Students must submit regular written reflections on their experiences in and observations of the local justice system. Their assigned cases often will demand written court filings. During most weeks students will meet one-on-one with the faculty supervisor. Evidence is a prerequisite. Courses in criminal procedure (investigation) and trial advocacy are strongly encouraged. Students will be awarded three separate grades, each reflecting four credits, for clinical practice, clinical methods, and clinical coursework. Elements used in grading include class attendance and participation, writing assignments, case preparation, and courtroom presentations and advocacy. Class attendance is mandatory. Grading is on the H/P system. Special Instructions: General Structure of Clinical Courses: All of the Law School's clinical courses, other than advanced clinics, are offered fulltime for twelve credits. This format allows students to immerse themselves in the professional experience without having to balance clinical projects with other classes, exams, and papers. Students enrolled in a clinic may not enroll in any other class, seminar, directed research, or other credit-yielding activity within the Law School or University during their clinical quarter. Nor are they allowed to serve as teaching assistants expected to attend a daytime class regularly. There is a limited exception for joint-degree students who are required to take specific courses each quarter and who would be foreclosed from taking a clinic unless allowed to co-register. These exceptions are approved case by case. The clinical quarter begins on the first day of classes and runs through the final day of exam period. Students should not plan personal travel during the Monday-to-Friday workweek without permission from onsite and faculty supervisors. Students are expected to be available by email or cellphone during workday hours Monday through Friday and are expected to devote at least thirty-five hours per week to various facets of this work. In some weeks casework may demand much longer hours. Enrollment in a clinic is binding: Once a student has applied to and been selected by a clinic, the student may not drop the course except in rare cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (fulltime or advanced) that would result in their earning more than twenty-seven clinical credits during their law school careers. For more general information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Please note that due to the present pandemic, some activities of this clinic will require adjustment and perhaps cancellation in the Winter 2021 term. Prison visits and police ride-alongs may prove impossible, and many court hearings may take place remotely. Some hearings, however, are likely to proceed in Superior Court in San Jose, and some aspects of supervision and case preparation are likely to take place

LAW 906B. Criminal Prosecution Clinic: Clinical Methods. 4 Units. The six students enrolled in the Criminal Prosecution Clinic advocate before the San Jose Superior Court under the guidance of Santa Clara County prosecutors. The cases concern thefts, burglaries, assaults, weapons possession, drunk driving, drug distribution, and a range of other crimes. Students offer testimony by police officers, crime victims, and other witnesses and cross-examine defense witnesses, including those defendants who take the stand. Clinic students spend at least four full days a week -- Mondays, Tuesdays, Thursdays, and Fridays -- at the D.A.'s office or in court. There generally will be two class sessions each week: a three-hour on-campus class on Wednesday mornings and a Tuesday lunch seminar at the D.A.'s office. Toward the beginning of our term, classes focus on skills training, including direct and cross-examination, admission of physical evidence, making and answering objections, and argument. Toward the end of the term our classroom focus shifts to an examination and critique of the local mechanisms of criminal justice. Topics include the impact of race, gender, and class on the quality of justice; the institutional strengths and weaknesses of the actors in the system; prison conditions and prison reform; and the ethical issues that confront prosecutors and defense lawyers. Students typically tour the Santa Clara County crime lab, Solano State Prison, FCI-Dublin (a federal women's prison), and the Chaderjian Youth Correctional Facility in Stockton and have the option to spend an evening on a police ride-along. Students must submit regular written reflections on their experiences in and observations of the local justice system. Their assigned cases often will demand written court filings. During most weeks students will meet one-on-one with the faculty supervisor. Evidence is a prerequisite. Courses in criminal procedure (investigation) and trial advocacy are strongly encouraged. Students will be awarded three separate grades, each reflecting four credits, for clinical practice, clinical methods, and clinical coursework. Elements used in grading include class attendance and participation, writing assignments, case preparation, and courtroom presentations and advocacy. Class attendance is mandatory. Grading is on the H/P system. Special Instructions: General Structure of Clinical Courses: All of the Law School's clinical courses, other than advanced clinics, are offered fulltime for twelve credits. This format allows students to immerse themselves in the professional experience without having to balance clinical projects with other classes, exams, and papers. Students enrolled in a clinic may not enroll in any other class, seminar, directed research, or other credit-yielding activity within the Law School or University during their clinical quarter. Nor are they allowed to serve as teaching assistants expected to attend a daytime class regularly. There is a limited exception for joint-degree students who are required to take specific courses each quarter and who would be foreclosed from taking a clinic unless allowed to co-register. These exceptions are approved case by case. The clinical quarter begins on the first day of classes and runs through the final day of exam period. Students should not plan personal travel during the Monday-to-Friday workweek without permission from onsite and faculty supervisors. Students are expected to be available by email or cellphone during workday hours Monday through Friday and are expected to devote at least thirty-five hours per week to various facets of this work. In some weeks casework may demand much longer hours. Enrollment in a clinic is binding: Once a student has applied to and been selected by a clinic, the student may not drop the course except in rare cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (fulltime or advanced) that would result in their earning more than twenty-seven clinical credits during their law school careers. For more general information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Please note that due to the present pandemic, some activities of this clinic will require adjustment and perhaps cancellation in the Winter 2021 term. Prison visits and police ride-alongs may prove impossible, and many court hearings may take place remotely. Some hearings, however, are likely to proceed in Superior Court in San Jose, and some aspects of supervision and case preparation are likely to take place

LAW 906C. Criminal Prosecution Clinic: Clinical Coursework. 4 Units. The six students enrolled in the Criminal Prosecution Clinic advocate before the San Jose Superior Court under the guidance of Santa Clara County prosecutors. Students formulate case strategy, identify and interview witnesses, and conduct evidentiary motions, preliminary hearings, and occasional nonjury trials. The cases concern thefts, burglaries, assaults, weapons possession, drunk driving, drug distribution, and a range of other crimes. Students offer testimony by police officers, crime victims, and other witnesses and cross-examine defense witnesses, including those defendants who take the stand. Clinic students spend at least four full days a week -- Mondays, Tuesdays, Thursdays, and Fridays -- at the D.A.'s office or in court. There generally will be two class sessions each week: a three-hour on-campus class on Wednesday mornings and a Tuesday lunch seminar at the D.A.'s office. Toward the beginning of our term, classes focus on skills training, including direct and cross-examination, admission of physical evidence, making and answering objections, and argument. Toward the end of the term our classroom focus shifts to an examination and critique of the local mechanisms of criminal justice. Prison visits and police ride-alongs may prove impossible, and many court hearings may take place remotely. Some hearings, however, are likely to proceed in Superior Court in San Jose, and some aspects of supervision and case preparation are likely to take place

LAW 908. Advanced Environmental Law Clinic. 2-7 Units.
The Advanced Environmental Law Clinic provides students who have already taken the Environmental Law Clinic the opportunity to continue intense individual project work. Advanced students often work on matters they worked on as full-time students, but they also have the chance to work on new matters and develop new skills. Advanced students work closely with supervising faculty on their designated projects and are expected to take increasing responsibility for managing their work and representing clients. In addition, advanced students often serve as mentors to less experienced full-time students and thereby receive training in basic team building and supervision. Advanced students may arrange to receive between two and seven units. No student may receive more than 27 total clinical units during the course of the student's law school career. Elements used in grading: TBA.

LAW 908A. Environmental Law Clinic: Clinical Practice. 4 Units.
Students enrolled in the Clinic provide legal assistance to national, regional and grassroots non-profit organizations on a variety of environmental issues, with a focus on complex natural resource conservation and biodiversity matters at the interface of law, science and policy. Working under the direct supervision of practicing environmental attorneys, Clinic students help screen new matters and potential clients; formulate strategies; research and develop factual and legal issues; and prosecute administrative and litigation proceedings. During the term, students may meet with clients, opposing counsel or agency decision-makers; review and prepare administrative records; develop expert testimony; draft comment letters, petitions, pleading or briefs; and/or attend and present arguments in administrative and court hearings.
In regular one-on-one meetings with supervising faculty, there is a heavy emphasis on learning how to write persuasively and present oral arguments. Indeed, in any given quarter, our students typically prepare a mix of state and federal, and trial and appellate, court pleadings, and because all of our hearings during the academic year are conducted by students, many students also have the opportunity to present oral argument in front of one or more judges. In addition, students participate in a regular seminar where we examine strategic, ethical and substantive issues arising out of the Clinic's work. The Clinic is a particularly good place to learn how to conduct effective legal research, marshal facts in support of legal arguments, and, above all, write well. We practice at all levels of state and federal court and before many local, state and federal administrative agencies. Our work involves extensive motions practice and brief writing, and often involves administrative petitions and policy papers. Our work is inherently cross-disciplinary. No prior environmental experience or background is necessary, but an interest in learning about environmental and natural resources law is important.
Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend a few inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the

LAW 908B. Environmental Law Clinic: Clinical Methods. 4 Units. Students enrolled in the Clinic provide legal assistance to national, regional and grassroots non-profit organizations on a variety of environmental issues, with a focus on complex natural resource conservation and biodiversity matters at the interface of law, science and policy. Working under the direct supervision of practicing environmental attorneys, Clinic students help screen new matters and potential clients; formulate strategies; research and develop factual and legal issues; and prosecute administrative and litigation proceedings. LAW 910. Advanced Immigrants' Rights Clinic. 2-7 Units.
The Immigrants' Rights Advanced Clinic offers the opportunity for students who have already successfully completed the Immigrants' Rights Clinic to pursue: a specific immigrants' rights advocacy project; advanced individual client representation; and/or working with the clinic director to provide direction/guidance to those enrolled in the Clinic for the first time. All advanced Clinic projects will be jointly designed by the director and the advanced student. Advanced students providing guidance/direction to first-time students will receive additional training on providing supervision. Special instructions: Advanced students are expected to attend the case-rounds portion of the weekly seminar, and to participate as needed in the lecture/discussion portion of the seminar. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Attendance and participation in class, project work, writing assignments, and case preparation.

LAW 910A. Immigrants' Rights Clinic: Clinical Practice. 4 Units.
The Immigrants' Rights Clinic offers students the opportunity to represent immigrants before the San Francisco Immigration Court, the Board of Immigration Appeals, the federal district courts and the Ninth Circuit Court of Appeals. Students in the clinic conduct mini-trials in immigration court, write motions and appellate briefs, interview clients and witnesses, investigate facts, develop case strategy, and argue cases. The Clinic represents immigrants with past criminal convictions, asylum seekers, and survivors of domestic violence. All clinic students also work on a variety of impact litigation and advocacy projects to address federal government immigration enforcement practices at the national and local levels, including impact litigation to challenge prolonged immigration detention, local and state advocacy to limit enforcement activity by police, the creation of model pleadings and know your rights materials for immigrant detainees, and advocacy with the federal agencies that regulate immigration. No prior substantive experience or background in immigration or immigrants' rights work is necessary. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Elements used in grading: Attendance and participation in class, case and project work and writing assignments. There are no prerequisites.

LAW 912. Advanced International Human Rights and Conflict Resolution Clinic. 2-7 Units.
The International Human Rights & Conflict Resolution Advanced Clinic offers the opportunity for students who have already successfully completed Clinic quarter to pursue one or more specific projects in conjunction with the Clinic, either independently or in collaboration with colleague(s) enrolled in the regular clinic. Any travel will be strictly contingent on the Advanced Clinical student's availability and the needs of the project. Advanced Clinical students are expected to participate in as much of the regular clinical seminar and seminar simulations as possible given pre-existing scheduling constraints and previous experience. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Project work, writing assignments, case preparation, attendance and class participation.

LAW 912A. International Human Rights and Conflict Resolution Clinic: Clinical Practice. 4 Units.
In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse and practice. This Clinic gives students the opportunity to work directly with the actors and organizations behind this remarkable development as they navigate the vast challenges faced by human rights advocates and victims. In addition to operating within the human rights framework, students will also have occasion to study and contribute to efforts to resolve situations of tension and ongoing conflict using tools of transitional justice and conflict mitigation. The course aims to help students develop a broad range of multidisciplinary human rights advocacy skills--including factual documentation; litigation before national, regional, and international institutions; community empowerment strategies; and client enfranchisement and representation--through in-class sessions, role play exercises, and engagement in, and critical assessment of, clinical projects in human rights. This Clinic involves both a weekly seminar as well as work directly with clients and partner organizations (i.e. Clinic Projects). Together, these experiences give students the chance to reflect upon a number of foundational questions including: What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in rights promotion and defense? How is conflict resolution consistent with human rights advocacy? When and where are these approaches in tension? Students will also be confronted with the ethical and strategic issues that arise in the course of doing human rights work and balancing the often differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the (frequently non-western) developing world. In some sessions, part of the class will be devoted to presentations by students and clinical rounds in line with greater Mills Legal Clinic model. These presentations will consider one or more issues that arise in the course of students' own engagement in advocacy projects through the Clinic. During the course of the quarter, in addition to their work for their clients and partners, students will also be required to write several short, critical reflection papers or thought pieces (2-4 pages, double-spaced, or 500-1,000 words) on the readings, their Clinic Project(s), and/or human rights events on campus. Special Instructions: General Structure of Clinical Courses. The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. As a general rule, students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work/projects (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in

LAW 912B. International Human Rights and Conflict Resolution Clinic: Clinical Methods. 4 Units.

In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse and practice. This Clinic gives students the opportunity to work directly with the actors and organizations behind this remarkable development as they navigate the vast challenges faced by human rights advocates and victims. In addition to operating within the human rights framework, students will also have occasion to study and contribute to efforts to resolve situations of tension and ongoing conflict using tools of transitional justice and conflict mitigation. The course aims to help students develop a broad range of multidisciplinary human rights advocacy skills--including factual documentation; litigation before national, regional, and international institutions; community empowerment strategies; and client enfranchisement and representation--through in-class sessions, role play exercises, and engagement in, and critical assessment of, clinical projects in human rights. LAW 914. Advanced Juelsgaard Intellectual Property and Innovation Clinic. 2-7 Units.
Advanced clinic allows students who have taken the Advanced Juelsgaard Intellectual Property and Innovation Clinic to continue working on cases. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical units during their law school career. Elements used in grading: TBA.

LAW 914A. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Practice. 4 Units.
The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. A background in technology may be useful in some cases but is not necessary to a successful experience in the clinic. - - Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. LAW 916. Advanced Organizations and Transactions Clinic. 2-7 Units. (Formerly Law 279) Advanced clinic allows students who have taken the Organizations & Transactions Clinic to work on ongoing projects. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Students must have taken Organizations & Transactions Clinic (Law 272). Elements used in grading: Written assignments and client interactions.

LAW 916A. Organizations and Transactions Clinic: Clinical Practice. 4 Units.
The O&T Clinic is Stanford's only corporate experiential course involving representation of real clients. We're designed for both students interested in M&A, capital markets, emerging company, tech transactions or other corporate work, and those wanting to explore a non-litigation, advisory-oriented practice. Prior experience in business or corporate law is welcome but certainly not necessary. Students represent multiple clients during the term. Our clients are all established nonprofit corporations. Most generate annual revenues in the range of $1 - $100 million, and some are larger. These clients have boards of directors, run complex programs, own brands and other intellectual property, and engage in a range of transactions, yet are small enough that our contact is almost always the CEO, CFO, general counsel, or other senior executive. O&T client engagements provide students with opportunities to assess facts; develop advice; read and write contracts, corporate governance materials, emails and other client communications; lead meetings and calls with clients; collaborate with colleagues; and manage projects. Our practice is document-intensive and service-oriented; we focus on clear communication and crisp execution. The course includes a class that generally meets twice a week. Class meetings center on student-led workshops regarding client projects and on orientation to corporate practice, including discussion of core commercial relationships such as acquisition, credit, and licensing, and practice skills such as transaction planning and management. Guests often join us; those are occasions for informal conversations with general counsels and law firm partners. Information about prior projects is available from the instructors and on the SLS website. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend a few inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school

LAW 918. Advanced Religious Liberty Clinic. 2-7 Units.
Advanced clinic allows students who have taken the Religious Liberty Clinic to continue working on cases. Participation in rounds is required. Advanced clinic may be taken for 2-7 units; general rule of thumb is 4 hours of work per week per unit. Students may not enroll in any clinic (basic or advanced) which would result in earning more than 27 clinical units during their law school enrollment. Elements used in grading: Class participation, written assignments, and case work. Students must have taken Religious Liberty Clinic.

LAW 918A. Religious Liberty Clinic: Practice. 4 Units.
The Religious Liberty Clinic is the only clinic of its kind in the country. The landmark program offers participating students a full-time, first-chair experience representing a diverse group of clients in legal disputes arising from a wide range of beliefs, practices, and circumstances. Students learn in class and engage through reflective and supervised practice the laws, norms, and limits affecting the exercise of religious freedom in a pluralistic society. Students are expected to counsel individual or institutional clients and litigate on their behalf with excellence, professionalism, and maturity. In clinic, students typically handle an accommodation project - e.g., represent a prisoner, student, or employee facing obstacles in the exercise of faith - as well as a longer-term litigation or development matter - e.g., represent a small church, synagogue, or mosque with zoning issues, or an individual challenging state preferences for particular beliefs. Opportunities to draft amicus briefs also arise. The clinic involves agency, trial, and appellate practice - though time constraints may not permit each student to work in all areas - under the empowering supervision of faculty and staff. Students work in assigned case teams but are also encouraged to help develop new clients and matters. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend a few inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four units. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical units during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Clinical case/project work, clinical performance, seminar preparation and participation.

LAW 918B. Religious Liberty Clinic: Clinical Methods. 4 Units.
The Religious Liberty Clinic is the only clinic of its kind in the country. The landmark program offers participating students a full-time, first-chair experience representing a diverse group of clients in legal disputes arising from a wide range of beliefs, practices, and circumstances. Elements used in grading: Clinical case/project work, clinical performance, seminar preparation and participation.

LAW 920. Advanced Supreme Court Litigation Clinic. 2-7 Units.
The Advanced Supreme Court Litigation Clinic provides an opportunity for students who have already successfully completed the Supreme Court Litigation Clinic to continue their work in the Clinic. Work includes research and drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting on drafts of briefs being filed by lawyers in other cases. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. For a more elaborate description of the clinic's content, see the course description for Course Number 436-0-01. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Students have the option to receive R credit upon instructor approval. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Projects and participation.

LAW 920A. Supreme Court Litigation Clinic: Clinical Practice. 4 Units.
The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. The course will involve substantial amounts of legal research. The Supreme Court operates on a tight, and unyielding deadline, and students must be prepared both to complete their own work in a timely fashion and to assist one another and the instructors on other cases. The instructors will not ask students to do any kind of "grunt work" that they themselves will not also be handling, but grunt work there will be: proofreading, cite-checking, dealing with the joint appendix, and the like. The nature of the work product means that while students will average thirty hours per week on their case-related work, that work will surely be distributed unevenly across the quarter. Unlike most other courts, the Supreme Court has no student practice rules. Thus, students will not be able to argue cases before the Court. But they will participate in moot courts on their cases, as both advocates and Justices. Each student will also have the opportunity to travel to Washington to see the Court in session, preferably with respect to a case on which the student has worked. Ideally students will already have experience with persuasive doctrinal writing, through a course like Federal Pretrial Litigation or through intensive supervision during their summer jobs or other clinics. Admission to the Clinic is by consent of the instructors. Students will need to submit a writing sample that reflects their facility with doctrinal legal arguments and the name of at least one reference who can comment on their legal analytic ability. - - Special instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. LAW 922. Advanced Youth and Education Advocacy Clinic. 2-7 Units. The Youth and Education Advocacy Advanced Clinic provides an opportunity for students who have already successfully completed the Education Advocacy Clinic to continue their advocacy work in the Clinic and/or to pursue a discrete project related to educational equity advocacy. Examples of projects include strategic policy research and management consulting for public education institutions on specific topics (e.g., accountability programs, community outreach and engagement, school climate); investigation and preparation for impact litigation; and community education and outreach on a specific education-related issue. All projects will be jointly designed by the instructor and the advanced student. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical units, however, during the course of the student's law school career. Elements used in grading: Projects and class participation.

LAW 922A. Youth and Education Law Project: Clinical Practice. 4 Units. The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or strategic policy research and consulting. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with coalitions and/or other education-sector agencies to advance equity-minded educational policies and school reform. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. Students working in this area will interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work will offer students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters will interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. Students may also have the opportunity to participate in complex school reform litigation, including the monitoring and enforcement of a consent decree and corrective action plan in an ongoing special education lawsuit or appellate and trial work in a pathbreaking educational rights case on behalf of Native American students. Finally, students who are interested in strategic policy research and management consulting on behalf of public education institutional clients (school districts, charter schools, state education agencies) will have the opportunity to participate in the multi-disciplinary collaborations with non-profit clients. The education clinic includes a one-week intensive training program held at the beginning of the quarter, weekly seminars that focus on legal skills and issues in law and education policy, regular case review, and a many opportunities for feedback and reflection with the instructors. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. -- Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. Students may also have the opportunity to participate in complex school reform litigation, including the monitoring and enforcement of a consent decree and corrective action plan in an ongoing special education lawsuit or appellate and trial work in a pathbreaking educational rights case on behalf of Native American students. Finally, students who are interested in strategic policy research and management consulting on behalf of public education institutional clients (school districts, charter schools, state education agencies) will have the opportunity to participate in the multi-disciplinary collaborations with non-profit clients. The education clinic includes a one-week intensive training program held at the beginning of the quarter, weekly seminars that focus on legal skills and issues in law and education policy, regular case review, and a many opportunities for feedback and reflection with the instructors. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. -- Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. -- Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. -- The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five to seven hours per week preparing for and

LAW 922C. Youth and Education Law Project: Clinical Coursework. 4 Units.
The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or strategic policy research and consulting. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with coalitions and/or other education-sector agencies to advance equity-minded educational policies and school reform. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. Students working in this area will interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work will offer students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters will interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. Students may also have the opportunity to participate in complex school reform litigation, including the monitoring and enforcement of a consent decree and corrective action plan in an ongoing special education lawsuit or appellate and trial work in a pathbreaking educational rights case on behalf of Native American students. Finally, students who are interested in strategic policy research and management consulting on behalf of public education institutional clients (school districts, charter schools, state education agencies) will have the opportunity to participate in the multi-disciplinary collaborations with non-profit clients. The education clinic includes a one-week intensive training program held at the beginning of the quarter, weekly seminars that focus on legal skills and issues in law and education policy, regular case review, and a many opportunities for feedback and reflection with the instructors. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 units. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. -- Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. -- Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. -- The work during a typical week in a clinic is divided into three components. Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will

LAW 1001. Antitrust. 4 Units.
Antitrust law sets the ground rules for competition. This course will explore the basic concepts in antitrust law. We will examine cartels and competitor collaborations, monopolization, vertical restraints and horizontal mergers. There are no prerequisites for this course. No economic background is required. The course is open to GSB students and graduate students in the Economics Department. To apply for this course, non-Law students must complete a Non-Law Student Add Request Form available on the SLS Registrar's Office website (see Non-Law Students). Elements used in grading: Class participation, attendance and final exam.

LAW 1002. Advanced Antitrust: Monopolization and Abuse of Dominance in the US and the EU. 3 Units.
This course will take an in-depth look at the principles in US and EU competition law regarding conduct by firms that excludes or weakens rivals. This is perhaps the most controversial and unsettled part of competition law and the part about which there is the least multinational agreement. We will study, among other materials, some of the major recent cases in which the same or very similar matters were addressed by both US and EU competition authorities, including matters involving Microsoft, Google, Intel and Rambus. The objectives are to gain a deeper understanding of the principles regarding exclusionary conduct and the ways in which those principles in US and EU law differ and, from that understanding, to draw inferences about the reasons for the differences between US and the EU law and the impact of different enforcement procedures on substantive legal principles. This course is open to anyone who has taken Antitrust Law 1001 or an equivalent course about EU or EU-like competition law and to others with the permission of the instructor. Elements used in grading: Class participation and final paper.

LAW 1003. Bankruptcy. 3 Units.
This course concerns the law and finance of corporate bankruptcy with an emphasis on reorganization. The course reviews the fundamentals of debt contracting, including the role of events of default, debt priority, and security interests. The course examines various aspects of the bankruptcy process: including the automatic stay, the avoidance of prebankruptcy transactions (e.g. fraudulent conveyances and preferences), the treatment of executory contracts, the debtor's governance structure during bankruptcy, the financing of operations and investments in bankruptcy, sales of assets during bankruptcy, and the process of negotiating, voting, and ultimately confirming a plan of reorganization. Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section 01 (final exam) into section 02 (final paper), with consent of the instructor. Elements use in grading: Class participation; and exam or paper.

LAW 1004. Comparative Corporate Law and Governance. 2 Units.
From the United States to China, and from Brazil to the EU, corporate capitalism has triumphed globally as the dominant form of economic organization. Yet despite the common attributes of the corporation familiar to every U.S. law student, corporations around the world have diverse ownership structures, interact in their domestic political economies in different ways, and exhibit a host of traits that vary with the institutional context in which they operate. This seminar explores the many forms corporate capitalism takes around the world, the forces that shape domestic corporate law and governance in major countries, and the important legal and policy issues raised by global corporate activity. We will explore the rise of "agency capitalism" in the U.S. and the proliferation of new forms of corporate ownership around the world, the emergence of Chinese state capitalism and its legal and policy consequences, efforts to reform Japanese stakeholder-oriented capitalism, and the emergence of hybrid forms of business organization designed to pursue both profits and social benefits. Policy issues to be considered include the "social responsibility" or "purpose" of the corporation, the national security implications of foreign investment by state-owned enterprises, and the consequences of global hedge fund activism. Special Instructions: This class is limited to 15 law students by lottery. Depending on demand, additional students may be admitted with consent of the instructor. Interested students not admitted through the lottery process are encouraged to contact the instructor about the possibility of enrollment. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Presentation.

LAW 1005. Comparative Venture Capital - China. 2 Units.
(Formerly Law 736) This course is taught in conjunction with Law 1006. Students may enroll for this course alone or for both this course and Law 1006. Law 1005 is intended to introduce students to the legal and financial principles underlying venture capital investment in start-up enterprises and innovative technologies. A special emphasis of this course will be a comparative analysis of the ways in which the various legal and financial structures employed by venture capitalists are replicated in other legal environments, with a focus on the largest venture capital and IPO market in the world - China. The first eight weeks of the course will coincide with the first eight weeks of Winter Quarter, and will be conducted at Stanford Law School. Class sessions will be comprised of lectures regarding the basic concepts and structures, as well as seminar discussions with venture capital industry participants. Elements used in grading: Final exam, attendance and class participation. Special Instructions: Enrollment in the Beijing option is limited to 12 students (See Law 1006 for application instructions and deadline).

LAW 1006. Comparative Venture Capital - China: Field Study. 1 Unit.
(Formerly Law 736A) This is the Stanford Center at Peking University in Beijing component of Comparative Venture Capital - China (Law 1005). For details, see course description for Law 1006. During spring break 2017, the course will be held at the Stanford Center at Peking University in Beijing, and will consist of meetings and seminars with lawyers, entrepreneurs, and venture capitalists active in the Chinese venture capital market. Students will also tour start-up enterprises made possible with venture investments. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and a visa to travel to Beijing. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1007. Contracts: American Law. 4 Units.
This course will provide advanced-degree students with coverage of Contracts law comparable to the fall course offered for first-year JD students. The course will identify the scope and purpose of the legal protection accorded to interests created by voluntary undertakings. We will focus on problems of contract formation, enforceability, interpretation, performance and excuses for non-performance, and remedies for breach. The course will cover both the U.S. common law of contracts and the basics of UCC Article 2 (sales of goods). Not open to JD students. Open only to students in the SLS Advanced Degree Programs. Elements used in grading: Class Participation, Attendance, Final Exam.

LAW 1008. Contract Design: Principles and Practice. 2 Units.
Contract Design: Principles and Practice (1008): (Formerly Law 434) Transaction lawyers spend much time drafting contracts and related documents, and they can contribute very significant value by designing transactions. While transactions should be tailored to the goals and circumstances of each set of parties, there are general principles that guide the design process, even as the technology of contracting is evolving (through automated and smart contracting). This seminar combines discussion of academic scholarship with examples of real-world examples of design challenges (such as in franchising, construction, corporate acquisition, loan or data use agreements). Students will be required to write and present a paper, and encouraged to focus on a specific contracting challenge. Elements used in grading: Class participation (20%) and an independent research paper for "R" (Research credit).

LAW 1009. Corporate Finance I. 3 Units.
This course discusses main principles underlying many of the major financial decisions made by corporate managers and investors. Topics include net present value, interest rates, bonds and stocks, market efficiency, price of risk and capital asset pricing model, company valuation, financial distress, options and other derivative securities. The goal of the course is to develop intuitive understanding of the general principles that can be applied in various practically important scenarios. The course will include problem solving using Excel. No knowledge of mathematics beyond high-school algebra or familiarity with Excel will be assumed. Elements used in grading: Class Participation, Attendance, Written Assignments, Midterm, Final Exam.

LAW 1010. Corporate Income Taxation. 3 Units.
This course will cover the basic principles and rules regarding the taxation of domestic corporations. Prerequisite: LAW 1029 Taxation 1. Students must contact the instructor if they wish to have the prerequisite substituted or waived. Elements used in grading: attendance, class participation and final exam.

LAW 1011. Advanced Corporate Finance. 3 Units.
Lawyers often need an advanced understanding of corporate financial decisions, instruments, and transactions, including equity financing and initial public offerings, the determination of a firm's cost of capital, valuation, payout policy, recapitalizations and bankruptcy, mergers and acquisitions, and the market for corporate control. Advanced Corporate Finance introduces these topics by lecture and then explores them through detailed analysis of actual cases. This structure maximizes the synergy between theory and practice, providing students with portable, durable, and marketable tools for their careers. Legal considerations that arise in the execution of these corporate financial decisions include mandatory disclosure requirements, the issuance of dual class shares, charges of anticompetitive practices, taxation, appraisal cases and fairness opinions, takeover defenses and fiduciary duty challenges, contractual provisions in merger agreements, insider trading, and Chapter 11 bankruptcy proceedings. This class rigorously advances both conceptual and practical/analytical understanding. The knowledge gained will facilitate professional dealings with chief executive officers and chief financial officers, boards of directors, investment bankers, consultants, portfolio and investment managers, venture capitalists, and private equity investors. Prerequisite: Corporate Finance I (Law 1009) or Introduction to Finance (Law 1036) or equivalent background with professor permission. Elements used in grading: class participation and final exam.

LAW 1012. Corporate Reorganization. 3 Units.
This course examines the reorganization of a financially distressed company under chapter 11 of the Bankruptcy Code. Naturally we will examine reorganization through several stages of a business turnaround and restructuring (such as an out-of-court workout, a chapter 11 filing, selected chapter 11 operating issues, and the formulation, negotiation and confirmation of a plan of reorganization). But we will also view chapter 11 in terms of its effects upon financing transactions that are negotiated long before bankruptcy becomes necessary. After all, the terms of a financing transaction probably are most important when things do not work out as well as hoped or planned, because it is then that the relative rights of parties become critically important. Thus, a fundamental knowledge of chapter 11 is not just for bankruptcy specialists, but it is also important for non-bankruptcy lawyers and businesspeople who help structure complex financing transactions in anticipation of the cold reality that something, someday, could financially go wrong. In doing all of this, we will touch on issues that often arise in a reorganization setting, such as valuation, leveraged buyouts, debt and derivative instruments, and distressed debt investing. We will also follow current developments in actual bankruptcy cases, primarily through reports in the media. Elements used in grading: class participation and final exam.

LAW 1013. Corporations. 4 Units.
This course is an introduction to the basic legal rules and principles governing the relations between managers, investors, and creditors in the business enterprise. The course is the foundation for advanced business law courses. We focus on problems that arise because a firm's managers and owners have conflicting interests. We examine the costs associated with this conflict and how markets, legal standards (particularly judicially developed fiduciary duties) and contracts might reduce them. We also examine the way in which federal securities law complements state-level corporate law in the governance of public corporations. Topical areas of coverage include shareholder activism, mergers and acquisitions, and insider trading. Elements used in grading: Attendance, Class Participation, Exam.

LAW 1014. Current Issues in Tax Practice. 2 Units.
This course will introduce students to major issues in tax practice. Each class will be co-taught by one or more leading practitioners in the tax bar, with other members of the bar attending. Subjects include international tax, intellectual property and tax, tax litigation, state and local taxation, working for the government in tax, tax lobbying and working in a corporate tax department. Class will meet at my home (with take-out dinner provided). The class offers students a good opportunity to connect their SLS tax courses to real-world tax issues and practitioners. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 1015. Corporate Social Responsibility. 2 Units.
Although corporate social responsibility ("CSR") initiatives have been pursued by a range of companies as voluntary measures for decades, recent developments have rendered the exercise by companies of designing and implementing environmental, social and governance mechanisms inherently legal in nature. This course will explore the legal issues that companies have been forced to confront, increasingly with the support of specialized legal counsel, in pursuing CSR or sustainability objectives, including those arising in the context of supply chain human rights due diligence (e.g., minerals sourcing and human trafficking), impact investment and the adoption of alternative corporate forms, voluntary standards and mandatory requirements regarding non-financial disclosure and reporting (e.g., SASB, sustainability listing standards, possible amendments to Regulation S-K, and the EU non-financial reporting rules), director fiduciary duties and the changing expectations of investors, shareholder proposals and stakeholder engagement, and the rise of corporate social activism by companies and their officers, among others. Elements used in grading: Class Participation, Written Assignments, Final Paper.

LAW 1016. Deals I. 4 Units.
This course applies economic concepts to the practice of structuring contracts. The course extends over two quarters. In the Fall quarter it will meet four hours per week. In the Winter quarter, it will meet ONLY FOR FIVE WEEKS for four hours per week--for 2 units of course credit. During those five weeks, it will meet on Monday and Friday. Exactly which five weeks the course will meet will be announced during the Fall quarter. Students enrolled in the course must take both quarters. All of the first quarter will be spent in a traditional classroom setting but with untraditional materials. Most of the materials consist of case studies of business transactions (and no case law). We will use those case studies to analyze the economics underlying a wide range of business transactions and the contractual terms and structures used to respond to underlying economic challenges. During the second quarter, we will explore deals in greater detail by studying five complex transactions in full. For this part of the course, students will be divided into groups and will be assigned one of the five deals. Each group will give a presentation of its deal to the class, and in the following class, a lawyer or other participant in the deal will come to class to present the deal based on his or her experience. We study five new deals each year. Deals we have studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, corporate reorganizations, and more. Special Instructions: Students enrolled in the course must take both quarters. Students who have not taken the course in the fall cannot register for it in the winter, and those who took it in the fall must register for it in the winter. No exam in Autumn Term. An In-School exam will be given at the conclusion of the course in the Winter Term. Grades will be given at the end of the second quarter and will be applied to both quarters. I use the consent form two reasons: (a) to ensure diversity across 2L, 3L and advanced degree students; and (b) simply to learn more about those of you with whom I will be working in the course. There is no background required for the course. Elements used in grading: Attendance, class participation, class presentation, written assignments, group paper, and exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1017. Deals II. 2 Units.
This course is the continuation of Deals I. In order to register for this course you must have taken Deals I; and if you took Deals I, you must register for Deals II. Deals I and II apply economic concepts to the practice of structuring contracts. Deals I and II are in effect a single course that extends over two quarters. Deals I will meet four hours per week. Deals II will meet ONLY FOR FIVE WEEKS for four hours per week--for 2 units of course credit. Exactly which five weeks the course will meet will be announced during Deals I. Students enrolled in the course must take both quarters. All of Deals I will be spent in a traditional classroom setting but with untraditional materials. Most of the materials consist of case studies of business transactions (and no case law). We will use those case studies to analyze the economics underlying a wide range of business transactions and the contractual terms and structures use to respond to underlying economic challenges. In Deals II, we will explore deals in greater detail by studying five complex transactions in full. For this part of the course, students will be divided into groups and will be assigned one of the five deals. Each group will give a presentation of its deal to the class, and in the following class, a lawyer or other participant in the deal will come to class to present the deal based on his or her experience. We study five new deals each year. Deals that we have studied over the years have included movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, corporate reorganizations, and more. Special Instructions: Students enrolled in the course must take both quarters. Students who have not taken Deals I cannot register for Deals II, and those who took Deals I must register for Deals II. No exam at the end of Deals I. An In-School exam will be given at the conclusion of Deals II. Grades will be given at the end of Deals II and will be applied to both quarters. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration) to the instructors. I use the consent form two reasons: (a) to ensure diversity across 2L, 3L advanced degree, and non-law school students; and (b) simply to learn more about those of you with whom I will be working in the course. There is no background required for the course. See Consent Application Form for submission deadline. I use the consent form to ensure diversity of experience and non-experience and diversity across classes. There is no background required for the course. Elements used in grading: Attendance, class participation, class presentation, written assignments, group paper, and exam.

LAW 1018. Derivatives. 2 Units.
The course will examine the legal, regulatory, trading and risk management aspects of the $600 trillion notional over-the-counter and cleared derivatives markets. Derivatives have historically not been well-understood by regulators or the public and have been blamed for causing or contributing to the economic crisis. This course will offer students the opportunity to understand how various derivative products are designed, traded and risk-managed and what role regulators play in the derivatives industry. In addition, students will focus on understanding key legal contracts that underpin the global derivatives industry, in particular focusing on the ISDA© Master Agreement and Credit Support Annex, as well as documentation supporting credit derivatives and other common derivative types. Students will also consider the shifting regulatory landscape for financial institutions and hedge funds as it relates to the way in which these products are traded, with rates and credit products migrating to clearinghouses. The course will conclude with an examination of the economic crisis that erupted with Lehman Brothers' bankruptcy in September 2008 and the consequent policy reactions to that event from a derivatives and bankruptcy perspective. Elements used in grading: attendance, written homework assignments and a final exam.

LAW 1019. Current Topics in Sports Law. 1 Unit.
Current Topics in Sports Law is a one-unit seminar for up to 15 students with San Francisco 49ers General Counsel and SLS alumna Hannah Gordon. The class is made up of six 90-minute sessions and brief reflection papers. Attendance is mandatory at all six sessions to pass the course. The class will meet the first six weeks of Autumn Quarter. The seminar will explore current topics in the practice of law that are impacting the sports industry, both through litigation and legislation. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1020. Entertainment Law. 3 Units.
Entertainment law is not, in and of itself, a separate legal discipline. Instead, the practice of entertainment law lies at the intersection of various traditional legal disciplines, such as contract, tort, copyright, trademark, antitrust, secured transactions, etc., and applies those disciplines to a unique business setting. This course is intended to approach the study of entertainment law from a practical perspective, applying the principles of traditional legal disciplines to avoid problems and find solutions in various facets of the entertainment industry. To accomplish the necessary background, we will study the entertainment industry from both a macro level (i.e., the organization of the motion picture, television and music business, including the function of studios, producers, networks, record companies, agencies, managers, lawyers and labor unions) and a micro level (i.e., examining actual agreements in order to understand the principal components of motion picture talent, production and distribution contracts, television series contracts, music and book publishing contracts). We will also examine key litigation issues that affect the industry, such as the interaction of the First Amendment and the right of publicity, the right of privacy and libel, the anti-SLAPP laws, the "final cut" and profit participation cases. The impact of the digital media (including the internet) will, of course, be analyzed, along with the future of the entertainment industry, including convergence, holograms, syntho-thespians and the like. We plan to include guest speakers from the entertainment industry so that this class will embody both business and legal considerations. The overall goals of this course are (1) to expose students to the unique and increasingly complex structure of the entertainment business; (2) to foster an understanding of the role the law and entertainment lawyers play in that unique business structure; (3) to strengthen students' ability to draft key documents and craft persuasive legal arguments to accomplish the goals they may seek to achieve as lawyers in the entertainment industry; and (4) to develop the analytical and problem-solving skills necessary to make them into effective entertainment lawyers. Elements used in grading: Class participation, team contract negotiation and drafting projects, final paper.

LAW 1021. Estate Planning. 3 Units.
This class will cover the basics of the gift and estate tax system and estate planning principles. With these fundamentals, the course will then examine basic and advanced estate planning and wealth transfer techniques, including wills, various types of trusts, titling property, gifts during lifetime, charitable vehicles, handling closely held businesses and valuation matters--with an emphasis on how to use these tools in planning an estate to meet the objectives of a couple or individual. Probate of an estate, durable power of attorneys, conservatorships, and planning for other life situations will be explored. Elements used in grading: Class participation (is a small factor and only in the positive direction) and final open book exam. This course is open to GSB and other graduate students with consent of the instructor.

LAW 1022. International Tax. 2 Units.
This course examines the United States federal income taxation of international operations and transactions, including international joint ventures and M&A transactions. Traditional issues such as income source, foreign tax credits, Subpart F, and international transfer pricing rules will be addressed. Congress recently encated fundamental reform of US international tax rules; important new provisions in this area, including the "GILTI" and "BEAT" rules, will also be covered. Elements used in grading: Final Exam.

LAW 1023. International Securities Offerings. 2 Units.
This course will focus on the application of United States securities laws and regulations to non-US issuers. We will examine how that regulatory framework differs for Foreign Private Issuers, as compared to other issuers in the United States. Initial public offerings, private placements under Rule 144A and Regulation S and ADR programs will all be covered. We will take a close look at the Alibaba IPO and Alibaba's subsequent regulation as a public company listed in the United States. The course will be taught from a practical perspective with in-class review of SEC filings, offering documents and SEC correspondence. The Morrison Case and its progeny defining the reach of U.S. Securities law to conduct with limited U.S. contacts will also be examined. Elements used in grading: Class Participation, Final Exam.

LAW 1024. Private Equity Investing. 3 Units.
(Formerly Law 522) This course will focus on the central issues involved in private equity investing. Topics will include: pricing, structuring and valuation of private equity and venture capital investments; buyouts and other transactions involving multitiered capital structures; the structure and governance of PE and VC funds; conceptual issues relevant in this realm such as option theory, asymmetric information and bounded rationality; and private equity as a distinct asset class. There are no required prerequisites. Students will develop skills and tools used in the private equity arena, including financial analysis (e.g., "deal arithmetic" fundamentals, spreadsheet modeling and forecast preparation); the drafting and negotiation of transaction documents; and the ability to conduct comprehensive due diligence examinations of prospective acquisitions and investments. We will have a number of guest speakers during the term, and will draw on various materials illustrative of what one would encounter in private equity deals and funds. Elements Used in Grading: Periodic problem sets, a final case study and class participation. (The case study will be completed in a small group, and it will give students the opportunity to analyze a real-world transaction from a number of perspectives.) A Final Note: While a 3-credit course, Private Equity Investing will not meet for the entirety of the Winter quarter. The final class session will be on March 2nd (rather than March 12th). This class is limited to 24 students. 16 SLS students will be selected by lottery. The other eight spots will be allocated by consent of instructor, and will be selected from law students who were waitlisted and non-law students. All interested students must attend the first two class sessions (January 10 & 12) in order to keep a spot on the class list or waitlist.

LAW 1026. Securities Litigation. 3 Units.
(Formerly Law 300) Executives of American public companies control one of the largest accumulations of wealth in history, amounting to trillions of dollars in market capitalization. Tens of billions of dollars of securities in these companies are traded daily. This course addresses the most interesting and complex litigation that arises in connection with these securities, including fraud claims against executives and corporations, criminal actions for insider trading, internal investigations of executive misconduct, SEC enforcement actions, and derivative actions against corporate directors and officers. This course does not concern stock market technicalities. Instead, you will learn the basic legal framework governing this area, the theories underpinning it, and how to present legal arguments in this area. You will learn in a group setting by working out solutions to some of the most challenging issues that we have faced. In the process you will come to recognize the patterns we see and understand the forces behind them, so that you are prepared to practice in this area. Elements used in grading: Attendance, Class Participation, Exam.

LAW 1027. Securities Regulation: Capital Formation from Start-Up to IPO and Beyond. 4 Units.
We examine the legal regime governing securities markets the United States through the lens of the Silicon Valley venture capital process. We study regulations governing venture capital investing, multi-billion-dollar private placements, initial public offerings (IPO's), and the governance of publicly traded firms, including exposures for securities fraud litigation. The course also explores emerging regulatory tensions over US investments in Chinese issuers, proposals to share equity with "gig-economy" workers, and proposals to facilitate small investor access to private placements. There is extensive reliance on recent real-world transactions, litigation, legislation, and rulemaking. Students are expected to participate in panels. Elements used in grading: Final exam and panel participation.

LAW 1028. Tax Policy. 2 Units.
This course will explore various tax policy issues. In past years, the issues we've explored have included the carbon tax, health care, social security, consumption tax, tax compliance, tax shelters and school financing. Special Instructions: Grades will be based on either (A) class participation and memos responding to the discussion questions for any three of the sessions or (B) class participation and a research paper on a topic of your choosing (subject to instructor approval). Option B is Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, attendance and written assignments.

LAW 1029. Taxation I. 4 Units.
This course provides an overview of the federal income tax. Elements used in grading: Class participation and final exam. Special Instructions: Students enrolled in Taxation I LAW 1029 have the option to concurrently enroll in Race, Class and Tax LAW 1059 for one unit (MP/R,/F) with instructor consent. Race and Tax Policy will provide an additional focus on race.

LAW 1030. Partnership Tax. 2 Units.
(Formerly Law 377) This course will cover the basic rules that govern the tax treatment of partnerships and partners, with a focus on agreements and issues that are relevant to venture capital and private equity investment partnerships. The course will be primarily problem-set based. Prerequisites: Taxation I required; Corporate Income Taxation suggested but not required. Elements used in grading:, Final Exam, Class Participation.

LAW 1031. Current Issues in Business Law. 2 Units.
This course will focus on issues in law and business that are both important to practitioners and the subject of academic or policy debates. We will cover a range of legal and economic issues, including the following topics: nonbank lending, gatekeeper liability, capital repatriation and tax policy, corporate restructuring, blockchain and smart contracts, and cyber risk management. Each of these issues will be introduced by readings and presentations, but the classes will rely on student discussion and critical evaluation of the papers and positions we examine. Students will have the opportunity to write reaction papers that critically analyze the required readings and to learn and analyze other business law issues of their choice by working in groups. Elements used in grading: Reaction papers, class participation, and performance in the group project and presentation.

LAW 1032. Banking Law. 3 Units.
(Formerly 378) This course will examine the legal and regulatory system governing financial institutions, with an emphasis on banks. It will do so by exploring the underlying economics of banking, and the ongoing effort to reform financial regulation. Questions addressed will include: Why do we regulate financial institutions? What dangers do we want to avoid? How well does the current regulatory system achieve what we want to achieve? What alternative approaches can be taken? What are the costs and benefits of the current system, and those of the alternatives? Elements used in grading: Class participation, attendance, final exam.

LAW 1033. Trusts and Estates. 2 Units.
This course will cover the following topics: intestacy; will execution and revocation; will provisions and interpretations; restrictions on the right to devise; probate; creation, amendment and termination of trusts; revocable and irrevocable trusts; trust provisions; charitable trusts; trust administration; and durable powers of attorneys, advanced health care directives and conservatorships. Elements used in grading: Final exam (In-School: open book, essay).

LAW 1034. Real Estate Transactions. 3 Units.
Real Estate Transactions and Commercial Development examines the structuring, negotiation and documentation of commercial real estate transactions. Working both individually and in groups, students will learn the requisite skills for drafting and negotiating leases, letters of intent, sale contracts and related financing documents. As time permits, development-related matters will be explored, including the legal aspects of site acquisition, design and construction. Classes will be a mixture of lectures, interactive discussions, and several mock negotiations. Elements used in grading: Class attendance, individual and group project participation, and written assignments. No final exam.

LAW 1035. Mergers and Acquisitions. 3 Units.
This course is a comprehensive introduction to the law and practice of mergers and acquisitions. It will cover key and emerging issues in transactional legal practice, including in mergers, tender offers, carve-outs and asset sales, negotiated and unsolicited acquisitions, buyouts, conflict transactions, and deal activism. In addition to the relevant laws, regulations and fiduciary standards, the course will cover key aspects of the deal-making process, including mechanisms for protecting a preferred transaction and increasing deal certainty, takeover preparedness and responding to hostile offers, as well as structuring alternatives. The course will include practical exercises on M&A topics and guest speakers who have encountered some of the issues discussed. Prerequisite: Corporations, except on petition to the instructors based on prior coursework or special experience. The course is intended both for students anticipating a career in transactional legal practice as well as for students seeking to develop a general understanding of issues in M&A transactions. Elements used in grading: Attendance, Class Participation, Exam. Casebook: We will be using a casebook: Mergers and Acquisitions Law, Theory, and Practice by Claire Hill, Brian JM Quinn and Steven Davidoff Solomon (2nd Ed; West Academic Publishing 2019).

LAW 1036. Introduction to Finance. 2 Units.
This course is a basic introduction to the principles of finance. It will prepare you for the 3-credit version (Corporate Finance 1009) and introduce you to principles of valuation that are useful in everything from family law to settlement negotiations over civil disputes. The course provides a framework for answering the basic question: how much is this firm (or project) worth? We will cover topics such as: earnings, cash flows, income statements, interest rates, time value of money, risk and return and the cost of capital. No prior knowledge of finance or fancy math skills will be assumed. The course will consist primarily of on-line modules and problem sets that you will complete on your own and in small groups. We will have "live" class sessions to discuss the application of these principles in a legal setting and to hear from lawyers, investors and policy makers how finance has been useful in their careers. There will be weekly problem sets and you will get experience with building a simple excel spreadsheet that will help you estimate the value of a potential new project. There is a final project where you are asked to value a company and present your teams' findings to the class. On-line component. Elements used in grading: Written Assignments, Final Project. Participation.

LAW 1037. The Evolution of Finance. 2 Units.
(Formerly Law 487) This course provides a framework to understand how uncertainty and technology affect the evolution of finance (and businesses generally), with heavy emphasis on recent developments and future trends. In recent years Myron Scholes has given about half the lectures with the other half given by prominent guests. The guest list changes year to year but 2017's list included David Booth, Katie Hall, Howard Marks, James Manyika, George Osborne, Kevin Warsh, Tom Kempner, and Larry Summers. Jeremy Bulow may replace Myron for a small number of lectures. Special instructions: LAW 1037 is limited to 15 law students. If more than 15 law students enroll, a lottery will be run to determine the final class list. Elements used in grading: No Exam. Participation 50% Projects/Papers 50%. Mandatory attendance. Absences impact grade. Cross-listed with Graduate School of Business (MGTECON 343).

LAW 1038. The Future of Finance. 2 Units.
This 2-credit course will examine vast changes driven by innovation both from within traditional finance and from new ecosystems in fintech among others. Breathtaking advances in financial theory, big data, machine learning, artificial intelligence, computational capability, IoT, payment systems (e.g. blockchain, crypto currencies), new products (e.g. robo advising, digital lending, crowd funding, smart contracts), new trading processes (e.g. algorithmic trading, AI-driven sales & trading), and new markets (e.g. ETFs, zero-cost products), among others are changing not only how financial and non-financial firms conduct business but also how investors and supervisors view the players and the markets. We will discuss critical strategy, policy and legal issues, some resolved and others yet to be (e.g. failed business models, cyber challenges, financial warfare, fake news, bias problems, legal standing for cryptos). The course will feature perspectives from guest speakers including top finance executives and Silicon Valley entrepreneurs on up-to-the-minute challenges and opportunities in finance. Elements used in grading: Class Participation, Attendance, Final Paper. Cross-listed with Economics (ECON 152/252), Public Policy (PUBLPOL 364), Statistics (STATS 238).

LAW 1039. Deal Litigation Seminar. 2-3 Units.
This seminar is designed as an introduction to mergers and acquisitions litigation. The course provides both a practical and doctrinal perspective on M&A-related litigation and relies heavily on readings and issues derived from practice in the Delaware courts where much contemporary deal litigation occurs. Students will be asked to apply cases and legal principles in various practical situations that may arise in a transactional litigation practice. Familiarity with basic corporate law principles is assumed. Classes and readings. The first segment of the course will introduce basic doctrinal principles of M&A law and provide an introduction to the litigator's role in the transactional setting. The remaining sessions will revolve around two detailed M&A case studies, with seminar members divided into group roles. The first week of each case study will involve the negotiation and structuring of an M&A transaction. The second week will involve litigation relating to the transaction. As part of the case studies, students will negotiate a transaction, advise their client, take depositions, write briefs and present oral argument. Reading for the case studies will include case scenarios, supporting materials, and additional relevant case law and articles. Written assignments and grading. Students will be expected to write a final paper, in addition to the brief they will write in connection with their assigned case study. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Students taking the seminar for R credit can take the seminar for either 2 or 3 units, depending on the paper length. Corporations (Law 242) is a prerequisite. Elements used in grading: Attendance, class participation, brief writing/oral argument, and paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Please note that due to scheduling issues this quarter, class will not meet on April 6 or 13, or May 18, and makeup classes will be scheduled.

LAW 1040. Venture Capital. 3 Units.
This course examines the venture capital (VC) financing model from both a theoretical and a practical perspective. The course traces the start-up process from initial formation of a new venture and angel investments, through multiple institutional venture capital financing rounds, with a view to potential exits via acquisition or initial public offering. The class will analyze each step in the process from the perspective of the business entity, the founders and employees, the investors, and the lawyers for each party. It also will consider the incentives and control structures used at each stage of financing, with a focus on both the underlying economic and financial theory, as well as on pragmatic considerations in structuring the transactions. Students will learn the VC business model to understand what makes it unique from other investment forms and how that impacts the startup ecosystem. Students will become familiar with spreadsheet capitalization tables, engage in small group class discussions, and participate in small teams in the negotiation of a first round venture capital financing term sheet. There will be required readings for each class that include a range of materials from law review articles and relevant fiduciary duty cases to model deal documents and case studies of what can go wrong. Some sessions will include guest speakers who are either entrepreneurs or venture capitalists. This course is co-taught by Gordon Davidson and Michael Esquivel, who are partners at Fenwick & West LLP and advise technology and healthcare startups and venture capitalists. Elements used in grading: Class participation/assignments, negotiation exercises and written summary, and the final exam.

LAW 1041. Venture Capital II: Starting and Running a Venture-Backed Company. 3 Units.
(Formerly Law 401) This class will focus on the legal and non-legal tactical details of entrepreneurial endeavors. The legal specifics of corporate formation, tax, and contracts are well covered by a variety of other courses at the Law School and will only be reviewed briefly in this course. Instead, the course will examine the life stages (formation, financing, execution, and exit) of a venture-backed company from the entrepreneur's perspective. Students who are interested in either starting companies or working with startup founders as their legal counsel will solidify their foundations in this course. There will be no textbook -- course materials will include PowerPoint slides, readings from various entrepreneur and venture capital blogs, sample business plans, and other sources. This course is limited to 14 students. Those students who have taken VC I receive priority in enrollment. Prerequisites: A modest background in financial analysis or the use of Excel, such as might be obtained from any of the introductory finance courses in most undergraduate curriculums or the handful of similar graduate classes at Stanford (such as QM Finance) is strongly recommended for this course. Venture Capital I will also be helpful but is not a prerequisite. Elements used in grading: Class participation (20%), and a 60 minute oral business plan presentation with accompanying slide deck and written materials (80%). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1042. New Venture Finance. 2 Units.
This is a practice-oriented business law seminar designed to provide students with an understanding of the legal, business, financial and practical issues that arise in advising venture capital-backed and emerging growth companies through the typical stages of their development and common transactions. The seminar will cover selected corporate, securities and tax issues in areas such as business entity formation, corporate organization and governance, venture capital financings, employee benefits, acquisitions and initial public offerings, with an emphasis on practical solutions and business realities. The goal of the seminar is to provide students with a window into the daily life of a typical Silicon Valley-style corporate attorney. Students are required to complete a number of assignments, participate in a negotiation exercise, participate in class discussions and sit for an exam. There will be required readings for each session that include a range of materials. Some sessions will include guest speakers. This course is taught by Mark Reinstra (JD '92), a partner at Wilson Sonsini Goodrich & Rosati. Mark represents emerging growth companies in substantially all facets of their corporate lives, from incorporation, financings, strategic transactions and, ultimately, liquidity events. Elements used in grading: Students will be evaluated on class participation/assignments, negotiation exercises and a final exam (In-School Essay - closed book).

LAW 1043. Blockchain and Cryptocurrencies: Law, Economics, Business and Policy. 3 Units.
Blockchain and cryptocurrency technologies have spawned an extensive and rapidly growing set of businesses along with a corresponding rapidly expanding need for lawyers and regulators with the required expertise. This course provides core background for legal, policy, or business work in the field by nurturing three areas of understanding: (1) the technologies themselves; (2) the scope and nature of business applications; and (3) the pertinent legal and regulatory structures with particular emphasis on securities regulation aspects. Elements used in grading: Exam.

LAW 1045. Prediction and Complexity in Corporate and Securities Litigation. 3 Units.
Success as an attorney and businessperson depends on the ability to predict outcomes in complex situations. Law school courses generally do not develop this skill set. The traditional "case method" asks us to understand how and why cases have been decided. I contrast, this course's "prediction method" challenges students to understand how and why cases yet to be decided will be resolved. The course addresses the academic literature related to prediction, and uses a series of case studies related to undecided cases currently on the US Supreme Court docket to develop student skills as predictors and analysts of complex litigation and transactional situations. This course is open only to students who have already taken and successfully completed a course on Corporate Law or Securities Regulation. Elements used in grading: Attendance, Class Participation, and Final Exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This class will not be offered in 2020-2021.

LAW 1046. Deals in Hong Kong: Field Study. 1 Unit.
This is a travel course that is integrated into Deals I and Deals II. Students who take this course will have taken Deals I and Deals II in the same year. The course will have two elements. First, there will be two deals assigned to two groups of students, as is true of Deals II. Rather than meeting with the lawyers involved in those deals here at Stanford, as we do in Deals II, we will meet in Hong Kong. Students will complete their papers on these deals shortly following their week in Hong Kong. Second, we have a variety of meetings in Hong Kong in which we learn about transactions that are handled by lawyers and bankers there and more generally about business in that part of the world.

LAW 1047. Business, Social Responsibility, and Human Rights. 3 Units.
Large corporations now routinely spend millions of dollars to protect human rights and the environment. Shell Nigeria builds hospitals and schools in the Niger Delta. Nike employs hundreds of inspectors to improve conditions for the factory workers who produce its shoes across Asia and Latin America. Technology companies such as Facebook have scrambled to fend off the threat of new regulation since the Cambridge Analytica revelations. Other examples abound, across industries and around the globe. "Don't be evil" (Google's former motto) may be one motivation for these companies, but something more mundane is also at work: many companies believe they will do well, financially, if they do good, ethically. This course examines questions that lawyers in large law firms, corporations, NGOs, and government agencies regularly confront: --How does business activity affect human rights and other "social" goods (such as the environment and community cohesion)? --What factors, internal and external to companies, shape corporate decisions that have human rights/social impacts? When does it serve a company's interest to take costly action to address human rights, labor, and environmental concerns? -- What tactics have activists used to shift public opinion, media frames, and the law, and thereby change companies' incentives? We will learn through seminar-style discussion, lectures, role play, and small group exercises. Several guest speakers with experience in business, advocacy, or in between will provide insights from their experiences on the ground. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students enrolled in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Written Assignments; Final Exam or Final Paper. Cross-listed with International Policy (INTLPOL 358).

LAW 1048. Introduction to Commercial Law. 3 Units.
Although definitions of commercial law vary, it generally concerns a business enterprise's contracts with its customers and suppliers (usually not with its investors or employees, and not relating to real property). This course surveys legal issues in contracts for the provision of goods, services and information; franchises and distributorships; commercial credit (including secured credit, sureties and guarantees, and letters of credit). Elements used in grading: Grades will be based on class participation, and either a final exam (section 01) or a final paper (section 02). After the term begins, students accepted into the course can transfer from section 01 into section 02, which meets the R requirement, with consent of the instructor.

LAW 1049. Corporate Governance. 2 Units.
This seminar will focus on key topics in corporate governance. We will cover a range of legal and economic issues, including the following topics: hedge fund activism, gatekeeper liability, executive compensation, proxy advisory services, environmental, social, and governance ("ESG") investing, and independent directors. Each of these issues will be introduced by readings and presentations, but the classes will rely on student discussion and critical evaluation of the papers and positions we examine. Many classes will have guest speakers who are experts in the respective area. Students will have the opportunity to write reaction papers that critically analyze the required readings, and to analyze other corporate governance issues of their choice by working in groups. Elements used in grading: Evaluation will be based on reaction papers, class participation, and performance in the group project and presentation.

LAW 1050. Law, Business, and Policy Strategy in the Startup Economy. 3 Units.
This seminar explores the intersection of legal, business, and policy strategy in the startup economy. The class operates along two concurrent paths: First, under faculty supervision, students will act as if they were outside counsel to a Stanford-affiliated startup, learning the business and personal goals of the founder(s) and spotting the relevant legal and non-legal issues. Students will use formal analytical frameworks, including legal research, business strategy, policy strategy, and design thinking, to craft a comprehensive review of the startup's position within the applicable regulatory and business environment, and will present their strategy recommendations to the founder(s) and a panel of faculty and outside experts. Second, students will engage in a case-based exploration of complex legal, regulatory, and ethical issues that often occur in early stage companies. Through focused case studies, students will be required to spot issues, analyze potential outcomes, and make defensible recommendations for legal and business strategy. Issues covered will include corporate formation and capitalization, entering regulated marketplaces, supply chain ethics, employment and culture, and multi-jurisdictional scaling. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1051. Payment Systems: Cryptocurrencies. 2 Units.
This seminar is designed to afford students the opportunity to study the regulation of new, cutting edge payment systems that employ blockchain technology. To do so, students will familiarize themselves with the current state of the law of payment systems as represented in the Uniform Commercial Code, the National Bank Act, and other relevant statutes. Students will then engage readings regarding the regulatory difficulties presented by the realities of cryptocurrency technology. We will start with the history of digital currency, then look at the laws, organizations, trends, and communities behind it to build a complete picture of the ecosystem surrounding blockchain technology. Each student will present and discuss a paper on a topic of interest within the world of cryptocurrencies generally. Each of the students will research and write a paper on cryptocurrency regulation or regulatory technology as the principle component of their final grades. Students have two options. Those taking the course for 2 units (Section 01) will write papers that meet the PW (Professional Writing) requirement. Students taking the course for 3 units (Section 02) will write a long research paper. After the term begins, students accepted into the course can transfer from Section (01) into Section (02), which meets the R (Research) requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 1052. Venture Capital and the Dual Fiduciary. 1 Unit.
This course introduces students to the business and legal/governance issues in venture capital. We will begin with the role of venture capital in the broader US economy, who the players are in the ecosystem and how venture capital funds are raised and managed. We will then have a series of modules through which we'll understand how venture capitalists structure deals (including a full understanding of the economic and governance issues associated with a term sheet). We will dive into the role of the board post-investment, with a particular emphasis on the fiduciary duties (often conflicting) of the board in governing a venture capital financed business. In particular, we will look at the role of the board in financing activities, M&A activities and various special situations. The course will utilize case law as well as various articles and case studies to articulate the potential governance issues boards may encounter. We will focus on practical applications of the rules to real-world situations, with the goal of preparing students post-graduation to be able to properly advise venture-backed boards on how to successfully navigate many of the governance challenge. This class will meet the first five weeks of the quarter (September 25 to October 23). Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 1053. International Securities Regulation. 2 Units.
This course will focus on the application of United States securities laws and regulations to non-US issuers. We will examine how that regulatory framework differs for non-US issuers, as compared to issuers domiciled in the United States. Initial public offerings, private placements under Rule 144A and Regulation S and ADR programs will all be covered. We will also discuss ongoing reporting requirements and other implications of being a non-US public company. We will take a close look at the Alibaba IPO . The course will be taught from a practical perspective with in-class review of SEC filings, offering documents, SEC correspondence and applicable SEC rules. The Morrison Case and its progeny defining the reach of U.S. Securities law to conduct with limited U.S. contacts, as well as SEC enforcement actions against non-US issuers, will also be examined. Prior completion of Securities Regulation or a comparable securities law class strongly encouraged. Elements used in grading: Class Participation, Final Exam.

LAW 1054. Economics of Contracts. 2 Units.
This course will combine contract theory, a field of economics for which several Nobel prizes have been awarded, with a study of the practice of business transactions. Our discussion will explore how well economic theory illuminates actual contracting practices and how the practice of contract design deviates from theory. Our overarching goal will be to develop an understanding of business transactions that goes beyond the drafting of contract language to conceptual and structural features of agreements. We will discuss design topics such as how contracts respond to incomplete information, the "make or buy" choice (whether to carry out a project within a firm or contract with an external party), the role of judicial enforcement in relational contracts, the use of vague and/or precise language in agreements, obstacles and process of innovation in contracting, and the role and effect of bargaining power. This course differs from the Deals course in that it covers a different set of topics and is less applied, and this course will be conducted in a seminar fashion. Elements used in grading: Class participation, Written Assignments.

LAW 1055. Law of Nonprofits. 3 Units.
This course provides an overview of laws and policies affecting the nonprofit sector. The course will focus both on state laws governing nonprofit corporations and charitable trusts as well as federal tax laws applicable to section 501(c) entities. Topics will include the fiduciary duties of nonprofit directors and trustees, obtaining and maintaining tax-exempt status, nonprofit lobbying and political activities, private foundations and donor-advised funds, and alternative organizational forms such as low-profit limited liability companies and benefit corporations. Lectures and discussions will be supplemented by in-class conversations with leaders of local nonprofit organizations. Special Instructions: No pre-requisites. Knowledge of basic tax and/or corporate law is helpful but not required. Elements used in grading: Final exam.

LAW 1056. Regulatory Economics. 4 Units.
Law 1056 examines public policies for dealing with problems arising in markets in which competitive forces are weak. The focus is on monopolies, oligopolies, cartels, and other environments where market mechanisms are unlikely to produce outcomes that benefit consumers more than the alternatives involving costly government intervention. The two main areas examined are competition policy and economic regulation. Competition policy refers to laws that define certain market behavior as illegal because it is harmful to competition or fails to provide consumer benefits that justify its costs to consumers. Economic regulation refers to policies in which government controls prices and/or decides the terms and conditions under which firms can participate in a market. A growing area of study and policy design is the introduction of market mechanisms into formerly regulated industries such as: telecommunications, electricity, airlines, railroads, postal delivery services and environmental regulation. Prerequisites: Econ 51 or equivalent. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper and Final Exam. Cross-listed with Economics (ECON 158).

LAW 1059. Race, Class and Tax. 1 Unit.
This one unit course is only an option for students who are concurrently enrolled Taxation I (LAW 1029) or who have previously taken Taxation 1. The course is an extension of Taxation I with a greater focus on race and class. Goals of the class include deciding which additional materials should be assigned to the basic Taxation 1 course, and what other changes might be made in Taxation 1 and the (Bankman/Shaviro/Stark/Kleinbard) casebook used for the course. The one unit will be graded mandatory P/R/F. After the term begins, students enrolled in Taxation I may enroll in Race and Tax Policy with instructor consent.

LAW 1060. Global Business Law - Asia. 2 Units.
This seminar introduces key attributes of the legal, financial and corporate governance systems of Asia, with a focus on China, Japan and Singapore -- particularly aspects most pertinent to lawyers counseling clients on investing and doing business in those countries. The seminar will also examine several subjects that serve as important conceptual background for practicing transactional law in Asia or representing Asian clients, including the startup ecology in the region, cross-border investor activism, the role of the state as a participant, via state-owned enterprises, in the economies of China and Singapore, and national security concerns raised by foreign investment from China. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 1061B. Global Business Law - Asia: Legal Practice. 2 Units.
This course is the field study portion of the Global Quarter. The field study is comprised of a three-week itinerary of office visits, simulated negotiations and counseling sessions, and seminars in Beijing, Hong Kong, Shenzhen, Singapore, and Tokyo. Participation in the field study qualifies for Pathway B treatment of the Experiential Learning requirement. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 1062. Global Capital Markets. 2 Units.
This course will cover a mix of issues that lie at the intersection of the financial regulation of capital markets and corporate finance. The course will include an examination of US regulation of capital flows into and out the United States (including Regulation S, Rule 144A and the use of ADRs), shareholder class action litigation in capital markets around the world through the use of case studies (including the US, Canada, Australia and Japan), financial manipulation in derivative markets (such as the LIBOR scandal), and international arbitration of financial claims. This class runs from January 6 through January 21. Elements used in grading: Attendance, Final Exam. This class is open to ALL students (except 1Ls), and is not limited to students enrolled in the Global Quarter. This class does not overlap with Accounting (students can take both.

LAW 1063. Global Business Law and Public Policy. 2 Units.
This seminar explores selected topics at the intersection of the practice of transnational business law and public policy. This quarter, we will examine three topics of great interest to corporate executives, their legal advisors, and policy makers: the pandemic; human rights and "ESG" (environmental, social, governance) considerations in global business; and the intensifying "tech war" between the U.S. and China. For each of the topics, two seminar sessions will be led by prominent practitioners. For example, our unit on the pandemic includes class sessions with the General Counsel for HHS (discussing Operation Warp Speed and the legal and business challenges behind the development of a vaccine), representatives from KKR (on how the pandemic is changing global business), and from the pharmaceutical industry (on drug development and national security). The final two sessions will be led by teams of students on topics of their choosing. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 1064. Selected Topics in Antitrust Law. 1 Unit.
Antitrust law has in the last couple of years become a controversial topic and the subject of intense academic debate, proposed legislation, and international discussion. The seminar will provide a forum in which the students could better understand the current controversies and discuss them in a thoughtful and rigorous fashion. We will have 5 2-hour sessions, each on a different topic with assigned readings. The tentative list of topics is this: (1) "New Brandeis" or populist criticism of the fundamental normative (Chicago and post-Chicago) underpinning of U.S. antitrust law; (2) antitrust and IP, especially patents; (3) antitrust and the digital platforms; (4) antitrust in the health care sector; and (5) comparative perspectives -- antitrust in the U.S. and the European Union. Stanford faculty outside the law school will probably participate in one or more sessions. The class will meet on Wednesdays, from 4:45 to 6:45, on April 1, 15, and 29 and May 13 and 27. Elements used in grading: Attendance, Class Participation. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.
Same as: Reading Group

LAW 1065. Partnership Tax. 1 Unit.
This course will acquaint you with the basic rules and structure of partnership tax. Elements used in grading: Attendance, Class Participation. Class will meet every other Wednesday, 4:10PM to 6:10PM.
Same as: Reading Group

LAW 1066. Global Business Law and Public Policy - Asia Field Study. 2 Units.
This field study is open to students enrolled in the seminar LAW 1063 Global Business Law and Public Policy (GBLPP). Health and safety conditions permitting, students will travel to Singapore with the instructors over spring break for a series of meetings broadly related to the topics explored in GBLPP, which may include global business and human rights, doing business in weak rule of law environments, and responses to the COVID-19 global pandemic. Cultural activities and activities with law students in Singapore will also be planned. Elements used in grading: Attendance, class participation, written assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. NOTE: This course is tentative subject to health and travel restrictions. Consent application will be announced pending approval of the course.

LAW 1067. FinTech Innovation and the Transformation of Financial Services. 3 Units.
This course will focus on the so-called "FinTech Revolution" which is transforming traditional banking and financial services. FinTech generally refers to disruptive financial sector innovations involving technology-enabled (online and mobile device-based) business models. Independent FinTech businesses can facilitate disintermediation, create and deliver novel products and services, increase access and inclusivity, reduce costs and both create and address privacy, regulatory and law-enforcement challenges. FinTech can also refer to the increasingly technological approaches that both incumbents and entrepreneurial ventures take to the main financial intermediation functions, e.g., maturity transformation, payments, capital raising and remittances, and to "back end" data systems and regulatory compliance. The goal of the course will be for students to understand the major categories of FinTech innovation in the U.S., including crypto currency and blockchain, the evolving business models and regulatory and legal structures that underlie these categories, and the opportunities and risks that emerging FinTech business models create for financial, legal and regulatory systems. Non-U.S. examples will be used to compare and contrast different approaches to key policy issues. Four key themes will be emphasized: 1) Understanding innovative business models in emerging FinTech. 2) FinTech competition and cooperation with the existing financial services ecosystem and 'big tech.' 3) Financial regulatory and legal system coverage of, mismatches with, and adaptation to, emerging FinTech business models. 4) Public Policy issues surrounding FinTech (Innovation and efficiency; Personal financial data ownership, use, control and liability; Financial stability; Financial inclusion and consumer financial health). No prerequisites but professor permission will take into account relevant background. Elements used in grading: class participation, class assignments and final take-home assignment. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 1068. Corporate Purpose: Beyond Shareholder Value. 2-3 Units.
The neoliberal orthodoxy that corporate managers' sole duty is to maximize shareholders' financial value has never been entirely adhered to in practice and has been increasingly challenged in recent decades. While acknowledging the importance of shareholder value, commentators have argued that corporations should purposively benefit other stakeholders, including customers, employees, and the communities they affect. At the same time, there has been an upswing of investments aligned with investors' social interests, including public equity investments in companies with high environmental, social, and governance (ESG) ratings and private equity "impact investments" that typically incur greater risks than pure market rate investments. This course will consider a variety of legal, ethical, and policy issues related to corporations' purposes and responsibilities, including: the meanings and measures of corporate social responsibility (CSR) and ESG criteria; disclosure of a company's environmental and social harms or risks; when is it legally and ethically appropriate for corporate managers or institutional investors to compromise shareholder value in the pursuit of social, environmental and other nonpecuniary goals; constituency statutes and benefit corporations that reflect interests other than profit maximization; the power of investors to influence corporate behavior through affirmative investments, divestments and shareholder activism; the power of various stakeholder groups to influence corporate behavior; proposals for broadening the purpose of corporations; barriers to these various practices and proposals; and whether they can be accommodated within neoliberal ideology or require a new framework. You may write a series of short commentaries on four of the sessions. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single empirical research paper on a topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit (section 02), depending on the project and paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. This class is limited to 20 students, with an effort made to have students from SLS (15 students by lottery) and 5 GSB students by instructor consent. Elements used in grading: attendance, class participation; written assignments or research paper.

LAW 1070. Social Responsibility, Race, Gender, and the Corporation. 3 Units.
This course uses a series of controversial challenges facing publicly traded corporations as vehicles for exploring advanced concepts in corporate law. Among other topics, the course will likely analyze: (1) The constitutionality and effectiveness of recent California legislation mandating boardroom gender and racial diversity; (2) Google's recent settlement of derivative litigation with the creation of a $310 million social justice fund; (3) The Business Roundtable's statement that corporations owe obligations to constituencies other than stockholders; (4) The performance of Wells Fargo¿s board of directors during its recent phony accounts crisis; (5) The status of derivative litigation challenging boards composed entirely of white directors; (6) The new-found vitality of litigation alleging that directors violated their Caremark duties of oversight; (7) Whether ESG investing can outperform the market, and potential SEC-imposed ESG disclosure obligations; and (8) Reasons for the paucity of criminal prosecutions of senior white collar executives, and potential policy responses. This topic list is subject to change in light of evolving events. Students will be required to write a paper and to sit for an examination. Elements used in grading: Written Assignments, Final Exam.

LAW 2001. Criminal Procedure: Adjudication. 4 Units.
The Law School offers two survey courses dealing with constitutional criminal procedure. "Criminal Investigation" will consider questions that arise under the fourth, fifth, and sixth amendments regarding investigations, interrogations, and charging decisions. This course, "Criminal Adjudication," will look at the way the judicial system handles criminal cases. Topics will include the right to counsel (and the concomitant right to "effective assistance" of counsel), prosecutorial discretion and plea bargaining, joinder and severance, discovery, the right to jury trial, double jeopardy, sentencing, and appellate review. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Attendance, participation and final exam. Small grade adjustments will be made for exceptional class participation.

LAW 2002. Criminal Procedure: Investigation. 4 Units.
The law school offers two survey courses dealing with constitutional criminal procedure. "Criminal Adjudication" covers the formal pretrial and trial processes, including the right of counsel, prosecutorial charging criteria, grand juries, bail, speedy trial, discovery, plea bargaining, trial by jury, and double jeopardy. This course, "Criminal Investigation," covers police investigation in the form of searches and seizures, interrogations, lineups, and undercover operations, and hence examines the Fourth and Fifth (and, to a limited extent, the Sixth) Amendment rules regulating the police in these endeavors. It also incorporates some of the federal laws governing electronic communications and privacy. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Final exam (in-class, open book), plus small adjustments for exceptional class participation.

LAW 2006. Race, Class, and Punishment. 3 Units.
Since the early 1970s, the criminal justice system in the United States has expanded dramatically. America has adopted an array of increasingly tough approaches to crime, including aggressive street-level policing, longer sentences, and a range of collateral consequences for criminal convictions. As a result, there are currently 2.2 million persons in prisons and jails and seven million under some form of correctional supervision. The impact on communities of color has been especially profound: In many of our nation's cities, nearly one-half of young black men are in the criminal justice system. This seminar will begin with readings discussing the tough-on-crime era's historical roots. We will then turn to examine the impact of these policies. Finally, we will turn to current efforts to resist and reform the system that has been created. This portion of the seminar will focus on violent crime, and whether and how to respond to violent crime differently than we currently do. The assigned reading will be substantial, and will come from a wide variety of sources, including history, sociology, political science, criminology, and law. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 2008. Three Strikes Project: Criminal Justice Reform & Individual Representation. 3 Units.
This seminar offers an opportunity to study mass incarceration, criminal justice reform, and post-conviction litigation in real time. In many ways, the era of mass incarceration began in California with the enactment of the "Three Strikes and You're Out" sentencing law in 1994. Today, California leads political and policy trends in the opposite direction with a number of critical reforms to the state's justice system. In this seminar students read and analyze a variety of cases and articles, examining the evolution of incarceration and sentencing policies in California and across the country. Students also assist with live litigation on behalf of inmates sentenced to life in prison for nonviolent crimes. Students also have the opportunity to contribute to ongoing research, public policy analysis and advocacy in the area of criminal justice reform. The class focuses largely on California's Three Strikes law as a case study in the history, politics, constitutional doctrine, and reform of criminal justice policy throughout the country. Students will test their skills in the field by assisting with the representation of individual inmates sentenced to long prison terms for nonviolent crimes in state and federal courts. The Project has been intimately involved in the movement to reduce incarceration in California and throughout the country, partnering with the NAACP Legal Defense Fund and Obama administration on different projects including direct legislative reform, impact litigation, executive clemency, and prisoner reentry. Students enrolled in the seminar quickly become involved in all aspects of the Project's work, including assistance with different stages of ongoing litigation. Students will visit a Project client in prison, conduct factual investigations, and draft petitions on our clients' behalf. The Project is an active, fast-paced organization that depends on the hard work and contributions of law students enrolled in this seminar. This seminar offers the opportunity to both study the theory behind the law and to hone practical litigation and advocacy skills in and out of the courtroom. The seminar will meet for 3 hours per week, including 1 hour individual meetings with Project director Mike Romano. CONSENT APPLICATION: Interested students must apply to enroll in the seminar by sending a one-page statement of interest and resume by email with the subject line "application" to Mike Romano (mromano@stanford.edu). Applications will be considered on a rolling basis. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 2009. White Collar Crime. 3 Units.
This course explores the law of economic and political crimes associated with the rubric "white collar crime." The class is divided thematically between mens rea issues and substantive issues. Among the substantive areas which are covered are: obstruction of justice, perjury, bribery and gratuities, mail and wire fraud, securities fraud, and money laundering. We will study specific federal statutes in considerable detail, while also speculating about the jurisprudence underlying these crimes, and related issues of prosecutorial discretion and attorney ethics. Special instructions: Students may write a paper in lieu of the final exam for Research credit. Also, classroom participation may be taken into account to some very small degree. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and final exam or paper.

LAW 2010. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.
(Formerly Law 621) This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system for adult offenders. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore: (1) sentencing theories and their application; (2) the nature, scope and function of jails, prisons, probation and parole; (3) the impact of incarceration on crime, communities, and racial justice; (4) the effectiveness of rehabilitation programs; (5) the collateral consequences of a criminal conviction; (6) special prison populations (e.g., mentally ill) and policies (e.g., solitary confinement); (7) prison litigation and conditions of confinement; and (8) parole, risk prediction, and prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation (which will include a class presentation), and three reflection papers of 5 to 7 pages each. Due dates will be listed in the class syllabus. Elements used in grading: Final grades will be based on the three reflection papers (25% each) and class participation (25%).

LAW 2013. United States v. Milken: A Case Study. 2 Units.
The most recent financial crisis that began in 2008 has resulted in a call, mostly ignored, for significant jail time for those allegedly responsible, without any explanation of the crimes that may have been committed. The aggressive use of the criminal laws to respond to perceived financial abuse probably had its birth in the prosecution of Michael Milken. Although folks will differ about the prosecution, there is no realistic dispute about the influence Mr MILKEN has had in creating the markets which made possible for new ideas and ventures to have access to the capital needed to build and thrive. . MILKEN effectively developed the so called "junk bonds" market which was the engine that allowed for this theoretically high risk capital to be effectively deployed. As the high yield market grew, Michael Milken and the firm he worked for, Drexel Burnham became the largest and most effective competitor in the market place. This led to a call for an investigation and coincided with a significant insider trading investigation centered on Ivan Boesky (fictionalized in the first Wall Street movie). The US Attorney in NY at the time was Rudolph Giulliani (later Mayor of NY and, more recently, know for his representation of President Trump in various matters including the Ukrainian matter) who led the investigation. Ultimately Mr MILKEN was indicted and pled guilty and was imprisoned. This seminar will involve an in depth study of the circumstances surrounding the high yield securities market and the investigation, indictment and guilty pleas and the subsequent impact of the case. The seminar will examine the tools available to prosecutors, including the use of the Racketeer Influenced and Corrupt Organizations Act (RICO) in white collar cases, in pursuing this and other cases, the affect of the media in high profile cases and other systemic elements that come into play. The seminar will feature presentations of many colorful key players including those involved in the prosecution and defense and those with knowledge of the high yield markets. The seminar will be taught jointly by Professor Mills (who was intimately involved with Mr MILKEN and defended some of the other cases which arose at the time) and Richard Sandler who served as Michael Milken's personal counsel throughout the time and has continued to work with Michael Milken to the present time. Elements used in grading: Class presentation and final paper.

LAW 2015. Advanced Criminal Law. 3 Units.
The intensity of the current debates over criminal law and criminal justice policy is at an unusually high level, with strong and conflicting positions being staked out in the areas of race and crime, policing, incarceration and sentencing, drug policy, and guns. We will be discussing these topics with a mixture of doctrinal analysis of key issues, review of secondary commentaries on key aspects of criminal justice policy, and analysis of empirical papers that illuminate important elements relevant to these legal and policy debates. Elements used in grading: Grading will be based on attendance, class participation, one-to-two-page response papers to readings, and three six-page papers on topics distilled from each of the three three-week blocks in the course.

LAW 2016. Violence and the Law. 2-3 Units.
This seminar will explore how the law thinks about violence. Across various legal domains---e.g., criminal law, criminal procedure, juvenile justice, immigration, domestic violence, family law, civil rights, free speech, firearms regulation---we will study when and to what extent the law marks off violence as a category of distinct concern, how violence is defined, and what ideas the law reflects about how violence operates. Students may elect to write a substantial research paper or a series of short response papers. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Response Papers or Final Paper.

LAW 2018. Wrongful Convictions: Causes, Preventions and Remedies. 3 Units.
Over the course of the past two decades there has been increasing recognition that, despite its commitment to the concept of proof beyond a reasonable doubt, our criminal justice system yields a steady stream of wrongful convictions. This Seminar will focus on some causes, preventions and potential remedies for this phenomenon. Subjects to be addressed include eyewitness identification, interrogations and confessions, jailhouse informant testimony, forensic evidence, the psychology of tunnel vision and confirmation bias, the role of appellate review and habeas corpus, the role of clemency, the impact of the problem on the death penalty, and issues around compensation of those who have been wrongly convicted. As we study these subjects, we will also reflect on whether taking some reforms too far will impair on the efficacy of legitimate law enforcement. The class will meet for two hours each week. In addition, there will be three additional evening or weekend sessions (to be scheduled at the convenience of the participants). During each of these additional sessions, students will watch a film involving a wrongful conviction and will engage in conversation about the particular case involved. Each student will be responsible for preparing a paper on an appropriate topic to be chosen in consultation with the instructor. Consent Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation; Paper.

LAW 2019. Criminal Procedure: Theoretical Foundations. 2-3 Units.
This course examines the theoretical foundations of criminal procedure---political, historical, and, above all, philosophical. What are the ideas at work in the American system of criminal procedure? How, historically, did the system develop, and why does it presently function as it does? Is the system broken and, if so, what principles should orient us in fixing it? This theoretical inquiry has a practical point. Procedure plays a major role in the present crisis of American criminal justice. By examining criminal procedure's theoretical foundations, this course aims to develop competing "big picture," synthetic perspectives on the criminal justice crisis as a whole. Thus, for students interested in criminal justice reform, this course will equip you to take a philosophically richer view of the underlying policy issues. For students thinking about a career in criminal law, this course will equip you to engage in large-scale thinking about how criminal procedure should change, rather than just working within the doctrinal and institutional structures that exist at present. For students interested in legal academia, this course will develop your ability to read sophisticated theoretical material, to write in the same vein, and to relate theoretical ideas to policy prescriptions. Elements used in grading: Class participation and, based on individual student preference, either a final reflection paper or a final research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Cross-listed with Philosophy (PHIL 375K).

LAW 2020. History of Criminal Justice. 2 Units.
This seminar will deal with the history of criminal justice in the United States, since the colonial period. The emphasis will not be on doctrines of criminal law, or (for the most part) on reported case law; but rather on the relationship between the working criminal justice system and American society. Indeed, throughout our history, there has been a huge gulf between the formal law and the way the system actually operated. At all points, the criminal justice system has responded to social, economic, political and cultural factors; and it is these that the course will focus on. The students will read a number of original sources that bear on the relationship between law and society, including sources on the rise of the penitentiary, the death penalty, the development of correctional methods, such as parole and indeterminate sentences; also race and gender relations and their influence on criminal justice. The course will also look at the rise and fall of laws controlling moral and sexual behavior. Students will be expected to write brief reflection papers (roughly two pages) before each of the sessions in which readings will be discussed. The reflection papers should not be mere summaries of the readings, rather, students will explain how the readings bore on the general theme or themes of the course; and the student's reaction to the writer's point of view. Each student will also be asked to develop a topic, carry out research, and write a paper on one or more aspects of the history of criminal justice. Papers can either be synthetic (a review of the literature on some aspect of the history of criminal justice) or embody original research, using such material as court files, older treatises, and newspaper and periodical literature. Elements used in grading: The grade in the seminar will be based on the paper, and (to a degree) also on class participation, including the reflection papers.

LAW 2023. Law, Order & Algorithms. 3 Units.
Human decision making is increasingly being displaced by predictive algorithms. Judges sentence defendants based on statistical risk scores; regulators take enforcement actions based on predicted violations; advertisers target materials based on demographic attributes; and employers evaluate applicants and employees based on machine-learned models. One concern with the rise of such algorithmic decision making is that it may replicate or exacerbate human bias. This course surveys the legal and ethical principles for assessing the equity of algorithms, describes statistical techniques for designing fair systems, and considers how anti-discrimination law and the design of algorithms may need to evolve to account for machine bias. Concepts will be developed in part through guided in-class coding exercises. Admission is by consent of instructor and is limited to 20 students. CONSENT APPLICATION: To enroll in the class, please complete the course application by March 20, available at: https://5harad.com/mse330/. Elements used in grading: Grading is based on response papers, class participation, and a final project. Prerequisite: CS 106A or equivalent knowledge of coding. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 230), Management Science & Engineering (MS&E 330), Sociology (SOC 279).

LAW 2024. Search Warrants in the Digital Era. 2 Units.
This will be a 2-hour advanced criminal procedure class, designed to acquaint students with the challenges confronting judges as they apply the Fourth Amendment to the bewildering array of search and surveillance techniques available to law enforcement in the 21st century. Various surveillance techniques will be examined, such as cell site simulators, GPS and RFID tracking devices, remote computer access (NITs), biometric identification, facial recognition technology, and automated license plate readers. The novel legal and practical issues generated by computer-based search techniques will be explored, for example: Should the plain view exception apply to computer searches? Are ex ante conditions on computer search warrants necessary, or even advisable? When is compulsion of biometric device identifiers appropriate? Can providers be compelled to decrypt locked cell phones? What are the notice requirements for search warrants directed to service providers? What limits should be placed on border searches of electronic devices? After the Supreme Court's 2018 decision in Carpenter, what rules govern law enforcement access to medical or genetic databases maintained by third parties? How is a cell tower dump order distinguishable from a general warrant? What are the particularity requirements for search warrants seeking electronically stored information? Should there be super-warrant requirements pertaining to minimization and overcollection for such searches? What about extraterritoriality and conflict of law issues raised by U.S. law enforcement access to data stored on foreign servers? Broader policy questions will also be addressed. For example, is it sensible to rely on the exclusionary rule to develop Fourth Amendment doctrine in this "golden age of surveillance"? Are courts or legislatures better equipped to regulate modern police investigations? What lessons can be learned from comparative approaches to police regulation in other countries? The course will build upon foundations laid in the Criminal Procedure--Investigation and Criminal Procedure--Adjudication courses. Those classes touch upon the basics of search warrants and the Fourth Amendment, and both are recommended prerequisites for this class. The next generation of judges, prosecutors, defense attorneys, and civil rights advocates will be forced to apply existing legal precedent to unprecedented surveillance technologies generated by the digital era. This course is designed to help them meet that daunting challenge. Elements used in grading: Attendance, Class Participation, Final Exam.

LAW 2025. Search and Seizure Issues for Criminal Lawyers. 2-3 Units.
This seminar on selected issues in search and seizure for criminal lawyers will enhance your future clinic experience. Students will explore thorny issues raised in suppression motions using fact patterns and investigative materials from actual, prior clinic cases. Assigned readings will include briefs and governing caselaw on each topic. Students can take the course for either 2 or 3 units. Students electing 3 units will write an additional 10 page brief. After the term begins, students enrolled in the course can transfer from section 01 (2 units) into section 02 (3 units) with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. This seminar will be offered to students who were enrolled in the Spring 2020 Criminal Defense Clinic (which was cancelled). Depending on enrollment, other students may be considered with the consent of the instructors.

LAW 2026. American Criminal Justice and Its Discontents. 3 Units.
In this course students will participate in direct dialogs with major national experts and institutional leaders from a variety of perspectives on the country's criminal law system. We will hear from experts and leaders from law enforcement, prosecution, public defense, the judiciary, and corrections, and policy experts (including from the academic world). The thematic coverage of the course will be broad, covering empirical assessments of the state of criminal justice in the US, efforts to bring the country out of the phase of mass incarceration while maintaining record-low crime rates, reforms in our sentencing laws (including the death penalty), assessing what is meant by the rubric "progressive prospection," the workload challenges of public defenders, addressing the problem of wrongful convictions, and racial discrimination in both investigation and adjudication of crime. Each week there will be a Zoom interview with a guest. The instructors will interview the guests, and students will then participate in a Q and A phase. The interview sessions will generally run 90 minutes. For each guest there will be preassigned material to be read before the interview. Within 2 days after each interview, students will turn in 3-page reflection papers derived from the interview and reading. The final product will be a 10-page essay on a topic that has emerged from the course. This 10 page paper need not me a scholarly or research endeavor. It can be, in effect, a more extended reflection essay. We anticipate that for most weeks we will have one guest, either Monday or Wednesday, and the other day will be reserved for more elaborate discussions of the most previous guest's presentation or of reading for the next guest. There may be one or 2 weeks where we have 2 guests. While we are just now settling the guest list and anticipate some very exciting additions, for sure it will include Barry Scheck, founder of the famed Innocence Project. Professor Rachel Barkow of NYU. Leading authority on criminal justice administration. Earlonne Woods, former California life prisoner and co-creator and now co-producer and writer for of the Ear Hustle podcast. George Gascon, former Police Chief and former District Attorney of San Francisco and now candidate for Los Angeles County District Attorney. Professor John Donohue of Stanford, widely regarded as the nation's leading empirical researcher of crime and sentencing. Professor Sherri Lynn Johnson of Cornell, expert on the death penalty, who successfully argued the dramatic Flowers v. Mississippi case in SCOTUS last year (overturning a death verdict because of racial discrimination in jury selection.). Enrollment: Limited to 25 students; slots are guaranteed for students who had been enrolled in the Three Strikes Project course or Advanced Criminal Law for Spring term. Schedule. There may be a few sessions at a different time to accommodate our guests' schedules and constraints. The attendance rule for students is that they must ensure live attendance at least 8 of the sessions. For any missed session, the student must view the recorded video of the session within 24 hours and submit the reflection paper on schedule. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 2027. Prosecutorial Discretion and Ethical Duties in the Enforcement of Federal Criminal Law. 3 Units.
Prosecutors wield enormous power over life, liberty and reputation and are subject to ethical standards higher than those that apply to other attorneys. As former U.S. Supreme Court Justice Sutherland recognized in the context of federal prosecutors, "[t]he United States Attorney is the representative not of an ordinary party to a controversy, but of a sovereignty whose obligation to govern impartially is as compelling as its obligation to govern at all, and whose interest, therefore, in a criminal prosecution is not that it shall win a case, but that justice shall be done." A U.S. Attorney may "strike hard blows" but not "foul ones." This course examines the distinct roles and responsibilities of U.S. Attorneys in the enforcement of federal criminal laws. We will review the ways in which a federal prosecutor exercises discretion in deciding whether or not to charge, what crimes to charge, and what punishments to seek. We will examine charging both individuals and corporate entities in the context of the priorities and policies of different administrations as well as the prosecutor's individual ethical obligations. This will be done on both a practical and conceptual level. Introductory sessions will focus on the historical evolution of the office, beginning with the Judiciary Act of 1789, and examine the office's complex (and unique) role within the system of separation of powers (including the appointment of Independent Counsel, Special Counsel and the judicial appointment of United States Attorneys). It will also explore related theoretical questions involving the prosecutorial role as well as challenges to the constitutionality of the judicial role in selecting US Attorneys. The bulk of the course will involve class sessions centered on different federal cases that involved difficult questions of prosecutorial decision-making. We will discuss the tools prosecutors use in exercising their discretion, including non-prosecution agreements, deferred prosecution agreements and cooperation agreements. The course will also explore the relationship between the U.S. Attorney and "Main Justice" and the extent to which the U.S. Attorney has independent decision-making authority. It will delve into the conflicts that may arise, and it will examine the appropriate framework for resolution of those conflicts. All students will write a paper for the class. Students may optionally elect to write an independent research paper for R credit. Students should submit at least 15 pages in the non-R (01) section. Students receiving R credit must abide by the Law School's research paper requirements -- which have the effect, because this is a three-credit course, of imposing a 26-page minimum. After the term begins, students accepted into the course can email registrar@law.stanford.edu to transfer from section (01) into section (02), which meets the R requirement. Please observe the Registrar's deadline (final study list deadline) for switching into the R section. Elements used in grading: Attendance, class participation, research paper.

LAW 2401. Advanced Civil Procedure. 3 Units.
This course will address significant areas of procedural law and design that go beyond the first-year civil procedure course, with special attention to the relevance of procedural choices to civil rights and public law litigation. Contemporary litigation frequently involves multiple related actions, multiple parties, and multiple claims that may interact in complex ways, and often aspires to reform institutions in addition to seeking remedies for discrete past harms. This course introduces procedural doctrine, theory, and practice related to complex and/or public law litigation, including such topics as the joinder of claims and parties, claim and issue preclusion, class action law, multidistrict litigation and other forms of aggregation, and the turn towards mandatory arbitration. The course should be of particular interest to aspiring litigators (in any substantive area) and public interest lawyers (litigators or otherwise), and complements other curricular offerings in complex and constitutional litigation. Elements used in grading: Exam, class participation.

LAW 2402. Evidence. 5 Units.
Evidence rules constrain proof at criminal and civil trials. We will study the Federal Rules of Evidence, related case law, and those constitutional concepts that limit proof at criminal trials. Topics include relevance, unfair prejudice, character evidence, impeachment, the rape shield law, hearsay, the Confrontation and Compulsory Process Clauses, and expert testimony. Please note that the California Bar Examiners have posted this announcement: "Applicants should be prepared to answer questions that have issues concerning the Federal Rules of Evidence and the California Evidence Code. Applicants should be prepared to compare and contrast the differences between the Federal Rules and the California Evidence Code, especially where the California rules of evidence have no specific counterparts in the Federal Rules." This evidence course covers only the Federal Rules of Evidence and does not address the California Evidence Code. Though similar principles govern the Federal Rules and California Code, the two sets of rules are not identical. Students preparing for the California Bar Exam will have to learn some new material. Elements used in grading: Final exam (one-half essay and one-half multiple choice).

LAW 2403. Federal Courts. 4 Units.
This course addresses the role of the federal courts in the American system of federalism and separation of powers, as well as their role in the development of substantive federal law and constitutional rights. We will cover three major topics: (1) Congressional and judicial control over federal and state court jurisdiction; (2) the relationships between state and federal courts; and (3) the nature of federal cases. The course is strongly recommended for students interested in pursuing a judicial clerkship and/or a career in litigation. Elements used in grading: Class attendance, class participation, one-day take home exam.

LAW 2404. Global Litigation. 4 Units.
German owned VW admits that it included a "defeat device" in the software for its diesel cars so they could fraudulently pass US environmental tests, and is sued by thousands of US consumers in state and federal courts in the US. Very quickly, the cases are consolidated in the federal court in Northern California. Meanwhile, special purpose foundations are established in the Netherlands to seek a settlement with VW on behalf of European consumers under the Dutch collective settlement act, and a securities lawsuit on behalf of investors whose share values have dropped dramatically is filed in Germany, using that country's special group litigation procedure. The Dutch foundations may be coordinating their actions with US lawyers, the shareholders in Germany are represented by the local partners of a leading US-based litigation boutique, and the shareholder suit is funded by a UK-based international litigation financing firm. In 2019, a jury in E.D. Va. delivers a verdict holding a former Somali army commander now living in the U.S. liable under the Torture Victim Protection Act for compensatory and punitive damages to a Somali citizen he injured 30 years ago. The plaintiff is represented by the Center for Justice & Accountability in San Francisco and DLA Piper lawyers serving pro bono; the witnesses include public and private actors from different countries. In 2011, US-based Apple sues Korea-based Samsung for patent infringement in N.D. CA and Samsung counter-sues in Korea, Japan and Germany. A year later more than 50 lawsuits are ongoing in more than 10 countries. Two years later the companies agree to drop their litigation outside the US and focus their resources on their US litigation battle. Apple wins a big judgment in the federal court in San Jose but Samsung appeals all the way up to the U.S. Supreme Court. SCOTUS rejects the appeal and remands and in Spring 2018 the case is on the calendar for the third time in San Jose. Philip Morris' Hong Kong subsidiary files a claim in an international arbitration tribunal charging that Australia's public health protection statute regarding tobacco marketing violates Australia's bi-lateral investment treaty with Hong Kong. The arbitration claim is filed after the parent company unsuccessfully challenged Australia's statute before the High Court. In December 2015 the arbitration tribunal rules that it does not have jurisdiction over Philip Morris' claim effectively dismissing it. But controversy over Philip Morris' and other multi-national corporations' attempts to use investment arbitration to challenge diverse health, safety and environmental protection regulations derails international trade negotiations and leads to efforts to establish an international court for investment disputes. These high-profile cases illustrate an important aspect of complex litigation: across many different substantive domains, in court and ADR proceedings, disputes that used to be contained within national borders are now trans-national. This seminar will consider the doctrinal, procedural and practical challenges that arise when litigation goes global. We will consider the high profile cases in which these issues have played out in recent years and hear from some of the lawyers who are creating a new virtual international court system for the resolution of global disputes. The goal of the seminar is to develop an understanding of how the global dimension of high-stakes complex disputes shapes parties' and lawyers' strategies and judges' decisions. The seminar will meet 3 times a week. A small number of seminar sessions will be conducted in collaboration with law faculty and students in Canada, the Netherlands and Germany, three countries that have adopted procedures for dealing with large-scale civil litigation in distinctive fashions. Although teaching plans for the fall quarter are still somewhat in flux, I expect that I will teach this seminar mainly on-line, although I hope there will be an opportunity to hold a few introductory sessions in person. Guest speakers will appear online. Where time differences permit, sessions with guest speakers will be synchronous; otherwise I will record interviews with our guests, which we will then play in class and discuss. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and degree program. Elements used in grading: Class participation and course paper.

LAW 2406. Conflict of Laws. 3 Units.
(Formerly Law 251) Instances are common in law where more than one legal authority potentially governs a particular event, occurrence or transaction. When the outcome required by these authorities differs, which law governs? Beginning with the classic problem of choosing an applicable law in cases with facts touching more than one jurisdiction, this course is designed broadly to explore the variety of theories and systems used to resolve this question. The course thus uses state/state conflicts to develop a set of approaches and then extends these to such other problems as adjudicatory jurisdiction, judgments, federal subject-matter jurisdiction, and public and private international law. Elements used in grading: Attendance, preparation, participation and final examination.

LAW 2407. Arbitration: Law, Practice & Politics. 3 Units.
Arbitration, once narrowly defined as a party-selected method for resolving contract-based disputes arising out of commercial transactions, is now ubiquitous. In the U.S. in addition to resolving run-of the-mill commercial disputes, arbitration may be used to resolve claims invoking anti-trust, securities, and civil rights law, and consumers, employees, patients and other individual claimants may be held to arbitration provisions included in form contracts drafted by corporations that the individuals overlooked or barely understood. Businesses too may find themselves held to an arbitration clause hastily chosen by a transactional lawyer who didn't understand what she was committing her client to. Economic globalization has created increased demand for international commercial arbitration, which offers binding resolution of trans-national business disputes, enforceable in virtually every court in the world. The increased frequency of complex high-value international transactions involving key industries -- e.g. energy and telecommunications -- has led to an increasing fraction of transnational business disputes with a significant public policy dimension. Moreover, the desires of countries with less developed economies to attract foreign direct investment has led to the creation of a specialized form of arbitration for disputes between private investors and states. Often bundled with other forms of alternative dispute resolution ("ADR") such as mediation, arbitration is actually a rule-defined adjudicative procedure, in which parties submit their disputes to privately-chosen and privately-paid decision-makers who deliver binding (and usually unappealable) outcomes, often in closed proceedings. The law that governs arbitration is a mix of domestic statutes (e.g., in the U.S., the Federal Arbitration Act) and international conventions (e.g., the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards, the Convention on the Settlement of Investment Disputes between States and Nationals of Other States ("ICSID")) that have been entered into by a large majority of countries. Today, arbitration offers a challenging and lucrative practice area to lawyers representing corporations in multiple industries, in domestic and international contexts, and to lawyers serving as arbitrators, who often command high hourly rates. Understanding the differences and similarities among arbitration law and practice in multiple domains and the intersection of public and private law is valuable to lawyers who specialize in arbitration. This seminar is intended for students who wish to develop this capacity as well as for students who want to understand better how to draft business contracts that will protect their clients should they find themselves subject to arbitration. Although arbitration is well-accepted around the world, certain applications of arbitration have become increasingly controversial. In the U.S. the requirement that employees agree to arbitrate sexual harassment claims as a condition of employment has led to boycotts against "big law" firms. Requirements to arbitrate disputes between private investors and national governments have knocked high-profile multi-lateral trade negotiations off-track. Some business decision-makers are turning away from arbitration for "ordinary" commercial disputes, arguing that it has become as expensive and time-consuming as court adjudication, without the protections of the latter. In this course we will consider separately and together, the statutes that provide the legal framework for arbitration, the specific rules that govern different types of arbitration, the ongoing controversies evoked by some of these rules and their application, and the reforms that have been proposed in response to these controversies. We will read and discuss U.S. case law, international arbitration decisions, academic commentary and empirical analyses of arbitration use and consequences, and hear from leading arbitration practitioners. Students will select aspects of arbitration law or practice or the controversies that surround it and write research papers on their topic of interest. Elements used in grading: Attendance, Class Participation, Final Paper.

LAW 2408. Advanced Federal Courts. 1-3 Unit.
This advanced course in structural constitutional law builds on concepts, doctrines, and themes developed in Federal Courts. Modern doctrines attempting to reconcile federalism, the supremacy of federal law, separation of powers, and the specific jurisdictional limitations of Article III judicial power raise complex questions about the nature and scope of judicial review, remedies, the adversary system, and alternatives to adjudication, among other subjects. This course is designed to allow students to deepen their expertise and explore discrete topics in a tutorial-style format with the instructor. Individual topics will be selected on the basis of student interest in consultation with the instructor, appropriate reading will be selected for analysis and discussion (generally by using a canonical or innovative text as a springboard), and students will be guided in the development of novel doctrines, theories, and practical solutions to some of the most vexing issues in the field. Evaluation will be based on participation in mentored research and tutorial engagement as well as the creativity, prose quality, and persuasiveness of the paper. Students may take the course for 1-3 units. The paper requirement is 10-12 pages for each unit. Student electing 2 or 3 units should enroll in Section 02 (which can count for R-credit). Class sessions to be scheduled in harmony with students' other course commitments. Elements used in grading: Written Assignments, Final Paper. Prerequisite: Federal Courts. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 2409. Anatomy of the Opioid Litigation: A Case Study in Complex Litigation. 3 Units.
Although easy to lose sight of in the midst of the Coronvirus epidemic, the United States is in the midst of an opioid addiction epidemic. More than 10 million Americans 12 years and older are estimated to have misused opioids in 2018, most of which misuse was linked to prescription drugs. Approximately 47,000 Americans died of opioid overdoses in that year. Opioid use is reported to have peaked in 2011 but opioid addiction remains a problem in many parts of the country (CNN Editorial Research, "Opioid Crisis Fast Facts," June 21, 2020, available at https://www.cnn.com/2017/09/18/health/opioid-crisis-fast-facts/index.html). The opioid crisis presents a variety of public policy challenges. Like the Crack epidemic of the 1980s, opioid misuse has had disproportionate effects on certain communities. While the former disproportionately affected poor Black urban communities and other urban communities of color, the latter has primarily affected poor White communities, particularly in non-coastal areas of the country. The former was met with popular criticism of its victims and draconian criminal justice policies that incarcerated a generation of Black Americans and other people of color. The latter has been met with an outpouring of concerned media commentary, and funding (however insufficient) for public treatment programs. It is difficult not to conclude that systemic engrained racism explains much of this difference. The opioid crisis also differs from the crack crisis, however, in that opioid victims and their advocates have been able to target responsible parties and attempt to hold them accountable for the harm and losses their conduct has imposed on addicts, their families and their communities. It is widely agreed that the origin of the epidemic was the virtually unlimited distribution of prescription opioid drugs, allegedly encouraged by the drug manufacturers and enabled by other corporations in the pharmaceutical supply chain and by the physicians who prescribed the drugs. The opioid epidemic has also led to a wide-ranging litigation, which has taken as its role model earlier litigation against tobacco manufacturers and ongoing litigation against gun manufacturers. The opioid litigation stands as an example of joining private and public civil litigation to claim compensation for losses due to alleged wrongdoing by private corporations and in the process reshape public policy with regard to harm. To prevail against defendants, plaintiffs have had to persuade courts to apply liability doctrine in unusual although not entirely new ways. Much of the litigation resulting from opioid overdoses and addiction has been contested in the federal courts, which have deployed an armamentarium of formal and informal procedural rules and practices developed over the past several decades to manage and resolve large-scale litigation. Innovative approaches have been adopted by the federal judge assigned to manage the litigation. Key defendants have chosen to manage their liability by seeking the protection of the bankruptcy courts. In sum, the opioid litigation offers opportunities to consider the roles of socio-economic inequality and racial attitudes in shaping perceptions of harm, the potential of tort law to provide remedies for losses, and the challenge of pursuing remedies for mass loss in federal courts. Through readings, guest lectures, discussion and individual research papers on relevant topics of your choice, this seminar will provide both practical information about litigating mass tort claims and space to consider the appropriate role of courts in solving social policy problems. Attendance, Class Participation, Written Assignments, Final Paper.

LAW 2502. Climate Change Policy: Economic, Legal, and Political Analysis. 4 Units.
(Formerly Law 746) This course will advance students' understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Beyond focusing on economic issues and legal constraints, it will address the political economy of various emissions-reduction strategies. The course will consider policy efforts at the local, national, and international levels. Theoretical contributions as well as empirical analyses will be considered. Specific topics include: interactions among overlapping climate policies and between new policies and pre-existing legal or regulatory frameworks; the role that jurisdictional or geographic scale can play in influencing the performance of climate policy approaches; and numerical modeling and statistical analyses of climate change policies. Elements used in grading: Class Participation, Written Assignments, Final Exam. Cross-listed with Economics (ECON 159).

LAW 2503. Energy Law. 3 Units.
Modern energy systems aim to deliver a supply of reliable, low-cost, and clean energy; in turn, they require major capital investments in infrastructure projects, some of which have the features of a natural monopoly and therefore require ongoing economic regulation. The U.S. energy system today is subject to a complex regime of state and federal laws. We will examine the historical role of state-level electric utility regulation, tracing its evolution into the various forms of regulated and deregulated energy markets now in use in the U.S. electricity and natural gas sectors. Contemporary energy law increasingly involves a delicate federalist balance where state and federal regulators share overlapping authority in contested policy areas that are subject to major technological and economic change. Finally, we will interrogate the contested ideals of regulation and competition, which private, non-profit, and governmental stakeholders deploy in legal and political fora to advance private gain and public goods. Students who complete the class will gain a historical understanding of how economic regulation of the energy sector has evolved since the early 20th century, a durable conceptual framework for understanding modern energy law and policy debates, and a practical understanding of energy law designed for future practitioners. Non-law students interested in energy issues are highly encouraged to take this course, as energy law literacy is essential to careers in the sector. Elements used in grading: class participation, short written assignments, and a one-day take-home final exam. Cross-listed with Environment and Resources (ENVRES 226).

LAW 2504. Environmental Law and Policy. 3 Units.
Environmental law is critically important and endlessly fascinating. In this course, we will look at the major statutes and policies used, at both the federal and state levels, to protect humans and the environment against exposure to harmful substances, including the Clean Air Act, Clean Water Act, Superfund, the Resource Conservation & Recovery Act, and laws designed to regulate toxic substances. This class will also examine the challenges of global air pollution, including climate change and ozone depletion. The class will look not only at the substance of these laws and policies, but also at enforcement challenges, alternative legal mechanisms for advancing environmental policies (such as voter initiatives and common-law actions), the role of market mechanisms in addressing environmental problems, and constitutional restrictions on environmental regulation. As part of the class, students will engage in a series of situational case studies designed to provide a better sense of the real-world issues faced by environmental lawyers and to teach students the skills and tactics needed to solve those issues. Elements used in grading: Attendance, Class Participation, Exam.

LAW 2505. Land Use Law. 3 Units.
This course focuses on the pragmatic (more than theoretical) aspects of contemporary land use law and policy, including: the tools and historical/legal foundation of modern land use law; zoning and General Plans; the process of land development; vested property rights and development agreements; eminent domain, regulatory takings, and exactions; redevelopment; growth control, sprawl, housing density, and affordable housing; historic preservation; direct democracy over land use; global warming and climate action plans; and environmental review (CEQA and NEPA). We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: Student participation is essential. Roughly four-fifths of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. This class is limited to 20 students selected by consent. Elements used in grading: attendance, class participation, two short writing assignments, an oral presentation, and a final exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 2506. Natural Resources Law and Policy. 3 Units.
Natural resource management presents extremely difficult and contentious issues of law and public policy. Major debates continue to rage over issues such as the Endangered Species Act, whether the United States should permit drilling in the Arctic National Wildlife Refuge, and how to prevent the overfishing of the oceans. This course will focus on two major aspects of natural-resource management: biodiversity protection (including the Endangered Species Act, ocean fisheries management, and global protection of marine mammals) and public lands in the United States such as national parks and wilderness areas. The course also will examine the National Environmental Protection Act and the effectiveness of environmental impact assessments. Class sessions will include critical examinations of current law and policy and in-depth discussions of situational case studies that force you to consider how you would resolve real-life issues. Students will be expected to participate actively in class discussions. (This course will not examine either water law or energy law in any depth. Several other courses in the Law School deal with energy-law questions.) Elements used in grading: Class participation and final exam (open book).

LAW 2508. The Business of Water. 2 Units.
One of the fastest growing economic sectors is the water field, and private water companies are playing an increasingly important role around the world in water management. In many cases, private companies have made important contributions to meeting water needs (e.g., in the development of new technologies and expanding water supplies). In other cases, however, the involvement of private companies has proven controversial (e.g., when private companies have taken over public water supply systems in developing countries such as Bolivia). This course will look at established or emerging businesses in the water sector and the legal, economic, and social issues that they generate. These businesses include investor-owned water utilities, water technology companies (e.g., companies investing in new desalination or water recycling technologies), water-right funds (who directly buy and sell water rights), social impact funds, innovative agricultural operations, water concessionaires, and infrastructure construction companies and investors. Each week will focus on a different business and company. Company executives will attend the class session and discuss their business with the class. In most classes, we will examine (1) the viability and efficacy of the company's business plan, (2) the legal and/or social issues arising from the business' work, and (3) how the business might contribute to improved water management and policy. Each student will be expected to write (1) two short reflection papers during the course of the quarter on businesses that present to the class, and (2) a 10- to15-page paper at the conclusion on the class on either a water company of the student's choice or a policy initiative that can improve the role that business plays in improving water management (either in a particular sector or more generally). Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Cross-listed with Civil & Environmental Engineering (CEE 273B).

LAW 2509. Clean Energy Project Development and Finance. 3 Units.
(Formerly Law 774) This case study-oriented course will focus on the critical skills needed to evaluate, develop, finance (on a non-recourse basis), and complete grid-scale clean energy projects. This course will be essentially the same as in the past four years (when it was cross-listed as GSB GEN 335). This course is highly multi-disciplinary, both in terms of substance and student mix. The course has consistently had a significant mix of business, engineering, law and earth science students. As in the past, the course will focus on the issues associated with the business of developing, financing, constructing and operating grid-scale clean energy projects. The course will focus on what a project developer or lender (i.e., in either case, the business person) needs to know to develop and finance successful projects. The project development business--far more than many other businesses such as tech, manufacturing, consumer, services, retail or transportation--inherently involves a VERY long list of highly-germane and critical legal issues. We address the legal issues from the perspective of what a business person needs to understand in order to navigate them and complete a project. The primary course materials will be documents from several representative projects -- e.g., solar, wind, storage, carbon capture, transmission, combined heat & power -- covering key areas including market and feasibility studies, environmental permitting and regulatory decisions, financial disclosure from bank and bond transactions, and construction, input, and offtake contracts. For virtually every clean energy project, legal documents and financial/business models tend to highly customized. By examining actual projects and transactions we can learn how developers, financiers, and lawyers work to get deals over the finish line--deals that meet the demands of the market, the requirements of the law, and (sometimes) broader societal goals, in particular climate change, economic competitiveness, and energy security. Elements used in grading: Class Participation (35 %), Lecture-based Assignment (15 %), Group Project (50 %). Absences affect grade. This class is limited to 36 students, with an effort made to have students from SLS, GSB, engineering and earth sciences. (All students need to be graduate students.) CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). Students are encouraged to apply as early as possible. See Consent Application Form for instructions and submission deadline.

LAW 2510. California Coast: Science, Policy and Law. 4 Units.
This interdisciplinary course integrates the legal, scientific, and policy dimensions of how we characterize and manage resource use and allocation along the California coast. We will use this geographic setting as the vehicle for exploring more generally how agencies, legislatures, and courts resolve resource-use conflicts and the role that scientific information and uncertainty play in the process. Our focus will be on the land-sea interface as we explore contemporary coastal land-use and marine resource decision-making, including coastal pollution, public health, ecosystem management; public access; private development; local community and state infrastructure; natural systems and significant threats; resource extraction; and conservation, mitigation and restoration. Students will learn the fundamental physics, chemistry, and biology of the coastal zone, tools for exploring data collected in the coastal ocean, and the institutional framework that shapes public and private decisions affecting coastal resources. There will be 3 to 4 written assignments addressing policy and science issues during the quarter, as well as a take-home final assignment. Special Instructions: In-class work and discussion is often done in interdisciplinary teams of students from the School of Law, the School of Engineering, the School of Humanities and Sciences, and the School of Earth, Energy, and Environmental Sciences. Students are expected to participate in class discussion and 2-3 Saturday field trips. Elements used in grading: Participation, including class session and field trip attendance, writing and quantitative assignments. Cross-listed with Civil & Environmental Engineering (CEE 175A/275A).

LAW 2512. Cities and Sustainability: Current Issues, Policy, and Law. 2 Units.
Cities are on the front lines of solving many of society's sustainability problems, from advancing green buildings and clean energy, to preparing for the effects of climate change. With a diminishing role of the federal government on environmental policy and regulation, it is up to sub-nationals like states and cities to lead innovation and deployment of clean energy, resilience strategies, water management, and more. This class will explore the evolving role of cities in advancing sustainability from the lens of law, policy, planning, and governance. Some of the topics we will discuss in-depth include climate mitigation, clean energy, green buildings, climate adaptation and resilience, water supply and reuse, land use and transportation, and more. Case studies will focus on U.S. cities with some emphasis on California. Overarching themes across all content areas include legal constraints of city authority, governance, socioeconomic tradeoffs, and the roles of various types of institutions in developing, advancing, and advocating for local policy change. Elements used in grading: Attendance, Class Participation, Written Assignments, Exam. Cross-listed with Environment and Resources (ENVRES 212).

LAW 2513. Climate: Politics, Finance, and Infrastructure. 2-3 Units.
While climate change is often considered an 'environmental problem', the risks and opportunities embedded in a changing climate go well beyond the natural environment. This course reframes climate as a macroeconomic challenge, one in which multilateral politics, global investment, and distribution of impacts must be understood and reconsidered. Based on readings and guest speakers, this interdisciplinary course traces the arc of climate past, present and future on the pillars of politics, finance, and infrastructure (both physical and institutional). Grounded in the latest climate science and the history of global climate negotiations, the bulk of the course will investigate innovations at the intersection of finance, law and policy, with particular emphasis on risk management, legal liability, corporations, climate justice and resilience. The final sessions will consider the future, taking a look at how the next generation of leaders might solve the greatest challenge of our time. Elements used in grading: Students may take the course for 2 units (section 1) or 3 units (section 2). Section 1 and 2 students will both receive grades for attendance, in class participation and guest-speaker questions. Section 1 students will also complete a group presentation on the design of a financial, business, legal or policy intervention with the potential to reduce emissions on a large scale. Section 2 students will be required to write an individual research paper meeting the Law School's R paper requirements. This class is limited to 30 students, with an effort made to have students from SLS (15 students will be selected by lottery) and 15 non-law students by consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 2515. Environmental Justice. 3 Units.
This course will introduce environmental justice as a social movement, including its central substantive concerns (the needs of humans in the built environment rather than the need to protect the environment from humans) and its methods (community-based political organizing rather than professionalized judicial or legislative action). The bulk of the course will then pursue a broader conception of environmental justice today by using social science research, theory, and case studies to investigate the civil rights and poverty aspects of environmental safety and natural resources. The course will include units on: (1) toxic exposure and public health disparities stemming from the disproportionate siting of locally-unwanted land uses in poor neighborhoods of color; (2) access to natural resources and basic public services, including clean water, wastewater disposal, and open space; (3) tools in environmental justice advocacy (including community-based lawyering, Title VI of the Civil Rights Act of 1964, the Fair Housing Act, common law nuisance actions, and transactional lawyering); (4) environmental justice issues in Indian Country, and (5) environmental justice issues in climate change policy. Much of the course material, including student presentations, will be grounded in the experiences and advocacy histories of specific communities, both urban and rural, across the country. This class is limited to 25 students, with an effort made to have students from SLS (20 students will be selected by lottery) and 5 non-law students by consent of instructor. Course requirements will include class participation, in-class presentation, and either response papers (section 01) or a long research paper for R credit (section 02). A maximum of 10 students will be permitted to write the long research paper with instructor consent. After the term begins, students enrolled in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, in-class presentation; response papers or a final research paper.

LAW 2516. Natural Resources Law and Policy - South Africa: Field Study. 1 Unit.
This is the South Africa Field Study component of Natural Resources Law and Policy (LAW 2506). For details, see course description for Law 2506. This course will look at three issues covered in Natural Resources Law & Policy from a comparative perspective, focusing on Cape Town, South Africa, and the region surrounding it. First, we will look at the water challenges facing Cape Town, including (a) the supply limitations that led the city to warn in 2018 of a "Day Zero" when it would be forced to turn off everyone's taps and (b) the ongoing water equity issues facing the region's impoverished townships such as Khayelitsha. Second, we will visit with companies and law firms seeking to promote renewable energy projects to discuss the issues that they face. Finally, we will meet with environmental non-profits to examine South Africa's efforts to protect wildlife from poaching and other threats. Students might also participate in small, half-day conference with the University of Stellenbosch examining these and related sustainability issues. Elements used in grading: TBA. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 2517. Modern Crosscurrents in Energy and Environmental Law. 3 Units.
This course explores the close relationship between energy and environmental law. We will work through the major energy sectors and, for each, discuss key environmental law and policy issues that are influencing energy production and use. Our focus will be on current issues. We'll explore environmental issues that are traditionally associated with the energy sector, including air emissions, waste disposal and cleanup, and oil spills, while also covering new environmental issues emerging from the energy sector including climate change-related regulatory and business risk issues, energy infrastructure permitting issues, and environmental pressure points on the utility industry and on renewable energy and conventional energy projects, more generally. Elements used in grading: Exam; one written assignment; class participation.

LAW 2518. U.S. Environmental Law in Transition. 1 Unit.
This course offers an accessible survey of timely topics in environmental law and policy as the United States transitions presidential administrations. Taught by two practicing lawyers, the class introduces students from any background to the interactions between local, state, and federal environmental law as they apply to critical policy issues. We will analyze major changes in federal policy, providing historical context for the transformations now underway in the laws and institutions that shape environmental outcomes in the United States. Elements used in grading: Attendance, Class Participation, Final Paper. Cross-listed with Earth Systems (EARTHSYS 108 & 208).

LAW 2519. Water Law. 3 Units.
This course will study how society allocates and protects its most crucial natural resource -- water. The emphasis will be on current legal and policy debates, although we will also examine the history of water development and politics. Although the course will focus on United States law and policy, insights from the course are applicable to water regimes throughout the world, and we will occasionally look at law and policy elsewhere in the world for comparison. Among the many issues that we will consider are: how to allocate water during periods of scarcity (particularly as climate change leads to more extremes); alternative means of responding to the world's growing demands for water (including active conservation); the appropriate role for the market and private companies in meeting society's water needs; protection of threatened groundwater resources; environmental limits on water development (including the U.S. Endangered Species Act and the "public trust" doctrine); constitutional issues in water governance; Indian water rights; protection of water quality; challenges to substantively reforming existing water law; and interstate and international disputes over water. Students will be expected to participate actively in classroom discussions. Elements Used in Grading: Class participation, attendance and final exam.

LAW 2520. Climate Law and Policy. 3 Units.
This course offers an interdisciplinary, graduate-level survey of current and historical efforts to regulate emissions of greenhouse gases in the United States and around the world. Students will read primary legal documents--including statutes, regulations, and court cases--in order to evaluate the forces and institutions shaping American climate policy. Additional perspectives from climate science, economics, and political science will provide context as students analyze the evolution of climate law and policy regimes. Elements used in grading: Grades will be based on class attendance, class participation, and either written assignments and an exam (section 01) or a final paper (section 02). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with Environment and Resources (ENVRES 222).

LAW 2521. California's Water Policy and Management: Toward a Sustainable Future. 1 Unit.
This seminar series focuses on the dramatic changes in recent decades in California water policy and management and how water researchers can help forge modern, collaborative solutions that will allow the state to adapt to an uncertain and challenging future. The seminar will meet six times during the Spring Quarter. The heart of the series will include four seminars with panels of outside experts covering the following topics: 1) The diversification of California's water supply portfolio; 2) The rise of the coequal goals of ecosystem restoration and water supply reliability; 3) The ongoing tension between collaborative and adversarial decision-making processes; and 4) Implications for water researchers seeking to help define pathways to meaningful solutions. In addition to these four seminar sessions, there will be an introductory California Water 101 session for students and a closing session on what we have learned. Students will be assigned readings and required to develop questions for discussion. Lead instructor for the seminar will be Landreth Visiting Fellow Dr. Timothy Quinn. Dr. Quinn spent more than ten years as the executive director of the Association of California Water Agencies, and more than twenty years as the Deputy General Manager of the Metropolitan Water District of Southern California. Over the course of that career, he was at the center of every major water management issue facing the state of California, including the state's use of Colorado River water, management of the Bay Delta, and sustainable groundwater management. This class will meet the first five weeks of the quarter. Elements used in grading: Attendance, Class Participation, Written Assignments. Cross-listed with Civil & Environmental Engineering (CEE 266E).

LAW 2522. Private Environmental Governance. 2-3 Units.
The tools of private environmental regulation (e.g., eco-certifications, CSR initiatives, supplier contracts) have become an increasingly important source of governance. But how do they work? How do they arise--why and how can corporations participate in these voluntary measures? How do they regulate firm behavior and how can regulators police the tools themselves? This interdisciplinary seminar examines these questions and more, with readings from traditional legal sources (cases, agreements), as well as from economics, political science, and social psychology. Guest speakers and case studies will add real-world context to our exploration of theory. Elements used in grading: Students may take the course for 2 units (section 1) or 3 units (section 2). Attendance, class participation, and short written assignments will factor into grades for both sections. Section 1 students will also prepare a private governance proposal and presentation. Section 2 students will write a research paper meeting the Law School's R paper requirements. After the term begins, students can transfer from section 1 to section 2, which meets the R requirement, with consent of the instructors. Please note that the last two class sessions (May 21 and 28) will have to be rescheduled. Cross-listed with Environment and Resources (ENVRES 228).

LAW 2523. Climate, Energy, and Democracy. 1 Unit.
This 1-credit, discussion-based seminar will examine the challenge and promise of responding to climate change in democracy. Combining theoretical readings and real-world examples such as California community choice energy programs and the movement for a Green New Deal, we will explore questions including: To transform our fossil-fuel based economy, do we need more democracy or less democracy, and what practically does either of those things mean? What makes federal climate change legislation so hard to achieve? In contrast, why have many sub-federal communities been successful in adopting climate change policies, and what are the benefits and limitations of these local actions? Grades will be based on a series of short reaction papers and class participation. Elements used in grading: Attendance, Class Participation, Written Assignments. This class will meet 4:15-7:15pm on Mondays - April 20, April 27, and May 4.

LAW 2524. Climate and Energy Workshop. 1 Unit.
This seminar will provide students with the opportunity to hear from faculty at other law schools who are at the cutting edge of research in the areas of climate change and energy. Although it is open to all students, the seminar is designed especially for those with an interest in the field who wish to stay abreast of current issues, work, and ideas. Each class will involve a separate climate or energy scholar presenting their current research. This class will meet every other Monday afternoon from 4:15 to 6:15 during the winter quarter: January 13 , January 27, February 10, February 24, and March 9. It will be a 1-unit Mandatory Pass (MP) class. Elements used in grading include attendance and participation, preparation of written questions for the speakers, and short reflection papers.

LAW 3001. Health Law: Finance and Insurance. 3 Units.
This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act , health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at https://syllabus.stanford.edu. Cross-listed with Graduate School of Business (MGTECON 331), Health Research & Policy (HRP 391) & Public Policy (PUBLPOL 231). Elements used in grading: Participation, attendance, and final exam.

LAW 3002. Health Law: Quality and Safety of Care. 3 Units.
(Formerly Law 727) Concerns about the quality of health care, along with concerns about its cost and accessibility, are the focal points of American health policy. This course will consider how legislators, courts, and professional groups attempt to safeguard the quality and safety of the health care patients receive. The course approaches "regulation" in a broad sense. We will cover regimes for determining who may deliver health care services (e.g. licensing and accreditation agencies), legal and ethical obligations providers owe to patients (e.g. confidentiality, informed consent), individual and institutional liability for substandard care, and various proposals for reforming the medical malpractice system. We will also discuss the Patient Protection and Affordable Care Act (aka, "Obamacare"), which has led to many new initiatives aimed at improving health care quality. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Exam or Final Paper. Cross-listed with School of Medicine (MED 209).

LAW 3003. Health Law: The FDA. 2 Units.
This course will examine the Food and Drug Administration. It will focus largely on the FDA's regulation of drugs and biologics, but will also cover its regulation of medical devices, nutritional supplements, and its jurisdiction over special legal, social, and ethical issues arising from advances in the biosciences. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Elements used in grading: Attendance, class participation, and final exam (In-school, open book). Cross listed with Health Research and Policy (HRP 209).

LAW 3004. Law and Biosciences: Genetics. 2-3 Units.
(Formerly Law 480) This seminar will focus on ethical, legal, and social issues arising from advances in our knowledge of human genetics. These will drawn from topics such as forensic uses of genetics, genetic testing, widespread whole genome sequencing, genome editing, genome synthesis, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research, among other things. Students are required to write a research paper for this course. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Students will be required to submit an independent research paper. Students can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, attendance and final paper. Cross-listed with Health Research & Policy (HRP 221).

LAW 3005. Law and Biosciences Workshop. 1 Unit.
This workshop seminar will provide students with the opportunity to examine and critique cutting-edge research and work in the field of law and the biosciences presented by different speakers from Stanford and elsewhere. Although it is open to all students, the seminar is designed especially for those with an interest in the field who wish to stay abreast of current issues, work, and ideas. In each class, an academic expert, policy maker, or practitioner will present his or her current research or work and engage in a robust discussion. This class is worth one unit. It will meet five times for 1 hour, 50 minutes per session; students will need to attend at all five sessions and, for each session attended, write a reflection piece of roughly three double-spaced pages, due just before the speaker's presentation. The class is open to first-year Law School students in Winter Quarter. Elements used in grading: Class participation, attendance, and written assignments.

LAW 3006. Law and Biosciences: Neuroscience. 3 Units.
This seminar examines legal, social, and ethical issues arising from advances in the biosciences. This year it will focus on neuroscience. It will examine how neuroscience will affect the law, and society, through improvements in predicting illnesses and behaviors, in "reading minds" through neuroimaging, in understanding responsibility and consciousness, in "treating" criminal behavior, and in cognitive enhancement. Students who have taken the Law and the Biosciences (Genetics) seminar in past years may receive additional credit for taking this year's class. The class is open to 1Ls. Elements used in grading: Class participation, attendance and final research paper. Cross-listed with Health Research & Policy (HRP 211).

LAW 3009. Health Law: Improving Public Health. 3 Units.
This course examines how the law can be used to improve the public's health. The broad questions explored are: what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? The course investigates these questions as they operate in a range of specific contexts, including preventing and controlling infectious diseases; preventing obesity; reducing tobacco use; ensuring access to medical care; reducing firearm injuries; addressing the opioid epidemic; and responding to public health emergencies. In examining these contexts, we will ask and answer questions such as, what do the Constitution and key statutes permit? What makes a good public health law? Where do we see success stories--and failures--in public health law? What ethical and economic arguments justify government intervention to shape individuals' and companies' health-related behaviors? Instruction is through interactive lectures with a significant amount of class discussion and some group exercises. Class Participation, Written Assignments, Final Exam. Cross-listed with Medicine (MED 237).

LAW 3010. Mental Health Law. 2-3 Units.
This class will explore timely issues surrounding mental health law. Representative topics include civil commitment proceedings; forced outpatient treatment and hospitalization; mental health in the criminal justice system; guardianship/conservatorship and its alternatives; electroconvulsive therapy (ECT); the Americans with Disabilities Act; the Individuals with Disabilities Education Act (IDEA); and neurodiversity. A variety of stakeholders---clinicians, attorneys, individuals with mental illness or developmental disabilities, and family members---will join us as guest speakers to reflect on the strengths and weaknesses of the current system and to discuss possible reforms. After the term begins, students accepted into the course can transfer from Section 01 (MP/R/F) into Section 02 (H/P/R/F), which meets the R requirement, with consent of the instructors. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class Participation, Written Assignments, Final Paper.

LAW 3011. Law and Economics of Biomedical Innovation. 2-3 Units.
Biomedical research at universities, other nonprofits, government laboratories, and private firms has led to remarkable lifesaving advances in recent decades. Scientists have developed new biologic drugs to cure cancer, complex algorithms to identify public health risks or predict disease, and 3D-printed medical devices. Biomedical research is also tremendously expensive. In this seminar we will examine the economics of biomedical R&D and the legal framework that is designed to incentivize new advances, with an emphasis on pharmaceuticals. We will consider policy tools including patents and other intellectual property, FDA-administered regulatory exclusivity, prizes, grants, tax incentives, and insurance reimbursement. We will also discuss how these incentives are funded and what this means for allocating access to medical technologies, both in the United States and abroad. The current policy mix of innovation incentives and access allocation mechanisms is far from perfect, and students will have the opportunity to discuss reform proposals with real-world biomedical innovators from different sectors. There are no prerequisites, and no technical or economic background is required, but students should be willing to learn about biomedical technologies, detailed legal frameworks, and economic policies. Special Instructions: After the term begins, students can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: attendance, participation, and reflection papers or research paper. Early drop deadline. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 3012. Introduction to Law and the Biosciences. 3 Units.
This course will provide an introduction to the legal, ethical, and policy areas important to understanding Law and the Biosciences. Each topic will include both discussion of the relevant legal rules and ethical principles and their application to a specific case study. Topics to be covered include the structure and regulation of the biopharma industry and biosciences research, intellectual property relevant to the biosciences, federal regulation of bioscience products through the FDA and otherwise, the health care financing system, human subjects research, genetic technologies, reproductive technologies, neuroscience technologies, criminal law applications of bioscience technologies, and more. The course will prepare students for more advanced courses in these areas, as well as for working with or in the bioscience world. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Some undergraduates may be admitted with consent of the instructor. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Elements used in grading: Attendance, class participation, and final exam (In-school, open book). Cross listed with Health Research and Policy (HRP 276).

LAW 3254. How to Ask a Question. 1 Unit.
Asking questions is at the core of the role of an attorney. Whether it is interrogating a witness in a deposition, or conducting a direct or cross examination at trial, knowing how to ask a question is an essential lawyering skill. We'll explore textual materials and real life case examples in transcripts, videotape, and cinema to determine the principals and best practices for questioning. We'll learn how to prepare for questioning, how to focus, narrow, and broaden an examination, how to obtain key admissions, how to deal with a difficult opponent, when to stop asking, and how to use what's been obtained in court or otherwise to win for your clients. This course will give you the skills and tools needed for the critical roles of questioning, which has broad applicability for trial lawyers and non trial lawyers alike. Shanin Specter is a founding partner of Kline & Specter, P.C., in Philadelphia, concentrating in catastrophic injury litigation. He has obtained more than 200 settlements or verdicts in excess of $1 million and is a member of the Inner Circle of Advocates, whose membership is limited to the top 100 plaintiffs' attorneys in the United States. Elements used in grading: assessment of two brief reaction papers, as well as classwork; class attendance is required. This class will meet Tuesdays, 4:15PM - 7:15PM on three consecutive Tuesdays early in the spring quarter (precise dates TBA).

LAW 3258. Responsibility for Risk: Perspectives on Liability Insurance. 2-3 Units.
This seminar will explore the intellectual foundations of the institution of insurance, including the following key questions: How is insurance to be conceived: from a contract perspective? a tort perspective? a private governmental perspective? Correlatively, what are the economic and ethical dimensions of risk classifications and management? How serious are the concerns about moral hazard and adverse selection---core concepts of insurance law? What standards should be used to resolve insurance bad faith claims? And, when a party is sued and the liability insurer controls the party's defense, how should the defense lawyer hired by the insurer navigate---and conceive of---this triangular relationship? The pervasive role of insurance in addressing societal concerns about accidental harm is vitally important but has been remarkably under-examined in the traditional law school curriculum. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. Early drop deadline.

LAW 3259. The Civil Justice System as an Agent of Change. 3 Units.
The past 60 years have witnessed a dramatic expansion in the role of the courts as an agent of change in the United States. Constitutional, civil and economic rights have been created, such as marriage equality and strict liability in tort, but rights have also been limited through statutory restrictions and other means. The role of the judge has grown to activist and administrator in cases such as prison reform and housing desegregation. And through it all, it has been lawyers who have fought, won, and lost the battles of expansion and contraction of rights and remedies. Where the government fails to protect us, private practitioners serve a crucial role in challenging the legal "status quo" through civil litigation; vindication of a particular client's claim can simultaneously establish or clarify the rights in question on a societal scale. Taught by an experienced trial lawyer, along with guests from both plaintiff and defense practices, course readings and discussion will draw on a wealth of textual, law review, and lay media, and the arc of relevant case law, including real trial experiences and litigation documents. This course explores changes in motor vehicle and commercial product safety, medical malpractice, police misconduct, civil rights, marital rights, sexual harassment and abuse, firearms liability, school and housing desegregation, college hazing, privacy, school funding and consumer safety. We'll study the titanic struggle over appropriate remedies for wrongs in these substantive areas, ranging from immunity to limits on recoveries, compensatory and punitive damages, injunctive relief and other equitable remedies. We'll also study how a plaintiff or defense lawyer can make a difference for their clients and others similarly situated to catalyze significant societal improvement. Elements used in grading: The grade is based on class work (i.e., contribution to discussions and participation in class exercises) and a final paper. There is no exam. No automatic grading penalty for late papers.

LAW 3502. Art and the Law. 2 Units.
This course covers the legal, public policy, and ethical issues that concern artists, art dealers, auction houses, museums, collectors, and others who comprise the world of visual art. Our focus will be on artists' rights (including copyright, resale royalties, moral rights, and freedom of expression issues), how the markets in art function (such as the artist-dealer relationship, auction rules, and issues faced by collectors), and the legal and ethical rules governing the collection, donation, and display of visual art, particularly for museums and their donors. The course focuses on certain recurrent themes: How do statutes and courts define (or attempt to define) art, and how is art defined differently for different legal purposes? How does the special character of art justify or require different treatment under the law from that accorded other tangible personal property, and how does (and should) the expressive nature of art affect the way it is owned, protected, regulated, or funded? We anticipate having two or three visitors to the class during the quarter, such as a gallery owner, auctioneer, and museum director. In addition, we will also have the students participate in at least one or two interactive negotiation simulation exercises inspired by real situations and controversies in the art world. Graduate students from other departments and schools are welcome to take this course with the permission of the instructors. Elements used in grading: Class participation, attendance, final exam.

LAW 3504. U.S. Legal History. 3 Units.
This course explores the legal history of what became the United States from the beginning of European colonization until the early twentieth century, focusing on the late eighteenth and nineteenth centuries. It examines both the evolution of legal doctrine and the role of marginalized communities as targets, resistors, and creators of law. It emphasizes continental, borderlands, and transnational perspectives on U.S. legal history. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Take-home final exam or paper. Automatic grading penalty waived for writers.

LAW 3505. Law and Culture in American Fiction: Trauma, Resistance, Dissent. 3 Units.
Individuals experience war, epidemic, economic crisis and rapid social change in contingent and uneven ways. Some of us find our suffering compounded, some of us discover we are vulnerable in ways we had never imagined, some of us uncover possibilities in the wreckage. This seminar explores the interplay of legal responses to states of emergency and expressions of trauma, resistance, and dissent in American literature since the mid-nineteenth century. The terms and stakes of this interplay will inform our readings of both fiction and legal texts and we will pay particular attention to points of contact and tension between literary narrative and the operation of narrative in legal discourse. Each week, a novel or story will be paired with a contemporary legal text (often an opinion) and background historical material. We will likely read fiction by Rebecca Harding Davis, Herman Melville, Henry James, Charles Chesnutt, Katherine Anne Porter, John Okada, Ralph Ellison, and Leslie Marmon Silko, but this list is not complete. Among other themes, we will track the effects of shifting legal constructions of citizenship, race, gender, and class; changes in the law of property, contract, and privacy; and deployments of the authority and violence of the state on the maintenance of personal identity, community stability, and linguistic meaning. Elements used in grading: Class participation, attendance, written assignments and final paper. Automatic grading penalty waived for writers. Special instructions: Course requirements include class attendance and participation, three short response papers, and two longer papers. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, written assignments and final paper. Automatic grading penalty waived for writers. Special instructions: Course requirements include class attendance and participation, three short response papers, and two longer papers. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 3506. Law and Empire in U.S. History. 2-3 Units.
This course will examine the interrelationship between legal norms and empire in the history of the United States. Topics in this part will include the Constitution as an imperial document; law and the expansion of the United States in western North America, Puerto Rico, and Hawaii; the Insular Cases; and current debates over extraterritoriality and the War on Terror. Substantial readings will consist of scholarly articles, historical cases, and primary sources, and will be provided online. Requirements for the course include regular class participation and, at the students' election, either response papers or a historiographical essay. Students may also elect to complete a research paper, in which case they will receive 3 units and "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with History (HISTORY 354F).

LAW 3507. Law and the Rhetorical Tradition. 3 Units.
The conventions of legal writing and reasoning taught in law school derive from a long tradition of argument and persuasion. This interdisciplinary seminar locates legal conventions in that broader intellectual history, starting with Aristotle and tracing (some of) the ruptures and continuities that have shaped our particular practices. The way we argue matters. The form we give our statements determines not just whether but whom they will persuade. So we will develop a tool kit for identifying the available means of persuasion, crafting sentences and paragraphs that suit the ideas they contain, voicing those ideas with an eye to audience and purpose as well as authority; noticing the way the language we choose implies a social world in which the argument unfolds. The goal is to become both more effective and more conscious in our deployment of those conventions ¿ as readers, speakers and writers. Elements used in grading: Class participation, attendance, revision and writing assignments. Automatic grading penalty waived for writers. Special Instructions: This course can satisfy the Research "R" requirement. The instructor and the student must agree whether the student will receive "R" credit. For "R" credit, the paper is substantial and is based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 3508. Law and Visual Culture. 3 Units.
When we represent our experience today, we do so as much through images as language. When we seek to persuade, we offer photographs, charts, videos. Our ability to document brutality and misconduct with our smartphones has reignited our long national struggle to redress racial injustice. Images are powerful. And as they saturate our cultural discourse, they are increasingly part of legal practice. The power of an image often lies in its apparent simplicity: we know it when we see it. But how much of what we see is produced by the biases and expectations -- the habits of viewing -- that we bring to the encounter? What is left out when an infographic distills information for us? Lawyers and judges tend to treat certain kinds of images as unmediated representations of reality, even though neuroscience, empirical research, and cultural theory all refute this so-called reality effect. Such naïve realism in law may reflect the ideal of definitive proof that animates the adversary system. Indeed, lawyers and judges have historically worried that images might replace legal process altogether. The more pressing challenge, however, is to adapt legal practice to visual persuasion in ways that are consistent with our rule of law values. This seminar tracks the legal reception of modern visual representation from confusion about the admissibility of photographs in the late 19th century (is it like a drawing? is it like eyewitness testimony?) to the debate about cameras in the courtroom in the late 20th century (do judges and jurors decide differently when the proceedings are subject to public scrutiny?) to the frequent and strategic deployment of visual media in pretrial and litigation practice today. We will then consider the roles of visual persuasion in the law of privacy, qualified immunity, and freedom of speech, as well as applications in practice areas like contracts and client communications. Throughout the quarter, we will attend to the ways American visual culture has resisted and reinforced systemic inequality. Course materials range from judicial opinions to film theory to social psychology to presentations by practicing attorneys. Special Instructions: This course can satisfy the Research "R" requirement. The instructor and the student must agree whether the student will receive "R" credit. For "R" credit, the paper is substantial and is based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements Used in Grading: Class Participation. Attendance, Written Assignments, Final Paper. Automatic grading penalty waived for writers.

LAW 3510. Psychological Development: Myth, Law, and Practice. 2 Units.
Collective myths from a variety of traditions and cultures capture enduring psychological truths about human choices and the human condition. Lawyers at various stages in their careers have their own personal myths, sometimes conscious and sometimes not. These personal myths embody key tendencies that determine or heavily influence each lawyer's personal and professional path. This course uses some salient collective myths as well as modern psychological material to create a powerful backdrop for self-examination and self-development. It offers a space and time for each student to consider his or her own personal and professional direction through the course materials, class interactions, and a series of reflection papers. The course benefits from the collaboration of Ron Tyler, Director of the Criminal Defense Clinic, who will conduct a session focusing on mindfulness practices. Elements used in grading: A series of reflection papers totaling at least 18-pages.

LAW 3511. Writing Workshop: Law and Creativity. 3 Units.
Practicing law is very much a creative enterprise. Effective advocates and counselors provide innovative and thoughtful solutions to complex problems. But there often isn't enough attention devoted in law school either to thinking creatively or to reflecting in a creative way on the issues students confront inside and outside the classroom. This course will respond to this gap by building a bridge between law and the arts, with the goal of helping students hone their ability to think creatively and use disciplined imagination. Law & Creativity will meet twice a week and have dual components designed to inform one another. The first session will be structured as a seminar in which students gather to examine and discuss creative treatments of legal and professional issues in a variety of media (including film, fiction, and nonfiction). The second session will follow the creative-writing workshop model in which students submit their own fiction and creative nonfiction pieces for group discussion. Through the workshop process, students will develop the skills necessary to constructively critique and workshop one another's work, and learn a variety of techniques for improving their own creative writing. Elements used in grading: Class attendance, participation and final paper.

LAW 3512. Markets, Morals and the Law. 2 Units.
What things should or should not be for sale - and why? This course will consider several examples of "blocked exchanges" or "contested commodities," including the trade in reproductive services, body parts, environmental resources, political rights and obligations, and the varieties of human labor. With readings drawn from law, philosophy, and moral and political economy, the purpose of the course will be to examine a range of contemporary controversies over commodification and to consider arguments about the appropriate scope and limits of market activity. The assigned reading will be substantial, varied, and demanding. Elements used in grading: Attendance, Class Participation, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 3514. Law and Inequality. 1 Unit.
This reading group will focus on the challenges presented to law by the long-term growth of economic inequality. In addition to exploring evidence of rising inequality (including the work of Thomas Piketty and others), we will examine legal and other scholarship that seeks to understand law's contribution to inequality and legal responses that might reduce inequality or ameliorate its effects. Meeting Time: Class will meet 7:00 PM to 9:00 PM, April 10, April 17, May 1, May 15, and May 22. Elements used in grading: Attendance, Class Participation.
Same as: Reading Group

LAW 3515. Law and Humanities Workshop: History, Literature, and Philosophy. 2-3 Units.
(Formerly Law 516) The Law and Humanities Workshop: History, Literature, and Philosophy is designed as a forum in which faculty and students from the Law School and from various humanities departments can discuss some of the best work now being done in law and humanities. Every other week, an invited speaker will present his or her current research for discussion. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Students have two options. Those taking the course for 2 units are required to write a brief response to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before the speaker presents. Students taking the course for 3 units are required to write a research paper on a law and humanities topic that they choose (in consultation with the professors). Law students who complete this 3-unit track will receive an "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Enrollment will be limited to 30 students -- 20 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class participation, attendance, and writing assignments. Cross-listed with the Department of History (HIST 308F).

LAW 3516. Legal History Workshop. 2-3 Units.
The Legal History Workshop is designed as a forum in which faculty and students from the Law School, the History Department, and elsewhere in the university can discuss some of the best work now being done in the field of legal history. Every other week, an invited speaker will present his or her current research for discussion. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Special Instructions: Students may choose to enroll in one of two sections of the course. In the first, students must write brief responses to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before speaker presents. In the second section, students must write a research paper on a legal history topic that they select in consultation with the professors. Students opting to write a research paper will receive an "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Enrollment will be limited to 30 students -- 20 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class participation, attendance, assignments and final paper. Cross-listed with History (HISTORY 307A).

LAW 3517. Law and Literature. 3-4 Units.
After its heyday in the 1970s and 1980s, many wondered whether the law and literature movement would retain vitality. Within the last decade there has, however, been an explosion of energy in the field, which has expanded beyond the boundaries of the literary text narrowly conceived and incorporated a range of other genres and humanistic approaches. Several recent or forthcoming books survey the range of emerging scholarship and the potential for new directions within the field. Using one of these--New Directions in Law and Literature (Oxford, 2017)--as a guide, this course will delve into a variety of topics that law and literature approaches can illuminate. These include, among others, conceptions of sovereignty and non-sovereign collectivities, the construction of the citizen and refugee, competing visions of marriage and its alternatives, law and the rhetorical tradition, and theoretical perspectives on intellectual property. Nearly every session will pair recent scholarship in the field with a literary or artistic work, ranging from Claudia Rankine's Citizen to Shakespeare's Merchant of Venice. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 3 or 4 units, depending on the paper length. This class is limited to 22 students, with an effort made to have students from SLS (16 students will be selected by lottery) and six non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Cross-listed with English (ENGLISH 350).

LAW 3518. Law and Psychology. 3 Units.
This course will examine the implications of psychological theory and research for normative legal theory and for contemporary legal policies, procedures, and practices. The course will draw on contemporary cognitive, social, and clinical psychology to address the concepts of intent, responsibility, deterrence, retribution, morality, and procedural and distributive justice. We will examine evidence law (e.g. eyewitness testimony, polygraphy, expert testimony, psychiatric diagnosis and prediction), procedure (e.g., trial conduct, jury selection, settlement negotiations, alternative dispute resolution), and various topics in criminal law, torts, contracts, property, discrimination, family law, and other areas. We will compare "rational actor" and psychological perspectives on decision making by juries, judges, attorneys, and litigants. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Series of shorter papers or final independent research paper totaling 28 pages.

LAW 3519. Law and the Greek Classics. 1 Unit.
This one credit course, based on materials taught at the Aspen Institute, will read and discuss selected classical Greek documents (in translation, of course) of particular relevance to the contemporary practice of law. We will begin with a reading of two Platonic dialogues -- Crito and the Apologia -- to frame the question of whether Socrates should have resisted the lawful, but unjust, verdict condemning him to death. We'll focus of the tension between law and justice, perhaps peeking forward to Melville's Billy Budd, and MLK Jr.'s Letter from the Birmingham Jail. We will continue with the third play in Aeschylus' Oresteia, focusing on the decision to remit Orestes to the judgment of the people of Athens, rather than to the Furies, in connection with the murder of Clytemnestra. We'll focus on the decision to vest secular authorities with the definition of justice. We'll close with a reading of Antigone, focusing on the relationship between the individual and the state, and the gendered nature of justice. I often end the seminar with an informal public reading of the Antigone. I play Creon, maybe this year in a Trump mask. I anticipate five meetings, usually over dinner in one of the seminar rooms. Class will meet five Wednesdays, 6:15PM-8:15pm, April 11, April 25, May 9, May 23, May 30. Discussion will be informal, and non-hierarchical. Elements used in grading: Attendance, Class Participation. Same as: Reading Group

LAW 3520. Selected Topics in the History of Capitalism, Regulation, Corporations and Finance. 1 Unit.
This seminar will briefly examine recent debates about the role of the financial sector in the United States, considered in light of the long history of American debates over regulation of economic activity. It will be structured as a continuing dialogue between recent debates about regulation and finance, and historical debates over the role of law in capitalist development. It will touch upon the regulation of corporations, banking and the financial system, movements for deregulation in the 1970s, 80s and 90s, the roots of the financial crisis of 2007-08, and its aftermath up to the present day. The seminar will be structured as a short and necessarily tentative (given the time constraints of the course) examination of the social, institutional and intellectual history of economic regulation, as a means of contextualizing our continuing and unresolved arguments over scope and purpose of corporations and the financial sector. Elements used in grading: Attendance, Class Participation. Class meets 7:15 p.m. - 9:15 p.m., January 9, 10, 14, 16, and 17.

LAW 3521. Law, Politics and the Arts. 3 Units.
This seminar will explore the connections between the arts and questions of law and politics, using several performances from the 2019-2020 Stanford Live season to form the basis of a conversation. Students will attend the multiple performances and discussions before or after each performance. The performances will be on the evenings of 1/15, 1/17, 1/22, 1/29, 2/5, 2/21, 2/22 and 2/26---student must attend at least 6 performances so please confirm your availability before enrolling. Specific meeting times TBD with instructor and the Bing event schedule. The discussions will be a combination of public lectures and exclusive pre or post performance conversations with the artists, artistic directors, and Stanford faculty members. Students will be expected to write four reflection papers over the course of the term. Enrollment limited to 7 law students. CONSENT APPLICATION: To apply for this course, please submit a short written statement of interest to cparis@law.stanford.edu. Mandatory Pass/Fail, 3 units. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 3522. Legal History: Research Seminar in Legal Biography. 2 Units.
The aim of this seminar is to produce a number of student-written studies of the lives of lawyers. In the first half of the seminar, we will read some exemplary biographies of lawyers. In the second half, students in the seminar will report on their own research into the life of a lawyer, preferably a lawyer who undertook public engagements as an official, elected officeholder, law writer or reformer, or judge as well as private practice. Students who wish to enroll in the course should, at the time of enrollment, submit a short proposal with (1) the name of the lawyer or lawyers they plan to write about; (2) the materials, including in substantial part primary sources, they plan to use in writing the biography; and (3) a summary of other sources, such as secondary biographical or contextual materials that they plan to consult. Elements used in grading: Attendance, Class Participation, Final Paper.

LAW 4001. Media, Technology, and the First Amendment. 3 Units.
The right to free speech is meaningless without some spaces to exercise it. Over the past decades, electronic media -- broadcast radio and television, cable television, telephony, and the Internet -- have become critical spaces where Americans speak to and with each other. Today, being able to speak and be heard online is as important as being able to speak in parks, sidewalks, and public squares. As the Supreme Court has recognized, social media platforms "provide perhaps the most powerful mechanisms available to a private citizen to make his or her voice heard," so that any citizen may "become a town crier with a voice that resonates farther than it could from any soapbox." Packingham v. North Carolina, 137 S. Ct. 1730, 1737 (2017). But while the public squares of the colonies were public spaces, the social media platforms hosting much of Americans' online speech today are owned by private actors with their own First Amendment rights. And the decisions courts have been making about electronic media differ significantly from the precedents governing leaflets, pickets, soapboxes, and burning flags that dominated the twentieth century. This class complements the law school's general First Amendment class by focusing on the First Amendment precedents governing speech on electronic media (broadcast, cable, telephony, and the Internet) and what they mean for the First Amendment in the digital age. We will grapple with questions such as: Why can comedians swear on Netflix or cable TV, but not on broadcast TV? Can the government ensure that speech spaces on electronic media are open to a variety of viewpoints? Can politicians or government officials block Americans from their Twitter or Facebook accounts? Do Internet platforms violate their users' First Amendment rights when they take down or restrict access to their content? And how does the First Amendment affect attempts to regulate Internet platforms, including President Trump's recent Executive Order? Who should take this class: If you are interested in the First Amendment, constitutional issues, appellate litigation, media and technology law, communications law, net neutrality, the increasing power of Internet platforms, or simply use the Internet, this class is for you. There are no prerequisites for this class. You can take it before or after the general First Amendment class. The class is open to first year law students and graduate students from other schools. To apply for this course, non-Law students must complete a Non-Law Student Add Request Form available on the SLS Registrar's Office website (see Non-Law Students). Elements used in grading: Class participation, attendance, group project, end-of-class quiz.

LAW 4003. Current Issues in Network Neutrality. 2 Units.
Due to the change in administration, the future of net neutrality in the US is in question again. Network neutrality rules are based on a simple principle: Internet service providers like Verizon or Comcast that connect us to the Internet should not control what happens on the Internet. Net neutrality rules prohibit ISPs from blocking or slowing down websites, making some sites more attractive than others, or charging sites fees to reach people faster. After a long, public fight that mobilized more than 4 million people across the political spectrum, the Federal Communications Commission (FCC) adopted strong net neutrality rules in February 2015. Now these rules might be on the chopping block. FCC Chairman Pai, who opposed the rules when they were adopted, has declared his intention to roll back the rules, while expressing some support for "net neutrality principles." At the same time, Republicans in Congress have indicated they might consider a legislative solution. Through lectures, class discussions, and guest speakers, the seminar will introduce students to the key questions underlying the net neutrality debate so that they can become informed participants in this debate. Do we need net neutrality rules, and, if yes, what should they be? What are the options for addressing net neutrality at the FCC and in Congress? How do past court decisions constrain the FCC's options for adopting net neutrality rules? While the class focuses on the net neutrality debate in the U.S., the underlying policy questions are general and directly applicable to ongoing net neutrality debates around the world. The class is open to law students and students from other parts of the university. Students do not need to have any technical background to participate in the class; any necessary background will be taught in class. Elements used in grading: Short written assignments, class participation, attendance. Students are expected to attend all sessions of the class and participate in the class discussion. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 4004. Cybersecurity: A Legal and Technical Perspective. 2 Units.
This class will use the case method to teach basic computer, network, and information security from technology, law, policy, and business perspectives. Using real world topics, we will study the technical, legal, policy, and business aspects of an incident or issue and its potential solutions. The case studies will be organized around the following topics: vulnerability disclosure, state sponsored sabotage, corporate and government espionage, credit card theft, theft of embarrassing personal data, phishing and social engineering attacks, denial of service attacks, attacks on weak session management and URLs, security risks and benefits of cloud data storage, wiretapping on the Internet, and digital forensics. Students taking the class will learn about the techniques attackers use, applicable legal prohibitions, rights, and remedies, the policy context, and strategies in law, policy and business for managing risk. Grades will be based on class participation, two reflection papers, and a final exam. Special Instructions: This class is limited to 65 students, with an effort made to have students from SLS (30 students will be selected by lottery) and students from Computer Science (30 students) and International Policy Studies (5 students). Elements used in grading: Class Participation (20%), Written Assignments (40%), Final Exam (40%). Cross-listed with Computer Science (CS 203) and International Policy Studies (IPS 251).

LAW 4005. Introduction to Intellectual Property. 4 Units.
This is an overview course covering the basics of intellectual property law -- trade secrets, patents, copyrights, and trademarks. This course is designed both for those who are interested in pursuing IP as a career, and those who are looking only for a basic knowledge of the subject. There are no prerequisites, and a scientific background is not required. Elements used in grading: Class participation, attendance, and final exam.

LAW 4006. Intellectual Property and Antitrust Law. 3 Units.
(Formerly Law 459) This is an advanced seminar focusing on antitrust law as it applies to the creation, licensing, and exercise of intellectual property rights. At least one IP or antitrust class is a prerequisite, and ideally both. Papers will be due before the Law School deadline. Draft papers will be due in time for student presentations. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements use in grading: Class participation and final paper.

LAW 4007. Intellectual Property: Copyright. 3 Units.
Copyright law is the engine that drives not only such traditional entertainment and information industries as music, book publishing, news and motion pictures, but also software, video games and other digital products. This course examines in depth all aspects of copyright law and practice, as well as the business and policy challenges and opportunities that the Internet and other new technologies present for the exploitation of copyrighted works. There are no prerequisites for this class. Elements used in grading: Final Exam (In-School, open book). A detailed description of how the class will be conducted, including reading assignments and modes of student participation, appears in the course syllabus on Canvas.

LAW 4008. Intellectual Property: Copyright Licensing, Principles, Law and Practice. 2 Units.
(Formerly Law 625) This course will combine in-depth study, through reading assignments and lectures, of US law governing copyright transactions (contract formalities and construction; recordation and title practice; termination of transfers) and copyright contract drafting and negotiation exercises (book publishing agreement; videogame production and distribution agreement). Elements used in grading: Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 4009. Intellectual Property: International and Comparative Patent Law. 2 Units.
Patentable goods and services are increasingly important in today's global information economy, and they frequently cross national borders, physically or electronically. This course will include a comparative examination of the major national patent systems, a survey of the principal international patent treaties, and discussions of related transnational patent issues. We will examine these topics both from the perspective of global patent practitioners -- who face challenges such as securing large international patent portfolios and strategizing multinational patent litigation -- and from the perspective of the academics and policymakers who are engaged in ongoing patent harmonization debates. Prerequisites: Introduction to Intellectual Property or consent of instructor. Elements used in grading: class participation, attendance, and short writing assignments.

LAW 4010. Intellectual Property: Patents. 3 Units.
In this course we cover the major aspects of patent law, primarily as applied in the United States: patentability (including patentable subject matter, novelty, nonobviousness, enablement, and definiteness); infringement; and remedies. The emphasis is on essential legal principles and a policy analysis of the patent system. The course is designed to be useful both as solid background for non-patent-specialists and for those planning a career in the field. Prerequisites: Introduction to Intellectual Property is recommended but not required. No technical background is required. Elements used in grading: Class participation, attendance, and final exam.

LAW 4011. Intellectual Property: The Business & Law of Technology & Patent Licensing. 3 Units.
If you practice in any technology-related area (whether transactions, corporate, or litigation), you will encounter licensing, as it is the principal means by which technology and patent rights are disseminated, exploited and commercialized. It is fundamental to Silicon Valley and beyond, including in software, mobile, consumer devices, autonomous cars, semiconductors and pharmaceuticals. This is a practice-oriented course covering the fundamentals of licensing technology and patents, including business considerations, drafting, negotiations and strategic considerations. We will also consider the role of licensing in mergers and acquisitions, litigation and antitrust contexts. The course is structured based on a real-world hypothetical involving entrepreneurs who spin out university-developed inventions into startup companies and then seek to commercialize the technology and patents to leading companies in a specified technology industry (such as smartphones, autonomous cars, "internet of things" or the like). We will also have a guest lecturer from a major technology company with significant licensing dimensions (which in the past have included Google, Waymo, and Qualcomm). Elements used in grading: Class Participation, Final Exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 4012. Intellectual Property: Trademark and Unfair Competition Law. 3 Units.
This course will consider the protection and enforcement of trademarks and related state rights in brands and names, including the right of publicity. There is no prerequisite, though some students will have taken Introduction to Intellectual Property. Elements used in grading: Class Participation, Exam (Open-book one-day take-home).

LAW 4013. Information Privacy Law. 3 Units.
This course explores the roots of privacy law, its evolution in the face of rapid technological change, and the challenges to an individual's ability to control third party collection, access, use and disclosure of their personal information. The course covers existing and emerging privacy torts, applicable and proposed privacy legislation and regulations, international norms and extraterritorial application of privacy law such as in the EU's General Data Protection Regulation, and self-regulation of privacy through technological means, contracts or other means. We will discuss all of these things, as well as incorporate developments in the news, from the perspective of the various privacy stakeholders--consumers, regulators and business. Elements used in grading: Final Exam.

LAW 4014. Law, Technology, and Liberty. 2 Units.
New technologies from gene editing to networked computing have already transformed our economic and social structures and are increasingly changing what it means to be human. What role has law played in regulating and shaping these technologies? And what role can and should it play in the future? This seminar will consider these and related questions, focusing on new forms of networked production, the new landscape of security and scarcity, and the meaning of human nature and ecology in an era of rapid technological change. Readings will be drawn from a range of disciplines, including science and engineering, political economy, and law. The course will feature several guest speakers. There are no formal prerequisites in either engineering or law, but students should be committed to pursuing novel questions in an interdisciplinary context. The enrollment goal is to balance the class composition between law and non-law students. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course is cross-listed with Bioengineering (BIOE 242) and Engineering (ENGR 243) .

LAW 4015. Modern Surveillance Law. 2 Units.
This seminar provides an in depth look at modern government surveillance law, policies and practices. It is taught by Richard Salgado, director of law enforcement and information security at Google and a former prosecutor at the U.S. Department of Justice's Computer Crime and Intellectual Property Section, and Todd Hinnen, a partner at Perkins Coie and a former head of U.S. Department of Justice's National Security Division. The course will cover the technology, law and policy of government surveillance of the Internet and other communications technologies. We will focus on U.S. government surveillance for national security, criminal law enforcement and public safety purposes, and its relationship with other jurisdictions. Technologies and practices covered will include wiretapping, stored data collection and mining, location tracking and developing eavesdropping techniques. Legal regimes will include the Fourth Amendment, the Foreign Intelligence Surveillance Act, the USA Freedom Act, USA Patriot Act, the Electronic Communications Privacy Act, the CLOUD Act and CALEA among others. Elements used in grading: Two papers, timely submission of topics and outlines, and class participation.

LAW 4016. Patent Litigation Workshop. 3 Units.
This course simulates the strategy and pretrial preparation of a patent lawsuit. The course materials include information typical to a patent lawsuit: a patent, file history, prior art, and information regarding the accused product. Students will represent either the patentee or the accused infringer. Students will draft claim construction charts, infringement charts, take and defend depositions, and brief and argue claim construction and motions for summary judgment of infringement and invalidity. Some knowledge of patent law is presumed. Special Instructions: IP. Patents (Law 326) is a prerequisite for this course, but can be taken coterminously. Students must attend the first class session (or contact the instructor) or they will be dropped from the class or waitlist. Elements used in grading: Attendance, participation, writing assignments, exercises and oral arguments.

LAW 4017. Advanced Torts: Defamation, Privacy, and Emotional Distress. 3 Units.
This course will examine the theoretical foundations and common law development of the range of tort remedies designed to afford protection to the interests in personality. Defamation, the right of privacy, and claims of emotional distress and harassment will receive particular attention, along with the constitutional defenses to these claims, based on the First Amendment, and recent issues novel to the internet era. Elements used in grading: Final Exam.

LAW 4018. Intellectual Property: International and Comparative Copyright. 2 Units.
All copyrights today are international, and copyright litigation and licensing increasingly require a general understanding of foreign copyright law and of the international copyright system. This course will focus on the counselling considerations that surround the exploitation of US-based music, film, literature, software and other copyrighted works in foreign markets, and of foreign works in US markets, through licensing, litigation, or both. The course will survey the principal legal systems and international treaty arrangements for the protection of copyrighted works as well as the procedural questions that lie at the threshold of protection. Elements used in grading: class participation and two problem sets, one mid-course and the other at the end of the course.

LAW 4019. Computational Law. 2 Units.
Computational Law is an innovative approach to Legal Informatics concerned with the representation of regulations in computable form. From a practical perspective, Computational Law is important as the basis for computer systems capable of performing useful legal calculations, such as compliance checking, legal planning, and regulatory analysis. In this course, we look at the theory of Computational Law, we review relevant technology and applications, we discuss the prospects and problems of Computational Law, and we examine its philosophical and legal implications. Elements used in grading: Work in the course consists of reading, class discussion, practical exercises, and a final project. Cross-listed with Computer Science (CS 204). This class is limited to 30 students (LAW 4019 & CS 204 combined). Interested students should enroll as early as possible in Axess to reserve a spot in the class. (http://complaw.stanford.edu/).

LAW 4020. Lawyering for Innovation: A Case Study. 3 Units.
(Formerly Law 769) Strategic lawyering in the 21st century requires a combination of critical skillsets, including facility with technology, product design, partnerships, dispute resolution, and policy. No issue in the digital age has demonstrated this better than the history of and litigation surrounding Google Books. For over a decade, from the inception of the product to the resolution of its legal issues, lawyers were integrally involved with engineers and the business every step of the way. They helped design its features, defend it from lawsuits, craft a settlement, and advocate complementary policy positions. On a broader level, the history of ebooks is a microcosm of the opportunities and challenges of the digital age: new technologies to reproduce and distribute works, changing consumer norms, massive disruptions to economic interests, evolving concepts of fair use, increased access to information, fears about piracy, and threats to competition. Every one of these issues requires skilled lawyering in close partnership with business leadership. This seminar will focus on strategic lawyering at the cutting edge of innovation by closely studying, among other things, the history of Google Books and the evolution of copyright in the digital age. We will look at how leading businesses, including Google, Apple, Amazon and Microsoft, have each used law, litigation, and policy as tools to advance their business interests. We will focus on developments related to ebooks, and also study analogous issues involving the music, movie, and newspaper industries. The seminar will include guest speakers who have led legal strategies to further innovation. Some copyright experience is helpful but not essential. The course is open to graduate students throughout the university, especially the Graduate School of Business, the Department of Communication, and the Journalism Program. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of their position on the waitlist and degree of study. Elements used in grading: Grading will be based upon weekly reflections, class participation, and a short final paper (or, for those opting for Research credit, a longer paper based on independent research). A version of this course was taught at Stanford Law School in 2015 and Harvard Law School in 2016. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 4021. Free Speech in the Age of the Internet. 2 Units.
Taught by top policy leaders from Google/YouTube, Facebook and Twitter, this course will explore the way free speech norms have evolved in the age of the Internet and the pivotal role online platforms play in the information available worldwide. From the content policy issues that evolved in the face of violent geopolitical disputes (from the Arab Spring to the Ukraine), to the Right to be Forgotten in Europe, the challenges posed by terrorist propaganda online, and the role platforms play in social movements like #blacklivesmatter, this course will allow students to critically engage the balance between freedom of information and other important social values, such as privacy and security. After the term begins, students accepted into the course can transfer from section (01) into section (02), with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments; Exam or Final Paper.

LAW 4022. Communications Law: Internet and Telephony. 3 Units.
The internet has enabled new forms of innovation, content production and political participation that are transforming our economy, society and democratic system. Technical, legal and economic choices will affect whether the Internet can realize its potential or not. Communications law - the law that governs both the physical infrastructures for communications services such as cable and telephone networks as well as the communication services which are provided over these infrastructures - has become one of the most important arenas in which choices affecting the future of the information society are made. The debates over network neutrality or the right ways to foster broadband deployment are examples of this trend. At the same time, the Internet's ability to support a variety of different communications services such as telephony, information services or video over the same physical network infrastructure challenges the existing communications law, which is based on the assumption that different physical infrastructures offer different communications services. What can regulators and legislators do to allow the Internet to realize its economic, social, cultural, and political potential? How can we foster the deployment of more broadband networks? And how can policymakers allow applications like Internet telephony and traditional telephony to coexist without giving one an unfair advantage over the other? The course will address how current law deals with these questions, but also explore what regulators and legislators may do to better deal with the challenges posed by the Internet. The course is mostly focused on the US, but highlights developments elsewhere where appropriate. Special Instructions: Students may take Communications Law: Internet and Telephony and Communications Law: Broadcast and Cable Television in any order (neither is a prerequisite for the other). There are no prerequisites for this course. No technical background is required. Elements used in grading: Class participation, attendance, final exam.

LAW 4024. Patent Prosecution. 2 Units.
This skill-based course examines the core requirements and strategies for drafting and prosecuting a patent application before the U.S. Patent & Trademark Office (PTO). The class brings in real inventors and patent examiners to give students a real-world experience of developing a patent, understanding patentability, building patent portfolios, and getting a patent application prosecuted through the patent office. Students will interact with inventors in a startup-type environment and help the startup protect the IP in its technology -- through interactions with the inventors to identify and develop concepts and draft corresponding patent applications, and through interactions with the PTO to get the patents assessed against prior art and eventually granted. The course is open to all students, regardless of your technical (or non-technical) undergraduate background. All you require is an interest in technology or patent law. This class will give you a solid understanding of what patents are, provide real-life experience in identifying and helping companies protect the IP in their technologies, and help you understand the mechanics of patent structure and development, all of which will be helpful experience and background for students interested in pursuing any technology-based litigation or transactional practices. Students are evaluated on participation, in-class and take-home exercises, and projects relating to the drafting and prosecution of a patent application.

LAW 4025. Intellectual Property: Trade Secrets. 3 Units.
Trade secret protection has become one of the most important issues in intellectual property today. Technology becomes more important to industry every day, but information can be downloaded and shared more easily than ever before. The law has to strike a balance between encouraging and protecting commercial investment in research, and preserving an individual's right to change employment or to compete directly against a former employer. In addition to examining the law and the theory of trade secret protection, we will emphasize the practical aspects of protecting information as a trade secret. We will discuss the challenges and issues involved in litigating trade secret cases, creating corporate programs to protect trade secrets, and the increasingly important subject of protecting trade secrets internationally. We will feature several guest speakers, including individuals from the FBI, the Department of Justice, the judiciary, in-house counsel, and a forensic discovery specialist, each of whom will address trade secret law and practice from their own unique perspective. We will highlight topics of current interest, such as non-competition agreements, trade secrets and the Internet, and cybercrime, and will discuss in detail some of the most prominent trade secret cases of the past several years. The class will be of interest to students who expect to practice intellectual property law as well as to students who expect to be involved in corporate transactions and labor law. Elements used in grading: Class participation and final exam.

LAW 4026. Internet Platforms and Free Expression. 2-3 Units.
In recent years, Internet platforms like Facebook, Google, or Twitter have increasingly come under fire. Top executives from these companies have testified before Congress about their role in spreading misinformation in the 2016 elections. With the increased scrutiny come diverse calls for change. They include asking the platforms to self-regulate, asking regulators to address the platforms' growing market power, or asking Congress to adopt laws regulating various aspects of the platforms' behavior. The seminar explores the many ways in which Internet platforms shape free expression online and asks what public responsibilities these private companies do and should have. By interrogating the structural role that these companies play in society -- are they quasi-state actors? are they the press? are they monopolies? -- we will assess how the platforms contribute to (or possibly mitigate) key social problems. We will critically examine constitutional and statutory laws, like the First Amendment, CDA 230, and antitrust law to evaluate whether and how they facilitate or constrain possible solutions. And with the benefit of guest speakers from academia and policy sectors, we will draw our own conclusions about how to best ensure platform accountability. tl;dr: If you want to work at a tech law firm, in-house at a tech company, in a regulatory position vis-a-vis the tech sector, or are generally interested in critical questions around the role of Internet platforms in society and their impact on free expression online, this class is for you. We hope to see your application! Special Instructions: Enrollment will be limited to 15 students from both SLS and H&S. Experience with First Amendment doctrine is helpful, but not required. Grades will be based on class attendance, class participation, and either a number of shorter reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. CONSENT APPLICATION: To apply for this course, students must complete and submit the Consent Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

LAW 4028. Intellectual Property: Advanced Copyright. 2 Units.
Copyright law is the primary legal regime governing human creativity, and it plays some role in nearly all creative industries today. Consequently, copyright law has far-reaching economic and cultural implications. In this seminar, we will consider the interests of some of the different groups affected by the copyright regime, including creators, technologists, audiences, institutions, and heirs. Course readings will cover copyright case law and scholarship; research on creative practices and relevant business models; the role of copyright law in innovation policy; and legal versus extralegal modes of protecting the fruits of creative labor. Throughout, we will assess the fairness, efficacy, and alignment of copyright protection and remedies available, to whom, when, and for what reasons. The course aims to deepen students' knowledge of copyright law and scholarship; to equip students to develop principled policy arguments about the scope of copyright protection; and to enable students to evaluate reforms and alternatives to copyright in light of how these might serve different entities in the copyright ecosystem. After the term begins, students accepted into the course can transfer from section 01 (written assignments) into section 02 (research paper), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Written Assignments or Research Paper.

LAW 4029. Video Game Law. 3 Units.
This seminar discusses a variety of legal issues raised by video games and game platforms. We will devote substantial attention to intellectual property matters, but will also include business and licensing issues, tort law, the First Amendment, and legal issues presented by virtual reality. Students will write and present an original research paper on a topic related to the class. This is a 3-unit seminar that satisfies the R requirement. Introduction to Intellectual Property or equivalent is a prerequisite. Enrollment is limited to 12 students, and will be by consent of the instructors. Interested students should submit a paragraph explaining their background and interest in the course. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 4030. Intellectual Property: Patents - Japan Field Study. 1 Unit.
This is the Tokyo, Japan component of Intellectual Property: International and Comparative Patent Law (Law 4009) and Intellectual Property: Patents (Law 4010). Students enrolled in either Law 4009 or Law 4010 may apply for this optional field study component, for which students will travel to Tokyo for one week during spring break 2018. Class sessions will take place primarily at Waseda Law School. Students will also meet with local lawyers, clients, and government officials, including at the Japanese Patent Office, the Intellectual Property High Court, and the Ministry of Economy, Trade and Industry. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and visa to travel to Japan. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website. See Consent Application Form for instructions and submission deadline.

LAW 4031. Disruptive Technologies: Their Impact on Our Laws, and the Laws' Impact on the Technology. 2 Units.
The advent of a highly disruptive technology necessarily butts up against existing laws, regulations and policies designed for the status quo as well as established businesses. This course takes the examples of driverless cars and artificial intelligence and examines the new and challenging legal questions and opportunities presented by these technologies. We will also discuss how business leaders, lawyers and technologists in these areas can navigate and create legal, regulatory and policy environments designed to help their businesses not only survive but thrive. Through a combination of readings, classroom discussions, expert guest speakers from the relevant technology and policy fields and student presentations, this course explores the promise of these technologies, the legal and regulatory challenges presented and the levers in-house counsel and business leaders in these fields can invoke to better navigate the inevitable obstacles facing these highly disruptive technologies. There are no formal prerequisites in engineering or law required, but students should be committed to pursuing novel questions in an interdisciplinary context. Elements used in grading: class preparation and short reflection papers. This course is open to School of Engineering and graduate students with consent of the instructor.

LAW 4032. Advanced Negotiation of Patent Reform Policies. 2 Units.
Patent reform has been a hotly debated topic in recent years in the intellectual property field. Different industries and players have differing and often competing views of our patent system–how effective it is in promoting innovation and what, if any, reform is needed. Students will play the role of counsel on one or more teams representing the interests of particular stakeholder groups. The teams will engage in a series of mock negotiations on actual legislative or administrative patent reform proposals with other teams, as well as mock legislative or administrative engagements before Congress or the United States Patent and Trademark Office respectively. The goal is to achieve consensus on patent reforms that best serve the stakeholders' individual and collective interests, all in an environment of competing interests. Through experience-based learning and simulations, students will gain an understanding of some of the most current patent policy issues being debated in Congress and before the United States Patent and Trademark Office. This seminar will also teach students how to: (1) evaluate from their client's perspective complex, legislative and administrative, patent policy proposals; and (2) strategize, prepare for, participate in, negotiate and advocate for beneficial reforms. Prerequisites: Introduction to Intellectual Property. Grading Criteria: The seminar requires that students to do the required reading, actively participate in class and the mock negotiations and legislative or administrative engagements, and write a series of at least three short assignments.

LAW 4035. Cyber Law: International and Domestic Legal Frameworks for Cyber Policy. 2 Units.
Was Russia's interference in the 2016 U.S. elections an act of war? When do cyber attacks constitute a use of force? Is sovereignty in cyberspace different than in other domains, and can states meaningfully defend their sovereignty in cyberspace? Is hacking back against cyber thieves the legal equivalent of defending one's own property? How should states respond to cyber espionage and information operations, and what legal options are available? This course explores the domestic and international law of cyberspace and its application to significant practical challenges. It also addresses broader legal policy questions, including the extent to which law acts as a constraint on state and non-state actors in cyberspace, whether the application of existing law to cyber activities is sufficient or new laws and norms are needed, and how they could be developed. Policy and law students are welcome; no previous legal knowledge is required. Elements used in grading: Attendance, class participation, writing assignments, and a final exam. Cross-listed with International Policy (INTLPOL 269).

LAW 4038. Does Google Need a Foreign Policy? Private Corporations & International Security in the Digital Age. 3 Units.
Facebook has more users than any nation has citizens. Apple CEO Tim Cook speaks more often with Chinese President Xi Jinping than President Trump does. Google's revenues exceed the GDPs of more than half the world's countries. Cybersecurity companies produce weapons that once only foreign governments wielded. These and other technology companies are increasingly caught in the maw of global politics whether it's entering challenging new foreign markets, developing platforms that enable millions of people around the world to organize for both noble and nefarious aims, or developing products that can become tools of intelligence agencies worldwide for surveillance, counterintelligence, and information warfare. In several respects, tech companies wield more power than governments. We examine the changing role of corporations in international politics, the role of the state, and critical challenges that large technology companies face today in particular. We discuss contending perspectives about key issues with guest lectures by industry and US government leaders as well as simulations of foreign policy crises from the board room to the White House Situation Room. No background in political science or computer science is required. Admission based on application. Elements used in grading: Class participation, midterm policy memo, final policy memo, participate in final course simulation tech company summit. CONSENT APPLICATION: Admission based on application. Instructor consent required. Please send an application email to the teaching assistant, Taylor McLamb, at twj@stanford.edu, that includes: your major, an explanation why you want to take the course, and how your background fits with the subject matter (not to exceed three paragraphs). The application deadline is Friday, November 17 and notification of course acceptance will be sent on Thursday, November 30. International Policy Studies (IPS 245) and Public Policy (PUBLPOL 245).

LAW 4039. Regulating Artificial Intelligence. 3 Units.
Even just a generation ago, interest in "artificial intelligence" (AI) was largely confined to academic computer science, philosophy, engineering research and development efforts, and science fiction. Today the term is widely understood to encompass not only long-term efforts to simulate the kind of general intelligence humans reflect, but also fast-evolving technologies (such as elaborate convolutional neural networks leveraging vast amounts of data) increasingly affecting finance, transportation, health care, national security, advertising and social media, and a variety of other fields. Conceived for students with interest in law, business, public policy, design, and ethics, this highly interactive course surveys current and emerging legal and policy problems related to how law structures humanity's relationship to artificially-constructed intelligence. To deepen students' understanding of current and medium-term problems in this area, the course explores definitions and foundational concepts associated with "artificial intelligence," likely directions for the evolution of AI, and different types of legally-relevant concerns raised by those developments and by the use of existing versions of AI. We will consider distinct settings where regulation of AI is emerging as a challenge or topic of interest, including autonomous vehicles, autonomous weapons, AI in social media/communications platforms, and systemic AI safety problems; doctrines and legal provisions relevant to the development, control, and deployment of AI such as the European Union's General Data Protection Regulation; the connection between the legal treatment of manufactured intelligence and related bodies of existing law, such as administrative law, torts, constitutional principles, criminal justice, and international law; and new legal arrangements that could affect the development and use of AI. We will also cover topics associated with the development and design of AI as they relate to the legal system, such as measuring algorithmic bias and explainability of AI models. Cross-cutting themes will include: how law affects the way important societal decisions are justified, the balance of power and responsibility between humans and machines in different settings, the incorporation of multiple values into AI decision making frameworks, the interplay of norms and formal law, the technical complexities that may arise as society scales deployment of AI systems, and similarities and differences to other domains of human activity raising regulatory trade-offs and affected by technological change. Note: The course is designed both for students who want a survey of the field and lack any technical knowledge, as well as for students who want to gain tools and ideas to deepen their existing interest or background in the topic. Students with longer-term interest in or experience with the subject are welcome to do a more technically-oriented paper or project in connection with this class. But technical knowledge or familiarity with AI is not a prerequisite, as various optional readings and some in-class material will help provide necessary background. Requirements: The course involves a mix of lectures, in-class activities, and student-led discussion and presentations. Requirements include attendance, participation in planning and conducting at least one student-led group presentation or discussion, two short 3-5 pp. response papers for other class sessions, and either an exam or a 25-30 pp. research paper. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. CONSENT APPLICATION: We will try to accommodate as many people as possible with interest in the course. But to facilitate planning and confirm your level of interest, please fill out an application (available at https://bit.ly/2MJIem9) by TBA. Applications received after the deadline will be considered on a rolling basis if space is available. The application is also available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

LAW 4040. Hot Issues in Tech Policy. 1 Unit.
In our hyper-networked world dominated by digital gatekeepers, tech policy implicates the law, business, engineering and --- perhaps foremost --- society. Effective lawyering in the field must be multi-dimensional and incorporate economic, technological, societal and historical perspectives on the issues. This reading group will put these principles into action by examining current tech policy issues through these lenses. Past offerings of the reading group examined breaking issues such as Facebook and Cambridge Analytica (data collection and use); Uber and the Arizona pedestrian death (testing of AI); Amazon and antitrust (competition online); Apple and iPhone encryption (privacy vs. security); and LinkedIn and public user data (platform control and data ownership). Some possible topics this year include AI and facial recognition; social networks and political advertising; and Google, Apple and digital competition. The reading group does not require a technology background --- just interest in gaining a deeper understanding of the issues. It will meet every other week starting week 1 (weeks 1, 3, 5, 7 and 9) on Thursdays, 6:30PM to 8:30PM. Grading (MP/R/F) will be based on attendance and class participation. Enrollment will be limited to 10 students, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a short Consent Application Form available on the SLS website (click Courses at the bottom of the homepage and then click Consent of Instructor Forms). Applications are due by December 15, though earlier submissions are welcome.
Same as: Reading Group

LAW 4041. Lawyering for Innovation: Artificial Intelligence. 2 Units.
In recent years, artificial intelligence (AI) has made the jump from science fiction to technical viability to product reality. Industries as far flung as finance, transportation, defense, and healthcare invest billions in the field. Patent filings for robotics and machine learning applications have surged. And policymakers are beginning to grapple with technologies once confined to the realm of computer science, such as predictive analytics and neural networks. AI's rise to prominence came thanks to a confluence of factors. Increased computing power, large-scale data collection, and advancements in machine learning---all accompanied by dramatic decreases in costs---have resulted in machines that now have the ability to exhibit complex "intelligent" behaviors. They can navigate in real-world environments, process natural language, diagnose illnesses, predict future events, and even conquer strategy games. These abilities, in turn, have allowed companies and governments to entrust machines with responsibilities once exclusively reserved for humans---including influencing hiring decisions, bail release conditions, loan considerations, medical treatment and police deployment. But with these great new powers, of course, come great new responsibilities. The first public deployments of AI have seen ample evidence of the technology's disruptive---and destructive---capabilities. AI-powered systems have killed and maimed, filled social networks with hate, and been accused of shaping the course of elections. And as the technology proliferates, its governance will increasingly fall upon lawyers involved in the design and development of new products, oversight bodies and government agencies. AI is the biggest addition to technology law and policy since the rise of the internet, and its influence spreads far beyond the tech sector. As such, those entering practice in a wide variety of fields need to understand AI from the ground up in order to competently assess and influence its policy, legal and product implications as deployments scale across industries in the coming years. This course is designed to teach precisely that. It seeks to equip students with an understanding of the basics of AI and machine learning systems by studying the implications of the technology along the design/deployment continuum, moving from (1) system inputs (data collection) to (2) system design (engineering) and finally to (3) system outputs (product features). This input/design/output framework will be used throughout the course to survey substantive engineering, policy and legal issues arising at each of those key stages. In doing so, the course will span topics including privacy, bias, discrimination, intellectual property, torts, transparency and accountability. The course will also feature leading experts from a variety of AI disciplines and professional backgrounds. An important aspect of the course is gaining an understanding of the technical underpinnings of AI, which will be packaged in an easy-to-understand, introductory manner with no prior technical background required. The writing assignments will center on reflection papers on legal, regulatory and policy analysis of current issues involving AI. The course will be offered for two units of credit (H/P/R/F). Grading will be determined by attendance, class participation and written assignments. Given the course's multi-disciplinary focus, students outside of the law school, particularly those studying computer science, engineering or business, are welcome. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 4043. The Social & Economic Impact of Artificial Intelligence. 1 Unit.
Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems are free of algorithmic bias and respect human ethical principles? What role will they play in our system of justice and the practice of law? How will they be used or abused in democratic societies and autocratic regimes? Will they alter the geopolitical balance of power, and change the nature of warfare? The goal of CS22a is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines. Elements used in grading: Attendance. Cross-listed with Computer Science (CS 22A) and International Policy (INTLPOL 200).

LAW 4044. Lawyering for Innovation: The (Ongoing) Facebook Case Study. 2 Units.
Issues of technology law and policy -- many involving Silicon Valley companies -- are among the most interesting and challenging in law today. Drawing on the lecturer's experience as General Counsel of Facebook, the course will focus on actual controversies that confront practicing lawyers as they grapple with these evolving issues in a fast-moving environment of innovation and disruption. In less than 15 years of existence (and less than seven years as a public company), Facebook has confronted an unending set of legal challenges, across the full range of subject matter, and in the process has helped define technology law in the 21st century. From questions of privacy law, to antitrust, to intellectual property law, to cutting-edge litigation, and most recently to election law and the political process, Facebook has been at the forefront of many of the defining legal developments of our era. In order to navigate these issues effectively, lawyers must combine legal expertise with practical business judgment as well as an understanding of the broader social and political context -- and in this course, students will develop those skills by studying Facebook legal controversies from the past and the present. Grading will be based on attendance, class participation, and a short final paper.

LAW 4045. Digital Technology and Law: Foundations. 3 Units.
Taught by a team of law and engineering faculty, this unique interdisciplinary course will empower students across the University to work together and exercise leadership on critically important debates at the intersection of law and digital technology. Designed as an accessible survey, the course will equip students with two powerful bases of knowledge: (i) a working technical grasp of key digital technologies (e.g., AI and machine learning, internet structure, encryption, blockchain); and (ii) basic fluency in the key legal frameworks implicated by each (e.g., privacy, cybersecurity, anti-discrimination, free speech, torts, procedural fairness). Substantively, the course will be organized into modules focused on distinct law-tech intersections, including: platform regulation, speech, and intermediary liability; algorithmic bias and civil rights; autonomous systems, safety, and tort liability; "smart" contracting; data privacy and consumer protection; "legal tech," litigation, and access to justice; government use of AI; and encryption and criminal procedure. Each module will be explored via a mix of technical and legal instruction, case study discussions, in-class practical exercises, and guest speakers from industry, government, academe, and civil society. Law students will emerge from the course with a basic understanding of core digital technologies and related legal frameworks and a roadmap of curricular and career pathways one might follow to pursue each area further. Students from elsewhere in the University, from engineering to business to the social sciences and beyond, will emerge with an enhanced capacity to critically assess the legal and policy implications of new digital technologies and the ways society can work to ensure those technologies serve the public good. All students will learn to work together across disciplinary divides to solve technical, legal, and practical problems. There are no course prerequisites, and no prior legal or technical training will be assumed. Students will be responsible for short discussion papers or a final paper. After the term begins, students electing the final paper option can transfer from section 1 to section 2, which meets the R requirement, with consent of the instructor. This class is cross-listed in the University and undergraduates and graduates are eligible to take it. Consent Application for Non-Law Students: We will try to accommodate all students interested in the course. But to facilitate planning and confirm interest, please fill out a consent application (https://forms.gle/hLAQ7JUm2jFTWQzE9) by March 13, 2020. Applications received after March 13 will be considered on a rolling basis. Elements used in grading: Attendance, Class Participation; Written Assignments or Final Paper. Cross-listed with Computer Science (CS 481).

LAW 4046. Data: Privacy, Property and Security. 3 Units.
The collection, use and marketing of personal data are ubiquitous in the digital age. This seminar will explore the diverse legal regimes regulating personal data--including privacy, property and security-- and the imperfect nature of their protections. Legal rules are rapidly evolving to address, if not resolve, the inevitable conflicts between privacy, property and security in relation to personal data. Laws have been enacted and new ones are under consideration at the national, state and even municipal levels, as well as around the world. Norms are emerging to guide these conflicts in the operation of business. Technology is evolving that can facilitate the protection, or accelerate the exploitation, of personal data. At the heart of all these developments is the question, who owns and controls personal data in the digital age. The same piece of data may in different hands raise different expectations. As an example, A may have a privacy expectation that her purchase from an online marketplace is no one's business but her own. B, the app that served as intermediary between the buyer and seller, may have a property or contract expectation that it owns the metadata and other information about A's buying habits. C, a government agency, may have a security interest in collecting or unearthing the details of A's purchase of particular items. This same triad of interests is implicated across a wide variety of highly sensitive personal data, such as location information, facial recognition and medical results. This seminar will explore these data rules, norms, technologies and conflicts through three sessions of lecture and interactive exercises addressed to privacy, property and security, respectively; four sessions devoted to presentations from leading representatives of consumer, corporate and government interests, with questioning by students in the class; and two sessions devoted to discussion of student answers to problem sets, focusing on an exploration of the privacy-property-security conflict and on forward-looking solutions to the protection of personal data. Elements used in grading: Attendance, class participation, final research paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with International Policy (INTLPOL 362).

LAW 4047. Ethics, Public Policy, and Technological Change. 4 Units.
Examination of recent developments in computing technology and platforms through the lenses of philosophy, public policy, social science, and engineering. Course is organized around four main units: algorithmic decision-making and bias; data privacy and civil liberties; artificial intelligence and autonomous systems; and the power of private computing platforms. Each unit considers the promise, perils, rights, and responsibilities at play in technological developments. Prerequisite: CS106A. Elements used in grading: Attendance, class participation, written assignments, coding assignments, and final exam. Cross-listed with Communication (COMM 180), Computer Science (CS 182), Ethics in Society (ETHICSOC 182), Philosophy (PHIL 82), Political Science (POLISCI 182), Public Policy (PUBLPOL 182).

LAW 4048. Regulating Internet Speech Platforms. 2-3 Units.
Internet platforms like Google and Facebook play an enormous role in our online speech and information environment today. This class will review the intermediary liability laws that shape platforms' decisions about online content, and examine how successfully those laws achieve their goals. Students will be encouraged to think pragmatically about the legal, operational, and product design choices platforms may make in response to particular laws, drawing on the instructor's experience handling such questions as Associate General Counsel at Google. Readings and discussions will focus primarily on current US law, with some attention to European laws and to proposed or pending legislation. Important themes of the class include Constitutional and human rights constraints on intermediary liability laws; legal limits (or lack thereof) on platforms' enforcement of privatized speech rules under their Community Guidelines or Terms of Service; global enforcement of national laws requiring platforms to remove content; and connections between platform liability and other areas of law such as consumer protection or privacy. Students will be responsible for three written assignments. The longest will be a final paper of 15 pages. The other two will both be short responses to the week's reading. Up to three students, with consent of instructor, will have the option to write an independent research paper for 3 units. After the term begins, students (max 3) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students will be graded based on Attendance, Class Participation, Written Assignments, and a Final Paper. Admission to the class is based on lottery, but in admitting students from the waitlist the instructor may prioritize based on students' degree programs.

LAW 4049. Hack Lab. 3 Units.
This course aims to give students a solid understanding of the most common types of attacks used in cybercrime and cyberwarfare. Taught by a long-time cybersecurity practitioner, a recovering cyberlaw litigator, and a group of hearty, motivated TAs, each session will begin with a lecture covering the basics of an area of technology and how that technology has been misused in the past. Students will then complete a lab section, with the guidance of the instructor and assistants, where they attack a known insecure system using techniques and tools seen in the field. Each week, there will be a second lecture on the legal and policy impacts of the technologies and techniques we cover. By the end of the course, students are expected to have a basic understanding of some of the most common offensive techniques in use today as well as a comprehensive overview of the most important aspects of cyberpolicy and law. No computer science background is required. All students must have access to a Windows, Mac OS X or Linux laptop. Students must enroll in the lecture as well as one Computer Lab (Lab meets 50 minutes once a week). Special Instructions: This class is limited to 120 students with 30 spots for SLS students. If more than 30 SLS students wish to enroll, instructor permission is required. Elements used in grading: Class participation, written assignments, take-home midterm, and a final exam. Cross-listed with International Policy (INTLPOL 268). Law students see INTLPOL listing for Computer Lab section meeting times.

LAW 4050. AI and Rule of Law: A Global Perspective. 2-3 Units.
Advances in machine learning, big data, networked communications, and computing are transforming our world and fueling calls for regulation. This course--a joint venture of a Stanford law professor and a former Member of the European Parliament and leading voice on tech regulation--offers a global perspective on the profound legal and governance challenges posed by the new digital technologies. Students will emerge with an understanding of how tech is reshaping the global distribution of political authority, rights, and resources, the existing state of law and regulation in the U.S., Europe, China, and elsewhere, and the new democratic governance models that are emerging in response. Each class session will feature one or more distinguished speakers from around the world drawn from the ranks of government officials, judges, activists, and academics who work in the fields of human rights, privacy, free speech, trade, and national security. There are no course prerequisites, whether in law or otherwise. Students will be responsible for one-page responses to each week's readings and a research paper to be turned in at the spring paper deadline. Students can take the course for 2 or 3 units, depending on research paper length. This class is cross-listed with International Policy (INTLPOL 253) and undergraduates and graduates are eligible to take it. Stanford Non-Law students may enroll in INTLPOL 253 directly in Axess. Non-law students wishing to enroll in LAW 4050 should complete the Non-Law Student Add Request form available at https://law.stanford.edu/education/courses/non-law-students/ for a permission number to enroll. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 4051. Foundations of Internet Speech Platform Regulation. 3 Units.
Internet platforms like Google and Facebook play an enormous role in our online speech and information environment today. This class will review the laws that shape platforms' decisions about online content, with a primary focus on intermediary liability laws like the Digital Millennium Copyright Act (DMCA), Communications Decency Act Section 230 (CDA 230), and the EU's eCommerce Directive. The majority of course material will be from the U.S., but some will explore international models and in particular recently enacted laws in the European Union. Some classes will explore the impact of related areas of law, including privacy law, and some will go beyond current legal models to explore forward-looking legislative and policy proposals. Important themes of the class include Constitutional and human rights constraints on intermediary liability laws; legal limits (or lack thereof) on platforms' enforcement of privatized speech rules under their Community Guidelines or Terms of Service; global enforcement of national laws requiring platforms to remove content; and tensions between the goals of intermediary liability law and those of privacy, competition, and other legal frameworks. Students will be encouraged to think pragmatically about the legal, operational, and product design choices platforms may make in response to particular laws, drawing on the instructor's experience handling such questions as Associate General Counsel at Google. Students will be responsible for (1) submitting twelve written questions in response to reading assignments (these are due before class meets on twelve class days of your choice, they can be very brief and informal); (2) participating in class discussion, potentially including discussion of points raised in your written questions; and (3) completing a final examination. The course is open to law students and students in the Masters in International Policy (MIP) program. Thirty-five students will be admitted, with an effort made to have 25 students from the law school admitted by lottery, and 10 from MIP admitted by instructor consent. In admitting law students from the waitlist the instructor may prioritize based on students' degree programs. The material in this class overlaps considerably with that in the 2019 Regulating Internet Speech Platforms (LAW 4048) seminar course. Students who took that class will not be admitted. If a student who took LAW 4048 is admitted to LAW 4051 by lottery, the student will be instructed to drop the class. Elements used in grading: Attendance, class participation, written assignments, final exam. Cross-listed with International Policy (INTLPOL 361).

LAW 4052. Governing Artificial Intelligence: Law, Policy, and Institutions. 3 Units.
Even just a generation ago, interest in "artificial intelligence" (AI) was largely confined to academic computer science, philosophy, engineering, and science fiction. Today the term is understood to encompass not only long-term efforts to simulate the general intelligence associated with humans, but also fast-evolving technologies (such as elaborate neural networks leveraging vast amounts of data) with the potential to reshape finance, transportation, health care, national security, advertising and social media, and other fields. Taught by a sitting judge, a former EU Parliament member, and a law professor, and conceived to serve students with interest in law, business, public policy, design, and ethics, this interactive course surveys current and emerging legal and governance problems related to humanity's relationship to artificially-constructed intelligence. To deepen students' understanding of legal and governance problems in this area, the course explores definitions and foundational concepts associated with AI, likely pathways of AI's evolution, different types of law and policy concerns raised by existing and future versions of AI, and the distinctive domestic and international political economies of AI governance. We will consider discrete settings where regulation of AI is emerging as a challenge or topic of interest, among them: autonomous vehicles, autonomous weapons, labor market decisions, AI in social media/communications platforms, judicial and governmental decision-making, and systemic AI safety problems; the growing body of legal doctrines and policies relevant to the development and control of AI such as the European Union's General Data Protection Regulation and the California Consumer Privacy Act; the connection between governance of manufactured intelligence and related bodies of law, such as administrative law, torts, constitutional principles, civil rights, criminal justice, and international law; and new legal and governance arrangements that could affect the development and use of AI. We will also cover topics associated with the design and development of AI as they relate to law and governance, such as measuring algorithmic bias and explainability of AI models. Cross-cutting themes will include: how law and policy affect the way important societal decisions are justified; the balance of power and responsibility between humans and machines in different settings; the incorporation of multiple values into AI decision-making frameworks; the interplay of norms and formal law; technical complexities that may arise as society scales deployment of AI systems; AI's implications for transnational law and governance and geopolitics; and similarities and differences to other domains of human activity raising regulatory trade-offs and affected by technological change. Note: The course is designed both for students who want a survey of the field and lack any technical knowledge, as well as students who want to gain tools and ideas to deepen their existing interest or technical background in the topic. Students with longer-term interest in or experience with the subject are welcome to do a more technically-oriented paper or project in connection with this class. But technical knowledge or familiarity with AI is not a prerequisite, as various optional class sessions and readings as well as certain in-class material will help provide necessary background. Requirements: The course involves a mix of lectures, practical exercises, and student-led discussion and presentations. Elements used in grading: Requirements include attendance, participation in a student-led group presentation and a group-based practical exercise, two short 3-5 pp. response papers, and either an exam or research paper. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. CONSENT APPLICATION: We will try to accommodate as many people as possible with interest in the course. But to facilitate planning and confirm your level of interest, please fill out an application (available at TBA) by March 10, 2021. Applications received after the deadline will be considered on a rolling basis if space is available. The application is also available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

LAW 4053. Confronting Misinformation Online: Law and Policy. 2-3 Units.
This course will examine contemporary challenges and trade-offs for tech law and policy decision-making presented by false information online. Topics will include policy and regulatory responses to election misinformation; medical misinformation; the spread of misinformation in armed conflict and situations of widespread human rights violations; and conspiracy theories and rumors in the areas of science, climate, religion, and politics. Along with the faculty, guest speakers from academia and industry thought leaders will present on these topics, followed by a discussion. In addition, students will analyze real-world dilemmas confronting policymakers through practical case studies and will assume the role of a policymaker as part of each class. Finally, this course will explore regulatory, policy, technological, and other solutions to enhance the integrity of the online information ecosystem and address the growing problem of false information online. Special Instructions: Up to five Law students, with the consent of the instructors, will have the option to write an independent research paper for Law School Research (R) credit. For students in this section (02), the research paper will replace the Final Policy Memo. All other elements used in grading will apply. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Attendance, Class Participation, Written Assignments; Final Policy Memo or Final Research Paper. Cross-listed with International Policy (INTLPOL 363).

LAW 5001. China Law and Business. 3 Units.
The growing tension between China and the rest of the world after the COVID-19 outbreak has made it more important than ever for businesses and their advisers to understand the legal framework in China and related compliance issues. Given their need to survive the current economic crisis, which will likely last for some time, foreign businesses--however guarded they are--must keep a watchful eye and be ready to seize opportunities arising from an economy that is too big to give up. Designed to prepare students for different opportunities that are likely to touch on China and its regulatory framework, this introductory course examines Chinese legal rules and principles in select business-related areas, including intellectual property, dispute resolution (e.g., arbitration and litigation), foreign investment law, antimonopoly law, and artificial intelligence. Drawing on her 25 years of experience handling issues related to U.S.–China relations, politics, and legal reforms, the instructor will, wherever appropriate, conduct discussions that help shed light on the role of China in the new world order. Through active class participation and analysis of legal and business cases, students will learn both the law on the books and the law in action, as well as strategies that Chinese and international businesses alike can use to overcome limitations in the Chinese legal system. Leaders from the law and business communities will be invited to share their experiences and insights. This course is particularly suitable for law students, MBA students, and students enrolled in the East Asian Studies Program. Undergraduates who have permission from the instructor may also take this course. A Stanford Non-Law Student Course Registration Form is available on the SLS Registrar's Office website. Elements used in grading: class participation (20%), team project (40%), and extended take-home exam (40%). For the team project component, students will work with another student enrolled in the class to produce an analysis of a judicial case or legislation in China and discuss, for example, the implications of the related Chinese legal principles for businesses and/or major differences between these principles and similar U.S. legal principles. Quality team projects may have the opportunity to be included in the professional journal published by the China Guiding Cases Project ("CGCP"), which is led by Dr. Mei Gechlik, the instructor, and her global team of nearly 200 members. Team projects selected for publication will receive editorial input from the CGCP.

LAW 5002. Comparative Law. 3 Units.
The big question in comparative law today - and one that is of key importance to anyone interested in international law - is whether we are currently witnessing a convergence of national legal systems. This course examines this question, as well as the related problem of American exceptionalism, by exploring key aspects of contemporary Western European legal systems, as well as (to a lesser extent) Latin American ones. We will study a range of legal institutions and practices, including such topics as legal education, the role of judges and judging, constitutional courts and judicial review, criminal procedure and punishment, and the rise and regulation of consumer culture. In contrast to the traditional comparative law course, we will also devote substantial time to such pressing public-law questions as racial equality and affirmative action, gender equality and sexual harassment, and church-state relations. In lieu of the final exam, students may opt to write four response papers to the assigned readings (each 5 to 7 double-spaced pages long). After the term begins, students accepted into the course can transfer from section (01) into section (02), with consent of the instructor. Elements used in grading: Class participation; and exam or response papers.

LAW 5003. International Criminal Law and Its Enforcement. 3 Units.
The establishment of a global system of international justice reveals that the promises made during the Nuremberg era are not mere history. Over the past two decades, the international community has undertaken a considerable investment in enforcing international criminal law in conflict and post-conflict situations with the establishment of the international criminal tribunals for the former Yugoslavia, Rwanda, Sierra Leone, East Timor, Cambodia, and Lebanon. In addition, new hybrid models and multilateral investigative institutions are in operation, attesting to the creativity of justice advocates. Meanwhile, national courts are increasingly exercising expanded forms of criminal jurisdiction over international and transnational crimes. The International Criminal Court (ICC) sits at the apex of this system, although it is plagued by challenges to its legitimacy, erratic state cooperation, and persistent perceptions of inefficacy and inefficiency. Moreover, the global commitment to international justice remains inconsistent as calls for criminal accountability for the situations in Sri Lanka, South Sudan, and Syria -- among others -- go unanswered. This course will introduce students to the law, institutions, and actors that constitute the system of international justice and to the political environment in which this system is situated. Readings will map the once and future international criminal law institutions, offer an elemental analysis of international crimes and forms of responsibility as they have evolved in international law, and focus on the challenges of pursuing criminal prosecutions for international crimes. Jurisprudence from the various international and domestic tribunals will be scrutinized with an emphasis on understanding the prosecution's burden, available defenses, and sources of proof. The course will also engage new and perennial debates about the suitability of using criminal justice mechanisms to respond to mass atrocity situations and consider alternatives from the domain of transitional justice. In addition to the substance of international criminal law, this course will also serve as an introduction to international legal reasoning, law-making, and institutional design. It will complement existing courses at the Law School covering comparative law, international organizations, international human rights, criminal law, and public international law. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used grading: Attendance, Class Participation, Written Assignments; Exam or Final Paper. Cross-listed with Human Rights (HUMRTS 116) and International Policy (INTLPOL 354).

LAW 5005. European Union Law. 2-3 Units.
The U.S. and the European Union (which comprises 27 European states and 450 million people) have the largest bilateral trade relationship in the world. Over 50% of the world's GDP is generated on the Transatlantic Marketplace. U.S. companies rely on the EU market for more than half of their global foreign profits, and U.S. investment in the EU is currently three times greater than U.S. investment in the whole of Asia. In recent years, this has tremendously heightened the need for a sound understanding of the legal system of the EU, especially for business and technology lawyers. Responding to this need, this course will, first, examine the internationally unique legal system of the EU as such, as it is applicable to any field of substantive and procedural EU law. Thus, we will look at the legal nature and the different sources of EU law and its relationship with the national law of the EU Member States, including European human rights and fundamental rights protection standards. We will cover the relevant EU law enforcement actions including state liability issues for breach of EU law as well as the jurisdiction of both European Courts and relevant remedies in national courts. Secondly, we will explore the legal framework governing business activities in the EU, from the perspective of a business entity as an internationally operating actor in a European business environment. In this context, we will focus on the most essential fields of EU business law, i.e. (a) the four fundamental economic freedoms of the European Internal Market for goods, services, capital, and persons (enterprises, workforce, immigration), including the legal and economic implications of Brexit, (b) EU competition (antitrust) law, and (c) the new digital European Internal Market and EU data protection and privacy laws. Special attention will be given to the question how companies established outside the EU can efficiently use EU business law to pursue their interests in the EU. Additional study and research opportunities for students in EU law, building on this course, can be found on the SLS EU Law Initiatives website (https://law.stanford.edu/transatlantic-technology-law-forum/european-union-law-initiatives/). Special Instructions: After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Grades for students enrolled in section (01) will be based on writing assignments. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Writing assignments or research paper.

LAW 5006. International Business Transactions and Litigation. 3 Units.
Lawyers are increasingly asked to advise clients with global operations: Twitter reacts to free speech limitations in Turkey; Facebook's user data is regulated by governments around the world; Nike weighs the legal risk from factory fires in Bangladesh; investors spend billions in China without reliable legal protections common elsewhere; companies worry about the consequences of human rights violations. What legal problems arise when firms go global? Through a series of case studies, we put you in the driver's seat and ask you to consider the practical challenges of doing business around the world. We will examine how treaties, international agreements, and informal norms constrain or supplement national laws and review the risks of doing business in nations whose laws are ineffective or unreliable. We also consider some of the costs of globalization. We'll hear from current or former general counsel from global firms such as Intel and G.E. Elements used in grading: a short paper, class participation, and written assignments.

LAW 5007. International Business Negotiation. 3 Units.
This course is structured around a quarter-long, simulated negotiation exercise which provides an in-depth study of the structuring and negotiating of an international business transaction. This class will be taught in counterpart with a class at Berkeley Law School. Students in this class will represent a U.S. pharmaceutical company, and the students in the class at Berkeley will represent an African agricultural production company. The two companies are interested in working together to exploit a new technology developed by the pharmaceutical company that uses the cassava produced by the African agricultural production company. The form of their collaboration could be a joint venture, a licensing agreement or a long term supply contract. The negotiations between the two classes will take place through written exchanges and through real-time negotiation which will be conducted both in-person and via videoconferences. The purpose of the course is to provide students with an opportunity (i) to experience the sequential development of a business transaction over an extended negotiation, (ii) to study the business and legal issues and strategies that impact the negotiation, (iii) to gain insight into the dynamics of negotiating and structuring international business transactions, (iv) to learn about the role that lawyers and law play in these negotiations, (v) to give students experience in drafting communications, and (vi) to provide negotiating experience in a context that replicates actual legal practice with an unfamiliar opposing party (here, the students at Berkeley). Students will also learn about the legal and business issues that may arise in joint ventures, supply agreements and licensing agreements. The thrust of this course is class participation and active involvement in the negotiations process. Students are expected to spend time outside of class, working in teams, to prepare the written exchanges, to prepare for the live negotiations (as well as online negotiations in a world where these will be increasingly the norm), and to prepare for class discussions. Class discussions will focus on the strategy for, and progress of, the negotiations; collective evaluation of the class's preparation for, and performance in, the negotiations; and the substantive legal, business and policy matters that impact on the negotiations. In addition to the regular Monday class, classes will meet for the live negotiations on one Thursday evening (DLA Palo Alto Office, 2000 University Avenue) at 7:00 PM-10:00 PM (10/17), and four Saturday mornings at 10:30 AM (10/3, 10/10, 10/17 and 11/7) in the San Francisco office of DLA Piper (555 Mission Street; close to Montgomery St. BART station). The four Saturday classes will end at 1:30 PM, except for 11/7 which will end at 2:30 PM. Due to the Thursday and Saturday classes, this class will conclude on November 9. Admission to this class is by consent of instructor. The maximum class size is 21, which will include students from GSB or other departments. Attention Waitlist Students: Students on the waitlist for the course will be admitted if spots are available on the basis of their position on the waitlist and degree of study; all waitlist students are encouraged to attend the first class and will be notified as spaces become available. Attention Non-Law Students: You must complete and submit both a consent form and a Non-Law Student Course Add Request Form to the Law School Registrar's Office (Room 100). See Stanford Non-Law Student Course Registration on the SLS Registrar's Office website. Prerequisites: A course in basic negotiations (e.g., Law 7821) or comparable prior experience is recommended. Elements used in grading: Class participation, written assignments and final paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 5008. International Commercial Arbitration. 3 Units.
This course provides a rigorous introduction to the law, theory and practice of international commercial arbitration. International commercial arbitration which has become the default means of settling international disputes and with clients increasingly involved in international business transactions and cross-border activity, is a rapidly growing practice area in law firms of every size. The practice is peripatetic, with many international arbitration lawyers basing themselves in law firms in New York, Washington D.C., Paris, Hong Kong, Singapore, and other major world commercial centers. The course will deal with the internationalist elements of the subject matter, but also examine international commercial arbitration from an American perspective. Students can expect to review both foreign and US commentaries, statutes and case law. The course will comprise of five main topics: (1) an introduction to the field of international commercial arbitration; (2) the agreement to arbitrate; (3) the arbitrators; (4) the arbitration process; and (5) the arbitral award. The intent is to provide a strong academic understanding of the various theories and principles, but with a strong practical bent. Elements used in grading: Attendance, Class Participation, Final Exam.

LAW 5009. International Conflict Resolution. 2 Units.
This seminar examines the challenges of managing and resolving intractable political and violent intergroup and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various strategic, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach examines the need for the parties to conflicts to address the following questions in order to have prospects of creating peaceful relationships: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? We will consider both particular conflicts, such as the Israeli-Palestinian conflict and the South African transition to majority rule, as well as cross-cutting issues, such as the role international legal rules play in facilitating or impeding conflict resolution, the ways intragroup dynamics affect intergroup conflict resolution efforts, and the role of transitional justice mechanisms to address atrocities following civil wars. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of some of the written assignments and final exam for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. This class is limited to 20 students, with an effort made to have students from SLS (12 students will be selected by lottery) and eight non-law students by consent of instructor. This class is cross-listed with International Policy (INTLPOL 250) and Psychology (PSYCH 383).

LAW 5010. International Human Rights. 3 Units.
This course offers an introduction to the theory and practice of human rights. We will examine major sources of international human rights law---including treaties, customary international law, and national law---as well as the institutions in which human rights are contested, adjudicated, and enforced. Key situses of human rights activity include multilateral organizations, like the United Nations Security Council and Human Rights Council; international, regional, and national courts and tribunals; and quasi-judicial treaty bodies, like the U.N. Committee Against Torture. This degree of jurisdictional redundancy offers an opportunity to explore questions of institutional design and interaction as well as processes of normative diffusion. The course will also consider the role of non-state actors---including non-governmental organizations, corporations, terrorist organizations, and ordinary individuals---in promoting and violating human rights. In addition to this survey of the human rights ecosystem, the course will engage some of the fundamental theoretical debates underlying the international human rights project with a focus on perennial questions of legitimacy, justiciability, compliance, and efficacy. Finally, we will explore a range of threats and challenges to the promotion of human rights---both perennial and novel---including economic under-development, terrorism, national security over-reach, patriarchy, and racism. We will read case law originating from all over the world, including the United States. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation; exam or final long research paper. Cross-listed with Human Rights (HUMRTS 117) and International Policy (INTLPOL 355).

LAW 5011. International Investment Law. 2-3 Units.
The past few decades have seen a dramatic increase in the number of bilateral investment treaties and other treaties with investment-related provisions, followed by a sharp rise in the number of disputes between private investors and sovereign states pursuant to investor-state dispute settlement (ISDS) provisions. This course will cover four broad areas: (I) the historical and policy origins of international investment law; (II) the substantive obligations and standards governing the investor-state relationship; (III) the investor-state arbitration process; and (IV) current controversies over the legitimacy and desirability of ISDS. The course uses materials from international investment treaty texts, case law, and commentaries to enable students to evaluate and apply legal doctrine to future situations. Students will produce a variety of writing assignments such as case commentaries and short "briefs," and will serve as discussion facilitators along with the instructors. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance and paper(s).

LAW 5012. International Criminal Justice. 3 Units.
(Formerly Law 752) The establishment of a global system of international justice reveals that the promises made during the Nuremberg era are not mere history. Over the past decade, the international community has undertaken a considerable investment in enforcing international criminal law in conflict and post-conflict situations with the establishment of the international criminal tribunals for the former Yugoslavia, Rwanda, Sierra Leone, East Timor, Cambodia, and Lebanon. As these ad hoc institutions wind down, the International Criminal Court (ICC) has become fully functional, although it is plagued by challenges to its legitimacy, erratic state cooperation, and persistent perceptions of inefficacy and inefficiency. Moreover, the global commitment to international justice remains inconsistent as calls for criminal accountability for the situations in Sri Lanka, South Sudan, and Syria---among others---go unanswered. This intensive mini-course in the early September Term will introduce students to the law, institutions, and actors that constitute the system of international criminal justice and to the political environment in which it operates. The classroom component (offered at Stanford during the first week of the course) will undertake an elemental analysis of international crimes as they have evolved in international law and focus on the challenges of interpreting these norms in a criminal prosecution. Jurisprudence from the various international tribunals will be scrutinized with an emphasis on understanding the prosecution's burden, available defenses, and sources of proof. The course will culminate in a visit to The Hague in the second week of the course, during which time students will meet with principals from the tribunals, including prosecutors, judges, administrators, and members of the defense bar. In addition to the substance of international criminal law, this course will also serve as an introduction to international legal reasoning, law-making, and institutional design. It will complement existing courses at the Law School covering comparative law, international organizations, international human rights, and public international law. The course grade will be based on a series of short papers and active in-class engagement with the assigned materials. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 5013. International Law. 4 Units.
This course provides a general introduction to international law and its role in today's complex and interdependent world. We will begin by considering foundational questions about the nature of international law, such as: the origins of international law in the sovereign equality of states; the sources of international law (including treaties and customary international law); the subjects of international law; principles of state responsibility; the bases upon which states may exercise jurisdiction; and the global governance challenges arising from the absence of assured mechanisms for the interpretation or enforcement of international law. We will then examine the incorporation and operation of international law in the U.S. legal system. In the second half of the course, we will look at a series of contemporary international law topics and issues, including international dispute resolution, international human rights law, the law governing coercion and the use of armed force, the law of armed conflict, international environmental law, and international criminal law. Throughout, we will consider current issues and problems arising in the international arena, as well as whether and to what extent international law affects the behavior of states. This course provides a general grounding in public international law and a foundation for more advanced or specialized international law courses. Elements used in grading: Class participation, optional paper, and final exam. Cross-listed with International Policy (INTLPOL 350).

LAW 5014. International Trade Law. 3 Units.
This course will survey the law and policy of modern international trade agreements, with an emphasis on the treaty network of the World Trade Organization (WTO) and certain other arrangements to which the United States is a party, as well as U.S. laws governing "unfair trade practices" such as subsidization and dumping. Topics will include the political economy of the treaty framework, the relationship between international and domestic law, bilateralism versus multilateralism, the current crisis in the WTO dispute resolution system and its origins, and the possible tensions between international trade law and domestic regulation. Particular attention will also be directed to the current trade row with China and the imposition of trade restrictions on national security grounds by the Trump administration. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance and final exam or research paper.

LAW 5015. International Dealmaking: Vienna Field Negotiation. 2 Units.
This course is structured around a week-long, simulated negotiation exercise which provides an in-depth study of the structuring and negotiating of an international business transaction. This class will be taught in counterpart with a class at University of Vienna Law School. Students in this class will represent a U.S. pharmaceutical company, and the students in the class at Vienna will represent an African agricultural production company. The two companies are interested in working together to exploit a new technology developed by the pharmaceutical company that uses the cassava produced by the African agricultural production company. The form of their collaboration could be a joint venture, a licensing agreement or a long-term supply contract, or some combination. The negotiations between the two classes will take place through written exchanges and through real-time negotiation which will be conducted in-person. The purpose of the course is to provide students with an opportunity (i) to experience the sequential development of a business transaction over an extended negotiation, (ii) to study the business and legal issues and strategies that impact the negotiation, (iii) to gain insight into the professional and cultural dynamics of negotiating and structuring international business transactions, (iv) to learn about the role that lawyers and law play in these negotiations, (v) to give students experience in drafting communications, and (vi) to provide negotiating experience in a context that replicates actual legal practice with an unfamiliar opposing party. Students will also learn about the legal and business issues that may arise in joint ventures, supply agreements and licensing agreements. The thrust of this course is class participation and active involvement in the negotiations process. Students are expected to spend time outside of class, working in teams, to prepare for class discussions involving the written exchanges, as well as preparing for the live negotiations. Class discussions will focus on the strategy for, and progress of, the negotiations, as well as the substantive legal, business and policy matters that impact on the negotiations. The course will be limited by consent to eight (8) students. Prerequisites: A course in basic negotiations (e.g., Law 7821) or comparable prior experience is recommended. Elements used in grading: Class participation, written assignments and final paper. There will be two preparatory sessions at Stanford during February and March 2018. Students in the class will travel to Vienna on or before Saturday, March 24th. Class sessions will begin on Sunday afternoon, March 25, and continue all day Monday, March 26 through Wednesday, March 28th. [Cultural tour and closing dinner on Thursday, March 29th, and depart for USA on Friday, March 30th.].

LAW 5016. Japanese Law, Society and Economy. 3 Units.
This course provides a critical introduction to the institutions and actors that comprise the Japanese legal system. Throughout the course, law is examined within the broader context of Japanese social, political, and economic institutions. Topics covered include the legal profession, constitutional law, dispute resolution, family law, employment law, and corporate law. Leading scholarly commentaries on law's role in Japanese life are also examined and critiqued. Thematically, the course offers an extended exploration of the "transplantation" of foreign law and the role of law in Japan's social structure and economic development. All readings and instruction are in English. Japanese language ability and knowledge of Japan are not required. Elements used in grading: Attendance, Class Participation, Written Assignment, and Final Exam.

LAW 5017. Law in Latin America. 2 Units.
(Formerly Law 582) The course has two main goals: to introduce students to the civil law tradition and to gain an understanding of the ways in which the law is practiced and lived in Latin American and Spain. Special attention is given to law firms, courts and legal education. The course will be especially useful for those expecting to have contact with Latin American countries or Spain in their practice of law and for those interested in comparative law or Latin American studies. All required readings are in English. In addition, students may review and present elective readings in Spanish and Portuguese. The ability to read in these languages is appreciated but not required. Elements used in grading: Class Participation, Written Assignments, Final Paper.

LAW 5018. Legal Institutions and Global Economic Development. 3 Units.
This course will cover readings on the relationship between legal institutions and economic development across different countries. Some topics are set by the instructor, while others arise depending on the interests of students as they develop their paper topics. Topics in the past have included the role of legal and colonial origins, rights in property and contract, natural resources, political stability, governance/corruption, and social and economic rights. Readings will emphasize both broad themes and policy in these areas, with a special emphasis on considering varieties of evidence, including case studies, comparative history, statistical studies with observational data, and field experiments. No prior background in empirical methods is necessary or required. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Written Assignments or Final Research Paper.

LAW 5019. The Law of War. 2 Units.
The course explores the international law regime governing war, including the law that regulates when states may resort to force and the constraints on the conduct of warfare itself. We will begin by considering when states may permissibly use force, and how changing security threats, including transnational terrorism, the proliferation of weapons of mass destruction, and the commission of widespread humanitarian atrocities, challenge and are reshaping the legal framework on recourse to force. We will then explore the rules governing the conduct of military operations, including the constraints on the means and methods of war, the rules governing the treatment of detainees, and the protections extended to civilians and noncombatants in armed conflict. A particular focus of the class will be the application of these rules in non-traditional, asymmetric conflicts between states and nonstate armed groups. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of some of the written assignments and the final exam required for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 5021. Current Topics in International Economic Law. 2 Units.
This seminar will explore select topics in international economic law, including but not limited to: the formation of new free trade agreements (in particular the proposed Pacific and Atlantic partnerships); the inclusion of "next generation" issues into trade agreements; the expanding use of investment arbitration; the architecture of the Eurozone in relation to recent European Union jurisprudence and policy; and the global regulation of cross-border financial flows. An introductory course in international trade law (or equivalent preparation) is prerequisite. In addition to a final paper, students will be expected to produce weekly reading responses. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 5023. The Rule of Law - The Foundation of Functional Communities. 2 Units.
We will seek to determine a useful meaning of the notion of the rule of law, to identify a credible measurement of adherence, and to explore the importance of the rule of law in terms of economic, socio-political and human development. We will focus on accountable government and private actors; just laws; open processes for the enactment, administration and enforcement of laws and impartial dispute resolution. Readings will include the works of philosophers, political theorists and jurists from the 17th to the 21st century as well as contemporary scholars. This seminar will feature experts in the field as guest lectures and requires three reaction papers from all participants. Elements used in grading: Class participation and reaction papers.

LAW 5025. Global Poverty and the Law. 3 Units.
With more than a billion people living on less than $2 a day, global poverty is one of the biggest challenges currently facing humanity. Even though those who suffer the most are located in the developing world, many of the policies, economic opportunities, and legal actions that offer the biggest potential for global poverty alleviation are made in the United States. This course will provide an introduction to the study of global poverty. What causes poverty? Why have some parts of the developing world done better at alleviating poverty than others? Can the world ever be free of poverty, as the World Bank's official motto suggests? How is the COVID pandemic affecting global poverty, and how should policymakers think about any potential tradeoffs? More generally, what can aspiring lawyers do to improve the condition of the world's impoverished? These are some of the questions this course is designed to address. This course is intended especially for future lawyers and policymakers who seek a deeper understanding of the developing world. After a brief overview that will familiarize students with the major concepts and empirical debates in poverty and development studies, we will examine a variety of 'causes' of poverty, from poor governance to lack of economic opportunity to the role of society. Since this course is just as much about what can be done, we shall also consider applied approaches to poverty alleviation. These types of interventions include political/legal reforms such as anti-corruption initiatives, 'rule of law' interventions, right to information programs, privatization, and community-driven development models; economic solutions such as cash transfers and microfinance; and technological approaches such as new methods for measuring policy impact and the application of new technologies for state identification and distribution programs. In addition to more typical scholarly readings, students will review poverty alleviation policy proposals and contracts made by various stakeholders (academics, NGOs, states, international bodies, etc.). Grading is based on participation, a presentation of research or a proposal, and, in consultation with the professor, a research paper. The research paper may be a group project (Section 01) graded MP/R/F or an individual in-depth research proposal either of which could be the basis for future field research (Section 02) graded H/P/R/F. Students approved for Section 01 or Section 02 may receive R credit. After the term begins, students accepted into the course can transfer from Section 01 into Section 02 with consent of the instructor. Automatic grading penalty waived for research paper. This course is taught in conjunction with the India Field Study component (Law 5026). Students may enroll for this course alone or for both this course and Law 5026 with consent of the instructor (12 students will come to India). See Law 5026 for application instructions. Cross-listed with International Policy Studies (INTLPOL 281).

LAW 5026. Global Poverty, Corruption, and the Law: India Field Study. 1 Unit.
This is the India Field Study component of Global Poverty and the Law (Law 5025). For details, see course description for Law 5025. Corruption is one of the most difficult challenges facing societies across the developing world. Why is corruption so pervasive and what can be done to address it? During spring break 2019, this course will be held in Delhi, India and will consist of conversations with lawyers, politicians, scholars, leaders in civil society, and senior bureaucrats who are active in anti-corruption efforts. Students will also meet frontline bureaucrats (i.e., cops and government teachers) who will share their own perspectives about the problem. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and a visa to travel to India. Students will be required to attend two dinner meetings during the Winter Quarter in preparation for the trip. Elements used in grading: class participation and short writing assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website. See Consent Application Form for instructions and submission deadline.

LAW 5027. Social Conflict, Social Justice, and Human Rights in 21st Century Latin America. 2 Units.
This course will consider significant sources of social conflict, efforts to achieve social justice and the relevance and impact of human rights norms and oversight mechanisms in Latin America in the 21st Century. Led by Prof. James Cavallaro, the course will involve weekly sessions, each focusing on a particular topic. Readings will provide the basis for short student reflection papers to be prepared in advance of each session. The class will generally involve an initial presentation, followed by seminar-style discussion. Topics will include the human rights crisis facing Mexico, in particular, forced disappearances, summary executions and torture. We will consider, for example, the forced disappearance of 43 students in September 2014 (Ayotzinapa) in at least one session. The current political and human rights crisis facing Venezuela will be considered, likely by an expert guest speaker. So too will the peace process in Colombia and the Special Jurisdiction for Peace. Other sessions will consider social conflict and justice issues across the region. These issues will include the resurgence of populism in the United States and Latin America and its effects on social justice and human rights, the continued relevance of the Organization of American States and its human rights bodies, migration and human rights, the rights of indigenous and traditional peoples and models of development, among others. Elements used in grading: Grades will be based on class participation, and either several short reflection papers (section 01) or a final paper (section 02). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 5028. Regional Human Rights Protections: The Inter-American System. 3 Units.
This course provides an in-depth introduction to the doctrine, practice and critiques of the Inter-American Human Rights System ("IASHR"). Students will examine the major instruments for human rights protections in the IASHR, the Inter-American Court and Commission's procedure and jurisprudence, as well as the obstacles and opportunities that civil society, victims, and advocates encounter when engaging the inter-American system. The Course will consider issues of implementation, and the types of measures and forms of relief that can be sought from the Court and the Commission. The inter-American system has played a crucial role in opening spaces for debate on human rights protections in Latin America and the Caribbean, increasing protections at the domestic level, and supporting civil society in its quest for accountability for massive human rights violations. The system has also played a role in civil society efforts to bring the human rights debate home, including in the United States. Students will have an opportunity to cast a comparative look at the inter-American and the European Human Rights systems and to consider the comparative advantages, disadvantages and complementary potential of regional human rights systems and universal international human rights and criminal justice bodies. Cross Registration: This Course is open to graduate students across the university, with permission of the instructor. Preference for cross-registration by non-Law School students will be given to students enrolled in the Master of Arts program in Latin American Studies. Elements used in grading: Class Participation, Attendance, Short Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 5029. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.
(Formerly Law 675) This course offers an interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, including trafficking for forced prostitution, labor exploitation, and organ harvesting. In each of these areas, we will focus on human rights violations and remedies. The course aims to: 1. Provide the historical context for the development and spread of human trafficking. 2. Analyze current international and domestic legal and policy frameworks to combat trafficking and evaluate their practical implementation. 3. Examine the medical, psychological, and public health issues involved. 4. Stimulate ideas for new interventions. Instruction will combine lectures and small group discussion, and uses problem-based learning. Students interested in service learning should also enroll in History 6W/7W (FemGen 6W/7W), a two-quarter service learning workshop. Elements used in grading: Attendance; participation; written assignments; and final exam. This class is cross-listed with Feminist, Gender and Sexuality Studies (FEMGEN 5C, FEMGEN 105C), History (HISTORY 5C, 105C), Human Biology (HUMBIO 178T), International Relations (INTNLREL 105C) & School of Medicine General (SOMGEN 205).

LAW 5031. Law and Society in Late Imperial China. 3 Units.
(Formerly Law 773) Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Cross-listed with Chinese (CHINA 392B) and History (HISTORY 392B).

LAW 5033. International Justice. 2-3 Units.
(Formerly Law 786) Mass atrocities---including genocide, war crimes, and crimes against humanity---continue to rage around the world, from Syria and South Sudan to Iraq and Myanmar. This course examines origins, operations, and outcomes of historical and contemporary international justice measures to address such heinous crimes. We will consider the full range of judicial, legislative, and executive "transitional justice" mechanisms available to policymakers as societies emerge from periods of violence and repression. These mechanisms include war crimes tribunals (such as the International Criminal Court), truth commissions, amnesties, lustration, exile, indefinite detention, lethal force, and inaction. The course draws on various case studies, including present-day Syria and Iraq, Rwanda and the Balkans in the 1990s, and World War II. Readings address the legal, political, and philosophical underpinnings of justice; questions of institutional design; and how different societies have balanced competing policy imperatives. Students may take the course for two or three units depending on the length of the paper. Students will receive Research credit for the seminar. This class is limited to 20 students, with an effort made to have students from SLS (15 students will be selected by lottery) and five non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 5034. Human Trafficking: Law and Policy. 3 Units.
Taking an historical and comparative perspective, this course will introduce students to the international, domestic, foreign, and sub-national law governing the many manifestations of human trafficking (including legal prohibitions on forced labor and modern forms of slavery, sexual exploitation, organ trafficking, and child soldiering). We will also explore the diplomatic and policy tools employed by state and local governments to tackle this phenomenon. Class sessions will be comprised of a combination of lectures, seminar discussions, and guest speakers. Students have the option of completing a research paper or a take-home final exam. The first eight weeks of the course will coincide with the first eight weeks of winter quarter and will be conducted at Stanford Law School. Enrollment in the Thailand field study option is limited to 12 students (See Law 5035 for application instructions and deadline). Elements used in grading: Attendance, Class Participation, Written Assignments; Final Exam, or Final Research Paper. Cross-listed with International Policy (INTLPOL 356).

LAW 5035. Human Trafficking: Law and Policy - Thailand: Field Study. 1 Unit.
This field study is being taught in conduction with Law 5034, offered Winter Quarter 2019. During spring break, select students enrolled in Law 5035 will travel to Thailand to tour elements of the anti-trafficking ecosystem in Bangkok and Chiang Mai (the largest city in northern Thailand). Thailand is considered a source, transit, and destination state for many forms of human trafficking. As part of this field study, students will meet with multilateral organizations, government officials, non-governmental organizations and survivors' organizations, and other individuals involved in the anti-trafficking movement. Students will also consider the legal and ethical challenges associated with working in this field. Enrollment is limited to 12 students who will be chosen by lottery (with preference given to 3Ls). Grading will be based on participation in field study activities and a final reflection paper. N.B. Students will require a passport (valid 6 months from the date of entry) to visit Thailand. U.S. citizens do not require a visa for stays of less than 30 days. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 5036. Law and Ethics of War. 2 Units.
War is violent and often devastates the lives of those caught up in it. Yet it is also a means by which political communities protect themselves, pursue collective interests, and defend their rights. When, if ever, is the recourse to armed force justified, either as a legal or moral matter? And what rules, if any, do law and morality impose on the conduct of war? The course explores both the international law regime and the just war theory principles governing war. We will begin by considering when states may permissibly use force, and how changing security threats, including terrorism, the proliferation of weapons of mass destruction, and the impulse to respond to widespread humanitarian atrocities challenge and are reshaping the legal framework on recourse to force. We will then explore the rules governing the conduct of warfare itself, including the constraints on the means and methods of war, the requirement to avoid targeting non-combatants in armed conflict, and the rules governing the treatment of detainees. A particular focus of the class will be the application of these rules in non-traditional, asymmetric conflicts between states and non-state armed groups. Throughout, we will consider the relationship between just war theory and the international law regime governing the use of force, when they conform with one another and when they diverge, and why. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of the written assignments and final exam for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation; Written Assignments, Final Exam or Research Paper.

LAW 5037. Qing Legal Documents. 3 Units.
How to use Qing legal documents for research. Winter: sample documents that introduce the main genres including: the Qing code and commentaries; magistrates' handbooks and published case collections; and case records from Chinese archives. Spring: class meets occasionally; students complete research papers. Prerequisite: advanced reading ability in Chinese. Elements used in grading: Students complete research papers. This course is cross-listed with History (HISTORY 495A) and Chinese (CHINA 495A).

LAW 5038. Jewish Law: Introduction and Topics. 2 Units.
This course will provide an overview of the field of Jewish Law and will seek to provide a few case studies of topics in Jewish Law. All the readings are in English and this course presupposes no background in Jewish Law. Jewish Law is the world's oldest complex legal systems with distinct and idiosyncratic approaches to family, commercial, ritual and many other areas of law. It also has developed an elaborate "conflicts of law" sub-literature focusing on when should Jewish Law apply and when should some other legal system apply, reflecting the long history of the Jewish community in the diaspora as a minority. In this course, we will consider how Jewish law approaches a number of specific topics and we will ponder as well the proper interaction between Jewish law and secular legal norms, Jewish Law and changes in technology, Jewish law and sovereignty, Jewish Law and Bioethics and Jewish law and Family. Other topics will be added as we all see fit. Students who are interested in making a presentation on an area of their choice are welcome to do so. The course will seek to include an optional supplementary "field trip" to see a rabbinical court in action in California. The Learning Outcomes provided by this court include the following: Students who take this course will: 1. Exhibit knowledge and understanding of key concepts in substantive law, procedural law, and legal thought in Jewish Law. 2. Demonstrate facility with legal analysis and reasoning in the Jewish Legal tradition and will demonstrate the ability to conduct legal research in Jewish Law. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: Attendance, Class Participation, Final Paper. Cross-listed with Jewish Studies (JEWISHST 265).

LAW 5039. The Future of Global Cooperation. 1-2 Unit.
To mount a response to threats to peace and security, should states act unilaterally, seek to build ad hoc coalitions of the willing, or work through multilateral institutions? What are the benefits and risks of global cooperation? This seminar interrogates these questions by examining the role that international organizations play in responding to global threats in the modern era. The first section focuses on the advent of the modern global institutional architecture, considering its historical context, theoretical underpinnings, sources of legitimacy and power (or lack thereof), and the role of regional, subnational, and nongovernmental actors. The second section considers the efficacy of global institutions in responding to transnational threats through recent case studies, including the Syrian civil war, the Paris Climate Accord, the Iran Nuclear Deal, and 2014-2016 Ebola outbreak in West Africa. The final section explores the future of the liberal world order and its institutions, and considers alternative models of global cooperation. For LAW 5039, students may enroll for one unit (Section 01) or students may write a long policy memo for an additional unit of credit. Students electing to write the long policy memo may enroll for two units (Section 02). Elements used in grading: Attendance, class participation, written assignments, and a final presentation. This class is capped at 20 students. Please contact instructor for consent to enroll. Students accepted in LAW 5039 should contact the SLS Registrar's for permission to enroll in the class in Axess. Cross-listed with International Policy (INTLPOL 217).

LAW 5040. Law, Lawyers, and Transformation in Democratic South Africa. 3 Units.

Registration for this class took place in Spring 2019. Enrollment in the class is currently closed. South Africa's transition to democracy in 1994 marked the formal end of the comprehensive political, economic, and social system of racial subordination known as apartheid. The country has changed dramatically since then, as the government has built several million new housing units, created social welfare systems, and created an array of government and private sector programs to combat discrimination and redress the effects of subordination. Yet the country remains among the most unequal in the world, with 64% of black South Africans living below the poverty line, compared to 1% of whites. Most non-white South Africans receive poor education, live in substandard housing, and have limited employment opportunities. In the last five years, discontent with the pace of economic and social transformation has boiled over. In 2015, university campuses erupted in protests. Students' demands quickly expanded from the removal of statutes of white colonizers to wider "decolonization" of university faculty and curricula and the expansion of access to higher education. "Born-free" student activists are now calling for faster, more radical transformation not just of campuses but of the society as a whole; many denounce what they see as the Mandela generation's overly conciliatory approach to white privilege in the economy, society, and interpersonal relations. Since 2018 there is new dynamism at the top, too: many South Africans believe that their new President, Cyril Ramaphosa, will curtail corruption and expand redistributive economic and social policies. This course provides an opportunity to engage South Africa at this exciting historical moment, through intensive study during a week at Stanford and meetings with lawyers, activists, community members, and possibly students, journalists, and politicians during a week in Cape Town. We will focus on how lawyers are struggling for social justice and economic and social transformation--sometimes through ambitious arguments using South Africa's highly progressive constitution, but more often by supporting social movements day to day. Our learning will be grounded in specific cases, such as of the shackdwellers movement Abahlali baseMjondolo; Equal Education, an organization of high school-age students; and pioneering class actions on behalf of injured gold miners. These will enable us to explore various ways law and lawyers fit into social change, the challenges and rewards of such work, and how their perspectives overlap with and diverge from those of their clients. At the same time, we will draw connections between this work and the grand debates and historical arc described above. While comparing South Africa with the United States will not be a primary purpose of the course, we may well see interesting parallels and divergences, and will have some space to discuss those, among ourselves and perhaps with our South African interlocutors. The format of the course will be unusual: We will return to campus before the Fall quarter and spend the week of September 9 preparing intensively at Stanford. We will meet daily for approximately three hours of discussion, collaborative exercises, and some lecturing, as well as read assigned material outside class. We will (a) learn some essential background on apartheid; current legal, political, economic, and social conditions; and our case studies; (b) begin to analyze legal activism methods and the challenges of transformation; and (c) prepare topics and specific questions for our meetings in South Africa, which students will lead. The following weekend we will fly to Cape Town, where we will spend the week of September 16 learning from visits to organizations and communities, and possibly one or two museums or other sites, as well as from discussions with a range of South Africans. We will return the weekend before the Fall quarter begins. Stanford Law School is committed to equal access to field study courses regardless of financial situation. The School covers nearly all expenses during the trip, but students must pay for their own transportation to and from South Africa. Students who qualify for financial aid can receive a supplemental award to cover those transportation costs. Elements use in grading: The course grade will be based on a series of short papers (one or more of which may be due after our return), active in-class engagement with the assigned materials, and preparation for and participation in interviews during the trip, and. The course is open to rising 2Ls and 3Ls. CONSENT APPLICATION: To apply for this course, students must complete and

LAW 5041. Business, Institutions, and Corruption in Latin America. 2 Units.

Corruption is a global problem. Although data suggests that there are places that accumulate more harmful practices than Latin American countries, Latin America is perceived as a champion of corruption. This macro vision may hide the distinctive characteristics of each country, as Latin America is a patchwork of idiosyncrasies regarding corruption. However, Latin American countries are narrowing their differences to closer patterns at a considerable pace. Latin America is facing an unprecedented chapter in its history against corruption due to the Organisation for Economic Co-operation and Development (OECD) and other international organizations' recommendations, the Foreign Corrupt Practices Act (the US federal law that addresses accounting transparency requirements for companies that negotiate bonds in the US), and other constraints related to economic globalization. This course will present students with the theoretical literature that aims to explain corruption in Latin America, the technical constraints that have recently reshaped its practices, and the latest most significant cases. From the petty bribery that is essential for people to gain access to basic needs, to the sophisticated structure that is the mainstay of organized crime, corruption embodies an enormous range of different practices. Risk and uncertainty, information asymmetry, and contract enforceability are traditional barriers to the development of ethical business in Latin America in general. However, recent episodes in Latin America have demonstrated that corruption involving politicians and public procurement concretizes huge entry barriers to the free market. One of the aims of this course is to show how this kind of corruption is incorporated within the design of legal statutes and the practices of institutions. Some of the questions raised by this course will address issues including the following: what companies and institutions can do to improve fair trading in Latin America and stop the vicious cycle of corruption; how successful they might be considering Latin America's social and political environment; what challenges are introduced by the Foreign Corruption Practices Act; how political austerity in Latin America relates to the ability to inspect areas that are vulnerable to corruption and criminality; what the recent plea-bargain cases in Latin America, especially Brazil, show about hands-on experience with corruption; and how this knowledge can prepare lawyers to prevent their clients from falling into the same path-dependent dangers. The course is designed for JD candidates and LLM students, but graduate students from other departments are most welcome. Legal jargon is not expected. We will learn through seminar-style discussions and lectures. Elements used in grading are class participation, attendance, and a few reaction papers.

LAW 5042. Comparative Law and Society. 2 Units.
This is a course about the relationship between law and the larger society--but with readings drawn almost entirely from studies carried out in countries other than the United States. The course will look, for examples, at readings from Chile, China, England, Germany, Israel, Japan, Jordan, Russia, Taiwan, Thailand, and Venezuela. Introduction: The aim of the seminar is to introduce students to studies of the relationship between law and society, but with an international and comparative perspective. The readings use a broad range of methods and techniques, to explore how legal rules, processes and institutions are framed by, and influence, the social context. Paying attention to the social context opens the door to a richer understanding of the law, a better explanation of what makes it work (or not work) and how it changes over time. Traditionally the field called comparative law has concentrated heavily on differences between common law and civil law; and at principles and doctrines and formal rules. But in the real world we know that systems can behave every differently even if they share formal rules and institutions. Consider, for example, Canada and Jamaica, both common law countries; or Japan, Haiti and Spain --all civil law countries. In many ways, the world today is a global village. Lawyers, too, often work across borders. It is the theory of the course that we can learn a lot about law and legal institutions, if we look at experiences in different countries: plea bargaining in England; how victims of motorcycle accidents in Changmai, Thailand, deal with tort law; how the black market for used cars functioned in the former East Germany; the controversy over honor killings in Jordan; disputes over the sale of tunas in Tokyo's fish market; informal lending markets in Taiwan. The aim is a more general understanding of how legal systems work, how structure and culture interact; and the role of lawyers, judges, courts, and institutions in different societies. There are lessons to be learned about American society as well. Methodology and evaluation: The discussions in the classes will focus on a selection of readings from Law in Many Societies --a reader edited by Lawrence Friedman, Rogelio Pérez-Perdomo and Manuel Gómez (Stanford University Press, 2011). Other readings are contained in a package available to students in the class. Some of the readings are classics in the field. Others raise contemporary problems. The course is a traditional seminar, in the sense that everyone in the seminar will be encouraged to speak, and to contribute to general discussion. For each class, each student must write a short essay, reflecting on the readings (two or so pages at most or about 500 words). These should be sent to both professors (lmf@stanford.edu & rperez3@law.stanford.edu) and to fellow students, by email, not later than 24 hours before the class. These reflection papers allow participants to tell us what aspects of the readings they found significant, and what they found right or wrong about the readings. No footnotes or research are expected, and are, in fact, discouraged. The reflection papers are required; but they are not graded. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: The course grade will reflect class participation, and an extended take-home exam or a research paper at the end of the quarter.

LAW 5043. Introduction to Islamic Law. 1 Unit.
Islamic law, along with English common law and Roman law, is one of the world's great legal systems. This course will introduce students to the following topics: the material sources of Islamic law; the history of its development from western Arabia into a global legal system; basic elements of Muslim jurisprudential theory; and, an introduction to Islamic family law as an exemplar of the development of Islamic law from revealed sources to modern statutory law. Course readings will consist of primary sources in translation along with relevant scholarly articles. Elements used in grading: Grades will be determined by a combination of in class participation and a final, ten page paper.

LAW 5101. Afghanistan Legal Education Project (ALEP) Seminar. 3 Units.
The Afghanistan Legal Education Project (ALEP) Seminar is only open to student preselected in spring 2019. The ALEP Seminar will begin with an intensive bootcamp taught by ALEP leadership and members of the law faculty at American University of Afghanistan (AUAF). We will explore the Afghan sociopolitical and legal context, rule of law efforts and challenges in Afghanistan, and the role of legal education in legal development. Participants will learn from Afghan law professors about Shari'a law, customary law, Afghan civil law, and the challenges presented by Afghanistan's pluralistic legal system in preparation to work on legal curriculum to be taught at AUAF. The bootcamp, held in Asia, will be highly participatory and requires full attendance. During the remainder of the quarter, participants will receive training in curriculum creation and organizational development in preparation for authoring an Afghan legal textbook and assuming ALEP programmatic responsibilities. Consent Process: Only students selected in spring 2019 have consent to take the ALEP Seminar. Their names will be given to the Registrar, who will automatically enroll them in the course in fall 2019. Elements used in grading: Grading is based on mandatory attendance of the bootcamp, participation, assignments, and authoring a new chapter and/or revision of an existing textbook chapter. Note: Regular deadline for submission of R-Paper to be waived for ALEP Seminar.

LAW 5102. Advanced Afghanistan Legal Education Seminar. 3 Units.
Students who participate in the Afghanistan Legal Education Seminar in the fall quarter will continue their work in the Advanced Seminar in the winter or spring quarter. Only students selected for the Afghanistan Legal Education Project (ALEP) in spring 2018 may participate. Students will author textbook chapters, assume programmatic responsibilities, and meet regularly as a team and individually with the ALEP faculty. Note: Regular deadline for submission of R-Paper to be waived for Advanced ALEP Seminar. Elements used in grading: Attendance, Written Assignments, Final Paper.

LAW 5103. State-Building and the Rule of Law Seminar. 3 Units.
The State-Building and the Rule of Law Seminar is centrally concerned with bridging theory and practice. The seminar introduces the key theories relevant to state-building generally, and strengthening the rule of law in particular. This course explores the multidisciplinary nature of development -- through readings, lectures, guest lectures, case studies, and seminar discussions --- and weighs how lawyers fit in and contribute to the process. The set of developing countries considered within the scope of this workshop is broad. It includes, among others, states engaged in post-conflict reconstruction, e.g., Cambodia, Timor Leste, Rwanda, Iraq, Sierra Leone; states still in conflict, e.g., Afghanistan, Somalia; the poorest states of the world that may not fall neatly into the categories of conflict or post-conflict, e.g., Nepal, Haiti; least developed states that are not marked by high levels of violent conflict at all, e.g., Bhutan; and more developed states at critical stages of transition, e.g., Tunisia, Georgia, Ukraine, Hungary. The course is updated to include current events affecting state-building processes, including COVID, the regression of the rule of law, and the emergence of China. Elements used in grading: Grading is based on participation, a presentation of research or a proposal, and, in consultation with the instructors, a research paper. The research paper may be a group project (Section 01) graded MP/R/F or an individual in-depth research paper or proposal, either of which could be the basis for future field research (Section 02) graded H/P/R/F. Students approved for Section 01 or Section 02 may receive EL credit or R credit. Automatic grading penalty waived for submission of the final work products. Cross-listed with International Policy (INTLPOL 352).

LAW 5104. Advanced State-Building and Rule of Law Seminar. 3 Units.
Students who participate in the State-Building and Rule of Law Seminar in the fall quarter may seek consent to continue their work in the Advanced Seminar in winter or spring quarter. Six students per quarter will be allowed to participate. Students will work on individual applied or scholarly research projects developed in collaboration with the professor, and meet regularly as a group to discuss shared research challenges and issues. There may be funds available for fieldwork necessary to complete applied research projects. Determinations will be made by the professor and Rule of Law Program. Students may write a paper for Research credit with instructor consent. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Automatic grading penalty waived for submission of the final work products. Elements used in grading: Attendance, Written Assignments, Final Paper.

LAW 5201. Foreign Legal Study: Bucerius Law School. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5204. Foreign Legal Study: Hebrew University of Jerusalem. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5207. Foreign Legal Study: Institut d'Etudes Politiques de Paris. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5210. Foreign Legal Study: National University of Singapore. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5213. Foreign Legal Study: Peking University Law School. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5216. Foreign Legal Study: Waseda University. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5219. Foreign Legal Study: University of Vienna. 9-14 Units.
This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS) -- Hamburg, Germany, Hebrew University of Jerusalem (HU) -- Jerusalem, Israel, Institut d'Études Politiques de Paris (Sciences Po) -- Paris, France, National University of Singapore (NUS) -- Singapore, Peking University Law School (PKU) -- Beijing, China, University of Vienna -- Vienna, Austria, and Waseda University Law School (WLS) -- Tokyo, Japan. See Foreign Legal Study Program at https://law.stanford.edu/education/only-at-sls/global-initiative/foreign-legal-studies-program/ for study abroad opportunities each academic year and for application deadlines. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 5801. Legal Studies Workshop. 1 Unit.
The Legal Studies Workshop is designed to support students working on a piece of legal scholarship with an eye to publication. The workshop will meet every other week in the fall, winter, and spring quarters, and most quarters over the following two years. Students may sign up for as many quarters they wish, and will receive one credit for each quarter they are enrolled. Each session will be devoted to presentations of one or two student works-in-progress. Every student is expected to present his or her own work at least once over the quarters she or he is enrolled in the Workshop, and to provide constructive oral feedback on others' work. We welcome students who are just starting to explore their interest in an academic career; if you have any questions about whether the course is suitable for you, please contact Prof. Barbara Fried (bfried@stanford.edu). Attendance is mandatory, absent extenuating circumstances. There are no written requirements for the course, and no requirement that the work presented be original to the Workshop. Students may wish to use the Workshop as an opportunity to expand on seminar papers or pursue independent research projects for which they are getting separate credit through one of the research tracks (e.g., directed research, dissertation). Whether students are working on a new project or revising an old, the expectation is that students will develop their topics independently of the course. Students who would like to participate in the Workshop but feel they need help in developing a workable research topic should consult faculty members ahead of time. Elements used in grading: Class participation and attendance. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Classes will be held at Prof. Fried's home, health restrictions permitting. The specific location will be sent to students prior to the first class meeting.

LAW 5802. Modern American Legal Thought. 3-4 Units.
(Formerly Law 500) The course surveys the most significant theories of law and adjudication in this country from the 1880s to the present. We will consider, among other topics, Formalist (Langdellian) Legal Science, Sociological Jurisprudence, American Legal Realism, the Legal Process School, Law and Moral Philosophy, Public Choice Theory, Law and Economics, Feminist Jurisprudence, Critical Race Theory, the Law and Society movement, and Empirical Legal Studies. The readings are drawn principally from primary materials---the important contemporary manifestos and critiques of the schools of thought studied, along with writings that involve their application to concrete legal problems or reveal their influence on others. Enrollment allowing, students may be asked to help co-teach some of the sessions. Contact Prof. Fried (bfried@stanford.edu) if you would like to look at a syllabus from prior years before deciding whether to enroll. Special Instructions: If any student would like to write a research paper in lieu of the reflection papers, he or she should consult the instructor before the start of the course. After the term begins, students accepted into the course can transfer from section (01) (Reflection papers option) into section (02) (Final paper option) with consent of the instructor. Section (02) meets the R requirement. Note: Students enrolled in Section 01 will complete reflection papers (2-3 pages) for 9 of the 18 classes and students enrolled in Section 02 will complete a research paper (25-30 pages) on topic of student's choice related to the material of the course. Students are required to meet regularly with Prof. Fried throughout the Quarter to discuss progress on the paper. Elements used in grading: Class Participation plus reflection papers or final paper.

LAW 5805. Animal Law. 2 Units.
This course presents a survey of the historical and current status of this rapidly developing specialty. In brief, animal law encompasses all areas of the law in which the nature -- legal, social or biological -- of nonhuman animals is an important factor. It is an objective and logical specialization of a challenging area -- one with a growing number of cases and laws, increasing public and practical interest, and significantly different historical, legal and philosophical foundations than most other courses. Topics covered include animal cruelty, animals as property, tort claims regarding animals, legal issues involving farm animals and animals in entertainment, and federal statutes regarding certain groups of animals. The Animal Law course has been described as intellectually stimulating and ethically challenging, and synthesizes a wide range of legal concepts, and the course materials apply traditional ideas to legal concepts associated with animals in new ways. Students have called it a great bar review class, because concepts from many areas of law are covered with respect to their application to animals and their interests. More and more firms, large and small, are providing pro bono (and paying) work in the animal law area, as the field gains momentum and reputability in the legal community. Mr. Wagman is a lawyer in San Francisco, with a full-time animal law practice, representing organizations and individuals in a wide range of cases. He is one of the authors of the Animal Law casebook, two other animal legal texts, and has been practicing animal law for most of his 286-year career. His practice includes litigation, consultation, legislative work, and extensive writing and lecturing on various animal law topics. The class includes regular updates on his current cases, as well as real-life experiences from the front lines of the animal law frontier. Special Instructions: Students have the option to write an independent research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or 18 page independent research paper.

LAW 5806. Jurisprudence. 3 Units.
This course examines the diverse ways in which the philosophy of law bears on the practice of law. Our subject is thus a set of philosophical concepts, particularly legal positivism and natural law, but the approach is not purely conceptual. Rather, we will examine both the philosophical concepts in the abstract and how those philosophical concepts are reflected or actualized in the craft of legal argumentation, in the intellectual history of law, and in contemporary questions of politics and government. Above all, we will ask which conception of law best contributes to legal justice. The course consists in three units. Unit I is about theories of the nature of law, focusing on legal positivism and natural law. Unit II is about theories of particular departments of law, focusing on tort law and criminal law. Unit III takes a philosophical perspective on being a lawyer, focusing on questions of what principles define lawyers' role in society and what ideals give the life of a lawyer meaning. Grading is based on class participation, two in-class moot court presentations, and, based on individual student preference, either a final exam (a one-day take-home essay with a word limit) or a final research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Cross-listed with Philosophy (PHIL 375J).

LAW 5807. Feminism and the Law: Selected Topics. 1 Unit.
The Reading Group will meet five times during the quarter: April 24, May 1, May 8, May 15, and May 22. We will start by considering the major schools of feminist legal theory, and then look more closely at selected topics of current interest. Topics will likely include women in the legal profession; regulating sexual misconduct; and intersectionalities of gender, race, class and religion. Students are expected to do the assigned readings and come prepared to discuss them. In addition, each student will help co-lead one of the five sessions. There are no written requirements. All students are welcome to apply. There are no prerequisites. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Class will meet at Prof. Fried's house (on campus).
Same as: Reading Group

LAW 5808. The Law of Bystanders and Upstanders. 1 Unit.
What duties do or should bystanders have to intervene in crimes (e.g., sexual assault) and crises (e.g., drowning)? What rewards and immunities should upstanders receive? What Good Samaritan laws (which eliminate liability for interveners) and Bad Samaritan laws (which penalize non-intervention) exist, how could they be improved, and how do they vary per type of crime, crisis, or jurisdiction? This reading group will explore the law of bystanders and upstanders and how such carrots and sticks could be strengthened, standardized, and spread. Class meeting dates: The reading group meets five Wednesdays on April 10, April 24, May 8, May 15 and May 22. Dinner will be provided and will meet in the clubhouse of the Pearce Mitchell Place complex (near the Law School). Elements use in grading: Attendance, Class Participation.
Same as: Reading Group

LAW 5809. Is there an American Legal Canon?. 2-3 Units.
Is there a "canon" of American legal scholarship? And if so, how does it shape our understanding of, or the way we talk about, the law today? In many other academic disciplines, a central element of any course of advanced study is an encounter with a "canon" of some sort. This is a core set of texts that are perceived as foundational, and that are commonly used as reference points for scholarly advances. In other disciplines, the canon can be an object of emulation or criticism. Indeed, the very idea of a "canon" of legal scholarly is often subject to contestation, e.g., given the barriers women and minority scholars have faced. Drawing on the model of those foundational courses in other disciplines, this seminar aims to provide students with a working knowledge of a set of scholarly writings that can plausibly be characterized as an American "canon." At the same time, the seminar aims to elicit from students a critical engagement with this putative "canon." Particular attention is paid to the manner in which the canon either includes or marginalizes certain voices. Hence, one part of the seminar involves reading material that might be part of an expanded, more diversely populated canon. The seminar is designed for two kinds of student. First, it is a useful course of study for students either interested in academia or those thinking about whether academia might be the right path for them (and indeed, the seminar is modeled on a course at Chicago designed for prospective academics, or those considering that path). Second, the course is a chance to take a deeper dive into ideas that lurk behind many first-course private-law and public-law courses. During the seminar, students will read and discuss a range of texts, many drawn from Fisher and Kennedy's The Canon of American Legal Thought. Students will be asked to write response papers and to lead discussion on certain readings. The precise set-up of the course will depend, however, on enrollment. Finally, students will also have the option of doing a longer paper for additional credit (section 02). After the term begins, students accepted into the course can transfer from section 01 (2 units) into section 02 (3 units) with consent of the instructor. Elements used in grading: class participation, short papers, and optional final research paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers.

LAW 5810. Behind the Doctrinal Curtain: Law School's Concepts and Themes. 3 Units.
When you have finished law school, you will (hopefully) have mastered a good deal of legal doctrine (many of you will review and/or sharpen your mastery of particular rules when you study for the Bar) and mastered a number of skills you will need to fulfill professional roles. (Hopefully, you will learn particular advocacy skills if you will be an advocate; writing skills that will help you whether you draft contracts or legislation, briefs or executive summaries, client letters; and, particularly in the Experiential Learning courses, skills that will help you exercise prudent judgment, collaborate with others, work both efficaciously and empathetically in a diverse world.). The claim that underlies this course is that your "classroom" courses here at SLS -- and at pretty much any of the academically ambitious schools that most of you considered attending -- had both a text (the doctrines and policies in the particular subject area that you were studying) and a "sub-text" (the concepts and themes that recurred across a wide range, maybe all, of your courses.) The goal of this course is to highlight these recurring themes (and remind you or illuminate for you just how often you confronted or will confront these issues), to discuss more overtly and directly the distinct approaches to each of these recurring issues than you might have discussed them before, and to expose you to some ways of approaching these issues that might be less familiar to you. In discussing these issues, we will draw on the insights offered by a wide array of "schools" of legal thought, including, but not limited to, libertarianism, Law and Economics, Legal Realism, Critical Legal Studies, Critical Race Theory, a variety of Feminist Legal Theories (anti-subordination feminism, "cultural" feminism), Langdellian Formalism and neo-Formalism, Law and Society. So, for instance, we will discuss some or all of the following issues: 1. Ways in which legal pronouncements are framed (the tension between the use of rules and standards; between default and mandatory rules); 2. Remedial options and remedial mechanisms (the choice between inalienable entitlements, injunctions, damages, restitution, and distinct forms of punishment; between sliding remedial scales and binary outcome-determinative rules; conduct regulation and output/outcome goals; public enforcement v. mixed public/private enforcement v. private enforcement with differing degrees of collectivization of individual complaints); 3. Issues in the interpretation of both private and public legal texts (textualism, intent-based originalism, flexible purposivism) and distinct theories of why or in what ways texts may be either incomplete or "dated," with some special attention to how to interpret texts that appear to delegate authority (to another decision maker, to a future decision maker) to make narrow, concrete decisions; 4. The interplay between substance and procedure (and its relationship to creating a gap between the law on the books and the law in action; the degree to which substantive rules are framed in the way that they are because rule makers are anticipating procedural barriers to enforcing alternative rules); 5. Institutional competence issues; 6. Alternative visions of human behavior and motivation (individualistic rational choice models with "thin," generally materialistic goals v. thicker rational choice models v. individualistic models influenced by psychologists, advancing richer views of how people process information and form tastes and/or sociological models, focused more on group influence, group maintenance and group conflict); 7. Some recurring substantive issues (how we define operative assent and how we define normatively meaningful consent; how we deal with problems of incommensurable values or deny the possibility of incommensurability; when we do or don't believe people are adequately empowered by "exit" -- finding another provider in a market or subjecting ourselves to a different political body that will make the rules that govern us -- and when we believe power must be exercised politically/collectively; when we believe principal/agent problems are serious and how we think they are "solved"; battles between anti-classification and anti-subordination views of antidiscrimination norms) and 8. The origins of law and the impact of law (is law significantly autonomous or responsive to other social forces (where "social forces" might or might not be understood in significant part in terms of distinctions in power by race, class, gender, LGBTQ status etc.) and to the ideological predispositions of those who articulate it? Is law -- and most particularly the judge-made law we (ever?) emphasize in law school -- effectual in

LAW 5811. Philosophy of Law: Protest, Punishment, and Racial Justice. 3 Units.
In this course, we will examine some of the central questions in philosophy of law, including: What is law? How do we determine the content of laws? What is the proper role of judges in interpreting the law? Do laws have moral content? What is authority? What gives law its authority? Must we obey the law? If so, why? How can we justify the law? How should we understand and respond to unjust laws? What is punishment? What is punishment for? What, if anything, justifies punishment by the state? What is enough punishment? What is too much punishment? What does justice require under non-ideal conditions? There will be a 50-minute mandatory TA session (Date and Time TBA). Law students have the option to write an independent research paper for R credit with instructor consent. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: discussion questions, midterm paper, final paper abstract, final paper presentation, final paper, attendance. Cross-listed with Ethics in Society (ETHICSOC 175W) and Philosophy (PHIL 175W/PHIL 275W).

LAW 5812. Feminist Legal Theory Workshop. 2 Units.
Workshop will provide students with a structured opportunity to write a research paper on any aspect of feminist legal theory/feminism and the law (broadly defined) that interests them. Students are expected to formulate a research topic by week 4. Paper should be as long as needed to communicate central ideas and no longer. In general, students should aim for 25 - 30 pages in length. We will meet by Zoom as a class four times during the quarter. Students will present possible research topics in classes #1 and #2 for feedback, and update their progress in class #3. Depending on student interest, we will also discuss major themes in feminist legal theory, and current legal topics that relate to feminist concerns. Instructor is available for consultation throughout the quarter, and will review outlines or drafts if students wish. No prerequisites. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Class meets Thursday, 2:00PM to 4:00PM on April 2, April 16, April 30, and May 14. CONSENT: Interested students may apply to enroll in the seminar by sending a statement of interest to Barbara Fried at bfried@stanford.edu.

LAW 5813. Representation. 3 Units.
In this course, we will work together to develop a detailed and comprehensive understanding of the concept(s) of political representation. We will do so by examining a number of historical and contemporary theories of political representation developed within philosophy and cognate fields. Elements used in grading: a workshop paper, weekly workshop responses to fellow classmates' workshop papers, a class presentation, a workshop recap, a final paper abstract, and a final paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 371) and Philosophy (PHIL 371W).

LAW 6001. Legal Ethics. 3 Units.
This course will explore issues involving professional responsibility. Topics will include the role of advocates, the adversary system, the conditions of practice, diversity and inclusion, candor, and confidentiality, conflicts of interest, lawyer-client relationships, regulatory structures, access to justice, pro bono service, and legal education. Special Instructions: Grades will be based on class participation and (1) a number of short reflection essays on the readings and a short research paper or (2) a long paper. A maximum of 10 students will be permitted to write the long paper for R credit. After the term begins, 10 students can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. If more than 10 students apply to write a long paper for R credit, a lottery will be run to determine the 10 students accepted in section (02). This class is designated as fulfilling the Ethics requirement (and the R requirement with instructor consent). Elements used in grading: Attendance, class participation, and either long paper or short reflection essays on the readings and short research paper.

LAW 6003. The American Legal Profession. 3 Units.
This course will deal with selected aspects of the history, organization, economics, ethics, and possible futures of the legal profession in the United States. Likely topics will include, in addition to the ABA's Model Rules of Professional Conduct: demographic changes in the profession, the evolution of law firms, bar associations, and law schools from the early twentieth century to the present; the development of corporate law, personal injury, mass torts, prosecutorial and criminal defense practices, and the "public-interest" bar; the dominant professional ethic of adversary-advocacy, and its critics; the regulation of lawyers; the economics of the market for legal services; the organization and culture of law firm practice; the role of the role of the lawyer as counselor; and the export of American lawyering models abroad. 8-hour self-scheduled take-home examination, with option of writing a research paper. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, final paper or final exam.

LAW 6004. Legal Ethics: The Plaintiffs' Lawyer. 3 Units.
This course uses a study of plaintiffs' lawyers as a vehicle to explore many of the most controversial and important issues at the intersection of tort law, civil procedure, and legal ethics. Specifically, in this course, we will study who personal injury lawyers are, how they find clients, how they fund litigation, and how they usher complex cases to conclusion. In so doing, we will address: the role and regulation of lawyers; the use and abuse of the contingency fee; the legality and normative consequences of solicitation and attorney advertising; the propriety of secret settlements, NDAs, and expansive protective orders; the rise and impact of "alternative litigation finance"; and the vexing issues posed by class actions, aggregate actions, consolidated actions, and multidistrict litigations (MDLs). The final segment of the course will involve a series of case studies, where students will test their knowledge of the Model Rules of Professional Conduct and have the opportunity to see the course's themes echoed and expressed in recent real-world controversies. Importantly, though the course is nominally focused on "the plaintiffs' lawyer," it does not just equip students to practice on one side of the "v." Rather, through our grounded and contextualized study of legal ethics, advanced civil procedure, the legal profession, and contemporary legal practice, students will acquire tools to litigate cases of all stripes and for both sides. Elements used in grading: Class participation, attendance, and reflection papers.

LAW 6005. Technological, Economic and Business Forces Transforming the Private Practice of Law. 2 Units.
The private practice of law has and will continue to undergo fundamental change. Technological, economic and business forces are placing extreme pressure on not only the traditional "Big Law" firm model but also role of in-house counsel. These forces will transform, eliminate or replace virtually every aspect of the current practices of firms and in-house legal departments. Foundations of the law firm model such as bespoke client services, "billable" hours, large staffs (e.g., paralegals and secretaries), high associate-to-partner ratios and summer associate programs are becoming (or have already become) relics of a bygone era. Sophisticated clients today are utilizing a wide range of internal and external service providers and technologies such as artificial intelligence for their legal work. This diversity in the delivery of legal services is dramatically altering the supply and demand characteristics of the legal economy and markets. The breadth of available technologies and options is altering the types of skills and prerequisites required for attorneys to be successful private practice. The course is composed of two parts. In part one, the course focuses on the technological, economic and business practices transforming the legal profession are identified and their impact on the traditional approaches to law will be examined. In part two, the course focuses on how individual lawyers can adapt to or embrace the forces transforming law to improve their practice and succeed in the new environment. Part two of the course will also examine how the changing legal environment creates new ethical and professional challenges for attorneys. Elements used in grading: Attendance, class participation and a research paper for the written assignment.

LAW 6006. Introduction to Legal Design. 3 Units.
(Formerly Law 761) Intro to Legal Design is a 9-week course for law students & other graduate students to reimagine how legal services are delivered, & to learn how to use human-centered design methods to create breakthrough solutions to complex problems. The students will work with project partners - including legal aid groups, courts, and private law firms -- on legal service challenges to help the partners solve real problems they & their users face. For each challenge, students will work on interdisciplinary teams, with close coaching from designers, engineers & lawyers. Students will learn design methods to create new innovations that make legal services more accessible & engaging. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 6007. Legal Profession Workshop: The Future of Big Law. 2-3 Units.
Ever since the global financial crisis, legal media have focused on the contraction of the corporate legal services sector. But today, partners at the top tier of big corporate law firms -- "big law" -- are earning huge profits and job prospects for graduates of top law schools interested in the corporate sector are bright. Although some commentators continue to predict that demand for corporate legal services will contract in the mid- to long-term, it seems more likely that demand for high-end legal analysis will persist if not increase in the foreseeable future. The question is who (or what) is going to perform that work, in what organizational setting, with what technological assistance, and in what part of the world. This seminar will address the key dimensions of change in the "big law" market and how changes in the delivery of corporate legal services may affect legal careers, gender equality, diversity, and work-life balance. Topics include the increased power of Fortune 100 General Counsel, new organizational models for delivering corporate legal services, the response of large law firms to new market factors, the expanding role of information technology in the delivery of corporate legal services, third-party litigation financing, changing legal markets outside the US, the evolution of global law firms, the effects of changes in law firm organization on women and lawyers of color, and the effects of changes in the legal market on legal careers. Course materials will include books and journal articles, media reports, blog posts and guest lectures. Special Instructions: You may write a series of short reaction papers on 4 of the topics we will cover at the seminar sessions. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a topic of your choice related to the evolution and future of Big Law. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit (section 02), depending on the project. After the term begins, students registered in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Four commentaries or one research paper.

LAW 6015. Innovations in the Delivery of Legal Services. 2 Units.
This is an era of groundbreaking change in the legal profession. Twenty years ago, email was unheard of at most law firms. Today, artificial intelligence, machine learning, and online services are creating a fundamental shift in how law is practiced. Beyond technology, massive challenges to the code of professional responsibility, from multi-disciplinary practices to law firms filing for IPOs, are reshaping the legal landscape. This course focuses on the opportunities and challenges these disruptions create for the new lawyer. Students will gain hands-on experience with some of the most innovative organizations in the legal community. Significant time will also be spent analyzing changes anticipated to impact the legal industry in the next decade. Elements used in grading: Attendance, Class Participation, Final Paper.

LAW 6016. Challenges Facing the Legal Profession. 3 Units.
This course is about the challenges facing the next generation of lawyers and the profession as a whole. These challenges existed in 2019, but 2020 has sharpened two of them. The Covid-19 crisis has forced a change in the way lawyers work, with greater use of technology, and the resurgence of the #BlackLivesMatter movement following the death of George Floyd highlights the lack of diversity in the profession. These developments add to existing economic and other pressures facing lawyers. The specific topics covered will include: the changing relationship between in-house and outside counsel; ways that technology is changing the practice of law; new business models for lawyers, including the productization of legal services; and the challenges of diversity and inclusion in the profession. The course is a mix of full-class discussion with the instructors and guest speakers from practice, small-group discussion of case studies, and work on team projects. A significant part of most classes will involve case studies where students will put themselves in the role of lawyers, and talk through options for dealing with the issues presented. The instructors and guest speakers will introduce context about the challenges, and then engage students in thinking about possible paths forward. Elements used in grading: The requirements will include attendance and participation; a few short written assignments, either answers to problems/exercises or reflection papers; and a final team memo and presentation. There is no exam.

LAW 7001. Administrative Law. 4 Units.
Federal agencies make an astounding number of policy decisions, engaging in more lawmaking and adjudication than Congress and the federal courts, respectively. These policy decisions range from the seemingly trivial, such as the size of holes in Swiss cheese, to matters of life-and-death importance, such as how to limit emissions of sulfur dioxide, nitrogen oxides, and mercury. These agencies also range in age, organization, and duties. There is the postal service, which was created over 200 years ago, and changed five decades ago from a cabinet-level department to a government corporation, with current calls to privatize it. On the newer side, there is the Consumer Financial Protection Bureau, which was established in 2011 to protect consumers in the financial arena; its leadership and funding structure produced constitutional challenges that recently reached the Supreme Court. In this quarter of Administrative Law, we will consider the creation and control of the modern administrative state. Topics will include the structure of administrative agencies and their place in a governing scheme of separated but overlapping powers, delegation of authority to agencies, types and requirements of agency decisionmaking, availability and scope of judicial review of agency action (and inaction), and other forms of agency oversight. We will apply concepts through many recent examples. A variety of policy areas will be considered, including (among others) the COVID-19 pandemic, national security, financial regulation, health care, the environment, food and drugs, and telecommunications. Elements used in grading: Attendance, Class Participation, Written Assignments, Exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. This course will be capped at 60 students, randomly selected.

LAW 7002. Beyond the Common Law: Tort Reform and Tort Alternatives. 2-3 Units.
(Formerly Law 563) Over the past century, tort law has been under sustained attack. Using a broad mix of case law, case studies, and scholarly analysis, this seminar will interrogate those attacks-including their historical roots, their theoretical justifications, and their practical effects. We will first study "replacement reforms"-attempts to jettison the common law in favor of alternative compensation mechanisms, including workers' compensation, auto no-fault, the September 11th Victim Compensation Fund, and the Vaccine Injury Compensation Program, housed within the U.S. Court of Claims. Second, we will study modern tort reform initiatives, often dubbed "discouragement reforms," which have chiseled away at damages and chilled personal injury victims' incentives and capacity to seek relief. Finally, we will study the United States Supreme Court's own tort reform activity, including recent jurisprudence limiting punitive damages, preferencing arbitration, and granting broad preemptive effect to agency actions. Through this analysis, students will develop a deeper and richer understanding of the tort system, its contemporary operation and excesses, and the uneasy but undeniably important place tort law-and civil litigation more generally-occupies in contemporary American society. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, reflection papers or research paper. Early drop deadline.

LAW 7003. Cities in Distress. 3 Units.
(Formerly Law 735) Despite the end of the Great Recession, serious fiscal challenges remain for many urban and rural local governments. This course will focus on these places and what they need from state and local government. Subjects will include: (1) the basics of local finance; (2) an introduction to the primary causes of local fiscal distress; (3) tools for state and federal governance of city finances and financial distress (including municipal bankruptcy and state receiverships); and (4) the local public sector's role in anti-poverty work, especially after significant losses in local employment. The course will feature readings focused on places (both urban and rural) across the country. Class performance will be evaluated based on class participation, an in-class presentation, and weekly reflection papers of 3-5 pages each week for most of our topics. Completion or co-enrollment with Local Government or Land Use Law is useful but not required. Elements Used in Grading: Class Participation, Attendance, Written Assignments or Research Paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7005. Constitutional Politics. 2-3 Units.
This seminar will explore various ways in which constitutional law interacts with the political process. Topics covered will include the appointment and confirmation process for federal judges, judicial campaigns and elections in the states, various approaches to "popular constitutionalism," ratification of constitutional amendments, judicial activism as a political issue, public opinion and the Supreme Court, court-curbing legislation, and the role of interest groups in constitutional litigation. Readings will include cases, as well as perspectives from legal scholars, political scientists and historians. Students will be assigned to prepare and circulate discussion questions for one week of the class. Students can choose to write a final R paper or take an exam. Students writing the paper may take the class for 2 credits or write a longer paper for 3 credits. The paper will be due at the law school's paper deadline for fall quarter classes. Students taking the exam will be asked to answer one or more essay questions about the major issues covered in the class. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: The grade will be based on the paper or exam, along with class participation.

LAW 7006. Current Issues in Civil Liberties and Civil Rights. 3 Units.
This seminar will address current issues in civil liberties and civil rights arising at both the federal and state level, with an emphasis on the policies of the Trump administration. It is intended to be both timely and topical. As a result, the initial syllabus may be revised if new and significant issues later emerge. Among the topics that are likely to be discussed are hate speech, immigration, reproductive rights, voting rights, affirmative action, LGBT rights, and privacy. We will begin by focusing first on background legal principles and then on applying those legal principles to each debated policy. We will also consider the real world consequences that flow from different legal outcomes. There is no casebook. Instead, weekly readings will consist of judicial decisions, statutory and regulatory texts, and published articles (both academic and popular). Any that are not easily accessible will be circulated prior to class. Elements used in grading: Grades will be based on class attendance, class participation, and either several short papers (Section 01) or an independent research paper for Research credit (Section 02). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 7007. Constitutional Law: Religion and the First Amendment. 4 Units.
(Formerly Law 602) This course covers the major doctrines and decisions interpreting the provisions of the First Amendment affecting religion, especially the free exercise and establishment clauses. The principal focus is on modern Supreme Court cases and doctrine, but the course also emphasized the historical, philosophical, and theological roots of first amendment principles. Elements used in grading: Final Exam (take-home).

LAW 7008. The White Supremacist Constitution: American Constitutional History. 3 Units.
This course addresses U.S. constitutional history from the post-Civil War Reconstruction period through the mid-20th century. Because of the breadth of the subject matter, the view will necessarily be partial. In particular we will take as our focus the way the Constitution has provided a point of political mobilization for social movements challenging economic and social inequality. Topics covered include: Civil War Reconstruction and restoration; the rise of corporate capitalism and efforts to constrain it; Progressive Era regulation; the New Deal challenge to federalism and the anti-New Deal backlash; government spending; WWII and the Japanese Internment; the Civil Rights Era, and the War on Poverty. Readings will include both legal and historical materials with a focus on the relationship between law and society. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers. Cross-listed with American Studies (AMSTUD 155) and History (HISTORY 155).

LAW 7010A. Constitutional Law: The Fourteenth Amendment. 3 Units.
This course examines various aspects of the Fourteenth Amendment, with special attention paid to equal protection and substantive due process. We will examine many contested constitutional questions, including, for example: How did gay and lesbian relationships go so quickly from being subject to criminal prohibition to being eligible for marriage? What justifies the Supreme Court's striking down a law mandating segregated schools, when it had upheld an analogous law half a century earlier? Must the law treat all individuals identically, or may and should it grant special protections to members of historically disadvantaged groups? To what sources might (and should) a judge look to give content to vague constitutional terms like "equal protection" and "due process"? How can we distinguish "law" from "politics" in this area? Readings will include judicial opinions and some scholarly commentary. Class discussion will be supplemented with group exercises of various sorts. Elements used in grading: Class participation and exam.

LAW 7010B. Constitutional Law: The Fourteenth Amendment. 4 Units.
This course examines various aspects of the Fourteenth Amendment, with a focus on how its doctrines interact in particular substantive areas. Rather than progressing seriatim through individual doctrines, this section of the regularly-offered course will focus on the role of the Fourteenth Amendment in the economy, education, personal autonomy, family formation, criminal justice, and voting. As a result, the course will pose many cross-cutting questions. For example, what are the various constitutional constraints on public education? What are the advantages and disadvantages of couching reproductive rights claims as due process claims versus equal protection claims? Do, or should, Fourteenth Amendment-based arguments operate differently within the criminal justice system? Using such questions, the course will work through established doctrines such as tiers of scrutiny, substantive due process, privileges and immunities, incorporation, state action, and congressional enforcement. The course reader has been constructed to help you draw connections between topics and doctrines. Readings include formative Supreme Court cases on the contours of the Fourteenth Amendment, as well as scholarly and popular media sources discussing its many applications. There will be no final examination. Instead, the written work for the course will consist of four short writing assignments (for a total of approximately 20 pages). Two assignments will ask you to compare doctrine across different areas of Fourteenth Amendment law through assigned case comparisons. The other two assignments, to be shared with the class as a whole, will ask you to apply insights from secondary sources (chosen from a list provided in the course materials) to the cases and issues we're discussing in class. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 7011. Constitutional Litigation. 3 Units.
(Formerly Law 641) This is a course in advanced and applied constitutional law. It focuses on one of the central ways in which constitutional claims are actually litigated: in lawsuits against public officials and local governments. The bulk of the course looks at litigation under 42 U.S.C. § 1983. We will consider topics such as what it means to act "under color of state law;" absolute and qualified immunities; government liability for the acts of individual officials; and remedies for constitutional violations. This course is particularly useful for students who plan to clerk on federal courts, as much of their dockets involves §1983 litigation. This course complements Federal Courts (Law 283). Elements used in grading: Participation, Attendance, Exam.

LAW 7012. Constitutional Law: Speech and Religion. 4 Units.
This is a course about the freedoms of speech, press, religion, association, and assembly under the First Amendment. Two- thirds of the course will be about freedoms of speech, press, and assembly. We will examine historical context, doctrinal development, and current caselaw. We will ask why government regulates speech (to prevent harms? to protect sensibilities? to redistribute power? to advance the interests and ideas of the politically powerful?), how government regulates speech (by aiming at messages? by aiming at markets? by aiming at when and where speech takes place? by conditioning subsidies?), and what justifications are ever sufficient for limiting speech. We will include consideration of the institutional press and new technologies including the Internet, as well as the rights of private organizations to determine their membership and organization. About a third of the course will be about religion. We will ask how the twin constraints of the Free Exercise and Establishment Clauses relate, looking especially at notions of neutrality, voluntarism, separation, and accommodation. Elements used in grading: Exam.

LAW 7013. Gender, Law, and Public Policy. 3 Units.
Topics in this course will include equal protection standards, employment, family, reproductive rights, sexual harassment, rape, domestic violence, pornography, sexual orientation, diversity in the profession, and intersections with race, ethnicity, class, and sexual orientation. Materials will include cases, commentary, problems, and media portrayals, and presentations by guest lecturers. Special Instructions: Course requirements will include class participation and either (1) a long paper, which will satisfy the research requirement or (2) a number of short reflection papers on the assigned readings, and a short final research paper. Students writing reflection papers will form teams and each member will be responsible for writing comments on one classmate's paper each week. There will be no final examination. A maximum of 10 students will be permitted to write the long paper for R credit. All students interested in R credit should pre-register by lottery for Law 307-0-02. Students who do not receive a spot in section 02 may enroll in section 01. Open to students from other schools with the consent of the instructor. To apply for this course, non-Law students must complete a Non-Law Student Course Add Request Form available on the SLS Registrar's Office website. Elements used in grading: Class participation, attendance, reflection papers, and final paper.

LAW 7014. Constitutional Theory. 2-3 Units.
The guiding question of this course will be how we should think about the role of the U.S. Constitution in American law and American life. In considering this issue, we will address debates about constitutional interpretation (including both originalism and living constitutionalism), the nature and features of constitutional change within the American context, the role of federalism and the separation of powers in the constitutional scheme, and the nature of American constitutionalism as opposed to English and continental European models. We will tackle these debates in the context of some specific contemporary controversies about the Constitution, including: How do the civil rights movement and other social movements impact our understanding of the Constitution?; Does the Constitution reject a European-style inquisitorial process in favor of an Anglo-American vision of due process?; How important is consensus within the Supreme Court to establishing the legitimacy of constitutional meanings?; Why do we have nine Supreme Court justices, and; What is the Constitution, and how much does it include outside of the written document? Throughout we will be contemplating the extent to which our interpretation of the constitution depends on our vision of American democracy and the good society. Requirements for the course include regular class participation and either four response papers or a substantial research paper; students who take the research paper option will receive two or three units and 'R' credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Special Instructions: This class is limited to 16 students by lottery. If applicable, openings will be filled from the waitlist in waitlist order. Four additional spots may be reserved for 2Ls at the discretion of the instructor. If determined by the instructor, four 2Ls will be admitted from the waitlist in waitlist order. Elements used in grading: Attendance, Class Participation; Response Papers or Final Paper. Cross-listed with English (ENGLISH 350D).

LAW 7015. Contemporary Issues in Constitutional Law. 3 Units.
(Formerly 448) This is an advanced constitutional law seminar for students who have already taken the introductory Constitutional Law course. The seminar will provide an opportunity for in-depth discussion of competing theories of constitutional interpretation, the role of the Supreme Court in our political system, and analysis of judicial behavior. Each week, these themes will be examined through the lens of a current "hot topic" in constitutional law - for example, affirmative action, same-sex marriage, religious liberty, the death penalty, executive power, campaign finance, immigration, abortion, and other topics. This is not a "spectator" class; all students will be expected to participate actively in class discussion each week. This is a good seminar for students interested in clerking or pursuing academia. Prerequisite: Constitutional Law. Elements used in grading: Attendance, Participation, Written Assignments.

LAW 7016. Critical Race Theory. 3 Units.
This course will cover the most important writing in critical race theory as it relates to law and jurisprudence. We will review the relationship between skeptical jurisprudence as developed in legal realism and Critical Legal Studies to the struggle for racial justice and the ambivalent relationship of civil rights lawyers to mainstream legal strategies for social change. We will review the critique of rights, the use of narrative in legal scholarship and the emergence of the critique of "intersectionality" as a challenge to conventional racial politics. Special Instructions: Grades will be based on attendance, class participation and (1) short reflection essays on the readings and a short research paper or (2) a long research paper with consent of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, class participation, written assignments, final paper.

LAW 7017. Creation of the Constitution. 4 Units.
The course begins with readings setting forth the intellectual and experiential background of the framing, including common law and natural rights theory, republicanism, economic & political scientific ideas, and colonial and post-Independence experience. We then study large parts of the debates at the Constitutional Convention, primarily using Madison's Notes. Major topics are the principle of representation, the extent and enumeration of national powers, the construction of the executive and judicial branches, and slavery. Next come the ratification debates, including readings from antifederalist writers, The Federalist, and speeches in ratification conventions. We conclude with the addition of the Bill of Rights. Classes consist of a combination of lecture and extensive participation by students. Elements used in grading: Class participation, In-class exam, supplemented by short take-home essay. Cross-listed with History (HISTORY 153).

LAW 7018. Disability Law. 3 Units.
This is a survey course of disability rights law, with an emphasis on federal and state statutes and case law. Areas of concentration include employment, government services, public accommodations, education, housing, mental health treatment and involuntary commitment, and personal autonomy. We will review such statutes as the Americans with Disabilities Act (ADA), Rehabilitation Act (Sec. 504), Individuals with Disabilities Education Act (IDEA), and the Fair Housing Act Amendments. The course examines disability from a civil and human rights perspective. Elements used in grading: Grades will be based on class participation (50%), and either an exam (50%) - Section 01 or a long independent research paper (50%) - Section 02. The student must consult with the instructor on the paper's topic, scope and format. After the term begins, students accepted into the course can transfer from Section 01 into Section 02, which meets the R requirement, with consent of the instructor. Automatic grading penalty waived for submission of research paper. Non-law students may enroll with instructor consent.

LAW 7019. Employment Discrimination. 3 Units.
This course will examine legal responses to the barriers to workplace equality that are faced by minority groups. The course will survey the relevant doctrine, focusing primarily on federal employment discrimination statutes, but also addressing more expansive antidiscrimination protections under some state statutes, and local ordinances. Covered topics include sexual and racial harassment, sexual orientation discrimination, and affirmative interventions aimed at increasing the minority group and/or female representation in certain job categories or segments of the labor market. In addition to surveying the doctrine as it stands and as it has developed over time, we will also explore the doctrinal and conceptual difficulties inherent in identifying invidious discrimination and in devising appropriate remedies. The elements used in grading will be class participation, and, at the student¿s option, either a series of reflection papers or a single final paper on a topic to be determined in consultation with Professor Ford. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. If more than 35 students wish to enroll, students should contact instructor to be placed on a waitlist. Instructor will determine final enrollment.

LAW 7020. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 2 Units.
The objective of this course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding and the law can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government, non-profit, and academia. A framework for ethical decision-making underpins the course. There is significant space for personal reflection and forming your own views on a wide range of issues. Prominent guest speakers will attend certain sessions interactively. The relationships among ethics and technology, culture, leadership, law, and global risks (inequality, privacy, financial system meltdown, cyber-terrorism, climate change, etc.) will inform discussion. A broad range of international topics might include: designer genetics; civilian space travel (Elon Musk's Mars plans); social media (e.g. Facebook Cambridge Analytica, on-line sex trafficking, monopolies); new devices (e.g. Amazon Alexa in hotel rooms); free speech on University campuses; opioid addiction; AI (from racism to the work challenge and beyond); corporate and financial sector scandals (Theranos, Wells Fargo fraudulent account creation, Volkswagen emissions testing manipulation); new corporate challenges (e.g. Google selling drones to the military and Facebook's new Libra crypto currency); and non-profit sector ethics challenges (e.g. NGOs engagement with ISIS and sexual misconduct in humanitarian aid (Oxfam case)). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Please note that this course will require one make-up evening session on a Wednesday or Thursday in lieu of the final class session the first week of June, and two one-hour extensions to Monday class sessions as a make-up for May 11, so the course will end before Memorial Day. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. The course offers credit toward Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking–Ethical Reasoning requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. *Students taking the course for Ways credit and Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Students seeking credit for other majors should consult their departments. NOTE: This course does NOT meet the SLS Ethics requirement. CONSENT APPLICATION: Interested SLS students may apply to enroll in this class by sending a request to Dr. Susan Liautaud at susanl1@stanford.edu. Elements used in grading: Class Participation, Attendance, Written Assignments, and Final Paper. Cross-listed with Public Policy (PUBLPOL 134, PUBLPOL 234).

LAW 7021. Family Law. 3 Units.
(Formerly Law 293) If there were no legal institution called marriage, would we want to create one? In the context of people's intimate relationships, when and how does the law facilitate and reinforce people's preferences/choices, and when does and should it restrict them? What are (and should be) the sources of legally enforceable obligations between intimates or family members? How does and should the law take account of children, who cannot fend for themselves? This course will consider these questions and more. Elements used in grading: Exam, with minor adjustments for class participation.

LAW 7022. Federal Habeas Corpus. 2 Units.
This course covers the history of the Great Writ and the evolution of the scope of federal habeas corpus review and relief; the Suspension Clause; habeas review in capital cases including stays of execution; alternatives to habeas review; state post-conviction proceedings; the Antiterrorism and Effective Death Penalty Act (AEDPA); and jurisdictional issues in both the trial and appellate courts. The course will be valuable to students seeking federal judicial clerkships as well as those interested in prosecutorial work or post-conviction representation. Elements used in grading: Exam.

LAW 7023. Federalism. 3 Units.
(Formerly Law 742) This course is an overview of legal and policy issues connected to federalism. We will examine a set of core theoretical questions - the values federalism serves; the relationship of federalism and individual and minority rights; and the role of judges in enforcing federalism through judicial review - across a wide range of contemporary legal debates (e.g., same-sex marriage, health care, immigration, voting rights). While much of the seminar will focus on the United States, we will also consider federalism in comparative context by examining the constitutions and legal doctrines of other regimes. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Written Assignments or Research Paper.

LAW 7024. Food Law and Policy. 2-4 Units.
This seminar explores legal and policy issues related to our food system, including the regulation of food supply, food safety, nutrition / obesity, marketing / labeling, security, and animal treatment. We will examine how laws and regulations affect the production, distribution, sale, and consumption of food and whether particular regulatory approaches (e.g., product bans, product standards, government subsidies, taxes, information disclosure, or labeling) are more effective in achieving public goals. The course can be conceived of as a form of applied administrative law and regulation, but no background is necessary. Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2-4 units, depending on paper length. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7025. Employment Law. 3 Units.
Workplace issues have become one of the fastest-growing areas of state and federal law. Employment-related lawsuits filed in federal court have tripled in volume in the past decade, and now account for a tenth of all civil cases. Many state courts have experienced a similar burgeoning of their employment law caseloads. This course examines this diverse, rewarding, and rapidly evolving area of legal practice by considering the diverse array of laws and institutions that regulate the employment relationship. The focus of the course is on laws that affect employees in non-unionized settings, such as protections against dismissal without cause, wage and hour restrictions, workplace privacy, covenants not to compete, the Family and Medical Leave Act, and mandatory arbitration of employment disputes. The course does not cover either Employment Discrimination or Labor Law, both of which are offered as separate courses. Special Instructions: Regular, punctual attendance is required. If you expect (or are unexpectedly forced) to miss more than two classes, please consult with the instructor as soon as possible, as exceptions will be considered on a case-by-case basis. Early Add/Drop Deadline: Add/Drop decisions must be made the first week of class. Exceptions are at the instructor's discretion and will be considered on a case-by-case basis. Elements used in grading: Final Exam.

LAW 7026. Immigration Law. 3 Units.
This survey course provides a foundation in the constitutional principles governing the regulation and rights of noncitizens and the immigration statute that governs the admission and removal of noncitizens. The course also explores contemporary issues related to immigrants' rights and immigration reform, including major Trump administration actions especially in the area of border enforcement and asylum rights. We will analyze other current areas issues such as immigration detention; the intersection of criminal and immigration law; state and local regulation of immigrants; constitutional limits on 'alienage' discrimination; and the right to Article III judicial review of removal orders. The course draws on the instructor's decades of experience litigating constitutional and civil rights issues on behalf of noncitizens while at the ACLU and his more recent service as a senior immigration policy advisor in the Obama administration. Guest speakers may be invited for some topics. No prior course or background in immigration law is expected. Elements used in grading: Class participation and attendance (10%), final exam (90%).

LAW 7027. Critical Race Theory. 1 Unit.
This reading group will investigate unresolved issues in Critical Race Theory. Questions explored will include: What exactly are advocates for racial justice fighting for? That is, what does racial justice look like? What is the place of "culture" in our racial present and in a racial utopia? What are the roles of agency and structure -- individuals and institutions -- in perpetuating, and remedying, racial inequality? What is the role of law in undermining and/or entrenching racial stratification? Readings will be highly varied, coming from the fields of law, psychology, sociology, and anthropology, among others. Meeting Dates: This class will meet 4:15PM - 7:15PM on Thursday, September 29, October 27 and November 17. Elements used in grading: Grading will be based on participation, short reaction/response papers, and a final paper.
Same as: Reading Group

LAW 7028. Lawyers and Leadership. 3 Units.
This course will examine the responsibilities and challenges for those who occupy leadership roles, with particular emphasis on those seeking to use law as a vehicle for social and organizational change. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, conflict and crisis management, innovation, diversity and inclusion, ethical responsibilities, scandal, civil and human rights, and public interest law. Materials will include cutting-edge research, case histories, problems, exercises, and media clips. Class sessions will include visitors who have occupied leadership roles. Requirements will include class participation, and either a few short written weekly reflection papers (2 to 3 pages and a short research paper (about 3-5 pages) or (2) a long paper (approximately 26-30 pages). After the term begins, students can transfer from section (01) into section (02), which meets the R requirement. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 7029. Legislation and Administration. 3 Units.
(Formerly Law 394) This course explores the world of legislation and administration that defines much of our modern legal order. By analyzing agencies, statutes, and legislative procedures, the course prepares students to think about the structures and processes of government, and how they influence legal outcomes that would otherwise be defined largely by social norms and common law adjudication. Drawing on examples from a variety of substantive areas, the course covers the legislative process, approaches to statutory interpretation, the role of agencies and the legislature in a system of separated powers, delegation to agencies, the interaction of common law doctrines and agency practices, and techniques of agency regulation and adjudication. First-year students are welcome. Special Instructions: Students who receive credit for Legislation (Law 319) and/or Statutory Interpretation (Law 425) may not receive credit for Legislation and Administration (Law 7029) and vice versa. Elements used in grading: Attendance, participation in in-class discussion and simulation and occasional short assignments, being on "panel" for selected classes, and a self-scheduled open-book exam. CONSENT APPLICATION: To apply for this course, students must complete and submit a simple Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7030. Federal Indian Law. 3 Units.
This course will provide an overview of the field of federal Indian law. It will consider the origins and scope of tribal sovereignty as recognized under federal law, as well as current federal law on tribal criminal and civil jurisdiction. It will also explore the division of authority between tribal, federal, and state governments; federal statutory schemes governing Natives and Native nations; and constitutional issues affecting Natives. Additional current legal issues which may be covered based on class selection include Native land claims, gaming, family law, religious and cultural rights, and natural resources. The course includes an optional supplementary trip to the Yurok Reservation in northern California in early May. Students enrolled in Federal Indian Law who wish to seek an extra unit of credit may concurrently enroll in Federal Indian Law: Historiographical Readings in Federal Law and Policy (1 unit/ Mandatory P/R/F) with instructor consent. Elements used in grading: Class Participation, Final Exam.

LAW 7031. Political Campaigning in the Internet Age. 2 Units.
This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. With particular focus on the 2016 campaign, this course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course. Law students enrolled in this class will have the option of participating in a one-week extension of the course (Law 7056) in Delhi, India during spring break for an additional credit. Students may enroll for this course alone or for both this course and Law 7056. The overseas option is limited to 12 students. (See Law 7056 for application instructions and deadline). Elements used in grading: Attendance, Final Paper. This course is cross-listed with Communication (COMM 153 & 253).

LAW 7032. Public Interest Law and Practice. 3 Units.
This course will examine the history, theoretical frameworks, strategies used by, and political position of public interest law practice and attorneys in the United States. We will consider the role of lawyers and the legal system in advancing social change; different career paths of public interest lawyers; ethical issues related to working as a public interest lawyer; the personal impacts of this type of career choice; and tactics deployed by lawyers in differing settings, from issue-based non-profits to government agencies, and private public interest law firms or legal services groups. Readings will include law review articles, legal pleadings and case studies that allow analysis and exploration of the tensions and challenges that exist within the legal system for public interest practitioners. Guest speakers will include leaders from the field. Students will also be exposed to practical skills outside of litigation that social change lawyers should understand. Students will be asked to produce several short papers throughout the quarter. Elements used in grading: Attendance, class participation, written assignments.

LAW 7033. Race, Identity, and National Security. 2 Units.
This course explores theoretical, historical, and legal policy questions at the intersection of race, group identity, and national security. Recent political events have thrust the relationship between race, religion, nationality, immigration status, and national security into the limelight, although the questions themselves are not new. How do national security threats affect the formation of racial identity within the United States, and how does race affect our understanding of national security? What is the proper role of courts in addressing challenges to national security policy affecting minority communities? This seminar aspires to understand contemporary policy questions in light of a broader theoretical, historical, and legal context. Class attendance and robust participation in discussion is required. There are two options for assignments in this course. You can either write 4 response papers throughout the course, or a single 18-20 page research paper related broadly to the themes of the course (for R credit). Those who choose the research paper option will be expected to discuss and submit an outline of their research paper while the course is in session and to submit the final paper in accordance with standard law school requirements. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Response Papers or Research Paper.

LAW 7034. Race and Public Education. 3 Units.
From at least Brown v. Board of Education, and many would say before that, education has been central to racial justice movements in America. More than fifty years after Brown, most American schools remain segregated by race and class, and many advocates still argue that the struggle for quality education is the key civil rights issue of our time. This course will examine a host of education-related legal and policy issues that intersect with questions of race and class. Topics will include: desegregation and re-segregation, tracking, charter schools, school vouchers, high-stakes testing, the Common Core, school discipline, the "school to prison pipeline," and education in alternative schools, juvenile facilities, and adult prisons. This will be a discussion-oriented course that will operate more like a seminar than a lecture. This class is limited to 30 students, with an effort made to have students from SLS (20 students will be selected by lottery) and students from the School of Education (10 students). Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 7036. Law of Democracy. 3 Units.
This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and final exam. Cross-listed with Communication (COMM 361) International Policy (INTLPOL 351), and Political Science (POLISCI 327C).

LAW 7037. Poverty Law: Introduction and Overview. 1 Unit.
This one-credit survey course will cover selected topics in American poverty law and policy, with an emphasis on federal poverty relief. Topics covered will include the U.S. Supreme Court¿s poverty jurisprudence, the history of federal welfare policy, and historical and present-day debates about poverty in housing, education, health care, and other social domains. Students will have responsibility for reading 50-100 pages for each week¿s discussion. Mandatory P/F, and grade will be based on attendance and participation (one excused absence consistent with passing grade).

LAW 7038. Remedies. 3 Units.
The remedy is arguably the most important part of any lawsuit, and often the most neglected. This course considers the question of what plaintiffs are entitled to when they win a case and why. It will cover damages, punitive damages, restitution, unjust enrichment, and injunctive relief. While we will consider public remedies in constitutional cases, the majority of the course will focus on remedies in private law civil actions. Elements used in grading: Class participation and reflection papers.

LAW 7039. Reproductive Justice. 1 Unit.
(Formerly Law 490) This seminar explores Reproductive Justice ("RJ") as a paradigm for understanding reproductive oppression -- that is, the subordination of individuals through their bodies, sexualities, and abilities to reproduce. The RJ paradigm picks up where a reproductive rights framework ends. It contends that the fight for equality and dignity in matters relating to reproduction continues beyond a successful argument that the Constitution ought to protect a "right" to privacy, "right" to access contraception, or "right" to an abortion. An RJ framework observes that "rights" are given meaning -- and lose meaning -- according to the race, class, age, sexual orientation, gender identity, immigration status, and physical and mental ability (among other attributes) of the rights bearer. As such, RJ analyzes reproductive experiences within a complex context and with respect to the multiple statuses of the persons involved. This seminar will explore RJ as it speaks to assisted reproductive technologies, health care policy, immigration, incarceration, environmental justice, and economic inequality, among other topics. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. This class meets during the first two weeks of Winter Quarter.

LAW 7040. Social Justice Impact Litigation: Issues and Strategies. 2 Units.
(Formerly Law 572) This seminar explores strategic, legal, and ethical issues related to using law reform and social justice litigation to advance the constitutional and civil rights of vulnerable communities. The seminar is designed to allow students to understand and grapple with some of the doctrinal and strategic issues faced by social justice litigators. The course will be informed by the instructor's thirty years of litigating cases, including in the Supreme Court, to advance immigrants' rights as the founder and former national director of the ACLU Immigrants' Rights Project. Among the topics that may be included are selecting and using test cases; identifying plaintiffs; coalition litigation; strategic pleading; class action problems; the role of amicus briefs; suits for damages versus injunctive relief; standing and mootness; ethical problems; settlement strategies; use of public advocacy and media; the effect of lawsuits on policymakers and public officials; the role of government and agency lawyers; and litigation to achieve legislative change. Guest speakers will be invited. Enrollment is limited and the seminar is not open to 1L students. Students are expected to submit a series of reflections (totaling 18 pages) in response to seminar issues and guest speakers. In unusual cases, a student may be approved for Research (R) credit to write a substantial research paper on an approved topic of current significance. R credit is available only with the instructor's prior consent early in the quarter. Students approved for R credit will transfer from section (01) into section (02) after the term begins. Elements used in grading: Class participation (50%) and written submissions (50%). CONSENT APPLICATION: To apply for this course, students are asked to complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7041. Statutory Interpretation. 3 Units.
Statutory law is the dominant source of contemporary law, and it is the form of law that lawyers are likely to confront most often in almost any area of practice. It is also an area of vibrant intellectual debate, as scholars, Supreme Court justices, and others debate the methods and aims of statutory interpretation. This course will stress both the practical and theoretical dimensions of interpretation. Students will learn and apply the methods of statutory interpretation. We will also spend considerable time on contemporary controversies, such as debates about textualist, purposive and dynamic interpretation; about the use of legislative history and canons of construction; about the special interpretive problems that arise in the context of direct democracy; and about the democratic and constitutional foundations of statutory interpretation itself. Readings will draw from political science as well as law. Elements used in grading: Class participation and final exam.

LAW 7042. Sexual Orientation, Gender Identity and the Law. 2-3 Units. This seminar will focus on how the law regulates sexuality. We will approach the material as an exercise in advanced constitutional law, exploring how courts have used--or might use--federal or state constitutional provisions to address issues regarding a wide array of issues involving sexuality. The core of the class will relate to contemporary controversies concerning sexual orientation and gender identity (including, for example, how sexual orientation and gender identity are defined, regulation of sexual conduct, marriage and parenting rights of same-sex couples, and religious liberty debates, among others). But we will also discuss other issues, including polygamy/polyamory and asexuality. We will maintain an interdisciplinary focus throughout as we consider how social, cultural, and political forces shape, and are shaped by, legal doctrine. All students taking the seminar for 2 units will either write a final research paper of approximately 18 pages (for R credit) or a take a final exam. Students who wish to write a longer R paper (approx. 26 pages) may enroll in the seminar for 3 units. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation; and paper or exam.

LAW 7043. Strategic Litigation for Racial Justice. 1 Unit. (Formerly Law 715B) Recent events in our country have dramatically highlighted the fact that we are not a post-racial society, and that structural racism and implicit bias are as harmful to people and institutions as intentional discrimination. Currently, plaintiffs can only show a violation of the Equal Protection Clause of the 14th Amendment - and several other antidiscrimination laws - by proving intentional discrimination. This seminar will examine this "intent standard" and its significant barriers to racial justice litigation. The course will review social science research, including studies on implicit bias, racial anxiety, stereotyping, and other concepts, to explore how contemporary discrimination manifests. We will address how legal advocates and the law can utilize such research to challenge and remedy discrimination through strategic litigation. We will examine real-world examples of this, including in the context of school discipline and the school-to-prison pipeline. Meeting dates: This class will meet on three Fridays, October 21, October 28 and November 4. Students must attend all three classes. Early drop deadline: Students may not drop this course after the first class. Elements used in grading: Written assignments (reflection papers) and class participation.

LAW 7044. Supreme Court Simulation Seminar. 3 Units. This seminar provides students with the opportunity to analyze, argue, hear oral arguments and draft opinions in cases that are currently pending before the Supreme Court of the United States. Professor Lawrence Marshall will serve as the instructor in the seminar, and several of the Law School's esteemed group of Supreme Court litigators are expected to participate in one or more of the sessions. The 18 students in the seminar will be divided into two courts. During each sitting, one of the courts will hear arguments in a case currently pending before the Supreme Court, while two of the students from the court not sitting that week will present oral arguments. The cases chosen will provide a mix of constitutional and statutory issues, as well as a mix between criminal and civil cases. Each student will be assigned the role of a particular Justice for the entire quarter. Each student's task while sitting on cases is to do his or her best to understand that particular justice, based on that justice's prior opinions and judicial philosophy. In this sense, the seminar is also intended to help promote insight into the role of judicial personality and philosophy within the decisional process. The weekly seminars will proceed as follows: In preparation for each week's session, all students (whether they are the two students arguing that week, the nine students judging that week, or the seven students observing that week) will read the lower courts' decisions, the briefs (the party briefs and selected amicus briefs) and the major precedents implicated. During the first portion of each week's session (approximately one hour), two of the students (who are members of the Court that is not sitting that week) will present oral arguments to the nine "justices" sitting that week. The arguments will be based on the briefs that were actually filed in the case. During the second segment of each week's session (approximately 45 minutes), the "justices" who are sitting that week will "conference" the case while the other non-sitting students, students who argued, instructors and guests will observe. Again, each student will be in the role of a particular justice. At the end of the "conference," the opinion-writing will be assigned to one "justice" in the majority and one "justice" in the dissent. During the final portion of each session (approximately one hour), the instructors, guests and students will engage in a broad discussion of what they just observed. This may include analysis of the briefing, discussion about the oral argument, reflections on the "conference," and, more generally, a discussion about the case and its significance. After each class, the student assigned to draft the majority opinion will have two weeks to circulate a draft to the "Court." The student writing the dissent will then have two weeks to circulate his or her opinion. The other sitting "justices" can join one of these opinions, request some changes as a condition of joining, or decide to write separately. Over the course of the Quarter, then, each student will argue one case, sit on four or five cases, and draft at least one opinion. Special instructions: 1. Because this is a simulation with assigned roles, students who are accepted into the seminar may not drop without permission of the instructor. 2. Because of the nature of the writing projects (with extensive interaction with other students), the normal deadline for Winter Quarter papers is waived and final papers must be submitted by the Spring Quarter deadline. Elements used in grading: Students will be graded based on the quality of their participation as justices, their oral argument, and their written opinions.

LAW 7045. The Article III Judge. 2 Units.
(Formerly Law 278) The contemporary debate over the proper role of a federal judge under the Constitution turns, in large measure, on what it is we think an Article III judge is doing when she is called upon to resolve a "case or controversy." Is she looking for the fair result? If so, by whose lights? Is she a political actor, or is she instead looking for a rule of decision that has been previously established by law (a "mere translator" of the law, in Justice Frankfurter's words). If so, by natural law or positive law? These are some of the questions we will consider in discussing what role a federal judge plays when she exercises "the judicial Power of the United States" conferred by Article III of the Constitution. Readings will include books and articles by some of the leading legal thinkers in the nation's history. Special Instructions: This class will meet the first three weeks of the quarter only. Elements used in grading: Class attendance and participation, reading the assigned material, and a 10-15 page paper that uses the readings to analyze a significant judicial opinion. Special Instructions: This class will meet the first three weeks of the quarter only.

LAW 7046. The Welfare State. 3-5 Units.
(Formerly Law 765) Much has been written in recent years about the decline of the welfare state. Numerous adjectives have been applied to describe a trend toward austerity -- death, demise, withering, reversal. One writer suggested that the welfare state had not died, it had merely "moved to Asia" along with industrialization. This seminar introduces students to the key literature, questions, and debates about the modern welfare state. We will consider the emergence, growth, and current status of the welfare state, primarily in Western Europe and North America. The course will examine classical theories about markets and the emergence of social provision. We will also consider the leading theoretical and empirical research addressing the emergence of the welfare state, looking at the American case in comparative perspective. Attention will be paid to social and political factors on state development including political parties, labor markets, gender, demographic change, and immigration. We will then turn to the trend toward austerity and retrenchment, and the effect of globalization for the future of the welfare state. Course Requirements. Participation/Discussion (25%). Students are responsible to complete all readings and to come to class prepared to actively participate in discussion. Each student is responsible to lead a portion of the discussion twice per quarter. Short Reaction Papers (25%). All students must complete 5 reaction papers related to the weekly readings of 2 to 3 pages in length. Reaction papers will include a list of questions to be addressed in that week's discussion. All reaction papers must be posted to coursework in advance of class so that the student(s) leading that week's discussion can incorporate the questions into that week's discussion. Final Options (50%). Students have the option of completing one final paper of 20 pages in length OR 4 essays of 5 -6 pages each addressing the readings in weeks that the student did NOT complete reaction papers. Topics for 20 page papers must be approved by me in advance, and may be related to a student's dissertation or master's research or may be a stand-alone topic. Papers may take the form of a research proposal and need not contain original empirical research. Shorter papers should engage thoroughly with the literature on the selected topic, and should bring additional sources other than those read for class to bear on the topic of choice. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with Sociology (SOC 254 & SOC 354).

LAW 7047. Rethinking Campus and School Title IX Policies and Procedures. 2-3 Units.
I apologize in advance for the fact that there are no paragraph breaks in this description. It is not my fault. Please contact me directly if you have questions about the class and I will email you a more readable description. Thanks, MLD. Seminar with Concurrent Policy Lab: Rethinking Campus and School Title IX Policies and Procedures. Policy Lab Client: National Women's Law Center. Over the past six years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women (and a similar proportion of students identifying as transgender and gender-nonconforming, as well as around 5-10% of male students) experience sexual assault. Survivors have come forward across the country with harrowing stories of assault followed by an insensitive or indifferent response from college administrators, launching one of the most successful, and surprising, social movements in recent memory. Statistics are equally disturbing in the middle and high school context. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 250 colleges and universities currently under investigation for allegedly mishandling student sexual assault complaints. At the same time, students accused of sexual assault have complained of botched processes driven by a "campus rape over-correction" that denied them a fair disciplinary hearing. It is clear that schools are struggling to develop and implement policies and procedures that satisfy their legal obligations in this area. While the future of federal enforcement under the Trump Administration is uncertain, schools are still subject to federal and state law that require them have policies and procedures to address sexual harassment and violence. This course focuses on the legal and policy issues surrounding the highly challenging area of investigation and adjudication of sexual assault and other gender-motivated violence on college campuses and in K12 schools. It will cover the federal and state legal frameworks governing these procedures including Title IX, the Violence Against Women Act, and the Clery Act, and examine current cases as well as the rapidly-evolving legal, federal regulatory, and political environment surrounding this issue. Guest speakers working in the area will help to broaden the class's understanding of the subject matter. Students in this seminar will have the opportunity to participate in the invitation-only national conference entitled The Way Forward: Title IX Advocacy in the Trump Era, which will be held May 1-2 at Stanford Law School and is organized in conjunction with the National Women's Law Center. See [http://conferences.law.stanford.edu/thewayforward-title9/] for more information on the conference. Concurrent Seminar and Policy Lab: The seminar is taught concurrently with the Policy Lab (also entitled "Rethinking Campus and School Title IX Policies and Procedures"). All students registered for the seminar participate in the Policy Lab, which works with the National Women's Law Center toward the development of a set of evidence-based and legally compliant model policies and procedures. Given all the controversy, surprisingly little is actually known about the policies and processes that are currently in use, nor is there any way of easily ascertaining what the majority of an institution's "peer schools" are doing with respect to solving a challenge or addressing an issue. There is no set of "best practices" to which school administrators can easily turn. Students will analyze cutting-edge issues related to school-based gender-motivated violence and work on a white paper for the NWLC that includes both legal and empirical research into the policies and procedures currently in use around the country. Throughout the class, students will have the opportunity to reflect on what they are learning and how it applies in a professional context. The eventual goal of this Policy Lab is the development in conjunction with NWLC of a free, web-based, open-source set of adaptable model policies and procedures that are targeted for different market segments (i.e., large private, large public, small private, HBCU, community colleges, and k12). Course Schedule and Optional Travel: The first three weeks of the class there will be two meetings per week, on Tuesday and Thursday from 4:15 to 6:15. Students will meet with Fatima Goss Graves, Senior Vice President for Program at the NWLC during week 2 to hear her expectations regarding the project and ask questions. During weeks 4-6

LAW 7048. Legislation. 3 Units.
(Formerly Law 319) Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation, final memo, and in-class presentation. (Cross-listed with PUBLPOL 319).

LAW 7049. Advanced Torts: Law and Practice. 3 Units.
Most of civil litigation is in tort. As society changes, this dynamism is reflected in the progression and regression of tort law. Taught by an experienced practitioner, this course will explore contemporary developments in the law of medical malpractice, product liability, mass torts, harms to reputation and dignity and other civil wrongs. We will consider a range of remedies including compensatory and punitive damages as well as their constriction through tort limitations. Knowledge of these substantive rights and remedies has greatest value if the arc and texture of suit is understood. So we'll also learn about insurance, negotiation, settlement and alternatives to trial. And we'll set all this in the broader context of how an attorney can guide a plaintiff or defendant to an appropriate economic and/or noneconomic remedy. Elements used in grading: Class attendance is mandatory and class participation is encouraged and valued. There will be a final exam.

LAW 7050. Toxic Harms. 2 Units.
(Formerly Law 280) This seminar will examine the concerns arising from exposure to toxic substances from a variety of perspectives. A principal focus will be tort liability, and a central theme in the course will be whether tort law is an effective method of compensating victims of toxic exposure and controlling the distribution and/or emission of toxic substances. In order to assess the efficacy of tort, it is essential to compare the liability system with alternatives such as restructured "public law" litigation, administrative compensation schemes, and regulatory control strategies. Moreover, it seems equally important that these options be grounded in a concrete understanding of the major current problem areas. To accomplish these aims, the course will focus on a number of specific present concerns, including tobacco, asbestos, anti-inflammatory drugs, and workplace emissions exposures. In each instance, we will look at the nature of the public health problem as well as ensuing tort litigation and regulatory activity. In addition to examining these distinctive problem areas, we will look at broader, cross-cutting institutional reform proposals that have received recent attention. Students in Section (01) will write three ten-page writing exercises on topics discussed in class. After the term begins, students accepted into the course can transfer from section (01) into section (02), and have the option to write a final independent research paper for Research credit, with instructor consent. Elements used in grading: Three ten-page writing exercises or final independent research paper. Early drop deadline.

LAW 7051. Local Government Law. 3 Units.
Local governments exert tremendous influence over socioeconomics, race relations, environmental health, political power, and housing and real estate. This public law course will investigate the law of these governments (including cities, counties, and special districts) from four vantage points: (1) local governments within the federalist system, including the balance of power between local, state, and federal governments; (2) horizontal questions of power, including hierarchy and specialization among local governments; interlocal cooperation and competition; and the creation, expansion, and dissolution of local entities; (3) innovative uses and delegations of local authority to achieve state or local public policy goals; and (4) the nature of local democracy and local finance, including citizen influence of local lawmaking through initiatives and referenda, alternative voting schemes, and responses to fiscal distress. Discussions and in-class projects in the course will be situated in locations ranging from rural towns to major metropolises across the country. This class is limited to 30 students, with an effort made to have students from SLS (25 students will be selected by lottery) and up to five non-law students by consent of instructor. Elements used in grading: Class participation; in-class presentation, and one-day take home exam.

LAW 7054. The 45th President and the Constitution. 2-3 Units.
We will survey a number structural constitutional issues raised during the Trump Presidency, including the role of the judiciary; the scope and limits of unilateral Presidential power; the relationship between state and federal governments; Congressional power to investigate; and the role of the Special Counsel. Among the substantive areas of coverage will be protection of voting rights; partisan gerrymandering; free speech; and religious freedom. Among the specific settings we will consider are the President's first and second immigration orders; the Global Gag Rule; the effort to de-fund Planned Parenthood; the President's acrimonious relationship with the press; conflict of interest issues, including the Emoluments Clauses; the legal status of the Affordable Care Act's mandatory coverage of contraception, including religious objections; the status of gay marriage, including religious exceptions; and the regulation of the mass media and the Internet. Participants in the seminar should have completed (or be enrolled in) the basic Constitutional Law course. After the term begins, a maximum of 20 students accepted into the course can transfer from Section 01 into Section 02 (long research paper option), which meets the R requirement, with consent of the instructor. Elements used in grading: Final paper.

LAW 7055. American Legal History, 1930 - 2000: The New Deal, The Rights Revolution and Conservative Reaction. 2 Units.
This course examines major transformations in American law brought about by the momentous social and political movements of the mid- to late 20th Century. Part I deals with the response of Franklin D. Roosevelt's New Deal to the economic catastrophe of the Great Depression. The New Deal resulted in a major expansion -- against the resistance of conservative courts -- in the size and responsibilities of the Federal government to regulate the economy and secure citizens against risks of unemployment, sickness and old age. Part II covers the expansion of the New Deal after World War II to new forms of welfare and regulation (such as Medicare and environmental law) and what we now call the Rights Revolution --movements of subordinated or marginalized groups to claim equal rights (African-Americans, women, the disabled, gays and lesbians) or fair treatment by government (criminal suspects, welfare recipients, mental patients, prisoners). Part III: Both the New Deal and the Rights Revolution provoked fierce political reactions in which the modern conservative movements arose and came to power. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Attendance; Exam or Final Research Paper. Cross-listed with History (HISTORY 51G & 151G).

LAW 7056. Law of Democracy - India: Field Study. 1 Unit.
This is the Delhi, India component of Political Campaigning in the Internet Age (Law 7031) and Law of Democracy (Law7036). For details, see course description for Law 7031 and Law 7036. Students in this optional field study component will travel to Delhi, India for one week during spring break 2017. It accompanies courses in Law of Democracy and Political Campaigning in the Internet Age. Class sessions will take place primarily at the O.P. Jindal Global University, but will include visits to the Indian Parliament, Supreme Court, and National Electoral Commission. The Course will examine topics in regulation of democracy in a comparative perspective. Those topics include voting rights, campaign finance, regulation of political parties, and election administration. On the last day of the course, students will also have the option of participating in an international conference on comparative democracy to be held at O.P Jindal Law School. The course grade will be based on student essays examining a topic of the law of democracy in comparative perspective. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7057. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams. Elements used in grading: Attendance, Final Paper. Cross-listed with Communication (COMM 153A, 253A), Political Science (POLISCI 72), and Public Policy (PUBLPOL 146, 246).

LAW 7058. Introduction to Antidiscrimination Law. 3 Units.
(Formerly Law 734) This course will focus on the statutory legal rules (primarily federal) governing discrimination on the basis of race, national origin, sex, disability, and other protected classifications. With a rotation of instructors including and beyond Ford and Anderson, the course will include modules regarding: employment discrimination (including sexual harassment), fair housing law, voting rights, and disability law. Note: The course will be designed to minimize overlap with Ford's Employment Discrimination course, and thus students are welcome to take both. Elements used in grading: Class Participation, Attendance, Final Exam.

LAW 7059. Labor Law. 3 Units.
This course is a survey of the law of labor relations; it is designed to provide the student with an acquaintance with the more important problems of labor law but not with a comprehensive coverage of the entire field. In particular, the course will focus upon the historical development of labor law, problems relating to union organization, recognition, and the duty to bargain collectively. The course will also examine some aspects of arbitration and the law relating to the enforcement of collective bargaining as well as non-union arbitration. The course will include some discussion of the relationship between law and politics in administrative agencies. Elements used in grading: Final Exam.

LAW 7060. Law and Continental Thought: Resistance. 2 Units.
Dominant trends in continental thought will be studied with an emphasis on the complex evolution of the relationship between theories of the rule of law and the definition and assertion of liberal democratic rights, on the one hand, and the sources of systematic legal failure and justifications of resistance to law, on the other. The roots, development, and pathologies of post-structural theory will be a central preoccupation of the course, as will the tensions between post-structuralism and the premises of liberal democratic thought. Major works by a range of theorists (such as Marx, Freud, Nietzsche, Benjamin, Fanon, Lacan, Foucault, Bhabba, Butler, Said, Chakrabarty, Haraway, Crenshaw, Ranciere, and Agamben) will be situated in relation to historical and theoretical interpretations of discrete 19th and 20th century resistance movements. No prior work in philosophy or critical theory is required to enroll in the seminar. Students may elect to write an 'R' credit paper or complete a 10-12 page essay. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Grading Elements: attendance, active class participation and written assignments (essay or research paper).

LAW 7061. Children Sexuality and the Law. 2-3 Units.
This seminar focuses on federal and state law designed to protect children from sexual exploitation, as well as federal constitutional law regulating young adults' expressive rights with regard to gender and sexual identity. The seminar provides a general introduction to some of the laws governing children's sexual autonomy as well as necessary protections from sexual abuse; however, the seminar's primary purpose is to teach students about how the law discursively constructs children as it attempts to protect them. Specifically, students will explore how laws designed to protect children from sexual exploitation also naturalize certain assumptions about children's perceptions, cognitive capacities, interests and vulnerabilities. Our discussions will explore how the law, while attempting to catalogue and regulate the potential threats children face, also instantiates certain ideas about children's potential sex-related injuries and how these injures can affect them over time. Finally, seminar discussions will explore whether there are any inconsistencies between the understanding of childhood, sexual injury, capacity, and autonomy in various areas of state child protection laws, federal constitutional law, and relevant federal statutes. In addition to considering how laws regulating children's sexuality affect children, the seminar will also examine how the same laws effectively constrain adults' behavior, as well as shape our understanding of the role of certain social institutions. Laws intended to more generally protect children from sexual exploitation also regulate children's relationships to their parents, affect our understanding of the role of schools, and even our understanding of the role libraries and the internet play in educating citizens. Seminar discussions will focus on how discursive constructs and social understandings about children contained in law both constrain and enable us in discussions of child sexuality. We will also consider how these constructs and understandings empower certain institutions by legitimating certain kinds of intervention. Students can choose to write three short response papers for two units or a final research paper for three units. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the Research (R) requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation; Written Assignments or a Final Research Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7062. Originalism. 2 Units.
This two-credit seminar will explore the theory and practice of "originalism" -- the idea that the Constitution should be interpreted in light of the meaning of its text to those who had authority to enact it. This is a controversial approach (as are the others) and we will read and consider critics as well as proponents, so that students can make up their own minds. The first part of the seminar will be devoted to the theory: how it works, what are its justifications, what are its flaws, the various versions. The remainder will be devoted to specific applications. Because there are far more topics than we have time to cover, students will vote on the first day for which topics we will take up. Among the choices are: executive power, speech and press, liberty under the Fourteenth Amendment, equality under the Fourteenth Amendment, gun rights, searches and seizures, and freedom of religion. Two students will assist in leading class discussions. Elements used in grading: Grades will be based 20% on participation and 80% on papers. Students will have the choice of one longer research paper or three shorter reflection papers. After the term begins, students accepted into the course can transfer from Section 01 into Section 02 (long research paper), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7063. Youth Law and Policy. 2 Units.
This course examines current issues in youth law and policy with a focus on the potential and collateral effects of law on certain subpopulations of vulnerable youth. Substantively, the course focuses on case law and statutes in delinquency, dependency, education, public benefits, and health access with an attention to cross-section themes of poverty, economic justice, race, and youth voice. By the end of the course, students will have developed a better understanding of how litigation, legislation, and policy in youth law come about through examining recent developments in the field and the tools advocates have used to enact change. Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from the exam section (01) into paper section (02), with consent of the instructor. Elements used in grading: Class Participation, Attendance, Written Assignments; Exam or Final Paper.

LAW 7064. Advanced Immigration Law Seminar. 2 Units.
This seminar is an advanced course on immigration law and policy designed for students who have taken the basic immigration law course (or had equivalent academic exposure to immigration law) and who wish to explore additional topics or issues in greater depth. Topics may include: discrimination against noncitizens by private and public entities, workplace and labor rights of noncitizens, constitutional limits on federal enforcement, the intersection of immigration and criminal law, federal enforcement priorities, asylum and humanitarian protections, subfederal immigration enforcement and "sanctuary" measures, and selected contemporary litigation. Issue selection may be adjusted based on student interest and input. Readings will be both doctrinal and policy. Students must fill out a consent form and have academic or equivalent grounding in the basics of immigration law. A limited number of students may be able to enroll for R paper credit. Guest speakers may be invited for some topics. Students accepted into the course may be eligible to transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and attendance (30%), written reflections or paper (70%). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7065. One in Five: The Law, Politics, and Policy of Campus Sexual Assault. 3-4 Units.
TRIGGER WARNING: Over the past several years the issue of campus sexual assault and harassment has exploded into the public discourse. Multiple studies have reinforced the finding that between 20-25% of college women (and a similar proportion of students identifying as transgender and gender-nonconforming, as well as approximately 10% of male students) experience sexual assault carried out through force or while the victim was incapacitated during their time in college. Fraternities have been found to be associated with an increased risk of female sexual assault on campus. Vulnerable students and those from marginalized groups are often found to be at increased risk. This is also a significant problem in k12 education. Sexual harassment rates are even higher. Survivors have come forward across the country with harrowing stories of assault followed by what they describe as an insensitive or indifferent response from college administrators. These survivors have launched one of the most successful, and surprising, social movements in recent memory. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 300 colleges and universities under investigation for allegedly mishandling student sexual assault complaints as of the end of that administration. At the same time, the Obama administration's heightened response led to a series of high-profile lawsuits by accused students who assert that they were falsely accused or subjected to mishandled investigations that lacked sufficient due process protections. The one thing that survivors and accused students appear to agree on is that colleges are not handling these matters appropriately and appeared to be more concerned with protection the institutional brand than with stopping rape or protecting student rights. Colleges have meanwhile complained of being whipsawed between survivors, accused students, interest groups, and enforcement authorities. In an about-face that many found shocking, the Trump Administration rescinded all of the Obama-era guidance on the subject of sexual harassment and has promulgated new proposed regulations that would offer significantly greater protection to accused students and to institutions and commensurately less protection to survivors. An increasingly partisan Congress has been unable to pass legislation addressing the issue.This course focuses on the legal, policy, and political issues surrounding sexual assault and harassment on college campuses. Each week we will read, dissect, compare and critique a set of readings that include social science, history, literature, legal, policy, journalism, and narrative explorations of the topic of campus sexual assault. We will explore the history of gender-based violence and the efforts to implement legal protections for survivors in the educational context. We will also study the basic legal frameworks governing campus assault, focusing on the relevant federal laws such as Title IX and the Clery Act. We will critically explore the ways that responses to this violence have varied by the race, class, gender identity, sexual orientation, and other characteristics of parties and institutions. We will hear from guest speakers who are actively involved in shaping policy and advocating in this area, including lawyers, activists, journalists, and policymakers. This year we will also host special guest speaker Chanel Miller, author of the bestselling memoir Know My Name. The subject matter of this course is sensitive, and students are expected to treat the material with maturity. Much of the reading and subject matter may be upsetting and/or triggering for students who identify as survivors. There is no therapeutic component for this course, although supportive campus resources and Title IX staff are available for those who need them. Elements used in grading: Grades will be based on class attendance, class participation, and either several short reflection papers and a class presentation (section 01) or an independent research paper or project and class presentation (section 02). After the term begins, students accepted into the course can transfer from section 01 into section 02, which meets the R requirement, with consent of the instructor. Enrollment is by INSTRUCTOR PERMISSION. Access the consent form here feminist.stanford.edu/academics/undergraduate-program/forms or email etsurkov@stanford.edu to request a form via email. Applications will be reviewed on a rolling basis until the class is full. Demand for the class is high and participation is capped at 18. The class usually fills quickly, so make sure to apply early. Cross-listed with Feminist Gender

LAW 7067. Law and Policy in the Post-Obama Era. 1 Unit.
This course will consider a number of current issues of law and policy that achieved prominence during the Presidency of Barack Obama and remain unresolved. These issues include: 1) immigration law reform and DACA, 2) the role of the Department of Justice in reforming local and federal criminal law enforcement, 3) the role of government policy in regulating the economy and financial system, in facilitating heath insurance, and in remedying economic inequality, 4) the proper balance between national security and civil liberties/human rights, as exemplified by the debates over the status of the Guantanamo Bay detention facility and drone warfare. In each of these areas, and others, debates about law and policy had reached a seeming, or potential, consensus in early 2009, but that consensus quickly fell apart. In each area, the gap between differing formulations of law and policy that had existed until recently has widened. Keeping in mind the time limitations of this course, we will briefly examine most of these of law and policy -- the governing legal doctrines and policies, their evolution since 2009, and their present and future prospects. The course will ask: What accounts for these differing visions of law and policy? What accounts for the inability of the political and legal system to resolve them? What are the possible ways forward? Class format will consist mainly of readings and class discussion, and students are encouraged to bring their own perspectives to bear on these difficult and timely issues. Class will meet Monday-Thursday, January 8-11, 7:15 PM to 9:15 PM and Tuesday of the following week, January 16, 6:20 PM to 7:20 PM. Elements used in grading: Class Participation.

LAW 7070. Federal Indian Law: Historiographical Readings in Federal Law and Policy. 1 Unit.
This is the one unit, Mandatory P/R/F component to Federal Indian Law (LAW 7030). Enrollment is by consent of instructor. See LAW 7030 in the SLS Course Catalog for details. Students will meet five times over the quarter. Meeting dates to be arranged with the instructor. Elements used in grading: Attendance, reading assignments, and a short paper.

LAW 7071. Philanthropy and Civil Society. 1 Unit.
Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 3 units. Cross-listed with Education (EDUC 374), Political Science (POLISCI 334) and Sociology (SOC 374).

LAW 7073. Law, Bias, and Algorithms. 3 Units.
Human decision making is increasingly being displaced by algorithms. Judges sentence defendants based on "risk scores;" regulators take enforcement actions based on predicted violations; advertisers target materials based on demographic attributes; and employers evaluate applicants and employees based on machine-learned models. A predominant concern with the rise of such algorithmic decision making (machine learning or artificial intelligence) is that it may replicate or exacerbate human bias. Algorithms might discriminate, for instance, based on race or gender. This course surveys the legal principles for assessing bias of algorithms, the engineering techniques for how to design and assess bias of algorithms, and assesses how antidiscrimination law and the design of algorithms may need to evolve to account for the potential emergence of machine bias. The course will meet jointly with MS&E 330 [https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=MS%26E+330%3A+Law%2C+Bias%2C+%26+Algorithms+%29&collapse=]. Minimal coding background is assumed, but students will learn through interactive coding sessions in class. Admission is by consent of instructor and is limited to 20 students. Student assessment is based on response papers and a final project. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7075. Family Law I: Regulating Marriage and other Intimate Relationships. 3 Units.
Intimate sexual relationships are central to most people's lives. Marriage has long been the primary locus of such relationships, the foundation of family life. In recent decades, though, marriage has undergone unprecedented changes. Sustained political advocacy and judicial decisions have opened marriage to same sex couples. Yet marriage equality has triumphed at a time when marriage is less universal and less robust as a social institution than ever. More American adults than ever are unmarried; more than a third of those who do marry will divorce. Unprecedented numbers of children are now born to unmarried parents. And marriage rates and stability have diverged across racial and socioeconomic groups as never before. What is one to make of these changes? And how should law and policy respond? The course will examine the constitutional and statutory doctrine governing marriage and other intimate relationships. Throughout, we will consider the cultural and social understandings that undergird our past and current approaches to regulating intimate relationships. Elements used in grading: Attendance, Class Participation and Exam.

LAW 7076. Race, Disadvantage, and Elite Education: The Allocation of Opportunity. 2 Units.
In recent years, selective universities have become more academically selective than ever. During the past half century their applicant pools have grown considerably--now including women, minorities, immigrants, and international students--while the sizes of their student bodies remain virtually unchanged. The broader social and economic context has shifted as well. With globalization, the advance of technology and the resulting labor market shifts, advanced education is seen as more important than ever to getting ahead. Yet, even as elite universities seem central to Americans' hopes and dream, they have also come under attack, viewed as disconnected from, and alien to, "regular Americans." This course will engage these developments through considering a pivotal question: How do and should elite educational institutions choose among the many applicants vying for admission? Two principles loom large in the ethos of selective college admissions: diversity and merit. Throughout the course, we will take a critical stance toward these claims. For example, how much does and should merit shape admissions decisions? What are the rationales for using prior grades and test scores to assess applicants? Similarly, what are the costs and benefit of the diversity rationale? Should schools take account of race, socioeconomic class, or neither? Course readings will include judicial opinions and legal commentary, social science evidence and cultural criticism. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 7077. Native Peoples and the Law. 1 Unit.
This reading group of five evening meetings over the quarter will explore Native peoples' encounters with U.S. law as recounted in novels, documentaries, essays, and other material, emphasizing indigenous perspectives and voices. The class is intended as a complement to LAW7030: Federal Indian Law; students enrolled in that course will receive priority in admission, but all students are welcome, space permitting. Elements used in grading: Attendance, Class Participation. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.
Same as: Reading Group

LAW 7078. The United States Senate as a Legal Institution. 3 Units.
This course will familiarize students with major, and/or emerging legal and constitutional issues concerning the U.S. Senate. In so doing, it will examine: 1) the Senate's nature as a complex legal institution, and 2) the issue of the Senate's legitimacy in the context of the current and largely unprecedented criticism of the Senate from all parts of the political spectrum. This first portion of the course will consider institutional-legitimacy issues facing the Senate, including the appointment of senators to fill vacancies as well as disputes concerning Senate rules and procedures such as the filibuster and holds. The second part of the course will explore how the Senate interfaces with the Constitution and the Supreme Court. It will examine how senators should regard the issue of constitutionality in voting on legislation, be it campaign-finance reform, internet decency, or health care. This part of the course will also consider how senators should approach proposed constitutional amendments. The final portion of the course will review the wide range of issues that have emerged in recent years regarding the constitutional relationship between the Senate and the Executive Branch, including the increasingly acrimonious issue of the standard to apply to executive appointments under the advice and consent power. Particular emphasis on this part of the course will be given to issues that have gained greater prominence since 9/11, including the relationship between enacted, constitutional legislation and the presidential assertion of Article II powers, as well as the Senate's abdication of its Article I war-declaration power. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: Class participation, attendance; and final exam or final research paper.

LAW 7079. Advanced Immigration Policy Reform. 2 Units.
This is a seminar for students with some background and interest in immigration and administrative law based on prior coursework, clinic enrollment, academic study, or other experience who want to engage in an examination of the administrative process for pursuing reform. The course will examine some of the current contested immigration policy changes and consider the mechanisms for achieving positive reform in light of administrative law and practice. The goal is to identify strategies and mechanisms for future reform that would further the protections of non-citizens during a period of global hostility to migrants. One significant part of the course will be contributing to a project that tracks and catalogues all the immigration policy changes of the Trump administration. Students will also develop proposals for future non-legislative reform through administrative action. The seminar will examine the federal administrative process from a theoretical, doctrinal, and practical perspective based on selected readings, guest speakers, and the instructor's experience as senior immigration policy advisor in the Obama administration at the Department of Homeland Security and as founder and former director of the ACLU Immigrants' Rights Project. Requirements: Some prior exposure to immigration law or practice in a work, clinical, professional, academic, or other setting. Elements used in grading: Grades will be based on class attendance, class participation, and either writing assignments (Section 01) or, with the instructor's permission, an independent research paper (Section 02). A very limited number of students may be permitted to write the long research paper for R credit but only with the prior specific approval of the instructor. Students accepted into the course may be eligible to transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7080. Amending the U.S. Constitution. 2 Units.
This seminar explores the legal and historical dimensions of the American constitutional amendment process as well as its current and potential role in our political system and public debate. The principal focus will be on Article V of the Constiution but we will also briefly examine the way in which the Constitution is said by some to be "amendable" (and to have already been "amended") through alternate means apart from Article V. The seminar will enable students both critically to evaluate the myriad aspects of constitutional amendments and conventions using proper source material and to develop their own proposals for potential amendments. The first part of the course will first explore the origins of Article V, including background on the comparative amendability of other written constitutions, the adoption of the Bill of Rights, and the apparent unamendability of the provision in Article V requiring equal representation of the states in the Senate. We will then review the history of efforts--both successful and unsuccessful--to amend the Constitution, such as the early corrective amendments to the post-Civil War Reconstruction amendments, the Progressive Era amendments (e.g., the switch to the direct election of Senators), and the modern voting-related amendments. This section will also consider views about when and how it is proper or "appropriate" to amend the Constitution, the standard that members of Congress should employ in voting on proposed amendments, and the history of calls for constitutional conventions to amend the Constitution. The second part of the course will explore the current possibility of a constitutional convention or conventions being called independently of Congressional initiative including the question of whether the scope of such a convention could be limited. We will then examine the relatively recent and current proposals and advocacy for and against constitutional amendments across the political spectrum. For this portion of the course, we will particularly consider the balanced budget amendment, the state veto amendment, the victims' rights amendment, and the elimination of the direct election of Senators, from the conservative side of that spectrum. We will then particularly highlight the movement to overturn Citizens United by amendment, the elimination of the electoral college amendment, the proposal to overturn Heller (right to bear arms) by amendment, and the current effort to revive and ratify the Equal Rights Amendment, all mostly associated with the progressive or liberal side of the spectrum. For the final seminar, students will be asked to give in class their opinion of Article V and whether it is too easy or difficult (or just right) in terms of allowing amendments. Each student will also be asked briefly to propose and defend an amendment that that student believes should be added to the Constitution. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement. Elements used in grading: class attendance, participation, class presentations, and final paper.

LAW 7081. Family Law II: Parent-Child Relationships. 2 Units.
This course will examine the legal regulation of the parent-child relationship. The law used to be much simpler than it is today. The law treated marriage as the near exclusive setting for the rearing of children, defining the woman who gave birth to the child was the mother, and the man to whom she was married as the father. In recent decades, that simple legal principle has collapsed under the weight of social and technological change. The central social change is the reconfiguration of marriage and the multiplicity of settings in which children are raised. The advent of same sex marriage and same sex couples undermine longstanding assumptions about the legal definition of parent. And the fact that 4 in every 10 children are born to unmarried couples, and that nearly half of all married couples will divorce (often with either or both partners remarrying) introduce a dizzying array of possible family configurations. Advances in genetic testing complicate matters further, by allowing biological parents to be identified with near certainty. Thus, there is less reason to treat a woman's husband as her child's father. Many couples use reproductive technologies involving the donation of sperm, the donation of eggs or even the use of a surrogate mother to gestate the child. The use of such technologies can result in many adults having some form of tie to the child, a situation that has prompted some jurisdictions to recognize the possibilities of more than 2 parents! In sum, nonmarital, nonbiological, and same-sex parenting have become central, rather than peripheral features of the familial landscape. These changes highlight provocative and fundamental inquiries: What, exactly, does, and should, make one a parent in the view of the law? And how should the state allocate rights and responsbilities, related to custody, financial support and visitation, as families fracture and reconfigure? Elements used in grading: Participation, Exam.

LAW 7082. Free Speech, Democracy and the Internet. 2-3 Units.
This course, which will be cotaught by Monika Bickert from Facebook, will cover contemporary challenges to democracy presented by the Internet. Topics will include disinformation, polarization, hate speech, media transformation, election integrity, and legal regulation of internet platforms in the U.S. and abroad. Guest speakers from academia and industry will present on these topics in each class session, followed by a discussion. Students will be responsible for one-page papers each week on the readings and a research paper to be turned in at the fall paper deadline. Students can take the class for either 2 or 3 units, depending on the research paper length. This class is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Cross-listed with Communication (COMM 153B/253B) and International Policy (INTLPOL 323).

LAW 7083. Race and Law Workshop. 2 Units.
The Race and Law Workshop will meet once each week. The broad theme of the workshop is to probe the relation of law and justice with respect to race and inequality. Most weeks will feature a speaker who will present a draft of a paper. Students will have read the paper, and often, additional materials related to the subject matter of the paper, and will write responses to the paper, which will be shared with the speaker before the session. The session will consist of discussion of the speaker's paper and the students' responses. The aim of the workshop is to expose students to current scholarship about race and law, to improve the speaker's paper, and to deepen student's thinking about the relationship between law and racial justice (and injustice). Elements used in grading: Written Papers.

LAW 7084. The First Amendment: Freedom of Speech and Press. 3 Units.
Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. This course is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Law students will be evaluated based on class participation and a final exam. Non-law students will be evaluated on class participation, a midterm and final exam, and nonlaw students will participate in a moot court on a hypothetical case. Non-law students will also have an additional one hour discussion section each week led by a teaching assistant. Cross-listed with Communication (COMM 151, COMM 251) and Political Science (POLISCI 125P).

LAW 7085. The U.S. and the Use of Force. 2 Units.
This course examines legal issues involved in the formulation and implementation of U.S. policy and actions with respect to the use of armed force, with emphasis on recent and current conflict situations. It will explore these issues from the point of view of international legal norms and obligations, U.S. law and practice, and the policies and actions of recent U.S. Administrations. Among the areas that will be explored are the following: (1) law and practice relating to the resort to armed force; (2) limits on means and methods of warfare; (3) the treatment of detainees; (4) the treatment of the civilian population; and (5) the punishment of international crimes. Elements used in grading. Grades will be based on a paper exploring these issues in the context of a specific current conflict or situation (75%), and class participation (25%).

LAW 7086. Transitional Justice. 3 Units.
The political, social, and legal problems confronting societies after periods of mass human rights violations or war have attracted increasing attention from policymakers and scholars in the last three decades. This course will examine the legacies of atrocities and the institutions and processes that governments and citizens most often use to address them, comparing approaches from across the globe. South Africa's Truth and Reconciliation Commission; the prosecution of Chile's former dictator, Augusto Pinochet; Argentina's reparations to victims of its military regime; and the International Criminal Court are among the best-known policy responses to those problems. In addition, non-legal interventions---such as the Berlin Holocaust Memorial and Nelson Mandela's many symbolic gestures toward reconciliation with white South Africans---may have important social and political effects. In addition to initiatives at the national and international levels, we will devote some attention to transitional justice at the local level. A recurring theme throughout the course will be the connections between atrocities and transitional justice measures intended to address them, on the one hand, and economic justice and development, on the other. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students enrolled in the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Written Assignments; Final Exam or Final Paper.

LAW 7088. Defining Discrimination. 2 Units.
Federal, state and local laws prohibit discrimination based on many grounds such as race, sex, religion, national origin and disability. But the operative term, "discrimination," is typically quite vaguely defined in statutory language. As a consequence, courts and legal analysts have developed a number of theories of discrimination. These theories can be inconsistent with each other and with popular definitions of discrimination; for instance, some laws forbidding "discrimination" forbid differential treatment, some permit it under limited circumstances and some require it. Discrimination may or not require a specific mental state ("discriminatory intent") or specific consequences ("discriminatory effect" or "disparate impact"). Arguably, "discrimination" is, in practice, as much a question of values and norms as it is a matter of fact. This class will explore the concept of discrimination in case law, philosophy and legal theory. Special Instructions: Grades will be based on attendance, class participation and (1) short reflection essays on the readings and a short research paper or (2) a long research paper with consent of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7089. Originalism and the American Constitution: History and Interpretation. 3 Units.
Except for the Bible no text has been the subject of as much modern interpretive scrutiny as the United States Constitution. This course explores both the historical dimensions of its creation as well as the meaning such knowledge should bring to bear on its subsequent interpretation. In light of the modern obsession with the document's "original meaning," this course will explore the intersections of history, law, and textual meaning to probe what an "original" interpretation of the Constitution looks like. Elements used in grading: Class Participation, Response Papers, Research Paper. Cross-listed with History (HISTORY 252/352).

LAW 7090. Race and International Law. 1 Unit.
This mini-course is an introduction to thinking about race as method for the study of international law. If the international legal order is primarily structured around the categories of nation and state, the notion of race continues to haunt it in important and often unacknowledged ways. The course will explore the tension between (a) race as a social phenomenon that is transnational if not global in scope and (b) the construction of race in contemporary international law, where it is often treated as a domestic matter of non-discrimination norms in human rights law. The course will also examine the present-day legacies of international legal norms and institutions connected to slavery and formal colonialism. Materials will be drawn from contemporary UN human rights mechanisms, state practice and case law, and legal claims by anti-colonial/racial justice movements. This class will meet the first five weeks of the quarter (September 25 to October 23). Elements used in grading: Class evaluation will be based on attendance, participation, and short reflection papers before the five class sessions.

LAW 7091. Gender, Sexuality and Reproduction. 1 Unit.
This mini-course revisits the core elements that have traditionally defined family law: gender, sexuality and reproduction. Historically, family law had two main functions. It created a framework for bearing and raising children, and organized the children's parents' coupledom. Gender, sexuality and reproduction were closely interwoven and subject to certain expectations. Sex was only allowed in the context of marriage, which formed the gateway to reproduction. Children born outside of wedlock had inferior rights. Women were placed under their husband's control to ensure their sexual fidelity. From the 1960's on, societal changes shook the traditional conception of the family to its foundations. Women gained economic independence and started challenging their traditional role in the family. Birth control cut the ties between sexuality and reproduction. The position of marriage as the sole seat of both coupledom and childbearing started to erode. The disconnection of gender, sexuality and reproduction opened family law up to new questions. Why should marriage only be possible between a man and a woman? Can children have more than two legal parents? What is the extent of the reproductive rights of women and men? Is marriage still a relevant legal concept? These and other questions are tackled from a comparative law angle, comparing the approach in the United States and other Western jurisdictions. Students are asked to reflect on the various responses to contemporary family law issues across the Western world. The focus is on general tendencies, not on technicalities. Grades will be based on regular attendance, active class participation and one short response paper. This class will meet the first three weeks of the quarter on Thursday, January 9, 16, and 23.

LAW 7092. Suffering. 1 Unit.
The law is in large part about suffering. As lawyers, we recognize suffering [or we do not], we articulate what suffering means [or does not], and we measure remedies for suffering [or we do not]. Despite the central import of suffering to the law, suffering is elusive. This reading group will explore different treatments of suffering in music, fiction, law review articles, blog posts, and other media and discuss how to apply the insights of artists, theorists, lawyers, and novelists to our understanding of legal suffering. Class meeting dates: The class will meet five Tuesdays from 6:30PM-8:30PM on January 15, 22, and February 5, 19, & 26. Elements used in grading: Attendance, Class Participation. Consent Application: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).
Same as: Reading Group

LAW 7093. Legal Lags: Regulatory Challenges Posed by Social, Economic & Technological Change. 1 Unit.
This Reading Group will explore the legal and regulatory challenges posed by fast-moving social, economic and technological developments. Examples include privacy regulation in the age of Facebook; transportation safety in the era of autonomous vehicles and drones; energy regulation in the context of climate change and financial regulation in a time of blockchain. Members of the reading group will be asked to share in the preparation and present of discussion materials. Reading group meets five Thursdays. Precise meeting dates TBD by instructor. Elements used in grading: Attendance, Class Participation.
Same as: Reading Group

LAW 7094. Tribal Law. 1 Unit.
A survey of the laws that tribes enact to govern themselves. It considers issues ranging from governance (elections, justice systems, and tribal constitutions), to conflicts between individuals (contracts, property, domestic relations, torts), to regulation of a tribal community's economy. This class will meet 7:15PM to 9:15PM on Tuesday, May 7, Wednesday, May 8, Thursday, May 9, Tuesday, May 14, and Wednesday, May 15. Elements used in grading: Participation, Written Assignments.

LAW 7095. Advanced Administrative Law. 3 Units.
This advanced course will combine theory and practice, drawing from new academic research as well as recent litigation and events. It will explore a series of subjects, including the following: agency design and staffing; the White House's role in agency action; current agency rulemaking and adjudicatory practices; latest issues in the reviewability of agency action and inaction; modern applications of Vermont Yankee, Chevron, and State Farm; state administrative law; and preemption. Requirements will include multiple writing assignments (including very short reading reflections, a draft comment and reflection on an open regulatory proceeding or attendance at and reflection on an agency adjudication, and a 10-15 page paper on a relevant topic). Students must have taken Administrative Law or receive permission of the instructor. Elements used in grading: Attendance, class participation, written assignments, final paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7096. Law and Politics of Bureaucracy. 3-5 Units.
Modern government is bureaucratic government. In the words of Justice Jackson, the rise of the administrative state is likely "the most significant legal trend of the last century and perhaps more values today are affected by [agency] decisions than by those of all the courts." This seminar will survey the major ways in which law and political science have grappled with bureaucratic governance. How do we understand the rise of the administrative state? Why are bureaucracies designed the way they are? How do bureaucracies work in the face of legal and political constraints? And what avenues are there for meaningful regulatory reform? The class is cross-listed in political science and the law school and course enrollment will be by consent of instructor. Students will be responsible for writing short reflection papers and a research paper. Students may take the course for either 3, 4, or 5 units, depending on the paper length. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. Admission based on application. Instructor consent required. CONSENT APPLICATION: To apply, please complete the following webform by TBA: https://forms.gle/ZBtFE5Xdh2UwBEHb8. Cross-listed with Political Science (POLISCI 228C/428C).

LAW 7097. Educational Rights Workshop. 2-4 Units.
This workshop will be offered to students who were enrolled in the Spring 2020 Education Advocacy Clinic (which was cancelled). The workshop will consider historical legal and policy efforts to ensure that all children have a right to equal educational opportunity and it will look to the future of educational rights advocacy. This workshop will draw from past civil rights work, the experience of the Youth & Education Law Project, and the best thinking on how to move forward. Specific topics may include racial equality in schools, educational resource equity, equal opportunity for students with disabilities, Native American students, and other historically disadvantaged populations, and standards-based reform and expanded school choice as approaches to educational equity. There will be a weekly 2-hour, on-line seminar and discussion. All students will be required to write weekly reflection papers. Students may opt to write a 10-page final paper for an additional unit (3 units - section 02) or an extended 25-page research paper for an additional two units (4 units - section 02). After the term begins, students enrolled in the course can transfer from section 01 (2 units) into section 02 (3 or 4 units) with consent of the instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. This class will meet once a week for two hours. Day and time TBD by instructors.

LAW 7098. Topics in Constitutional Law. 3 Units.
This class will be a hybrid between a group seminar and independent research projects. The seminar will meet over Zoom every other week to cover basic topics in constitutional law, potentially including interpretive methods, federalism and the separation of powers, emergency constitutionalism, and comparative constitutional law. During the alternating weeks, students will meet individually with the instructor over Zoom to discuss readings they are doing independently, either with the aim of working toward a research project or with the goal of exploring different areas of Constitutional Law. Students may opt either to write five shorter responses papers on readings they complete during the quarter or a final research paper (which will count for R credit). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. No automatic grading penalty for late papers. Elements used in grading: Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7099. Optimal Size and Scope of Government. 2 Units.
While some political debates are simply efforts to craft a message that will enable the proponent to seize or maintain political power, others are rooted in different conceptions of what government can and should be doing. Opinions about issues ranging from antidiscrimination law, criminal justice, education, poverty, and inequality to gun policy, environmental law, the challenge of climate change, the provision of medical care, national defense, and the need to thwart or respond to pandemics, asteroids, or other rare but potentially catastrophic events are rooted in conceptions of the proper role of government and empirical assessments about its capacities and the benefits and costs from government action or inaction. Based on the course readings and our discussions, those supporting a more limited role of government will be pushed to defend this position and articulate its possible risks and benefits. Those supporting a more activist approach will be pushed to prioritize their programmatic preferences in light of our inherently limited capacity to advance every objective and address every possible problem or threat. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 7100. Reconstruction: Adding the Thirteenth, Fourteenth, and Fifteenth Amendments. 3 Units.
This course will explore the changes to the Constitution made after the Civil War and their enforcement statutes. Materials will primarily be original source texts, supplemented by selected secondary literature. The majority of class time will be devoted to discussion, based on close reading of the materials. Students will be assigned to take the lead on class discussion on particular topics. Topics will include: (1) the constitutional status of slavery prior to the Civil War; (2) the Emancipation Proclamation; (3) the Thirteenth Amendment; (4) the Civil Rights Act of 1866 and President Johnson's constitutional veto; (4) drafting and ratification of the Fourteenth Amendment, with special emphasis on the citizenship clause, due process, equal protection, privileges and immunities, and congressional enforcement; (5) the Freedman's Bureau Act, Ku Klux Klan Act, Enforcement Acts, and Civil Rights Act of 1871; (6) the Fifteenth Amendment; (7) the Civil Rights Act of 1875; (8) early Supreme Court interpretations, and (9) the collapse of Reconstruction and rise of Jim Crow. Within these topics, we will discuss segregation, affirmative action, the state action doctrine, equality with respect to non-racial characteristics, ratification rules, state sovereign immunity, and the role of electoral politics in constitutional interpretation and enforcement. Note: This is NOT a course on current interpretations of the Reconstruction Amendments, but on their historical background. There are no prerequisites. First year law students and non-law students are welcome. Constitutional Law would be helpful but is not required. Grading. Grades will be based partly (20%) on class participation, and partly on either an in-class exam or a research paper on a topic approved in advance by the instructor. Students will choose between the exam and the paper. Grades for students will be on the Honors/Pass/Restrd Cr/Fail system. After the term begins, students accepted into the course can transfer, with consent of the instructor, from section (01) into section (02), which meets the R requirement.

LAW 7101. Election 2020. 1 Unit.
We are living in extraordinary times. The historic convergence of social, economic, and public health challenges has profoundly impacted the lives of millions of Americans. In the midst of great uncertainty, the 2020 U.S. presidential election will be perhaps the most important in our lifetimes. Will Donald J. Trump win re-election amidst high unemployment, deep political polarization, and the COVID-19 pandemic that has upended life as we know it? Or will Joe Biden and a team of Democrats prevail? We will assemble a wide range of expert speakers--including preeminent political, business, foreign policy, and academic leaders--to explore these questions, and more, as we seek to cultivate a broad and informed view of this pivotal election. Each week, the course will examine major topics at stake for the country. Anticipated topics include: the nation¿s coronavirus response; widening inequality across America; racial violence and nationwide protests; the role of technology and media in the election; the state of our economy; the Supreme Court and the rule of law; education policy; climate change; foreign policy; and voting rights. Elements used in grading: Attendance. Cross-listed with the School of Education (EDUC 157).

LAW 7102. Regulation, Evaluation, and Governance Lab: Practicum. 1-4 Unit.
The Regulation, Evaluation, and Governance Lab (RegLab) partners with government agencies to envision how data science can improve administrative governance. Students enrolled in this practicum will be working on projects related to the core mission of the RegLab, using the tools of data science to improve law and governance. The course is open to law and non-law students, with consent of the instructor. Students may take the course for 1 to 4 units and can be graded on the Honors/Pass/R/F or Mandatory Pass/R/F grading basis. Course units and grade basis must be approved by instructor and selected when students enroll in the course in Axess. Elements used in grading: Attendance, Performance, Class Participation, Written Assignments, Final Paper. Consent Application: Interested students may apply to enroll in the course by sending a statement of interest to Daniel Ho at dho@law.stanford.edu. Applications will be considered on a rolling basis.

LAW 7103. Race and Policing: Accountability and Civil Liability. 2 Units.
This seminar will investigate ways in which policing has served as an instrument of racial subordination and violence in the United States. It will also explore how the primary remedial tool for addressing excesses in policing--42 U.S.C. § 1983, enacted in the Klu Klux Klan Act of 1871 and the third Enforcement statute passed after the Civil War--has functioned. Attention will be given to the criminalization of blackness (and other non-white groups), the pathologies of force, and the development of legal rules (e.g., immunity doctrines and standards concerning municipal liability) in Section 1983 litigation. Casework and litigation strategies will be set alongside readings, both theoretical and pragmatic, drawing from the fields of remedies; political philosophy; legal realism and critical race theory; and traditional doctrine. Students will write several brief reflection papers (roughly two pages) exploring how the assigned readings bear on the general themes of the course, and broader reactions to the readings. A longer paper (roughly 7-8 pages) about any topic related to race and policing is also required. Elements used in grading: Grading will be based on the papers and class participation.

LAW 7104. The Youth Justice Lab: Imagining an Anti-Racist Public Education System. 2 Units.
This course will take an interdisciplinary approach to these issues by enrolling students from the Law School and the Graduate School of Education. Specifically, partnering with Public Counsel and IntegrateNYC, Youth Justice Lab students will gather and analyze the relevant historical and empirical research, interview and consult with experts in the field, and draft a series of research and policy memos that summarize our research and provide recommendations.

LAW 7501. Carrots, Sticks, Norms, and Nudges: Changing Minds and Behaviors. 3 Units.
In this class, we will survey the current state of the science of behavior change. By the 1990s, social scientists had already built a massive literature on this topic, and an integrative consensus theoretical framework began to emerge. But in the past decade, this literature has been revitalized by dramatic new ideas and technologies, as well as significant improvements in evaluation methodology. We will focus on four types of strategies that apply equally to influence efforts by individuals, communities, non-profits, for-profits, and government: (1) Carrots: Positive incentives (rewards, awards, praise, recognition, discounts, rebates, property rights, etc.); (2) Sticks: Negative incentives (punishments, fines, shaming, guilt or liability verdicts, costs, etc.); (3) Norms: What other people believe I should do, and what I see others actually do (tipping points, bandwagons, cascades, herding, etc.); and (4) Nudges: Traditional methods of persuasion; use of defaults to encourage certain behaviors; engineering the environment; harm reduction for risky behaviors. We will examine the "how" and "why" and "when" of these approaches, but also their normative implications for ethics, justice, and public welfare. Course requirements include class attendance and participation, and five short written assignments. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, written assignments and/or final paper.

LAW 7502. Economic Analysis of Law. 3 Units.
This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differ from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. There is no formal economics prerequisite to take this course, though some prior training in economics will be helpful. Elements used in grading: Final exam (open-book) plus three short take-home problems during the quarter. Cross-listed with Public Policy (PUBLPOL 302B). (For students interested in a shorter introduction to economic analysis of law, see Law 7503, "Introduction to Law and Economics," which is a one-unit course also offered during the winter quarter that is graded on a mandatory pass-fail basis.).

LAW 7503. Introduction to Law and Economics. 1 Unit.
This course will introduce students to the "law and economics" way of thinking about the legal system. It is designed primarily for students who have little or no prior training in economics and who are unlikely to take more advanced courses in the field (such as the 3 unit Law 7502, "Economic Analysis of Law"). This class will meet for six 1.5 hour sessions during the first part of the quarter. We will focus on the core bodies of law taught to first-year law students: tort law, contract law, property law, criminal law, and civil procedure. For each of these bodies of law, the economic approach will be described in non-technical terms and then this approach will be used to examine a key case or key issue within that body of law. First-year law students are especially welcome in this course. There are no prerequisites to take this course. Elements used in grading: Two short take-home exercises (graded on a mandatory pass-fail basis).

LAW 7504. Introduction to Organizational Behavior. 3 Units.
(Formerly Law 327) Why do firms exist? Is their sustained success in markets possible? How do leaders choose and execute on a strategy? What should the role of firms be in society? This course will meet once a week to discuss these questions and others about business enterprise. Each week we will focus on interesting and engaging case studies that illustrate key components of strategic management in firms in the U.S. and abroad. The course is designed to be highly interactive, and the principles taught during this course can help students prepare for careers in which they will need to employ strategic thinking. Due to the interactive nature of the course, attendance and in-class participation are graded components. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 7505. Law and Economics of the Death Penalty Seminar. 2-3 Units.
This seminar will examine the legal and policy aspects of a capital punishment regime, with a focus on three primary issues: 1) the Supreme Court's forty-year effort to define what cases can permissibly receive the death penalty and the procedures under which it must be imposed; 2) the arguments for and against the death penalty, with a major focus on whether the death penalty deters, is administered in a racially biased way, or is otherwise implemented in an arbitrary and capricious manner; and 3) what the U.S. and international status of the death penalty is today and what the prospects are for the future in the wake of Justice Breyer's invitation in June 2015 to the Court to rule on the constitutionality of capital punishment in light of the existing empirical evidence. The principle text in the class will be Steiker and Steiker, Courting Death: The Supreme Court and Capital Punishment. Although the readings on deterrence and racial discrimination will entail some substantial statistical analysis, a background in statistics, though helpful, will not be required. Special Instructions: After the term begins, students can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading seminar: attendance, class participation, short response papers, and final paper or approved research with the professor.

LAW 7506. Law and Economics Seminar I. 2-3 Units.
This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Special Instructions: You may write a series of short commentaries on the guest speakers' papers, of which there will be four. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a law and economics topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. (You may write a single longer paper for two quarters if you enroll in the Seminar in the Winter as well.) Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal economics prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in economics. Students may take both Law and Economics Seminar I and Law and Economics Seminar II in either order (neither is a prerequisite for the other). This seminar is cross-listed with the Economics Department (same as Econ 354). Elements used in grading: Four commentaries or one research paper. Special note: Professor Polinsky will be the principal instructor, with Professor Donohue participating mainly when there are guest speakers. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7507. Law and Economics Seminar II. 2-3 Units.
topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Special Instructions: You may write a series of short commentaries on the guest speakers' papers, of which there will be four. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a law and economics topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. (You may write a single longer paper for two quarters if you enroll in the Seminar in the Autumn as well.) Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal economics prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in economics. Students may take both Law and Economics Seminar I and Law and Economics Seminar II in either order (neither is a prerequisite for the other). Elements used in grading: Four commentaries or one research paper. Cross-listed with Economics (ECON 354). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7508. Problem Solving and Decision Making for Public Policy and Social Change. 3 Units.
Stanford graduates will play important roles in solving many of today's and tomorrow's major societal problems--in areas such as education, health, energy, and domestic and global poverty--that call for actions by nonprofit, business, and hybrid organizations as well as governments. This course teaches skills and bodies of knowledge relevant to these roles, covering topics such as designing, implementing, scaling, and evaluating social strategies; systems thinking; decision making under risk; psychological biases that adversely affect people's decisions; methods for influencing behavior; and pay-for-success programs. The large majority of the course will be devoted to students' working in teams to apply these concepts and tools to an actual problem, with teams choosing whatever problem interests them. The course may be of interest to students in Law and Policy Lab practicums who wish to broaden their policy analysis skills.

LAW 7509. Bayesian Statistics and Econometrics. 4 Units.
This course examines econometrics from a Bayesian perspective including linear and nonlinear regression, covariance structures, panel data, qualitative variable models, nonparametric and semiparametric methods, time series, Bayesian model averaging and variable selection. It explores Bayesian methodology including Markov Chain Monte Carlo methods, hierarchical models, model checking, mixture models, empirical Bayes approaches, approximations, and computational issues and gives some attention to foundations. Elements used in grading: Attendance, Class Participation, Exam.

LAW 7510. Empirical Legal Studies: Research Design. 3-4 Units.
Empirical legal studies have become trendy in the U.S. and are now spreading to law faculties in other countries as well. The popular image of an empirical study is that it involves sophisticated statistical analysis of quantitative data. Often the author of the study starts with a handy dataset and then tries to figure out what question he or she can answer using those data. Useful empirical studies of law and other topics don't start this way. Instead the researcher has a question, derived from theoretical literature or policy debate (or both) and faces the challenge of deciding what types of empirical data, collected and analyzed in what fashion, will best answer that question. The possibilities range from "big data" analyses of hundreds or thousands of documents, tweets or something similar to lengthy, intensive interviews with a few well-placed officials or informants, with just about any other way one might collect factual data -- e.g. online surveys, courtroom observations -- in between. What all of these approaches have in common is not that they involve numeric data but that they attempt to arrive at as objective a view of social, economic, or political reality as is possible. Learning how to design and conduct a survey or how to estimate a regression model or apply AI to vast numbers of texts is (relatively speaking) easy. There are lots of courses at Stanford that you can take on these methods. Learning what approaches are most appropriate to answer the research questions you are interested in is much harder. This seminar is directed at helping you think through the design of an empirical research project -- whether quantitative, qualitative or both -- from identifying researchable questions to collecting and analyzing data to presenting your results to academic or policy audiences. You will start with a broad question (or several questions) of interest to you, based on your previous experience, other studies or reading. By the end of the seminar you will have identified questions you can investigate empirically (perhaps in addition to theoretically) and figured out what research approach(es) will work best for you. The product of the seminar will be a preliminary research proposal, whether for your master's thesis this year or some other purpose in the future. Although plans for the fall quarter are still somewhat in flux, I expect to teach this seminar online with the assistance of the SPILS teaching fellow. I hope it will be possible to meet in person at the beginning of the quarter for a few introductory sessions to begin to get to know each other. In any event, I will be available throughout the quarter for one-on-one zoom sessions to discuss your research. Special Instructions: JD students can take the class with consent of the instructor. After the term begins, JD students accepted into the course can transfer from section (01) into section (02), which can potentially satisfy the R requirement, with consent of the instructor. Consent Application for JD students: To apply for this course, JD students must e-mail Deborah Hensler at dhensler@stanford.edu. This course is REQUIRED for all SPILS fellows and BY CONSENT for all other students. Elements used in grading: Class participation, attendance, written assignments and final paper.

LAW 7511. Sociology of Law. 3-4 Units.
This course explores major issues and debates in the sociology of law. Topics include historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance, with particular attention to the problem of mass incarceration; the "law in action" versus the "law on the books;" organizational responses to law, particularly in the context of sexual harassment and discrimination in education and employment; the roles of lawyers, judges, and juries; and law and social change with particular emphasis on the American civil rights movement. Special Instructions: Students are expected to attend a weekly TA-led discussion section in addition to lecture. Sections will be scheduled after the start of term at times when all students can attend. Paper requirements are flexible. Cross listed with the Sociology Department (Soc 136/236). See "Special Instructions" in course description above. Elements Used in Grading: Class participation, paper proposal, three short papers and a final paper (see syllabus for details).

LAW 7512. Statistical Inference in Law. 3 Units.
Drawing inferences from quantitative data lies at the heart of many legal and policy decisions. This course provides the tools, concepts, and framework for lawyers to become sophisticated consumers of quantitative evidence and social science. The course will begin with an overview of basic statistical concepts that will bring everyone to the point where they can read and evaluate empirical studies. We will then focus on a number of empirical debates -- for example, does the death penalty deter murder, do concealed handgun laws influence crime -- as a springboard to teach the logic and terminology of statistical/econometric evaluation of law and policy (regression, statistical significance, identification). No background, beyond high school algebra, is assumed. Anyone who 1) will work in litigation (whether corporate, securities, antitrust, employment discrimination, environmental law) or in public policy, 2) wants to be a better citizen or 3) wants to understand the challenges of establishing causal relationships, and who doesn't already have a strong understanding of statistics will find this course useful. Elements Used in Grading: Attendance, written and oral assignments, response papers, and a final project. To avoid math phobias and fears about ringers from the econ or stats departments, the course is graded as a mandatory pass-fail course.

LAW 7514. Behavioral Law and Economics. 2-3 Units.
The field of "law and economics" provides important lessons for how legal institutions should be designed, but many of those lessons rely on the assumption that individuals behave in a way that maximizes their self-interest. Research from psychology and behavioral economics casts doubt on this assumption in many legal contexts. This seminar will explore a range of topics about human decision-making, focusing on how research in this area should inform the design of policy. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: class participation, class attendance, reflection papers or research paper. Early drop deadline.

LAW 7515. Law and the New Political Economy. 3 Units.
In this seminar, we consider key legal topics through the lens of political economy -- that is, is the interplay among economics, law, and politics. This perspective has had a powerful and growing impact on how scholars and judges view the nature and scope of law and politics in the modern regulatory state. We look at a range of topics from this perspective, including: constitutional law, statutory interpretation, administrative law and regulation, and jurisprudence -- all with an eye toward better understanding the dynamic interaction among law, politics, and social change. There are no prerequisites for this seminar. Elements used in grading: The final assignment will be a substantial research paper. Cross-listed with Political Science (POLISCI 225L/325L).

LAW 7518. Social Science of Identity and Prejudice. 1 Unit.
This a one-unit, Law Mandatory P/R/F course that grows out of the recommendations of the 2018 Faculty and Student Working Group on Diversity and Inclusion. The course is built around a series of outside speakers on identity and prejudice. These speakers will include the sociologist Lawrence Bobo (W.E.B. Du Bois Professor of Social Sciences at Harvard) and the psychologist Mahzarin Benaji (Richard Clark Cabot Professor of Social Ethics at Harvard). The lectures will be open to all members of the Stanford community. Students who wish to get course credit will be required to attend the lectures, participate in faculty and student-led discussions and write reflection papers. The course consists of 10 hours of lecture and discussion. The course is formally offered in the Spring Quarter, 2019 and credit for the course will be given at that time. However, the lectures and discussions will take place throughout the school year. The first of the lectures will take place on Wednesday, October 31 at 4 pm. Students unable to attend the lecture on October 31 may still participate in the upcoming lectures to be announced. Students who wish to take the course should sign up now so as to be notified of the time of the lectures and discussion sessions. Students with questions about the course should email Joseph Bankman at jbankman@stanford.edu. Begin in Autumn Quarter and run through Spring Quarter. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7519. Empirical Legal Studies Workshop. 2-3 Units.
Empirical Legal Studies uses data to inform legal and policy debates. Traditional empirical legal scholarship uses methods such as observational studies and experiments to examine the effects of various policies or legal decisions. More recently, advancements in technology have given rise to a new strand of research that uses tools such as machine learning and natural language processing to study legally relevant datasets at a large scale ("Big Data"). This seminar will present a range of topics that highlight current empirical legal scholarship in these areas. A theme of the course will be comparing and contrasting traditional empirical approaches with the techniques emerging from machine learning and big data. During roughly half of the sessions, we will host a guest speaker who will present an ongoing empirical research project. Familiarity with data science or statistics is not required. Special Instructions: You may write a series of short commentaries on the guest speakers' papers, of which there will be four. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single empirical research paper on a legal topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit (section 02), depending on the project. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in statistics. Elements used in grading: Attendance, Class Participation, Four commentaries or one research paper.

LAW 7801. Leadership and Influence Skills for Lawyers. 2 Units.
You want to important, meaningful, and impactful work. Leaders in law and business say they need trusted advisors who excel in skills like problem solving, innovation, creativity, ability to deal with ambiguity and complexity, and exceptional communication and persuasion skills. Research demonstrates that these skills can be learned and strengthened. This course focuses on developing these critical skills for the career that you are developing. Using neuroscience techniques about ways in which to optimize adult learning, we will use readings and hands-on exercises to assess and develop skills in strategic decision making, influence techniques, motivating others to work toward share goals and adapt communication preferences for clients and colleagues. The class includes real-time feedback about classroom exercises and writing short reflection papers to tie past and current experiences to identify areas for development and help create new habits for success. Elements used in grading: Class participation and attendance, course exercises and written assignments.

LAW 7802. Accounting. 3 Units.
Accounting is the language of business. In this course, we will learn basic accounting principles. We will focus on recent changes in accounting standards, such as changes to revenue recognition principles, that are likely to create difficulties for companies in the coming years. For example, we will consider how these changes affect contractual language and financial covenants. In this regard, this class differs significantly from a typical introductory accounting class and is more transactional-focused. Class time will be allocated to a combination of short lectures, group work, and discussions of the assigned readings. Evaluation will be based on problem sets assigned throughout the quarter. Please note that we focus on financial accounting principles--we will not cover tax law. Elements used in grading: Written Assignments. This class does not overlap with Global Capital Markets (students can take both).

LAW 7803. Alternative Dispute Resolution: Law, Practice, and Policy. 3 Units.
Clients in disputes increasingly call for lawyers -- whether transactional or litigation -- with the skill to navigate within a broad range of alternative dispute resolution processes. In this course, you will learn about the variety of dispute resolution procedures that operate under the ADR umbrella, within and outside of the court system (including mediation and arbitration). The goal is for students to understand the law and policy behind these alternatives relative to court adjudication, to be able to select the appropriate process(es) and advocate for a client effectively. The teaching team and guests include third party neutrals and advocates from a range of contexts, including federal court, private mediation, private and public arbitration, and corporate legal counsel. Special Saturday class. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, discussion; three written assignments, final paper.

LAW 7804. Alternative Dispute Resolution: Practicum. 2 Units.
Effective client representation increasingly calls for lawyers with skill within a broad range of alternative dispute resolution processes. In this course, you will have the opportunity to observe two day-long ADR processes being handled by Bay Area third-party neutral practitioners at the U.S.D.C. for Northern California and JAMS. Students in the class will meet three times to review relevant law and policy, and to discuss observed cases, including a factual and legal analysis of the observed cases, the practice skills of the respective counsel and mediators, and any ethical issues noted. Grades will be based on seminar participation and two short papers. Co- or Prerequisites: Mediation or ADR. Elements used in grading: Class participation, attendance and written assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7805. Career Development: Alchemy, Law, and Practice. 2 Units.
Career development is embedded in life development. This course offers a space and time for each student to consider both through course materials, class interactions, and a series of reflection papers. The course includes one class facilitated in collaboration with the Office of Career Services focusing on a formal assessment via one or more psychological tests offered to each student. The materials for other class meetings are thought provoking works that have proven to be salient for considering career and life direction. Images and material from alchemy that embody what many consider to be a primary set of symbols for personal transformation provide a backdrop for the course. The course benefits from the collaboration of Michael Guasperini, a mythologist and lawyer whose primary vocation is working intimately with lawyers and firms during periods of personal and institutional transition. Mr. Guasperini has deep experience with the personal lives of hundreds of lawyers at various ages and levels of professional development, providing a valuable and practical perspective for self-reflection. Elements used in grading: Written Assignments (reflection papers).

LAW 7806. Dispute System Design. 3 Units.
Lawyers are often called upon to help design systems for preventing, managing, and resolving conflicts that support or supplant existing legal structures. The crisis of September 11 led Congress to pass a law creating the September 11 Fund; a California Supreme Court challenge to its method of resolving health care disputes led Kaiser Permanente to reform its arbitration system; years of atrocities committed against the people of South Africa, Chile, and many other countries led to the formation of truth commissions. Lawyers often lead the design and implementation of these conflict resolution systems. Increasingly these systems utilize technology to improve efficiency, accessibility, and transparency for disputants. In this class we will apply an analytic framework (including stakeholder assessment and conflict resolution process options) to a series of case studies and use simulations to understand different kinds of dispute systems. We will also examine the growing use of online dispute resolution (ODR), the new challenges it poses to neutrals and system designers, and evolving best practices for the use of technology in dispute system design. Special Instructions: Grades will be based on class participation and Option 1 (section 01) a series of weekly short written assignments plus a 10-page case study; or Option 2 (section 02) weekly short written assignments plus a 26-page research paper involving independent research. Students electing option 2 (section 02) will be graded on the H/P/R/F system and will receive Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Negotiation Seminar (LAW 7821) is preferred but not required. The class will meet on one Saturday. Elements used in grading: Class participation, attendance, written assignments, and final paper. Attendance at the first class is mandatory.

LAW 7807. Facilitation for Attorneys. 2 Units.
Most lawyers and other professionals spend a significant amount of time in meetings and working in teams or groups for a variety of purposes, and many report that this can be a frustrating experience. As the practice of law becomes more complex, it includes more and more situations where groups of people need to work together planning complex legal strategies, developing firm policies, working with corporations or other multi-person clients, or participating in shareholder meetings, public commissions and councils, corporate and non-profit board of directors meetings. Group functionality and outcomes can be significantly improved by any group member who has the awareness and skills of a facilitator, whether or not that person is formally designated as the facilitator. The interactive class methodology will combine discussion with many exercises and roleplays, putting facilitation tools into practice every step of the way. We will examine group dynamics and learn skills used by professional facilitators to prevent common problems and elicit the best work of a group. We will explore how to prepare effectively with clear goals, collaborative problem definition, inclusive process design and a well-structured agenda. We will also discuss and practice core meeting management skills such as how to balance voice and participation, build consensus, inspire creativity and promote principled evaluation and decision-making. Finally, we will identify and apply communication skills that keep group sessions productive, and tools to manage difficult moments and problem behaviors. Class Schedule dates: Fri 10/23: 3:30-9p, Sat 10/24: 9-1p, Sun 10/25: 9-1p, Fri 10/30: 3:30-9p. Elements used in grading: Class attendance, participation and final paper.

LAW 7808. Foreign and International Legal Research. 2 Units.
(Formerly Law 461) This course will introduce students to concepts and skills used in international and foreign law research. Students will learn to construct successful research strategies for questions of foreign law, public international law, and private international law. Both primary and secondary authority will be covered in various formats. Students will understand how different legal systems and cultures influence the use and assessment of legal resources. The course will also equip students to critically evaluate current and future research tools. No pre-requisites or foreign language ability required. Advanced degree and non-law students are welcome to enroll in the course. Learning Outcomes -- *Identify primary and secondary sources of materials on international law and foreign legal systems. *Develop effective research strategies using online and print resources. *Critically evaluate research tools for international and foreign legal research. *Appreciate cultural and historical influences on the development of legal systems and their relevance to legal research. *Understand the role of language and translation tools in researching foreign and international law. Elements used in grading: Weekly assignments.

LAW 7809. Advanced Legal Research: Litigation. 3 Units.
This course aims to prepare law students for research in litigation practice and judicial clerkships. More broadly, the primary goal is to enable students, now and later in their professional lives, to map out a coherent plan of action when asked to research a topic previously unfamiliar to them. Students should acquire a solid knowledge of research tools and a frame of reference that enables them to function independently and competently in the complex world of legal information. Students will accomplish the following learning objectives: 1) formulate rational and efficient research strategies incorporating relevant sources of legal information; 2) find and effectively use primary and secondary legal sources in any format; and 3) increase critical skills in assessing and the variety of information resources relevant to the practice of law. Learning legal research requires a hands-on approach, so students will complete in-class exercises and homework assignments -- all of which contribute to grading. There will not be a final exam. This course is open to Stanford graduate students with permission from the instructor. Attendance, Class Participation, Written Assignments.

LAW 7815. Advanced Legal Writing: Business Transactions. 3 Units.
This course offers comprehensive preparation for the practice of the transactional lawyer. Students will learn foundational tools to write clear, effective, plain language business contracts and analyze other transactional writings used to manage and document complex business transactions. The course provides a selective mix of interactive live Zoom and recorded lectures, and a wide range of realistic drafting and research exercises. These exercises help students sharpen their analysis, research, drafting, and editing skills, and develop sensitivity to the expectations of attorneys and clients with whom they will be working. Students will learn to interpret provisions in a variety of business agreements. Issues related to ethics in a transactional practice will also be addressed. The course should appeal especially to students interested in working for a law firm and practicing transactional law (be it corporate, venture, debt, intellectual property, mergers and acquisitions, entertainment, real estate, etc.). It will also appeal to those interested in business litigation, or those curious about the work of transactional lawyers. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and degree program. Early drop deadline: Students may not drop this course after the first week of class. Corporations (Law 1013) is a prerequisite for all but for LLM students in the CGP program only (not other LLM programs). Elements used in grading: Class participation, attendance, written assignments, and final paper. Please consult the syllabus for paper and assignment deadlines. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7816. Advanced Legal Writing: Litigation. 3 Units.
Building on the skills developed in Federal Litigation, this course will give students additional practice with legal analysis, argument structure, and writing in the pre-trial context. Students will draft a predictive office memo, an e-mail memo, and memorandum in support of a motion for summary judgment. Students also will complete short writing exercises in class to practice skills such as omitting surplus words, preferring active voice, using concrete words, punctuating carefully, etc. The goals of this class are to help students organize facts and legal rules and analysis in a succinct and logical way, to deepen their understanding of legal reasoning and writing, and to hone their advocacy skills. The course should appeal to students interested in litigation practice and those wishing to strengthen their writing. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Written work, class participation, and attendance.

LAW 7817. Advanced Legal Writing: Global Litigation. 3 Units.
This course offers an introduction to the practical, procedural and analytical aspects of private transnational litigation in the U.S. and Europe. Through a case simulation students will examine differences in legal systems and how to effectively navigate the challenges and opportunities presented when litigation goes global. With three instructors and limited student enrollment, the class provides an excellent opportunity for students to develop the research, writing and oral advocacy skills necessary for a successful transnational litigation practice. Elements used in grading: class participation, attendance, assignments.

LAW 7818. Advanced Legal Writing: Technology Transactions. 3 Units.
This course covers the foundations of drafting contracts in a modern commercial setting, primarily through weekly hands-on writing exercises that illustrate business problems commonly found in today's technology transactions law practice. Topics to be addressed will include basic contract anatomy, common clause ambiguities, structuring for readable "flow", and drafting-for-negotiation techniques. Final examination will involve crafting a full-length technology license agreement from a rough term sheet that appears to have been pecked out on some sort of mobile device. No prior business law coursework, intellectual property background, or martial arts proficiency required. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

LAW 7819. Mediation. 3 Units.
As law is practiced today, attorneys are far more likely to participate in multiple mediations than trial. Mediation has become the preferred approach to conflict resolution in most states and many parts of the world. With the assistance of a mediator, parties can reach agreements at any stage in a dispute, in some cases avoiding litigation altogether, in other cases agreeing just before trial or when the case is on appeal. The course goals are to understand the nature of conflict and principles of conflict management, to develop the oral and written communication skills essential to effective mediation, to evaluate various mediation models and mediator styles, to practice all of the phases of a mediation and appropriate use of caucus, to consider the policy and ethical implications of the expanding use of mediation, and to develop the skills necessary to represent clients in mediation. The class methodology is highly experiential, with more than half of the class consisting of practice from the perspective of client, advocate and mediator. The course also includes readings and discussions, brief interactive lectures, demonstrations and videotaped sessions. Each student receives individual feedback from an experienced Bay Area mediator and develops skills that will be useful in client development, interviewing, counseling, fact development and legal analysis, negotiation and a variety of contexts beyond mediation. You are encouraged to apply if you have taken (or are concurrently taking) the basic negotiation class or its equivalent in studies or experience. Elements used in grading: Class participation, attendance at all classes, and assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7820. Moot Court. 2 Units.
The major moot court activity at Stanford Law School is the Marion Rice Kirkwood Memorial Competition, which takes place each year during Autumn and Winter terms. Autumn term will be dedicated to brief writing and completion of the written portion of the Competition; the oral argument portion of the Competition will be conducted during the first four to five weeks of Winter term. Students on externship and in clinics may enroll, if permitted by their respective programs. In Autumn term there are only a few class meetings, including a guest lecture on ethics, which can be recorded. In addition, there are individually scheduled conferences. In Winter term, there are optional class meetings and practice arguments. Participation in the oral argument competition is mandatory, which includes attendance at the semifinal and final arguments. The preliminary rounds are held in the evening; the semifinal and final rounds are in the late afternoon. Prior to the Competition itself, materials and lectures are provided on research, brief writing, and oral advocacy techniques. Registration for the Kirkwood Competition is by team. Each team is required to submit an appellate brief of substantial length and quality and to complete at least two oral arguments, one on each side of an actual case. The first draft of the brief is reviewed and critiqued by the course instructors. The course instructors and the Moot Court Board Presidents score the final draft of the brief. The course also offers digital recording and critiques of practice oral arguments. Panels of judges and local attorneys serve as judges who score the oral argument portion of the Competition. Teams are selected for the quarterfinal, semifinal, and final round of the Competition based on their brief and oral advocacy scores. The final round of the Competition is held before a panel of distinguished judges, and the entire Law School community is invited to attend. Special Instructions: In order to maintain academic standards, enrollment in the Kirkwood Competition is limited to 20 two-person teams. This limit will be strictly enforced. Registration forms will be distributed Spring term. If the program is oversubscribed, a lottery will be held to determine participating teams and to establish a waiting list. The final drop deadline for the course will be on Thursday of the first week of classes. Enrollment in both Autumn (2 units) and Winter (1 unit) terms is required. The final grade for both Autumn and Winter terms and the Professional Skills credit will be awarded upon the completion of the course requirements. Registration and Consent Instructions: Instructions on how to register for the Moot Court competition are sent out to students each year in Spring term for the coming academic year. The registration process is separate from the regular class registration process. Early application and drop deadlines. Elements used in grading: Satisfactory completion of appellate brief and oral arguments.

LAW 7821. Negotiation. 3 Units.
As a lawyer, you will probably negotiate more than you do anything else. You will negotiate not just over cases, but any time that you need something that you cannot get alone. You will negotiate with your boss, your clients, your paralegal, and all of their counterparts (plus the lawyers) on the other side. You will negotiate with "the system" whether it is the court, the government, the structure of society, or the law. You will also continue to negotiate with your family, your friends, and yourself. This course is designed to: (1) develop your understanding of negotiation, and your awareness of yourself as a negotiator; (2) give you some tools and concepts for analyzing and preparing for negotiations; (3) enhance your negotiating skills through frequent role plays, reflection, and feedback; and (4) teach you how to keep learning from your own negotiation experience. In addition to negotiation skills and theory (including interviewing, counseling, negotiation, fact analysis, legal analysis, and collaboration), you will be introduced to issues of representation, ethics, and the place of negotiation in our legal system. The Negotiation Seminar is an intense, interactive course. We will require weekly preparation of readings, simulations, and written assignments. Basically, you will learn by reading about specific research and doing simulated negotiations -- figuring out with the rest of the class what works and what does not, writing about what you're learning, and trying again. Because participation in the simulations is central to the course, attendance at all classes is required. Since we will begin our simulation exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the instructor.) Add-drop decisions need to be resolved at the first class. Elements used in grading: Class participation, attendance and written assignments.

LAW 7822. Negotiation on the Ground: Discussions at the Intersection of Theory and Practice. 1 Unit.
We can read any number of books about negotiation, but how do the concepts and principles play out in the real world? This dinner colloquium will meet with distinguished negotiators working in a variety of fields to reflect on and draw lessons from their deep and diverse experience. Guests for last year spoke on: studio and talent perspectives in entertainment negotiations; working relationship between inside and outside transactional counsel in technology M&A; prosecution and defense perspectives on negotiating in the criminal justice system; and public policy negotiation on gun law issues. For each session, students will read a background piece on issues in the selected area of legal practice and submit a discussion question to facilitate a discussion with the guests on client counseling, factual and legal analysis, negotiation and conflict resolution options, and collaboration. Pre-Requisite: Negotiation Seminar or substantial equivalent. Schedule: Monday, 5:30-8:00pm. There will be an organizing class on March 29, 5:30-6p, plus four presentation/dinner discussion sessions in April and May. Elements used in grading: Class participation, assignments and attendance.

LAW 7823. International Negotiation: Solving Intractable Conflict. 3 Units.
This course will provide the building blocks for negotiating and resolving intractable conflicts around the world. How do we negotiate effectively under conditions of uncertainty and distrust? How can we build effective working relationships even when there is a history of enmity, violence, or spoilers at the table? The goal of this course is to develop each student¿s personal negotiation tool box to effectively analyze, prepare for, and participate in, negotiations that take place in complex settings around the globe. We will learn by doing. The course emphasizes experiential learning and negotiation simulations, as well as case studies and engaging directly with professionals in the field. Students will have opportunities to reflect on their experiences, provide one another with direct feedback, and receive feedback from instructors and expert guest speakers. The course focuses on conflict settings in the international arena (including natural resource management and extractive industries, ceasefire negotiations, and peace agreements), but students will develop skills to help them be effective in any complex negotiation setting from their local communities to the workplace. The course is designed for students who have already taken Basic Negotiation, but students who have not taken Basic Negotiation may still be admitted if they attend an intensive bootcamp in basic negotiation theory and methods the first Saturday of spring quarter. This course is open to cross-registration by graduate students in a variety of departments and programs. SPILS students and International Policy Studies students are especially encouraged to enroll. Grading Criteria: The seminar requires that students attend all classes, do the assigned reading, prepare for and actively participate in class and simulations, and write a series of short assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit the Consent Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms).

LAW 7824. Advanced Negotiation: Environmental Policy. 3 Units.
Advanced negotiation courses are designed to take students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar, to examine many facets of negotiation complexity, both in terms of the participants and topics. This section of Advanced Negotiation will focus on two-party and multi-party environmental policy negotiations, working in teams, group decision-making, coalition management, and negotiating on behalf of organizations to solve complex problems in environmental policy. The goals of the class are twofold, for students (1) to acquire an added theoretical base beyond what was covered in the Negotiation Seminar through which to analyze (in terms of law and facts), prepare for, participate in and facilitate more complex, multiparty negotiations, and (2) to expand skills through deeper examination of various actual negotiation cases and complex simulations, including ethical responsibilities to the client and the public, opportunities for leadership, and collaboration. Special Instructions: Attendance at and participation in the simulations is required. Passing is dependent upon active preparation and participation, submission of four assigned short reflection papers, and completion of a selected case analysis (a completed or ongoing environmental policy dialogue). Prerequisite: Negotiation Seminar (Law 7821) or its substantial equivalent. Advanced degree students (and graduate students in other departments and programs) are encouraged to enroll. The course is designed for students who have already taken a basic negotiation seminar, but students who have not taken Negotiation may still be admitted if they attend an intensive bootcamp in basic negotiation theory and methods the first Saturday of winter quarter, January 9. Elements used in grading: Class participation and engagement, including simulations; attendance; preparation for and contributions to discussion; four short written assignments; and a 10 page case analysis.

LAW 7825. Advanced Negotiation: Transactions. 3 Units.
Advanced Negotiation takes students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar. This course, Advanced Negotiation: Transactions, places the student in more difficult and more nuanced transactional simulations, working as individuals, lawyer-client pairs, and teams to negotiate on behalf of business entities, governments, unions and NGOs. Simulations may include critical-path supply agreements, vendor/collaborator contracts, cross-cultural joint ventures, airline reorganization, founder/VC deals, big pharma arbitration resolution and multi-party private sector/government negotiations. The goals of the class include developing a designer's mindset for strategic preparation and client counseling on both facts and law, and tactical adjustments to changing scenarios; ethical responsibilities; deeper analysis and work on the persuasive elements (oral and written) of negotiation; coalition formation and management; improved tactical skills, methods of questioning, response control and, ultimately, improved confidence and competence. Special Instructions: Attendance at and participation in all simulations and debriefing sessions is required. Passing is dependent upon this active participation, and a series of short papers and/or in-class presentations. Prerequisite: Negotiation Seminar or its substantial equivalent, as assessed by the instructor. This class is limited to 20 students, 16 from SLS selected by lottery, with an effort to have 4 non-law students by consent of instructor. Elements used in grading: attendance, participation in both the negotiations and the debriefings, thorough and meaningful preparation, and all other assigned work.

LAW 7826. Oral Argument Workshop. 2 Units.
Building on the skills developed in Federal Litigation, this simulation course will give students the unique opportunity to argue and judge pretrial motions from actual federal court cases. The instructor will provide the written briefs, and each week half the class will argue and half the class will judge a motion. Preparation will require reading the cases cited in the briefs and coming to class ready either to present an argument (attorneys) or interrogate counsel (judges). Students will critique each other both orally and in writing, and the instructor will provide oral critiques of all arguments. The goals of this class are: to train students to argue in court; to provide them with a chance to polish their public speaking skills and practice thinking on their feet; to prepare students to engage in challenging dialogue with both colleagues and future clients; and to improve self-confidence. Thus, while the context of the course is litigation, the objectives are much broader than the mastery of litigation technique. This course is not open to first year Law School students. Priority will be given to those students who commit to taking the class if given consent to enroll. Please indicate your commitment on the consent form. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Elements used in grading: Class attendance, participation, and preparation.

LAW 7827. Advanced Legal Writing for American Practice. 3 Units.
This course orients advanced degree students to a range of legal writing genres used by lawyers in practice in American law offices and before American courts. At the core of these genres are the techniques of legal research, objective and persuasive legal writing, and related legal analysis in a litigation context. The course presents students with realistic legal writing scenarios that they address in and out of class. Students perform legal research and analysis as they complete assignments designed to incorporate methods that American lawyers use to analyze typical legal problems while advocating on behalf of a hypothetical client in a litigation matter. This class is limited to Advanced Degree Students. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 7828. Trial Advocacy Workshop. 5 Units.
In 2020 all sessions including the end-of-quarter trials will be conducted via Zoom. This lawyering skills course gives students an orientation to and constant practice in most basic pretrial and trial advocacy skills areas. Topics include: taking and defending depositions, trial evidence, including admission of trial exhibits in evidence and use of prior witness statements to refresh and impeach a witness, jury selection and voir dire, opening statements, direct and cross examination of witnesses, and closing arguments. Students will try a full case through to verdict before a federal or state judge at the end of the course. There will be two classes (one lecture and one workshop) per week on most weeks from 4:15-9:00 PM, plus the final weekend of trials, Saturday and Sunday November 14 and 15. Each day's ending time will vary; most sessions will end before 9:00 PM. For details, please refer to the 2020 Trial Advocacy Workshop Schedule at https://tinyurl.com/TrialAd2020. The format for each topic begins with a lecture/discussion featuring video vignettes of various techniques and a demonstration by an expert trial lawyer. Following the discussion portion of each topic are small group sessions during which each student practices the skills involved. Constructive feedback is given after each exercise by two of our faculty of very experienced Bay Area litigators and judges. Many exercises are also videoed for further one-on-one critique by another faculty member. The central philosophy of the workshop is that skills are best acquired in an experiential manner by seeing, hearing, and doing. Frequent short, well-defined exercises followed by immediate constructive feedback in a non-competitive, non-threatening atmosphere provide the core of the program. The workshop directors are Tim Hallahan, Judge Sallie Kim and Sara Peters. Tim has taught similar programs at Harvard Law School, the University of San Francisco School of Law, Berkeley Law, the California Continuing Education of the Bar, and in private and public interest law firms around the country. Sallie is a United States Magistrate Judge in San Francisco and was a partner in a civil litigation firm and also previously taught a class at SLS and served as Associate Dean for Student Affairs. Sara is a trial attorney for a personal injury law firm in San Francisco. She graduated from Stanford Law School in 2008 and coaches the Stanford Law School Mock Trial Team. Special Instructions: If you haven't taken Evidence you must contact Tim Hallahan before the course begins for some brief pre-course reading assignments. There are no papers or tests, but attendance at every session is required. Since we will begin our trial advocacy exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the professor.) Add-drop decisions need to be resolved at the first class; no drops will be permitted thereafter. Exceptions to this rule will be made by petition only. Mandatory attendance. Elements used in grading: Attendance and in-class assignments. In addition, the Trial Advocacy Workshop is approved to offer Experiential Learning (EL) Credit. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7830. Topics in American Legal Practice. 1 Unit.
(Formerly Law 733) This course is designed to introduce international students to American legal practice. To do this, the course begins in the spring quarter by working with students to look ahead to their summer experience and begin to identify ways in which the culture or norms of the practice setting might be distinctive, or otherwise differ from the legal, political, or workplace culture of their home country. Then in the fall quarter, students are asked to write a 10-page paper, situated in the relevant literature(s), that uses the summer experience to examine one such set of issues. Elements used in grading: Final Paper.

LAW 7831. Transition to Practice: Selected Topics. 1 Unit.
This course is designed to explore issues of professional identity for students transitioning into the legal profession. It will begin in the spring quarter and continue into the fall quarter, and will require the writing of a paper. Elements used in grading: Final Paper.

LAW 7833. Spanish for Lawyers. 2 Units.
The Spanish for Lawyers course offers students the opportunity to enhance existing Spanish communication skills in legal practice. The goal of the class is to offer students an opportunity to practice their Spanish in a simulated legal setting and to learn about cultural humility and trauma-informed interviewing. The course will introduce Spanish legal terminology in areas such as immigration, criminal, employment, housing, family law, corporate law, and politics. With an emphasis on speaking and listening comprehension through in-class partner activities and dialogue, the class will teach students how to interact with clients who possess limited English proficiency. Students will also be given homework assignments, including grammar exercises, to assist students with Spanish mastery. Class instruction will take place predominantly in the Spanish language. The course is designed to be beneficial for students with varying levels of Spanish language ability, up to and including students who are native speakers of Spanish. The level of difficulty of the course presupposes that students already have an intermediate level of Spanish, which includes familiarity with the essentials of Spanish grammar and ability to engage in intermediate verbal communication. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 7836. Advanced Legal Writing: Appellate Litigation. 3 Units.
This course will bring the Instructor's decades of experience in high-stakes legal writing to bear on the drafting of appellate briefs: what's good, what's bad; what works, what doesn't; and how to get from here (your frustratingly blank computer screen) to there (a finished brief that assists, persuades, and impresses appellate judges). Through a combination of lectures, discussion, selected readings, and writing exercises (both individual and collaborative), we will cover most of the key topics in appellate writing, including: The differences between appellate and trial-court writing; How appellate judges think, and how to give them what they need; Basic appellate procedure; The pervasive influence that the standard of review has on everything in the brief; Identifying and articulating winning issues and themes (and the difference between the two); Framing appellate issues to advantage your client and neutralize your opponent's best arguments; Getting your arms around the trial-court record; The components of an appellate brief, their purposes, and what it takes to make each component successful; Crafting a narrative that grips the imagination; Structuring appellate arguments; Constructing great headings and subheadings; Writing clear, graceful, properly constructed sentences devoid of brain-killing ambiguities; Linking the entire brief together--using headings, paragraphs, sentences, and individual words--so that it seems to flow effortlessly from point to point to reach the seemingly ineluctable conclusion that your client should win; Lessons from scientific studies of cognition and reading; Cultivating the critical distance you need to edit your own writing; Editing other lawyers' writing effectively; Obtaining discretionary appellate review; and Typography and layout. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 7837. Advanced Legal Writing: Public Interest Litigation. 3 Units.
Public-interest litigation is often an uphill battle. Lawyers and clients representing public interests have difficulty prevailing even when their fact patterns are sympathetic, often because the law is either undeveloped or unsupportive. Yet when public-interest litigation does succeed it can change the legal landscape and galvanize social movements. This class will focus on the research and writing skills necessary to litigate public-interest lawsuits. The class will employ briefs from important public-interest cases and other readings to unpack the rhetorical and analytical tools needed to persuade judges across the ideological spectrum. Students will also learn how to conduct advanced legal research; develop tools for constitutional, statutory, and case law interpretation; and hone their ability to be clear and creative. Students will practice the skills they learn by preparing multiple drafts of two pleadings in a single case, and will receive detailed feedback on their writing from the instructor and their peers. Grading will be based on a Mandatory P/R/F system, taking into account writing as well as class participation. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority. Early drop deadline: Students may not drop this course after first week of class. Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 7838. History of Civil Rights Law. 2-3 Units.
This is a seminar that uses U.S. history to examine canonical civil rights law. We will investigate the historical context behind the enactment of particular laws and judicial decisions. We will also discuss the meaning and implications of the term "civil rights law." Readings will include cases, law review articles, primary sources, and history articles. The seminar will focus upon African-American legal history. 14th Amendment is not a prerequisite for the seminar. Requirements for the course include regular class participation and, at the students' election, either response papers or a historiographical essay. Students may also elect to complete a research paper with the instructor's approval, in which case they will receive 3 units and "R" credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Automatic grading penalty waived for submission of research paper. This class is limited to 16 students, with an effort made to have students from SLS (10 students) and 6 non-law students by consent of instructor. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline. Cross-listed with History (HISTORY 361D).

LAW 7843. Community-Led System Design. 2 Units.
This class engages students in participatory/collaborative approaches to redesign complex systems. They will answer the question: how do we make our social legal systems better for people -- and how do we put people at the center of this redesign? The seminar has two parallel components: (1) Learn from a series of experts who have been taking a community-led approach to remaking a legal system (or analogous ones). Guest experts will present their current case studies to illustrate strategy and process design. (2) Select one of two system redesign challenges (see below) and develop their own prototype launching workshop. [For those students interested in continuing with the project, there will be a companion policy lab in the Spring Quarter 2018. This seminar is a prerequesite for the policy lab.] The two prospective system-leader partners are on the verge of major new overhauls of their current systems: (a) California Self-Help Services' guardianship/kid's custody redesign, with Bonnie Hough and the California Judicial Council as a partner, as they try to figure out how to remake the legal system for parents and family members (without lawyers) trying to get custody worked out for kids. (b) New York Chief Justice Task Force housing court/eviction redesign, with the Chief Judge Janet DiFiore's task force as the partner, as they try to figure out how to make the eviction system work better for users. Students will develop their own preliminary plan and prototype for a user-centered process for their partner. Students will learn about new approaches to policy-change, as well as the fundamentals of participatory design and community lawyering. They will operationalize these different approaches, to make them relevant and actionable in an actual legal system. They must synthesize a recommendation to their partner-leader about how they might create a better process to redesign a given court process/system. And they must create a prototype of a launching workshop, that can demonstrate how a wider process would work, while also testing their plan. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.

LAW 7846. Elements of Policy Analysis. 1 Unit.
This one-credit course is designed to support students undertaking public policy analysis projects in the Policy Lab and in other policy-based courses. The course will help students gain facility with basic policy methods and approaches common to public policy research and Policy Lab projects. The core session of the course consists of three hours of classroom instruction on a Saturday morning (the Saturday at the end of the first week of classes) with emphasis on thinking like a policy analyst (as distinguished from an advocate or lawyer), scoping policy problems, promoting and assessing evidence quality, and making valid (and avoiding invalid) inferences. The afternoon session offers three hours of instruction focused on designing and evaluating programs to improve individuals' lives (for example programs aimed at reducing homelessness or opioid addiction). Then, during the early part of the term, students may choose at least two topics from among a series of short workshops including (1) interviewing clients and other stakeholders (especially where ethnic and cultural differences may be salient), (2) policy research tools and strategies, (3) design thinking for law and policy, (4) charting, graphing, and visualizing data, and (5) policy writing. With guidance from their faculty instructors, students may then draw on the skills developed in this introductory seminar to analyze a public policy problem, develop potential strategies to address it, weigh the pros and cons of strategy options, and produce a final product that may offer options or recommendations to a policy client, suggestions for implementing such recommendations, and techniques to assess the effectiveness of implementation. Attention Non-Law Students: See Non-Law Student Add Request Form at https://law.stanford.edu/education/courses/non-law-students/ to enroll in this class. Elements used in grading: Attendance, Performance, Class Participation.

LAW 7847. Nonviolence: Conflict Transformation in Divided Communities. 3 Units.
This course explores and investigates the theory and practice of disciplined nonviolence in the Gandhi-King tradition to powerfully confront, transform and overcome injustice and systemic violence in divided communities. We will examine the role of nonviolent direct action, negotiation and mediation in a variety of historical, present-day and simulated cases in order to identify and analyze strategic lessons from successes as well as failures. We will inquire into the relationship between direct action campaigns, and legal processes and political decision-making. After examining transformative campaigns led by Gandhi, King, and the Student Nonviolent Coordinating Committee, we will explore case studies such as the anti-apartheid movement, and truth and reconciliation process, in South Africa; and racial and environmental justice movements and anti-gun violence campaigns in the United States in recent years until the present day, including Black Lives Matter, March for Our Lives, and the fossil fuel divestiture movement. Students will participate in several simulated negotiation and mediation exercises to develop experiential learning in the field from the perspective of multiple stakeholders, including activists, community leaders and government officials. In several sessions we will engage in dialogue with leading scholars and activists of transformative nonviolence, and we will engage together in a nonviolence training workshop. Students will have an option to enroll in an R-paper section with the permission of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, class participation, written assignments, final paper.

LAW 7848. The Practice of Law or Not: What Lies Beyond Graduation. 2 Units.
This course seeks to explore a simple question: what lies beyond graduation? Within that question are a myriad of complexities. What does it mean to be an associate or a partner in a law firm? Should I do litigation or transactional work, such as public finance, whatever that is? Should I become a prosecutor or a public defender or criminal defense attorney? Should I go in-house and in what size place? Should I leave the law behind and pursue business or other opportunities? Those are not the only questions. To add an overlay that we all must address directly or indirectly, how is my being a person of color relevant to my decision and my success? In a world in which diversity is said to matter, as a person who is not of color, should I take that into account? What about being a woman or LGBTQ in the workplace? Or, what about being a woman or man who wishes to have a family? How does that (or should that) impact my decision? These are just some of the issues that will be explored. They will be explored each week in classes lead by different guests who will be law school graduates practicing law at law firms as associates and partners, practicing as prosecutors and criminal defense lawyers, in-house counsel, counsel for start-ups, and law school graduates who have left the law. The course will require the writing of a paper and grades will also depend on class attendance. Attendance, Class Participation, Final Paper.

LAW 7849. Mediation Boot Camp. 1 Unit.
Lawyers mediate most litigated cases, even those never filed in court. Lawyers mediate in commercial transactions, and as part of everything they do with other lawyers, clients, staff, the government, and their families. Do you want to be in the majority of lawyers who are constantly mediating, but never take a single mediation course? This course is a quick immersion in mediation advocacy, and mediation. It is intended for those who want to avoid being entirely unprepared for an essential part of legal practice. It is also intended for those who want to take a first step to see if mediation interests them. The two days of class will be an interactive exploration of the strategies, tactics and theories of mediation, and mediation advocacy. Class will include: 1) a concise overview of mediation approaches and theories, 2) skills exercises, 3) multiple mediation role plays, and 4) individualized video review. Together these will allow students to think about, practice, and experiment with, the most effective approaches to mediation advocacy and mediation. The course will be taught by Michael E. Dickstein, a full-time mediator of complex cases across the U.S. and Canada for over twenty years, and a former partner in a leading law firm, who practiced litigation, transactional, employment, and environmental law. Elements used in grading: Attendance, Class Participation, and potentially a short Written Assignment. In Winter Quarter, this class will meet Friday February 19, 3:00PM-7:30PM and Saturday February 20, 9:30AM-5:30 PM. This class is limited to 12 students (Fewer on Zoom). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7850. Advanced Legal Writing: High-Tech Transactions. 3 Units.
This practice-based, skills-building, seminar will require students to draft, edit, and negotiate technology agreements of increasing complexity over the course of the quarter. Using a biotechnology case as context, the curriculum is designed to translate contract principles and doctrine (to which students have been exposed,) into real-world practice. Students will acquire the foundational tools necessary to write clear, effective, plain-language provisions into agreements that memorialize a bargain between parties in different contexts and based on realistic situations. Exercises include simulations in which students will not only draft, edit, and negotiate agreements, but that are designed to help students understand how to develop, foster, and sustain client trust, advocate in a client's best interests, as well as effectively and ethically engage with a counter-party's counsel. Students will be expected to operate as senior associates in a law firm, or as in-house counsel tasked with managing licensing and commercial transactions for a technology developer. Students will also focus on understanding their client's needs versus wants, supporting them in achieving their goals while identifying, counseling, and mitigating legal risk. This will be achieved through in-class discussion as well as hands-on drafting (done at home and in class), along with facilitated sessions in which students will be tasked with advising their client or negotiating with a counter-party. Exercises are designed to help students improve their critical thinking, due diligence, analysis, drafting, and editing skills, which deepens an understanding as to the expectations of attorneys and clients with whom they will be working and supporting respectively. Grades will be based on participation, applied negotiation skills, drafting exercises weighted by level of complexity, and culminating in the drafting of a final negotiated agreement. Students may elect credit for either experiential learning (EL) or professional writing (PW) for this course. Prerequisite: Completed Corporations (LAW 1013). This class is limited to 16 students by lottery. Student admitted to the class must have taken a class in Corporations. Some working knowledge of intellectual property is a plus. Waivers of the requirements will be offered on a case-by-case basis.

LAW 7851. Introduction to Legal Research. 2 Units.
This course will introduce law students to the sources and methods used in legal research. Students will (1) gain familiarity with core primary and secondary U.S. legal information sources, how this material is used, organized, published, indexed, and kept current, and how to efficiently find and use these sources; (2) build foundational research skills that can be used to approach legal research questions in any area of law; and (3) develop basic strategies to effectively use both familiar and unfamiliar research databases, sources, and tools. Learning legal research requires a hands-on approach, so students will complete in-class exercises, homework assignments, and a final project, all of which contribute to students' final grade. There will not be a final exam. This course is open to Stanford graduate students with permission from the instructors. SLS 1Ls will be given preference when registering. Elements used in grading: Attendance, Class Participation, Written Assignments. CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 7853. Advanced Legal Research: Transactional. 3 Units.
This course aims to prepare students to research as a business lawyer, including the analysis, search process, information evaluation, and reasoning necessary to ethically research business law problems and advise clients on corporate or transactional law matters. The purpose of this course is to broaden your knowledge of the methods, databases, sources, and primary materials that you will encounter when conducting business law research; and to increase your familiarity with common business law terminology and the research requests that typically accompany that knowledge. Students' learning objectives are to develop research strategies, identify sources, and enhance their research skills related to (1) corporate formation and organization laws and regulations; (2) company research and analyses; and (3) common transactional law research questions (including forms and due diligence). Elements used in grading: Attendance, Class Participation, Written Assignments.

LAW 7854. Lawyers as Leaders Intensive Boot Camp. 4 Units.
You've got the substantive legal knowledge and intellectual firepower necessary to be a good lawyer, but do you have the leadership skills it takes to be a great one? Leaders in law and business want trusted advisors who excel in skills like problem solving, creativity, ability to deal with ambiguity and complexity, and exceptional communication and persuasion skills. This course focuses on strengthening these critical skills for the career that you are developing. In this highly immersive class, our hands-on exercises and discussions assess and develop your skills in strategic decision making, influence techniques, motivating others, leading teams, and managing change in unpredictable environments. We use neuroscience techniques that optimize adult learning, with real-time feedback on classroom exercises and short reflection papers to help create new habits for success. The course meets in a three full-day session immediately before the start of Fall Quarter (Sept. 9-11). We then meet 3 hours/month through the academic year in workshop style -- interactive sessions in which students bring and work on actual leadership challenges, brainstorming and problem solving as a cohort Precise meeting dates/time TBA by instructors. Enrollment in the class (4 units) is in Autumn Quarter 2020. An "N" grade (indicates satisfactory progress in a course that has not yet reached completion) will be given at the end of Autumn Quarter 2020. Final grades will be given at the end of Spring Quarter 2021 and will be applied to Autumn Quarter 2020. Elements used in grading: Class participation and attendance, course exercises and written assignments. Class Outline (https://docs.google.com/document/d/1_XAWnMhQE0bFVgRE2eR0kA488plZddvJhDKxw_PdZEo/edit) . Info Sheet (https://www.dropbox.com/s/xhgnenqkq99shd1/Lawyers%20As%20Leaders%20%20Poster.pdf?dl=0). CONSENT APPLICATION: To apply for this course, students must complete and submit a Consent Application Form available on the SLS website (Click Courses at the bottom of the homepage and then click Consent of Instructor Forms). See Consent Application Form for instructions and submission deadline.

LAW 8001. Corporate Governance and Practice Seminar. 2 Units.
The seminar on corporate governance meets in the Autumn and Winter quarters and forms the core of the LL.M. Program in Corporate Governance & Practice. The course, designed to be taken in conjunction with Corporations in Autumn, takes an economic approach to the analysis of corporate law. In particular, we ask why American corporate law has its particular structure. We will seek to understand how the separation of ownership and control produces agency costs, and the ways in which corporate law seeks to remedy these through techniques like disclosure, fiduciary duties and shareholder litigation, voting, and hostile takeovers. We will read and discuss ongoing debates among scholars and practitioners about the agency cost framework, the merits and limits of current legal policies, and the role of institutional arrangements like activist shareholders. We will also consider the relevance of these disputes, and the effectiveness of corporate law and governance more generally, in the context of a variety of real-life incidents. No knowledge of economics is presupposed, so the course will also introduce basic economics and finance concepts necessary to understand these concepts. Some course sessions, largely in the Winter will feature outside speakers who will complement the discussions with real-world examples drawn from practice. Attendance and active participation are important to the success of the seminar and an important factor in the overall grade. Students are expected to have carefully read and reviewed assigned materials in advance of each session. Students will be required to submit short reflection papers that evaluate, critique, and discuss some or all of the key topics reviewed in the previous week's session. Students may also be asked to prepare presentations and case studies. The class will be graded H/P/R/F in Autumn Quarter and Winter Quarter. This course is required for and limited to students in the Corporate Governance and Practice LL.M. Program. Elements used in grading: Class participation, attendance and assignments.

LAW 8002. Environmental Law and Policy Colloquium. 2 Units.
The Environmental Law & Policy Colloquium offers students the opportunity to learn about cutting-edge legal topics related to environmental law, broadly defined to include, among other areas, pollution control, natural resources management, and energy development. The colloquium meets in two quarters. During the autumn quarter, students will learn about core concepts that underlie the administration of environmental law, exploring ideas from economics, philosophy, natural science, and law. In the autumn quarter, students will begin to develop a capstone research paper on a contemporary environmental law issue. During the spring quarter, the students will write and present their research papers. Elements used in grading include attendance and participation, problem sets, small writing assignments, and a final paper. This course is required for students in the Environmental Law & Policy LL.M. Program. All other students are welcome but will need instructor permission to enroll.

LAW 8003. International Economic Law, Business & Policy (IELBP) Colloquium. 2 Units.
This course enables IELBP advanced degree students to explore selected issues, case studies and policy debates in international economic law and business, global political economy, and international economic dispute resolution in a highly interactive seminar. The course is a complement to the other core degree requirements of the LLM in IELBP and is discussion-oriented. The course offers students the opportunity to engage in dialogue with experts in the field (including Stanford Law faculty and interdisciplinary scholars from other schools, departments or programs at Stanford University). The course takes on a wide-ranging approach: we will examine legal issues confronting international business while also focusing on cutting-edge debates arising out of economic globalization; we will explore the complex architecture of international economic law, unpacking how international institutions and public international law sources (formal and informal) regulate: i) cross-border business transactions between private parties, ii) international economic relations between and among states, and iii) cross-border economic conduct by states, international organizations, and private actors. Students are expected to have carefully read assigned materials in advance of each session, and to actively participate during class. Grades for the colloquium are based on students' papers and their classroom performance (e.g., preparation, participation, attendance, etc.). The course extends over two quarters (autumn and spring), and students are required to complete both quarters in order to satisfy the program requirement. Topics in the Fall quarter will focus on developments in world trade law, international monetary cooperation, international investment law, economic integration and development, international taxation, international arbitration, and international antitrust law. Topics in the Spring quarter will be selected based on students' interests, as well as pressing policy concerns in international commerce, such as climate change and national security.

LAW 8004. Law, Science, and Technology Colloquium. 2 Units.
The Law, Science & Technology Colloquium offers students in the Law, Science & Technology LLM Program the opportunity to discuss cutting-edge legal issues at the intersection of law and technology with leading experts in the field, including Stanford faculty, visiting scholars, technology and IP lawyers, entrepreneurs, and executives from Silicon Valley technology companies. For organizational purposes, the course is divided into units reflecting different areas of law and technology. Each begins with a keystone lecture that introduces students to the unit's doctrinal and theoretical themes. After the keystone lecture, each unit includes one or more topical lectures taught by experts representing a diverse cross-section of viewpoints from academia, legal practice, and business. Students are expected to have carefully read the assigned materials in advance of each session, and to actively participate during class. Students will also write papers dealing with the units' themes. Grades for the colloquium are based on students' papers and their classroom performance (e.g., preparation, participation, attendance, etc.). This course is restricted to students in the Law, Science, and Technology LLM program, and satisfies their "colloquium requirement" for the fall and spring quarter.

LAW 8011. SPILS Law and Society Seminar. 3 Units.
This seminar is restricted to students who are in the SPILS program. The seminar deals with the relationship between legal systems and the societies in which they are embedded. The materials are drawn from studies of many different societies. Among the issues dealt with are: What influence does culture have on the operation of legal systems? What are the social forces which produce particular forms of law? What impact do legal interventions have on society and on human behavior? Elements used in grading: Exam.

LAW 8012. SPILS Masters Thesis. 4 Units.
The writing of a work of original scholarship in the area of research that each student chooses is necessary requirement of the JSM degree. During the winter quarter students are expected to submit two draft chapters: 1) any chapter of the fellow's choice in early February; and 2) a draft of the empirical research result's chapter in early March. During the spring quarter students are expected to finalize their research project, and write and submit their final thesis. Towards that end, students must complete and submit a draft of the whole thesis in early April. The final version, revised in response to the adviser's comments, must be submitted by the end of the quarter. The exact dates will be informed in advance by the teaching fellow. Elements used in grading: Thesis. This course is exclusive to SPILS students. The thesis is required for JSM graduation.

LAW 8013. SPILS Research Methods Workshop. 2 Units.
This is a mandatory course for SPILS Fellows as part of the program's core curriculum. Its main goal is to offer students an interdisciplinary perspective about socio-legal research, and research tools for implementing their individual research projects. This Winter term workshop will complement the Research Design for Empirical Legal Studies Seminar taken in the Autumn by 1) expanding and elaborating on some of the methods analyzed during the seminar; and 2) assisting students in using such methods towards their individual research project. The workshop will consist of specialized sessions, most of them tailored towards the work of empirical research that occurs after the data collection phase. During the quarter the fellows are expected to submit drafts of different chapters of their thesis and present their preliminary findings in class. If appropriate, the workshop may also include group and/or individual sessions designed to address the very specific needs of the research undertaken by the SPILS Fellows. Elements used in grading: Class participation, attendance, written assignments and final presentations. Enrollment is restricted to SPILS fellows. The seminar is required for JSM graduation.

LAW 8021. Introduction to American Law. 3 Units.
This course is designed to introduce international students in the Exchange and Advanced Degree Programs (LL.M. and SPILS) to the key principles of American law. The course provides an overview of distinctive features of the U.S. legal system, including its history and institutions. Topics include the role of precedent in the common law, distinctive elements of civil procedure and legal actions, the branches of the U.S. government and the separation of powers, federalism, due process, and equal protection. The course is offered before the start of the regular Law School quarter. Special Instructions: Required for LL.M. but optional for the SPILS and Exchange Program students. Open to LL.M., SPILS and SLS Exchange Program students only. This course is taught on an accelerated basis over the course of three weeks between orientation and the beginning of the Fall Quarter classes. Precise meeting dates TBA. Final exam will be scheduled on September 11, 2020. Elements used in grading: class attendance, participation, short written assignment, and final exam.

LAW 8022. Professional Responsibility. 3 Units.
This course introduces students to the goals, rules and responsibilities of the American legal profession and its members. The course is designed around the premise that the subject of professional responsibility is the single most relevant to students' future careers as members of the bar. These issues come up on a constant basis and it is critical that lawyers be alert to spotting them when they arise and be educated in the methods of resolving them. As such, the course will address many of the most commonly recurring issues that arise, such as confidentiality, conflicts of interest, candor to the courts and others, the role of the attorney as counselor, the structure of the attorney-client relationship, issues around billing, the tension between "cause lawyering" and individual representation, and lawyers' duty to serve the underrepresented. In addition, we will delve into some more personal ethical issues that reflect on why students have chosen law as a profession and how lawyers compose careers that promote or frustrate those goals. At the start of each session (starting with the second session) there will be a brief quiz on the material that was covered in the readings and discussion of the prior session. During the period of the course, students will also be responsible for submitting one reflection paper (three-to-five pages) based on a prompt that will be circulated after each of the first six sessions (one paper for the entire course). These papers will be due by 11:59 on the last day the class meets. Grades will be based on the quizzes and the paper submitted, with the instructor retaining the right to take class participation into account. Attendance is mandatory and students must seek instructor approval for any absences not due to illness. This course is offered to international graduate students only. It is taught on an accelerated basis over the course of three weeks between orientation and the beginning of the Fall Quarter classes. Thus, the course meets on average nine hours per week. The exact meeting times will be set once the graduate students' schedules are set. Elements used in grading: Attendance, class participation, quizzes and written memo. Limited to LLMs, JSMs and exchange students. Required for LLMs.

LAW 8031. JSD Research Colloquium. 0 Units.
Required for and limited to JSD candidates. The objective of the colloquium is to assist students in designing, conducting, analyzing and reporting their doctoral dissertation research. Weekly colloquium sessions are devoted to work in progress presentations by JSD candidates, supplemented by occasional guest lectures and discussions of cross-cutting issues of interest to doctoral students.

SCHOOL OF MEDICINE

The School of Medicine offers courses of study leading to the M.S., Ph.D., and M.D. degrees.

Undergraduate Programs in the School of Medicine

Many courses in the School of Medicine are open to any registered Stanford student who has fulfilled the prerequisites, subject to the usual limits of course enrollment and faculty approval. The school also offers courses specifically for undergraduates, as well as graduate-level courses where advanced undergraduates with backgrounds in the life sciences are welcome. Among the undergraduate offerings are numerous Stanford Introductory Seminars for freshmen and sophomores, the Emergency Medical Technician program, Stanford Immersion in Medicine Physician Shadowing, Pre-Vet Advisory, and courses in Community Health, including participation in the Stanford Free Clinics. The school also offers several undergraduate courses through the Department of Biology and the Interdisciplinary Program in Human Biology in the School of Humanities and Sciences. See the school's Undergraduate Studies (http://med.stanford.edu/education/undergrad-studies.html) web site for additional information.

M.S. and Ph.D. Programs in the School of Medicine

The School of Medicine is home to graduate programs covering a broad range of disciplines within biomedicine leading to Ph.D. or M.S. degrees. These programs focus on interdisciplinary training with in-depth investigation of an original problem of fundamental importance to the biosciences. Each degree program sets its own curriculum, but many courses are taught by groups of faculty from multiple programs and departments. Flexibility is a priority to ensure that all students obtain the best possible training for pursuing careers in their areas of interest. The school is dedicated to training students from diverse backgrounds, and to the promotion of diversity in graduate education. Admission is through one of about 15 home programs. These home programs enable students to carry out dissertation research and training with School of Medicine faculty, as well as investigators in the departments of Biology and Biophysics in the School of Humanities and Sciences. Detailed information on School of Medicine M.S. and Ph.D. programs, curricula, and research can be found at Stanford's School of Medicine Master's Degree Programs (http://med.stanford.edu/education/masters-programs.html) and Ph.D. Programs (http://med.stanford.edu/education/phd-programs.html) web site. Application information can be found at Stanford's Office of Graduate Admissions (http://gradadmissions.stanford.edu) web site.

M.D. Program in the School of Medicine

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world's people through research, innovation, and leadership. The Stanford M.D. Discovery Curriculum (http://med.stanford.edu/md/discovery-curriculum.html) provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content, interactive approaches, and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. The flexible Discovery Curriculum supports student's scientific discovery and self-discovery by offering multiple learning pathways at a more individualized pace and opportunities for pursuing a second degree, such as an M.P.H., M.B.A., Master's of Science in Epidemiology or Health Services Research, a Ph.D., or participating in longitudinal and global health research experiences.

The Discovery Curriculum features robust basic science content, integrated organ based learning, and compassionate patient-centered clinical training. Core foundational content is presented in the first year and broad clinical science education occurs throughout the curriculum with ample exposure to patient care and the practice of medicine. Students may begin clinical clerkships as early as May of the second year. The structure of clinical training is flexible, allowing customization of the order in which core clerkships are completed and offering a wide variety of selective/elective clerkships. The curriculum also features a strong emphasis on population health with courses that include classroom and experiential learning to provide understanding of the socioeconomic determinants of the health of patients and communities.

The required Scholarly Concentrations offer opportunities for developing skills that enhance basic science and clinical training in areas such as bioengineering, biomedical ethics and medical humanities, biomedical informatics, clinical research, community health, health services and policy research, and the molecular basis of medicine. Through the Scholarly Concentration program, these skills may be applied in clinical areas housed within centers at Stanford such as the Comprehensive Cancer Center, the Cardiovascular Institute, the Neuroscience Institute, the Institute of Immunity, Transplantation, and Infection, and Women's Health at Stanford. Study in a scholarly concentration typically includes course work and research activities. Funding for research and other scholarly opportunities may be supported through the Medical Scholars program, which funds student research projects at Stanford and overseas.

The Medical Scientist Training Program (MSTP) MD-PhD program provides a select group of medical students with an opportunity to pursue a training program designed to equip them for careers in academic investigative medicine. Individualization of the curricular and research programs of each trainee is the hallmark of the Program. Training for a combined MD-PhD includes the same content encountered by students who pursue each degree separately, but the total time of training should be less than the sum of the time normally taken for each degree. To this end, students must plan their training carefully and commit to a rigorous and intensive period of study. The flexible curriculum at Stanford Medical School allows each student to satisfy the requirements for the MD degree and to pursue an independent research program. In what follows, we provide a general outline of what to expect.

In addition to a variety of other dual degree opportunities, Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at Stanford's Dual Degree and Multi-Degree Programs (http://med.stanford.edu/education/dual-degree-programs.html) web site.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

The M.D. degree requires 12 quarters of registration at full Med-MD tuition; the joint M.D./Ph.D. degree requires 15 quarters. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see the Stanford (http://

med.stanford.edu/md/) MD Program (http://med.stanford.edu/md.html) website.

Multiple-Degree Programs in the School of Medicine

M.D./Ph.D.

Many M.D. students undertake a Ph.D. while they are at Stanford. Popular choices are School of Medicine programs in Bioengineering , Biomedical Informatics, or one of the 13 Biosciences home departments. At the School of Engineering, the Biomechanical Engineering M.D./Ph.D. program also makes a special effort to work with M.D. students.

Medical Scientist Training Program

The Medical Scientist Training Program (MSTP) provides medical students with an opportunity to pursue an individualized program of research and course work leading to both the M.D. and Ph.D. degrees. It is designed to equip students for careers in academic investigative medicine, and emphasizes flexibility of curricular and research programs for each trainee. Training for a combined M.D.-Ph.D. includes the same content encountered by students who pursue each degree separately, but the total training time is less than the sum of the time normally required for each degree. The flexible curriculum at Stanford's School of Medicine allows each student, in consultation with a preceptor and other advisers, to pursue a plan of study that satisfies the requirements for the M.D. and allows performance of doctoral-level research leading to the Ph.D. Students interested in joining the MSTP are considered for admission at the time of their application to the School of Medicine M.D. program and are asked to provide supplemental information relevant to their research background. Current Stanford M.D. students may also apply for admission to the MSTP.

M.D./M.B.A.

M.D.. students interested in combining their medical training with training in business can take advantage of a dual degree M.D./M.B.A. program that allows students to obtain both degrees after completion of a 5-year curriculum. Students must apply to and be admitted by the Stanford Graduate School of Business, at the time of their admission to the medical school or after beginning their M.D. studies.

M.D./M.P.H.

A unique collaboration with UC Berkeley allows M.D.. students to pursue and obtain a Master of Public Health degree while still at the Stanford School of Medicine. This dual degree M.D./M.P.H. program is open to M.D. students who participate in the Scholarly Concentration in Community Health. Students must apply to and be admitted by the UC Berkeley program; course work is undertaken at the UC Berkeley campus.

Ph.D./M.S.M.

The Master of Science in Medicine (http://msm.stanford.edu/) program admits current Stanford Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease to be better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master's program. During their first five quarters, students take basic biomedical science courses with Stanford M.D. students. The School of Medicine M.D. curriculum is presented in a succinct format that allows time for students to concurrently complete their Ph.D. course requirements and lab rotations. By early in their second year, students choose a lab for their Ph.D. thesis research and complete their medical course work. They also elect a clinical co-mentor to discuss translational research needs and help to arrange a short clinical experience. Upon completion of the Program., participating students receive an M.S. in Medicine.

M.D./M.S. Degrees

Health Policy: the master's degree program in Health Policy seeks to train students in the quantitative analysis of issues in health and medical care. The program is based upon an individual development plan, and includes both course work and completion of a master's project under the direction of a program core faculty member. The typical student in the program is a physician who has completed residency training and is preparing for a research career; the program also admits Stanford medical students and others with a strong background in health policy analysis. The core faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

Epidemiology: The Graduate Interdisciplinary Program in Epidemiology is a research oriented program that offers instruction and research opportunities leading to the M.S. degree in Epidemiology, the study of the distribution and determinants of diseases in populations.

Biomedical Informatics: An option for anyone who wishes to either perform research in Biomedical Informatics as clinical faculty at a school of medicine or for those who wish to continue into the health care industry or government. There is high need for trained individuals who understand the practice of medicine and who are able to develop and implement applications in biomedical informatics.

Biomedical Investigation (http://med.stanford.edu/md/discovery-curriculum/BergScholarsProgram.html): In this program, M.D. students complete the core pre-clerkship curriculum of the M.D. program then undertake additional coursework related to their research interests as one of the pathways in the Discovery Curriculum. The program was designed to address the decreasing number of physician-scientists by shortening the training period without compromising the quality of research. Biomedical Investigation is a sub-plan of the M.S. in Medicine. It is a research-oriented program resulting in an M.S. in Medicine in Biomedical Investigation.

Biomechanical Engineering: Bioengineering is a fusion of engineering and the life sciences that promotes scientific discovery and the invention of new technologies and therapies through research and education. It encompasses both the use of biology as a new engineering paradigm and the application of engineering principles to medical problems and biological systems. The discipline embraces biology as a new science base for engineering.

M.D./M.P.P. Degree

Matriculated M.D. students from Stanford's School of Medicine may apply for admission to the joint M.P.P./M.D. degree program (http://med.stanford.edu/education/dual-degree-programs.html). Applications are accepted anytime after a student has completed one year in the M.D. program. Students must obtain the permission of the School of Medicine to participate in the joint degree program. Students are required to devote two continuous years of full-time study to the completion of the first two years of the core M.D. curriculum. Students then devote one continuous academic year of study to the completion of the M.P.P. core curriculum. At other times, the student may be enrolled in either unit and may take courses from either unit to satisfy the joint degree requirements.

Departmental Dual Degrees

Education: The Individually designed M.A. in Education is designed for Stanford doctoral students enrolled outside of the School of Education. Individuals enrolled at the doctoral level at Stanford can be considered for this program.

E-IPER: Stanford's Emmett Interdisciplinary Program in Environment and Resources (E-IPER) gives students a focused science, engineering, and

technology background, allowing them to integrate science with law and business to address critical environmental and sustainability issues.

Public Policy: Stanford University offers two master's programs in Public Policy. A Master's of Public Policy (M.P.P.) is a two-year professional degree and the Masters of Arts in Public Policy (M.A.) is a one-year non-professional degree. Students currently enrolled in other Stanford graduate programs, and applicants to those programs, may apply for either of the Public Policy master's programs. M.D. students are eligible to apply for a dual M.A. degree program. See above for the joint M.D./M.P.P. program.

Dean: Lloyd Minor

Senior Associate Dean for Graduate Education and Postdoctoral Affairs: William Talbot

Senior Associate Dean for Medical Education: Charles Prober

Medicine Interdisciplinary Courses

INDE 201. Practice of Medicine I. 8 Units.
Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters, in which students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epdemiology students learn the taxonomy of epidemiological studies, how to critically read a journal article, and how to recognize and understand the concepts behind different clinical study designs. Topics include bias, confounding, diagnostic testing and screening, and "how statistics can lie." Psychiatry introduces students to the unique role of medical students in talking with patients, the difference between process and content in patient communication, how to respond to breaks in the patient-physician relationship, and the relationship between the quality of the patient-physician interaction and health outcomes. Health care policy covers such topics as health insurance, physician payment, health care costs, access, measurement and improvement of quality, regulation and health care reform. Biomedical ethics includes important ethical issues in medical practice, such as confidentiality, privacy, and ethical issues relating to medical students. The population health curriculum exposes students to concepts of public health, community action, and advocacy, and includes a year-long, community-based project. At the end of this quarter students participate in a performance-based assessment of the medical interview skills.nCourse offered to MD and MSPA students only.

INDE 202. Practice of Medicine II. 5 Units.
Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series. Course open to MD and MSPA students only.

INDE 203. Practice of Medicine III. 6 Units.
Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice mental health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series. Course open to MD and MSPA students only.

INDE 204A. Practice of Medicine IV-A. 4 Units.
The second year of the Practice of Medicine series (INDE 204 and 205) emphasizes clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. The Clinical Procedures segment introduces common and important procedures in clinical practice, including phlebotomy, intravenous line insertion, and electrocardiography.

INDE 204B. Practice of Medicine IV-B. 4 Units.
The second year of the Practice of Medicine series (INDE 204 and 205) emphasizes clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. The Clinical Procedures segment introduces common and important procedures in clinical practice, including phlebotomy, intravenous line insertion, and electrocardiography.

INDE 205A. Practice of Medicine V. 3 Units.
Continued emphasis on clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. For the Clinical Procedures segment, students will have an opportunity in the Emergency Department to practice performing procedures learned in the previous quarter. At the end of this quarter, students participate in a comprehensive four-station objective structured clinical examination (OSCE) performance-based assessment of their medical interview, physical examination, and clinical problem-solving skills.

INDE 205B. Practice of Medicine V. 3 Units.
Continued emphasis on clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. For the Clinical Procedures segment, students will have an opportunity in the Emergency Department to practice performing procedures learned in the previous quarter. At the end of this quarter, students participate in a comprehensive four-station objective structured clinical examination (OSCE) performance-based assessment of their medical interview, physical examination, and clinical problem-solving skills.

INDE 206. Practice of Medicine VI. 5 Units.
This last segment of the Practice of Medicine series is an intensive, four-week learning experience to consolidate clinical skills from prior quarters, and a final preparation for transition to clerkships. An extensive series of workshops covers topics such as dermatology, ophthalmology, advanced clinical reasoning, advanced presentations, bedside skills, ethics, palliative medicine, advanced sexual history, electronic medical record, ekg interpretation, intravenous fluid and electrolyte management. Students practice clinical procedures with task trainers and on a cadaver. This quarter also includes a professionalism series to prepare students for entry into clinical practice. Special clinical practice sessions are held as a capstone to clinical skills preparation.

INDE 207A. Medical Mandarin I: Beginning. 2-3 Units.
Develops conversational communication skills and essential medical vocabularies. Teaches in pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions) as well as daily survival conversations. Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care as well as daily life. Students registering for 3 units participate in clinic visits and field activities.

INDE 207B. Medical Mandarin II: Intermediate. 2-3 Units.
For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and different tasks such as giving medical instructions and doing labs and tests. Builds working vocabulary for organ system, disease assessment to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students registering for 3 units participate in clinic visits and field activities. Prerequisite: one year of college-level Chinese or instructor assessment of fluency.

INDE 207C. Medical Mandarin III: Advanced. 2-3 Units.
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Students registering for 3 units participate in clinic visits, field activities or projects. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.

INDE 207D. Professional Mandarin I. 2-3 Units.
Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor.

INDE 208A. Medical Mandarin I: Beginning. 2-3 Units.
Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208B. Medical Mandarin II: Intermediate. 2-3 Units.
Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208C. Medical Mandarin III: Advanced. 2-3 Units.
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.

INDE 208D. Professional Mandarin II. 2-3 Units.
Continuation of INDE 207D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 207D.

INDE 209. Analysis of Public Companies in the Life Sciences. 2 Units.
Student lead: Life Science companies are often valued with a different methodology than traditional valuation metrics. This course will serve to teach students how to analyze a publicly traded life science company or sector using publicly available materials online such as 10-K, 13-F, conference calls, and financial & technical analysis. In addition, students will learn how to access various Stanford resources (analyst reports, Bloomberg, etc). Students will work in teams throughout class and publish an investment analysis at the end of the course.

INDE 209A. Medical Mandarin III: Beginning. 2-3 Units.
Continuation of 207A/208A. See description for 207A. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209B. Medical Mandarin III: Intermediate. 2-3 Units.
Continuation of 207B/208B. See description for 207B. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209C. Medical Mandarin III: Advanced. 2-3 Units.
Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.

INDE 209D. Professional Mandarin III. 2-3 Units.
Continuation of INDE 208D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 208D.

INDE 211. Creative Writing. 1 Unit.
For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.

INDE 212. Medical Humanities and the Arts. 2 Units.
The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.

INDE 214. Stanford Medical Student Journal. 1 Unit.
Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Journal. Students enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The Journal is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

INDE 215. Queer Health & Medicine. 1 Unit.
Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. May be repeated for credit.

INDE 217. Physician Scientist Hour. 1 Unit.
Enrollment is limited to MD, PhD, or MD-PhD students interested in careers as physician scientists. Focus is on aspects of developing careers in biomedical research through a mix of research lectures, clinical case presentations, and physician-scientist guest speakers.

INDE 218. Histology. 1 Unit.
This course focuses on the microscopic structure of the major organ systems, including the cardiovascular, respiratory, gastrointestinal, renal, and reproductive systems. Sessions examine the unique features of the cells and tissues that comprise the major organs, describe how they contribute to the organs' functions, and explore how the form the foundation for many pathologic processes. Course open to MD and MSPA students only.

INDE 221. Science of Medicine I. 12 Units.
First course in three-sequence Science of Medicine block. Focus is on structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. The Science of Medicine block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

INDE 222A. Science of Medicine II-A. 7 Units.
Focus is on structure, function, disease, and therapeutics of the renal, gastrointestinal, and hepatic systems. Science of Medicine presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each integrated course includes a review of the anatomy, related histology, and normal function of one or more organ systems, how the organ systems are affected by and respond to disease including infection, and how diseases of those organ systems are treated (therapeutics).

INDE 222B. Science of Medicine II-B. 7 Units.
Focus is on structure, function, disease, and therapeutics of the endocrine and musculoskeletal systems and on Women's Health. Science of Medicine presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each integrated course includes a review of the anatomy, related histology, and normal function of one or more organ systems, how the organ systems are affected by and respond to disease including infection, and how diseases of those organ systems are treated (therapeutics).nPrerequisites if applicable: INDE-221, completed or concurrent INDE-222-A.

INDE 223A. Science of Medicine III-A. 5 Units.
Focus is on structure, function, disease, and therapeutics of the nervous system and skin. Science of Medicine presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each integrated course includes a review of the anatomy, related histology, and normal function of one or more organ systems, how the organ systems are affected by and respond to disease including infection, and how diseases of those organ systems are treated (therapeutics).nnPrerequisites if applicable: INDE-221, INDE-222-A.

INDE 223B. Science of Medicine III-B. 5 Units.
Focus is on structure, function, disease, and therapeutics in the areas of Hematology and Autoimmune Disease. Science of Medicine presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each integrated course includes a review of the anatomy, related histology, and normal function of one or more organ systems, how the organ systems are affected by and respond to disease including infection, and how diseases of those organ systems are treated (therapeutics).

INDE 224. Pathophysiology Capstone. 4 Units.
The Pathophysiology Capstone (PC) is a newly developed Science of Medicine (SOM) Year 2 capstone experience in Quarter 6 that will be integrated with the Practice of Medicine (PON) course called "Transition to Clerkships." This four-week long intensive spring quarter course, including 25-32 hours of instruction, focuses on the re-introduction of core pathophysiology concepts as well as delving into advanced topics, treatment, and breakthroughs based on essentials taught in the SOM series in quarters 3-5.nPrerequisites: Successful completion of Science of Medicine (SOM) I,II,III.

INDE 225. Popular and Clinical Nutrition: Food Facts, Fads, and Pharmacology. 1 Unit.
Designed for medical students and other health care professionals. Lunchtime lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with caloric restriction, toxins in foods and the action of phytonutirents. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

INDE 226. History of Medicine Online. 1 Unit.
Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axess, then ask cwpsupport to be added to the course site as a student.

INDE 227. Careers in Medicine: Pathways in the Medical Sciences. 1 Unit.
Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life balance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow. 1 Unit.
Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective job search campaign. Topics: translating scientific and clinical training into a variety of workplace environmennts, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

INDE 230A. Topics in Scientific Management. 1 Unit.
Broadly discusses foundational topics in pursuing academic careers, including the academic and faculty career landscape, establishing a writing practice, establishing an independent research agenda, issues of diversity, equity and inclusion, presentation skills, self-advocacy, creativity in research, establishing collaborations, and grantsmanship. Topics may vary annually.

INDE 230B. Topics in Scientific Management. 1 Unit.
Reviews management skills necessary for successfully assuming leadership roles in scientific research. Addresses some of the most difficult aspects of developing, directing, and managing people and projects and running a research group, especially issues that new faculty have traditionally learned by trial and error over a number of years. Topics include: the faculty job search process and strategies, key elements in starting a lab, basic principles regarding legal dimensions of scientific activity (intellectual property, royalties, links with industry), team science, research ethics, communication and negotiation skills, writing and securing grants. Topics may vary annually.

INDE 230C. Topics in Scientific Management. 1 Unit.
Deep dive into topics in mentorship, which may include mentoring in a research environment, navigating all directions of mentoring relationships within academia, conflict management and resolution, communication styles, setting expectations, giving feedback, cultivating ethical behavior, promoting research self-efficacy, and navigating intercultural dynamics. Topics may vary annually.

INDE 231A. Career Transitions: Academia. 1 Unit.
Preference to PhD students in their fourth year or beyond and postdocs/fellows in their intended final year. Restricted to students in Biosciences and the School of Medicine. Focus is on practical, hands-on preparation of application materials (including interview and job talk) for academic positions. Provides practical, hands-on preparation for Bioscience PhD students, postdoctoral fellows and research/clinical trainees ready to apply to academic positions. It not only previews the academic hiring process, including tips from experienced faculty from different types of institutions, but also guides participants in the preparation and polishing of their application materials for success on the job market.

INDE 231B. Career Prep and Practice: Academia. 1 Unit.
Open to all Biosciences PhD students, postdocs/fellows and medical students/residents/fellows planning to pursue academic careers. Focus is on gaining a deeper understanding of faculty roles and responsibilities. Topics include how to balance teaching, research, service, lab set-up, grantwriting and publishing at different types of institutions. Features panels of experienced faculty members from different academic environments. More information available on course website: web.stanford.edu/class/inde231b.

INDE 232. Introduction to Academic Medicine for Physician-Scientists. 3 Units.
Open only to accepted MSTP students. Presentations by Stanford faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

INDE 233. Medical Education Seminar Series. 1 Unit.
For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education journal club; education works-in-progress; topics in medical education design, implementation, and evaluation; teaching M&M; hot topics and controversies in medical education. May be repeated for credit.

INDE 234. Introduction to Writing Research Proposals. 3 Units.
Practical instruction in research proposal writing. Suitable for advanced graduate students. Substantial writing component. Enrollment by instructor approval only.

INDE 238. Managing Difficult Conversations. 3 Units.
(Crosslisted with GSBGEN 368) This elective 3-unit course is offered to all medical students, residents, and fellows, and to GSB students who aspire to improve their ability to deal effectively with difficult interpersonal situations. The course will be taught by William F. Meehan III, the Raccoon Partners Lecturer in Strategic Management, Stanford Graduate School of Business and Charles G. Prober, M.D., Professor of Pediatrics, Microbiology & Immunology and Senior Associate Vice Provost for Health Education, Stanford School of Medicine. The course, which will be case-based, will involve frequent student-to-student and student-to-instructor role-playing in authentic difficult professional and interpersonal situations. Topic-specific experts often will be present to participate as class guests. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Students will be expected to attend all classes unless excused in advance. Class preparation will include reading of assigned cases; analysis of the cases and recommendations as to how to confront specific difficult conversations (consistent with assigned study questions); and reading of assigned background material. It is important that all students participate actively in classroom discussions. Class size will be limited to 40 students per the following: (1) a maximum of 20 MBA students and (2) a maximum of 20 non-GSB graduate students. MD student enrollment only in INDE 238, GSB students enroll under GSBGEN 368.

INDE 240. Humanistic Medicine: Engaging Difference by Design. 1 Unit.
In the changing healthcare landscape, maintaining a human connection with patients is more essential than ever. Humanistic medicine is defined by its focus on building a patient-provider relationship grounded in compassion and empathy. It¿s medicine practiced with sensitivity to diverse cultural backgrounds, values, and preferences. How do our own unique identities as healthcare practitioners intersect with those of our patients? Our colleagues? This course incorporates experiential activities with active discussion to explore the complex ways that identities intersect in medicine, starting with our own.

INDE 255A. Health Policy, Finance and Economics I. 1 Unit.
Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research . Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.

INDE 257. Global Health Storytelling. 1 Unit.
Global health storytelling is a hands-on workshop that teaches global health students the art of performing compelling stories. Participants will focus on seeking, structuring, and sharing stories culminating in a live performance in front of their peers. Through the workshop, students will learn the narrative structure of a story, practice active listening, examine the importance of body language and dramatic techniques, and understand the power of narrativizing medical research and clinical experiences.

INDE 258. PSTP Career Development Symposium. 1 Unit.
Enrollment is limited to senior MD program students. Preference given to MSTP and Berg Scholars Program participants. Focus is on providing guidance to students who are pursuing physician-scientist careers. Topics include introduction to physician investigator careers, identifying a research area and mentor, how to maintain a research focus in a clinical environment, clinical research: challenges and rewards, staffing and funding a research group. Guest speakers include Stanford faculty physician-scientists and physician-scientist assistant professors for a panel discussion.Prerequisites: Must be a senior MD program student. Priority will be given to MSTP and Berg Scholars Program participants.

INDE 260A. Pharmacological Treatment of Disease. 1 Unit.
This course will provide an overview of how drugs and therapeutics are used in the treatment and prevention of diseases and disorders. It aims to review the general principles of drug action, including drug absorption, distribution, metabolism, elimination, pharmacokinetics, and pharmacodynamics of the major drug classes. For each major drug class, we will review selected prototype drugs and discuss their molecular mechanisms of action, therapeutic indication, adverse effects, contra-indications and drug-drug interactions.

INDE 260B. Pharmacological Treatment of Disease. 1 Unit.
This course will provide an overview of how drugs and therapeutics are used in the treatment and prevention of diseases and disorders. It aims to review the general principles of drug action, including drug absorption, distribution, metabolism, elimination, pharmacokinetics, and pharmacodynamics of the major drug classes. For each major drug class, we will review selected prototype drugs and discuss their molecular mechanisms of action, therapeutic indication, adverse effects, contra-indications and drug-drug interactions.

INDE 263. Microbiology and Infectious Diseases I. 3 Units.
First course in a two-course series exploring microbiology, pathogenesis, and clinical issues associated with infectious diseases. Patient cases springboard discussion on viral, bacterial, fungal, protozoal and helminthic pathogens. Online videos and self-assessments followed by interactive sessions and problem sets.

INDE 265. Microbiology and Infectious Diseases III. 2 Units.
Second course in a two-course series exploring microbiology, pathogenesis, and clinical issues associated with infectious diseases. Patient cases springboard discussion on microbiomes, diarrhea, hepatitis, STIs, helminths, zoonoses. and systemic diseases. Online videos and self-assessments followed by interactive sessions and problem sets.

INDE 267. Planning and Writing a Research Proposal. 1 Unit.
Students will gain fundamental skills in developing research questions and writing research proposals through a series of engaging workshops. Topics include developing a research idea; writing an executive summary, i.e. NIH-style 1-page specific aims; outlining the research plan to include rigor; and designing career development training plans. Students will develop early drafts of key proposal documents, such as the 1-page Specific Aims, and receive feedback from an instructor or Grant Coach. Students in the Medical Scholars Research Program or Biosciences Program may enroll in the course.

INDE 268. Early Clinical Engagement. 1 Unit.
Early Clinical Engagement (ECE) is an innovative course for first year medical students to participate in clinical experiences that inform their vision as future physicians. Course goals include integration into the clinical setting with preceptors, development of concrete skills, and introduction to different career paths. ECE includes three components: (1) clinical experiences, (2) interactive large group seminars, and (3) small group sessions for reflection of clinical sessions.
Same as: ECE

INDE 273. Medical Improvisation. 1 Unit.
Medicine, like theater, is both a skill set and an art form. The practice of medicine demands exceptional communicative, cognitive, and interpersonal skills in order to respond to unpredictable situations while interacting with a wide variety of individuals. Improvisational theater skills have a surprising and substantial overlap with those required of clinicians. Improv is a genre of performance art grounded in principles of spontaneity, adaptability, collaboration, and skilled listening. In this course, the principles and training techniques of improvisational theater are used to highlight and improve awareness, communication, and teamwork in the field of medicine. Limited enrollment. Class meets on five consecutive Mondays 9/30, 10/7, 10/14, 10/21, 10/28 from 5:30-7:30 pm.

INDE 274. Medical Spanish. 2 Units.
Medical Spanish is a new elective course for MD and MSPA students to engage in 40-hours of medical Spanish curriculum through an online platform then solidify their knowledge through workshops for practical dialogue with faculty members at Stanford Medicine in multiple subspecialties who have native Spanish fluency. Students take part in online curriculum that is differentiated into 3 proficiency levels, therefore all levels of learners from beginners to native speakers are encouraged to participate. The online content covers over 36 medical specialties to provide a broad base of clinically relevant knowledge. The platform has validated pedagogy to meet the needs of individual learners with clinical scenarios that are relevant to medical engagements across all disciplines and inclusive of a culturally relevant approach to clinical care. Subspecialty faculty will lead the language workshops: Dr. Reena Thomas, Clinical Associate Professor of Neurology; Dr. Matias Bruzoni, Associate Professor of Surgery; Dr. Katherine Bianco, Clinical Associate Professor of Obstetrics and Gynecology; Dr. Felipe Perez, Clinical Assistant Professor of Anesthesiology; Dr. Moises Gallegos, Clinical Assistant Professor of Emergency Medicine.

INDE 281. Ethics, Science, and Society. 1 Unit.
This discussion focused Ethics, Science, and Society interactive mini-course will engage Immunology graduate students, postdoctoral fellows, and faculty in learning and conversations on topics in responsible research (including animal subjects, authorship, collaboration, conflicts of interest, data management, human subjects, mentor-mentee relationships, peer review, publication, research misconduct, and social responsibility) and diversity in science, informed by readings, case studies, individual reflections, and more. Some of the driving themes in this course include: what it means to do research well and how to and not to achieve this, why doing research well and with integrity is important, and who are researchers currently and who should they be. Prerequisite: MED 255.
Same as: IMMUNOL 258

INDE 290A. Walk With Me: A Patient and Family Centered Exploration of Health & The Health Care System. 1 Unit.
This innovative course for first year students places patients, families, and caregivers front and center in the journey to explore health from a person-centered perspective and better understand the challenges of managing optimal health in a complex health care system. The curriculum is organized around a monthly workshop series, which explores a different health systems science topic each month through lectures from experts from Stanford and the community and from the perspectives of an individual patient or caregiver, or panel, with time to engage in discussion and explore patient-centered solutions to real-world problems. Students are also paired with a patient partner for the year with whom they meet (online) monthly, outside of class, to explore the patient and caregiver journey by developing an individual relationship. Participation in this course can fulfill the ECE requirement. Enrollment by Instructor Approval Only. Please submit an application by September 11 at 11:59PM: https://stanfordmedicine.qualtrics.com/jfe/form/SV_bvzt6ZZqAg5Vvkp. Those selected will be informed by September 14 at 11:59PM so that they may enroll in the course. For questions, please email Marcello Chang (TA): marcelkc@stanford.edu.

INDE 290B. Walk With Me: A Patient & Family Centered Exploration of Health & The Health Care System. 1 Unit.
Continuation of monthly workshop series begun in INDE 290A, with new monthly topics. Students will continue the partnership with their patient and gain further understanding of the challenges of managing optimal health in a complex health care system. Enrollment by Instructor Approval Only.nnThis course can be fulfills the ECE requirement for pre-clinical students.

INDE 290C. Walk With Me: A Patient & Family Centered Exploration of Health & The Health Care System. 1 Unit.
Continuation of monthly workshop series begun in INDE 290A and INDE 290B, with new monthly topics. Students will continue the partnership with their patient and gain further understanding of the challenges of managing optimal health in a complex health care system. Enrollment by Instructor Approval Only.

INDE 292. Exploration of The Health Care System : Clinical Partnership Development. 1-2 Unit.
For second year medical students who wish to continue their existing longitudinal clinical partnerships begun in year 2. 1/2 day clinical immersion, by arrangement woth preceptor. 2-unit option includes clinical quality improvement or other approved project. Director approval required.

INDE 295. Bioethics and Anthropology Interdisciplinary Directed Individual Study. 3-5 Units.
Supervised individualized study in bioethics and anthropology for a qualifying paper, research proposal, or project with an individual faculty member. May be repeated for credit.

INDE 297. Reflection and Contextual Medicine. 4 Units.
Required for all MD students enrolled in clerkships at Stanford affiliated sites. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clinical environment. The goals of this course are: to offer a regular opportunity for students to discuss challenging issues faced in their clinical training; to ground students in strategies for managing challenging situations they are likely to experience in their personal and professional lives while on clerkships; and to provide opportunities for students to develop and expand their reflective and communication skills. Components of this curriculum include the "Doctoring with CARE" small groups, the "MeD-ReST" Medical Student Resiliency Skills Training¿ sessions, and the "Contextual Medicine: Communication, Connection and Creativity in Practice" lunch and lecture series. All students in clinical clerkships must participate in all aspects of RCM Days. Students enrolled in Selective II Clerkships (Sub-internships) may choose to participate in clinical duties but are expected to communicate their absence to course faculty/staff in advance. Prerequisite: Concurrent enrollment in clinical clerkships. Please note, students will enroll in this course their final quarter of enrollment prior to graduation to receive retroactive credit for all session. Only enroll the last quarter of enrollment.

INDE 298. Women's Health Independent Project. 1 Unit.
Women's Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.

Medicine Courses

MED 1A. Leadership in Multicultural Health. 2 Units.
Designed for undergraduates serving as staff for the Stanford Medical Youth Science Summer Residential Program (SRP). Structured opportunitie to learn, observe, participate in, and evaluate leadership development, multicultural health theories and practices, and social advocacy. Utilizes service learning as a pedagogical approach to developing an understanding of the intersections between identity, power and privilege and disparities (health, education, environment), fostering knowledge and skills to become social advocates to address forms of inequities. Students explore approaches for identifying and tackling issues of equity (health and education) as well as learn fundamental skills necessary to implement activities for the Summer Residential Program.

MED 1B. Identity, Power and Privilege in Multicultural Health. 1 Unit.
An independent study service learning course designed to develop students' understanding of the intersection between identity, power, privilege, and disparities (health, education, environment). Students submit a written reflective term paper based on their experience as staff for the Summer Residential Program as well as their understanding of how constructs of identity, power and privilege impact low-income and underrepresented students in their pursuit of higher education. Prerequisite MED 1A.

MED 50N. Translational Research: Turning Science into Medicine. 3 Units.
Investigates how scientific research informs how physicians take care of patients and how clinical research informs how scientific experiments are conducted. Topics include how these two processes have improved health and have resulted in innovation and scientic progress; specific human disease areas in allergy and immunology that affect all ages of patients globally, including food allergy; scientific concepts of research that helped in discovery of novel diagnostics and treatment of disease; ethical roles of physicians and scientists in conducting translational research in human disease.

MED 50Q. Respiration. 3 Units.
Preference to sophomores. Topics include: the biological basis for use of oxygen for aerobic metabolism in animals, human lung physiology and pathophysiology, comparative physiology of respiration in fish, birds and mammals, new insights into mammalian lung development, current challenges in human respiratory health including air pollution and lung cancer. Student presentations on specific topics based on literature research developed in consultation with the instructor. Application required.

MED 51B. Compassionate Presence at the Bedside: The Healer's Art. 3 Units.
Students in this class must have already completed MED51Q. This quarter is a skill-based practicum. The skills component of this course is focused on communication and presence at the patient's bedside. Students will learn the theoretical aspects of respectful communication and cultural competence. They will then participate in a variety of immersive simulation activities including role-play, video enacting, class presentations, reflective exercises to understand the nuances of empathetic communication. The focus of the second quarter is to practice the art of communication honestly and compassionately with patients, learning empathy and cultivating the skill of being present at the bedside of a patient. Students will be assigned a panel of seriously ill patients and they do mentored house calls and provide support to patients and families as a volunteer. The idea here is that the knowledge and skills acquired in the first quarter will be utilized in real-life settings to practice compassionate and respectful communication strategies, learn how to be a cam, compassionate and healing presence at the bedside of seriously ill patients. We believe that medical school curricula do not have a strong focus on essential doctoring skills related to communication and a compassionate presence at the bedside. By offering this course to pre-med students, we believe that the doctors of the future will become skilled and compassionate healers.

MED 51Q. Aging, Dying, and End-of-Life Care. 3 Units.
This is a Community-Engaged Virtual Healthcare Course for undergraduate students. This course is designed to prepare students to critically examine values, attitudes, and contexts that govern perspectives toward and engagement of patients within the context of aging and end of life. The course prepares students to responsibly and reflectively interact with aging and seriously ill patients in a mentored setting as follows: (a) Students will learn about the history, evolution, principles and practice of geriatrics and palliative care in class through didactics and lectures by guest lecturers (b) Through mentored fieldwork, students will learn the basic competencies of communicating with older adults from diverse backgrounds in a respectful and compassionate manner. Students will be exposed to the challenges faced by patients from diverse backgrounds and their caregivers. Each student will be assigned a small panel of patients. Due to COVID, all patient and family interaction will be virtual. Students will work with an inter-disciplinary team, conduct virtual calls on patients in their panel, and write progress notes, which will become a part of the patients' electronic medical records. (c) Weekly assignments will help students reflect on their interactions with the patients and lessons they learned. (d) All students will complete a mentored capstone project (either individually or in small groups as they choose) and present this project at the end of the quarter. Our goal is to train future leaders in healthcare and especially in the space of aging and end-of-life care. PLEASE NOTE: This Introductory Seminar is a Cardinal Course. Students who enroll in MED 51Q will be working virtually with patients. As a prerequisite for patient-care, all students (a) must complete HIPAA training, patient safety training, and a background check. All tests required will be provided free of cost and have to be completed with specific agencies affiliated with Stanford. Failure to complete paperwork will result in student being dropped from the class. Dr. Periyakoil will send more specific directions after students are enrolled in MED 51Q.

MED 52Q. What is a Human? Scientific and Mythological Approaches to Meaning. 3 Units.
Reconciling our mythology and current scientific consensus is a worthwhile pursuit to establish a balanced, congruent personal philosophy toward life. nIn this sophomore seminar, we will first explore scientific perspectives on the origin and evolution of humans utilizing archaeology, genetics, and evolutionary psychology. With this framework secured, we will sample major religious texts such as Genesis, The New Testament, and Eastern texts. Throughout the course, each student will have opportunities to reflect deeply on his or her own personal worldview (past, present, and future) to tailor a personalized philosophy for life. This course will provide you with an overview of a fascinating subject that can impact progress on your life journey and career.

MED 53Q. Storytelling in Medicine. 3 Units.
Stories are at the core of medical practice, but the skills developed are applicable across disciplines, including technology and business. Storytelling in Medicine is a new sophomore seminar designed to teach skills in multiple modalities of storytelling including narrative, oral, social media, academic presentations and visual storytelling for different audiences. This seminar combines small groups, interactive workshops, and guest speakers who are experts in their fields of medicine. This will also include editing and support to complete your own story by the end of the seminar.

MED 54Q. Decolonizing Global Health. 3 Units.
In this seminar, we will look at how global health discourse has changed over the years and discuss possible future directions for global health exchanges. This course will introduce students to the various definitions of global health from colonial times, through international health, tropical medicine, and now global health. We will consider what moral imperative leads to global health work, and how conventional thought about the relationships between providers, patients and systems in the global North and South is shifting. Global health has transitioned through various stages. In the 1800s, missionary doctors provided medical care while also spreading religion and colonial interests. During the twentieth century, great strides were made in sanitation and infectious disease treatment as part of systems and government based ¿international health¿ and ¿tropical medicine.¿ Paradoxically, in the last two decades, as the world becomes more intertwined, ¿global health¿ has generally involved shorter term encounters, usually with specialists at the vanguard. With the epidemiological transition and increasing communicable disease prevalence in developing countries, systems strengthening, and capacity building are the main priorities. It is argued that the current global health infrastructure does not focus on building long term partnerships or assign equitable worth to participants from the global North and South. We will investigate how effective our current efforts are and think critically about the meaning of ¿decolonizing global health¿ as regards population outcomes and the flow of resources. We will review each of these stages in global health development and use examples of long-term partnerships that have yielded considerable success, such as Partners in Health (PIH) and Academic Model Providing Access to Healthcare (AMPATH). We will also briefly discuss overlapping concepts in global health equity and health and social justice in the US. Guest speakers from primary care fields and with global health backgrounds will stimulate further dialogue and speak from their experiences on the front lines.

MED 71N. Hormones in a Performance-Enhanced Society. 3 Units.
(Formerly 117Q) Preference to first-year students. Explores how the availability of hormone therapy has affected various aspects of daily lives. Topics include the controversies concerning menopause and its treatment; use of hormones in athletics; cosmetic use of hormones to enhance growth, strength, and libido; use of hormones as anti-aging drugs; and how the hormone system has influenced our notions of gender. Includes the biochemistry and physiology of the human endocrine system; how hormones influence behavior, and how to read a scientific paper.

MED 73N. Scientific Method and Bias. 3 Units.
Offers an introduction to the scientific method and common biases in science. Examines theoretical considerations and practical examples where biases have led to erroneous conclusions, as well as scientific practices that can help identify, correct or prevent such biases. Additionally focuses on appropriate methods to interweave inductive and deductive approaches. Topics covered include: Popper¿s falsification and Kuhn¿s paradigm shift, revolution vs. evolution; determinism and uncertainty; probability, hypothesis testing, and Bayesian approaches; agnostic testing and big data; team science; peer review; replication; correlation and causation; bias in design, analysis, reporting and sponsorship of research; bias in the public perception of science, mass media and research; and bias in human history and everyday life. Provides students an understanding of how scientific knowledge has been and will be generated; the causes of bias in experimental design and in analytical approaches; and the interactions between deductive and inductive approaches in the generation of knowledge.

MED 110. Patient Health Advocate. 2 Units.
The "Patient Health Advocate" course is designed to introduce students to population health concepts in primary care, providing a clinical experience and an opportunity to contribute towards patient care. With guidance from faculty members, students will learn important preventive health care topics, gain skills in patient health coaching, and design and implement a quality improvement project to address a population health measure of their choice. Students will also be exposed to clinical care through clinic shadowing and pre-visit planning with resident physician mentors.nnPrerequisites: MED 143A/243A or equivalent.

MED 114. Frontier Technology: Understanding and Preparing for Technology in the Next Economy. 2 Units.
The next wave of technological innovation and globalization will affect our countries, our societies, and ourselves. This interdisciplinary course provides an introduction to frontier technology, the intersection where radical forward thinking and real-world implementation meet. Topics covered include artificial intelligence, additive manufacturing and advanced robotics, smart cities and urban mobility, telecommunications with 5G, and other key emerging technologies in society. These technologies have vast potential to address the largest global challenges of the 21st century, ushering in a new era of progress and change. Limited enrollment, contact instructors for application.
Same as: CEE 114, CEE 214, MED 214, PSYC 114

MED 121. Translational Research and Applied Medicine. 2-3 Units.
(Same as MED 121; undergraduate students enroll in MED 121) Open to graduate students and medical students, this course enables students to learn basic principles in the design, performance and analysis of translational medical research studies. The course includes both didactic seminars from experts in translational medicine as well as the opportunity to design and present a translational research project. Students enrolling for 3 units are paired with a TRAM translational research project and work as a team with TRAM trainees and faculty on a weekly basis, as arranged by the instructor, and present a final project update at the end of the quarter.
Same as: MED 221

MED 124. Global Child Health. 3-5 Units.
(HUMBIO students must enroll in HUMBIO 124C. Med/Graduate students must enroll in MED 124 or PEDS 124.) This course introduces students to key challenges to the health and well being of children worldwide. We explicitly focus on child and public health problems in low- and middle-income countries (LMIC) to reflect the global burden of disease among children. We will review the scope and magnitude of the leading causes of morbidity and mortality, as well as examine regional variations. We will then identify both medical and non-medical causes, effects of, as well as interventions to address, some of the biggest child health problems. The course will also prevent an overview of the role of culture, gender, and non-state actors (NGOs, foundations, etc.) on health and health policy. Optional: The course will be taught in conjunction with an optional two-unit community engaged learning component. Please view the course syllabus for more information. Upper division course with preference given to upperclassmen. Prerequisites: Human Biology Core or equivalent or Biology Foundations.
Same as: HUMBIO 124C, PEDS 124

MED 129. Health Care Systems Around the World. 4 Units.
This course will explore the role of health care systems in societies around the world, identifying the common challenges facing health care systems and how different institutional structures in different countries perform in response to these challenges. We will structure the course around general conceptual frameworks related to key health system institutions (including financing, insurance, provider payment, patient cost-sharing, and the regulation of medical technology). From this foundation, we will draw on the experience of individual countries (high and low income, with heavy chronic disease and infectious disease burdens) to illustrate the function of these institutions under real-world circumstances observed around the globe. Prerequisite: Human Biology Core or Biology Foundations or equivalent or consent of instructor.
Same as: HUMBIO 129W

MED 130. Yesplus: Meditation practices for wellbeing. 1 Unit.
Meditation Practices for Wellbeing" is a 1-unit course that provides students with tools and strategies to develop a sustainable approach to their happiness and wellbeing. Students will learn breathwork and meditation based techniques to decrease stress and increase peace and focus in day to day life. Students will also study happiness-based research and participate in community building discussions, yoga, and mindfulness processes to learn how wellness can be sustained as a personal practice. Class meets 5 evenings throughout the quarter, along with a mandatory mini retreat during the third week (Thursday 7 - 10 pm, Friday 7 - 10 pm, Saturday 12 - 3 pm). Open to all students, including freshmen and those new to meditation. Enrollment limited to 25. Admission by application, details at first class. See yesplus.stanford.edu for more information.

MED 131. Exploring Israel's Ecosystem in Human and Planetary Health. 1-2 Unit.
Israel¿s innovation ecosystem is one of the most admired in the world. Israel is a leader in health, environmental, and ecological innovation, and despite its small size, Israel is home to a disproportionate number of successful start-ups. Israel combines history, culture, politics, and religion in unparalleled ways that influence not only the human and planetary health innovation ecosystem, but all aspects of life. Students in this course will (1) develop an understanding of how socio-cultural conditions, including political, regulatory, military, and academic institutions; geographical, historical, environmental, and technological conditions; and human cultures and activities have shaped the innovation ecosystem in human and planetary health in Israel into one of the world¿s most productive centers; (2) gain an appreciation of the advantages and disadvantages faced by entrepreneurs in Israel, how they have evolved, and how they compare to the experience of entrepreneurs in the US and elsewhere; and (3) develop a strategy for delving more deeply into these themes in Israel. Note, this course will meet a total of four times during spring term. ¿ REGISTRATION is limited to undergraduate students participating in the Bing Overseas Study Program in Israel, Summer 2020. Prerequisites: This course is limited in enrollment to undergraduate students who will be participating in the Summer 2020 Bing Overseas Study Program (BOSP) Seminar in Israel ¿ Exploring Israel¿s Innovation Ecosystem in Human and Planetary Health: Can A startup Culture and Technology Change the World?.

MED 142. Modem Ethical Challenges in Neuroscience and Organ Transplantation. 3 Units.
Today we face unprecedented innovations in neuroscience and medicine. While these advances offer new hope, they also challenge medical, legal, and ethical paradigms. We will explore the ethical constructs surrounding topics including brain death, brain-computer interfaces and other adaptive technologies, and organ transplantation. The course material will include clinical and legal cases, scientific literature, film and popular culture, and experiential learning at Stanford Hospital. We will also focus on cultural comparisons between the US and Japan, where brain death is not widely accepted and deceased donor organ donation is rare. Course evaluation will be based on participation, written work, and team projects.

MED 145. Alternative Spring Break: Confronting HIV/AIDS in San Francisco. 1 Unit.
Preparation for the Alternative Spring Break trip. Current issues regarding HIV/AIDS worldwide and in the United States, with a specific focus on San Francisco. Topics include biology, transmission, prevention, pharmaceutical development, discrimination, stigma, access to health care, and perspectives of affected communities. Students enrolling for 3 units attend both Monday and Wednesday sections; medical students who can only attend Wednesday session have option to enroll for 2 units. See asb.stanford.edu for more information.

MED 147. Methods in Community Assessment, Evaluation, and Research. 3 Units.
Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.
Same as: CHPR 247, MED 247

MED 157. Foundations for Community Health Engagement. 3 Units.
Open to undergraduate, graduate, and MD students. Examination and exploration of community health principles and their application at the local level. Designed to prepare students to make substantive contributions in a variety of community health settings (e.g. clinics, government agencies, non-profit organization, advocacy groups). Topics include community health assessment; health disparities; health promotion and disease prevention; strategies for working with diverse, low-income, and underserved populations; and principles of ethical and effective community engagement.

MED 159. Oaxacan Health on Both Sides of the Border. 2 Units.
Required for students participating in the Community Health in Oaxaca summer program. Introduction to the health literacy and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (http://och.stanford.edu/oaxaca.html).

MED 160. Physician Shadowing: Stanford Immersion in Medicine Series. 1 Unit.
Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program.
Same as: SIMS

MED 164. Covid-19 Case Investigation and Contact Tracing. 3-6 Units.
In this service-learning course students will be learn how to identify people who have COVID-19 and those who have been exposed to people with COVID-19. Students will learn basics about the biology and health effects of SARS-CoV-2 and the epidemiology of COVID-19. Students will be taught important skills in healthcare communication including motivational interviewing, health education, and health coaching. Students will work as volunteers together with Santa Clara County staff to interrupt the chains of transmission of COVID-19 as they apply skills they have learned to help people with the illness and those who have been exposed understand the importance of isolation, quarantine, and other critical aspects of public health needed to control and manage this disease. Students will need to be willing to commit 20 hours per week to this course for 10 weeks over 2 quarters. Requires application and instructor approval. Please contact Course Director, Lars Osterberg MD, MPH for an application form and approval for enrollment.
Same as: CHPR 235, MED 264

MED 181. Preparation for Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.
Training course for new undergraduate volunteers at the Cardinal Free Clinics (CFCs). Topics include introduction to methods for providing culturally appropriate, high quality transitional medical care for underserved patient populations, clinic structure and roles, free clinics in the larger context of American healthcare, foundations in community health, cultural humility and implicit bias in healthcare, motivational interviewing and patient advocacy skills, and role-specific preparation. Application only; must be an accepted CFC volunteer. Visit https://cfc.stanford.edu for more information. 1-2 units.

MED 182. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.
The Cardinal Free Clinics, consisting of Arbor and Pacific Free Clinic, provide culturally appropriate, high quality transitional medical care for undeserved patient populations in the Bay Area. Students volunteer in various clinic roles to offer services including health education, interpretation, referrals, and labs. In clinic students are guided in the practice of medical interviews, history-taking and physical examinations as appropriate, and work with attending physicians to arrive at a diagnosis and management plan. Visit http://cfc.stanford.edu for more information. For questions related to the course or volunteering, please email arborclinic@stanford.edu and/or pacific@med.stanford.edu.
Same as: MED 282

MED 184. Team Leadership in the Cardinal Free Clinics I. 1 Unit.
Introduction to skills for effective leadership, including topics such as conflict resolution, team dynamic. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers.
Same as: MED 284

MED 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MED 200. Primary Care Presentations. 1 Unit.
This course is a lecture series offered during the winter quarter. The aim of this seminar is to allow medical students to experience the mindset of primary care physicians in real time. Classes feature presentations of patient cases submitted by Stanford faculty. Faculty presenters are provided with the diagnostic information for the cases in a sequential manner during and not in advance of each class, allowing students to learn from the thought process of physicians in real time as they put together the differential diagnosis, interpret diagnostic information, deliberate treatment and management options, and discuss other thoughts about the cases.

MED 201. Internal Medicine: Body as Text. 1 Unit.
Body as Text refers to the idea that every patient's body tells a story. The narrative includes the past and present of a person's social and medical condition; it is a demonstration of the phenotype. The art of reading the body as text was at its peak in the first half of the 20th century, but as technology has become ascendant, bedside skills and the ability to read the text have faded. Beyond scientific knowledge and medical facts, it is this often forgotten craft which is at the heart of the excitement of being an internist. This course introduces students to the art of the clinical exam, to developing a clinical eye, and learning to see the body in a completely different way. Enrollment will be based on a lottery system, for which details will be sent to first year students at the end of mini quarter.

MED 202. Alternative Spring Break: Rosebud Resilience: Community, Health and Learning in Lakota Nation. 1 Unit.
Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research.

MED 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.
Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
Same as: CHPR 206, EPI 206, STATS 211

MED 207. History of Medicine. 1 Unit.
Begins with studying Shamanistic medicine, practiced by humans throughout the globe, for millennia. Covers magico-religious medicine developed in ancient Egypt, Mesopotamia and Greece; the 4th Century BC with Hippocrates beginning to separate medicine from religion and magic; the slow progress in ancient Rome, the medieval period, and during the Renaissance; and the acceleration in the pace of discoveries In the last few centuries, as medicine became more scientific, complex, and specialized as Pasteur developed the germ theory of disease, Darwin and Mendel publications begin the development of Evolution and of Genetics, Watson and Crick solved the mystery of DNA structure, organ transplants began, and imaging procedures such as CT and MRI came into being. Lectures are profusely illustrated, and, for the sake of comparison, two equally ancient systems of medicine, the traditional Chinese and the Vedic, are briefly reviewed.

MED 210. Principles and Practice of Healthcare Quality Improvement. 1 Unit.
This course will introduce students to foundational concepts in healthcare quality improvement, and provide tools for translating these principles into practice. Topics include: current state, A3, SMART goals, root-cause analysis, metrics and measures, PDCA cycles, process controls, systems, and sustainability. Students have the option of completing the course curriculum in conjunction with a quality improvement/patient safety project offered by the SMS Quality Improvement Interest Group. This course will meet for four in-class sessions throughout the quarter, with students reviewing the online materials before each session. May be repeated for credit up to three quarters with continued work on a quality improvement project, and all units count towards the Quality Improvement Scholarly Concentration. Open to all.

MED 212. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.
Preference given to postgraduate fellows and graduate students.Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students.
Same as: CHPR 212, HRP 218

MED 214. Frontier Technology: Understanding and Preparing for Technology in the Next Economy. 2 Units.
The next wave of technological innovation and globalization will affect our countries, our societies, and ourselves. This interdisciplinary course provides an introduction to frontier technology, the intersection where radical forward thinking and real-world implementation meet. Topics covered include artificial intelligence, additive manufacturing and advanced robotics, smart cities and urban mobility, telecommunications with 5G, and other key emerging technologies in society. These technologies have vast potential to address the largest global challenges of the 21st century, ushering in a new era of progress and change. Limited enrollment, contact instructors for application.
Same as: CEE 114, CEE 214, MED 114, PSYC 114

MED 215A. Health Policy Graduate Student Tutorial I. 1-2 Unit.
Seminar series is the core tutorial for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study. 2 unit registration requires written responses to assigned reading questions.
Same as: HRP 201A

MED 215B. Health Policy Graduate Student Tutorial II. 1-2 Unit.
Second in a three-quarter seminar series, the core tutorial is for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.
Same as: HRP 201B

MED 215C. Health Policy Graduate Student Tutorial III. 1-2 Unit.
Third in a three-quarter seminar series, the core tutorial is for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.
Same as: HRP 201C

MED 216. Clinical Integration. 1 Unit.
The practice of clinical medicine requires the integration of several fields of knowledge including Embryology, Anatomy, Physiology, Pathology, Pharmacology, and Microbiology. In this exciting course, we will systematically review subjects such as Cardiology, Gastroenterology, Nephrology, Pulmonology, Endocrinology, Neurology, and Hematology/Oncology. I will provide power points and an outline as a reference point for the content. The majority of the classroom time will be spend with guided review of an excellent question bank. This will serve as an excellent review of the subjects after they have been formally taught during the M2 year. I have almost a decade of experience guiding students through the USMLE Step 1 exam with significant success. Utilizing my experience, I hope to help ¿connect the dots¿ in the above fields and prepare the student to think about ¿pathophysiology¿ as a guide to clinical reasoning.

MED 217. Inpatient Medicine Shadowing Rotation. 1 Unit.
The objective of this rotation is to provide second year medical students the opportunity to experience the application of their medical education to clinical scenarios in the hospital. Students will have a one-day weekend shadowing opportunity (either on Saturday or Sunday morning) with a dedicated internal medicine team and witness the evaluation and management of patients to better understand the roles of the different team members, the flow of rounds, and the functions of history taking and physical examinations to perform a patient assessment. Following the experience, the students will debrief with the course directions. Students will also attend virtual weekly lectures/discussions on Friday afternoon from 1:30-2:20pm to learn about the ins and outs of inpatient rotation logistics.

MED 219. What Keeps Us Up at Night. 1 Unit.
This lunchtime seminar series will bring Patients and Families, Clinicians and Hospital Administrative Leadership together in the classroom to discuss real world healthcare issues that directly affect all of us. In-class discussion will focus around current events and the impact on patient care and the learning health system. Participants will engage in conversation and gain insight into where innovation and is occurring within Stanford Health Care, and what opportunities exist to get involved and effect change.

MED 221. Translational Research and Applied Medicine. 2-3 Units.
(Same as MED 121; undergraduate students enroll in MED 121) Open to graduate students and medical students, this course enables students to learn basic principles in the design, performance and analysis of translational medical research studies. The course includes both didactic seminars from experts in translational medicine as well as the opportunity to design and present a translational research project. Students enrolling for 3 units are paired with a TRAM translational research project and work as a team with TRAM trainees and faculty on a weekly basis, as arranged by the instructor, and present a final project update at the end of the quarter.
Same as: MED 121

MED 223. Cardiovascular and Pulmonary Sciences Seminar. 2 Units.
Weekly seminar series featuring cardiovascular research by faculty. This course is intended for medical students, graduate students, and advanced undergraduate students. On Tuesdays, students attend Frontiers in Cardiovascualr Science. On Thursdays, a faculty member will present to students their research, followed by Q&A session with the students.

MED 224. Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health. 3-4 Units.
Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health is a Collaboratory workshop for students/fellows to design and develop innovative social ventures addressing key challenges in health and the environment, especially in support of the UN Sustainable Development Goals (SDGs 2030). Your mandate in identifying problems and designing solutions is broad and flexible! SE Lab is open to students and fellows across Stanford and combines design thinking exercises, short lectures & case studies, workshops, small group teamwork, presentations, guest speakers, and faculty, practitioner and peer feedback to support you and your team in generating and developing ideas and projects that will change the world! Join SE Lab with an idea or simply the desire to join a team. Enrollment limited to 30.
Same as: HRP 224, PUBLPOL 224

MED 225. Drug Development: From a Concept to the Clinic. 1 Unit.
This course is designed for medical students, trainees, basic scientists, clinicians and clinician-scientists at Stanford to provide an educational and practical perspective on the essential issues in drug development. Using a blend of seminars and dynamic workshops, the curriculum is focused on educating the audience on all stages of drug development and related research and business processes ¿ from discovery and translational science and how to launch new projects to analyzing data, communication and interpretation of results of clinical trials, regulatory issues and commercial considerations in product development. The emphasis will be on cardiovascular applications. Proposed seminar topics are attached and include How Drugs Are Discovered and Developed, Case Studies of the various challenges in Drug Development, Cardiac Safety, Moving a Compound through the Drug Development Process, and the FDA Advisory Committee Process.

MED 226. Practical Approaches to Global Health Research. 1-3 Unit.
(Formerly IPS 290 and HRP 237) How do you come up with an idea for a useful research project in a low resource setting? How do you develop a research question, prepare a concept note, and get your project funded? How do you manage personnel in the field, complex cultural situations, and unexpected problems? How do you create a sampling strategy, select a study design, and ensure ethical conduct with human subjects? This course takes students through the process of health research in under-resourced countries from the development of the initial research question and literature review to securing support and detailed planning for field work. Students progressively develop and receive weekly feedback on a concept note to support a funding proposal addressing a research question of their choosing. Aimed at graduate students interested in global health research, though students of all disciplines interested in practical methods for research are welcome. Undergraduates who have completed 85 units or more may enroll with instructor consent. Sign up for 1 unit credit to participate in class sessions or 3 units to both participate in classes and develop a concept note.
Same as: EPI 237, INTLPOL 290

MED 228. Physicians and Social Responsibility. 1 Unit.
Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the effects of poverty on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

MED 232. Global Health: Scaling Health Technology Innovations in Low Resource Settings. 2-3 Units.
Recent advances in health technologies - incorporating innovations like robotics, cloud computing, artificial intelligence, and smart sensors - have raised expectations of a dramatic impact on health outcomes across the world. However, bringing innovative technologies to low resource settings has proven challenging, limiting their impact. Ironically, the current COVID-19 pandemic has become Exhibit 1 in the challenges the global health community faces in scaling innovative interventions. This course explores critical questions regarding the implementation and impact of technological innovations in low-resource settings. The course will feature thought leaders from the health technology community, who will explore examples of technologies that have been successful in low resource communities, as well as those that have failed. A subset of these examples will be drawn from the current pandemic. Students will think critically to consider conditions under which technologies reach scale and have positive impact in the global health field. Students will also have an opportunity to work on real-world projects, each of which will focus on the potential opportunity for a health technology in a low-resource setting and consider approaches to ensure its impact at scale. This course will be taught by Dr. Anurag Mairal, Adjunct Professor of Medicine and the Director, Global Outreach Programs at Stanford Byers Center for Biodesign, and Dr. Michele Barry, Senior Associate Dean for Global Health. This course is open to undergraduate students, graduate students, and medical students. Undergraduates can take this course for a letter grade and 3 units. Graduate students and MD students can enroll for 2 units. Students enrolling in the course for a third unit will also work on group projects described above. Students enrolled in the class for three units will also have additional assignments, including weekly discussion posts. Students must submit an application and be selected to receive an enrollment code. The application form can be found at the following link: : https://tinyurl.com/ghmed232. Contact Olivia Paige with any questions: olivia.paige@stanford.edu.

MED 233. Global Health: Beyond Diseases and International Organizations. 4 Units.
Provides multidisciplinary trainees insight into over-arching themes of global health. Topics include systemic issues affecting healthcare progress globally, ethical and thoughtful approaches to solving these issues, as well as economics, water sanitation, public health, organizations in global health, human rights, involvement in NGOs, ethics of overseas work, and other non-medical aspects of this subject. This course will cover some of the essentials of patient care while working in the field as well including child health care, malaria, TB, and HIV. Course only open to graduate and MD/MSPA students. Undergraduates are not eligible to enroll.

MED 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.
The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAids (an award-winning nonprofit educational technology social venture used in 82 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.
Same as: AFRICAST 135, AFRICAST 235, EDUC 135, EDUC 335, EPI 235, HUMBIO 26

MED 237. Health Law: Improving Public Health. 3 Units.
(Same as Law 3009) Examines how the law can be used to improve the public's health. Major themes explored include: what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? Investigates these issues in several contexts, including the control and prevention of infectious disease, laws aimed at preventing obesity and associated noncommunicable diseases, tobacco regulation, ensuring access to medical care, reproductive health, lawsuits against tobacco, food and gun companies, and public health emergencies.

MED 238. Leading and Managing Health Care Organizations: Innovation and Collaboration in High Stakes Settings. 3 Units.
Same as OB 348. Leading and managing in complex, high stakes settings, like health care, where lives and livelihoods are on the line, presents distinctive challenges and constraints. This course challenges you to apply seminal and contemporary theories in organizational behavior to evaluate managerial decisions and develop evidence-based strategies for leading and managing health care teams and organizations. Topics include leading systems that promote learning; implementing change; and interdisciplinary problem-solving, decision-making, and collaboration. Group work and exercises will simulate high pressure and risk-taking under uncertainty. While the focus of this course will be on health care situations, lessons are relevant to other settings including consulting, banking, and high tech, and prior experience in the health sector is not required.

MED 239. Workshop For Ending Diagnostic Odysseys. 1-3 Unit.
Have you ever wondered how Dr. House solves difficult cases? Intrigued by Sherlock Holmes? Want to be a disease detective? In this project-based course, teams of students will work together to study cases of un-diagnosed rare and novel diseases. Like Dr. House, students will attempt to solve these medical mysteries. Course directors and team facilitators from Stanford's Center for Undiagnosed Diseases will introduce methods and approaches successful in solving past cases. Teams are expected to report on their findings at the completion of the quarter. Interested medical students may pursue follow-up research in subsequent quarters through Med Scholars. Co-Enrollment in the lecture-based course MED 244 is encouraged but not required.

MED 240. Sex and Gender in Human Physiology and Disease. 2-3 Units. (HUMBIO students must enroll in HUMBIO 140. PhD minor in FGSS must enroll in FEMGEN 241. Med students must enroll in MED 240.) Chromosomal, hormonal and environmental influences that lead to male and female and intersex reproductive anatomy and physiology and neuroendocrine regulation. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and sociocultural factors, in particular gender identity, (social) gender norms and relationships, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle and pregnancy up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Enrollment limited to students with sophomore academic standing or above. Prerequisites: Human Biology Core or Biology Foundations or equivalent, or consent of instructor.
Same as: FEMGEN 241, HUMBIO 140

MED 241. Clinical Skills for Patient Care in Free Clinics. 1 Unit.
Enrollment in this course is by application only for advanced volunteers at the Cardinal Free Clinics. Focus is on preparing students to gain early clinical experience by teaching basic skills such as taking patient histories, working with interpreters, providing motivational interviewing, and presenting cases to medical students or physicians. Students learn through classroom lectures and practice sessions. Upon successful completion of a competency assessment, students are able to serve in a clinic role in the Cardinal Free Clinics. Prerequisite: Advanced standing as a volunteer at the Cardinal Free Clinics.

MED 242. Physicians and Human Rights. 1 Unit.
Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

MED 243. Citizen Science Theory to Practice: Advancing Community-Driven Solutions for Health. 2-3 Units.
Harnessing and activating the insights of community members and patients is essential to achieving health equity ¿from the bottom up. ¿ Students will 1) learn and apply a novel datadriven, technology-enabled approach to improving community health through systematic documentation of lived experience and application of collective data to inform local change; 2) examine global project case studies targeting physical activity, food access, transportation, affordable housing, gender-based violence, and age-friendly environments; and 3) complete assessments of their local built environments using a Stanford-developed app and web platform, then use their data to develop and explore feasible strategies to improve community health.n(Cardinal Course certified by the Haas Center).
Same as: CHPR 236

MED 244. Diagnostic Odysseys In Medicine. 1 Unit.
Medicine is rapidly evolving, with increasing emphasis on genetic testing, immunophenotyping and integration of technology to guide diagnosis. In this course, experts from Stanford and Silicon Valley will highlight exciting developments. Topics include the latest developments in genetics and genomics (including genome testing in clinical practice, direct to consumer testing, and frontiers in neurogenetics), immunophenotyping, utilization of databases to research diseases and the emerging field of machine learning and clinical decision support in optimizing diagnostic strategies. Students who wish to engage in a mentored multi-disciplinary team-based research project related to advanced diagnostic techniques can additionally enroll in MED 239.
Same as: HUMBIO 44

MED 245. Leadership in Medicine: Developing your Moral Identity. 1-2 Unit.
Students will view videos of well-known leaders being interviewed or watch a live interview of the chief communications officer of Stanford School of Medicine each week. All this will be conducted through zoom conferencing for students to connect from home. With these interviews we will be highlighting the ethical challenges that these leaders faced and how they rose to these challenges, or fell short. These famous leaders will come from a variety of fields including academia, government, law, public service, public health, the military or journalism. We will then hold small group discussions after the interviews to debate the decisions made by these leaders. Through discourse and deep reflection we aim to prepare students for their own leadership challenges of the future. Students can apply for an additional unit with self-directed reading and a written paper describing important principles of leadership (1-2 units).

MED 246. The Medical Interview for Spanish Speakers. 1 Unit.
Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

MED 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.
Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.
Same as: CHPR 247, MED 147

MED 248. Student Rounds. 1 Unit.
Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

MED 249. Topics in Health Economics I. 3-5 Units.
Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include public financing and public policy in health care and health insurance; demand and supply of health insurance and healthcare; physicians' incentives; patient decision-making; competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs and medical technology; other aspects of interaction between public and private sectors in healthcare and health insurance markets. Key emphasis on recent work and empirical methods and modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent). Curricular prerequisites (if applicable): First year graduate Microeconomics and Econometrics sequences (or equivalent).
Same as: ECON 249, HRP 249

MED 250. Understanding Evidence-Based Medicine: Hands-on experience. 3-4 Units.
How can one practice evidence-based medicine and make evidence-based decisions for clinical practice and policy making? Using pivotal papers published in the recent scientific literature addressing important clinical questions on diverse medical topics, we will probe a wide range of types of studies, types of targeted therapeutic or preventive interventions, and types of studied outcomes (effectiveness and/or safety), including RCTs, observational studies, epidemiologic surveillance studies, systematic reviews-umbrella reviews-meta-analyses-meta-analyses of individual patient data, studies on the evaluation of diagnostic tests and prognostic models, economic analyses studies, and guidelines. Students enrolled for 4 units will complete an additional project or other engagement approved by the instructor. MD studies enroll for +/-. GR students enroll for Letter grade.
Same as: CHPR 205, EPI 250

MED 251. Measurement for Health Policy. 3 Units.
Conceptual, technical and empirical basis for measurement essential to health policy. Principles and good practice for designing measures fit for purpose. Practical application of measurement concepts and methods. Main emphasis on measuring levels of health in individuals and populations, combining mortality/longevity and quality of life/functioning. Additional topics include measurement of inequalities and health care quality. Examples and applications include high income and low/middle-income settings.
Same as: HRP 232

MED 252. Outcomes Analysis. 4 Units.
Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.
Same as: BIOMEDIN 251, HRP 252

MED 253. Building for Digital Health. 3 Units.
This project-based course will provide a comprehensive overview of key requirements in the design and full-stack implementation of a digital health research application. Several pre-vetted and approved projects from the Stanford School of Medicine will be available for students to select from and build. Student teams learn about all necessary approval processes to deploy a digital health solution (data privacy clearance/I RB approval, etc.) and be guided in the development of front-end and back-end infrastructure using best practices. The final project will be the presentation and deployment of a fully approved digital health research application. CS106A, CS106B, Recommended: CS193P/A, CS142, CS47, CS110. Limited enrollment for this course.
Same as: CS 342

MED 255. The Responsible Conduct of Research. 1 Unit.
Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended. Intensive format, 1-day course, register for only one section. One pre-class assignment required.

MED 255C. The Responsible Conduct of Research for Clinical and Community Researchers. 1 Unit.
Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prequisite: research experience recommended.

MED 256. Gene Expression Profiling in Cancer. 2-3 Units.
This course will cover techniques used to query the expression of genes in tissue and how the information derived from those techniques can be used to answer questions in cancer biology. The focus will be on the transcriptome analysis (e.g. RT-qPCR, microarrays, RNA-seq, etc.) in the context of cancer biology experiments. Throughout the quarter, we will develop a pipeline to analyze high-throughput RNA-seq data. Finally we will go over differential gene expression analysis techniques and tools used to interpret lists of genes derived from such analysis.

MED 258. Stanford Technology Access Resource Team: A Primary Care Effort to Bridge the Telehealth Divide. 1 Unit.
Video visits have been invaluable during the COVID pandemic for patients and providers and will continue to serve as a vital connection between patients and their care team beyond COVID-19. However, many patients cannot access this resource due to challenges with technology. This course will give students an opportunity to explore concepts in design thinking, communication, community-building, and team-based patient care while providing a service that will connect vulnerable patients and their caregivers to health care providers through video visits. The course consists of didactic sessions and opportunities for undergraduates and graduate students to interact with patients and health care teams by phone and video. Please note that regular use of the phone and internet are required and may not be the best option for those who are residing out of the country. MD Students should enroll in FAMMED 280.

MED 261. Leadership in Health Equity and Community Engagement: Creating New Educational Opportunities. 1 Unit.
Creating Capacity in Community Engagement Medical Education is a new course for first/second-year medical students with an interest in both community health and medical education. In a small group, faculty-facilitated setting, students will design and develop the foundational structure for a new scholarly application in the area of health equity and community engagement leadership. Additionally, students will work collaboratively with community engagement, public health, and diversity, equity, inclusion faculty members to create a new health equity and community engagement leadership course to be launched in Spring 2021. Activities will include reviewing other similar courses at peer medical schools, assessing medical education needs around these topic areas from peers, creating a syllabus and identifying key content areas, designing interactive small-group activities, and inviting health equity and community engagement practitioner guest speakers. Instructor/s permission is required. Prerequisite: INDE 201: Practice of Medicine I.

MED 262. Economics of Health Improvement in Developing Countries. 5 Units.
Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B.
Same as: ECON 127

MED 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.
Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.
Same as: HRP 263

MED 264. Covid-19 Case Investigation and Contact Tracing. 3-6 Units.
In this service-learning course students will be learn how to identify people who have COVID-19 and those who have been exposed to people with COVID-19. Students will learn basics about the biology and health effects of SARS-CoV-2 and the epidemiology of COVID-19. Students will be taught important skills in healthcare communication including motivational interviewing, health education, and health coaching. Students will work as volunteers together with Santa Clara County staff to interrupt the chains of transmission of COVID-19 as they apply skills they have learned to help people with the illness and those who have been exposed understand the importance of isolation, quarantine, and other critical aspects of public health needed to control and manage this disease. Students will need to be willing to commit 20 hours per week to this course for 10 weeks over 2 quarters. Requires application and instructor approval. Please contact Course Director, Lars Osterberg MD, MPH for an application form and approval for enrollment.
Same as: CHPR 235, MED 164

MED 265. Advanced Topics in the Economics of Health and Medical Care. 2 Units.
Emphasis is on research studies in health economics. Seminar style course focuses on health economics. Complimentary with HRP 256. Students will be expected to read and present papers to the group and discuss concepts with faculty. Restricted to second year or beyond PhD students in economics & economics-related disciplines.
Same as: HRP 257

MED 266. Literacy: A Fundamental Human Right Toward Health and Advocacy. 1-3 Unit.
This is a Community Engaged learning seminar style course that meets once a week for an hour and a half. We will have seminar discussions and readings related to local health literacy issues, and the systemic factors affecting health literacy through collaborative problem-solving processes through course readings and community engagement experiences. Emphasis will be on active learning, with assignments calling for data gathering through interaction with community members to explore and address these issues for more positive health outcomes. The course is open to pre-clinical medical, undergraduate and graduate students. No prerequisites.

MED 267. Ideo, Presence & The Human Experience in Medicine. 3 Units.
Presence. The Art and Science of Human Connection in Medicine is a new center, founded and lead by Dr. Abraham Verghese (http://med.stanford.edu/presence.html). This course partners with IDEO (https://www.ideo.com/) to bring design thinking to address the challenges of diagnostic error in medicine. Dr. Verghese and colleagues will outline the consequences of the lack of presence in the clinical encounter. IDEO's design thinking will be taught by Dr. Jayant Menon, Dr. Farzad Azimpour and Grace Hwang. Class participants will be divided into small groups and designated coaches. Each group will work with the course leadership to define a specific challenge and utilize the design thinking process to create deployable solutions. In class lectures and workshops will be held on campus on Tuesdays from 3.30-5 p.m., and IDEO (Forest Av, Palo Alto) based small group meetings will be held on Thursdays from 5.30-6.20pm. Admission is selective and requires all applicants submit an application before March 1, 2017. Applications can be found at https://goo.gl/forms/7mCI7vf8PbcdVG0m1 nQuestions should emailed to sonoot@stanford.edu.

MED 268. Tackling Cross-Cultural Health Challenges: Emphasis on the Asian/Pacific Islander Community. 1 Unit.
Why do certain diseases like hepatitis B affect Asian/Pacific Islanders (APIs) disproportionately? How can public policy advance health equity among ethnic groups? Weekly lectures examine health challenges endemic to the API community, recognizing underreported health issues in a prevalent ethnic demographic. Students will emerge with an understanding of topics including stigmas attached to traditional medicine, prevalent diseases in APIs, API health politics, and cultural/linguistic barriers that health professionals encounter. Guest speakers include professionals from the Ravenswood Family Health Center, the Santa Clara County Public Health Department, Hep B Free, the Stanford School of Medicine, etc. (Light supper served).

MED 270. Learning & Teaching of Science. 3 Units.
This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.
Same as: EDUC 280, ENGR 295, PHYSICS 295, VPTL 280

MED 271. Global Biodesign: Medical Technology in an International Context. 1 Unit.
This course (BIOE371, MED271) exposes students to the challenges and opportunities of developing and implementing innovative health technologies to help patients around the world. Non-communicable diseases, such as metabolic and chronic respiratory disease, now account for 7 in 10 deaths worldwide, creating the need for innovative health technologies that work across diverse global markets. At the beginning of the quarter, the course will provide an overview of the dynamic global health technology industry. Next, faculty members, guest experts, and students will discuss key differences and similarities when commercializing new products in the for-profit health technology sector across six important regions: the US and Europe, China and Japan, and India and Brazil. Finally, the course will explore critical ¿global health¿ issues that transcend international borders and how technology can be leveraged to address them. This section will culminate with an interactive debate focused on whether for-profit, nonprofit, or hybrid models are best for implementing sustainable global health solutions. The last class will be devoted to synthesis, reflection, and a discussion of career opportunities in the global health technology field.
Same as: BIOE 371

MED 272A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.
In this two-quarter course series (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new health technologies to address them, and plan for their implementation into patient care. During the first quarter (winter), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent health technology experts and/or investors. Class sessions include faculty-led instruction and case studies, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are required to participate in both quarters of the course. Visit http://biodesign.stanford.edu/programs/stanford-courses/biodesign-innovation.html to access the application, examples of past projects, and student testimonials. More information about Stanford Biodesign, which has led to the creation of 50 venture-backed healthcare companies and has helped hundreds of student launch health technology careers, can be found at http://biodesign.stanford.edu/.

MED 273. Biodesign for Digital Health. 3 Units.
Health care is facing significant cross-industry challenges and opportunities created by a number of factors including: the increasing need for improved access to affordable, high-quality care; growing demand from consumers for greater control of their health and health data; the shift in focus from sick care to prevention and health optimization; aging demographics and the increased burden of chronic conditions; and new emphasis on real-world, measurable health outcomes for individuals and populations. Moreover, the delivery of health information and services is no longer tied to traditional brick and mortar hospitals and clinics: it has increasingly become "mobile," enabled by apps, sensors, wearables; simultaneously, it has been augmented and often revolutionized by emerging digital and information technologies, as well as by the data that these technologies generate. This multifactorial transformation presents opportunities for innovation across the entire cycle of care, from wellness, to acute and chronic diseases, to care at the end of life. But how does one approach innovation in digital health to address these health care challenges while ensuring the greatest chance of success? At Stanford Biodesign, we believe that innovation is a process that can be learned, practiced, and perfected; and, it starts with a need. In Biodesign for Digital Health, students will learn about digital health and the Biodesign needs-driven innovation process from over 50 industry experts. Over the course of ten weeks, these speakers join the teaching team in a dynamic classroom environment that includes lectures, panel discussions, and breakout sessions. These experts represent startups, corporations, venture capital firms, accelerators, research labs, health organizations, and more. Student teams will take actual digital and mobile health challenges and learn how to apply Biodesign innovation principles to research and evaluate needs, ideate solutions, and objectively assess them against key criteria for satisfying the needs. Teams take a hands-on approach with the support of need coaches and mentors. On the final day of class, teams present to a panel of digital health experts and compete for project extension funding. Friday section will be used for team projects and for scheduled workshops. Limited enrollment for this course. Students need to submit their application online via: https://stanforduniversity.qualtrics.com/jfe/form/SV_28ZWIF8RJsyMvCR.
Same as: BIOE 273

MED 275B. Biodesign Fundamentals. 4 Units.
MED 275B is an introduction to the Biodesign process for health technology innovation. This team-based course emphasizes interdisciplinary collaboration and hands-on learning at the intersection of medicine and technology. Students will work on projects in the space of medical devices, digital health, and healthcare technologies with the assistance of clinical and industry mentors. Applicants from all majors and stages in their education welcome. Students will work in teams to develop solutions to current unmet medical needs, starting with a deep dive into understanding and characterizing important unmet medical needs through disease research, competitive analysis, market research, and stakeholder analysis. Other topics that will be discussed include FDA regulation of medical technology, intellectual property, value proposition, and business model development. Consent required for enrollment, to apply visit: http://bit.ly/MED275B2020.

MED 277. AI-Assisted Care. 1 Unit.
AI has been advancing quickly, with its impact everywhere. In healthcare, innovation in AI could help transforming of our healthcare system. This course offers a diverse set of research projects focusing on cutting edge computer vision and machine learning technologies to solve some of healthcare's most important problems. The teaching team and teaching assistants will work closely with students on research projects in this area. Research projects include Care for Senior at Senior Home, Surgical Quality Analysis, AI Assisted Parenting, Burn Analysis & Assessment and more. AI areas include Video Understanding, Image Classification, Object Detection, Segmentation, Action Recognition, Deep Learning, Reinforcement Learning, HCI and more. The course is open to students in both school of medicine and school of engineering.
Same as: CS 337

MED 278. Stanford Health Consulting Group- Leadership. 1-3 Unit.
This course is application-based and will be composed of students who have taken ¿Stanford Health Consulting Group - Core¿ and who wish to take on leadership roles in organizing and managing the high-impact health care projects for the class, which address major strategic and operational challenges in health care delivery and innovation. Participants will select projects, define objectives and deliverables, manage teams of 4-8 students from the core class, and ultimately serve as a bridge between students, faculty sponsors, and other health care stakeholders. Enrollment requires permission from the Instructor.

MED 279. Stanford Heath Consulting Group - Core. 1-3 Unit.
This course provides the opportunity to analyze and solve major strategic and operational challenges in health care delivery and innovation through interdisciplinary team projects. Teams will receive direct mentorship from Stanford Medicine faculty, health care leaders, and experienced student leads, with projects carefully defined to optimize high-impact experiential learning and leadership development. Projects will culminate with student-led presentations to faculty sponsors and other health care stakeholders, as well as opportunities for further dissemination of solutions.

MED 281. How to Change the World. 1 Unit.
This unique course will enable students to learn from invited guests about how to "Change the World". As a group, Humankind has had a lasting impact on this planet but, on an individual basis, our impact can seem limited. Many innovators from the sciences, humanities, engineering and business are making this world a better place on a large scale. How do they do this? Through a series of fireside interviews with "World Changing" guest speakers from non-profits, business and government, we will explore how individuals can have a huge, positive influence on the state of the world. Students will be asked to formulate a short 5 slide presentation about their thoughts on the interviews or their plan to change the world. Previous speakers included: co-founder of Patreon, business editor of the New York Times, executive from Nike, and head of Bangladesh USAID program. Students can take ideas developed in the course to apply for the $40,000 Westly Prize in Social Innovation (under age 28). Dinner will be provided for enrolled students.
Same as: for the Better

MED 282. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.
The Cardinal Free Clinics, consisting of Arbor and Pacific Free Clinic, provide culturally appropriate, high quality transitional medical care for undeserved patient populations in the Bay Area. Students volunteer in various clinic roles to offer services including health education, interpretation, referrals, and labs. In clinic students are guided in the practice of medical interviews, history-taking and physical examinations as appropriate, and work with attending physicians to arrive at a diagnosis and management plan. Visit http://cfc.stanford.edu for more information. For questions related to the course or volunteering, please email arborclinic@stanford.edu and/or pacific@med.stanford.edu.
Same as: MED 182

MED 283. Interpersonal Communication in Health Care. 2-3 Units.
Communication is an unavoidable element of our everyday life that often goes unexamined. In this course, we will first examine the communication experiences in daily life with friends, family, significant others, peers, and coworkers. You will then engage with a variety of materials designed to enhance both your analytic and experiential knowledge about our everyday communication and how this relates to communication in health care. Analytic knowledge stems from your understanding of theoretical and written materials and others¿ experiences. Experiential knowledge will require you to apply what you have learned to your own communication experiences. In addition to mastering course concepts through readings, class discussions, and lectures, time in class will be devoted to applying these concepts through various activities.
Same as: PSYC 283

MED 284. Team Leadership in the Cardinal Free Clinics I. 1 Unit.
Introduction to skills for effective leadership, including topics such as conflict resolution, team dynamic. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers.
Same as: MED 184

MED 285. Global Leaders and Innovators in Human and Planetary Health. 1-2 Unit.
Are you interested in innovative ideas and strategies for addressing urgent challenges in human and planetary health? This 7 session lecture series features a selection of noteworthy leaders, innovators and experts across diverse sectors in health and the environment such as: healthcare/medical innovation, environmental sustainability, foundations/venture capital, biotechnology/pharmaceuticals, social innovation/entrepreneurship, tech/media and artificial intelligence (AI), human rights, global poverty/development, sustainable agriculture/hunger/nutrition, public policy/systems change. Co-convened by faculty, fellows and students collaborating across several Stanford centers/departments/schools, the course invites the discussion of global problems, interdisciplinary perspectives and solutions in the fields of health and the environment. nSpecial themes for AY 2020-2021 include: 1) US and Global Responses in Combatting the Coronavirus Pandemic; 2) Climate Crisis, Wildfires, Extreme Weather and Environmental Sustainability; 3) Systemic Racism, Gender Inequality, Health Inequity and Community Well Being; 4) Democracy Under Siege, Political Landscape of Electoral, Judicial, Legislative Turmoil; 5) Partnership/Collaboration, Models of Leadership, Innovation, Sustainable Social Change; and Other Topics TBD by students/fellows. Students from all backgrounds are encouraged to enroll - registration open to all Stanford students and fellows. May be repeated for credit.
Same as: HRP 285

MED 286. Health Information Technology and Strategy. 3-4 Units.
Health Information technology was intended to help reduce and cost and improve the quality of health care services. TO date, this is little evidence that this goal has been achieved. This course is designed to explore economic frameworks that can help us to understand how health IT can achieve it's intended goals. These frameworks build from general business and economic models used successfully in other industries. The course will be utilize both business cases and lecture to prepare students to propose potential novel applications of health information technology solutions. Each student will have a team-based final project.

MED 287. Survey of Asian Health Issues. 1 Unit.
In this lecture series, students will explore Asian health topics. Specifically, the chronic disease risk and burden of Asians in the U.S. as a group is considered. Additionally, the necessity of the practice of disaggregation in the study and treatment of Asian Americans is emphasized. Topics will include cardiovascular disease, cancer, population health, precision health, pharmacogenomics and longevity in Asian-Americans. Class format is 30 minute lecture followed by 20 minutes for questions. No required readings. Opportunity to connect with guest speakers for research opportunities. Assignments will include short written reflections on lecture topics. This course is relevant for students interested in basic biology research, epidemiology, and public health policy, or clinical careers in medicine, psychology, or social work. Grading is satisfactory/no credit. All students are welcome, limit 25.
Same as: ASNAMST 287

MED 288. Perspectives on Cancer. 1 Unit.
Cancer consumes the lives of those associated with it: patients and their loved ones, their medical staff, and often the larger community. This course will address the broad impact of cancer from multiple fronts (medical, social, mental, etc.) by providing perspectives beyond the cut-and-dry scientific issue that the disease is often made out to be, enabling students to explore the "human-side" to the disease. In alternating weeks, students will participate in a Socratic seminar based on light reading about relevant topics and personally interact with guest speakers, who may include medical professional, cancer survivors and their loved ones, and activists. This course will meet weeks 2-9.

MED 289. Introduction to Bioengineering Research. 1-2 Unit.
Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.
Same as: BIOE 390

MED 290. Independent Study with Presence and the Program in Bedside Medicine. 1-5 Unit.
Students work with their faculty mentor on projects and studies that are broadly centered around the vision and mission of Presence: The Art and Science of Human Connection and the Program in Bedside Medicine. Please see our websites for updated projects and initiatives - Presence + Program in Bedside Medicine. Currently, we focus on: How do we teach and emphasize to students, residents, physicians (and beyond) in the medical field the need to master bedside skills? How does bedside medicine affect patient care? How has patient care changed with the omnipresence of technology in our lives? How is bedside medicine going to change in the next few decades, centuries? In investigating these questions, students utilize scientific articles and data, engage patients, and collaborate with our faculty and staff. Independent study projects culminate in a presentation to our team, with the potential for posters or manuscripts. Students paired with faculty based on their area of interest and faculty/project needs.We emphasize the human connection with patients, and students are encouraged to engage patients within our program for teaching sessions, research studies, among other projects. Enrollment varies with and is limited to faculty need. Repeatable for credit; more than one-quarter of commitment expected.

MED 291. Diagnostic Medicine on Television: Truths vs. Theatrics. 1 Unit.
School of Medicine faculty in charge of Stanford's Consultative Medicine Clinic, a real-life medical mystery clinic, will review cases from the popular TV show House and critique the show's depiction of complex disease diagnosis and treatment. We tread down the road of diagnostic dilemmas and the line between fact vs fiction. Lunch will be provided.

MED 292. Pathways in Global Health. 1 Unit.
The goal of this class is to introduce students to the diverse pathways that contribute to Global Health. From epidemiology, to climate change, everyone is impacted, and the ways we address global health problems is multifaceted. Each week, there will be different speakers from various departments such as in biology, anthropology, medicine who will talk about their careers and perspectives in global health. The class experience with be an interactive speaker series, where students will learn and develop ways they can contribute to global health.

MED 295. Advanced Cardiac Life Support. 2 Units.
(For clinical MD students only) Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically ill patients. Clinical scenarios and small group discussions address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrhythmias and defibrillation, and acute ischemic stroke. Students should get the approval of their Clerkship Coordinator before registering for the course. nRecommended prerequisites: Medicine 300A, Pediatrics 300A, or Surgery 300A. nPrerequisite: EMED 201A.

MED 296. Being Mortal: Medicine, Mortality and Caring for Older Adults. 1 Unit.
Mortality is the inevitable, final outcome of human health. Though medical education focuses on treating illness and prolonging life, healthcare professionals in practice must face the fact that patients¿ lives cannot always be saved. This course will explore the difficult issues such as end-of-life planning, decision-making, and cost of care, that figure in hospitals, hospice, and assisted living centers. Guest speakers will include elderly care workers, medical writers and filmmakers, and physicians in geriatrics, oncology and palliative care, who will lead student discussions following their lectures. Upon finishing the course, students will learn how to better handle aging and death in their medical practice, in order to improve the quality of their patients¿ lives¿and that of their families¿ as well.

MED 297. Diabetes 101 for Healthcare Providers. 1 Unit.
Diabetes is an extremely high-prevalence disease, that you will likely encounter on a consistent basis regardless of your medical specialty, so learning about the practical aspects of treatment is extremely useful. This course is designed to teach these practical skills about diabetes care, treatment and the latest research in the field. Diabetes 101 for healthcare providers is a lunch seminar style course with lectures on subjects like: A meal in the life of a diabetic; Pumps/ CGMs/ Artificial Pancreases; Beyond Types 1 and 2; The Psychology of diabetes and chronic disease; and Rare complications and future treatments.

MED 298. Being Mortal II: Approaching Serious Illness. 1-2 Unit.
This elective offers an opportunity for MD and PA students to improve their ability to engage in effective and compassionate conversations with patients facing serious illnesses. The course will feature palliative care physicians, oncologists, spiritual care providers, and hospice staff, and provide students with early exposure to concepts in palliative medicine, hospice care, and end-of-life care, which are otherwise given little emphasis in the core curriculum. Students will learn practical skills in serious illness conversations with patients, through case-based sessions involving peer-to-peer, peer-to-instructor, and peer-to-patient role play. Relevant topics in leadership, psychology, sociology, and professionalism will also be covered. In addition, students taking the course for 2 credits will have the opportunity to participate in on-site visits to hospices, nursing facilities, assisted-living facilities, and adult day health care facilities. For more information please contact Henry Bair (hbair@stanford.edu) or Paul Horak (pwhorak@stanford.edu).

MED 299. Directed Reading in Medicine. 1-18 Unit.
Prerequisite: consent of instructor.

MED 300A. Internal Medicine Core Clerkship. 10 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Required. DESCRIPTION: Teaches the natural history, pathophysiology, diagnosis, and treatment of medical illness. Emphasis is placed on acquiring the understanding, skills, and attitudes desirable in a scientific and compassionate physician. Students record histories, physical examinations, and laboratory data for patients for whom they are responsible and present their findings, together with their diagnoses and treatment plans, at rounds and conferences. Developing sound clinical reasoning skills is continuously emphasized. An essential aspect of the clerkship is the students¿ gradual assumption of direct responsibility for, and full-time involvement in, patient care with the house staff and faculty team. To take advantage of the differences in patient populations and teaching staffs of the four hospitals, students spend three weeks at either SUMC or PAVAMC, and three weeks at either SCVMC in San Jose or KPMC in Santa Clara. The resulting six week experience is an integrated curriculum designed to cover the essentials of internal medicine. The Department of Medicine supervises a random draw-based assignment to two of the four locations shortly before the beginning of each odd-numbered clerkship period. A passing grade will require both a satisfactory performance at both clinical sites and passing the NBME Subject Exam at the end of 6 weeks. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full time for six weeks, 18 students per period. CLERKSHIP DIRECTOR: John Kugler, M.D. (jkugler@stanford.edu). CLERKSHIP COORDINATOR: Nancy D'Amico (650-721-1640). REPORTING INSTRUCTIONS: Where: Varies, students will be notified prior to the first day; Time: TBA. CALL CODE: 4. OTHER FACULTY: Staff. LOCATION: SUMC, PAVAMC, SCVMC, KPMC.

MED 302A. Infectious Diseases Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The infectious diseases clerkship features an active inpatient service at Stanford Hospital, which averages two to four new consults per day. As a consulting specialty service within the Department of Medicine, participants are able to see a wide variety of community-acquired and nosocomial infections. Particular emphasis is placed on clinical and diagnostic reasoning, as well as in developing a good working knowledge of antimicrobial agents and a rational approach for their use. The training and teaching opportunities are rich because of the case mix (medical, surgical, ICU) and broad patient populations that are seen at Stanford Hospital. The service is supervised on a daily basis by the infectious diseases fellow, who will work closely with students rotating on the clinical service. Students attend daily patient rounds, weekly infectious diseases conferences, and may attend other research or patient-care conferences at Stanford. The infectious diseases fellows' team room, L-134, is located in the Division of Infectious Diseases and Geographic Medicine home office on the first floor of the Lane building. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Andrew Nevins, M.D. CLERKSHIP COORDINATOR: Brenda Norrie (650-725-8338). REPORTING INSTRUCTIONS: Where: On the first day of the rotation, page the Stanford general infectious diseases fellow through the Stanford page operator at (650) 723-6661; Time: 8:00 AM. CALL CODE: 1. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 302B. Infectious Diseases Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The infectious diseases clerkship features an active inpatient service at the Palo Alto VA, which averages one to three new consults per day. As a consulting specialty service within the Department of Medicine, participants are able to see a wide variety of community-acquired and nosocomial infections. Particular emphasis is placed on clinical and diagnostic reasoning, as well as in developing a good working knowledge of antimicrobial agents and a rational approach for their use. The training and teaching opportunities are rich because of the case mix (medical, surgical, ICU) and patient populations that are seen at the Palo Alto VA. The service is supervised on a daily basis by the infectious diseases fellow, who will work closely with students rotating on the clinical service. Students attend daily patient rounds, weekly infectious diseases conferences, and may attend other research or patient-care conferences at the VA and/or Stanford. Course objectives and resources are provided at the beginning of the rotation. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: David Relman, M.D. CLERKSHIP COORDINATOR: Marian Askew (650-493-5000 x64209, marian.askew@va.gov). REPORTING INSTRUCTIONS: Where: On the first day of the rotation, page the Palo Alto VA infectious diseases fellow through the Stanford page operator at (650) 723-6661; Time: 8:30 AM. CALL CODE: 1. OTHER FACULTY: A. Chary, M. Holodniy, J. Parsonnet, C. Renault, U. Singh, D. Winslow. LOCATION: PAVAMC.

MED 302C. Infectious Diseases Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Teaches the skills of diagnosis and treatment of infectious diseases, including acute illnesses seen in the economically disadvantaged, and subspecialty patient referrals. The format of the clerkship at SCVMC is the same as at SUMC and PAVAMC, but the patient population at SCVMC differs from that of the other two hospitals. Two infectious diseases teaching conferences are held weekly for all three hospital services, and there are two additional conferences per month at SCVMC. Consultations are provided to all general (medical, ob-gyn, surgical) and specialized (burn, rehabilitation, dialysis) units. Tuberculosis clinic and HIV clinic experiences are also available during the rotation. The diagnostic microbiology laboratory staff will instruct students on diagnostic microbiology lab use and interpretation of results as required. The Infection Prevention nurses provide an orientation to hospital epidemiology. Students will be supervised by an attending, fellow and one to two residents. Students wishing to do this clerkship must get approval from Dr. Supriya Narasimhan first before registering. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Supriya Narasimhan, M.D., 408-885-5304. CLERKSHIP COORDINATOR: Melanie Bozarth, 408-885-5395, melanie.bozarth@hhs.sccgov.org. REPORTING INSTRUCTIONS: Where: Room 6C095, 6th floor, Old Main Hospital, SCVMC; Time: 8:30 am. CALL CODE: 1. OTHER FACULTY: J. Gupta, J. Kim, S. Narasimhan, A. Polesky, M. Ray, H. Sahni, J. Cooper. LOCATION: SCVMC.

MED 303A. Cardiology Clerkship-Inpatient/Outpatient Consult. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Emphasizes the acquisition of diagnostic skills related to cardiovascular evaluation. This experience is derived through active participation in the inpatient consultative cardiology program, which is directed by Dr. Stanley Rockson. In addition, at least three half days per week are spent in the outpatient setting, which encompasses aspects of preventive cardiology as well. Direct patient experiences are supplemented with one-on-one didactic sessions and directed reading. The elective also emphasizes the acquisition of ECG reading skills via electrocardiographic reading sessions. PREREQUISITES: Medicine 300A. PERIODS AVAILABLE: 1-16, full-time for three weeks. 2 students per period. CLERKSHIP DIRECTOR: Stanley Rockson, M.D., 650-725-7571, rockson@stanford.edu. CLERKSHIP COORDINATOR: Stanley Rockson, M.D., 650-725-7571, rockson@stanford.edu. REPORTING INSTRUCTIONS: Where: Dr. Rockson, CVRC CV-267; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 303B. Cardiology Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Exposes the students to all areas of clinical cardiology. Students participate in four half-day ambulatory care cardiology clinics, perform at least 3-5 new consultations per week, with each consultation being presented to an attending physician and having a consultation note written. Additionally, each students 'rounds' five days a week on patients on the consultation service. Students read electrocardiograms almost daily. Their physical examinations are reviewed by the attending physician and/or cardiology fellow. They are exposed to all areas of clinical cardiologic testing: exercise treadmill/stress testing, radionuclide testing (thallium scans and radionuclide ejection fractions), cardiac ultrasound studies, cardiac catheterization and percutaneous transluminal coronary intervention (PTCI). Students follow each of their patients through these tests. When surgery is required, they observe the procedure in the operating room. Students participate in daily didactic sessions covering all areas of basic cardiology and are present at daily coronary care unit/medical intensive care unit rounds. Each student also has the opportunity to participate in any other ongoing medical or surgical teaching conferences as time permits. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 5 students per period. CLERKSHIP DIRECTOR: Karen Friday, M.D. CLERKSHIP COORDINATOR: Donna Harris (650-858-3932). REPORTING INSTRUCTIONS: Where: PAVAMC, Second Floor, Rm E2-426; Time: 7:30AM. CALL CODE: 0. OTHER FACULTY: V. Froelicher, P. Heidenreich, P. Milner, M. Hlatky, W. Fearon, K. Friday. LOCATION: PAVAMC.

MED 303C. Cardiology Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Students are part of a cardiology team that consults on hospitalized patients, sees outpatients in seven half day sessions weekly, and attends didactic conferences including noon conferences, weekly Medicine grand-round as well as Cardiology Cath conferences. Opportunities are available to be involved in the various procedures performed by the department: stress test, echocardiogram, cardiac catheterization and implantable devices. We also encourage their participation with our Cardiovascular Surgeons for a complete cardiology experience. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 2 students per period, available by arrangement only. CLERKSHIP DIRECTOR: Susan Zhao, MD, FACC, Associate Chief, Division of Cardiology, SCVMC. CLERKSHIP COORDINATOR: Sherry Hamamjy (408-885-4389, sherry.hamamjy@hhs.sccgov.org). REPORTING INSTRUCTIONS: Where: Valley Specialty Center, 3rd Floor, Suite 340; Time: 9:00 a.m. CALL CODE: 0. OTHER FACULTY: M. Aggarwal, H. Brewster, A. Deluna, H. Shiran, C. Smith, A. Swaminathan, E. Yu, S. Zhao. LOCATION: SCVMC.

MED 304A. Cardiovascular Medicine Clerkship - Inpatients. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: General cardiology rotation remains part of the bread and butter core of internal medicine inpatient rotations. Together with the CCU/heart failure (PGY II) and the cardiology consult service (VA and Stanford), these rotations form the foundation of the cardiology knowledge base for students. Advances in diagnostic imaging, rapid bedside testing and evidence based clinical trials have allowed us to deliver coordinated complex care to our patients with ample opportunities for teaching and learning. The development of the skills and knowledge required for the practice of cardiac vascular medicine is an essential part of the educational process of internal medicine training. Cardiovascular diseases affect millions of Americans and now we have tools and drugs to treat and/or prevent this problem. It is an essential large component of a daily internal medicine practice. Involves four weeks of intensive experience with clinical cardiology inpatients. ECG reading will be included. Students are required to attend daily teaching rounds with the attending cardiologist and house staff, Division of Cardiovascular Medicine conferences, and formal teaching sessions, including electrocardiography. Cardiac patients who do not require CCU care, e.g. AF, NSTEMI, chest pain, SBE are admitted primarily via the ER 7 days a week. Students will work directly with R1 and a supervisory R2 Medicine Resident and Cardiology faculty member. Work day usually is from 7 am - 7 pm with one day off/week. No night call as patients are covered by R2 and R3 night float residents. Please note: Visiting students must obtain approval prior to applying for this clerkship. International students should email a CV to Rita Balian balian@stanford.edu, and domestic students should email a CV to Cassandra Hawthorne at casshaw@stanford.edu. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 1 student per period (a second student can be added with approval from clerkship coordinator). CLERKSHIP DIRECTOR: John Schroeder, M.D. CLERKSHIP COORDINATOR: Cassandra Hawthorne, casshaw@stanford.edu, 650-723-5562. REPORTING INSTRUCTIONS: Where: 500 Pasteur Drive, J7 Team Room 707; Time: 7:30 am. CALL CODE: 1. OTHER FACULTY: R. Dash, W. Fearon, C. Haeffele, R. Harrington, K. Josan, A. Khandelwal, J. Knowles, D. Lee, N. Leeper, D. Liang, K. Mahaffey, D. Maron, V. Parikh, R. Reejhsinghani, S. Rockson, F. Rodriguez, J. Spin, J. Wu, S. Wu, P. Yang. LOCATION: SHC.

MED 305A. Hematology Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Exposes students to the conceptual basis of hematology, the factual information that is available, and the responses required for consultation and patient care in rapidly evolving and frequently complex clinical circumstances. Under the supervision of the resident, fellow, and faculty attending physician, students admit and follow patients on the very well balanced inpatient Hematology Service (Med VIII) and do consultations. Students also round with the Med VIII team in the morning and attend outpatient clinics in the afternoon. In addition, students participate in the bone marrow reading sessions two mornings a week. Students also learn the requirements for prospective clinical protocol research. There is a weekly research conference, a journal club and a patient-oriented post-clinic conference. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Michaela Liedtke, M.D. CLERKSHIP COORDINATOR: Silvia Solorzano (650-723-7078, ssolorza@stanford.edu). REPORTING INSTRUCTIONS: Where: meet heme fellow and heme attending, F Ground, in basement of main hospital; Time: 7:45 am. CALL CODE: 0. OTHER FACULTY: C. Berube, R. Brar, S. Coutre, J. Gotlib, D. Iberri, L. Leung, M. Liedtke, G, Mannis, B. Martin, B. Medeiros, J. Zehnder, T. Zhang. LOCATION: SUMC.

MED 306A. Endocrinology and Metabolism Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Provides students with a comprehensive experience in clinical endocrinology by combining inpatient and outpatient experiences at SCVMC, Stanford (SHC), and PAVA. Students will attend 6-7 clinics per week at the three institutions. Each clinic has approximately 15 to 30 patients who are seen by students, residents, and fellows with faculty members in endocrinology. In addition, students will participate in inpatient endocrine consultation services at Stanford (SHC). Clinical conferences, teaching rounds, grand rounds each week will cover a broad array of endocrine and metabolic problems in both clinical and research spheres. Working at the three hospitals during the clerkship will require travel. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Kaniksha Desai, M.D. CLERKSHIP COORDINATOR: Jessica Wong, 650-736-8274, S025. REPORTING INSTRUCTIONS: Where: Valley Specialty Center, Rm. 2Q261; Time: 8:15 am on Monday. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SHC, PAVAMC, SCVMC.

MED 308A. Immunology/Rheumatology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: A comprehensive clinical experience in rheumatology and clinical immunology. Students attend five weekly clinics in rheumatology, and clinical immunology, gaining familiarity with the evaluation of new patients and the longitudinal follow-up of complex rheumatological problems such as SLE and vasculitis and common rheumatological problems such as rheumatoid arthritis, gout and spondyloarthropathies. Inpatient consultations provide experience with management of the acute crisis. Journal clubs, noon conferences, and division rounds provide didactic teaching. The costs and benefits associated with evaluation and treatment are emphasized. Stanford Students wishing to do this clerkship must receive prior approval from Clerkship Director before registering. Please note: Visiting students must obtain approval from Angie Aberia prior to applying for this clerkship. Please email requests to aberia@stanford.edu. Interested students must send their CV and 2 letters of recommendatio, one from the clerkship director, and the other letter from an attending attesting to the students clinical abilities (i.e. proficient H&P's and exam skills). These must be sent to Angie at least 4 to 6 weeks prior to the start of the period that the student would like to enroll in. Prereq: Successful completion of a full medicine clerkship. PREREQUISITES: Completion of a full Medicine clerkship. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. Additional students only allowed if reviewed and approved by clerkship director. CLERKSHIP DIRECTOR: Stanford Shoor, M.D. (650-725-5070). CLERKSHIP COORDINATOR: Ruselle McDermott, russelle.mcdermott@stanford.edu, (650-498-5630). REPORTING INSTRUCTIONS: Where: 1000 Welch Rd. Suite #203, see Angie Aberia (call one week prior to confirm); Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: C.G. Fathman, J. Fries, H. Holman, E. Lambert, S. Strober, L. Tarter, M. Genovese, W. Robinson, P. Utz, L. Chung, M. Lyon. LOCATION: SUMC.

MED 308C. Immunology/Rheumatology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Introduces students to patients with different forms of arthritis and related rheumatic diseases. Emphasis is on the specific examination of muscles, bones, and joints and important systemic signs and symptoms pertinent to the diagnosis of rheumatic diseases. Laboratory tests, X-rays, and biopsies are reviewed. Students see both new and returning patients and participate in both inpatient and outpatient consultations. Formal and informal participation in conferences is encouraged. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Veronika Sharp, M.D., 408-885-6777. CLERKSHIP COORDINATOR: Veronika Sharp, M.D., or secretary, Lupe Ibanez, 408-885-6777. REPORTING INSTRUCTIONS: Where: Check in with SCVMC Housestaff Office, Room 7C081, 751 S. Bascom Avenue, San Jose; Time: Between 8:00 and 8:30 am the first day of clerkship. CALL CODE: 0. OTHER FACULTY: B. Amlani, J. Burkham, U. Marvi. LOCATION: SCVMC.

MED 311D. Advanced Medicine Clerkship. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: The Kaiser Permanente Santa Clara Medical Center offers a dynamic academic clinical clerkship in advanced medicine. Students serve as the primary provider for their patients: documenting H&P's, progress notes and discharge summaries, arranging and completing procedures, participating in daily follow-up care, and communicating with patients. Supervision is provided by the senior level resident and the teaching Hospitalist. There are weekly teaching didactics specifically for sub-interns and daily conferences. It is highly recommended that students register for this clerkship near the beginning or middle of their final year of clinicals. If you want to be sure to have a slot for a particular period, you should register to it as soon as possible as the slots are limited and fill quickly. No adds or drops less than one week before start of each period. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 2-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Sudhir S. Rajan, MD, FACP, FCCP. CLERKSHIP COORDINATOR: Susan Krause (408-851-3836), KPMC, Santa Clara. REPORTING INSTRUCTIONS: Where: KPMC, Graduate Medical Education Office, Call 408-236-4921 for site location; Time: 7:00 am. CALL CODE: 5 (Not overnight). OTHER FACULTY: Staff. LOCATION: KPMC.

MED 312C. Advanced Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Involves an advanced level of inpatient care responsibility. Under the close supervision of faculty and residents the student is expected to function as an intern, caring for the same number of patients and working the same hours. Beepers are provided; meals are free. Please note: Visiting students must obtain approval from Dr. Stephanie Chan prior to applying for this clerkship. Please email requests to Stephanie.Chan@hhs.sccgov.org. Interested students must send their transcript and evaluations from 2 core clerkships. These must be sent to Dr. Chan at least 4 to 6 weeks prior to the start of the period that the student would like to enroll in. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 6 students per period. CLERKSHIP DIRECTOR: Stephanie Chan, M.D. (408-885-7744). CLERKSHIP COORDINATOR: Amy Luu (408-885-6300), amy.luu@sccgov.org. REPORTING INSTRUCTIONS: SCVMC, Room 4C004, 4th Floor Conference Room in the Department of Medicine [Visitors call (408-885-5110) and bring proof of PPD and malpractice insurance to 7th Floor Room 54]; Time: 8:30 am. CALL CODE: 4. OTHER FACULTY: Staff. LOCATION: SCVMC.

MED 313A. Ambulatory Medicine Core Clerkship. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Required. DESCRIPTION: The combined ambulatory/emergency medicine core clerkship will comprise of ambulatory clinics and emergency medicine shifts, for a total of three weeks. All students will attend Monday morning ambulatory didactics, and a simulation exercise run by the EM Simulation faculty on two Monday afternoons. Students will present interesting case presentations on the third Monday and take their final exam on the last Friday of the rotation. During the ambulatory block, students will attend general medicine and subspecialty clinics, generally Tuesday-Friday. Sites include SUMC, PAVA, SCVMC, Kaiser Santa Clara, Kaiser Fremont, and community clinics. During the emergency medicine block, students will work seven shifts, which will be a mixture of days, evenings, and overnights in the SUMC ED. Holidays in the EMed portion of this clerkship are treated as work days. Students in the EMed block can/will work on holidays. No student may miss more than two clerkship days. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 10 students per period. CLERKSHIP DIRECTOR: Jacqueline Tai-Edmonds, M.D. and Jessica Ngo, M.D. CLERKSHIP COORDINATOR: Maria Alfonso, 650-497-6702, malfonso@stanford.edu. and Kristen Kayser, 650-497-3058, kkayser@stanford.edu. REPORTING INSTRUCTIONS: Where: Varies depending on site assignment. The students are notified prior to the first day of the clerkship; Time: TBA. CALL CODE: 2 (No call, but one required weekend ambulatory clinic shift during the ambulatory block and a mixture of at least 2 overnights and/or weekend shifts during the EMED block). OTHER FACULTY: Staff. LOCATION: SUMC, PAVA, SCVMC, Kaiser Santa Clara, Kaiser Fremont, Community Clinics.

MED 314A. Advanced Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Intended for students in their second clinical year who are able to proceed to an advanced experience similar to an internship. Students see patients with a wide variety of internal medical diseases in both the inpatient and outpatient settings, and gain experience in the practical aspects of internal medicine. The variety of patients and the contact with many private practitioners provide a valuable complement to other clerkship experiences. The clerkship experience is enhanced by exposure to a broad variety of patients as well as clinical teaching from community attendings and Stanford faculty. Please note: Visiting students must obtain pre-approval from Nancy D'Amico prior to applying for this clerkship. Please email requests (pre-approval form) to ndamico@stanford.edu. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 5 students per period. CLERKSHIP DIRECTOR: John Kugler, M.D. (jkugler@stanford.edu). CLERKSHIP COORDINATOR: Nancy D'Amico (650-721-1640), 1215 Welch Road, Mod B, Space #37, MC 5418. REPORTING INSTRUCTIONS: Where: Students will be notified a week prior to the first day; Time: TBA. CALL CODE: 4. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 317C. Medical ICU Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: An in-depth, three week rotation in the general medical ICU of the SCVMC. Students work as an integral part of a large ICU team aiding housestaff in managing a wide range of critically ill patients. Direct student participation in ICU activities is the essential element of this clerkship. With guidance, students gain experience with a variety of procedures, actively apply their knowledge of physiology, and hone their patient management skills. PREREQUISITES: ANES 306A or MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks (longer by arrangement), 2 students per period. CLERKSHIP DIRECTOR: Vibha Mohindra, M.D. CLERKSHIP COORDINATOR: Eva Apolinar (408-885-2051), Building Q, Suite 5Q153, Valley Specialty Center. REPORTING INSTRUCTIONS: Where: SCVMC, Valley Specialty Center, 5th Floor, Pulmonary Division Office; Time: 8:00 AM. CALL CODE: 4. OTHER FACULTY: C. Kirsch, J. Wehner, V. Mohindra, E. Hsiao, F. Kagawa, A, Friedenberg, W.Chen, A. Gohil. LOCATION: SCVMC.

MED 318A. Palliative Medicine. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The clerkship provides medical students in-depth exposure to palliative care across the continuum of care including several ambulatory clinics, an inpatient consult service, and home and inpatient hospice care. Students will learn core communications strategies in disclosing bad news, eliciting and clarifying goals of care, and aiding in transitions in care. They will also learn physiology and pharmacology relevant for symptom management (e.g. pain, nausea, depression), as well as interact with patients confronting their own mortality. Students complete 3 weeks for elective credit. All patient visits will be conducted via the EPIC multi-provider video visit platform. PREREQUISITES: Prior approval by the Clerkship Director is required for all students. Please fill out the Qualtrics survey at: https://stanforduniversity.qualtrics.com/jfe/form/SV_0Il1gXXVKBV5uvz. We will begin reviewing pre-approval surveys for the 20-21 academic year starting in July. Surveys received prior to 7/1/2020 will not be processed. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 6 students per period. CLERKSHIP DIRECTOR: Kavitha Ramchandran, M.D. CLERKSHIP COORDINATOR: Laura J Lundi, 650-724-9705, llundi@stanford.edu. REPORTING INSTRUCTIONS: Please look for an email from the Clerkship Coordinator the Friday prior to your rotation; Time: TBA. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 321A. Inpatient Medical Oncology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Offers an intensive, inpatient, subspecialty care experience, equivalent to a subinternship. Students are responsible for 2 to 5 patients who are seriously ill with a broad range of medical problems in the setting of underlying malignant disease. Students work with the inpatient team composed of an attending, a medical oncology fellow, 2 medical residents and 2 medical interns. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 1 student per period. CLERKSHIP DIRECTOR: Sukhmani Kaur Padda, M.D. CLERKSHIP COORDINATOR: Laura Lundi (650-724-9705, llundi@stanford.edu). REPORTING INSTRUCTIONS: Stanford Hospital, F Ground (Oncology Fellow); Time: 8:00 AM. CALL CODE: 2 (patients are admitted daily and the sub-intern will admit patients on a rotation basis with the team without overnight call, but may stay late some evenings). OTHER FACULTY: Staff. LOCATION: SUMC.

MED 322A. Outpatient Medical Oncology Clerkship. 3-6 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Familiarizes students with the subspecialty of medical oncology through subspecialty patient care in clinics and tumor boards and attending the weekly conferences of the Division of Oncology. The experience draws heavily on and will expand skills in internal medicine, emphasizing differential diagnosis, physical examination, utilization of laboratory, X-ray, and imaging studies, as well as approaches to psycho-social problems for patients with suspected or established malignant disease. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 2 students per period. CLERKSHIP DIRECTOR: Sukhmani Kaur Padda, M.D. CLERKSHIP COORDINATOR: Laura Lundi (650) 724-9705; llundi@stanford.edu). REPORTING INSTRUCTIONS: Where: Cancer Center, Visitor Information Desk; Time: 9:00 am. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 323A. Trans-Disciplinary Breast Oncology Clerkship. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: This three week trans-disciplinary breast oncology clerkship cuts across the relevant treatment modalities and emphasizes interdisciplinary, patient-centered care. Breast cancer is a highly prevalent disease often treated in early stages with medical, radiation and surgical therapies. The student will be in each clinic of these treatment clinics for one day every week, independently work up and discuss patients with assigned faculty, present new cases to the breast tumor board, and subsequently synthesize the visit notes and outpatient letters. At least one day per week, students will choose from additional care activities that shape the patient's experience, including observation of breast surgeries, wound care visits, radiation dosimetry planning or simulation, chemotherapy teaching or infusion, and medical oncology inpatient rounds. Furthermore, students are encouraged to identify patients with multiple visits that month and follow them across clinics for concentrated continuity. The clerkship offers a unique vantage point to learn about the shared decision-making and coordination of complex cancer care, in addition to the management of general health problems for breast cancer patients. Students further appreciate the longitudinal evolution of the patient's relationship with their cancer. There will be weekly debrief check-ins and short didactics to optimize the student's experience. PREREQUISITES: Any core clerkship. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 1 student per period. CLERKSHIP DIRECTOR: Melina Telli, M.D. CLERKSHIP COORDINATOR: Vanessa Murillo, vmurill0@stanford.edu, 650-725-8738. REPORTING INSTRUCTIONS: Where: Stanford Cancer Center CC-2241; Time: 8:30 am. CALL CODE: 5. OTHER FACULTY: Staff. LOCATION: SUMC.

MED 325A. Gastroenterology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Involves participation in inpatient consultations and outpatient clinics. Students are responsible for evaluating patients with major diseases of the liver and gastrointestinal tract. They assume primary responsibility in both inpatient and outpatient settings and present cases regularly to the faculty attending physician. Daily inpatient rounds are made with the attending physician, fellow, and resident. Clinics are held on Mondays. Clinical conferences and journal clubs are held once weekly. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Subhas Banerjee, M.D., 650-736-0431. CLERKSHIP COORDINATOR: Abbey Hamilton, 650-723-4519, abbeyh@stanford.edu. REPORTING INSTRUCTIONS: Where: Endoscopy Unit, 300 Pasteur Dr, Basement Room H0262. (Please ask for GI attending fellow); Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: A. Aijaz, S. Banerjee, L. Becker, A. Cheung, J. Clarke, T. Daugherty, R. Dhanasekaran, D. Dronamraju, N. Fernandez-Becker, S. Friedland, G. Garcia, P. Garcia, J. Glenn, A. Goel, A. Gottfried, D. Grewal, H. Halawi, E. Ho, J. Hwang, A. Kalra, K. Keyashian, R. Kim, R. Kumari, P. Kwo, U. Ladabaum, B. Limketkai, A. Lowe, D. Limsui, L. Neshatian, L. Nguyen, M. Nguyen, P. Okafor, W. Park, A. Shah, S. Sinha, I. Sonu, S. Streett. LOCATION: SUMC.

MED 325B. Gastroenterology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Gives students responsibility for both inpatient consultations and the evaluation and treatment of referred patients in the Gastroenterology clinic. Rounds with the faculty consultant, fellow and resident, as well as GI endoscopic procedures are conducted daily. Conferences on clinical gastroenterology, hepatology, gastrointestinal radiology, and gastrointestinal and liver histopathology are held weekly. A combined medical-surgical conference is held every other week. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Ramsey Cheung, M.D. CLERKSHIP COORDINATOR: Matthew Alcera, Matthew.Alcera@va.gov. REPORTING INSTRUCTIONS: PAVAMC, Bldg. 100, Endoscopy Suite; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: R. Cheung, R. Soetikno, S. Matsui, B. Omary, S. Friedland. LOCATION: PAVAMC.

MED 325C. Gastroenterology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: This clerkship provides experience in outpatient and inpatient gastroenterology (GI). In the mornings, students will evaluate outpatients referred to GI clinic and will also have an opportunity to observe outpatient endoscopic procedures, including upper endoscopy, colonoscopy, paracentesis, ERCP and endoscopic ultrasound. In the afternoons, students will evaluate inpatients who require GI consultation, observe inpatient procedures and participate in inpatient rounds with the GI team. Students will assume primary responsibility for the inpatients they provide consultation on. In addition to direct patient care, students will attend multiple didactic lectures and conferences, including a bi-weekly GI/Surgery conference, bi-weekly GI Radiology conference, bi-weekly GI Journal Club, monthly Liver Tumor Board, monthly GI Pathology conference and weekly Stanford multi-disciplinary (GI/Surgery/Radiology/Pathology) Digestive Diseases Clinical Conference. This clerkship is closed to registration unless given prior approval by Clerkship Coordinator. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Elizabeth Hwang, M.D. (408-793-2598). CLERKSHIP COORDINATOR: Louise Leprohon (408-885-7947), Louise.Leprohon@hhs.sccgov.org. REPORTING INSTRUCTIONS: Where: SCVMC, Valley Specialty Center, 5th Floor, GI Clinic; Time: 8:00 am. CALL CODE: 0. OTHER FACULTY: A. Chen, A. Davila, A. Ho, E. Hwang, A. Kamal, R. Lerrigo, D. Lin, N. Shah, J. Williams. LOCATION: SCVMC.

MED 326A. Hepatology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Involves participation in inpatient consultations and outpatient clinics for 3 weeks. The goals are to familiarize students with evaluation and management of patients with major liver diseases. Students are responsible for evaluating patients with major diseases of the liver diseases. They assume primary responsibility in both inpatient and outpatient settings and present cases regularly to the faculty attending physician. Daily inpatient rounds are made with the attending physician, fellow, and resident. Clinics are held on Mondays to Friday. Journal clubs are held once weekly. Pathology conferences are held on Thursday and radiology conferences on Friday. Patient care conferences are held on Tuesday and Friday. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Mindie Nguyen, M.D., MAS (phone: 650-722-4478). CLERKSHIP COORDINATOR: Jeff Mathews (650-498-6084). REPORTING INSTRUCTIONS: Where: 780 Welch Road, Room CJ280K; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: A. Ahmed, T. Daugherty, A. Goel, R. Kumari, P. Kwo. LOCATION: SUMC, PAVAMC.

MED 328A. Addiction Medicine Clerkship. 3-6 Units.
VISITING: Closed to visitors unless already approved for clerkship within SHC. TYPE OF CLERKSHIP. Elective. DESCRIPTION: This clerkship will teach students the fundamentals of addiction medicine from the perspective of primary care and interdisciplinary coordination of care. Clinic exposure will include opportunities to interact with patients with substance use disorders in a variety of settings that may include: Community Clinics through Santa Clara Valley Medical Center, Stanford Family Medicine Clinic, Los Altos Primary Care and Buprenorphine and Alcohol Use Disorder Support Groups, and Residential and Inpatient settings. There may be opportunities to rotate in a smoking cessation group. Students will learn about outpatient detoxification from opioids and alcohol, relapse prevention medications for opioid and alcohol use disorders and the culture of substance use recovery. Please contact Coordinator listed below for pre-approval before signing up. PREREQUISITES: A minimum of 2 clerkship experiences that may include: Family or Internal Medicine, Pediatrics, Psychiatry, Surgery, OBGYN, Emergency, or Ambulatory (Urgent Care) Medicine. PERIODS AVAILABLE: 9-16 for 2020-21; 1-16 for 2021-22, full time for 3 weeks. 1 student per period. CLERKSHIP DIRECTOR: Chwen-Yuen Angie Chen, MD, FACP, FASAM, ChChen@stanfordhealthcare.org. CLERKSHIP COORDINATOR: Chwen-Yuen Angie Chen, MD, FACP, FASAM, ChChen@stanfordhealthcare.org. REPORTING INSTRUCTIONS: Where: TBA; Time: 8:00 am. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SHC.

MED 330A. Pulmonary Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Helps students develop the attitudes and skills necessary for the evaluation and management of patients with pulmonary disease. Students are expected to understand pulmonary disease in the context of internal medicine, using general as well as specific approaches to diagnosis. The clerkship affords direct patient involvement under supervision in the outpatient clinic and on inpatient consultation services. Critically ill patients with pulmonary disease in the ICU will be evaluated. Pulmonary function tests are evaluated daily, and student involvement in specialized studies is emphasized. Divisional clinical conferences are held weekly, and a joint medical-surgical conference bi-weekly. Each student has the option of spending one-half of the clerkship at the PAVAMC and one-half at the Stanford University Hospital on a rotational basis. These options are discussed and determined on the first day of the clerkship. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for three weeks (half-time at SUH; half-time at PAVAMC,) 2 students per period. CLERKSHIP DIRECTOR: Peter N. Kao, M.D, Ph.D. CLERKSHIP COORDINATOR: Kerri Keating, keatingk@stanford.edu. REPORTING INSTRUCTIONS: Where: H3147; Time: 8:45 am. CALL CODE: 1. OTHER FACULTY: R. Chitkara, T. Desai, G. Dhillon, J. Holty, P. Kao, K. Kudelko, W. Kuschner, J. Levitt, P. Mohabir, M. Nicolls, H. Paintal, A. Rogers, S. Ruoss, Y. Sung, R. Van Wert, A. Weinacker, R. Zamanian, C. Zone, V. de Jesus Perez. LOCATION: SUMC.

MED 330C. Pulmonary Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Affords students an opportunity to deal with a broad range of clinical pulmonary problems. Working as part of a busy consulting service, students develop a practical approach to evaluating and managing patients with respiratory disease. The spectrum of patients ranges from ambulatory outpatients, to patients with tuberculosis, to ICU patients with acute respiratory failure. The application of the basic principles of physiology to clinical problems is emphasized. Under supervision, students participate in interpreting pulmonary function tests and other diagnostic procedures. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Eric Hsiao, M.D. CLERKSHIP COORDINATOR: Angelica Segovia (408-885-2051), Building Q, Suite 5Q153, Valley Specialty Center. REPORTING INSTRUCTIONS: Where: Valley Specialty Center, 5th Floor, Room 5Q153; Time: 8:00 am. CALL CODE: 0. OTHER FACULTY: U. Barvalia, V. Chen, H. Duong, A. Gohil, E. Hsiao, V. Mohindra, H. Tsai, J. Wehner. LOCATION: SCVMC.

MED 331A. Advanced Work in Pulmonary and Critical Care Medicine. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The content of this clerkship is flexible. Students can do additional clinical work in Pulmonary and Critical Care Medicine or research work in the Division of Pulmonary and Critical Care Medicine. Specific arrangements for content should be made with the faculty in advance. PREREQUISITES: MED 330 and consent of instructor. PERIODS AVAILABLE: 1-16, full-time for 3 weeks only, 1 student per period. CLERKSHIP DIRECTOR: Peter Kao, M.D. CLERKSHIP COORDINATOR: Kerry Keating, 650-723-1150, keatingk@stanford.edu. REPORTING INSTRUCTIONS: Where: H3147; Time: 9:00 am. CALL CODE: 1. OTHER FACULTY: S. Chinthrajah, K. de Boer, T. Desai, G. Dhillon, J. Holty, P. Kao, K. Kudelko, W. Kuschner, Y. Lai, J. Levitt, M. Marmor, P. Mohabir, S. Majumdar, M. Nicolls, H. Paintal, R. Raj, M. Ramsey, A. Rogers, S. Ruoss, G. Singh, Y. Sung, A. Sweatt, R. Van Wert, A. Weinacker, R. Zamanian, C. Zone, V. de Jesus Perez. LOCATION: SUMC.

MED 334A. Nephrology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides students with an introduction to clinical nephrology, including diseases of the kidney and disorders of fluid, electrolyte, and acid-base balance. The clerkship is available at SUMC. Students evaluate inpatients as members of the nephrology consulting team. After completing this rotation, we expect that students will be able to independently work up and manage a wide variety of acute and chronic disturbances of renal function, as well as glomerular disease, vasculitis, hypertension, fluid and electrolyte disorders, and acid-base disturbances. They also participate in the management of patients with end-stage renal disease. There is a weekly schedule of grand rounds, journal club, and a monthly renal biopsy conference. PREREQUISITES: Medicine 300A, Surgery 300A or Pediatrics 300A are preferred but not required. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Shuchi Anand, M.D., M.S. (650-723-6961). CLERKSHIP COORDINATOR: Cayla Whitney, caylacw@stanford.edu, 650-721-6680, 777 Welch Road Suite DE Palo Alto, CA 94304. REPORTING INSTRUCTIONS: Where: 777 Welch Road Suite DE Palo Alto, CA 94304; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: T. Meyer, R, Lafayette, J. Scandling, J. Tan, Y. Lit, G. Chertow, V. Bhalla, A. Pao, M. Tamura, J. Yabu, N. Arora, R. Isom, T. Chang, S. Anand, T. Sirich, K. Erickson, P. Fatehi. LOCATION: SUMC, PAVAMC.

MED 334C. Nephrology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Students see patients in the outpatient renal clinic, and on an active inpatient service. The diverse patient population at SCVMC enables student to encounter patients with a wide variety of acute and chronic renal diseases, hypertension, and fluid and electrolyte disturbances. The clerkship is also designed to acquaint students with a systematic approach to patients with fluid, electrolyte, and acid-base abnormalities. A series of seminars covering a broad range of topics in nephrology and designed specifically for medical students is given by the faculty. An optional self-study program on fluid and electrolytes consisting of 8 taped lectures with slides is also available. Weekly divisional nephrology conferences are held at SCVMC, and address various topics in nephrology. Additionally, there is a monthly nephrology resident conference, in addition to a monthly renal pathology conference. Videotaped lecture series on the entire field of nephrology are also available. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 2 students per period. CLERKSHIP DIRECTOR: Anjali Bhatt Saxena, M.D. CLERKSHIP COORDINATOR: Mary Jane Monroe (408-885-7019). REPORTING INSTRUCTIONS: Where: SCVMC, Renal Dialysis Unit, 3rd Floor [Visitors call (408-885-5110) and bring proof of PPD and malpractice insurance as directed]; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: A. Saxena, J. Lugovoy, A. Jobalia, B. Young, N. Pham, F. Luo, staff. LOCATION: SCVMC.

MED 338A. Outpatient Infectious Diseases Elective. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: This clerkship provides medical students with an elective course of 3 weeks of outpatient ID experience. Clinical experiences will focus on antibiotic selection, utilization and stewardship, as well as the management of commonly encountered ID syndromes, including sexually transmitted infections, HIV, Tuberculosis, and viral hepatitis. Students will attend outpatient clinics at the Palo Alto Veterans Administration Medical Center, the Stanford affiliated Positive Care Clinic, and the San Mateo County Health System. There is potential flexibility for students interested in a focus area at a specific clinic or with a specific physician, to arrange more concentrated clinical work at one of the clinics with permission of the attending. Each student will be asked to prepare a small research project (e.g. a case or literature review) to be presented at the end of the rotation. Students planning on doing the outpatient ID rotation should contact Dr. Levy at vlevy@stanford.edu as soon as possible but at least 8 weeks prior to rotation beginning to verify there is period availability for the desired period of rotation and that all needed electronic medical record and infection control requirements have been obtained. This clerkship requires prior approval by Clerkship Director. PREREQUISITES: MED 300A. PERIODS AVAILABLE: For 2020-21, P6-16; For 2021-22, P1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Vivian Levy, M.D. (vlevy@stanford.edu or 650-573-3987). CLERKSHIP COORDINATOR: Vivian Levy, M.D. (vlevy@stanford.edu or 650-573-3987). REPORTING INSTRUCTIONS: Where: Dr. Levy will send the student a schedule, curriculum and orientation materials prior to starting the rotation of clinics and physicians; Time: TBA. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC, PAVAMC.

MED 339B. Advanced Medicine Clerkship. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Intended for clinically experienced students who seek an advanced experience similar to an internship. PREREQUISITES: MED 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 4 students per period. CLERKSHIP DIRECTOR: Arlina Ahluwalia, M.D., 650-493-5000 x66759. CLERKSHIP COORDINATOR: Matthew Alcera, 650-493-5000 x63157, Matthew.Alcera@va.gov, Bldg. 5, 3rd Fl Rm C-367. REPORTING INSTRUCTIONS: Where: First Monday of rotation, Bldg 101; Time: 08:30 a.m. CALL CODE: 4. OTHER FACULTY: Staff. LOCATION: PAVAMC.

MED 340B. Medical-Surgical Intensive Care Unit Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: This clerkship provides experience managing adult patients in a critical care unit. Students learn how to optimize care for the acutely ill patient and the multidisciplinary approach to complex patients. Teaching emphasizes the review of basic organ physiology, the ability to determine the pathophysiologic mechanisms involved in critical illness, and the formulation of a physiologic based treatment plan. Students gain experience with the implementation of monitoring and therapeutic devices used in the intensive care units and begin to become adept at the evaluation, stabilization and management of the most critically ill patients expected to be encountered in today's acute care hospitals. Ward rounds, bedside evaluation and treatment, and individual interactions with attending, fellows and residents are part of the educational process. Students must attend mandatory simulator courses in order to receive passing grade for this clerkship. Students wishing to do this clerkship must get approval from Bernadette Carvalho first before registering. Students must register for Anes 340B for this clerkship. PREREQUISITES: Anesthesia 306A or Medicine and Surgery core clerkships. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Juliana Barr, M.D., 650-493-5000 x64452, Building 1, Room F315, PAVAMC 112A. CLERKSHIP COORDINATOR: Bernadette F. Carvalho, berniec@stanford.edu. REPORTING INSTRUCTIONS: Where: PAVAMC, MSICU, 3rd Floor; Time: 8:00 am. CALL CODE: 4. OTHER FACULTY: E. Bertaccini, R. Chitkara, G. Lighthall, W. Kuschner, G. Krishna, J. Olsson. LOCATION: PAVAMC.

MED 342A. Geriatric Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: This clinical experience introduces students to the principles of effective geriatric care in both inpatient and outpatient settings. Geriatric faculty and fellows work with students in various clinical settings including: 1) outpatient clinics at the VA Palo Alto Health Care System 2) outpatient clinic at Stanford University 3) a community skilled nursing facility in Palo Alto. The rotation emphasizes the evaluation and management of patients with multiple chronic conditions, such as diabetes, congestive heart failure, hypertension, urinary incontinence, mental status changes, functional impairments and gait problems. This clerkship requires written approval by Clerkship Director before you can enroll. Please contact Dr. Philip Choe at Philip.Choe@va.gov to check for availability of spots in the clerkship. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Philip Choe, D.O. (650-493-5000 x64740). CLERKSHIP COORDINATOR: Philip Choe, D.O. REPORTING INSTRUCTIONS: Where: Arrange with clerkship coordinator; Time: Arrange with clerkship coordinator. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC, PAVAMC.

MED 343B. Palliative Care Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: Teaches the natural history, prognostication, and management of serious illnesses. Emphasis is placed on acquiring the knowledge, skills, and attitudes desirable in a compassionate clinician-scholar physician. Students record history (with special assessment to symptoms, functional assessment, mood and cognitive assessment), physical examination, and pertinent laboratory data for patients for whom they are responsible and present their findings, together with their diagnoses and management care plans, at rounds, and daily team meetings. Provision of patient-centered, family-oriented care is continuously emphasized. An essential aspect of the clerkship is the students' gradual assumption of direct responsibility for, and full-time involvement in, care of patients with serious illness with the house staff, fellows and a large inter-disciplinary team and this is why we have structured this as a three week rotation. A passing grade will require both a satisfactory performance and a successful 30 minute formal presentation on palliative care topic of interest (student will discuss ideas with Course Director to identify potential topics of interest to them). Course highlights include (a) mentoring from the course director and a cadre of mentors including Palliative Care Attendings and Fellows (b)focus on skill building and practice with special focus on communication skills (c) opportunity to work closely with a multi-disciplinary team(d) learning to care for the patient and their family as the unit of care. PREREQUISITES: This clerkship requires written approval by Clerkship Director before you can enroll. Please contact Dr. VJ Periyakoil at periyakoil@stanford.edu to check for availability of spots in the clerkship. PERIODS AVAILABLE: 1-16, full-time for 3 weeks. 1 student per period. CLERKSHIP DIRECTOR: VJ Periyakoil, M.D. (periyakoil@stanford.edu). CLERKSHIP COORDINATOR: VJ Periyakoil, M.D. (650-497-0332, periyakoil@stanford.edu). REPORTING INSTRUCTIONS: Where: This will depend on the start day of the rotation as training activities vary by the day; Time: 8:00 am. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC, PAVAMC, SCVMC.

MED 344A. Elective in Quality Improvement, Patient Safety, and Organizational Change. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Mentored practice and growth in knowledge, skills, and attitudes in quality improvement, patient safety, and organizational change. Students engage in directed readings, attend sessions with experienced QI Champions, learn about quality improvement projects and processes at Stanford University, participate in ongoing quality and patient safety activities within the Department of Medicine and Stanford Hospital and Clinics, and design and begin a quality improvement/patient safety/ organizational change project. Designed to allow the student to develop a mentoring relationship with a QI Champion who will serve as a role model, mentor, and educator. Contact Dr. Lisa Shieh at lshieh@stanford.edu if interested. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full-time for three weeks. 3 students per period. CLERKSHIP DIRECTOR: Lisa Shieh, M.D., Ph.D, FHM, 650-724-2917, lshieh@stanford.edu. CLERKSHIP COORDINATOR: Lisa Shieh, M.D., Ph.D, FHM, 650-724-2917, lshieh@stanford.edu. REPORTING INSTRUCTIONS: Where: 700 Welch Road, Suite 310B, Palo Alto, CA 94304; Time: TBA. CALL CODE: 0. OTHER FACULTY: K. Hooper, L. Shieh. LOCATION: SUMC.

MED 347A. Stanford Perioperative Internal Medicine Rotation. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The Stanford Perioperative Internal Medicine elective is a three-week inpatient rotation that will provide the students a clinical immersive experience in medical management of Orthopedics, Neurosurgery and ENT patients with bedside and didactic teaching. The students will be directly supervised by hospital medicine attendings. They will be expected to perform thorough histories and physical examinations of patients admitted to the hospital and then formulate and implement treatment plans. This rotation will expose the students to learn effective ways to evaluate medical co-morbidities, learn evidence based clinical practices to prevent and treat post-operative complications and learn about research and quality improvement projects pertaining to perioperative medicine. The students will also be expected to attend the resident morning report, noon conference and medical grand rounds during this time. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 2 students per three week period. CLERKSHIP DIRECTOR: Sarita Khemani, M.D. CLERKSHIP COORDINATOR: Sarita Khemani, M.D., 650-906-5070, skhemani@stanford.edu. REPORTING INSTRUCTIONS: Where: Stanford hospital 500 P, Floor L4, nursing station; Time: 9:00AM. CALL CODE: 0. OTHER FACULTY: Stanford Medicine faculty and residents from multiple disciplines. LOCATION: SUMC.

MED 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MED 390. Curricular Practical Training. 1-18 Unit.
CPT Course required for international students completing degree requirements.

MED 397A. MD Capstone Experience: Preparation for Residency. 1 Unit.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: This 1-week clerkship provides senior medical students an opportunity to review and practice a wide variety of knowledge and skills that are essential to preparing them to work effectively as interns. The capstone clerkship will include a significant emphasis on simulation-based learning as well as small group sessions, didactics, skills labs, and resident panels. Required skills and common experiences during internship will be specifically highlighted, such as cross cover calls, sign out, and advanced communication skills. All training is designed to help students master practical skills that will be essential during the first few months of any intern year. For those students who are not enrolled for the quarter in which the Capstone Clerkship is offered, please contact Brian Herman at bherman8@stanford.edu to register. PREREQUISITES: Completion of required core clerkships. PERIODS AVAILABLE: P14 (5/3/21-5/9/21) or P15 (5/17/21-5/23/21) for 2020-21; P14 (5/2/22-5/8/22) or P15 (5/16/22-5/22-22) for 2021-22, full-time for 1 week. 30 students maximum per period. CLERKSHIP DIRECTOR: Jeff Chi, M.D. and John Kugler, M.D. CLERKSHIP COORDINATOR: Brian Herman (650) 725-4677, bherman8@stanford.edu. REPORTING INSTRUCTIONS: Where: Course coordinator will send out reporting instructions with syllabus before the start of the clerkship; Time: TBA. CALL CODE: 2 - you will be asked to do one evening session, but no overnight session. OTHER FACULTY: Stanford Medicine faculty and residents from multiple disciplines. LOCATION: SUMC.

MED 398A. Clinical Elective in Medicine. 1-5 Unit.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides an opportunity for a student in the clinical years to have a clinical experience in one of the fields of Medicine, of a quality and duration to be decided upon by the student and a faculty preceptor in the Department of Medicine. Please note: Students cannot add 398A clerkships directly to their fishbowl schedules through the regular shuffles. Please contact Caroline Cheang in the Office of Medical Student Affairs at cheang@stanford.edu or 650-498-7619 with the faculty preceptor's name and email address to add this clerkship. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, 4 students per period. CLERKSHIP DIRECTOR: John Kugler, M.D., jkugler@stanford.edu. CLERKSHIP COORDINATOR: Nancy D'Amico, 650-721-1640, 1215 Welch Road, Mod B, Space #37, MC 5418. REPORTING INSTRUCTIONS: Where: TBA (designated faculty preceptor); Time: TBA. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC, PAVAMC, SCVMC, KPMC.

MED 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

BIOCHEMISTRY

Courses offered by the Department of Biochemistry are listed under the subject code BIOC on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOC&filter-catalognumber-BIOC=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOC&filter-catalognumber-BIOC=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOC&filter-catalognumber-BIOC=on).

Biochemistry is a department within the School of Medicine, with offices and labs located in the Beckman Center for Molecular and Genetic Medicine at the Stanford Medical Center, the Shriram Center for Bioengineering and Chemical Engineering, and the Stanford Genome Technology Center. Courses offered by the department may be taken by undergraduates as well as graduate and medical school students.

Advanced courses offered in more specialized areas emphasize recent developments in biochemistry, cell biology, and molecular biology. These courses include the physical and chemical principles of biochemistry, enzyme reaction mechanisms, membrane trafficking and biochemistry, molecular motors and the cytoskeleton, mechanisms and regulation of nucleic acid replication and recombination, the biochemistry of bacterial and animal viruses, the molecular basis of morphogenesis, the molecular and cell biology of yeast, and the structure and function of both eukaryotic and prokaryotic chromosomes.

Opportunities exist for directed reading and research in biochemistry and molecular biology, using the most advanced research facilities, including those for light and electron microscopy, chromatography and electrophoresis, protein and nucleic acid purification, rapid kinetic analysis, synthesis and analysis, single molecule analyses using laser light traps, microarray generation and analysis, and computer graphic workstation facilities for protein and nucleic acid structural analysis. Ongoing research uses a variety of organisms from bacteria to animal cells.

Doctor of Philosophy in Biochemistry

Requirements for the M.S. and Ph.D. degrees are described in the "Graduate Degrees (p. 65)" section of this bulletin. The department does not offer undergraduate degrees.

The Department of Biochemistry offers a Ph.D. program which begins in the Autumn Quarter of each year. The program of study is designed to prepare students for productive careers in biochemistry; its emphasis is training in research, and each student works closely with members of the faculty. In addition to the requirement for a Ph.D. dissertation based on original research, students are required to complete six advanced courses in biochemistry and related areas among the 135 total units required for the Ph.D. Selection of these courses is tailored to fit the background and interests of each student. A second requirement involves the submission of two research proposals which are presented by the student to a small committee of departmental faculty members who are also responsible for monitoring the progress of student curricular and research programs, and a journal club presentation. All Ph.D. students are expected to participate actively in the department's seminar program, and students are encouraged to attend and to present papers at regional and national meetings in cellular biochemistry and molecular biology. Teaching experience is an integral part of the Ph.D. curriculum and is required for the degree.

The Department of Biochemistry offers an M.S. degree only to students already enrolled in the Ph.D. program. Students should contact the Graduate Studies adviser for more details.

Those applying for graduate study should have at least a baccalaureate degree and should have completed work in cell and developmental biology, basic biochemistry and molecular biology, and genetics. Also required are: at least one year of university physics; differential and integral calculus; and organic, inorganic, and physical chemistry. The department is especially interested in those applicants who have research experience in biology or chemistry. Students must submit an application, including transcripts and letters of recommendation, by December for admission in the following Autumn Quarter.

Applications should be submitted at the Office of Graduate Admissions (http://gradadmissions.stanford.edu) web site. Applicants are notified by March 31 of decisions on their applications. The Biochemistry Department has made scores from the general Graduate Record Examination (GRE) (verbal, quantitative, and analytical) optional on our application.

All applicants are urged to compete for non-Stanford fellowships or scholarships, and U.S. citizens should complete an application for a National Science Foundation Predoctoral Traineeship. Students are provided with financial support to cover normal living expenses; Stanford tuition costs are paid. Applicants for admission to the department are considered without regard to race, color, creed, religion, sex, age, national origin, or marital status.

Postdoctoral research training is available to graduates who hold a Ph.D. or an M.D. degree. Qualified individuals may write to individual faculty members for further information.

The Department of Biochemistry focuses on the molecular basis of life, by studying the structures and functions of proteins and nucleic acids, the control of development, molecular motors and the cytoskeleton, trafficking of proteins between organelles, regulation of gene expression, protein homeostasis, structure and design, genetic and epigenetic control of chromosome function, and the application of genomics, all towards the understanding of health and disease.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Biochemistry Department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Department of Biochemistry is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails

collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors): Robert L. Baldwin, Paul Berg, Patrick O. Brown, Douglas L. Brutlag, David S. Hogness, A. Dale Kaiser, I. Robert Lehman

Chair: Aaron F. Straight

Director of Graduate Studies: Daniel Herschlag

Professors: Steven Artandi, Gilbert Chu, Ronald W. Davis, James E. Ferrell, Jr., Daniel Herschlag, Peter Kim, Mark A. Krasnow, Suzanne R. Pfeffer, James A. Spudich, Aaron F. Straight

Associate Professors: Onn Brandman, Rhiju Das, Pehr A. B. Harbury, Rajat Rohatgi

Assistant Professors: Silvana Konermann, Lingyin Li, Julia Salzman

Courtesy Professors: Chaitan S. Khosla, Sharon Long, Karlene Cimprich

Courses

BIOC 109A. Building Blocks for Chronic Disease. 3 Units.
Researchers have come a long way in developing therapies for chronic disease but a gap remains between current solutions and the ability to address the disease in full. This course provides an overview to the underlying biology of many of these diseases and how they may connect to each other. A "think outside of the box" approach to drug discovery is needed to bridge such a gap in solutions, and this course teaches the building blocks for that approach. Could Legoland provide the answer? This is a guest lecture series with original contributions from prominent thought leaders in academia and industry. Interaction between students and guest lecturers is expected. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.
Same as: BIO 109A, BIOC 209A, HUMBIO 158

BIOC 109B. Advances in Therapeutic Development: Neuronal Signaling and Immunology. 3 Units.
This is a seminar course focused on teaching students about novel research and applications in the fields of neuroscience and immunology. The course will cover topics that range from the neuronal pathways in opioid addiction and the mechanics of pain, to advances in immunotherapy. Students will engage with diverse material from leading neuroscience and cancer immunotherapy experts in the Bay Area. Guest lecturers will visit from both academia and neighboring pharmaceutical/biotechnology companies. Active participation is required. Prerequisite: Biology or Human Biology core. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program, but not both.
Same as: BIO 109B

BIOC 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

BIOC 200. Applied Biochemistry. 2 Units.
Enrollment limited to MD candidates. Fundamental concepts of biochemistry as applied to clinical medicine. Topics include vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metabolic pathways. Clinical case studies discussed in small-group, problem-based learning sessions.

BIOC 202. Biochemistry Mini-Course. 1 Unit.
Open to first year Biochemistry students and to other PhD students with consent of instructor. Hands-on, week-long immersion in biochemical methods and practice, high-throughput sequencing and data analysis, theory and application of light microscopy, and computational approaches to modern biological problems.

BIOC 205. Molecular Foundations of Medicine. 4 Units.
For medical students. The course examines the impact of molecular biology on medicine. Topics include DNA replication, recombination, and repair; genomics; gene transcription; protein translation; and proteins in cell decision-making. Medical impact is examined in patient presentations and small group discussions of papers from the medical literature.

BIOC 209A. Building Blocks for Chronic Disease. 3 Units.
Researchers have come a long way in developing therapies for chronic disease but a gap remains between current solutions and the ability to address the disease in full. This course provides an overview to the underlying biology of many of these diseases and how they may connect to each other. A "think outside of the box" approach to drug discovery is needed to bridge such a gap in solutions, and this course teaches the building blocks for that approach. Could Legoland provide the answer? This is a guest lecture series with original contributions from prominent thought leaders in academia and industry. Interaction between students and guest lecturers is expected. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.
Same as: BIO 109A, BIOC 109A, HUMBIO 158

BIOC 215. Frontiers in Biological Research. 1 Unit.
Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems.
Same as: DBIO 215, GENE 215

BIOC 221. The Teaching of Biochemistry. 3 Units.
Required for teaching assistants in Biochemistry. Practical experience in teaching on a one-to-one basis, and problem set design and analysis. Familiarization with current lecture and text materials; evaluations of class papers and examinations. Prerequisite: enrollment in the Biochemistry Ph.D. program or consent of instructor.

BIOC 224. Advanced Cell Biology. 4 Units.
For Ph.D. students. Taught from the current literature on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, signaling, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Advanced undergraduates may participate with the permission of the Course Director.
Same as: BIO 214, MCP 221

BIOC 227. Connections: Life, Science, and, Community. 1 Unit.
¿Connections¿ aims to welcome first-year students into the Biochemistry Department by fostering connections between you as a scientist and you as an individual with the broader communities of the department, Stanford, and local, national and international communities. The students, staff and faculty who have organized Connections believe that a sense of oneself and of belonging are foundations for doing transformative science and for doing so with purpose and wellness. We strive not just to be scientists but rather citizen-scientists, with broad and manifold aspirations for ourselves and those around us. The sessions planned, in addition to providing practical information, are aimed at continuing your exploration of your values and goals and placing that exploration in context of the multiple communities that you can embrace and that will embrace you. They will do so in ways that are inclusive to all individuals, thereby empowering individuals to be whoever they are, strengthening community, and promoting the ongoing causes of social and societal fairness and justice.

BIOC 236. Biology by the Numbers. 3 Units.
For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological times time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision.
Same as: APPPHYS 236

BIOC 239. Introduction to Analysis of RNA Sequence Data. 1-2 Unit.
Introduction to analysis of RNA-sequencing data including theory and napplications. Topics discussed will include computer scientific approaches to sequencing alignment such as dynamic programming, and statistical techniques that are that are used in analysis of next-generation sequencing data: Poisson models, the Expectation-Maximization algorithm, bootstrapping, multivariate linear models. Time permitting, we will cover single cell RNA sequencing, analysis and topics that arise in the analysis of multiple or large numbers of samples.

BIOC 241. Biological Macromolecules. 3-5 Units.
The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 30. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.
Same as: BIOE 241, BIOPHYS 241, SBIO 241

BIOC 257. Currents in Biochemistry. 1 Unit.
Discussions with Biochemistry faculty on their research careers. Getting to know the faculty, how they think, what drives them, how they chose their directions, and how they made tactical and strategic research decisions along the way.

BIOC 281. Introduction to Single Cell Expression. 2 Units.
Student lead: In the last decade single cell expression profiling has contributed to nearly every facet of biology, from uncovering new cell types to mapping stem cell lineages to molecularly dissecting disease. Single cell projects¿ scale and scope have grown as mRNA and cell capture have improved, and it is now possible to profile millions of cells across entire organisms. The data deluge has spurred development of hundreds of tools to analyze and extract as much information from these rich datasets, creating a dizzying landscape for biologists. This minicourse breaks down single cell expression analysis into phases, exploring important considerations and software for each and provides a hands-on environment to implement them.

BIOC 294. Chemistry for Biologists and Others. 3 Units.
Chemical transformations are central to biology and function, and chemical methods provide some of the most powerful tools for everyday experimental biology. Yet, most practitioners of biology have learned chemistry through memorization and do not use chemical principles or intuition in their research, even though chemistry underlies most processes and experiments carried out in biology and by biologists. Fortunately, a basic understanding and working knowledge can be gained in a short time, through a small set of simple concepts and limited number of memorized ¿facts¿. These concepts and facts will be introduced and then mastered through use in highly interactive, in-class problems and evaluation of selected literature. At the end of the three-week course students will have an ability to understand the chemistry underlying cellular processes and to better discuss and evaluate chemical tools and approaches. Prerequisites: High school or college introductory chemistry recommended but not required.
Same as: BIOS 294

BIOC 299. Directed Reading in Biochemistry. 1-18 Unit.
Prerequisite: consent of instructor.

BIOC 350. Development of Thesis Research. 2 Units.
Biochemistry 2nd year PhD students with permission of instructor only. Students place their thesis research into a broader scientific perspective, identify important questions to ask, and learn to communicate these clearly. The course includes a series of roundtable discussions with students and faculty about the students' proposed research topics. The initial focus is on developing the equivalent of a specific aims page for a research grant.

BIOC 360. Developing an Original Research Proposal. 1 Unit.
Biochemistry 3rd year PhD students with permission of instructor only. Students foster broad familiarity with the biomedical literature and learn to develop new research directions. Topics well outside of each student's research topic are chosen for regular informal journal club presentations. Students work with faculty to hone skills for identifying important open scientific questions, formulating hypotheses, and refining experimental logic. Students work collectively to create a "model" research proposal on a topic of general interest to the group, and then individually to develop an original proposal on a topic of each student's choice.

BIOC 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

BIOC 399. Graduate Research and Special Advanced Work. 1-18 Unit.
Allows for qualified students to undertake investigations sponsored by individual faculty members.

BIOC 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.
Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
Same as: BIO 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

BIOC 801. TGR Project. 0 Units.
.

BIOC 802. TGR Dissertation. 0 Units.
.

BIOMEDICAL ETHICS

The Stanford University Center for Biomedical Ethics (SCBE) is dedicated to interdisciplinary research and education, and provides clinical and research ethics consultation. SCBE serves as a scholarly resource on emerging ethical issues raised by medicine and biomedical research.

SCBE offers a scholarly concentration in Biomedical Ethics and Medical Humanities (BEMH) to medical students. This program allows medical students to study in depth the moral, social, and humanistic dimensions of medicine and biomedical science. Using cross-disciplinary methods such as those from philosophy, social science, film, literature, art, and law, students examine the meaning and implications of medicine and medical research.

Degree Requirements

COVID-19-Related Degree Requirement Changes

For information on how Biomedical Ethics degree requirements have been affected by the pandemic, see the "COVID-19 Policies tab (p. 2464)" in the "Medicine" section of this bulletin. For University-wide policy changes related to the pandemic, see the "COVID-19 and Academic Continuity (p. 5)" section of this bulletin.

Students who pursue Biomedical Ethics and Medical Humanities are required to complete 12 units including these two core courses:

		Units
INDE 212	Medical Humanities and the Arts	2
PEDS 251A	Medical Ethics I	2

Students may select eight elective BEMH units from a wide variety of University, Medical School, and Law School courses. Students interested in co-concentrating with another scholarly concentration must complete the two core BEMH courses plus 2 units in the BEMH scholarly area (six units for each concentration).

Students are encouraged to go through the various offerings and devise a course plan to present to the co-directors, Audrey Shafer and Maren Monsen.

Additional information on requirements for the scholarly concentration is available at the BEMH (http://bioethics.stanford.edu/education/bemh/) web site.

Instructions:

Click on the Edit pencil to getstarted.Delete this "Instructions" block when you have finished editing...just click inside the blue box to select and then clickdelete.Do not delete the block immediatelybelow.This block of general University information isrequired.Replace ENTER ANY GENERAL DEPARTMENT/PROGRAM TEXT HERE with any general department/program text, or just delete theline.This might include something generic about support, or instructions on who to contact,etc.If you department has not decided what to do, replace this line with text such as "The department is in the process of making decisions concerning COVID-19 policies and will update this tab when those decisions have been made." Then delete the remaining text below asrelevant.Undergraduate and graduategrading:Pick one statement and delete the others, or enter your owntext.You can add to the text also, perhaps to include reference to whom the student should contact,etc.Also, replace DEPARTMENTorPROGRAM with the name of your own department or program, e.g., Department ofBiology.Enter any additional policies under "Other..." or delete the header if there are no additionalpolicies.When done, save, and send toworkflow.Contact Stephen by Slack (arod) if you have questions, or come to our Bulletin officehours:https://asconfluence.stanford.edu/confluence/display/SASLL/Stanford+Bulletin+2020-21.Note that you will be able to edit this content as new informationdevelops.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

ENTER ANY GENERAL DEPARTMENT/PROGRAM TEXT HERE ... OR DELETE THIS LINE.

Undergraduate Degree Requirements

Grading

The DEPARTMENTorPROGRAM counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

The DEPARTMENTorPROGRAM has not changed its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21.

Graduate Advising Expectations

The Center for Biomedical Ethics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Co-directors: Audrey Shafer and Maren Monsen

Director Emeritus: Thomas A. Raffin

Associate Director: Mildred K. Cho

Participating Faculty and Staff: Laurel Braitman, Danton S. Char, Julie A. Collier, Jacqueline Genovese, Steven Goodman, Maren Grainger-Monsen, Henry Greely, Alvan A. Ikoku, Katrina A. Karkazis, Sandra S. Lee, Jose R. Maldonado, Michelle M. Mello, Kelly E. Ormond, Laura W. Roberts, Christopher T. Scott, Audrey Shafer, Abraham C. Verghese

BIOMEDICAL INFORMATICS

Courses offered by the Program in Biomedical Informatics are listed under the subject code BIOMEDIN on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOMEDIN&filter-catalognumber-BIOMEDIN=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOMEDIN&filter-catalognumber-BIOMEDIN=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOMEDIN&filter-catalognumber-BIOMEDIN=on).

The program in Biomedical Informatics emphasizes research to develop novel computational methods that can advance biomedicine. Students receive training in the investigation of new approaches to conceptual modeling and to development of new algorithms that address challenging problems in the biological sciences and clinical medicine. Students with a primary interest in developing new informatics methods and knowledge are best suited for this program. Students with a primary interest in the biological or medical application of existing informatics techniques may be better suited for training in the application areas themselves.

Graduate Programs in Biomedical Informatics

The Biomedical Informatics Program is interdepartmental and offers instruction and research opportunities leading to M.S. and Ph.D. degrees in Biomedical Informatics. All students are required to complete the core curriculum requirements, and also to complete additional course work to fulfill degree requirements and pursue their technical interests and goals as specified for each degree program.

The program can provide flexibility and can complement other opportunities in applied medical research at Stanford. Special arrangements may be made for those with unusual needs or those simultaneously enrolled in other degree programs within the University. Similarly, students with prior relevant training may have the curriculum adjusted to eliminate requirements met as part of prior training.

The GRE is not required for admission.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Advising

Upon entering the program, each student is assigned an academic adviser to help with course selection and monitor progress towards program milestones and degree requirements. Each research-track (academic) M.S. and Ph.D. student conducts research under the primary mentorship of a faculty supervisor, who guides their scholarly and professional development. Further details about the adviser roles and responsibilities are found in the BMI Student Handbook (http://med.stanford.edu/bmi/biomedical-informatics-students/handbook.html) and on the Advising tab (p. 2382) in this section of the Stanford Bulletin

Master of Science in Biomedical Informatics (Academic)

This degree is designed for individuals who wish to undertake in-depth study of biomedical informatics with research on a full-time basis. Normally, a student spends two years in the program and implements and documents a substantial project by the end of the second year. The first year involves acquiring the fundamental concepts and tools through course work and research project involvement. Academic M.S. students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics. This degree requires a written research paper to be approved by two faculty members.

Master of Science in Biomedical Informatics (Professional/Honors Cooperative Program)

This degree is designed primarily for the working professional who already has advanced training in one discipline and wishes to acquire interdisciplinary skills. Although many classes necessary for the degree are available online, some requirements may be fulfilled through implementation of an alternative plan to be approved by the program. The professional M.S. is offered in conjunction with Stanford Center for Professional Development (SCPD), which establishes the rates of tuition and fees. The program uses the honors cooperative program (HCP) model, which assumes that the student is working full-time and is enrolled in the M.S. on a part-time basis. Students who live locally may attend their courses on campus. Students have up to five years to complete the program. Research projects are optional; if interested, the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

Master of Science in Biomedical Informatics (Coterminal)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. See the "Coterminal Degrees (p. 56)" section of this bulletin for additional information. For University coterminal degree program rules and University application forms, see the Registrar's web site (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/).

The coterminal Master of Science program follows the same program requirements as the Master of Science (Professional), except for the requirement to be employed full-time. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Research projects are optional; if interested, the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

Application to the Coterminal Program

For complete information, see the program's Coterminal Master's Degree (http://bmi.stanford.edu/prospective-students/masters-degree-coterminal-biomedical-informatics.html) page.

1. Submit the University Coterminal Online Application (https://applyweb.com/stanterm/).
2. Submit your academic resume or curriculum vitae.
3. Submit a one-page Statement of Purpose describing how and why the BMI program is well matched to your interests.

Applicants to the coterminal M.S. programs are not required to submit GRE scores. GRE scores are recommended, especially if you have relatively little prior course work in quantitative and computational areas. The TOEFL is not required.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements

for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Core Curriculum and Program Requirements in Biomedical Informatics

Core Curriculum in Biomedical Informatics (37 units)

Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. Regardless of whether they are enrolled, they should attend all meetings throughout their graduate training, and attend a research colloquium appropriate to their interests. All students are expected to fulfill the following requirements:

- **Core Biomedical Informatics (15 or more units)**
  Students are expected to complete the core offerings in biomedical informatics. These courses should be taken for a grade.
  a. BIOMEDIN 212 Introduction to Biomedical Informatics Research Methodology
  b. and four of the courses listed below. Additional core course requirements are listed under the M.S. degree program.

		Units
BIOMEDIN 210	Modeling Biomedical Systems	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Science for Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

- **Computer Science, Statistics, Mathematics & Engineering (18 units)**
  Students are expected to create a program of study with graduate-level courses in computer science, statistics and other technical informatics-related disciplines to achieve in-depth mastery. The program of study may focus on aspects of these disciplines including machine learning, statistical modeling, artificial intelligence, data mining, image analysis, human-computer interaction and data visualization. A complete list of courses accepted for this requirement is on the BMI website. The following are required:
  a. CS 161 Design and Analysis of Algorithms
  b. STATS 200 Introduction to Statistical Inference
  c. STATS 315A Modern Applied Statistics: Learning or CS 229 Machine Learning
  d. No more than 9 units in courses numbered 100-199, and the rest should be 200 or above.
  e. CS 106A Programming Methodology and CS 106B Programming Abstractions cannot be counted for this requirement.
  f. All courses should be formal classroom-based courses, not research units.
  g. Up to 6 units of this portion of the core curriculum may be taken on a Satisfactory/No credit basis.
- **Social and Ethical Issues (4 units)**
  Students are expected to be familiar with issues regarding responsible conduct of research, reproducibility of research, and ethical, legal, social, organizational and behavioral aspects of the impact of biomedical informatics technologies on society. Courses that fulfill this requirement can be found by entering "bmi::ethics" in the Explore Courses search box. PhD students and Academic M.S. students should take MED 255 The Responsible Conduct of Research in their first year. These courses may be taken on a Satisfactory/No credit basis.

		Units
BIODS 240	Race, Data Algorithms, and Health	1
BIOE 122	BioSecurity and Pandemic Resilience	4-5
BIOE 131	Ethics in Bioengineering	3
BIOE 450	Advances in Biotechnology	3
BIOMEDIN 254	Quality & Safety in U.S. Healthcare	3
BIOMEDIN 256	Economics of Health and Medical Care	5
BIOMEDIN 432	Analysis of Costs, Risks, and Benefits of Health Care	4
BIOS 224	Big Topics in Stem Cell Ethics	2
BIOS 258	Ethics, Science, and Society	1
CS 181	Computers, Ethics, and Public Policy	4
CS 181W	Computers, Ethics, and Public Policy	4
CSB 272	Responsible conduct, rigor, and reproducibility in research	1
EMED 122	BioSecurity and Pandemic Resilience	4-5
EMED 222	BioSecurity and Pandemic Resilience	4-5
GENE 210	Genomics and Personalized Medicine	3
HRP 209	Health Law: The FDA	2-3
HRP 211	Law and Biosciences: Neuroscience	3
HRP 221	Law and the Biosciences: Genetics	3
HRP 254	Quality & Safety in U.S. Healthcare	3
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
HUMBIO 174	Foundations of Bioethics	3
INDE 212	Medical Humanities and the Arts	2
ME 208	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
MED 228	Physicians and Social Responsibility	1
MED 242	Physicians and Human Rights	1
MED 255	The Responsible Conduct of Research	1
MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	1
MS&E 256	Technology Assessment and Regulation of Medical Devices	3
MS&E 278	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
NBIO 101	Social and Ethical Issues in the Neurosciences	2-4
PEDS 251A	Medical Ethics I	2
PEDS 251B	Medical Ethics II	2

PUBLPOL 122	BioSecurity and Pandemic Resilience	4-5
PUBLPOL 222	BioSecurity and Pandemic Resilience	4-5

Program Requirements for the Academic M.S., HCP Professional M.S., and Coterminal M.S. Degrees

Students enrolled in any of the M.S degrees must complete the program requirements in order to graduate.

- The core curriculum generally entails a minimum of 37 units of course work, but can require more or less depending upon the courses chosen and the previous training of the student.
- M.S. candidates should complete additional course work and program requirements as outlined below. No one is required to take courses in an area in which he or she has already been adequately trained; under such circumstances, students are permitted to skip courses or substitute more advanced work using a formal annual process administered by the BMI executive committee. Students design appropriate programs for their interests with the assistance and approval of their Biomedical Informatics academic adviser.
- At least 21 units of formal letter-graded coursework are expected for all MS and PhD candidates.

Programs of at least 45 Stanford units that meet the following guidelines are normally approved:

1. Completion of the core curriculum with overall GPA of 3.0.
2. Unrestricted Electives needed to complete 45 units. Students may fulfill this requirement with any Stanford graduate courses, including courses taken to satisfy program prerequisites.
3. At least 23 units of courses must be at the level 200 or above.
4. Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium.
5. Academic M.S. students who are funded by the program are required to be a teaching assistant for one course; those students may register for 1-3 units of BIOMEDIN 290 Biomedical Informatics Teaching Methods .
6. HCP professional masters students who are local are encouraged to participate in on-campus coursework and seminars.
7. Masters students should sign up for BIOMEDIN 801 TGR Master's Project for their project units after completing their 45-unit residency requirement.

Doctor of Philosophy in Biomedical Informatics

Individuals wishing to prepare themselves for careers as independent researchers in biomedical informatics, with applications experience in bioinformatics, clinical informatics, or imaging informatics, should apply for admission to the doctoral program. The University's basic requirements for the doctorate (residence, dissertation, examination, and so on) are discussed in the "Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees/)" section of this bulletin.

The Core Curriculum in Biomedical Informatics (37 units) is outlined below. The Ph.D. program requires an additional 15 units of coursework, to complete a total of 52 units.

Core Curriculum in Biomedical Informatics (37 units)

Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. Regardless of whether they are enrolled, they should attend all meetings throughout their graduate training, and attend a research colloquium appropriate to their interests. All students are expected to fulfill the following requirements:

- **Core Biomedical Informatics Courses (9 or more units)**
  Students are expected to complete the core offerings in biomedical informatics. These courses should be taken for a grade.
  a. BIOMEDIN 212 Introduction to Biomedical Informatics Research Methodology
  b. and two of the courses listed below.

		Units
BIOMEDIN 210	Modeling Biomedical Systems	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Science for Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

- **Computer Science, Statistics, Mathematics & Engineering (24 units)**
  Ph.D. students are expected to create a program of study with graduate-level courses in computer science, statistics and other technical informatics-related disciplines to achieve in-depth mastery. The program of study may focus on aspects of these disciplines including machine learning, statistical modeling, artificial intelligence, data mining, image analysis, human-computer interaction and data visualization. Program Requirements for the Biomedical Informatics PhD:

1. Completion of the Core Curriculum (37 or more units) described above.
2. Domain biology or medicine (6 units). Students should take classes relevant to their application area interests.
3. The core curriculum and domain biology/medicine requirements should be completed by the end of the second year of graduate study.
4. Unrestricted electives (9 units). Students may fulfill this requirement with any Stanford graduate courses, including courses taken to satisfy program prerequisites.
5. A cumulative GPA of 3.0 or greater to remain in good academic standing.
6. In the first year, at least two research rotations are required.
7. Each student is required to be a teaching assistant for two courses as assigned by the Biomedical Informatics Executive Committee; one should be completed in the first two years of study. Students may register for up to 3 units of BIOMEDIN 290 Biomedical Informatics Teaching Methods to obtain credit for each teaching assistantship.
8. Doctoral students are generally advanced to Ph.D. candidacy after passing the qualifying exam, which takes place by the end of the second year of training. A student's academic adviser has primary responsibility for the adequacy of the program, which is regularly reviewed by the Biomedical Informatics Executive Committee. The student must fulfill these requirements and apply for admission to candidacy for the Ph.D. by the beginning of the third year.
9. During the third year of training, each doctoral student is required to give a thesis pre-proposal seminar that describes evolving research plans.
10. The most important requirement for the Ph.D. degree is the dissertation. Each student must secure the agreement of a member of the BMI advising faculty to act as the doctoral dissertation adviser or co-adviser.
11. After application for Terminal Graduate Registration (TGR) status and completion of 135 units, the Ph.D. candidate should register each quarter for BIOMEDIN 802 TGR PhD Dissertation so that their research effort may be counted toward the degree.
12. Each student must present and defend their dissertation work before a University Oral Examination Committee that includes at least one member of the BMI Advising Faculty. The committee determines whether the student's general knowledge of the field and the details of their completed research are sufficient to be granted the doctoral degree. Further details about the Oral Examination, and the submission of the written dissertation are in the BMI Student Handbook, and in University policies cited therein.
13. The student is expected to demonstrate an ability to present scholarly material and research in a lecture at a formal seminar.
14. The student is expected to demonstrate an ability to present scholarly material in concise written form. Each student is required to write a paper suitable for publication, usually discussing his or her doctoral research project. This paper must be approved by the student's adviser as suitable for submission to a refereed journal before the doctoral degree is conferred.
15. The dissertation must be accepted by a doctoral dissertation reading committee composed of the principal dissertation adviser and two other readers. A fourth reader may be added at the discretion of the student and the principal adviser.

Ph.D. Minor in Biomedical Informatics

For a Ph.D. minor in Biomedical Informatics (BMI), a candidate must complete a minimum of 20 unduplicated units of biomedical informatics course work, including 12 units in BMI core courses from:

		Units
BIOMEDIN 210	Modeling Biomedical Systems	3
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Science for Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

The candidate must complete the one-unit MED 255 The Responsible Conduct of Research or an approved substitute.

The remaining units must be courses that would count towards the BMI master's degree, taken from these areas:

- Computer Science, Probability, Statistics, Machine Learning, Mathematics, Engineering
- Biomedicine
- Other BMI courses from the list above

Students are expected to participate regularly in BIOMEDIN 201 (p. 2378) Biomedical Informatics Student Seminar.

Courses used for the BMI Ph.D. minor may not be double-counted to meet the requirements of a master's or Ph.D. degree.

All courses used for the BMI Ph.D. minor, except MED 255, must be taken for a letter grade and passed with an overall GPA of 3.0 or better.

This degree offering became effective in Autumn Quarter 2010-11. Courses taken at Stanford prior to that date may be counted towards the BMI Ph.D. minor degree.

Application Process

Stanford Ph.D. students apply using the Application for Ph.D. Minor (https://stanford.app.box.com/v/app-phd-minor/) form and must provide an unofficial Stanford transcript as well as a statement of purpose for adding the Ph.D. minor degree. Submit the form and accompanying materials to the Biomedical Informatics program.

Advising

A minor program adviser is assigned from the Biomedical Informatics Executive Committee or advising faculty upon admission to the program.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Biomedical Informatics Program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Program in Biomedical Informatics is committed to providing academic and research advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program. The program’s student services staff is also an important part of the student’s advising team. They inform students and advisers about University and department requirements, procedures, and opportunities, and they maintain the official records of advising assignments and approvals.

Academic Adviser—Each new student in the Program in Biomedical Informatics is assigned an academic adviser (a member of the core or advising faculty or Executive Committee of the program). Academic advisers guide students in key areas such as selecting courses, discussing research rotations, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways. Usually, the academic adviser serves for the duration of the student’s study; the BMI Student Handbook (http://med.stanford.edu/bmi/biomedical-informatics-students/handbook.html) describes a process for formal adviser changes. In addition, the program director is available during the academic year by email and during office hours.

Academic progress and student completion of program requirements and milestones are monitored by the program director and student services staff, and are discussed by faculty during periodic meetings devoted to assessing graduate student progress. A detailed description of the program's requirements, milestones, and advising expectations are listed in the Biomedical Informatics Training Program Student Handbook, found on the program web site (http://med.stanford.edu/bmi/biomedical-informatics.html), as well as in the section on the Biomedical Informatics Program in ExploreDegrees (p. 2378).

Research Adviser—Each student in the academic M.S. and Ph.D. degree programs must also have a research adviser, chosen by mutual agreement at the end of their research rotations (typically by the end of their first year in the program). This research adviser is a member of the core or advising faculty for the BMI program. The research adviser may not be the same person as the academic adviser. Research advisers and the students should have a clear, shared understanding of the scientific objectives of the student’s work, and how it fits into a research program that will lead to an M.S. degree or Ph.D. degree. They should focus on the development of methods that are novel, generally applicable, and well-grounded in the informatics literature. In select cases, the research adviser may be a member of the collaborating faculty, in which case the student must have a co-adviser from the BMI core or advising faculty. When there is a secondary or co-adviser, the primary adviser and co-adviser should have a clear understanding of their mentorship roles.

Each Ph.D. student is required to fill out an annual Individual Developmental Plan (IDP), usually in the Summer. The IDP is then discussed with the research adviser, as a way to facilitate: advising the student, both during and beyond the Ph.D.; establishing clear expectations on both sides with respect to degree progress and timely graduation; and emphasizing the importance of wellness in graduate school, together with access to University wellness resources.

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation by late third year or early fourth year. Students should consult frequently with all members of the committee about the direction and progress of the dissertation research and are required to meet annually with their whole committee. The detailed process, including Stanford and BMI policies such as composition of the committee, process toward dissertation, defense, submission of the final dissertation, and readiness to graduate, are described in the BMI Student Handbook (http://med.stanford.edu/bmi/biomedical-informatics-students/handbook.html).

Additionally, the program adheres to the University policies, guidelines, and responsibilities that apply to all faculty-student advising relationships. For a statement of University policy on graduate advising, see the "Graduate Advising (https://exploredegrees.stanford.edu/graduatedegrees/#advisingandcredentialstext)" section of this bulletin.

Program Director and Chair: Sylvia Plevritis

Director of Graduate Studies: Sylvia Plevritis

BMI Executive Committee: Sylvia Plevritis (Program Director and Chair), Steven Bagley (Interim Executive Director), Russ B. Altman, Manisha Desai, Ying Lu, Stephen Montgomery, Mark A. Musen, Daniel L. Rubin, Chiara Sabatti, Nigam Shah, Lu Tian, Robert Tibshirani, Dennis P. Wall

*Participating Faculty and Staff by Department**

Anesthesiology: Nima Aghaeepour (Assistant Professor)

Biochemistry: Douglas Brutlag (Professor Emeritus), Rhiju Das (Associate Professor), Ronald Davis (Professor), James Ferrell (Professor), Julia Salzman (Assistant Professor), Julie Theriot (Professor)

Bioengineering: Russ B. Altman (Professor), Kwabena Boahen (Professor), Markus Covert (Associate Professor), Scott Delp (Professor), Ingmar Riedel-Kruse (Consulting Assistant Professor), Vijay Pande (Adjunct Professor)

Biology: Hunter Fraser (Associate Professor), Dmitri Petrov (Professor), Jonathan Pritchard (Professor)

Biomedical Data Science: Russ B. Altman (Professor), Euan Ashley (Professor), Gill Bejerano (Associate Professor), Manisha Desai (Professor), Bradley Efron (Professor), Andrew Gentles (Assistant Professor), Olivier Gevaert (Assistant Professor), Trevor Hastie (Professor), Tina Hernandez-Boussard (Associate Professor), Iain Johnstone (Professor), Purvesh Khatri (Associate Professor), Teri Klein (Professor), Ying Lu (Professor), Mark A. Musen (Professor), Aaron Newman (Assistant Professor), Richard Olshen (Professor Emeritus), Julia Palacios (Assistant Professor), Sylvia Plevritis (Professor), Manuel Rivas (Assistant Professor), Daniel L. Rubin (Associate Professor), Chiara Sabatti (Professor), Julia Salzman (Assistant Professor), Nigam Shah (Associate Professor), Lu Tian (Professor), Robert Tibshirani (Professor), Dennis P. Wall (Associate Professor), Wing H Wong (Professor), James Zou (Assistant Professor)

Richard Olshen (Professor), Chiara Sabatti (Associate Professor), Robert Tibshirani (Professor), Dennis P. Wall (Associate Professor)

Chemical and Systems Biology: Joshua Elias (Assistant Professor), James Ferrell (Professor)

Chemistry: Vijay Pande (Professor)

Computer Science: Gill Bejerano (Associate Professor), David Dill (Professor Emeritus), Ronald Dror (Associate Professor), Leonidas Guibas (Professor), Anshul Kundaje (Assistant Professor), Terry Winograd (Professor Emeritus)

Dermatology: Paul Khavari (Professor)

Developmental Biology: Gill Bejerano (Associate Professor)

Electrical Engineering: Kwabena Boahen (Professor)

Energy Resources Engineering: Margot Gerritsen (Professor)

Genetics: Russ B. Altman (Professor), Euan Ashley (Professor), Michael Bassik (Assistant Professor), Ami Bhatt (Assistant Professor), J. Michael Cherry (Professor, Research), Stanley N. Cohen (Professor), Christina Curtis (Assistant Professor), Ronald Davis (Professor), William Greenleaf (Associate Professor), Karla Kirkegaard (Professor), Teri E. Klein (Senior Research Scientist), Anshul Kundaje (Assistant Professor), Jin Billy Li (Associate Professor), Stephen B. Montgomery (Assistant Professor), Jonathan Pritchard (Professor), Gavin Sherlock (Associate Professor), Arend Sidow (Professor), Michael P. Snyder (Professor), Hua Tang (Professor)

Health Research and Policy: Trevor Hastie (Professor), Mark Hlatky (Professor)

Management Science and Engineering: Margaret Brandeau (Professor), Ross D. Shachter (Associate Professor)

Mechanical Engineering: Scott Delp (Professor)

Medicine: Russ B. Altman (Professor), Euan Ashley (Professor), Mike Baiocchi (Assistant Professor), Sanjay Basu (Assistant Professor), Ami Bhatt (Assistant Professor), Jayanta Bhattacharya (Professor), Catherine Blish (Associate Professor), Carol Cain (Adjunct Assistant Professor), Jonathan Chen (Assistant Professor), Stanley Cohen (Professor), Christina Curtis (Assistant Professor), Manisha Desai (Professor), Michel Dumontier (Associate Professor), Andrew Gentles (Assistant Professor), Olivier Gevaert (Assistant Professor), Mary Goldstein (Professor), Summer Han (Assistant Professor), Tina Hernandez-Boussard (Associate Professor), Michael Higgins (Adjunct Associate Professor), Mark Hlatky (Professor), Hanlee P. Ji (Associate Professor), Purvesh Khatri (Associate Professor), Teri Klein (Professor), Lianne Kurina (Associate Professor, Teaching), Curtis Langlotz (Professor), Henry Lowe (Associate Professor), Mark A. Musen (Professor), Douglas K. Owens (Professor), Natalie Pageler (Clinical Associate Professor), David Relman (Professor), Daniel L. Rubin (Associate Professor), Robert W. Shafer (Professor, Research), Nigam Shah (Associate Professor), Samson Tu (Senior Research Engineer), P.J. Utz (Professor), Steven Bagley (Sr. Research Engineer), Eran Bendavid (Associate Professor), Zihuai He (Assistant Professor, Research)

Microbiology and Immunology: Karla Kirkegaard (Professor), Garry Nolan (Professor), David Relman (Professor), Julie Theriot (Professor)

Neurology: Zihuai He (Assistant Professor, Research)

Neurosurgery: Summer Han (Assistant Professor)

Operations, Information and Technology: Mohsen Bayati (Associate Professor)

Pathology: Stephen B. Montgomery (Associate Professor), Arend Sidow (Professor)

Pediatrics: Gill Bejerano (Associate Professor), Natalie Pageler (Clinical Associate Professor), Jonathan Palma (Clinical Associate Professor), Dennis P. Wall (Associate Professor)

Psychiatry and Behavioral Sciences: Vinod Menon (Professor, Research), Manish Saggar (Assistant Professor)

Psychology: Russell Poldrack (Professor)

Radiation Oncology: Ruijiang Li (Assistant Professor), Lei Xing (Professor)

Radiology: Sam (Sanjiv) Gambhir (Professor), Curtis Langlotz (Professor), Matt Lungren (Assistant Professor), Parag Mallick (Associate Professor, Research), Sandy A. Napel (Professor), David Paik (Adjunct Assistant Professor), Sylvia Plevritis (Professor/ Program Director), Daniel L. Rubin (Professor), Greg Zaharchuk (Professor)

Statistics: Bradley Efron (Professor), Trevor J. Hastie (Professor), Susan Holmes (Professor), Iain Johnstone (Professor), Art Owen (Professor), Julia Palacios (Assistant Professor), Chiara Sabatti (Professor), Robert Tibshirani (Professor), Wing H Wong (Professor)

Structural Biology: Michael Levitt (Professor)

Surgery: Tina Hernandez-Boussard (Associate Professor), Thomas Krumel (Professor))

* Research opportunities are not limited to faculty and departments listed.

Courses

BIOMEDIN 156. Economics of Health and Medical Care. 5 Units.
Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.
Same as: BIOMEDIN 256, ECON 126, HRP 256

BIOMEDIN 201. Biomedical Informatics Student Seminar. 1 Unit.
Participants report on recent articles from the Biomedical Informatics literature or their research projects. Goals are to teach critical reading of scientific papers and presentation skills. May be repeated three times for credit.

BIOMEDIN 205. Precision Practice with Big Data. 1 Unit.
Primarily for M.D. students; open to other graduate students. Provides an overview of how to leverage large amounts of clinical, molecular, and imaging data within hospitals and in cyberspace--big data--to practice medicine more effectively. Lectures by physicians, researchers, and industry leaders survey how the major methods of informatics can help physicians leverage big data to profile disease, to personalize treatment to patients, to predict treatment response, to discover new knowledge, and to challenge established medical dogma and the current paradigm of clinical decision-making based solely on published knowledge and individual physician experience. May be repeated for credit. Prerequisite: background in biomedicine. Background in computer science can be helpful but not required.

BIOMEDIN 206. Informatics in Industry. 1 Unit.
Effective management, modeling, acquisition, and mining of biomedical information in healthcare and biotechnology companies and approaches to information management adopted by companies in this ecosystem. Guest speakers from pharmaceutical/biotechnology companies, clinics/hospitals, health communities/portals, instrumentation/software vendors. May be repeated for credit.

BIOMEDIN 207. Seminar: Health IT in Care Delivery systems. 1 Unit.
The practice of medicine is reacting quickly to the avalanche of information available from electronic health records and data directly submitted by patients and from the environment. This seminar, comprised of guest lectures from industry and academia, will highlight the practical challenges and successes of how health IT has transformed care delivery programs. The seminar will cover current efforts in clinical decision support, patient-centered design, integration with community care, big data, medical education, and the innovation pipeline for healthcare delivery organizations.

BIOMEDIN 208. Clinical Informatics Literature Review Seminar. 1 Unit.
Weekly seminar series in which seminal literature and current publications in the field of clinical informatics are reviewed and discussed. Organized by the Stanford Clinical Informatics fellowship program. Topics include electronic health record design, implementation, and evaluation; patient engagement; provider satisfaction; and hot topics in clinical informatics. Limited enrollment.

BIOMEDIN 210. Modeling Biomedical Systems. 3 Units.
At the core of informatics is the problem of creating computable models of biomedical phenomena. This course explores methods for modeling biomedical systems with an emphasis on contemporary semantic technology, including knowledge graphs. Topics: data modeling, knowledge representation, controlled terminologies, ontologies, reusable problem solvers, modeling problems in healthcare information technology and other aspects of informatics. Students acquire hands-on experience with several systems and tools. Prerequisites: CS106A. Basic familiarity with Python programming, biology, probability, and logic are assumed.
Same as: CS 270

BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology. 3-5 Units.
Capstone Biomedical Informatics (BMI) experience. Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Issues related to research reproducibility. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 214 or 215 or 217 or 260. Preference to BMI graduate students. Consent of instructor required.
Same as: BIOE 212, CS 272, GENE 212

BIOMEDIN 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.
Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisite: CS 106B; recommended: CS161; consent of instructor for 3 units.
Same as: BIOE 214, CS 274, GENE 214

BIOMEDIN 215. Data Science for Medicine. 3 Units.
The widespread adoption of electronic health records (EHRs) has created a new source of big data namely, the record of routine clinical practice as a by-product of care. This graduate class will teach you how to use EHRs and other patient data to discover new clinical knowledge and improve healthcare. Upon completing this course, you should be able to: differentiate between and give examples of categories of research questions and the study designs used to address them, describe common healthcare data sources and their relative advantages and limitations, extract and transform various kinds of clinical data to create analysis-ready datasets, design and execute an analysis of a clinical dataset based on your familiarity with the workings, applicability, and limitations of common statistical methods, evaluate and criticize published research using your knowledge of 1-4 to generate new research ideas and separate hype from reality. Prerequisites: CS 106A or equivalent, STATS 60 or equivalent. Recommended: STATS 216, CS 145, STATS 305.

BIOMEDIN 216. Representations and Algorithms for Molecular Biology: Lectures. 1-2 Unit.
Lecture component of BIOMEDIN 214. One unit for medical and graduate students who attend lectures only; may be taken for 2 units with participation in limited assignments and final project. Lectures also available via internet. Prerequisite: familiarity with biology recommended.

BIOMEDIN 217. Translational Bioinformatics. 3-4 Units.
Computational methods for the translation of biomedical data into diagnostic, prognostic, and therapeutic applications in medicine. Topics: multi-scale omics data generation and analysis, utility and limitations of public biomedical resources, machine learning and data mining, issues and opportunities in drug discovery, and mobile/digital health solutions. Case studies and course project. Prerequisites: programming ability at the level of CS 106A and familiarity with biology and statistics.
Same as: BIOE 217, CS 275, GENE 217

BIOMEDIN 219. Mathematical Models and Medical Decisions. 3 Units.
Analytic methods for determining optimal diagnostic and therapeutic decisions with applications to the care of individual patients and the design of policies applied to patient populations. Topics include: utility theory and probability modeling, empirical methods for disease prevalence estimation, probability models for periodic processes, binary decision-making techniques, Markov models of dynamic disease state problems, utility assessment techniques, parametric utility models, utility models for multidimensional outcomes, analysis of time-varying clinical outcomes, and the design of cost-constrained clinical policies. Extensive problem sets compliment the lectures. Prerequisites: introduction to calculus and basic statistics.

BIOMEDIN 220. Artificial Intelligence in Healthcare. 3-4 Units.
Healthcare is one of the most exciting application domains of artificial intelligence, with transformative potential in areas ranging from medical image analysis to electronic health records-based prediction and precision medicine. This course will involve a deep dive into recent advances in AI in healthcare, focusing in particular on deep learning approaches for healthcare problems. We will start from foundations of neural networks, and then study cutting-edge deep learning models in the context of a variety of healthcare data including image, text, multimodal and time-series data. In the latter part of the course, we will cover advanced topics on open challenges of integrating AI in a societal application such as healthcare, including interpretability, robustness, privacy and fairness. The course aims to provide students from diverse backgrounds with both conceptual understanding and practical grounding of cutting-edge research on AI in healthcare. Prerequisites: Proficiency in Python or ability to self-learn; familiarity with machine learning and basic calculus, linear algebra, statistics; familiarity with deep learning highly recommended (e.g. prior experience training a deep learning model).
Same as: BIODS 220, CS 271

BIOMEDIN 221. Machine Learning Approaches for Data Fusion in Biomedicine. 2 Units.
Vast amounts of biomedical data are now routinely available for patients, raging from genomic data, to radiographic images and electronic health records. AI and machine learning are increasingly used to enable pattern discover to link such data for improvements in patient diagnosis, prognosis and tailoring treatment response. Yet, few studies focus on how to link different types of biomedical data in synergistic ways, and to develop data fusion approaches for improved biomedical decision support. This course will describe approaches for multi-omics, multi-modal and multi-scale data fusion of biomedical data in the context of biomedical decision support. Prerequisites: CS106A or equivalent, Stats 60 or equivalent.

BIOMEDIN 222. Cloud Computing for Biology and Healthcare. 3 Units.
Big Data is radically transforming healthcare. To provide real-time personalized healthcare, we need hardware and software solutions that can efficiently store and process large-scale biomedical datasets. In this class, students will learn the concepts of cloud computing and parallel systems' architecture. This class prepares students to understand how to design parallel programs for computationally intensive medical applications and how to run these applications on computing frameworks such as Cloud Computing and High Performance Computing (HPC) systems. Prerequisites: familiarity with programming in Python and R.
Same as: CS 273C, GENE 222

BIOMEDIN 224. Principles of Pharmacogenomics. 3 Units.
This course is an introduction to pharmacogenomics, including the relevant pharmacology, genomics, experimental methods (sequencing, expression, genotyping), data analysis methods and bioinformatics. The course reviews key gene classes (e.g., cytochromes, transporters) and key drugs (e.g., warfarin, clopidogrel, statins, cancer drugs) in the field. Resources for pharmacogenomics (e.g., PharmGKB, Drugbank, NCBI resources) are reviewed, as well as issues implementing pharmacogenomics testing in the clinical setting. Reading of key papers, including student presentations of this work; problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, 42, 43, 44X, 44Y or consent of instructor.
Same as: GENE 224

BIOMEDIN 225. Data Driven Medicine: Lectures. 2 Units.
Lectures for BIOMEDIN 215.With the spread of electronic health records and increasingly low cost assays for patient molecular data, powerful data repositories with tremendous potential for biomedical research, clinical care and personalized medicine are being built. But these databases are large and difficult for any one specialist to analyze. To find the hidden associations within the full set of data, we introduce methods for data-mining at the internet scale, the handling of large-scale electronic medical records data for machine learning, methods in natural language processing and text-mining applied to medical records, methods for using ontologies for the annotation and indexing of unstructured content as well as semantic web technologies. Prerequisites: familiarity with statistics (STATS 216) and biology.

BIOMEDIN 226. Digital Health Practicum in a Health Care Delivery System. 2-3 Units.
Practical experience implementing clinical informatics solutions with a focus on digital health in one of the largest healthcare delivery systems in the United States. Individual meetings with senior clinical informatics leaders to discuss elements of successful projects. Implementation opportunities include supporting the use of electronic health records, engagement of patients and providers via a personal health record, use of informatics to support patient service centers, and improvement of patient access to clinical data. Consent of course instructors required at least one quarter prior to student enrollment in course.

BIOMEDIN 233. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.
(Formerly HRP 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS or R. Special topics: cross-fold validation and bootstrap inference.
Same as: EPI 261, STATS 261

BIOMEDIN 240. Race, Data Algorithms, and Health. 1 Unit.
This course studies the interplay between race, data and algorithms in healthcare. The particular viewpoint we want to take is to understand the role of data, data analysis and algorithms in supporting equitable delivery of health care to members of all races. Topics as "representative data", "machine bias", "algorithmic fairness" are going to be central to the discussion. However, we want to stress the uniqueness of the "medicine/health care" viewpoint. For example, while in contexts as loan applications, it is normative that race information (or its proxies) not to be included among the variables used for decision, in healthcare, information on race is routinely collected in the attempt to provide "best" care. One of the goals of the class will be to understand what are the differences between biological populations and social environments that a doctor needs to be aware of as opposed to overly emphasized or imaginary ones. This will provide a context to understand the challenges that data collection and analysis faces to support equitable care.
Same as: BIODS 240

BIOMEDIN 245. Statistical and Machine Learning Methods for Genomics. 3 Units.
Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.
Same as: BIO 268, CS 373, STATS 345

BIOMEDIN 246. Seminar in Healthcare Quality and Safety. 1 Unit.
Primarily for medical students in the Quality and Safety Scholarly Concentration. Almost everyone will be a patient at some point in their lives. It is estimated that over 98,000 patients die in US hospitals each year due to medical errors and recent articles suggest that medical errors are the third leading cause of death in the US. Patient safety is the foundation of high-quality health care, which has become a critical issue in health policy discussions. This course will provide an overview of the quality & patient safety movement, the array of measurement techniques and issues, and perspectives of quality improvement efforts under the current policy landscape. Lunch will be provided for enrolled students.
Same as: HRP 246

BIOMEDIN 248. Clinical Trial Design in the Age of Precision Medicine and Health. 3 Units.
Overview of requirements, designs, and statistical foundations for traditional Phase I, II, and III clinical trials for medical product approval and Phase IV postmarketing studies for safety evaluation. As these methods cost too much and take too much time in the era of precision medicine and precision health, this course then introduces innovative designs that have been developed for affordable clinical trials, which can be completed within reasonable time constraints and which have been encouraged by regulatory agencies. Prerequisites: Working knowledge of statistics and R.
Same as: BIODS 248, BIODS 248P, STATS 248

BIOMEDIN 251. Outcomes Analysis. 4 Units.
Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.
Same as: HRP 252, MED 252

BIOMEDIN 254. Quality & Safety in U.S. Healthcare. 3 Units.
The course will provide an in-depth examination of the quality & patient safety movement in the US healthcare system, the array of quality measurement techniques and issues, and perspectives of quality and safety improvement efforts under the current policy landscape.
Same as: HRP 254

BIOMEDIN 256. Economics of Health and Medical Care. 5 Units.
Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.
Same as: BIOMEDIN 156, ECON 126, HRP 256

BIOMEDIN 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.
The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab or Python highly recommended.
Same as: CS 235, RAD 260

BIOMEDIN 273A. The Human Genome Source Code. 3 Units.
A computational primer to "hacking" the most amazing operating system "disk" on the planet: your genome. Handling genomic data is deceptively easy. But that's muscle. You want to be the brain, too. Topics include genome sequencing (assembling source code from code fragments); the human genome functional landscape: variable assignments (genes), control-flow logic (gene regulation) and run-time stack (epigenomics); human disease and personalized genomics (as a hunt for bugs in the human code); genome editing (code injection) to cure the incurable; and the source code modifications behind amazing animal adaptations. The course will introduce ideas from computational genomics, machine learning and natural language processing. Course includes primers on molecular biology, and text processing languages. Prerequisites: CS106A or equivalent. No biological background assumed.
Same as: CS 273A, DBIO 273A

BIOMEDIN 273B. Deep Learning in Genomics and Biomedicine. 3 Units.
Recent breakthroughs in high-throughput genomic and biomedical data are transforming biological sciences into "big data" disciplines. In parallel, progress in deep neural networks are revolutionizing fields such as image recognition, natural language processing and, more broadly, AI. This course explores the exciting intersection between these two advances. The course will start with an introduction to deep learning and overview the relevant background in genomics and high-throughput biotechnology, focusing on the available data and their relevance. It will then cover the ongoing developments in deep learning (supervised, unsupervised and generative models) with the focus on the applications of these methods to biomedical data, which are beginning to produced dramatic results. In addition to predictive modeling, the course emphasizes how to visualize and extract interpretable, biological insights from such models. Recent papers from the literature will be presented and discussed. Students will be introduced to and work with popular deep learning software frameworks. Students will work in groups on a final class project using real world datasets. Prerequisites: College calculus, linear algebra, basic probability and statistics such as CS 109, and basic machine learning such as CS 229. No prior knowledge of genomics is necessary.
Same as: BIODS 237, CS 273B, GENE 236

BIOMEDIN 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.
Computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules and cells. These computational methods play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course topics include protein structure prediction, protein design, drug screening, molecular simulation, cellular-level simulation, image analysis for microscopy, and methods for solving structures from crystallography and electron microscopy data. Prerequisites: elementary programming background (CS 106A or equivalent) and an introductory course in biology or biochemistry.
Same as: BIOE 279, BIOPHYS 279, CME 279, CS 279

BIOMEDIN 290. Biomedical Informatics Teaching Methods. 1-6 Unit.
Hands-on training in biomedical informatics pedagogy. Practical experience in pedagogical approaches, variously including didactic, inquiry, project, team, case, field, and/or problem-based approaches. Students create course content, including lectures, exercises, and assessments, and evaluate learning activities and outcomes. Prerequisite: instructor consent.

BIOMEDIN 299. Directed Reading and Research. 1-18 Unit.
For students wishing to receive credit for directed reading or research time. Prerequisite: consent of instructor. (Staff).

BIOMEDIN 304. Clinical Experience Seminar for Students in Biomedical Informatics. 1 Unit.
This seminar is intended to expose Biomedical Informatics graduate students to clinical environments where informatics is being applied. Students will shadow clinical care and interact with physicians and other allied health professionals throughout Stanford Healthcare and Stanford Children's Health during weekly sessions. Students will be asked to reflect on their experiences and discuss future applications to informatics projects. Preference will be given to senior students. Requires Course Director approval for enrollment - students should register 30 days prior to the first day of class for consideration. Prerequisites: School of Medicine HIPAA Training; Occupational Health clearance; SHC Compliance Attestation. All prerequisites must be submitted 2 weeks before the 1st day in order to ensure hospital compliance.

BIOMEDIN 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

BIOMEDIN 371. Computational Biology in Four Dimensions. 3 Units.
Cutting-edge research on computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules, cells, and everything in between. These techniques, which draw on approaches ranging from physics-based simulation to machine learning, play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course is devoted primarily to reading, presentation, discussion, and critique of papers describing important recent research developments. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).
Same as: BIOPHYS 371, CME 371, CS 371

BIOMEDIN 388. Stakeholder Competencies for Artificial Intelligence in Healthcare. 2-3 Units.
Advancements of machine learning and AI into all areas of medicine are now a reality and they hold the potential to transform healthcare and open up a world of incredible promise for everyone. But we will never realize the potential for these technologies unless all stakeholders have basic competencies in both healthcare and machine learning concepts and principles - this will allow successful, responsible development and deployment of these systems into the healthcare domain. The focus of this course is on the key concepts and principles rather than programming or engineering implementation. Those with backgrounds in healthcare, health policy, healthcare system leadership, pharmaceutical, and clinicians as well as those with data science backgrounds who are new to healthcare applications will be empowered with the knowledge to responsibly and ethically evaluate, critically review, and even use these technologies in healthcare. We will cover machine learning approaches, medical use cases in depth, unique metrics to healthcare, important challenges and pitfalls, and best practices for designing, building, and evaluating machine learning in healthcare applications.
Same as: BIODS 388

BIOMEDIN 390A. Curricular Practical Training. 1 Unit.
Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 390B. Curricular Practical Training. 1 Unit.
Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 390C. Curricular Practical Training. 1 Unit.
Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 432. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.
For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.
Same as: HRP 392

BIOMEDIN 472. Data science and AI for COVID-19. 2 Units.
This project class investigates and models COVID-19 using tools from data science and machine learning. We will introduce the relevant background for the biology and epidemiology of the COVID-19 virus. Then we will critically examine current models that are used to predict infection rates in the population as well as models used to support various public health interventions (e.g. herd immunity and social distancing). The core of this class will be projects aimed to create tools that can assist in the ongoing global health efforts. Potential projects include data visualization and education platforms, improved modeling and predictions, social network and NLP analysis of the propagation of COVID-19 information, and behavior-nudging tools. The class is aimed toward students with experience in data science and AI, and will include guest lectures by biomedical experts. Prerequisites: background in machine learning and statistics (CS229, STATS216 or equivalent). Some biological background is helpful but not required.
Same as: BIODS 472, CS 472

BIOMEDIN 801. TGR Master's Project. 0 Units.
Project credit for masters students who have completed all course requirements and minimum of 45 Stanford units.

BIOMEDIN 802. TGR PhD Dissertation. 0 Units.
.

CANCER BIOLOGY

Courses offered by the Cancer Biology Program are listed under the subject code CBIO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CBIO&filter-catalognumber-CBIO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CBIO&filter-catalognumber-CBIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CBIO&filter-catalognumber-CBIO=on).

The Cancer Biology Ph.D. program was established in 1978 at Stanford University. During the past four decades, the understanding of cancer has increased dramatically with the discovery of oncogenes and tumor suppressor genes, pathways of DNA damage and repair, cell cycle regulation, angiogenesis and responses to hypoxia, and the molecular basis of metastasis, among others. In addition, methods of parallel analysis including genomic and proteomic approaches have begun to refine and redefine the taxonomy of cancer diagnosis. This explosion of basic and clinical science has, in turn, resulted in the first successful cancer chemotherapies and immunotherapies based on knowledge of specific molecular targets. Stanford presents a unique environment to pursue interdisciplinary cancer research because the School of Medicine, the School of Humanities and Sciences, and the School of Engineering are located on a single campus, all within walking distance of one another.

The goal of the Cancer Biology Ph.D. program is to provide students with education and training that will enable them to make significant contributions to this remarkable field. Coursework during the first year is designed to provide a broad understanding of the molecular, genetic, cell biological, and pathobiological aspects of cancer. Students also learn about the current state of clinical diagnosis and treatment of human cancers. Equally important during the first year is a series of three rotations in research laboratories chosen by each student. By the end of the first year, each student has chosen his/her research advisor and has begun work on his/her dissertation project. A qualifying examination must be completed before the end of December of the second year. An annual Cancer Biology Conference provides students with an opportunity to present their research to one another and to the faculty in the program. The expected time to degree is four to five years.

Students are not limited to a single department in choosing their research advisors. The Cancer Biology Ph.D. program currently has approximately 65 graduate students located in a variety of basic science and clinical departments throughout the School of Medicine and School of Humanities and Sciences. Many students are supported by a training grant from the National Cancer Institute.

The Cancer Biology Ph.D. program is committed to fostering a diverse community of students. The program welcomes all individuals and strives to support them so they achieve their full potential. It values the diversity of its students because culture, socioeconomic and educational background, race, ethnicity, gender, sexual orientation, physical ability, life experiences, hobbies, and interests allow the program as a group to reach a greater level of innovation in cancer research.

Doctor of Philosophy in Cancer Biology

University requirements for the Ph.D. are described under the "Graduate Degrees (p. 65)" section of this bulletin.

A small number of applicants are admitted to the program each year. Applicants should have completed an undergraduate major in the biological sciences; applicants with undergraduate majors in physics, chemistry, or mathematics may be admitted if they complete background training in biology during the first two years of study. During the first year, each student is required to complete a minimum of three, one quarter laboratory rotations. Students must choose a dissertation advisor prior to the end of Summer Quarter, the first year, but not before the end of Spring Quarter.

The requirements for the Ph.D. degree are as follows:

1. Training in biology equivalent to that of an undergraduate biology major at Stanford.
2. Completion of the following courses:

		Units
Required Courses		
BIOS 200	Foundations in Experimental Biology (for students entering in 2012 or later. Students who entered in 2011 or earlier took GENE 203, Advanced Genetics.)	5
CBIO 240	Molecular and Genetic Basis of Cancer	4
CBIO 242	Cellular and Clinical Aspects of Cancer	4
CBIO 280	Cancer Biology Journal Club (required for first- and second-year graduate students in Autumn, Winter, and Spring quarters, totaling 6 units)	1
CBIO 245	Lecture Seminar Series in Cancer Biology Program (required for first- and second-year graduate student in Autumn, Winter, and Spring quarters, totaling to 6 units)	1
MED 255	The Responsible Conduct of Research	1
Electives (total of 10 units)		
Computational/Systems Cancer Biology Track		
Core Knowledge		
CBIO 290	Curricular Practical Training	1-2
STATS 60	Introduction to Statistical Methods: Precalculus	5
GENE 218	Computational Analysis of Biological Information: Introduction to Python for Biologists	2
NENS 230	Analysis Techniques for the Biosciences Using MATLAB	2
CS 106A	Programming Methodology	3-5
BIOS 205	(Introduction to R; no longer offered)	
GENE 211	Genomics	3
CBIO 243	Principles of Cancer Systems Biology	3
BIOS 201	Next Generation Sequencing and Applications	2
Additional Courses		
CS 106B	Programming Abstractions	3-5
STATS 116	Theory of Probability	4
STATS 202	Data Mining and Analysis	3
STATS 216	Introduction to Statistical Learning	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
CS 161	Design and Analysis of Algorithms	3-5
GENE 245		3
Other Cancer Biology Related Graduate-Level		
BIO 214	Advanced Cell Biology	4
SBIO 241	Biological Macromolecules	3-5
CSB 210	Cell Signaling	4
IMMUNOL 201	Advanced Immunology I	3

DBIO 201	Cells and Signaling in Regenerative Medicine	2
MI 215	Principles of Biological Technologies	3
CBIO 275	Tumor Immunology	3

3. Other elective course is determined in consultation with the student's advisor and/or the Program Director.
4. Presentation of research results at the annual Cancer Biology Conference and Pizza Talks.
5. Completion of a qualifying examination in Cancer Biology is required for admission to Ph.D. candidacy. The exam consists of an F31 NRSA-style written grant proposal not to exceed seven pages (excluding references) and an oral examination. The examining committee consists of three faculty members from the Cancer Biology Program but does not include the student's dissertation advisor. The composition of this committee is chosen by the student and thesis advisor and must be submitted to and approved by the Program Directors prior to the end of Autumn Quarter, second year. The qualifying examination must be taken prior to the end of December of the second year. If necessary, one retake is permitted prior to the end of Summer Quarter, second year. After the qualifying examination has been completed, the student is required to form a dissertation reading committee that includes the student's advisor and three other members of the Academic Council with appropriate expertise. Each student is required to arrange annual meetings (more frequently, if necessary) of the dissertation reading committee, at which time progress during the past year and a plan of study for the coming year are presented orally and discussed. Completion of each annual committee meeting must be communicated in writing to the program director by the advisor by the end of Spring Quarter each year.

The major accomplishment of each successful Ph.D. student is the presentation of a written dissertation resulting from independent investigation that contributes to knowledge in the area of cancer biology. An oral examination is also required for the Ph.D. degree. In the Cancer Biology Program, a public seminar (one hour) is presented by the Ph.D. candidate, followed by a closed-door oral examination. The oral examination committee consists of at least four examiners (the members of the doctoral dissertation reading committee) and a chair. The oral examination chair must be from outside the Cancer Biology Program faculty and may not have a full or joint appointment in the advisor's or student's home department. However, a courtesy appointment does not affect eligibility. The oral examination chair may be from the same department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation advisor.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Cancer Biology Program counts all courses taken in the academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Advising Expectations

The mission of the Cancer Biology Ph.D. program is to train graduate students so that they may ultimately launch careers related to the study and treatment of cancer. A major goal of the program is to assist students in their growth and development by constructing meaningful educational plans. The program believes that students will become outstanding cancer researchers through frequent and collegial personal contacts with their primary research advisors, members of their thesis committee, and other faculty in the program. Scientific interactions between students and faculty foster the development of motivated students who are independent thinkers and responsible decision makers. The program expects faculty thesis advisors to have an active role in the advising process, including by monitoring progress frequently and by helping define and develop realistic educational career plans through regular interactions with the advisee. Faculty thesis advisors should refer students to other institutional resources as needed. The program expects students to clarify their academic and career goals with their advisors and to be equal partners in the advising process, including by scheduling regular meetings with their advisors and by adhering to institutional policies, procedures, and requirements. These expectations, which are detailed in the program handbook, ensure the successful completion of degree requirements and timely graduation.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Program Co-Directors: Laura Attardi (Radiation Oncology and Genetics) and Julien Sage (Pediatrics and Genetics)

Executive Committee on Cancer Biology: Laura Attardi (Radiation Oncology and Genetics), Erinn Rankin (Radiation Oncology, Obstetrics and Gynecology), Julien Sage (Pediatrics and Genetics), Kevin Wang (Dermatology), Monte Winslow (Genetics)

Admissions Committee on Cancer Biology: Laura Attardi (Radiation Oncology and Genetics), Michelle Monje (Neurology), Carolyn Lee (Dermatology), Anthony Oro (Dermatology), Sharon Pitteri (Radiology), Julien Sage (Pediatrics and Genetics), Katrin Svensson (Pathology), Kevin Wang (Dermatology), Monte Winslow (Genetics), Jiangbin Ye (Radiation Oncology and Biology)

Participating Departments and Faculty

Biochemistry: Philip Beachy (Professor), Mark Krasnow (Professor), Julia Salzman (Assistant Professor)

Bioengineering: Jennifer Cochran (Professor)

Biology (School of Humanities and Sciences): Scott J. Dixon (Assistant Professor), Judith Frydman (Professor), Or Gozani (Professor), Ashby Morrison (Associate Professor), Dmitri Petrov (Professor), Jan M Skotheim (Professor), Tim Stearns (Professor)

Biomedical Data Science: Andrew Gentles (Assistant Professor), Purvesh Khatri (Associate Professor), Aaron Newman (Assistant Professor)

Chemical And Systems Biology: James K. Chen (Professor), Gheorghe Chistol (Assistant Professor), Karlene Cimprich (Professor), Mary Teruel (Assistant Professor)

Chemical Engineering and Genetics: Monther Abu-Remaileh (Assistant Professor)

Dermatology: Howard Y. Chang (Professor), Paul A. Khavari (Professor), Carolyn Lee (Assistant Professor), Anthony Oro (Professor), Kevin Wang (Assistant Professor)

Developmental Biology: Margaret Fuller (Professor), Roeland Nusse (Professor)

Genetics: Michael Bassik (Assistant Professor), Anne Brunet (Professor), Christina Curtis (Associate Professor), Julien Sage (Professor; Co-Director of Stanford Cancer Biology Program), Alice Ting (Professor), Monte Winslow (Associate Professor)

Medicine/Endocrinology/Gerontology/Metabolism: Justin Annes (Associate Professor), Katrin Chua (Associate Professor)

Medicine/Gastroenterology and Hepatology: Anson Lowe (Associate Professor)

Medicine/Hematology: Steven Artandi (Professor; Director, Stanford Cancer Institute), Calvin Kuo (Professor), Ravindra Majeti (Professor)

Medicine/Oncology: Ash Alizadeh (Associate Professor), Gilbert Chu (Professor), Michael Clarke (Professor), Dean Felsher (Professor), Hanlee Ji (Associate Professor), Ronald Levy (Professor)

Microbiology and Immunology: Helen M. Blau (Professor), Peter Jackson (Professor), Garry Nolan (Professor)

Neurology and Neurosurgery: Michelle Monje (Associate Professor)

Neurosurgery: Albert J. Wong (Professor)

Orthopedic Surgery: Nidhi Bhutani (Associate Professor)

Otolaryngology: John Sunwoo (Professor)

Pathology: Robert Angelo (Assistant Professor), Jeff Axelrod (Professor), Sean Bendall (Assistant Professor), Matthew Bogyo (Professor), Michael Cleary (Professor), Gerald Crabtree (Professor), Edgar Engleman (Professor), Andrew Fire (Professor), Joseph Lipsick (Professor), Bingwei Lu (Professor), Jonathan Long (Assistant Professor), Jonathan Pollack (Professor), Capucine van Rechem (Assistant Professor), Ansuman Satpathy (Assistant Professor), Katrin Svensson (Assistant Professor), Irving Weissman (Professor; Virginia & D.K. Ludwig Professor for Clinical Investigation in Cancer Research, Professor of Developmental Biology), Marius Wernig (Professor)

Pediatrics/Human Gene Therapy: Mark Kay (Professor)

Pediatrics/Hematology/Oncology: Charles Gawad (Associate Professor), Crystal Mackall (Professor), Matthew Porteus (Professor), Kathleen Sakamoto (Professor)

Psychiatry and Behavioral Sciences: Erin Gibson (Associate Professor)

Radiation Oncology/Radiation and Cancer Biology: Laura Attardi (Professor; Co-Director of Stanford Cancer Biology Program), Richard Frock (Assistant Professor), Edward Graves (Associate Professor), Sharon Pitteri (Associate Professor), Erinn Rankin (Assistant Professor), Jiangbin Ye (Assistant Professor)

Radiation Oncology/Radiation Therapy: Max Diehn (Associate Professor), Susan Knox (Associate Professor), Quynh-Thu Le (Professor)

Radiology/Diagnostic Radiology: Parag Mallick (Associate Professor, Research), Sylvia Plevritis (Professor), Tanya Stoyanova (Assistant Professor)

Courses

CBIO 101. Cancer Biology. 4 Units.
Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.
Same as: PATH 101

CBIO 240. Molecular and Genetic Basis of Cancer. 4 Units.
Required for first-year Cancer Biology graduate students. Focus is on fundamental concepts in the molecular biology of cancer, including oncogenes, tumor suppressor genes, and cellular signaling pathways. Emphasis will be given to seminal discoveries and key experiments in the field of cancer molecular biology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

CBIO 241. Cellular Basis of Cancer. 4 Units.
Focus on tumor cell biology including angiogenesis, metastasis, metabolism, stem cells, and other topics. Prerequisite: CBIO240.

CBIO 242. Cellular and Clinical Aspects of Cancer. 4 Units.
Required for first-year Cancer Biology graduate students, and for first- and second-year medical students intending to complete the Cancer Biology Scholarly Concentration. Focus is on the cellular biology of cancer, including discussion of basic biology including tumor angiogenesis, metabolism, and immunology, as well as clinical oncology and cancer therapeutics. Emphasis will be given to seminal discoveries and key experiments in the field of cancer biology and oncology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

CBIO 243. Principles of Cancer Systems Biology. 3 Units.
Focus is on major principles of cancer systems biology research that integrates experimental and computational biology in order to systematically unravel the complexity of cancer. The opportunity to embark on cancer systems biology research has been enabled by the rapid emergence of numerous and increasingly accessible technologies that provide global DNA, RNA and protein expression profiles of cells under a variety of conditions following environmental, drug and genetic perturbations. Course addresses the challenge of how to analyze high-dimensional and highly-multiplexed data in order to synthesize biologically and clinically relevant insights and generate hypotheses for further functional testing. Aims to broaden student exposure to the experimental and computational skills needed to apply the emerging principles of systems biology to the study of cancer.

CBIO 244. Lecture Series in Cancer Systems Biology. 1 Unit.
Presents new concepts in the field of cancer systems biology, demonstrating the integration of novel experimental and computational approaches for addressing outstanding critical questions in cancer biology. Invited speakers share insights about state-of-the-art trends and advice on navigating a career in cancer systems biology. Course required for CSBS Fellows.

CBIO 245. Lecture Seminar Series in Cancer Biology Program. 1 Unit.
Invited speakers share insights about state-of-the-art trends. Presents new concepts in the field of cancer biology. Science talks presented by students.

CBIO 246. Clinical Cancer Research Internship Program. 1 Unit.
As this is a limited enrollment course, graduate students interested in this course will contact must be affiliated with Cancer Biology Ph.D. Program and must contact the primary instructor Dr. Majeti and the course director Drs. Attardi and Sage by email.nA prerequisite for the course is the successful completion of the online training component for HIPAA certification: nnIn addition, the following is required:n1. Documented proof of Measles, Mumps & Rubella immunity in the form of vaccine dates or positive blood tests.n2. Documented proof of Varicella (chicken pox) immunity in the form of vaccine dates or positive blood tests.n3. Annual TB screening (PPD for US born or born in Canada and QFT for foreign born of high risk TB countries)n4. Annual Influenza vaccine (between Nov 1-March 31)nnIn the first component of the course, Dr. Majeti will identify an oncologist (adult or pediatrics) actively working in the clinic that the student can shadow that quarter for a minimum of 4 hours and will put the student in contact with the clinician. Shadowing hours can be at any time of the week or the weekend. The clinician will contact Dr. Majeti to confirm that the student has shadowed him/her for 4 hours.nnIn the second component of the course, Dr. Majeti will inform the student when the oncology clinical tumor board meets. The student must attend at least 3 tumor board sessions in the quarter (1h30 each).nnIn the third component of the course, the student will write a one-page analysis of a clinical paper related to cancer biology.

CBIO 260. Teaching in Cancer Biology. 1-10 Unit.
Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

CBIO 275. Tumor Immunology. 3 Units.
Tumor Immunology focuses on the mechanisms by which tumors can escape from and subvert the immune system and conversely on the ability of innate and adaptive arms of the immune system to recognize and eliminate tumors. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor microenvironment, tumor iniduced immunosuppression, tumorimmunotherapy (including cancer vaccines, CARs, TILs, checkpoint antibodies, monoclonal antibodies and bispecific antibodies, as well as bone marrow transplantation and radiation therapy). Tracks the historical development of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core. Same as: IMMUNOL 275

CBIO 280. Cancer Biology Journal Club. 1 Unit.
Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

CBIO 290. Curricular Practical Training. 1-2 Unit.
.

CBIO 299. Directed Reading in Cancer Biology. 1-18 Unit.
Prerequisite: consent of instructor.

CBIO 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

CBIO 801. TGR Project. 0 Units.
.

CBIO 802. TGR Dissertation. 0 Units.
.

CHEMICAL AND SYSTEMS BIOLOGY

Courses offered by the Department of Chemical and Systems Biology are listed under the subject code CSB on the (https://explorecourses.stanford.edu/search/?q=CSB&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-CSB=on&filter-catalognumber-CSB=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CSB&filter-catalognumber-CSB=on) ExploreCourses web site. (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CSB&filter-catalognumber-CSB=on)

The department emphasizes individualized training at the interface of physical science and biomedical science. The program encourages students to draw upon a variety of modern scientific techniques, ranging from recent advances in molecular biology and protein biochemistry to synthetic organic chemistry and single cell imaging. Graduate students in the department take courses in signal transduction networks, chemical biology, and other areas of importance to their research goals.

Master of Science in Chemical and Systems Biology

Students in the Ph.D. program may apply for an M.S. degree after having satisfactorily completed the course and laboratory requirements of the first two years. The degree also requires a written thesis based on literature or laboratory research. Postdoctoral research training is available to graduates having the Ph.D. or M.D. degree.

Doctor of Philosophy in Chemical and Systems Biology

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin.

The Department of Chemical and Systems Biology offers interdisciplinary training to prepare students for independent careers in biomedical science. The main focus of the program is cell signaling, chemical biology, and systems biology.

The program leading to the Ph.D. degree includes formal and informal study in chemical biology, systems biology, drug discovery, biochemistry, and other areas of relevance to the interests of particular students. First-year students spend one quarter in each of three different laboratories, working closely with other graduate students, a professor, and postdoctoral fellows on various research projects. During the fourth quarter, the student chooses a faculty mentor with whom to undertake thesis research, based on available positions and the student's interest. During or before the eighth quarter of study, students must pass a qualifying exam which consists of an oral exam on general knowledge and a defense of a research proposal. Course requirements are fulfilled during the first two years of study; the later years of the four- to six-year program are devoted to full-time dissertation research. Close tutorial contact between students and faculty is stressed throughout the program.

Research opportunities also exist for medical students and undergraduates. The limited size of the labs in the department allows for close tutorial contact between students, postdoctoral fellows, and faculty.

The department participates in the four quarter Health and Human Disease and Practice of Medicine sequence which provides medical students with a comprehensive, systems-based education in physiology, pathology, microbiology, and pharmacology.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

Chemical and Systems Biology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Graduate Advising Expectations

The Department of Chemical and Systems Biology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

What is the overall purpose of faculty advising in this program?

The Department of Chemical and Systems Biology is committed to providing advising to ensure graduate student personal, academic, and professional development. Both the advisor and advisee are key players in sustaining a collaborative relationship with integrity and professionalism.

How are advisors initially assigned to or selected by incoming graduate students?

Graduate students select a thesis advisor generally at the end of Spring Quarter of their first year. Before selecting an advisor, students rotate

in one lab per quarter during Autumn through Spring quarters of their first academic year. Students may opt for a fourth lab rotation and select an advisor in the Summer Quarter before their second year. After each rotation, students meet with the CSB Advisory Committee to discuss how the rotation went and whether the next rotation is a good match for the student's educational and professional goals. With the guidance of the CSB Advisory Committee and assistance from the student services staff, if needed, the student and thesis advisor mutually agree to work together.

What is the process by which students can change advisors and when should this happen?

The student should approach the CSB student services office and the CSB Advisory Committee to discuss the reasoning and proposal to change advisors. The student should work with the student services office and CSB Advisory Committee to try to find a suitable advisor. This process should happen as soon as issues start to arise and/or as soon as the student would like to change advisors.

How frequently should students meet with their advisors and how are those meetings set up? How does meeting frequency change as the student progresses?

As mentioned above, at the end of each quarter, first-year students meet with the CSB Advisory Committee to discuss potential issues with the program, issues with host laboratories, classes, the qualifying exam, and career planning. The topics that are discussed include ideas about student activities as well as additions or changes to the program. Students are also encouraged to meet with the CSB Advisory Committee members or the Department Chair individually if any issues come up throughout the year.

Committee meetings are held once a year after the qualifying exam. When a student is in their fifth year, the committee meetings should be held twice a year. From the sixth year and on, the meetings should be held every quarter.

What topics might be discussed at advising or committee meetings?

Committee meetings are the best opportunity for the student to get feedback about the progress and to get second opinions about which types of experiments should be pursued to help answer the questions being addressed in the student's thesis. The committee should include four faculty members counting the thesis advisor (faculty on the committee do not need to be tenure track). At least one of the four faculty members has to be a primary faculty in the CSB department, but the composition can be different from that in the qualifying exam and can also change during the student's thesis work as they may need to pursue different directions. The structure and format of the meetings are listed below. The committee should provide advice on future directions, attendance of conferences, career plans and more personal laboratory issues. Each meeting should include a time plan to ensure that the thesis project can be completed within five-and-a-half years.

At the beginning of each meeting, the student exits the room to allow for a discussion between the advisor and the rest of the committee. A few minutes before the end of the meeting, the advisor is asked to leave the room to allow for the student and the rest of the committee to discuss issues about the lab, potential personal issues, training opportunities and to discuss possible differences in research goals or issues relating to authorship.

If a committee meeting is not completed by the end of Summer Quarter, an enrollment hold is placed on the student's account and may delay graduate funding.

Are there any forms to complete or deliverables associated with any of those meetings?

Following the committee meeting, the student is required to summarize the discussion and formulate a revised plan for subsequent work. This summary should be discussed with the advisor and sent to the committee members within one week for comment. A final copy of the report must be submitted to the CSB Student Services Manager.

How and when does a student select and convene their dissertation reading or thesis committee? What is the purpose of the committee? And, how often should the committee meet?

Students select their reading committee when they go TGR, which is usually towards the end of their fourth year in Spring Quarter. The purpose of the committee is to further discuss the student's thesis and provide feedback. As mentioned above, committee meetings are held once a year after the qualifying exam. When a student is in their fifth year, the committee meetings should be held twice a year. From the sixth year and on, the meetings should be held every quarter.

How does the department or program, advisor, and student decide when a student is ready to graduate?

The decision to schedule an oral defense requires the support of each member on the committee including the thesis advisor. The department also expects that each student complete for the thesis at least one peer-reviewed, first-author paper that is accepted for publication by the time the oral thesis exam is being scheduled.

Who else might a student consult for help or guidance, e.g., department chair, DGS, student services staff?

At any time, students may consult with CSB student services staff, the Director of Graduate Studies and the Department Chair. Students may reach out to any of these parties by email to set up a meeting and/or stop by the student services office.

Emeriti: (Professors) Robert H. Dreisbach, Stuart Kim, Richard A. Roth, James P. Whitlock

Chair: James K. Chen

Director of Graduate Studies: Daniel F. Jarosz

Professors: James K. Chen, Karlene A. Cimprich, James E. Ferrell, Jr., Nathanael Gray (effective Winter Quarter), Tobias Meyer, Daria Mochly-Rosen, Thomas J. Wandless, Joanna K. Wysocka

Professor (Teaching): Kevin Grimes

Associate Professor: Daniel F. Jarosz

Assistant Professors: Gheorghe Chistol, Lei Stanley Qi

Courtesy Associate Professors: Markus W. Covert, Michael Z. Lin, Jan M. Skotheim, Aaron F. Straight, Marius Wernig

Courses

CSB 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CSB 201. Chemical and Systems Biology Bootcamp. 1 Unit.
In this "boot camp" students perform hands-on original research in small groups, combining chemical biology systems-level approaches to investigate current biological problems. This year's course will investigate the function and regulation of uncharacterized genes. Students will acquire conceptual and methodological training in a wide range of modern techniques, including "omics" approaches, fluorescence microscopy, genome editing, computational approaches, and quantitative data analysis.

CSB 210. Cell Signaling. 4 Units.
The molecular mechanisms through which cells receive and respond to external signals. Emphasis is on principles of cell signaling, the systems-level properties of signal transduction modules, and experimental strategies through which cell signaling pathways are being studied. Prerequisite: working knowledge of biochemistry and genetics.

CSB 220. Chemistry of Biological Processes. 3 Units.
The principles of organic and physical chemistry applied to biomolecules. The goal is a working knowledge of chemical principles that underlie biological processes. Chemical tools and techniques used to study and manipulate biological systems may be used to illustrate these principles. Prerequisites: organic chemistry and biochemistry, or consent of instructor.

CSB 221. Methods and Logic in Chemical and Systems Biology. 3 Units.
This course covers logic, experimental design and methods in Chemical and Systems Biology, using discussions of classic and modern literature to discern the principles of biological investigation in making discoveries and testing hypotheses. In collaboration with faculty, students also apply those principles to generate a potential research project, presented in both written and oral form.

CSB 224. Chemical and Systems Biology Pizza Talks. 1 Unit.
Required of and limited to all graduate students and postdoctoral scholars in the Department of Chemical and Systems Biology. Students and postdocs are required to give in-depth presentations about their current projects within the academic year.

CSB 240A. A Practical Approach to Drug Discovery and Development. 3-4 Units.
Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour.

CSB 240B. A Practical Approach to Drug Discover and Development. 3-4 Units.
(Continuation of 240A) Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour. Prerequisite: 240A.

CSB 242. Drug Discovery and Development Seminar Series. 1 Unit.
The scientific principles and technologies involved in making the transition from a basic biological observation to the creation of a new drug emphasizing molecular and genetic issues. Prerequisite: biochemistry, chemistry, or bioengineering.

CSB 243. Biotechnology and Development of Therapeutics. 1-2 Unit.
This course will introduce students to the applications of biotechnology to the discovery and development of novel drugs and therapeutics. Students will learn about the process of drug discovery and development from target discovery, through drug optimization, preclinical testing, clinical testing, and commercialization. The course also offers a basic understanding of functions that work in parallel with discovery research and drug development, including business strategy, portfolio decision-making and program management. Finally, the course allows the opportunity to learn from, and connect with leaders from companies within the Biotchnology sector.

CSB 245. Economics of Biotechnology. 2 Units.
Focuses on translation of promising research discovery into marketed drugs and the integration of scientific method, clinical needs assessment, clinical and regulatory strategy, market analysis, economic considerations, and the influence of the healthcare economic ecosystem necessary for successful translation. Explores the economic perspectives of various stakeholders--patients, providers, payers, biotechnology and pharmaceutical companies, FDA, and financial markets--and how they influence drug development.

CSB 250. The Biology of Chromatin Templated Processes. 3 Units.
Topics include mechanisms of DNA replication; gene expressions regulation; DNA damage sensing and DNA repair; chromatin structure and function; and epigenetics and nuclear reprogramming. Prerequisite: working knowledge of molecular biology, biochemistry and genetics, or instructor consent.

CSB 260. Concepts and Applications in Chemical Biology. 3 Units.
Current topics include chemical genetics, activity-based probes, inducible protein degradation, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies.
Same as: CHEM 289

CSB 261. Quantitative Principles in Cell Differentiation. 3 Units.
Explores the common principles controlling cell differentiation from stem cells to terminally differentiated cells. Focus is on becoming familiar with the computational and single-cell experimental approaches that are needed to identify, probe, and dissect the dynamic decision to differentiate or de-differentiate in different cell systems including stem cells, adipocytes, neurons, pancreatic beta cells, cardiomyocytes, and hematopoietic cells. Topics include exploring how feedback mechanisms can be exploited to enable and precisely control tissue regeneration.

CSB 270. Research Seminar. 1 Unit.
Students discuss readings focused on chemical and systems biology assigned by corresponding faculty host. Course held before corresponding Friday Cutting Lecture Series speaker. Please contact Student Services with any questions regarding the course administration. Required for CSB first and second year students. Open to all CSB students.

CSB 271. Principles of Cell Cycle Control. 3 Units.
Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature.
Same as: BIO 171, BIO 271

CSB 272. Responsible conduct, rigor, and reproducibility in research. 1 Unit.
Focus is on responsible conduct of research, rigor, and reproducibility in research. Students and postdocs discuss scientific ethics and best practices for experimental design and interpretation. Invited lecturers participate as well.

CSB 290. Curricular Practical Training. 1 Unit.
CPT Course required for international students completing degree requirements.

CSB 299. Directed Reading in Chemical and Systems Biology. 1-18 Unit.
Prerequisite: consent of instructor.

CSB 346. Advanced Seminar in Microbial Molecular Biology. 1 Unit.
Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.
Same as: BIO 346, GENE 346

CSB 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

CSB 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CSB 801. TGR Project. 0 Units.
.

CSB 802. TGR Dissertation. 0 Units.
.

COMMUNITY HEALTH & PREVENTION RESEARCH

Courses offered by the Stanford Prevention Research Center within the Department of Medicine are listed under the subject code CHPR (https://explorecourses.stanford.edu/search/?q=CHPR&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-catalognumber-CHPR=on&filter-departmentcode-CHPR=on&filter-coursestatus-Active=on&filter-catalognumber-CHPR=on) on the Stanford Bulletin's ExploreCourses website.

The Master of Science (M.S.) in Community Health and Prevention Research (CHPR) covers the study and treatment of leading risk behaviors (e.g., poor diet, physical inactivity, tobacco use, stress, distress) to prevent the prevailing causes of morbidity and mortality (e.g., cardiovascular disease, cancer, diabetes, lung disease, mental illness) with a focus on engaging and advancing health in diverse communities.

Community health and prevention research are complementary fields increasingly integrated to promote health and prevent chronic diseases in individuals, families, local communities, states, and countries, globally. Community health refers to the scientific discipline of safeguarding and enhancing the well-being of diverse communities and populations through education, the promotion of healthy lifestyle habits, and the extensive study of disease and disease determinants. Prevention research is a multidisciplinary scientific field that aims to enhance the health of populations through the study of genetic, behavioral, lifestyle, environmental, and policy factors that lead to disease or vitality.

The M.S. in CHPR is designed for students pursuing health-related careers focusing on chronic disease prevention, health and wellness promotion, and the pursuit of health equity. We anticipate the M.S. in CHPR will be attractive to Stanford's current (coterminal) undergraduates and graduate students, students in the health professions (e.g., medical students), health care providers seeking a second degree, and individuals who will later seek advanced degrees in medicine, nursing, or health/science-related doctoral programs.

The M.S. in CHPR is available to:

1. Current Stanford undergraduates (who must complete the M.S. as a coterminal master's program)
2. Current Stanford graduate students (i.e., master's, doctoral, and medical students)
3. External applicants.

All students in the program must complete the M.S.'s core curriculum and program requirements.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Master of Science in Community Health and Prevention Research

The Stanford Prevention Research Center within the Department of Medicine offers a Master of Science (M.S.) in Community Health and Prevention Research (CHPR). The M.S. in CHPR is available to external applicants, to current undergraduates via the coterminal master's program, and to graduate students at Stanford.

The purpose of the M.S. in CHPR is to:

- engage students from a range of backgrounds in didactic and experiential learning opportunities with the goal of gaining an in-depth understanding of community health and prevention research applications in diverse practice settings
- prepare future public health professionals to responsibly and effectively address health challenges faced by diverse communities across the life course.

In the M.S. in CHPR, students:

- study patterns of chronic diseases in diverse communities and settings and examine how prevention can optimize health and promote health equity at the individual, family, community, and population level
- critically interpret and evaluate research on community health and prevention
- become involved in research teams that encourage health equity promotion and social responsibility
- gain and hone methodological skills including research study design, study implementation, and data analysis related to community health and prevention research
- utilize course work and implementation science in a community-based research internship with the expectation that they design, implement, and assess health and wellness solutions addressing preventable community health challenges
- complete a master's thesis.

Admission

Admission for External Applicants

Applications for the 2021-22 academic year are due on January 12, 2021. Knight Hennessy program applicants: applications are due December 8, 2020.

- **Knight-Hennessy Scholars**
  - The Knight-Hennessy Scholars program (https://knight-hennessy.stanford.edu/) awards up to 100 high-achieving students every year with full funding to pursue a graduate education at Stanford, including the M.S. in CHPR. To be considered, you must apply to Knight-Hennessy Scholars by that program's deadline and separately apply to the CHPR program by December 8, 2020.

All applicants (not including coterminal applicants) must submit the following required application materials as part of their application. Instructions on how to submit these application materials can be found on Stanford's Graduate Admissions website (https://gradadmissions.stanford.edu/applying/).

- 3 letters of recommendation
  - At least one letter of recommendation should be from a faculty member at the last school you attended as a full-time student (unless you have been out of school for more than five years).
- GRE test scores are not required for applicants for academic year 2021-22 due to challenges posed by the COVID pandemic.
- TOEFL scores (if necessary)
- Resume or curriculum vitae (CV)
- Statement of purpose
  - The statement of purpose should describe succinctly your reasons for applying to the proposed program at Stanford, your preparation for this field of study, research interests, future career plans, and other aspects of your background and interests which may aid the admissions committee in evaluating your aptitude and motivation for graduate study.

- Official transcript(s) from all postsecondary institutions you have attended as a full-time student for one year (i.e., three quarters or two semesters) or longer.
  - You must upload one scanned version of your official transcript(s) in the online application and direct your institution(s) to send one official copy (email is preferred) to the Stanford Prevention Research Center within the Department of Medicine.
- $125 application fee
  - This application fee is assessed regardless of admission decision.

Admission for Coterminal Applicants

Applications for the 2021-22 academic year are due on January 12, 2021.

Stanford undergraduates may apply to the M.S. program once the following conditions have been met:

- Applicants must have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. This includes allowable Advanced Placement (AP) and transfer credit.
- Applicants must have a major(s) declared.
- Applicants must have completed six non-Summer quarters at Stanford (or two non-Summer quarters at Stanford for transfer students).
- Note that the GRE is not required for coterminal applicants.

As part of their program application, applicants must submit the following required application materials. Instructions on how to submit these application materials can be found on the Current Stanford Students (https://gradadmissions.stanford.edu/applying/current-stanford-students/) page of the Graduate Admissions web site.

- Application for admission to coterminal master's program
- Statement of purpose
  - The statement of purpose should describe succinctly your reasons for applying to the proposed program at Stanford, your preparation for this field of study, research interests, future career plans, and other aspects of your background and interests which may aid the admissions committee in evaluating your aptitude and motivation for graduate study.
- Resume or curriculum vitae (CV)
- Preliminary program proposal
- Two letters of recommendation from Stanford professors
- 1 copy of your Stanford transcript (unofficial transcripts are acceptable)
- $125 application fee (assessed by the Registrar's Office only if accepted and matriculated into the program).

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements. Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Admission for Current Students in Other Stanford Graduate Programs and Professional Schools

- Current Stanford graduate students include master's, doctoral, and medical students who are currently enrolled in a graduate degree program at Stanford. Current Stanford postdoctoral scholars must apply as external applicants.
- Applications for the 2021-22 academic year are due May 1, 2021 for Autumn 2021 start.

Required Application Materials: Instructions on how to submit these application materials can be found on the CHPR website (http://CHPR.stanford.edu). (http://prevention.stanford.edu/education/chpr.html/)

- Completed Current Graduate Student Online Application Form (https://stanfordmedicine.qualtrics.com/SE/?SID=SV_eIIAYRZnPUqkPGJ)
- Resume/CV
- Transcript (unofficial transcripts are acceptable)
- Valid GRE, MCAT, or GMAT scores (i.e., the test scores students submitted to their original graduate program at Stanford)
- Statement of Purpose
  - The Statement of Purpose should describe succinctly the reasons for applying to the proposed program at Stanford, preparation for this field of study, research interests, future career plans, and other aspects of the applicant's background and interests which may aid the admissions committee in evaluating aptitude and motivation for graduate study.
- 2 letters of recommendation from Stanford professors
- $125 application fee (assessed by the Registrar's Office only if accepted and matriculated into the program).

Degree Requirements

Core Curriculum and Program Requirements (45 units)

To complete the M.S. in CHPR, students must complete a minimum of 45 units, conduct a two-quarter community-based research internship, and write a master's thesis. All students in the M.S. in CHPR must also fulfill the course requirements below. Students are advised to check the prerequisites for all CHPR courses, especially the Biostatistics and Research Methods courses.

		Units
CHPR Foundation Core		
CHPR 200	SPRC/GMD Research Seminar (Two quarters required, 3 recommended, 2-3 units total; Autumn, Winter, Spring)	1
CHPR 201	Introduction to Science of Healthy Living (Required for students who have not taken HUMBIO 126/CHPR 226. Autumn.)	1
CHPR 220	Responsible Conduct of Research in the Community (Required. Autumn)	1
CHPR 227	The Science of Community Engagement in Health Research (Not required, but strongly encouraged. Winter)	3

CHPR 228	Theoretical Foundations and Design of Behavioral Intervention Trials (Required. Autumn)	3
CHPR 240	Prevention Research: the Science of Healthy Living (Required. Autumn)	3
CHPR 250	Prevention Across Medical Disciplines: Evidence-based Guidelines (Either CHPR 250 or CHPR 270 is required; both are encouraged. Winter)	3
CHPR 270	Prevention Across Surgical and Other Medical Disciplines (Either CHPR 250 or CHPR 270 is required; both are encouraged. Spring)	3
Biostatistics and Research Methods		
A minimum of 9 units from this section is required. Students may take any combination of the courses listed here, except for the following: students may take either EPI 258 or EPI 259, but not both; and students may take either CHPR 247 or PEDS 202C, but not both.		
CHPR 202	R Fundamentals for Health Research (Winter)	1-2
CHPR 205	Understanding Evidence-Based Medicine: Hands-on experience (Winter)	3-4
CHPR 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis (Winter)	3
CHPR 247	Methods in Community Assessment, Evaluation, and Research (Spring)	3
CHPR 266	Advanced Statistical Methods for Observational Studies (CHPR students must enroll for 3 units; pre-reqs: HRP 261 & HRP 262, or HRP 239. Spring)	2-3
HRP 216	(Spring)	2-3
HRP 258	(Spring)	3
HRP 259	(Autumn)	
HRP 261	(Pre-req: HRP 258; Winter)	3
HRP 262	(Spring Pre-req: HRP 258; Spring)	3
EDUC 430C	Using Data to Describe the World: Descriptive Social Science Research Techniques (Spring)	3-5
PEDS 202C	Qualitative Research Methods and Study Design (Spring)	2-3
Curricular Practical Training and Research Internship		
Take for 2 consecutive quarters, 6 total units.		
CHPR 290	Curricular Practical Training and Internship (Autumn, Winter, Spring, Summer)	3
Master's Thesis		
Take for 2 quarters, 6 total units. CHPR 299 (Directed Reading) recommended if additional research is required for thesis writing.		
CHPR 399	Community Health and Prevention Research Master's Thesis Writing (Autumn, Winter, Spring, Summer)	3

Curricular Practical Training and Research Internship

Students must complete a consecutive two-quarter long community-based research internship under the supervision of an SPRC mentor. Students will receive 6 total units for their internships, which are all unpaid positions. The primary learning goal of these internships is for students to apply their coursework and implementation science in a community or lab setting by engaging community members and faculty to create innovative, research-based, chronic disease prevention solutions addressing community health challenges.

1. Students must fulfill the following requirements in order to enroll in CHPR 290 Curricular Practical Training and Internship:
   a. Complete or be enrolled in:
      i. CHPR 228 Theoretical Foundations and Design of Behavioral Intervention Trials and
      ii. at least 1 approved Biostatistics and Research Methods course.
2. The earliest that incoming students may begin their community-based research internships is in the Winter Quarter of their first year.

Master's Thesis

Students are required to complete a master's thesis. The master's thesis allows students to demonstrate knowledge, application, and thoughtful scholarly communication of theoretical principles central to community health interventions, study design, research and analytic methods, as well as depth in a substantive area of community health and prevention research. The thesis is intended to be 30 pages in length (i.e., article-length), double-spaced, including supporting tables, figures, and references. The thesis can take one of the following forms:

1. Analysis of original data collected via a student's internship
2. Comprehensive literature review with meta-analysis of data or critical reanalysis of data
3. Evaluation of a methodological problem using data
4. Comprehensive literature review with a grant proposal (NIH-style format) for a new study to bridge a gap in existing knowledge
5. Organizational health improvement and evaluation plan written for a student's internship organization
6. CHPR mentor approved, independently designed thesis.

The program encourages students to use extant data sets for their projects. Students are not limited to quantitative data sets; many SPRC faculty possess qualitative data sets that may be analyzed for an M.S. thesis project. Students also have the option of collecting original data, for example, through the use of surveys. Students are encouraged to develop their thesis into a manuscript for publication or a credible research grant application, and mentorship is provided to do so.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Master of Science (M.S.) in Community Health and Prevention Research (CHPR) counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Grades of 'CR' or 'S' will satisfy graduate program degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Master of Science in Community Health and Prevention Research (CHPR) program is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee.

All CHPR students are matched with a mentor before the start of their internship. The mentor, with support from the CHPR administrative and faculty directors, evaluates the student's academic and research background, provides guidance in developing a thesis project and topic, and helps the student select thesis readers.

Mentors are expected to meet with graduate students several times during internship and thesis quarters to discuss and help develop the students' internship, thesis deliverables, and their professional aspirations. Additionally, students should meet with the CHPR administrative director on a quarterly basis to discuss the student's professional development in key areas such as selecting elective courses, designing and conducting research, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship. They should actively seek academic and professional guidance and take on the responsibility of informing themselves of policies and degree requirements for the CHPR MS program.

As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the mentor and the student are expected to maintain professionalism and integrity. If challenges arise in this relationship, the CHPR administrative director is brought in to assist.

Academic progress and student completion of program requirements and milestones are monitored by the CHPR office.

Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) (VPGE) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) (GAP).

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Core Faculty and Academic Staff

Director of the Stanford Prevention Research Center: David Maron

Professors: John Ioannidis, Marcia Stefanick, Christopher Gardner

Associate Professor: Judith J. Prochaska (Program Faculty Director)

Senior Research Scientist: Michaela Kiernan

Instructors: Jennifer Robinson, Sandra Winter (Adjunct)

Program Director: Jennifer Robinson

Assistant Director, Operations and Student Services: T.O. Preising

Courses

CHPR 113. Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment. 4 Units.
Focus on problems with and systems-based solutions to food system issues. Four particular settings are addressed: University, worksite, hospital, and school food. Traditional vs. disruptive food system models compared and contrasted. The goal is to determine how best to maximize sustainability across several dimensions, including health, economics, and the environment. Underlying class themes include social justice and the potential for changing social norms around food production and consumption. Discussion-based seminar. Prerequisite: Human Biology Core or Biology Foundations or consent of instructor.
Same as: HUMBIO 113S

CHPR 130. Human Nutrition. 4 Units.
(HUMBIO students must enroll in HUMBIO 130. CHPR master's students must enroll in CHRP 130.) The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies; nutritional supplementation; phytochemicals. CHPR master's students must enroll for a letter grade. Enrollment limited to students with sophomore academic standing or above. Prerequisites: Human Biology Core or Biology Foundations or consent of instructor.
Same as: HUMBIO 130

CHPR 166. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context. 4 Units.
(HUMBIO students must enroll in HUMBIO 166. Med/Graduate students must enroll in CHRP 166.) The material in this course is an introduction to the field and the target audience is undergraduates. It may be of interest to graduate students unfamiliar with the field. The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior. Enrollment limited to students with sophomore academic standing or above. Undergraduate Prerequisites: Human Biology Core or Biology Foundations or consent of instructor.
Same as: HUMBIO 166

CHPR 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CHPR 200. SPRC/GMD Research Seminar. 1 Unit.
Focus is on research on prevention of chronic disease and related topics. Guest speakers present material. May be repeat for credit.

CHPR 201. Introduction to Science of Healthy Living. 1 Unit.
This introduction to the science of healthy living (primarily U.S.) highlights preventable causes of mortality, i.e. modifiable risk factors, national lifestyle recommendations and behavioral change principles for reducing chronic disease risk. A life course perspective is presented as a trajectory from fetal/neonatal to childhood and adolescence to young, middle-ages and older adults, with recognition of the importance of social determinants of health. Sex & gender differences are also presented. Unless otherwise noted, all lectures are presented by Course Director, Marcia Stefanick, Ph.D. Priority for enrollment given to CHPR masters students, who must take the course for a letter grade.

CHPR 202. R Fundamentals for Health Research. 1-2 Unit.
This introductory course is a practicum in which students will learn the basics of R and use the programming language to analyze health datasets by application of classical statistical methods. A familiarity with basic descriptive and inferential statistics is required. It is assumed that students will have no (or very little) prior experience with R. Class sessions will include some lecture content and hands-on coding by each student on their own computers. Students will practice using R with open-source and simulated datasets. The primary goal of the course is to equip students with a basic and fundamental understanding of R's capabilities, experience using R with practice datasets, and the ability to extend their facility with R as their needs dictate. Students enrolled for 2 units will have additional weekly practice problems assigned. Priority for enrollment given to CHPR masters students, who must take the course for a letter grade.
Same as: EPI 202

CHPR 205. Understanding Evidence-Based Medicine: Hands-on experience. 3-4 Units.
How can one practice evidence-based medicine and make evidence-based decisions for clinical practice and policy making? Using pivotal papers published in the recent scientific literature addressing important clinical questions on diverse medical topics, we will probe a wide range of types of studies, types of targeted therapeutic or preventive interventions, and types of studied outcomes (effectiveness and/or safety), including RCTs, observational studies, epidemiologic surveillance studies, systematic reviews-umbrella reviews-meta-analyses-meta-analyses of individual patient data, studies on the evaluation of diagnostic tests and prognostic models, economic analyses studies, and guidelines. Students enrolled for 4 units will complete an additional project or other engagement approved by the instructor. MD studies enroll for +/-. GR students enroll for Letter grade.
Same as: EPI 250, MED 250

CHPR 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.
Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
Same as: EPI 206, MED 206, STATS 211

CHPR 212. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.
Preference given to postgraduate fellows and graduate students.Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students.
Same as: HRP 218, MED 212

CHPR 220. Responsible Conduct of Research in the Community. 1 Unit.
This course will engage CHPR students pursuing community-based participatory research in discussions regarding ethical and practical issues to prepare them for their CHPR program, including course planning, internship, and thesis. Discussions will address specifics of conducting research at Stanford as well as issues that may arise in the community at large and in their careers to follow. Course limited to current CHPR master's students.

CHPR 222. CHPR Professional Development and Career Planning. 1 Unit.
This interactive seminar will give graduate or professional students some tangible skills as they embark on a career in community-based participatory research (CBPR). Topics and assignments are designed to develop the following skills: poster and slide presentations; thesis or manuscript preparation; portfolio development (resume or CV); peer mentoring; peer-to-peer role playing; networking; informational interviews; defining self-fulling work. Course will also include panel discussions from alumni, faculty, and community partners. Final assignment will culminate in a poster or slide presentation to a larger department group. This course is required for all CHPR Master¿s Students (who must take the class for a grade). Students in other graduate programs or professional schools may take the class S/NC or +/- with instructor¿s consent. Please contact the CHPR Office for a permission code.

CHPR 226. Promoting Health Over the Life Course: the Science of Healthy Living. 3 Units.
(HUMBIO students must enroll in HUMBIO 126. Med/Graduate students must enroll in CHPR 226.) Disease prevention and health promotion topics pertinent at different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Public and community health are emphasized. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; physical activity, nutrition, obesity and stress reduction; children, young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness; and other additional issues. Students enrolled in CHPR 226 for a letter grade must complete additional assignments appropriate for its Masters level listing. Enrollment limited to students with sophomore academic standing or above. Undergraduate prerequisites: Human Biology Core or equivalent or consent of instructor.
Same as: HUMBIO 126

CHPR 227. The Science of Community Engagement in Health Research. 3 Units.
The Science of Community Engagement in Health Research course will focus on how the science of community engagement can be applied to diverse health-related research topics across the translational spectrum with the ultimate goal of high quality research that transforms human health and addresses health disparities. The course will provide historical context, theoretical frameworks, foundational skills in diverse community engagement methodologies, and tools for examining the effectiveness of various engagement strategies aimed. Specifically, the course will cover: 1) Historical context for community engagement in health-related research; 2) Evolution of community engagement as a science; 3) Theoretical frameworks for various community engagement approaches; 4) Community-Based Participatory Research (CBPR); 5) Community engagement strategies for different stages of translational research; and 6) Evaluation of various engagement strategies; and 7) Ethics of community engagement. Students will gain practical experience in various community engagement tools and strategies to help guide the development of a community engagement plan responsive to community needs. Challenges and benefits of establishing community partnerships will be highlighted by real-world examples. nThe course will include lectures; interactive student-led presentations and guided exercises; class discussions among invited speakers, students and instructors; individual and group assignments; and organized small-group and experiential activities. Course readings will demonstrate the need and opportunity for interdisciplinary community engagement approaches and will illustrate how to conduct innovative community-engaged research. nThe Science of Community Engagement course is intended to reach students with diverse research interests, including clinical research, community health, health research and policy, epidemiology, prevention research, environmental health, etc.
Same as: EPI 272

CHPR 228. Theoretical Foundations and Design of Behavioral Intervention Trials. 3 Units.
Focuses on the knowledge and skills, respect and thoughtful practice of designing health promotion interventions that are relevant, theoretically-informed, have broad impacts, and can endure. Provides an in-depth review of intervention approaches for health promotion and disease prevention and covers the leading theories of behavior change. Follows an integrative model to demonstrate similarities and differences between the theoretical approaches, seeking what is useful and worthwhile in each theoretical model rather than looking primarily for what is most easily criticized. Practical in nature with emphasis on the specifics of needs assessments and intervention development and delivery and how these may vary across community settings, with diverse populations, addressing different behaviors, and leveraging traditional and emerging delivery channels. Explores intervention creation, delivery, effectiveness, and sustainability to identify and better understand the resources and other practical considerations necessary to produce, deliver, monitor, and disseminate an intervention with demonstrated effectiveness. Examples drawn from across the behavioral spectrum and include tobacco control, physical activity, healthy diet, stress and distress, as well as consideration of the complexities of extending interventions to target multiple risk behaviors. Students develop a foundational understanding of behavior change theory, rigorous research methods, and creative design strategies to advance the health of individuals and communities. Students taking 2 units only will complete all 4 homework assignments, attend 8 of 10 class sessions, and complete an abbreviated final abstract plus figures/tables instead of a final paper. The grading, in this instance, will be the medical school option of credit/no credit. CHPR master's students must enroll for 3 units and a letter grade.

CHPR 230. Sexual Function and Diversity in Medical Disciplines. 2-3 Units.
This course is a coordinated seminar series that presents evidence-based health promotion and disease prevention guidelines by clinical and translational research and population health science faculty of clinical departments other than Medicine (the focus of CHPR 260) of the Stanford School of Medicine, including; Anesthesiology & Perioperative, & Pain Medicine, Cardiothoracic gy, Emergency Medicine, Neurology & Neurological Sciences, Neurosurgery, Obstetrics & Gynecology, Ophthalmology, Orthopaedic Surgery, Otolaryngology, Pathology, Pediatrics, Psychiatry & Behavioral Sciences, Radiation Oncology, Radiology, Surgery and Urology. CHPR master's program students must enroll in CHPR 230 for a letter grade and priority for enrollment will be given to current CHPR students. For third unit, graduate students attend INDE 215 Queer Health & Medicine and complete assignments for that section. For third unit and WAYs, undergrads enroll in SOMGEN 130. Prerequisites: CHPR 201 or HUMBIO 126/CHPR 226 or equivalent or consent of instructor.
Same as: FEMGEN 230, SOMGEN 230

CHPR 232. Social and Structural Determinants of Health: Achieving Health Equity. 1 Unit.
This course examines the theoretical basis and societal context of the social determinants of health, racial-ethnic health disparities, and health equity. Each session focuses on a social determinant of health addressed by Michael Marmot, including the social gradient, stress, racism, early life, social exclusion, work, unemployment, social support, addiction, food and transportation. Students will be encouraged to think beyond the individual-level to consider multi-level and policy-level interventions to promote health equity.

CHPR 234. Applying Contemplative Practices. 3 Units.
Knowledge and skills for applying contemplative practices to promote individual and community health and well-being in a variety of settings (e.g., clinics, hospitals, non-profit and for-profit organizations, schools, government agencies, secular and spiritual communities, etc.) is the focus of this course. In-depth exploration is provided through: 1) scholarly articles on contemplative neuroscience, biopsychosocial research, theoretical models, and interventions, and 2) experiential learning in which students are guided in doing diverse contemplative practices, including silence, centering, meditation, labyrinth walking, yoga, qigong, self-compassion, deep listening, storytelling, journaling, lectio divina, prayer, ritual, and compassionate action. Multi-modal learning activities include videos, field experiences, guest speakers, ancient and modern texts, class discussions, and personal reflections. In-depth understanding of contemplative practices is developed through consideration of contemplative practices with respect to behavioral science, ethics, social justice, inclusion and diversity, qualitative and quantitative research, motivational interviewing, compassionate communication, design thinking and relationship-based care, including deep listening, open-minded observation, empathic need-finding, pattern recognition, and creative confidence. The course culminates with students' presentations of their original design for a research-based health and well-being program or policy incorporating contemplative practices.

CHPR 235. Covid-19 Case Investigation and Contact Tracing. 3-6 Units.
In this service-learning course students will be learn how to identify people who have COVID-19 and those who have been exposed to people with COVID-19. Students will learn basics about the biology and health effects of SARS-CoV-2 and the epidemiology of COVID-19. Students will be taught important skills in healthcare communication including motivational interviewing, health education, and health coaching. Students will work as volunteers together with Santa Clara County staff to interrupt the chains of transmission of COVID-19 as they apply skills they have learned to help people with the illness and those who have been exposed understand the importance of isolation, quarantine, and other critical aspects of public health needed to control and manage this disease. Students will need to be willing to commit 20 hours per week to this course for 10 weeks over 2 quarters. Requires application and instructor approval. Please contact Course Director, Lars Osterberg MD, MPH for an application form and approval for enrollment.
Same as: MED 164, MED 264

CHPR 236. Citizen Science Theory to Practice: Advancing Community-Driven Solutions for Health. 2-3 Units.
Harnessing and activating the insights of community members and patients is essential to achieving health equity ¿from the bottom up. ¿ Students will 1) learn and apply a novel datadriven, technology-enabled approach to improving community health through systematic documentation of lived experience and application of collective data to inform local change; 2) examine global project case studies targeting physical activity, food access, transportation, affordable housing, gender-based violence, and age-friendly environments; and 3) complete assessments of their local built environments using a Stanford-developed app and web platform, then use their data to develop and explore feasible strategies to improve community health.n(Cardinal Course certified by the Haas Center).
Same as: MED 243

CHPR 238. Social Media, Health, and Well-Being. 1 Unit.
Focus is on how social media affects well-being, how and why information spreads, effects of social media on young people and other vulnerable populations, and how social media can be used to improve health behaviors and wellbeing. The synchronous class sessions on Zoom consist of brief lectures, guest speakers, and class discussions. Assignments will include reading, submitting written reflections, participating in class discussions, and a final project. Priority for enrollment given to current CHPR masters students, who must enroll for a letter grade.

CHPR 240. Prevention Research: the Science of Healthy Living. 3 Units.
Features the research of faculty in the Stanford Prevention Research Center and focuses on key health issues over the life course (prenatal through childhood, young to middle-aged, older and elderly adults). Topics include chronic disease (global and U.S.) epidemiology; application of behavioral science to risk reduction; nutrition; weight management; physical activity; stopping smoking; public health; community health and community-based prevention; national prevention strategy; applying communication technology to health promotion. Prerequisite: HumBio 126 or concurrent enrollment in CHPR 201.

CHPR 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.
Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.
Same as: MED 147, MED 247

CHPR 250. Prevention Across Medical Disciplines: Evidence-based Guidelines. 3 Units.
Coordinated seminar series presenting evidence-based health promotion and disease prevention guidelines by research and clinical faculty of multiple divisions of Stanford's Department of Medicine, including cardiovascular medicine, oncology, nephrology, immunology and rheumatology, infectious diseases, endocrinology, gerontology and metabolism, gastroenterology and hepatology, hematology, blood and marrow transplantation, pulmonary and critical care medicine, general medical disciplines (including family medicine). Key prevention issues addressed in primary care and outcomes research, biomedical informatics research and the Stanford Prevention Research Center also presented. Enrollment priority given to CHPR Master's students. CHPR students must enroll for letter grade.Prerequisite: CHPR 201 or HUMBIO 126/CHPR 226 or equivalent or consent of instructor.

CHPR 266. Advanced Statistical Methods for Observational Studies. 2-3 Units.
Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, and instrumental variables. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: EPI 261 and 262 or STATS 209 (EPI 239), or equivalent. See http://rogosateaching.com/somgen290/.
Same as: EDUC 260B, EPI 292, STATS 266

CHPR 270. Prevention Across Surgical and Other Medical Disciplines. 3 Units.
This course is coordinated seminar series that presents evidence-based health promotion and disease prevention guidelines by clinical and translational research and population health science faculty of clinical departments other than Medicine (the focus of CHPR 260) of the Stanford School of Medicine, including; Anesthesiology & Perioperative, & Pain Medicine, Cardiothoracic Surgery, Dermatology, Emergency Medicine, Neurology & Neurological Sciences, Neurosurgery, Obstetrics & Gynecology, Ophthalmology, Orthopaedic Surgery, Otolaryngology, Pathology, Pediatrics, Psychiatry & Behavioral Sciences, Radiation Oncology, Radiology, Surgery and Urology, CHPR master's program students must enroll for a letter grade and priority for enrollment will be given to current CHPR students. Prerequisites: CHPR 201 or HUMBIO 126/CHPR 226 or equivalent or consent of instructor.

CHPR 271. Human Molecular Genetics. 3 Units.
For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics and genomics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and human disease; mitochondrial genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; variant interpretation; gene therapy, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 271

CHPR 272. Introduction to Medical Genetics. 2-3 Units.
For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics practice, including taking a family history, modes of inheritance and risk assessment, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.
Same as: GENE 272

CHPR 274A. A Case Based Approach to Clinical Genetics. 2 Units.
For genetic counseling students and medical genetics residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.
Same as: GENE 274A

CHPR 274B. A Case Based Approach to Clinical Genetics. 2 Units.
For genetic counseling students and medical genetics residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders. This course is a continuation of GENE 274A, but may be taken individually with instructor permission.
Same as: GENE 274B

CHPR 278. Prenatal Genetic Counseling. 1 Unit.
Online course for genetic counseling students, graduate students in genetics, medical students, residents, fellows, and nurses interested in prenatal genetics. Genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include: prenatal screening and diagnostic testing, ultrasound, genetic carrier screening, teratology, fetal treatment and intervention, perinatal loss, termination, and infertility. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 278

CHPR 279. Pediatric and Adult Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: clinical reasoning in medical genetics, techniques to prepare for the medical genetics visit, assessment of child development and medical history in the context of a genetic workup, dysmorphology, development of a differential diagnosis, and resources for case management and family support. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 279

CHPR 280. Metabolic Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 280

CHPR 281. Cancer Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 281

CHPR 284. Medical Genetics Seminar. 1 Unit.
Presentation of clinical and research topics in human genetics, followed by case presentations from the medical genetics and biochemical genetics services. Course may be completed online or in-person. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 284

CHPR 287. CARDIOVASCULAR GENETICS. 1 Unit.
Online course for genetic counseling students, graduate students in genetics, medical students, residents, fellows, and nurses interested in inherited cardiovascular conditions. Genetic counseling students should take this course in conjunction with their cardiovascular genetics rotation. Topics include: Basic cardiology principles, including relevant anatomy and physiology; diagnosis, management and genetic testing as it relates to common inherited cardiovascular conditions in both the pediatric and adult setting; predictive genetic testing issues specific to inherited cardiovascular conditions; psychological issues related to sudden death conditions. Non-GC students: Please contact the instructor when you enroll.
Same as: GENE 287

CHPR 290. Curricular Practical Training and Internship. 1-18 Unit.
CHPR masters students enroll for a letter grade in your mentor's section. Before the end of the second week of the quarter, enrolled students must submit a description of the expected learning outcomes and deliverables for each unit to the CHPR office. One unit= three hours of work per week (30 hours for the quarter). CHPR 290 is also the CPT Course required for international students completing degree requirements.

CHPR 299. Directed Reading. 1-18 Unit.
Prerequisite: consent of instructor. Before the end of the second week of the quarter, enrolled students must submit a description of the expected learning outcomes and deliverables for each unit to the CHPR office. One unit= three hours of work per week (10 hours for the quarter).

CHPR 399. Community Health and Prevention Research Master's Thesis Writing. 1-18 Unit.
Thesis writing for Community Health and Prevention Research Program. Students enroll in thesis advisor's section. Non-medical students enroll for a letter grade. Before the end of the second week of the quarter, enrolled students must submit a description of the expected learning outcomes and deliverables for each unit to the CHPR office. One unit= three hours of work per week (30 hours for the quarter).

CHPR 801. TGR Project. 0 Units.
.

COMPARATIVE MEDICINE

Courses offered by the Department of Comparative Medicine are listed under the subject code COMPMED on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPMED&filter-catalognumber-COMPMED=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPMED&filter-catalognumber-COMPMED=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPMED&filter-catalognumber-COMPMED=on).

The Department of Comparative Medicine at Stanford is an academic, basic science department, the department is comprised of fourteen faculty, eleven of whom are veterinarians. All faculty members are immersed in laboratory animal science and translational research. They teach at the undergraduate, graduate, professional, and postgraduate levels. The department's clinical and basic science faculty welcome, review, and accept student candidates for participation in research projects. The Department of Comparative Medicine was established at Stanford in 1990.

The department's faculty is also engaged in collaborative and comparative research, with animal model expertise and programs in veterinary pathology, pain and anesthesia, rodent reproductive biology, infectious disease, cancer, bioengineering, animal welfare, and neuroscience. In addition, the veterinary faculty in the Department of Comparative Medicine has oversight responsibility for the campus-wide animal research program and provides clinical service in the Veterinary Service Center (VSC). The mission of the department is to advance human and animal health through outstanding research, veterinary care and training.

To learn more about the Veterinary Service Center core and services provided, see the Veterinary Service Center (VSC) (http://med.stanford.edu/vsc.html) web site.

To learn more about Animal Research at Stanford, see the Animal Research at Stanford (http://med.stanford.edu/animalresearch.html) web site.

Master of Science in Laboratory Animal Science

The Master of Science (M.S.) in Laboratory Animal Science (MLAS) degree program in the Department of Comparative Medicine is a flexible, one- to two-year graduate program designed for students who want to pursue advanced careers in biomedical research, focusing on animal modeling and biomethodology, laboratory animal science, organizational management and facility design, regulatory and compliance issues, and animal welfare.

The program's academic courses are designed to build a solid foundation for a successful career in laboratory animal science and biomedical research. Graduates find employment in pharmaceutical companies and academia, or pursue advanced degrees or training in medical or veterinary schools. The program is designed to give students the ability to customize their academic research experience.

The Master of Science (M.S.) in Laboratory Animal Science degree program may also be taken by Stanford undergraduates as a coterminal master's degree program.

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

How to Apply

External Applicants and Current Stanford Graduate Students

Review the information and instructions on the University Graduate Admissions web site (https://gradadmissions.stanford.edu). Submit your application online. The link to the online application is on the University Graduate Admissions web site (https://gradadmissions.stanford.edu/applying/).

Admissions Deadline: Application deadlines are listed on the Laboratory Animal Science (http://med.stanford.edu/compmed/mlas.html) webpage. For more information, contact <compmed-mlas-info@stanford.edu>.

Items which must be included in the online application:

- Completed School of Medicine Graduate Student Online Application Form (https://stanfordmedicine.qualtrics.com/SE/?SID=SV_eIIAYRZnPUqkPGJ)
- Resume or CV
- Transcript (unofficial transcripts are acceptable)
- GRE is not required
- Statement of Purpose (1-2 pages, 1 inch margins, 12 point font, single-spaced)
  - The statement of purpose should describe succinctly the reasons for applying to the proposed program at Stanford, preparation for this field of study, research interests, future career plans, and other aspects of the student's background and interests which may aid the admissions committee in evaluating aptitude and motivation for graduate study.
- Three letters of recommendation; at least one of the two reference letters should come from a science-related faculty member or professor.
- $125 application fee is assessed by the Registrar at the time of the submission of the application.

Coterminal Applicants

The coterminal degree program allows current Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. See the "Coterminal Degrees (p. 56)" section of this bulletin for additional information.

- Go to the Stanford Registrar's Office Applying to Coterm web site (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/).
- Review the eligibility requirements, deadlines, and fees.
- Complete the online Coterm Application at the University Graduate Admissions web site (https://gradadmissions.stanford.edu/applying/).
- $125 application fee is assessed by the Registrar at the time of the submission of the application.
- For additional questions, reach out to Tom Albert, Student Services Officer, tom.albert@stanford.edu.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the

graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Degree Requirements

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level. 36 of the 45 units must be at or above the 200 level. Students must complete all required courses listed below to count towards their 45 units. The remaining units can be used as research credit (COMPMED 260) or electives, as approved by each student's research mentor.
2. Students must complete a master's thesis, which may take the following form:
   a. Original analysis of original data
   b. A comprehensive literature review with a meta-analysis of data or a critical reanalysis of data
   c. Evaluation of a methodological problem using real data
   d. A comprehensive literature review with a grant proposal (NIH style format) for a new study to bridge a gap in the existing knowledge.
3. Per University policy (p. 65), the master's degree must be completed within three years.

Course Requirements

		Units
Required Courses		
Students are required to enroll in the following courses:		
COMPMED 200	One Health Journal Club (take twice)	2
COMPMED 202	Research Biomethodology for Laboratory Animal Science	2
COMPMED 205	Animal Use in Biomedical Research	3
COMPMED 209	Laboratory Animal Medicine Seminar	1
COMPMED 210	Form and Funkiness of Lab Animals : Anatomy, Histology, and Pathology	4
COMPMED 211	Biostatistics for the Life Sciences	2
COMPMED 260	Masters Laboratory Animal Science Practicum/Laboratory Research	1-18
COMPMED 290	Laboratory Animal Science Professional Development and Career Exploration (take three times)	3
Elective Courses		
COMPMED 114	Introduction to Veterinary Medical Terminology	2
COMPMED 123	Immunology of Infectious Disease	3
COMPMED 207	Vertebrate Brain Evolution	2
BIOS 285	Rodent Animal Models: Selection, Detection, Dissection, Inspection	1
Minimum Total Units		**45**

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

In Academic Year 2020-21, the Department of Comparative Medicine considers courses in which a 'CR' (credit) is earned as satisfactory toward completion of the graduate degree.

Other Graduate Policies

The Department of Comparative Medicine is monitoring the impact of COVID-19 on its master's students' ability to conduct research in person. The thesis requirement, typically based on student's laboratory research project, may be amended at the discretion of the department.

Graduate Advising Expectations

The Department of Comparative Medicine (DCM) is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee.

Graduate students are expected to have selected a faculty mentor by their second quarter in the program.

Faculty mentors are expected to meet with graduate students at least once a quarter to discuss and to assist with development of the student's Individual Development Plans (https://drive.google.com/open/?id=1Xq4uWhblKRgo25QQWsLeBbK7wx0rNNx1). Additionally, the department encourages advisors and students to meet on a regular basis throughout the year to discuss the student's professional development in key areas such as selecting courses, designing and conducting research, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship. They should proactively seek academic and professional guidance and take responsibility for informing themselves of policies and degree requirements for the M.S. in Laboratory Animal Science (MLAS) program. All new MLAS students are expected to enroll in and to participate in the department's formal professional development and mentoring course, COMPMED 290, offered quarterly.

As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Academic progress and student completion of program requirements and milestones are monitored by the program director and staff, and are reviewed during the Masters of Laboratory Animal Science Faculty Advisory Committee each quarter. A detailed description of the program's requirements, milestones, and advising expectations (for students and for their advisors) can be found on the program web site (http://med.stanford.edu/compmed/mlas.html).

Graduate students and their faculty mentors are encouraged to collaborate with the department's student services officer for referrals to campus resources, which include Biosci Careers Center, Vaden Health, etc.

Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) (VPGE) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) (GAP).

For more information regarding Graduate Student Advising and Postdoctoral/Resident Mentoring, contact the following people:

- Graduate Student Advising: Tom Albert (Student Services Officer), tom.albert@stanford.edu.
- Program Director: Sherril Green (Comparative Medicine Chair), sherril@stanford.edu.
- Postdoctoral Student/Residents: Megan Albertelli (Laboratory Animal Medicine Residency Director), megan.albertelli@stanford.edu.
- Postdoctoral/Resident: Monika Huss (Resident and Trainee Wellness Advisor), monikag@stanford.edu.

Emeriti: (Professors) Donna M. Bouley, Linda C. Cork

Chair: Sherril Green

Director of Graduate Studies: Sherril Green

Co-Director of Graduate Studies: Corinna Darian-Smith

Professors: David Bentzel (Clinical), Paul S. Buckmaster, Stephen Felt, Sherril Green, Shaul Hestrin

Associate Professors: Megan Albertelli, Corinna Darian-Smith, Joseph Garner, Claude Nagamine

Assistant Professors: Kerriann Casey (Clinical), Thomas Cherpes, Monika Huss (Clinical), Cholawat Pacharinsak, Jose Vilches-Moure

Courses

COMPMED 11SC. Life in the Zoo: Behavior, Welfare and Enrichment. 2 Units.
What makes for a good life in a zoo? For that matter, what makes a good zoo? The psychological and physical wellbeing of the animals? The contribution to research, conservation, and education? The guest experience? Students will learn first-hand how animal welfare science provides an evidence-based approach to optimize and balance each of these demands so that "good welfare is good business." Through a unique experience at San Francisco Zoo students will learn how to apply principles of animal behavior to design environmental enrichments which benefit both the animals and the complex mission of a zoo. Students will be guided through the process of assessing an exhibit from the point of view of the animal's behavior and wellbeing, educational opportunities, and guest experience; developing an enrichment plan; designing and building enrichments for the animals; interacting with the public as docents; and assessing the overall effectiveness of a new enrichment; before finally presenting their work at a "mini-conference." The course will be taught with an emphasis on self-guided learning, student-led class time, hands-on experience, and service-learning. Most days will begin with students presenting what they have learned the previous day to the class, followed by student-led discussion, preparation time for the day's activities, and then time out in the zoo. The course will be taught by Dr. Garner (whose introductory seminar in Animal Behavior is strongly recommended, though not required) and Dr. Watters (Vice President of Animal Wellness and Animal Behavior, San Francisco Zoological Society). [This is a SOPHOMORE COLLEGE course. Visit soco.stanford.edu for full details.].

COMPMED 23N. Pandemics & Plagues: Biological Causes and Social Effects. 3 Units.
Massive scale infections or plagues have often occurred, affecting millions for years or quickly killing thousands. In this seminar, we will use both biological and social lenses to examine infectious agents and the plagues they caused. To provide helpful framework for this exploration, we will begin with a very brief overview of the principles of microbiology and immunology. This will be followed by specific looks at the biological causes and social responses to Black Death, cholera, tuberculosis, the 1918 influenza pandemic, polio, and the ongoing HIV pandemic. We will conclude our seminar with similar looks at some of the infectious agents most likely to cause new pandemics.

COMPMED 80N. Animal behavior: sex, death, and sometimes food!. 3 Units.
Preference to freshman. Behavior is what makes animals special (thirsty plants don't walk to water), but why do animals behave the way they do? What does their behavior tell us about their inner lives, and about ourselves? What do lipstick and cuckoos and fireflies have in common? Why would nobody want to be a penguin? What do mice say to each other in their pee-mail? Learning how to think about questions like these gives us a unique perspective on the natural world. Format: Discussion and criticism of video examples, documentaries, and research papers. Topics: History and approaches to animal behavior; development of behavior, from genetics to learning; mechanisms of behavior, from neurons to motivation; function of behavior, from honest signals to selfish genes; the phylogeny of behavior, from domestication to speciation; and modern applications of behavior, from abnormal behavior, to conservation, to animal welfare, and animal consciousness.

COMPMED 81Q. Aardvarks to Zebras: The A to Z of Animal Anatomy. 3 Units.
Preference to sophomores. Ever wonder what cats and narwhals have in common? Maybe you haven't, but despite their seemingly different lifestyles and habitats (i.e. sleeping on couches versus swimming in oceans), they are both mammals! In this seminar, students will gain an appreciation for basic mammalian anatomic and physiologic principles that span across multiple species while emphasizing key differences that render each species unique. Through student projects, we will explore evolutionary adaptations that have driven the success of a variety of species within the context of their natural environments. In addition to lecture content, virtual laboratory sessions will reinforce anatomic principles through a combination of rodent cadaver dissection and examination of organ and bone specimens. Students with a passion for science will gain a fundamental understanding of anatomy that is applicable to future careers in medicine, biomedical research, veterinary medicine, and ecology/conservation.

COMPMED 84Q. Globally Emerging Zoonotic Diseases. 3 Units.
Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

COMPMED 85N. Animal Use in Biomedical Research. 3 Units.
Preference to freshmen. How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significantnportions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as laws and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: What advances have been made as a result of the use of animals in research? Who conducts animal research? Predominant animal species used in biomedical research, facts and myths; the regulation of biomedical research; housing and care of laboratory animals; why new drugs must be tested; animal use in stem cell research, cancer research and genetically engineered mice; career choices in biomedical research.

COMPMED 87Q. Laboratory Mouse in Biomedical Research. 3 Units.
What is a nude mouse and why is it used in cancer research? How come my mouse pups have a different coat color than their parents? What is a knockout mouse? Answers to these and more are in this introduction to the laboratory mouse, one of the most widely used models in biomedical research. We will explore the natural history and origin of the laboratory mouse; the ethics and regulations on the use of mice in research; the characteristics and nomenclature of commonly used mouse strains; the anatomy, physiology, and husbandry of mice; common mouse diseases and their effects on research; mouse coat color genetics and its relevance to human diseases; immunodeficient mouse models and their uses in research; and the technology for genetically engineering mice (e.g., transgenic mice). Video demonstrations of necropsy, mouse handling, anesthesia and surgery, identification methods, and research techniques will be provided. Each student is expected to read research papers that use the mouse as a research model and give a presentation of a topic of their choice. Students interested in biomedical research and human or veterinary medicine will benefit from this seminar.

COMPMED 89Q. Ouch it Hurts! The Comparative Neurobiology of Pain. 3 Units.
Preference to sophomores. Focus is on understanding the basic neurobiology of pain pathways. Topics include the physiology, pharmacology, and clinical aspects of effective pain management. In both humans and animals pain is part of the protective mechanisms that prevent further injury to the body. However, if the pain process continues unchecked, it can become extremely detrimental.

COMPMED 91N. And that's why cats should never eat garlic!. 3 Units.
Did you know that although we love garlic, it could make cats very sick? And how come if a human or a dog gets a heart attack they'll end up with a scar, but some fish can regenerate parts of their hearts? In this course, we will explore how select diseases can manifest themselves similarly or differently in different animal species. This course will be of interest to those looking to pursue careers in biomedical fields including veterinary and human medicine. Oh, and one last thing: don't cook with non-stick pans if you have indoor birds. Why? Sign up for the course to find out!.

COMPMED 107. Vertebrate Brain Evolution. 2 Units.
Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi.
Same as: COMPMED 207

COMPMED 109. Veterinary Clinical Shadowing Experience. 1-2 Unit.
Restricted to pre-veterinary students. Priority given to Seniors. The objective of this course is to provide students with practical experience in clinical laboratory animal veterinary medicine by shadowing veterinary staff at Stanford. Experience is gained in areas of laboratory animal veterinary care such as housing systems, husbandry, disease surveillance, enrichment, physical exams and clinical management. Enrolled students will work with multiple species and fully intend to apply to veterinary school. Limited Enrollment. Once registered, students must contact Dr. Sam Baker to create a shadowing schedule.

COMPMED 110. Pre-Veterinary Advisory. 1 Unit.
For students interested in a career in veterinary medicine. How to meet the academic and practical experience prerequisites for admission to veterinary school. Networking with other pre-vet students. Periodic group meetings with guest speakers presenting career options in veterinary medicine. Prerequisite: consent of instructor.

COMPMED 114. Introduction to Veterinary Medical Terminology. 2 Units.
The Introduction to Veterinary Medical Terminology course will introduce students to medical terminology used in the veterinary profession and in biomedical research. This course is designed with the pre-veterinary student in mind, although pre-medical students and students in other fields are welcome. Upon successful completion of the course, students will be able to review, comprehend, and communicate basic medical reports and clinical assessments. Students can expect to complete 2-4 hours of reading per week, to meet 2 hours per week for lecture and to review cases.

COMPMED 123. Immunology of Infectious Disease. 3 Units.
Course utilizes active learning techniques to explore essential elements of the mammalian host response to infection. Focusing on overriding principles rather than rote learning, course delivers pragmatic understanding of this response. Topics include pathogenesis of clinically relevant pathogens, vital immune system cells and tissues, and how innate and adaptive immunity responses are coordinated to control infection. Integrated into this active learning experience are human and veterinary medicine clinical cases that provide an exciting way for participants to re-enforce understanding of these basic concepts of host defense and challenge their problem-solving abilities. UG prerequisites: Cell Biology or consent of instructor.

COMPMED 198. Undergraduate Directed Reading in Comparative Medicine. 1-3 Unit.
May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.

COMPMED 199. Undergraduate Research. 1-3 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

COMPMED 200. One Health Journal Club. 1 Unit.
Participants report on and review scientific articles published in peer reviewed journals. Focus is on manuscripts which report basic and mechanistic discoveries, animal modeling and translational research. The objective is to introduce MLAS students to critical scientific review of hypothesis-based research and experimental design, data analysis and interpretation. Enrollment limited to undergraduate and graduate students currently matriculated or planning to enroll in the MS in Laboratory Animal Science degree program.

COMPMED 202. Research Biomethodology for Laboratory Animal Science. 2 Units.
Emphasis is on providing introductory training and practical, hands-on research animal biomethodology. Topics include basic care and principals guiding the use of research animals, animal health and welfare, enrichment, basic mouse handling, rodent breeding, and the principals of rodent aseptic surgery and anesthesia. The objective of this course is to teach basic skills in animal handling, animal care and biomethodological research techniques. Content delivered online and in-person.

COMPMED 205. Animal Use in Biomedical Research. 3 Units.
How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significant portions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as law and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: history of animals in research, environmental enrichment for research animals, and research animals in the media.

COMPMED 207. Vertebrate Brain Evolution. 2 Units.
Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi.
Same as: COMPMED 107

COMPMED 209. Laboratory Animal Medicine Seminar. 1 Unit.
Focuses on husbandry, care and diseases of major laboratory animal species (rodents, fish and amphibians, swine, sheep, rabbits, monkeys); regulatory and compliance, applied principals of animal modeling, and factors that influence animal research, animal behavior and research reproducibility. The objective of this course is to provide students with an overview of the history of laboratory animal science, current industry standards and practices, and the fundamentals of laboratory animal diseases. Department consent required for enrollment. May be repeated for credit.

COMPMED 210. Form and Funkiness of Lab Animals : Anatomy, Histology, and Pathology. 4 Units.
Focus is on anatomy and histology (microscopic anatomy) of the entire mouse, proper instrument handling and dissection technique, proper tissue fixation, trimming and orientation in cassettes, identification of normal organ histology on H & E-stained slides using a light microscope, use of special stains, and digital image acquisition. Basic pathological processes (inflammation, necrosis, apoptosis, hyperplasia, cancer) and how these manifest in different organs comprises the pathology aspect of this course. Participants present the pathology of their lab's mouse models. Preference to graduate students working with mouse models. Dissection labs. Comfort with mouse handling and previous participation in VSC mouse handling and euthanasia workshops recommended.

COMPMED 210A. Form and Funkiness of Lab Animals I: Anatomy and Histology. 3 Units.
Have you ever wondered what dermatitis looks like on a histology slide? Does wondering about what a pancreas really looks like keep you up at night? Wonder no more! This course focuses on the anatomy and histology of laboratory animal species, with a focus on the laboratory mouse. Topics covered include: tissue dissection, tissue preparation for histology (collection, fixation, trimming and orientation), and identification of normal anatomy and histology through brightfield microscopy. This course involves dissection laboratories, and previous participation in the VSC Mouse Handling Workshop is recommended.

COMPMED 210B. Form and Funkiness of Lab Animals II: Introduction to Pathological Principles. 3 Units.
Have you ever ever wondered what dermatitis looks like on a histology slide? Have you ever lost sleep thinking about what an infarct really is? Well, it's your lucky quarter! This course focuses on the microscopic assessment of tissue pathology, with a focus on the laboratory mouse. Topics covered include: cell injury and cell death, inflammation, healing, and neoplasia. Common diseases of the laboratory house will also be covered. Prerequisites: COMPMED210A (Form and Funkiness of Laboratory Animals I: Anatomy and Histology).

COMPMED 211. Biostatistics for the Life Sciences. 2 Units.
Emphasis is on real-world experimental design and analysis in the life sciences, with particular focus on modern techniques that maximize power and minimize sample size, and avoiding common errors contributing to false discovery and the reproducibility crisis. This is a flipped-classroom. Class time is devoted to discussion of assigned reading (primarily Grafen & Hails 2002 "Modern statistics for the life sciences"), critique of papers, working through example data sets, and developing analyses for the students' own research data. The objective is to provide MLAS students with a fundamental understanding of basic statistics, particularly as applied to the design and planning of animal-based research projects.

COMPMED 260. Masters Laboratory Animal Science Practicum/ Laboratory Research. 1-18 Unit.
Research laboratory and clinical service (pathology, diagnostic laboratory, surgery, husbandry, anesthesiology, aquatics, facility business and management, etc.), quarterly rotations for students enrolled in the Master's of Laboratory Animal Science program. The objective of this course is to provide students with hands on experience in research laboratories using animal models and to provide experience working in the daily operations of a large, veterinary service center. Fulfills the practicum and research requirements of MLAS students.

COMPMED 290. Laboratory Animal Science Professional Development and Career Exploration. 1 Unit.
Focus is on career development for graduate students and trainees enrolled in a trainee program in the Department of Comparative Medicine. Seminar topics include career pathways in laboratory animal science, resume preparation, manuscript preparation and authorship, life in academics, life in industry and biopharma, regulatory agencies, veterinary and medical school. Speakers include faculty, speakers from industry and pharmaceutical companies, veterinary school and medical school graduates, regulatory and compliance professionals, research scientists, and animal research program/laboratory managers. Students may choose to shadow veterinary clinical faculty or rotate through basic science laboratory, by special arrangement. The objective is to introduce students to the multiple career pathways available to individuals with advanced training in laboratory animal science. May be taken up to six quarters.

COMPMED 299. Directed Reading in Comparative Medicine. 1-18 Unit.
Prerequisite: consent of instructor. (Staff).

COMPMED 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

COMPMED 399. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members.Opportunities are available in comparative medicine and pathology, immuno-histochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.

COMPMED 801. TGR Project. 0 Units.
.

DEVELOPMENTAL BIOLOGY

Courses offered by the Department of Development Biology are listed under the subject code DBIO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=DBIO&filter-catalognumber-DBIO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=DBIO&filter-catalognumber-DBIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=DBIO&filter-catalognumber-DBIO=on).

A fundamental problem in biology is how the complex set of multicellular structures that characterize an adult animal is generated from the fertilized egg. Recent advances at the molecular level, particularly with respect to the genetic control of development, have been explosive. These advances represent the beginning of a major movement in the biological sciences toward the understanding of the molecular mechanisms underlying developmental decisions and the resulting morphogenetic processes. This new thrust in developmental biology derives from the extraordinary methodological advances of the past decade in molecular genetics, immunology, and biochemistry. However, it also derives from groundwork laid by the classical developmental studies, the rapid advances in cell biology and animal virology, and from models borrowed from prokaryotic systems. Increasingly, the work is directly related to human diseases, including oncogene function and inherited genetic disease.

The Department of Developmental Biology includes a critical mass of scientists who are leading the thrust in developmental biology and who can train new leaders in the attack on the fundamental problems of development. Department labs work on a wide variety of organisms from microbes to worms, flies, and mice. The dramatic evolutionary conservation of genes that regulate development makes the comparative approach of the research particularly effective. Scientists in the department labs have a very high level of interaction and collaboration. The discipline of developmental biology draws on biochemistry, cell biology, genetics, molecular biology, and genomics. People in the department have a major interest in regenerative medicine and stem cell biology.

The department is located in the Beckman Center for Molecular and Genetic Medicine within the Stanford University Medical Center.

Master of Science in Developmental Biology

University requirements for the M.S. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Students in the Ph.D. program in Developmental Biology may apply for an M.S. degree, assuming completion of their course requirements and preparation of a written proposal. The master's degree awarded by the Department of Developmental Biology does not include the possibility of minors for graduate students enrolled in other departments or programs.

Students are required to take, and satisfactorily complete, at least three lecture courses offered by the department, including DBIO 210 Developmental Biology. In addition, students are required to take three courses outside the department. Students are also expected to attend Developmental Biology seminars and journal clubs. In addition, the candidate must complete a research paper proposing a specific experimental approach and background in an area of science relative to developmental biology.

Doctor of Philosophy in Developmental Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The graduate program in Developmental Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP (http://mstp.stanford.edu/)) in which individuals are candidates for both the M.D. and Ph.D. degrees.

		Units
Students are required to complete at least five courses, including:		
DBIO 210	Developmental Biology	4
DBIO 215	Frontiers in Biological Research (1 unit per quarter; students are required to take at least two quarters)	2
An advanced graduate course in genetics or genomics;		
An advanced graduate course in cell biology or biochemistry;		
A course in quantitative or computational biology.		

Students are expected to attend Developmental Biology seminars and journal clubs.

Completion of a qualifying examination is required for admission to Ph.D. candidacy. The examination consists an off-topic proposal on a subject different from the dissertation research. The final requirements of the program include presentation of a PhD dissertation as the result of independent investigation and constituting a contribution to knowledge in the area of developmental biology. The student must pass the University oral examination, taken only after the student has substantially completed research. The examination is preceded by a public seminar in which the research is presented by the candidate. The oral examination is conducted by a dissertation reading committee.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

The department is in the process of making decisions concerning COVID-19 policies and will update this tab when those decisions have been made.

Graduate Degree Requirements

Grading

The Department of Developmental Biology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Department of Developmental Biology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Stuart Kim, Harley McAdams, Ellen Porzig

Chair: Anne Villeneuve

Associate Chair: David Kingsley

Professors: Philip Beachy, Gill Bejerano, Gerald Crabtree, James Chen, Margaret Fuller, Seung Kim, David Kingsley, Roeland Nusse, Lucy Shapiro, William Talbot, Anne Villeneuve, Irving Weissman, Joanna Wysocka

Assistant Professors: Alistair Boettiger, Daniel Jarosz, Kyle Loh

Courses

DBIO 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

DBIO 200. Genetics and Developmental Biology Training Camp. 1 Unit.
Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.
Same as: GENE 200

DBIO 201. Cells and Signaling in Regenerative Medicine. 2 Units.
Conserved molecular and cellular pathways regulate tissue and organ homeostasis. Errors in these pathways result in human diseases.nManipulation of key cells and signals is leading to new strategies for stimulating tissue formation and regeneration.nTopics: Stem cells. Molecules regulating stem cell proliferation and differentiation. Signaling pathways. Gene regulation. Embryonic stemncells. Programmed cell death. Cell lineage. Tissue regeneration. Use of stem cells in transplantation. Organoids. Emphasis on links between stem cells, signals, and clinically significant topics including diabetes, bone loss, cancer, and aging.

DBIO 210. Developmental Biology. 4 Units.
Current areas of research in developmental biology. How organismic complexity is generated during embryonic and post-embryonic development. The roles of genetic networks, gene regulation ,organogenesis, tissue patterning, cell lineage, maternal inheritance, cell-cell communication, signaling, and regeneration in developmental processes in well- studied organisms such as vertebrates, insects, and nematodes. Team-taught. Students meet with faculty to discuss current papers from the literature. Prerequisite: graduate standing, consent of instructor. Recommended: familiarity with basic techniques and experimental rationales of molecular biology, biochemistry, and genetics.

DBIO 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.
Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 42, or equivalent.
Same as: BIOE 211, BIOE 311, BIOPHYS 311

DBIO 215. Frontiers in Biological Research. 1 Unit.
Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems.
Same as: BIOC 215, GENE 215

DBIO 219. Special Topics in Development and Cancer: Evolutionary and Quantitative Perspectives. 3 Units.
The course will serve as a literature-based introductory guide for synthesis of ideas in developmental biology and cancer, with an emphasis on evolutionary analysis and quantitative thinking. The goal for this course is for students to understand how we know what we know about fundamental questions in the field of developmental biology and cancer, and how we ask good questions for the future. We will discuss how studying model organisms has provided the critical breakthroughs that have helped us understand developmental and disease mechanisms in higher organisms. The students are expected to be able to read the primary literature and think critically about experiments to understand what is actually known and what questions still remain unanswered. Students will develop skills in the educated guesswork to apply order-of-magnitude methodology to questions in development and cancer.
Same as: BIOE 219

DBIO 220. Genomics and Personalized Medicine. 3 Units.
Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200.
Same as: GENE 210

DBIO 234. Elements of Grant Writing. 1 Unit.
Focus is on training first year graduate students in proposal writing. In an intensive 4-week period, students learn fundamental skills focused on scientific proposal writing, including writing and criticizing a proposal on the scientific topic of their choice. Students encouraged to use these new skills and the proposal they create to apply for external funding to support their research training. Students in the Genetics home program may enroll in this course with prior approval from the course director.

DBIO 273A. The Human Genome Source Code. 3 Units.
A computational primer to "hacking" the most amazing operating system "disk" on the planet: your genome. Handling genomic data is deceptively easy. But that's muscle. You want to be the brain, too. Topics include genome sequencing (assembling source code from code fragments); the human genome functional landscape: variable assignments (genes), control-flow logic (gene regulation) and run-time stack (epigenomics); human disease and personalized genomics (as a hunt for bugs in the human code); genome editing (code injection) to cure the incurable; and the source code modifications behind amazing animal adaptations. The course will introduce ideas from computational genomics, machine learning and natural language processing. Course includes primers on molecular biology, and text processing languages. Prerequisites: CS106A or equivalent. No biological background assumed.
Same as: BIOMEDIN 273A, CS 273A

DBIO 299. Directed Reading in Developmental Biology. 1-18 Unit.
Prerequisite: consent of instructor.

DBIO 299C. CURRICULAR PRACTICAL TRAINING. 1 Unit.
CPT Course required for international students completing degree requirements.

DBIO 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

DBIO 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

DBIO 802. TGR Dissertation. 0 Units.
.

EPIDEMIOLOGY AND POPULATION HEALTH

Effective October 1, 2019, Epidemiology moved from the Department of Health Research and Policy to become an independent department in the School of Medicine, the new Department of Epidemiology and Population Health.

Epidemiology is the study of factors that cause illness and impairment in human populations. It is the cornerstone of population health and clinical research, informing policy, prevention, disease treatment, and understanding of disease mechanisms. A central focus of epidemiology is to go beyond simple prediction to identifying risk factors likely to be causal, upon which interventions and mechanistic understanding can be reliably based.

The Department of Epidemiology and Population Health (E&PH) is Stanford's academic and organizational home for such activities, offering expertise, research, and training on study design, data collection, analysis and proper interpretation of scientific evidence to improve human health in the clinic and in the field.

Master of Science in Epidemiology and Clinical Research

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The Graduate Program in Epidemiology offers instruction and interdisciplinary research opportunities leading to the M.S. degree in Epidemiology and Clinical Research. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. Epidemiologic methods are used by clinical investigators and by other scientists who conduct observational and experimental research on the identification, prevention, and treatment of human disorders.

Core and affiliated faculty come from the Department of Epidemiology & Population Health and from other Stanford University departments. The program has particular strengths in cancer epidemiology, cardiovascular disease epidemiology, epidemiologic methods, genetic epidemiology, global health, infectious disease epidemiology, musculoskeletal disease epidemiology, neuroepidemiology, and reproductive epidemiology and women's health. Students can select an optional concentration in global health or infectious diseases.

The mission of the Stanford University School of Medicine is to be a premier research-intensive medical school that improves health through leadership, diversity, and collaborative discoveries and innovation in patient care, education and research. The Graduate Program in Epidemiology fosters this mission through the training of physician investigators in techniques of clinical research. The department also welcomes students from other disciplines who would benefit from formal training in epidemiologic methods. The master's degree in Epidemiology and Clinical Research provides students with the skills essential to patient-oriented clinical research, including epidemiologic methods and statistical analysis.

Address inquiries to the Education Program Manager at epiadmissions@stanford.edu.

Admissions

See the Department of Epidemiology & Population Health web (http://med.stanford.edu/epidemiology-dept/education.html)site (http://med.stanford.edu/epidemiology-dept/education.html) for additional information regarding the program and admissions process. GRE is required (optional in 20-21 application cycle, yet still encouraged).

Submit your application through the Stanford Graduate Admissions website (https://gradadmissions.stanford.edu/applying/) by clicking on "Apply Now."

Successful applicants for admission are expected to have a strong academic record, high Graduate Record Examination (GRE) scores obtained within the past five years, strong letters of recommendation, and an appropriate personal statement of purpose. Preference is accorded to applicants with research interests aligned with those of faculty available to serve as research mentors.

Required supporting documents (to be submitted in the Stanford Graduate Admissions Application):

- Statement of Purpose that includes area(s) of interest
- Three letters of recommendation
- Official GRE General Test scores
- Official TOEFL scores (if applicable)
- Unofficial transcripts for all college/university degrees
- CV with relevant work and research experience

Application deadline: Tuesday, March 30, 2021.

Mentors

Students are assigned a methodology mentor from the Department of Epidemiology & Population Health and they also select a research mentor, who may be from another department. For physicians, the research mentor is often a faculty member from the department of the student's clinical specialty.

Coterminal Master's Program

For undergraduates at Stanford University, the program offers a coterminal M.S. in Epidemiology and Clinical Research. Coterminal students have the opportunity to pursue epidemiological research at the intersection of public health, disease treatment, and disease prevention. See the "Coterminal Master's" (p. 2415) tab in this section of this bulletin for admission and program details.

Degree Requirements

To receive the M.S. degree, students are expected to obtain a grounding in epidemiologic methods and applied biostatistics and to demonstrate research skills through the completion of a thesis. The master's degree program is typically completed in two years (four to six quarters).

Students must complete at least 45 units of approved course work as well as a master's thesis, which is usually based on original research related to clinical epidemiology.

Required Courses

		Units
Epidemiologic Methods		
EPI 225	Introduction to Epidemiologic and Clinical Research Methods	3
EPI 226	Intermediate Epidemiologic and Clinical Research Methods	3
EPI 251	Design and Conduct of Clinical Trials	3
Biostatistics		
EPI 259	Introduction to Probability and Statistics for Epidemiology	3
EPI 261	Intermediate Biostatistics: Analysis of Discrete Data	3

EPI 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3
Research Seminar (3 quarters)		
EPI 236	Epidemiology Research Seminar	1
Research (12 units, over at least 2 quarters)		
EPI 399	Graduate Research	1-18
Research Conduct		
MED 255	The Responsible Conduct of Research	1
or MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	
Electives		
Other approved selective and elective courses to complete the program total of at least 45 units		
Total Units		**45**

Pre-approved Electives

Any graduate level HRP course with primary focus on epidemiology or health services content or methods can be taken as an elective if approved by the student's epidemiology adviser.

EPI 251 is recommended but not required for coterminal students and students in designated tracks.

		Units
EPI 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
EPI 214	Scientific Writing	2-3
EPI 216	Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research	2-3
HRP 218	Methods for Health Care Delivery Innovation, Implementation and Evaluation	2
EPI 219	Evaluating Technologies for Diagnosis, Prediction and Screening	3
EPI 223	Introduction to Data Management and Analysis in SAS	2
EPI 224	Genetic Epidemiology	3
EPI 227	Advanced Epidemiologic Methods	3
EPI 231	Epidemiology of Infectious Diseases	3
EPI 235	Designing Research-Based Interventions to Solve Global Health Problems	3-4
EPI 237	Practical Approaches to Global Health Research	1-3
EPI 238	Genes and Environment in Disease Causation: Implications for Medicine and Public Health	2-3
EPI 239	Applications of Causal Inference Methods	2
EPI 244	Developing Measurement Tools for Health Research	2
EPI 247	Epidemic Intelligence: How to Identify, Investigate and Interrupt Outbreaks of Disease	4
HRP 249	Topics in Health Economics I	3-5
HRP 252	Outcomes Analysis	4
EPI 253	Cancer Epidemiology and Prevention	3
HRP 256	Economics of Health and Medical Care	5
HRP 263	Advanced Decision Science Methods and Modeling in Health	3
EPI 264	Foundations of Statistical and Scientific Inference	1
EPI 265	Advanced Methods for Meta-Analysis	2
EPI 267	Life Course Epidemiology	2
EPI 272	The Science of Community Engagement in Health Research	3
EPI 292	Advanced Statistical Methods for Observational Studies	2-3
EPI 263	Social Epidemiology	2
HRP 391	Health Law: Finance and Insurance	3
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4

Coterminal Master of Science in Epidemiology and Clinical Research

The coterminal master's degree is available only to current Stanford undergraduates. The M.S. entails a minimum of 45 units of course work but can require more depending upon the courses chosen and the previous training of the student; a minimum of 12 units must be applied towards the master's thesis.

Coterminal students are enrolled full-time and courses are taken on campus. Graduates of this program are prepared to contribute creatively to basic or applied projects in epidemiology and clinical research. The department anticipates that many go on to Ph.D. programs, M.D. degrees, or to pursue careers in public health, pharma or biotech.

Coterms may choose to obtain their bachelor's degree early after completion of requirements. However, all classes after conferral of the degree may only be counted towards the graduate degree. Part of the strategy that allows coterms maximal flexibility in their course of study is their dual status as both undergraduate and graduate student.

Coterminal students must have at least one quarter of overlap in the undergraduate and graduate career prior to conferring their undergraduate degree. See the "Coterminal Degrees (p. 56)" section of this bulletin for additional details. See also the Registrar's coterminal degrees (https://registrar.stanford.edu/students/coterminal-degree-programs/) pages.

Admission

For additional information on the application process, see the department's coterminal page (http://med.stanford.edu/epidemiology/co-term.html). Address inquiries to the Education Program Manager at epiadmissions@stanford.edu. GRE scores are recommended but not required for coterm applications.

Before applying to the M.S. Epidemiology and Clinical Research coterm program, students should discuss with their advisor and review the Stanford coterm information at the following links:

- Stanford bulletin coterm page (http://exploredegrees.stanford.edu/cotermdegrees/)
- Stanford Registrar coterm page (https://studentaffairs.stanford.edu/registrar/students/coterm/)
- Stanford Undergraduate Advising page for coterms (https://undergrad.stanford.edu/advising/coterm/). There is an option of scheduling a meeting with the Stanford Coterminal Student Advisor from this page.

The application process for coterms is online through Stanford Graduate Admissions (https://www.applyweb.com/stanterm/).

The application must include the following items:

- *Statement of Purpose.* In a maximum two pages, describe the reasons for applying to the M.S. Epidemiology and Clinical Research program and include your areas of interest.

- *Transcript.* Official Stanford transcript is requested and submitted through the online application.
- *Letters of Recommendation:* Three letters of recommendation are required in the application. Two letters should be from your current department faculty or E&PH faculty and one from your academic advisor.
- *CV/Resume:* Include a copy of your resume in your application.
- *GRE Scores:* GRE scores are recommended but not required for coterm applications (but may be requested by the admissions committee for students who have relatively little prior coursework in quantitative courses). For those reporting GRE scores, official test scores must be reported directly to Stanford from Educational Testing Service (ETS). Stanford's ETS institutional code is 4704; an individual department code number is not necessary. Be sure to list Stanford University as a Score Recipient in addition to listing it as your Graduate Institution (GI).

Application Deadline

The M.S. Epidemiology and Clinical Research program only matriculates students into Autumn Quarter. **The deadline to apply for the coterm program is February 2, 2021.**

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Funding Sources

Access to financial aid and other options for coterminal students depends on the number of units and quarters as a registered student at Stanford. Coterminal students have full access to undergraduate sources of financial aid until their twelfth quarter or four years of study. Coterminal students who have completed 180 units are eligible for University fellowships and assistantships. However, many federal and private fellowships and assistantships are awarded only to students who have received the bachelor's degree. Even after the conferral of the bachelor's degree, there is no guarantee that a coterminal student be awarded financial support via a RA-ship, TA-ship, or fellowship.

Degree Requirements

The coterminal Master of Science program follows the same program requirements as the Master of Science (academic), except that the student is not required to take the course in Clinical Trials. Students who desire to concentrate in a specific area can participate in one of the track areas (Infectious Diseases or Global Health), although this is not required. To pursue a research project, the student must make arrangements with program faculty.

See the "Master's (p. 2414)" tab in this section of this bulletin for degree requirements.

Ph.D. in Epidemiology and Clinical Research

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The field of epidemiology is poised to undergo major changes, and this Ph.D. program offers a cutting-edge curriculum that reflects this shift. Driven by technological advancements, the availability of very large datasets, and the omics revolution, epidemiology is moving toward what some have called Big Epidemiology, where epidemiologists partner with other scientists to study vast amounts of data. Thus, this program will train epidemiologists and clinical researchers to be savvy in technology, computing, data mining, bioinformatics, and genomics. The curriculum capitalizes on Stanford's unique strengths in these disciplines.

Admission

See the department's website (http://med.stanford.edu/epidemiology-dept/education.html) for additional information on the admissions process. Address inquiries to the Education Program Manager at epiadmissions@stanford.edu.

Application deadline: Tuesday, December 8, 2020. This is the final deadline. All applications must be submitted and all reference letters must be received by 11:59 pm on December 8, 2020.

Submit your application through the Stanford Graduate Admissions website (https://gradadmissions.stanford.edu) by clicking on "Apply Now."

Applications are evaluated based on the applicant's commitment to and aptitude for a career in epidemiology as demonstrated via transcripts, statement of purpose, relevant work and research experience, and letters of recommendation. The Graduate Record Examination (GRE) is required (optional in the 2020-2021 application cycle). Applicants from non-English speaking countries should provide evidence of competence in English on the Test of English as a Foreign Language (TOEFL). (For additional information on Stanford University requirements regarding TOEFL, visit the Stanford Graduate Admissions website page related to tests (https://gradadmissions.stanford.edu/applying/starting-your-application/required-exams/).

Required Supporting Documents (to be submitted in the Stanford Graduate Admissions Application)

- Statement of Purpose that includes area(s) of interest
- Three letters of recommendation
- Official GRE General Test scores
- Official TOEFL scores (if applicable)
- Unofficial transcripts for all college/university degrees
- CV with relevant work and research experience

The GRE is required, yet optional for the 20-21 admissions cycle.

Advising

Academic advising by department faculty is a critical component of graduate students' education.

All matriculating students are assigned a faculty adviser from the group of core faculty to help them design their academic program.

The program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the Graduate Academic Policies and Procedures (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) manual.

See the "Graduate Advising (p. 2418)" tab of this section of this bulletin for additional information on advising expectations for student and faculty.

After matriculating, students meet with their academic advisers to plan out an individually tailored curriculum. Students who matriculate with prior training in epidemiology and statistics may replace introductory core courses with more advanced courses, subject to approval. Beyond core course requirements, students select electives that delve deeper into a particular area of specialization of their choosing. Innovative online learning approaches will help meet the needs of physician-students, who will also be busy with clinical duties.

Degree Requirements

Students take core courses in epidemiology and biostatistics. Ph.D. students must complete a minimum of 135 units (as per University requirements), including 45 course units exclusive of EPI 236 Epidemiology Research Seminar, EPI 299 Directed Reading in Epidemiology, and EPI 399 Graduate Research.

		Units
Epidemiologic methods sequence (required)		
EPI 225	Introduction to Epidemiologic and Clinical Research Methods	3
EPI 226	Intermediate Epidemiologic and Clinical Research Methods	3
EPI 227	Advanced Epidemiologic Methods	3
EPI 264	Foundations of Statistical and Scientific Inference	1
Biostatistics sequence (required)		
EPI 259	Introduction to Probability and Statistics for Epidemiology	3
EPI 261	Intermediate Biostatistics: Analysis of Discrete Data	3
EPI 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3
Additional Methodologic coursework (must take at least 3 courses totaling at least 9 units)		
Any 200-level STATS course (other than STATS 260)		
STATS 116	Theory of Probability	
EPI 216	Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research	2-3
HRP 252	Outcomes Analysis	
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	
EPI 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
CS 229	Machine Learning	3-4
COMM 382	Big Data and Causal Inference	
BIOMEDIN 215	Data Science for Medicine	
CS 246	Mining Massive Data Sets	
STATS 202	Data Mining and Analysis	
CS 106A	Programming Methodology	3-5
BIOMEDIN 217/ CS 275	Translational Bioinformatics	
GENE 224	Principles of Pharmacogenomics	
BIOMEDIN/DBIO/ CS 273A	The Human Genome Source Code	
GENE 210/ DBIO 220	Genomics and Personalized Medicine	
Electives coursework: Infectious Disease Epidemiology/ Global Health/Genetics/Social and Behavioral Epidemiology/ Community-based Research/Cancer Epidemiology/Clinical Trials		
Take at least one course in 3 distinct areas, for a total of at least 9 units.		3-4
EPI 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
EPI 219	Evaluating Technologies for Diagnosis, Prediction and Screening	3
EPI 224	Genetic Epidemiology	3
EPI 231	Epidemiology of Infectious Diseases	3
EPI 235	Designing Research-Based Interventions to Solve Global Health Problems	3-4
EPI 237	Practical Approaches to Global Health Research	1-3
EPI 247	Epidemic Intelligence: How to Identify, Investigate and Interrupt Outbreaks of Disease	4
EPI 251	Design and Conduct of Clinical Trials	3
EPI 253	Cancer Epidemiology and Prevention	3
EPI 263	Social Epidemiology	2
EPI 267	Life Course Epidemiology	2
EPI 270	Big Data Methods for Behavioral, Social, and Population Health Research	2-3
EPI 272	The Science of Community Engagement in Health Research	3
BIO 247	Genomic approaches to the study of human disease	3
CHPR 247	Methods in Community Assessment, Evaluation, and Research	3
HRP 204	Models for Understanding and Controlling Global Infectious Diseases	3-4
HRP 263	Advanced Decision Science Methods and Modeling in Health	3
Other core courses/requirements (details in PhD handbook)		
MED 255	The Responsible Conduct of Research	1
EPI 236	Epidemiology Research Seminar	1
EPI 399	Graduate Research	1-18
Electives		
Total Units Required		**135**

Students should take EPI 236 Epidemiology Research Seminar at least 3 quarters (3 units).

Additional Requirements

See the department's website (https://med.stanford.edu/epidemiology-dept/education/graduate-programs/phd-ecr2/phd-requirements.html) and PhD Epidemiology & Clinical Research Handbook for additional requirements and sample programs.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine

M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Department of Epidemiology & Population Health counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Department of Epidemiology & Population Health is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

E&PH programs adhere to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the Graduate Academic Policies and Procedures (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) manual.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Department Chair: Melissa Bondy

Director: Steven Goodman

Core Faculty and Academic Teaching Staff:

Michael Baiocchi, Melissa Bondy, Mark Cullen, Lisa Goldman Rosas, Steven Goodman, Victor Henderson, Ann Hsing, John Ioannidis, Esther John, Abby King, Allison Kurian, Yvonne Maldonado, Lorene Nelson, Michelle Odden, Lesley Park, Julie Parsonnet, Rita Popat, Patricia Rodriguez Espinosa, Kristin Sainani, Julia Simard

Affiliated Faculty by Department:

- Biomedical Data Science: Ying Lu
- Dermatology: Eleni Linos
- Medicine: Jason Andrews, Themistocles Assimes, Glenn Chertow, Jennifer Lee, Stephen Luby, Latha Palaniappan, David Rehkopf, Thomas Robinson, Marcia Stefanick, Holly Tabor
- Pediatrics: Suzan Carmichael, Bonnie Halpern-Felsher, Paul Fisher, Angelle (Desiree) LaBeaud, Mary Leonard, David Maahs, Lee Sanders, Gary Shaw

Courses

EPI 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

EPI 202. R Fundamentals for Health Research. 1-2 Unit.
This introductory course is a practicum in which students will learn the basics of R and use the programming language to analyze health datasets by application of classical statistical methods. A familiarity with basic descriptive and inferential statistics is required. It is assumed that students will have no (or very little) prior experience with R. Class sessions will include some lecture content and hands-on coding by each student on their own computers. Students will practice using R with open-source and simulated datasets. The primary goal of the course is to equip students with a basic and fundamental understanding of R's capabilities, experience using R with practice datasets, and the ability to extend their facility with R as their needs dictate. Students enrolled for 2 units will have additional weekly practice problems assigned. Priority for enrollment given to CHPR masters students, who must take the course for a letter grade.
Same as: CHPR 202

EPI 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.
Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.
Same as: CHPR 206, MED 206, STATS 211

EPI 214. Scientific Writing. 2-3 Units.
(Formerly HRP 214) Step-by-step through the process of writing and publishing a scientific manuscript. How to write effectively, concisely, and clearly in preparation of an actual scientific manuscript. Students are encouraged to bring a manuscript on which they are currently working to develop and polish throughout the course. Please note 3-units students will additionally write and revise a manuscript.

EPI 216. Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research. 2-3 Units.
(Formerly HRP 216) Topics include: advanced aspects of study design and data analyses; evaluating confounding and interaction; modeling continuous characteristics of exposure; building prediction models; methods of summarizing literature and quantifying effect sizes (meta-analysis); handling missing data; and propensity score methods. 3 units requires a data analysis project. Prerequisites: 258 or 261, or consent of instructor.

EPI 219. Evaluating Technologies for Diagnosis, Prediction and Screening. 3 Units.
(Formerly HRP 219) New technologies designed to monitor and improve health outcomes are constantly emerging, but most fail in the clinic and in the marketplace because relatively few are supported by reliable, reproducible evidence that they produce a health benefit. This course covers the designs and methods that should be used to evaluate technologies to diagnose patients, predict prognosis or other health events, or screen for disease. These technologies can include devices, statistical prediction rules, biomarkers, gene panels, algorithms, imaging, or any information used to predict a future or a previously unknown health state. Specific topics to be covered include the phases of test development, how to frame a proper evaluation question, measures of test accuracy, Bayes theorem, internal and external validation, prediction evaluation criteria, decision analysis, net-utility, ROC curves, c-statistics, net reclassification index, decision curves and reporting standards. Examples of technology assessments and original methods papers are used. Knowledge of statistical software is not required, although facility with at least Excel for basic calculations is needed. Open to students with an understanding of introductory biostatistics, epidemiologic and clinical research study design. Undergraduates may enroll with consent of instructor.

EPI 223. Introduction to Data Management and Analysis in SAS. 2 Units.
(Formerly HRP 223) Provides hands-on introduction to basic data management and analysis techniques using SAS. Data management topics include: Introduction to SAS and SAS syntax, importing data, creating and reading SAS datasets, data cleaning and validation, creating new variables, and combining data sets. Analysis techniques include: basic descriptive statistics (e.g., means, frequency) and bivariate procedures for continuous and categorical variables (e.g., t-tests, chi-squares).

EPI 224. Genetic Epidemiology. 3 Units.
This course presents fundamental concepts and methods in genetic epidemiology, with examples on genetic studies of chronic diseases, including cancer, cardiovascular disease, metabolic conditions, and autoimmune diseases. It will provide an overview of various study designs, including family studies, and it covers fundamental analyses, inferences, and their strengths and limitations. It will include topics such as assessing genetic influences on disease; advances in genomics technology; family based study designs for linkage, exome sequencing and case-parent trios; candidate gene and genome-wide association studies of both common and rare genetic variants; gene-environment interactions, epistasis and non-Mendelian genetics; software and web-based data resources; ethical issues in genetic epidemiology; and applications of genetic epidemiology to clinical practice and public health. Guest speakers will discuss these concepts through the lens of various chronic diseases. Prerequisite: introductory biostatistics or epidemiology, biology, and genetics. Biostatistics (intro) or epidemiology (intro), biology, genetics (intro).
Same as: GENE 230

EPI 225. Introduction to Epidemiologic and Clinical Research Methods. 3 Units.
(Formerly HRP 225) The skills to design, carry out, and interpret epidemiologic studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, measures of association, estimating sample size, and sources of bias. Prerequisite: A basic/introductory course in statistics or consent of instructor.

EPI 226. Intermediate Epidemiologic and Clinical Research Methods. 3 Units.
(Formerly HRP 226) The principles of study design, measurement, confounding, effect modification, and strategies for minimizing bias in clinical and epidemiologic studies. Prerequisite: 225 or consent of instructor.

EPI 227. Advanced Epidemiologic Methods. 3 Units.
(Formerly HRP 227) Theory and applied methods for causal inference in epidemiology. Focus on the potential outcomes model and related methods including inverse probability weights, G-computation, and targeted maximum likelihood estimation. Other contemporary topics may be included. Learning is facilitated through in-class discussion, critical review of peer-reviewed literature, and applied laboratories in R. Prerequisites: EPI 225, EPI 226, and EPI 261 or equivalent (or permission of instructor).

EPI 229. Stanford CTSA Scholars Seminar. 1 Unit.
Preference to trainees awarded Stanford internal KL2, TL1 grants. Focus is on students and junior faculty who have received a CTSA KL2 or TL1 Award. Discussions include progress and challenges involved in starting and conducting clinical research, current courses, time management and resources; support from peers; education and professional development. All scholars are required to attend a weekly seminar series meeting throughout the year that will cover an array of cross-cutting methodological topics with published examples of implementation. Prerequisite: Awarded a CTSA KL2, TL1 Grant or Spectrum UL1.

EPI 231. Epidemiology of Infectious Diseases. 3 Units.
(Formerly HRP 231) Principles of the transmission of the infectious agents (viruses, bacteria, rickettsiae, mycoplasma, fungi, and protozoan and helminth parasites). The role of vectors, reservoirs, and environmental factors. Pathogen and host characteristics that determine the spectrum of infection and disease. Endemicity, outbreaks, and epidemics of selected infectious diseases. Principles of control and surveillance.

EPI 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.
The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAids (an award-winning nonprofit educational technology social venture used in 82 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.
Same as: AFRICAST 135, AFRICAST 235, EDUC 135, EDUC 335, HUMBIO 26, MED 235

EPI 236. Epidemiology Research Seminar. 1 Unit.
(Formerly HRP 236) Weekly forum for ongoing epidemiologic research by faculty, staff, guests, and students, emphasizing research issues relevant to disease causation, prevention, and treatment. May be repeated for credit.

EPI 237. Practical Approaches to Global Health Research. 1-3 Unit.
(Formerly IPS 290 and HRP 237) How do you come up with an idea for a useful research project in a low resource setting? How do you develop a research question, prepare a concept note, and get your project funded? How do you manage personnel in the field, complex cultural situations, and unexpected problems? How do you create a sampling strategy, select a study design, and ensure ethical conduct with human subjects? This course takes students through the process of health research in under-resourced countries from the development of the initial research question and literature review to securing support and detailed planning for field work. Students progressively develop and receive weekly feedback on a concept note to support a funding proposal addressing a research question of their choosing. Aimed at graduate students interested in global health research, though students of all disciplines interested in practical methods for research are welcome. Undergraduates who have completed 85 units or more may enroll with instructor consent. Sign up for 1 unit credit to participate in class sessions or 3 units to both participate in classes and develop a concept note.
Same as: INTLPOL 290, MED 226

EPI 238. Genes and Environment in Disease Causation: Implications for Medicine and Public Health. 2-3 Units.
(Formerly HRP 238) The historical, contemporary, and future research and practice among genetics, epidemiology, clinical medicine, and public health as a source of insight for medicine and public health. Genetic and environmental contributions to multifactorial diseases; multidisciplinary approach to enhancing detection and diagnosis. The impact of the Human Genome Project on analysis of cardiovascular and neurological diseases, and cancer. Ethical and social issues in the use of genetic information. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Prerequisites:Human Biology core or Biology Foundations or consent of instructor.
Same as: HUMBIO 159

EPI 239. Applications of Causal Inference Methods. 2 Units.
See http://rogosateaching.com/stat209/. Application of potential outcomes formulation for causal inference to research settings including: mediation, compliance adjustments, time-1 time-2 designs, encouragement designs, heterogeneous treatment effects, aggregated data, instrumental variables, analysis of covariance regression adjustments, and implementations of matching methods. Prerequisite: STATS 209A/MSE 327 or other introduction to causal inference methods. (Formerly HRP 239).
Same as: EDUC 260A, STATS 209B

EPI 244. Developing Measurement Tools for Health Research. 2 Units.
(Formerly HRP 244) The focus of this course is on providing the skills necessary to develop, validate and administer both qualitative and quantitative measures and instruments. Topics will include creating valid measures, ensuring the measures used address and apply to the research questions, design and samples; determining when to use standardized measures or develop new ones; instrument validation techniques; factor analysis; and survey administration, including determining the most effective way of administering measures (e.g., online, paper-and-pencil, ACASI) and the best way to design the survey.

EPI 245. Intensive Course in Clinical Research. 2 Units.
The Intensive Course in Clinical Research (ICCR) is a one-week immersion course designed for new or aspiring clinical investigators, medical students, residents, graduate students, fellows and junior faculty interested in pursuing careers in clinical and transnational research. Students spend five days and four evenings immersed in all aspects of research study design and performance. The format combined didactic with intense group/team activities focused on practical issues in clinical research design - from selection of a researchable study question through actual writing of a research proposal. Lectures and panel discussions are presented by an accomplished faculty of Stanford clinical researchers and key leaders from the Stanford community. Every presentation includes a discussion of relevant issues. The course is supported by over 40 faculty and fellows from across the School of Medicine.

EPI 247. Epidemic Intelligence: How to Identify, Investigate and Interrupt Outbreaks of Disease. 4 Units.
(HUMBIO students must enroll in HUMBIO 57. Med/Graduate students must enroll in EPI 247.) We will cover: the components of public health systems in the US; principles of outbreak investigation and disease surveillance; different types of study design for field investigation; visualization and interpretation of public health data, including identification and prevention of biases; and implementation of disease control by public health authorities. Students will meet with leaders of health departments of the state and the county and will be responsible for devising, testing and evaluating a field questionnaire to better understand the complexities of field research. (Formerly HRP 247).
Same as: HUMBIO 57

EPI 250. Understanding Evidence-Based Medicine: Hands-on experience. 3-4 Units.
How can one practice evidence-based medicine and make evidence-based decisions for clinical practice and policy making? Using pivotal papers published in the recent scientific literature addressing important clinical questions on diverse medical topics, we will probe a wide range of types of studies, types of targeted therapeutic or preventive interventions, and types of studied outcomes (effectiveness and/or safety), including RCTs, observational studies, epidemiologic surveillance studies, systematic reviews-umbrella reviews-meta-analyses-meta-analyses of individual patient data, studies on the evaluation of diagnostic tests and prognostic models, economic analyses studies, and guidelines. Students enrolled for 4 units will complete an additional project or other engagement approved by the instructor. MD studies enroll for +/-. GR students enroll for Letter grade.
Same as: CHPR 205, MED 250

EPI 251. Design and Conduct of Clinical Trials. 3 Units.
(Formerly HRP 251) The rationale for phases 1-3 clinical trials, the recruitment of subjects, techniques for randomization, data collection and endpoints, interim monitoring, and reporting of results. Emphasis is on the theoretical underpinnings of clinical research and the practical aspects of conducting clinical trials.

EPI 253. Cancer Epidemiology and Prevention. 3 Units.
(Formerly HRP 253) This course focuses on the role of epidemiology in cancer etiology, prevention, and control. We will discuss descriptive epidemiology, including cancer trends and patterns, natural history, and biologic characteristics as well as etiology of selected cancers. the influence of environmental and genetic factors and their interplay on the development of cancer are discussed as well as methodologic issues related to investigations of these studies. Principles and problems involved in cancer prevention and screening are covered. Student evaluation is based on a brief presentation and a paper on the descriptive epidemiology of a selected cancer, and participation in class discussions.

EPI 258. Introduction to Probability and Statistics for Clinical Research. 3 Units.
(Formerly HRP 258) Open to medical and graduate students; required of medical students in the Clinical Research Scholarly Concentration. Tools to evaluate medical literature. Topics include random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals, correlation, regression, analysis of variance, and survival analysis.

EPI 259. Introduction to Probability and Statistics for Epidemiology. 3 Units.
(HUMBIO students must enroll in HUMBIO 89X. Med/Graduate students must enroll in EPI 259.) Topics: random variables, expectation, variance, probability distributions, the central limit theorem, sampling theory, hypothesis testing, confidence intervals. Correlation, regression, analysis of variance, and nonparametric tests. Introduction to least squares and maximum likelihood estimation. Emphasis is on medical applications. (Formerly HRP 259).
Same as: HUMBIO 89X

EPI 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.
(Formerly HRP 261) Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS or R. Special topics: cross-fold validation and bootstrap inference.
Same as: BIOMEDIN 233, STATS 261

EPI 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.
(Formerly HRP 262) Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression.
Same as: STATS 262

EPI 263. Social Epidemiology. 2 Units.
Preference to graduate students with prior coursework in Epidemiology. Focuses on understanding the theory and empirical evidence that shows support for the relationships between social environments and health. Covers four main topics: the historical development of social epidemiology, and a survey of the major theories in social epidemiology; the three main empirical approaches used to generate new knowledge in social epidemiology: traditional observational studies, quasi-experimental studies and experimental approaches; how the constructs of social class, race/ethnicity and gender are used in social epidemiology; new emerging empirical approaches within the field including the application of causal, machine learning and complex systems methods.

EPI 264. Foundations of Statistical and Scientific Inference. 1 Unit.
(Formerly HRP 264) The course will consist of readings and discussion of foundational papers and book sections in the domains of statistical and scientific inference. Topics to be covered include philosophy of science, interpretations of probability, Bayesian and frequentist approaches to statistical inference and current controversies about the proper use of p-values and research reproducibility. Recommended preparation: At least 2 quarters of biostatistics and one of epidemiology. Intended for second year Masters students or PhD students with at least 1 year of preceding graduate training.
Same as: STATS 264

EPI 265. Advanced Methods for Meta-Analysis. 2 Units.
(Formerly HRP 265) Meta-analysis is a method to quantitatively combine information from multiple studies; this combination is also called "research synthesis." Historically, it has been used to combine studies with a similar design, such as randomized controlled trials or observational studies examining similar interventions or exposures. However, evidence about a given relationship is often provided by many studies with different designs, or studies that can be "fit together" to create an evidence base. This can only be done with advanced meta-analytic methods. The course will cover advanced methods for research synthesis, including multivariate meta-analysis for multiple outcomes, generalized evidence synthesis of multiple study designs, and network meta-analysis for multiple interventions. These techniques are being increasingly used in evidence-based medicine, health technology assessments and policy making. Recommended preparation: EPI 206, and at least 2 quarters of biostatistics and one of epidemiology, including clinical research design. Familiarity with logistic and linear regression modeling required.

EPI 267. Life Course Epidemiology. 2 Units.
(Formerly HRP 267) The focus of this course is on understanding the evidence for how exposure at multiple levels and at multiple ages influences an individual's health at any given time. The course emphasizes the primary theories used to examine life course determinants of health and how these theories both facilitate and impede research. A secondary focus is on understanding the methodological challenges to studying health from a life course perspective, as well as how knowledge of life course determinants of health can inform interventions to improve health from a population perspective.

EPI 270. Big Data Methods for Behavioral, Social, and Population Health Research. 2-3 Units.
This course will expose students from a variety of quantitative backgrounds to study design and analysis strategies for addressing specific hypotheses using the varied sources of behavioral, social, and population health sciences research data, and the analytic tools available for analyzing these data. The purpose of this foundational course is to lay the groundwork to have a framework for conceptualizing experiments and observational studies that rely on big data in behavioral science and population health. Weekly course meetings will be organized into three section: (1) Core lecture/discussion: weekly lecture and/or discussion of general principles; (2) Module A (Tuesday): large and complex data from internet, commercial, administrative health record, population database sources; and (3) Module B (Thursday): intensive or voluminous longitudinal data from mHealth, smartphone, and sensor technologies. All students are required to enroll in the core course and at least 1 data type module (option to enroll in both). Lecture and core modules are one unit each so students should register appropriately for the units that match their schedule. Register for 2 units if core lecture and one discussion section module, register for 3 units if core lecture and both discussion section modules. Prerequisites: EPI 258/259 (or equivalent statistics course, please contact instructors for approval). Students must have some experience in statistical programming in SAS or R.

EPI 272. The Science of Community Engagement in Health Research. 3 Units.
The Science of Community Engagement in Health Research course will focus on how the science of community engagement can be applied to diverse health-related research topics across the translational spectrum with the ultimate goal of high quality research that transforms human health and addresses health disparities. The course will provide historical context, theoretical frameworks, foundational skills in diverse community engagement methodologies, and tools for examining the effectiveness of various engagement strategies aimed. Specifically, the course will cover: 1) Historical context for community engagement in health-related research; 2) Evolution of community engagement as a science; 3) Theoretical frameworks for various community engagement approaches; 4) Community-Based Participatory Research (CBPR); 5) Community engagement strategies for different stages of translational research; and 6) Evaluation of various engagement strategies; and 7) Ethics of community engagement. Students will gain practical experience in various community engagement tools and strategies to help guide the development of a community engagement plan responsive to community needs. Challenges and benefits of establishing community partnerships will be highlighted by real-world examples. nThe course will include lectures; interactive student-led presentations and guided exercises; class discussions among invited speakers, students and instructors; individual and group assignments; and organized small-group and experiential activities. Course readings will demonstrate the need and opportunity for interdisciplinary community engagement approaches and will illustrate how to conduct innovative community-engaged research. nThe Science of Community Engagement course is intended to reach students with diverse research interests, including clinical research, community health, health research and policy, epidemiology, prevention research, environmental health, etc.
Same as: CHPR 227

EPI 273. Essentials of Clinical Research at Stanford. 1 Unit.
The course will consist of an introduction to the fundamentals of clinical research at Stanford, including the science of clinical research (design and analysis) and logistics (GCP, data management, regulatory). Material will be covered in approximately 4-6 3 hour sessions per quarter.

EPI 275. Population Health Research. 3 Units.
This course provides hands-on experience for students wishing to undertake health-related research using registry data covering the population of Denmark. Students will be instructed in basic R-programming, which they will use to analyze anonmyized Danish data (prior experience with R not required). Students will become familiar with the Danish data and develop a detailed original research proposal on a health-related topic addressable within the Danish data. Most students should be able to complete their proposed research in independent studies after successful completion of this course. nPrerequisites: HRP 259 or comparable introductory course in statistics. Special permission from the instructor required without prerequisites.

EPI 291. Curricular Practical Training. 1-18 Unit.
Curricular Practical Training in HRP.

EPI 292. Advanced Statistical Methods for Observational Studies. 2-3 Units.
Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, and instrumental variables. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: EPI 261 and 262 or STATS 209 (EPI 239), or equivalent. See http://rogosateaching.com/somgen290/.
Same as: CHPR 266, EDUC 260B, STATS 266

EPI 299. Directed Reading in Epidemiology. 1-18 Unit.
Epidemiology, preventive medicine, medical genetics, public health, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

EPI 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

EPI 370W. Medical Scholars Research. 4-18 Units.
Provides academic credit and financial support to medical scholar students who undertake original research under the mentorship of faculty at other institutions. Pre-requisite: Approval of the Medical Student Scholarship Committee.
Same as: Away

EPI 399. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

EPI 801. TGR Project. 0 Units.
.

EPI 802. TGR Dissertation. 0 Units.
.

GENETICS

Courses offered by the Department of Genetics are listed under the subject code GENE on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=GENE&filter-catalognumber-GENE=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=GENE&filter-catalognumber-GENE=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=GENE&filter-catalognumber-GENE=on).

An underlying theme in the department is that genetics is not merely a set of tools but a coherent and fruitful way of thinking about biology and medicine. To this end, the department emphasizes a spectrum of approaches based on molecules, organisms, populations, and genomes. It provides training through laboratory rotations, dissertation research, seminar series, didactic and interactive course work, and an annual three-day retreat of nearly 200 students, faculty, postdoctoral fellows, and research staff.

The mission of the department includes education and teaching as well as research; graduates from our program pursue careers in many different venues including research in academic or industrial settings, health care, health policy, and education. The department is especially committed to increasing diversity within the program, and to the training of individuals from traditionally underrepresented minority groups.

Master of Science in Human Genetics and Genetic Counseling

The University requirements for the M.S. are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

The Department of Genetics offers an M.S. in Human Genetics and Genetic Counseling, which is accredited by the American Board of Genetic Counseling. This program prepares students to practice in the healthcare profession of genetic counseling. The program is a full time two-year program, and accepts students to begin the program only in Autumn Quarter. Students must be admitted directly into this program, and cannot automatically transfer from the Ph.D. programs within the department, or vice versa. While courses are oriented primarily towards genetic counseling students, they may also be taken by medical students, other graduate students, residents or post-doctoral fellows, and (with permission) undergraduates.

To receive a Master of Science degree in Human Genetics and Genetic Counseling from Stanford University, students must successfully complete the following:

1. 84 units, including all of the required coursework as listed below (minimum grades of B- or better, Satisfactory, or Credit)
2. Approximately six quarters of rotations and independent study projects in diverse settings
3. All required aspects of the Graduate Student Research Project
4. All required aspects of the Service and Outreach Requirement
5. Formal presentations in Medical Genetics Grand Rounds and Human Genetics Journal Club.

		Units
GENE 271	Human Molecular Genetics	3
GENE 272	Introduction to Medical Genetics	2
GENE 273	Introduction to Clinical Genetics Testing	2
GENE 274A	A Case Based Approach to Clinical Genetics	2
GENE 274B	A Case Based Approach to Clinical Genetics	2
GENE 275	Role Play and Genetic Counseling Observations	2
GENE 276	Genetic Counseling Fieldwork	3-5
GENE 278	Prenatal Genetic Counseling	1
GENE 279	Pediatric and Adult Genetic Counseling	1
GENE 280	Metabolic Genetic Counseling	1
GENE 281	Cancer Genetic Counseling	1
GENE 282A	Genetic Counseling Research Seminar	1
GENE 282B	Genetic Counseling Research Seminar	1
GENE 283	Genetic Counseling Research	1-8
GENE 284	Medical Genetics Seminar	1
GENE 285A	Genetic Counseling Seminar	3
GENE 285B	Genetics Counseling Seminar	3
GENE 285C	Genetic Counseling Seminar	3
GENE 286	Advanced Genetic Counseling Seminar	2
GENE 287	CARDIOVASCULAR GENETICS	1
GENE 288	Neurogenetics	1
GENE 289	Variant Interpretation	1

- There are several additional required courses, including Clinical Embryology, Biomedical Ethics, and Research Ethics. The remaining required units can be completed through elective courses.
- Students are required to take a research elective to support your completion of the program's research project requirements– the number of units is not important (i.e. it could be a 1 unit course or multiple 2-3 units courses). There is "space" in the curriculum to take additional elective courses. We strongly encourage students to sign up for S/NC for any elective courses to ensure that they are able to focus on learning the material rather than earning a specific grade. In the spirit of supporting tailored education, we are also willing to consider any online courses or webinar series in place of or in addition to other electives. Students must submit a 1-page summary of why it would meet your needs, and if approved, you would register for GENE 299 Directed Readings for the appropriate number of units. Your conference funding could be used to cover the cost.

Students are also STRONGLY ENCOURAGED to attend when possible:

- Attendance at the **Genetics Department Retreat** (held yearly, usually in September in Monterey)
- **Human Genetics Journal Club** (first Monday of the month, 12:30-1:15pm). Attendance is strongly encouraged unless you have a conflict, as you will all present in your second year, and you will improve your critical thinking skills by attending.
- **Current Issues in Genetics** (Fridays 4-5pm, followed by happy hour), Genetics Library M315. This is the Genetics department's version of 'grand rounds,' typically with a more bench-science focus (similar to the talks at the retreat). Great for staying aware of future trends in genomics technology.
- **Stanford Center for Biomedical Ethics Seminars** (Brown Bags, Classic Topics, Writing Seminars) (Wednesdays 11-12), SCBE Conf Room
- **Other relevant Stanford events** (e.g. occasional guest speakers or film screenings sponsored by the GC program or affiliated groups; events held with our sister genetic counseling program at the University of Manila in the Philippines).

- **Work-study position with a genetics service at Stanford** (unless you choose to opt out). All students are expected to work an average of four hours per week, or a total of 40 hours per quarter. You will negotiate the format and timeframes directly with your supervisor.
- **Local, regional, and/or national genetics meetings**. Our hope is that you will choose to attend a combination of events that provide education in both genetic counseling and medical genetics. If frugal, students are often able to attend more than one national conference. We most strongly encourage attending the NSGC Annual Conference during your second year and attending the local conferences (the Northern California Coalition for Genetic Counseling Conference (usually Fall), the Northern California Genetics Exchange (Spring - at Stanford in 2020), and the Western Society for Pediatric Research Annual Meeting (Winter)). Other options include ASHG (Fall) or ACMG (Spring), and various other conferences (with justification submitted to and approved by the program directors in advance). Please refer to the SUGC Program Handbook for details on student conference travel budgets and information on requesting reimbursements.

Faculty members include members of the Stanford faculty from Genetics, Pediatrics, Obstetrics, Pathology, Developmental Biology, Biomedical Ethics, Law, and Psychology, and practicing genetic counselors and clinical geneticists in various medical centers across the Bay Area.

Applications are due in December (see website) for admission in the following Autumn Quarter. Applicants should demonstrate a combination of academic preparation, exposure to genetic counseling, and counseling and/or laboratory experiences. Exposure to persons with disabilities or chronic illness is also helpful. Additional information about the program is available at Stanford's Master's Program in Human Genetics and Genetic Counseling (http://www.med.stanford.edu/genetic-counseling/) website.

Doctor of Philosophy in Genetics

University requirements for the Ph.D. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The Ph.D. program in the Department of Genetics offers graduate students the opportunity to pursue a discipline that encompasses both a set of tools and a coherent way of thinking about biology and medicine. All major areas of genetics and genomics are represented in the department, including human genetics (molecular identification of Mendelian traits and the pathophysiology of genetic disease, gene therapy, genetic epidemiology, analysis of complex traits, genome functional analysis and human evolution), and application of model organisms such as bacteria, yeast, flies, worms, and mice to basic and translational areas of biomedical research. The department is especially strong in genomic and bioinformatic approaches to genome biology and evolution, and includes several genome-scale databases and Centers such as the Center for Genomics and Personalized Medicine (SCGPM), Saccharomyces Genome Database (SGD), the Stanford Microarray Database (SMD), and the Pharmacogenetics and Pharmacogenomics Knowledge Base (PharmGKB), the ENCODE project, Stanford Genome Technology Center (SGTC), ClinGen, eGTEX, and iPOP.

The Genetics Department works to support new generations of science scholars who reflect the diversity of life experiences, intellectual perspectives, race, abilities, and cultures representing society. The Stanford Genomics Diversity Summer Program is designed to help increase the number of underrepresented scientists pursuing and succeeding in genetics, genomics, or other research careers. The department supports this goal by recruiting highly motivated students from diverse backgrounds and exposing them to cutting-edge research in top and well-resourced laboratories.

Exposure to the intellectual scope of the department is provided by laboratory rotations, dissertation research, advanced courses in genetics and other areas of biomedical science, seminar series, journal clubs, and an annual three-day retreat of faculty, students, postdoctoral fellows, and staff scientists. Emphasis is placed on interactions and collaborations among students, postdoctoral students, and faculty within the department and throughout the campus.

During their first year, graduate students in the department take graduate courses and sample areas of research by carrying out rotations in three or four laboratories. At the end of the first three quarters, students may select a laboratory in which to do their dissertation research. While the dissertation research is generally performed in one laboratory, collaborative projects with more than one faculty member are encouraged. In addition to interacting with their faculty advisor, graduate students receive advice regularly from other faculty members who serve as members of their dissertation committee. Study for the Ph.D. generally requires between four and five years of graduate work, most of which is focused on dissertation research.

Students are primarily enrolled in the program to receive the Ph.D. degree, although a limited number of M.D. candidates can combine research training in genetics with their medical studies. Ph.D. candidates who have passed the qualifying exam in the second year can opt to receive the M.S. as a terminal degree.

There are opportunities for graduate students to teach in graduate-level and professional-school courses. In addition, students have the opportunity to participate in educational outreach activities coordinated by the department, which include opportunities to interact with secondary school students and teachers, lay groups, and local science museums.

Students who have recently received a bachelor's, master's, M.D., or Ph.D. degree in related fields may apply for graduate study. Prospective students must have a background in biology, mathematics, physics, and chemistry. Decisions for admission are based on comparison of the relative merits of all the candidates' academic abilities and potential for research and the department's interest in promoting a diverse learning environment. Interviews take place in late February or early March and successful applicants are offered admission by early spring. Students who wish to pursue a combined M.D./Ph.D. degree are considered for admission into the graduate program in the department after they have been admitted to the M.D. program in the School of Medicine.

Students begin graduate studies in Autumn Quarter. Prospective students are encouraged to start the application process early to ensure that they are able to submit a complete application by the December deadline. All students accepted into the Ph.D. program in the Department of Genetics are provided with full tuition and a stipend. Three training grants, two from the National Institutes of Health and one from National Institute for Interdisciplinary Science and Technology, provide major support for the graduate training program in the department. Other student support is provided by departmental funds, the School of Medicine, and from research grants, both federal and private, of the faculty. In addition, a number of graduate students are funded by fellowships, including those from the National Science Foundation and the Stanford Graduate Fellows program.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the

course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Department of Genetics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

The M.S. in Human Genetics and Genetic Counseling program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a B- or better level. However, the department strongly encourages students to follow grading basis guidelines listed in the curriculum guide to ensure that they maximize opportunities for depth and breadth of performance feedback, while minimizing pressure to achieve high marks.

Graduate Advising Expectations

The Department of Genetics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeritus: (Professor) Greg Barsh, Uta Francke

Chair: Michael Snyder

Professors: Russ Altman, Laura Attardi, Julie Baker, Anne Brunet, Carlos Bustamante, Michele Calos, Stanley Cohen, Ronald Davis, Andrew Fire, James Ford, Judith Frydman, Margaret Fuller, Aaron Gitler, Mark Kay, Karla Kirkegaard, Joseph Lipsick, Hiromitsu Nakauchi, Jonathan Pritchard, John Pringle, Julien Sage, Arend Sidow, Tim Stearns, Lars Steinmetz, Hua Tang, Alice Ting , Anne Villeneuve

Professor (Research): Leonore Herzenberg, J. Michael Cherry

Professors (Teaching): Kelly Ormond

Associate Professors: William Greenleaf, Jin Billy Li, Stephen Montgomery, Gavin Sherlock, Douglas Vollrath, Monte Winslow

Associate Professor (Clinical): Mary Ann Campion

Assistant Professors: Maria Barna, Michael Bassik, Ami Bhatt, Le Cong, Christina Curtis, Polly Fordyce, Livnat Jerby-Arnon, Anshul Kundaje, Serena Sanulli, Alex Urban

Assistant Professor (Clinical): Andrea Hanon-Kahn

Courses

GENE 104Q. Law and the Biosciences. 3 Units.
Preference to sophomores. Focus is on human genetics; also assisted reproduction and neuroscience. Topics include forensic use of DNA, genetic testing, genetic discrimination, eugenics, cloning, pre-implantation genetic diagnosis, neuroscientific methods of lie detection, and genetic or neuroscience enhancement. Student presentations on research paper conclusions.

GENE 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

GENE 200. Genetics and Developmental Biology Training Camp. 1 Unit.
Open to first year Department of Genetics and Developmental Biology students, to others with consent of instructors. Introduction to basic manipulations, both experimental and conceptual, in genetics and developmental biology.
Same as: DBIO 200

GENE 202. Human Genetics. 4 Units.
Utilizes lectures and small group activities to develop a working knowlege of human genetics as applicable to clinical medicine. Basic principles of inheritance, risk assessment, and population genetics are illustrated using examples drawn from diverse areas of medical genetics practice including prenatal, pediatric, adult and cancer genetics. Practical aspects of molecular and cytogenetic diagnostic methods are emphasized. Existing and emerging treatment strategies for single gene disorders are also covered. Prerequisites: basic genetics. Only available to MD and MOM students.

GENE 205. Advanced Genetics. 3 Units.
For PhD students in any of the Biosciences Departments and Programs at Stanford University. Emphasis on developing the ability to solve problems using genetic ideas and methods, to understand the nature and reliability of genetic inference, and to apply genetic reasoning to biological research. Weekly paper discussions based on original research papers that define or illustrate the ideas and techniques covered in the lecture.

GENE 207. Microfluidic Device Laboratory. 3-4 Units.
This course exposes students to the design, fabrication, and testing of microfluidic devices for biological applications through combination of lectures and hands-on lab sessions. In teams of two, students will produce a working prototype devices designed to address specific design challenges within the biological community using photolithography, soft lithography, and imaging techniques.
Same as: BIOE 301D

GENE 208. Gut Microbiota in Health and Disease. 3 Units.
Preference to graduate students. Focus is on the human gut microbiota. Students will receive instruction on computational approaches to analyze microbiome data and must complete a related project.
Same as: BIOE 221G, MI 221

GENE 210. Genomics and Personalized Medicine. 3 Units.
Principles of genetics underlying associations between genetic variants and disease susceptibility and drug response. Topics include: genetic and environmental risk factors for complex genetic disorders; design and interpretation of genome-wide association studies; pharmacogenetics; full genome sequencing for disease gene discovery; population structure and genetic ancestry; use of personal genetic information in clinical medicine; ethical, legal, and social issues with personal genetic testing. Hands-on workshop making use of personal or publicly available genetic data. Prerequisite: GENE 202, Gene 205 or BIOS 200.
Same as: DBIO 220

GENE 211. Genomics. 3 Units.
The goal of this course is to explore different genomic approaches and technologies, to learn how they work from a molecular biology view point, and to understand how they can be applied to understanding biological systems. In addition, we teach material on how the data generated from these approaches can be analyzed, from an algorithmic perspective. The papers that are discussed are a mixture of algorithmic papers, and technological papers. Finally, the course has a strong programming component, with Python being the language that we teach. All of our problem sets require Python programming - while beginning programmers succeed in our course, it is a steep learning curve, and the problem sets can require a significant time investment. Basic Python knowledge is required.

GENE 212. Introduction to Biomedical Informatics Research Methodology. 3-5 Units.
Capstone Biomedical Informatics (BMI) experience. Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Issues related to research reproducibility. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 214 or 215 or 217 or 260. Preference to BMI graduate students. Consent of instructor required.
Same as: BIOE 212, BIOMEDIN 212, CS 272

GENE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.
Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisite: CS 106B; recommended: CS161; consent of instructor for 3 units.
Same as: BIOE 214, BIOMEDIN 214, CS 274

GENE 215. Frontiers in Biological Research. 1 Unit.
Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems.
Same as: BIOC 215, DBIO 215

GENE 216. Practical Considerations and Industry Perspective on Academic-Industry Collaborations. 1 Unit.
Provides an overview, fundamentals and practical considerations for different aspects of academic-industry collaborations by inviting current industrial experts to share their views and to answer questions. The different aspects include collaboration models, proposal building, IP right sharing, funding opportunities, sabbatical and internship in industry, industry job searching, etc. This class also serves as a platform to connect with Bay Area biotech and pharmaceutical executives and experts.

GENE 217. Translational Bioinformatics. 3-4 Units.
Computational methods for the translation of biomedical data into diagnostic, prognostic, and therapeutic applications in medicine. Topics: multi-scale omics data generation and analysis, utility and limitations of public biomedical resources, machine learning and data mining, issues and opportunities in drug discovery, and mobile/digital health solutions. Case studies and course project. Prerequisites: programming ability at the level of CS 106A and familiarity with biology and statistics.
Same as: BIOE 217, BIOMEDIN 217, CS 275

GENE 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.
Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.
Same as: MI 218, PATH 218

GENE 219. Current Issues in Genetics. 1 Unit.
Current Issues in Genetics is an in-house seminar series that meets each Academic Quarter tor one hour per week (Friday, 4:00-5:00) and features talks by Genetics Department faculty, students, and postdoctoral fellows (with occasional visiting speakers from other Stanford departments). Thus, over the Academic Year, it provides a comprehensive overview of the work going on in the Department. Student attendance at the seminars will be required, with short written assignments (typically three per Quarter) to encourage thinking about the material presented in the talks.

GENE 221. Current Issues in Aging. 2 Units.
Current research literature on genetic mechanisms of aging in animals and human beings. Topics include: mitochondria mutations, insulin-like signaling, sirtuins, aging in flies and worms, stem cells, human progeria, and centenarian studies. Prerequisite: GENE 203, 205 or BIOS 200.

GENE 222. Cloud Computing for Biology and Healthcare. 3 Units.
Big Data is radically transforming healthcare. To provide real-time personalized healthcare, we need hardware and software solutions that can efficiently store and process large-scale biomedical datasets. In this class, students will learn the concepts of cloud computing and parallel systems' architecture. This class prepares students to understand how to design parallel programs for computationally intensive medical applications and how to run these applications on computing frameworks such as Cloud Computing and High Performance Computing (HPC) systems. Prerequisites: familiarity with programming in Python and R.
Same as: BIOMEDIN 222, CS 273C

GENE 223. Aging: Science and Technology for Longevity. 2-3 Units.
Is aging another disease that can be ultimately cured? We will look at the biology of aging, transitioning from the molecular level through to the cellular and systems level. What are age-related diseases, can lifespan be extended and are centenarians different? Additionally how can artificial intelligence create robotic and software assistants as we get older and is living forever is possible in any form ? Topics will include: molecular theories of aging, impact of oxidative stress, age-related diseases, artificial intelligence for longevity, and innovations to improve the quality of life as we age.

GENE 224. Principles of Pharmacogenomics. 3 Units.
This course is an introduction to pharmacogenomics, including the relevant pharmacology, genomics, experimental methods (sequencing, expression, genotyping), data analysis methods and bioinformatics. The course reviews key gene classes (e.g., cytochromes, transporters) and key drugs (e.g., warfarin, clopidogrel, statins, cancer drugs) in the field. Resources for pharmacogenomics (e.g., PharmGKB, Drugbank, NCBI resources) are reviewed, as well as issues implementing pharmacogenomics testing in the clinical setting. Reading of key papers, including student presentations of this work; problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, 42, 43, 44X, 44Y or consent of instructor.
Same as: BIOMEDIN 224

GENE 230. Genetic Epidemiology. 3 Units.
This course presents fundamental concepts and methods in genetic epidemiology, with examples on genetic studies of chronic diseases, including cancer, cardiovascular disease, metabolic conditions, and autoimmune diseases. It will provide an overview of various study designs, including family studies, and it covers fundamental analyses, inferences, and their strengths and limitations. It will include topics such as assessing genetic influences on disease; advances in genomics technology; family based study designs for linkage, exome sequencing and case-parent trios; candidate gene and genome-wide association studies of both common and rare genetic variants; gene-environment interactions, epistasis and non-Mendelian genetics; software and web-based data resources; ethical issues in genetic epidemiology; and applications of genetic epidemiology to clinical practice and public health. Guest speakers will discuss these concepts through the lens of various chronic diseases. Prerequisite: introductory biostatistics or epidemiology, biology, and genetics. Biostatistics (intro) or epidemiology (intro), biology, genetics (intro).
Same as: EPI 224

GENE 232. Advanced Imaging Lab in Biophysics. 4 Units.
Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, basic cell biology, and consent of instructor.
Same as: APPPHYS 232, BIO 132, BIO 232, BIOPHYS 232

GENE 235. C. Elegans Genetics. 2 Units.
Genetic approaches to C. elegans, practice in designing experiments and demonstrations of its growth and anatomy. Probable topics include: growth and genetics, genome map and sequence, mutant screens that start with a desired phenotype, reverse genetics and RNAi screens, genetic duplications, uses of null phenotype non-null alleles, genetic interactions and pathway analysis, and embryogenesis and cell lineage. Focus of action, mosaic analysis, and interface with embryological and evolutionary approaches.

GENE 236. Deep Learning in Genomics and Biomedicine. 3 Units.
Recent breakthroughs in high-throughput genomic and biomedical data are transforming biological sciences into "big data" disciplines. In parallel, progress in deep neural networks are revolutionizing fields such as image recognition, natural language processing and, more broadly, AI. This course explores the exciting intersection between these two advances. The course will start with an introduction to deep learning and overview the relevant background in genomics and high-throughput biotechnology, focusing on the available data and their relevance. It will then cover the ongoing developments in deep learning (supervised, unsupervised and generative models) with the focus on the applications of these methods to biomedical data, which are beginning to produced dramatic results. In addition to predictive modeling, the course emphasizes how to visualize and extract interpretable, biological insights from such models. Recent papers from the literature will be presented and discussed. Students will be introduced to and work with popular deep learning software frameworks. Students will work in groups on a final class project using real world datasets. Prerequisites: College calculus, linear algebra, basic probability and statistics such as CS 109, and basic machine learning such as CS 229. No prior knowledge of genomics is necessary.
Same as: BIODS 237, BIOMEDIN 273B, CS 273B

GENE 242. Genetics of Viral Emergence and Emerging Viruses. 2 Units.
This course will cover genetic and complementary approaches toward understanding and mitigating the emergence of new viral epidemics.nnTopics are: nI. Viral Emergence ('Viral life in prebiotic soup', 'emergence in cellular contexts', 'viruses from viruses', 'viruses and their non-viral cousins'), nII. Emergent Virology ('tracking the virome', 'genomics of recent viral pandemics', and 'the spectrum of viral malevolence'), andnIII. The Virome Interface ('environmental influences on viral epidemics', 'viruses, genes, and human behavior', 'big data in the service of controlling epidemics', and 'genetic approaches to viral treatment').

GENE 247. Genomic approaches to the study of human disease. 3 Units.
This course will cover a range of genetic and genomic approaches to studying human phenotypic variation and disease. We will discuss the genetic basis of Mendelian and complex diseases, as well as clinical applications including prenatal testing, and pediatric and cancer diagnostics. The course will include lectures as well as critical reading and discussion of the primary literature. Prerequisite: BIO 82 or equivalent. Open to advanced undergraduate students.
Same as: BIO 247

GENE 260. Supervised Study. 1-18 Unit.
Genetics graduate student lab research from first quarter to filing of candidacy. Prerequisite: consent of instructor.

GENE 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.
The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.nnnThis class is open to both graduate and undergraduate students, but requires sufficient backgrounds in college level genetics, cell biology and biochemistry. Undergraduates who are interested are required to contact the course director first.
Same as: BIO 267, NENS 267

GENE 268. Biology and Applications of CRISPR/Cas9: Genome Editing and Epigenome Modifications. 1 Unit.
This course is designed to provide a broad overview of the biology and applications of the revolutionary CRISPR/Cas9 system, with detailed exploration of several areas: / / --Basic biology of the CRISPR/Cas9 system / --High-throughput screening using CRISPR/Cas9 / --Epigenetic modifications and transcriptional regulation using dCas9 / --Therapeutic applications of gene editing with CRISPR / --Disease modeling with CRISPR / --Ethical considerations of the use of CRISPR/Cas9 / / The course will be geared toward advanced undergraduates and graduate students, and will assume a basic background in molecular biology and genetics. The course will be lecture-based, with frequent opportunities for discussion and questions.
Same as: BIOS 268

GENE 271. Human Molecular Genetics. 3 Units.
For genetic counseling students, graduate students in genetics, medical students, residents, and postdoctoral fellows interested in the practice of medical genetics and genomics. Gene structure and function; the impact of mutation and polymorphism as they relate to developmental pathways and human disease; mitochondrial genetics; approaches to the study of complex genetic conditions; GWAS and genome sequencing technologies; variant interpretation; gene therapy, stem cell biology, and pharmacogenetics. Undergraduates require consent of instructor and a basic genetics course. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 271

GENE 272. Introduction to Medical Genetics. 2-3 Units.
For genetic counseling students, graduate students in human genetics, medical students, residents, and fellows; undergraduates with consent of instructor. Principles of medical genetics practice, including taking a family history, modes of inheritance and risk assessment, and mathematical principles of medical genetics (Bayes theorem, population genetics). An additional problem set is required for 3 units.
Same as: CHPR 272

GENE 273. Introduction to Clinical Genetics Testing. 2 Units.
For genetic counseling students, medical students, residents, and fellows. Uses a combination of case based assignments, laboratory observation and didactic lectures to introduce techniques and technology used in cytogenetics, molecular genetics and biochemical genetic testing, and to introduce clinical features of common genetic conditions that are commonly diagnosed through genetic testing. Non-GC students: Please contact the instructor when you enroll.

GENE 274A. A Case Based Approach to Clinical Genetics. 2 Units.
For genetic counseling students and medical genetics residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders.
Same as: CHPR 274A

GENE 274B. A Case Based Approach to Clinical Genetics. 2 Units.
For genetic counseling students and medical genetics residents and fellows. Case-based scenarios and guest expert lectures. Students learn skills in case preparation, management, and presentation, as well as content around common genetic disorders. This course is a continuation of GENE 274A, but may be taken individually with instructor permission.
Same as: CHPR 274B

GENE 275. Role Play and Genetic Counseling Observations. 2 Units.
For genetic counseling students only. Students role play aspects of genetic counseling sessions and learn through clinical observations and personal reflection. Observation includes genetic counseling sessions in prenatal, pediatric, and specialty settings.

GENE 276. Genetic Counseling Fieldwork. 1-7 Unit.
For genetic counseling students only. Supervised clinical experiences. May be repeated for credit. Prerequisite: GENE 275.

GENE 278. Prenatal Genetic Counseling. 1 Unit.
Online course for genetic counseling students, graduate students in genetics, medical students, residents, fellows, and nurses interested in prenatal genetics. Genetic counseling students should take this course in conjunction with their initial prenatal genetics rotation. Topics include: prenatal screening and diagnostic testing, ultrasound, genetic carrier screening, teratology, fetal treatment and intervention, perinatal loss, termination, and infertility. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 278

GENE 279. Pediatric and Adult Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial general genetics rotation. Topics include: clinical reasoning in medical genetics, techniques to prepare for the medical genetics visit, assessment of child development and medical history in the context of a genetic workup, dysmorphology, development of a differential diagnosis, and resources for case management and family support. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 279

GENE 280. Metabolic Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows. Genetic counseling students should take this course in conjunction with their metabolic genetics rotation. Topics include: overview of metabolic diseases; common pathways; diagnosis, management, and treatment of metabolic disorders; and newborn screening. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 280

GENE 281. Cancer Genetic Counseling. 1 Unit.
Internet based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellows; genetic counseling students should take this course in conjunction with their initial cancer genetics rotation. Topics include: cancer biology and cytogenetics; diagnosis and management of common cancer genetic syndromes; predictive testing; psychology of cancer genetic counseling; and topics recommended by ASCO guidelines.Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 281

GENE 282A. Genetic Counseling Research Seminar. 1 Unit.
For genetic counseling students only. Facilitated discussions on identifying a topic and mentor for genetic counseling departmental research projects.

GENE 282B. Genetic Counseling Research Seminar. 1 Unit.
For genetic counseling students only. Lectures and facilitated discussions on research methodology for genetic counseling departmental research projects. Prerequisite: GENE 282A.

GENE 283. Genetic Counseling Research. 1-8 Unit.
Genetic counseling students conduct clinical research projects as required by the department for graduation. May be repeated for credit. Pre- or corequisite: GENE 282.

GENE 284. Medical Genetics Seminar. 1 Unit.
Presentation of clinical and research topics in human genetics, followed by case presentations from the medical genetics and biochemical genetics services. Course may be completed online or in-person. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 284

GENE 285A. Genetic Counseling Seminar. 3 Units.
Year-long seminar primarily for genetic counseling students. Fall: An introduction to genetic counseling principles, techniques, and professional development.

GENE 285B. Genetics Counseling Seminar. 3 Units.
Year-long seminar primarily for genetic counseling students. Winter: The impact of chronic illness and genetic disease across the lifespan.

GENE 285C. Genetic Counseling Seminar. 3 Units.
Year-long seminar primarily for genetic counseling students. Spring: The application of counseling theories, models, and therapy to the practice of genetic counseling.

GENE 286. Advanced Genetic Counseling Seminar. 2 Units.
For genetic counseling students only. This course will enhance students' advanced counseling skills through formal case presentations, observations of community resources, and a variety of presentations on professional issues. Must be taken for 3 quarters. Prerequisites: GENE 285 A,B,C and 276.

GENE 287. CARDIOVASCULAR GENETICS. 1 Unit.
Online course for genetic counseling students, graduate students in genetics, medical students, residents, fellows, and nurses interested in inherited cardiovascular conditions. Genetic counseling students should take this course in conjunction with their cardiovascular genetics rotation. Topics include: Basic cardiology principles, including relevant anatomy and physiology; diagnosis, management and genetic testing as it relates to common inherited cardiovascular conditions in both the pediatric and adult setting; predictive genetic testing issues specific to inherited cardiovascular conditions; psychological issues related to sudden death conditions. Non-GC students: Please contact the instructor when you enroll.
Same as: CHPR 287

GENE 288. Neurogenetics. 1 Unit.
Internet-based course for genetic counseling students, graduate students in genetics, medical students, residents, and fellow; genetic counseling students should take this course in conjunction with their neurogenetics rotation. Topics include: introduction to neurology for beginners, including an overview of neurologic exam and localization, to provide non-neurologist trainees a foundation for understanding the differential diagnosis process in neurology; common and exemplary neurogenetics disorders spanning the adult and pediatric neurologic sub-specialties; key genetic concepts such as triple repeat disorders and FSHD; ethical and psychological topics as well as gene-targets therapeutics. Medical students and graduate students outside of genetic counseling should obtain permission from instructor prior to enrollment. No prerequisite for genetic counseling students, genetics or neurology residents/fellows or post-docs. Non-GC students: Please contact the instructor when you enroll.

GENE 289. Variant Interpretation. 1 Unit.
Internet-based course for genetic counseling students, graduate students in genetics or bioscience, medical students, residents, and fellows. Genetic counseling students should take this course in conjunction with their variant interpretation rotation. Topics include a review of the types of genetic variants, HGVS nomenclature and standards, and technical aspects of variant calling, filtering, and prioritization. Attendees will become familiar with the types of evidence to support or refute pathogenicity and the standards in doing so, and will develop skills to critically assess the literature and existing databases for variant classification. Non GC-students: Please contact the instructor once you enroll.

GENE 299. Directed Reading in Genetics. 1-18 Unit.
Prerequisite: consent of instructor.

GENE 346. Advanced Seminar in Microbial Molecular Biology. 1 Unit.
Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.
Same as: BIO 346, CSB 346

GENE 399. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

GENE 801. TGR Project. 0 Units.
.

GENE 802. TGR Dissertation. 0 Units.
.

HEALTH AND HUMAN PERFORMANCE

Health and Human Performance (HHP) is organizationally housed under Vaden Health Services. The program offers experiences for academic credit as well as non-credit opportunities. Its academic pursuits are offered in partnership with the School of Medicine. The academic units housed within HHP include Kinesiology, Outdoor Education, Physical Education, Wellness Education, and Lifeworks.

Purpose Statement

Through integrating theory, research, and experiential practice we create innovative, transformative learning environments focusing on holistic student development.

Values

Inspiring a healthier Stanford by inviting students into an intentional process grounded in the following values:

Actualization: Supporting self-efficacy through empowerment, learning experiences, and realization of the human potential.

Balance: Creating opportunities for individuals to recognize and utilize the essential elements of well-being.

Community: Providing inclusive opportunities for healthy social engagement and relationship building.

Leadership: Developing change agents who can apply learned knowledge and skills towards active citizenship.

Innovation: Designing effective ways of learning and promoting human flourishing in a hyper-complex, ever-accelerating culture experience.

Kinesiology

Focuses on the anatomy, physiology, and mechanics of human movement and their applications to exercise and lifetime physical activities. Offers 1-3 unit courses using the seminar, laboratory, and workshop as the primary component types.

Leadership Innovations

Fosters transformational leaders of character who through the facilitation of critical collaborative environments are prepared to be agents of positive change. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

Lifeworks

Fosters transformational student leaders and future citizens of character who through the facilitation of creative expression, mindfulness, and collaborative environments are prepared to be agents of positive change. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

Outdoor Education

Develops outdoor leaders who use risk, challenge, and experience as educational tools with a variety of applications. Offers 1-3 unit courses using the lecture, seminar, and workshop as the primary component types.

Physical Education

Provides physical activity courses where knowledge associated with the proper performance of an activity is presented and discussed. Offers 1-2 unit courses using activity as the primary component type.

Wellness Education

Inspires a healthier, more vibrant university through teaching effective wellness theories and practices that promote flourishing and empower students to positively transform their lives and communities. Offers 1-3 unit courses using the lecture, seminar, discussion, and workshop as the primary component types.

Director: Aneel Chima
Associate Director: Diane Friedlaender (Learning, Pedagogy, and Research)
Associate Director: Tia Lillie (Kinesiology & Physical Education)
Director of Adventure Programs & Head of Outdoor Education: Sue Lowley
Assistant Director HHP, Head of The Flourishing Lab: Steven Murray
Associate Director: Gigi Otálvaro (LifeWorks)
Associate Director: Sarah Meyer Tapia (Wellness Education)

Lecturers & Instructors

Emergency Medicine

Antja Thompson

Athletics, Kinesiology & Physical Education

Gong Chen, Austin Lee, Tia Lillie, Ying Mitchell, Sara Safdari, Erick Schlimmer, Tom Sarsfield, Matt Thornton, Nick Wooters

Lifeworks

Anthony Lising Antonio, Aneel Chima, Cari Costanzo, Diane Friedlaender, Fred Luskin, Gigi Otálvaro, Andrew Todhunter, Jonah Willhnganz

Outdoor Education

Logan Chapman, Sue Lowley, Emily McCune, Peter Wright

Wellness Education

Alison Ash, Claudia Bicen, Diane Boxill, Nichol Bradford, Russ Carpenter, Aneel Chima , Orgyen Chowang, Robert Cusick, Kathryn Devaney, Dustin DiPerna, Caitlin Krause, Marissa Floro, Bryan Lian, Fred Luskin, Molly Maloof, Jeffery Martin, Christy Matta, Stephen Murphy-Shigematsu, Sara Nasserzadeh, Katherine Nobles, Pamela Paspa, Carole Pertofsky, Orgyen Ratna, John Rettger, Tia Rich, Jennifer Robinson, Mikey Siegel, Kelly Takahashi, Yingzhao Liu Julia Tang, Sara Meyer Tapia, Rosalyne Tu, Mara Waldhorn, Meag-gan Walters, Clyde Wilson, Donnovan Yisrael

Kinesiology Courses

KIN 100. Introduction to Human Movement: Mind-Body Performance. 1 Unit.
Investigate the basic principles governing human movement with an emphasis on sports applications and lifelong wellness. Conceptually and experientially examine the latest research and theories on basic anatomy and biology as pertaining to injury prevention, principles of optimal human performance, and the mind-body connection. Topics include periodization, modes of exercises, types of injuries, the healing process, and physiological and psychological factors influencing body movement.

KIN 101. Analysis of Human Movement. 2 Units.
Covers the basic principles governing human movement with an emphasis on sports and performance applications. Examines anatomy and biology (large- and small-scale structure and function); applied anatomy, both anatomy (body structure) and mechanics (force, torque), which together describe macroscopic movement; applied biology, specifically the molecular and cellular basis of movement mechanics (force, torque, etc) together describe macroscopic movement; applied biology, specifically the molecular and cellular basis of movement including muscles contraction, nerves signals, and related topics such as exercise damage, cramping, muscle memory, DOMS and fatigue.

Leadership Innovations Courses

LEAD 95. Ensemble Leadership. 1-2 Unit.
This experiential course allows students to grow as leaders through immersion in leadership positions in the Stanford Band. Study and implement frameworks and tools that enhance leadership and team performance. Topics covered include traditional leadership and governance concepts, as well as approaches specifically effective in music ensembles.

LEAD 100. Leadership Intensive. 2 Units.
Strengthen your leadership skills in one of Stanford's only purely experiential learning opportunities. Leadership Intensive offers rising juniors a unique and immersive practice of leadership. Leadership Intensive is characterized by, as the name implies, intense exploration of your own leadership skills and abilities (courage required). Design thinking, diverse teams and hands-on practice are integral components of the program.

LEAD 101. Redefining Leadership as Developmental Process. 2 Units.
Examination of sources required for authentic leadership: connections, identity, integrity and personal power. Analysis of effective leadership practices and the application to collaborative environments.

LEAD 105. Art of Facilitation. 1 Unit.
This experiential education style course allows participants to develop and test their group facilitation skills. Students will explore delivering group initiatives surrounding popular leadership topics and learn how to help their group take away valuable learning from an educational experience. Topics include: Group dynamics theories, safety, assessing the physical, human and social environment to improve group effectiveness.

LEAD 106. Spiritual Wellbeing and Religious Encounter. 1 Unit.
Engage in spiritual dialogue and religious encounter with peers and fellow students, as well as self-reflection around one's own spiritual wellbeing. Explore your meaning-making and spiritual and/or religious practices. Facilitate and engage in interfaith dialogue. Build community based on understanding of differences and common connection points. Through a highly interactive format utilizing readings, film screenings, and facilitated discussion, gain religious and spiritual literacy, including skills and knowledge that will help to address urgent questions, such as: how do I dialogue with people who belong to religious (and non-religious) traditions different than my own? How do I work together with people of different religious and spiritual backgrounds for the common good? What is pluralism and how do we protect it from prejudice?.

LEAD 110. Mindful Leadership. 1-2 Unit.
An exploration of one's inner life, ways of being in the world, and their expression in how one leads. Addresses the paradoxical task of merely paying attention to enhance our awareness of the socially constructed nature of reality and to feel comfortable to act with simplicity, empathy, and conviction. Through self-reflection, embodied practice, and creative expression through crossing borders students examine us and them. Mindful inquiry in expressed storytelling, collective knowing, appreciative intelligence, and is both scholarly and experiential.
Same as: CSRE 110P

LEAD 111. Luminaries: Life Lessons from Leaders and Change-makers. 1 Unit.
Encounter luminaries in the fields of leadership, business, social innovation, and change-making ranging from noted entrepreneurs and CEOs to social change agents and activists who are committed to enhancing individual and collective flourishing. Conceptualizing change-making as a personal and relational developmental journey, survey course format emphasizes direct, in-person interactions with a broad variety of luminaries in order to discuss their models and practices and learn from their experiences. Engage at the levels of theory and practice in order to enhance one's own leadership toolkit and change-making capacity. Course emphasizes conversations with leaders from across sectors, across the political spectrum, and across generations to discuss diverse, and sometimes divergent, perspectives on change-making. Specific topics evolve quarter-to-quarter based on the group of luminaries co-creating and lecturing in the course with the instructor/s. See the course notes section for this quarter's line-up.

LEAD 112. Communicating to the Core: Weekend Campus Intensive. 1 Unit.
Explore methods that enhance listening and communication and deepen relational connection and psychological safety. Practice having important conversations, find insights within conflict, and discover how to reach epiphanies when feeling stuck in relating to others. Learn experientially through a variety of practices focusing on vulnerability, curiosity, and empathy such as listening through non-verbal channels, responding to emotionally triggering content, and asking questions without imposing an agenda. Takes place in a weekend intensive format (on campus), allowing more immersive exploration of the topic space.

LEAD 197. LEADERSHIP INSTITUTE. 1 Unit.
Experiential, non-traditional learning environments to enhance leadership capacities.

LEAD 199. Selected Topics: Leadership Studies. 1-2 Unit.
Exploration of a topic (to be determined) not covered by the standard curriculum but of interest to faculty and students in a particular quarter. May be repeated with change of content. For more information regarding specific course titles, please refer to the notes of each course section.

Lifeworks Courses

LIFE 91CL. Self & Science. 3 Units.
"Self & Science" mines the intersection of memoir and science writing. In this advanced experimental writing course, students will read a selection of essays by writers including Lewis Thomas, Oliver Sacks, Annie Dillard, and Mark Doty, which illustrate the shared intellectual foundation in observation of scientific and poetic inquiry. Building on these readings, students will be challenged to produce an experimental essay that transgresses genre boundaries in the service of considering how personal reflection can narrate researched discoveries. Over the course of the quarter, students are invited to bolster their overall communication acumen, enhance their ability to share valuable discoveries beyond the confines of their major discipline, and practice the difficult bliss of engaging a discerning public audience. Click here for course video and full description: https://undergrad.stanford.edu/programs/pwr/courses/advanced-courses/self-science.
Same as: PWR 91CL

LIFE 101. Tools for a Meaningful Life. 3 Units.
Explores the foundational skills for a meaningful life. Features lectures by faculty from across the university and labs for experiential practice. Draws on research and practices from fields related to psychology, philosophy, literature, and neuroscience, as well as wisdom traditions from around the world. Focuses on developing human capacities necessary for a meaningful life including; attention, courage, devotion, resilience, imagination, and gratitude. Exposure to these capacities influences personal growth and its development in communities.

LIFE 102. Body Mapping: Embracing the Embodied Experiences of Your Life. 3 Units.
Utilize an anthropological lens to combine traditional analytic research with experiential contemplative practice to strengthen awareness of the body and embodied experiences. Explore cultural norms around the body as influenced by racial stereotypes, gender hierarchies, and political/economic/religious history. Investigate and express one's own body narrative through written, verbal, and creative methodologies.

LIFE 105. Meeting the Moment: Inner Resources for Hard Times. 1 Unit.
In the face of social, economic, environmental, and public health upheavals, many of us are experiencing an unprecedented degree of uncertainty, isolation, and stress affecting academic and day-to-day life. Challenging times ask us, in a voice louder than usual, to identify sources of strength and develop practices that sustain and even liberate. In this experiential, project-oriented class: Explore practices to find true ground and enact positive change for self and community; Cultivate natural capacities of presence, courage, and compassion; Develop resources to share with one another and the entire Stanford community.
Same as: WELLNESS 105

LIFE 124. Counterstory in Literature and Education. 3 Units.
Counterstory is a method developed in critical legal studies that emerges out of the broad "narrative turn" in the humanities and social science. This course explores the value of this turn, especially for marginalized communities, and the use of counterstory as analysis, critique, and self-expression. Using an interdisciplinary approach, we examine counterstory as it has developed in critical theory, critical pedagogy, and critical race theory literatures, and explore it as a framework for liberation, cultural work, and spiritual exploration.
Same as: CSRE 141E, EDUC 141, EDUC 341

LIFE 125. The Stillness of the Dunes. 3 Units.
An advanced writing course in nonfiction craft, drawing, and contemplative practice. a significant portion of each class meeting will focus on the development and sharpening of writing craft, especially of the essay, in a hybrid form both scholarly and personal. We will also explore writing as meditative practice, through examples and through short exercises. We will deepen our cultural understanding of the desert and its impact, through art, literature, philosophy, film, and contemplative practice, and the course will build toward a four-day camping trip to the dunes of Death Valley, six weeks into the quarter.

LIFE 142. Megacities. 5 Units.
In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.
Same as: ANTHRO 42, ARTHIST 242B, URBANST 142

LIFE 145. Trauma, healing, and empowerment. 3 Units.
This course will look at the ways in which humans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds.
Same as: CSRE 145H

LIFE 150G. Performing Race, Gender, and Sexuality. 4 Units.
In this theory and practice-based course, students will examine performances by and scholarly texts about artists who critically and mindfully engage race, gender, and sexuality. Students will cultivate their skills as artist-scholars through written assignments and the creation of performances in response to the assigned material. Attendance and written reflection about a live performance event on campus are required. Students will also learn various meditation practices as tools for making and critiquing performance, in both our seminar discussions and performance workshops. We will approach mindfulness as method and theory in our own practice, as well as in relation to the works studied. We will also consider the ethics and current debates concerning the mindfulness industry. Examples of artists studied include James Luna, Nao Bustamante, Renee Cox, William Pope.L, Cassils, boychild, Curious, Adrian Piper, Xandra Ibarra, Valérie Reding, Guillermo Gomez-Peña, and Ana Mendieta.
Same as: ARTSINST 150G, CSRE 150G, CSRE 350G, FEMGEN 150G, TAPS 150G

LIFE 161P. Dance and the Politics of Movement. 4 Units.
This course examines how the dancing body has been viewed, exhibited, analyzed, and interpreted from the late nineteenth century to the present. We will discuss how ideologies about race, gender, and sexual orientation are mapped onto the body, as well as investigate the body's place in discourses on religion, health, war, performance, and consumer culture. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices. The course's structure challenges the Western/non-Western binary by comparing dance forms across the globe.
Same as: DANCE 161P, TAPS 161P, TAPS 361P

LIFE 165. Mindful Citizen. 3 Units.
Our study explores the development of mindfulness and related abilities that lead to mindful citizenship in ourselves and in the world. We examine the intersection of race and ethnicity with the emerging field of contemplative studies through the teachings of leaders whose lives were dedicated to both contemplation and social action. Through self reflection, experiential learning, and creative expression we explore the personal as political. We aim to develop the capacity to move among worldviews, transcending particular identities while simultaneously honoring each of them, finding peace among the component parts of our own psyche, and possessing the inner resources to make peace in a multicultural society.

LIFE 175. The Mythic Life. 3 Units.
Why in the twenty-first century do many of our most acclaimed and popular stories carry narrative forms that are thousands of years old? Star Wars, The Lord of the Rings, Titanic, Batman - all are deeply informed by ancient myth, folklore, and oral traditions. One reason is that the deep stories of myth and folklore act as a bridge between our personal lives and the profoundest aspects of the human condition. They offer a way to understand our lives and how to live them.n nThis course offers an in-depth study and experience of myth and folklore, the roots of modern story and the roots of our own stories. You will hear these myths live, as people have for thousands of years¿from Trickster folk tales to the medieval Arthurian grail epic Parzival. You will also draw from these epics to create and tell a mythic story of your own. This will give you an appreciation for myth as a living principle, not just something from a long time ago. It will also help you become a good storyteller by developing your memory, improvisation, and image-based thinking. This ability to tell a story well is at the root of authentic leadership and helps us bring a powerful, embodied perspective to championing a cause or just debating over coffee.
Same as: ORALCOMM 175

LIFE 193. LifeWorks Individual Studies. 1-2 Unit.
Translate theoretical knowledge and acquired skills into actionable projects or initiatives that make positive impact within and/or beyond the Stanford community. Students work in collaborative groups or individually under the mentorship of the course instructor(s) to design, deliver, and evaluate an initiative or project.

LIFE 199. Selected Topics: LifeWorks. 1-2 Unit.
Exploration of a topic (to be determined) not covered by the standard curriculum but of interest to faculty/instructor(s) and students in a particular quarter. May be repeated with change of content. For more information regarding specific course titles and topics, please refer to the notes of each course section.

Outdoor Education Courses

OUTDOOR 5. Winter Camping and Travel. 1 Unit.
Learn basic skills for winter camping and travel including thermoregulation, avalanche awareness, proper winter weather clothing and equipment, common cold weather medical issues, and LNT for camping and travel. Field experience includes practicing travel techniques, snow shelter construction, snow slope evaluation, use of avalanche beacons, and winter route finding.

OUTDOOR 9. Travel as a Sacred Journey Towards Presence, Practice, and Purpose. 1-2 Unit.
Engage travel and pilgrimage as intentional contemplative practice for exploring one's life purpose. Experientially investigate, both individually and collectively, outer journeying as a support for inner reflection on meaning making and values creation. While immersed in environments ranging from nature settings to retreat communities learn about, contemplate, and practice a range of methods, informed by multiple spiritual and philosophical traditions, meant to enhance insight and human flourishing. All backgrounds and identities welcome.

OUTDOOR 10. Rock Climbing I: Beginning. 1 Unit.
This course is an introductory course. Students will learn skills necessary to get started exploring the world of indoor climbing. These skills include technical safety skills for bouldering and top-roped climbing, essential physical and mental skills, and strategies for training. Students will be taught with industry standard best practices in regards to safety, and provided with a multi-disciplinary approach to overall health and wellness. No experience necessary.

OUTDOOR 11. Rock Climbing II: Intermediate. 1 Unit.
In this course students will have the opportunity to build upon basic principles associated with rock climbing. Student will further explore variations in climbing efficiency techniques, crack climbing techniques, and training methodologies to enhance their climbing experience and help prevent injuries. Students will be taught with industry standard best practices in regards to safety, and provided with a multi-disciplinary approach to overall health and wellness.nPrerequisites: Rock Climbing 1 or at least 3 months previous climbing experience, current top-rope belay certification at the Stanford Climbing Wall.

OUTDOOR 12. Indoor Lead Climbing. 1 Unit.
Learn technical and safety skills pertaining to sport lead climibing. Apply specific physical and mental training principals to assist improving lead climbing performance and preventing over use injuries.

OUTDOOR 14. Rock Climbing: Gym to CRAG. 1 Unit.
Learn how to transition from indoor climbing facilities to outdoor rock climbing venues. Emphasis will be placed on evaluating risk, along with constructing and assessing safe anchoring systems using natural and bolted anchors.

OUTDOOR 15. Rock Climbing: Intermediate Anchors. 1 Unit.
Explore climbing safety systems as they apply to anchor building, self-rescue, impact forces, and belaying. Emphasis will be placed on constructing and evaluating safe traditional anchor systems as well as learning techniques for self-rescue in the single pitch outdoor rock climbing environment.

OUTDOOR 25. Introduction to Whitewater Kayaking. 1 Unit.
Instructs paddlers in whitewater kayaking techniques. Emphasizes basic skills needed for paddling class II, II whitewater rivers including paddle strokes, boat control, and essential whitewater safety information. Students will have to pass a swimming test to participate.

OUTDOOR 30. Sea Kayaking I: Introduction to Sea Kayaking. 1 Unit.
Learn the fundamental skills and safety pracices for coastal sea kayaking. Topics include essential gear, strokes and maneuvering, rescues and recoveries, and understanding tides and currents. This course will consist of several trips to Half Moon Bay and other near by coastal kayak areas. Active participation is required. Course culminates in a student-planned trip to a local kayaking destination.

OUTDOOR 40. Stand Up Paddleboarding: Beginner. 1 Unit.
This course teaches students the basic skills, strokes, maneuvers and water safety skills of Stand Up Paddleboarding in a calm, flat-water setting.

OUTDOOR 41. Stand Up Paddleboarding: Intermediate. 1 Unit.
This course will focus on the development and refinement of the skills needed to paddle effectively in conditions where wind, waves, and current are present. Students will learn more advanced skills, strokes and maneuvers of SUP. This course is also designed to increase knowledge of SUP equipment.nnPrerequisite: Successful completion of Introduction to SUP or successful demonstration of equivalent skills.

OUTDOOR 43. Strength & Conditioning for Climbing. 1 Unit.
This course is for the intermediate to advanced climber looking to increase their climbing fitness. Students will be exposed to both general and climbing specific training principles to help improve climbing fitness and prevent common overuse injuries. Students will be taught with industry standard best practices with regards to safety and provided with a multi-disciplinary approach to overall health and wellness.

OUTDOOR 60. Introduction to Flyfishing. 1 Unit.
Introduces students to flyfishing and its constituent components as a sport and an art. Emphasizes basic skills needed to learn how to cast and tie knots. Students will learn basic stream ecology in order to better understand complex aquatic ecosystems, and thus, "read" water and make appropriate fly selections.

OUTDOOR 70. SCUBA Diving Open Water: Beginner. 1 Unit.
Acquire knowledge and skills to safely enjoy and gain limited experience in the diving environment under normal open water diving conditions. This course prepares students for Open Water SCUBA Diving PADI Certification. Topics include diving equipment, diving physics, medical aspects of diving, diving emergencies, the diving environment, diving practices, diving activities, and SCUBA diving skills.

OUTDOOR 71. SCUBA Diving Open Water: Advanced. 1 Unit.
Develop a diver who is confident, safe, relaxed, aware, and more able to enjoy the underwater world. Skills include: confidence to dive to deeper depths; night diving experience; boat diving techniques; river diving; ocean diving, currents, and marine environment; underwater navigation; and search and recovery techniques. This class is an excellent choice for certified divers who have not been diving for a while, and need to regain confidence.

OUTDOOR 72. SCUBA Diving Open Water: Rescue. 1 Unit.
Acquire knowledge and skills for individuals to effectively perform diver rescues and assists, manage diving accident situations, and render proper first aid. Prerequisites: Outdoor 70, Outdoor 71, EMED 110, EMED 224, or Instructor Permission.

OUTDOOR 100. Sociocultural Dynamics of Adventure. 3 Units.
An examination of the historical, psychological, social, and philosophical foundations of adventure experiences in American culture, folklore, and landscape. Experience adventure in a variety of contexts.

OUTDOOR 101. Introduction to Outdoor Education. 1 Unit.
Examine outdoor adventure activties through the perspective of a trip leader. Discuss risk management, judgment and decision making, group facilitaiton, program standard operating procedures, and legal liability.

OUTDOOR 103. Foundations of Outdoor Education. 2 Units.
Explore topics about adventure activity risk assessment, leadership style and values, industry standards, and wilderness equity and inlcusion through class activites, discussions, and reflections. Develop essential skills for individual and group sustainability in a backcountry setting including shelter in outdoor environments, equipment selection and use, travel techniques, water and nutrition needs, planning and preparation, and risk management. Course includes the participation in a weekend backcountry experience.

OUTDOOR 105. Outdoor Living Skills. 1-2 Unit.
Introduction to essential skills for individual and group sustainability in a backcountry setting including shelter in outdoor environments, equipment selection and use, travel techniques, water and nutrition needs, planning and preparation, and risk management. Course includes the participation in a weekend backcountry experience. Corequisite: Outdoor 101.

OUTDOOR 106. Outdoor Leadership Practicum. 1-2 Unit.
Outdoor education and leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with critical self-assessment process to better understand their own levels of competence leading others. Co-requisite: OUTDOOR 101, OUTDOOR 105.

OUTDOOR 107. Working with Youth in Recreational Settings. 1 Unit.
Experience youth engagement techniques designed for specific outcomes and useful in outdoor environments. Discuss trends in youth culture through an examination of the social, legal, and political systems of working with youth in recreational programs. Course includes planned and facilitated youth engagement activities. Pre or Co-Requisite: OUTDOOR 101.

OUTDOOR 110. Adventure Experience Management. 1 Unit.
This course covers the effective design and delivery of courses and multi-day outdoor experiences. Students will learn the fundamentals of: emergency action plans; how to manage local operating procedures (LOP); standard operating procedures; Instructional design and delivery. Prerequisite: OUTDOOR 106 or Instructor Permission.

OUTDOOR 119. Outdoor Educator Apprenticeship. 1-2 Unit.
This course provides the student an opportunity to lead a multi-day outdoor experiences in an official capacity. Experience includes: outdoor living skills, planning and logistics, leadership, risk management, environmental integration, and education. Students will plan and co-lead field outings. Prerequisites: OUTDOOR 106.

OUTDOOR 195. Outdoor Education: Assistant Instructor. 1-2 Unit.
Opportunity to work in a field setting under supervision. Supports creation of artifacts for use in instructional portfolio if seeking Outdoor Educator certification. Requires defined student goals/benchmarks prior to field instruction. Pre-requisite: Outdoor 106 and instructor approval.

Physical Education Courses

PE 1. Indoor Cycling. 1 Unit.
This course is designed to teach students basic concepts associated with indoor cycling as well as build cardio-respiratory endurance, muscular strength, and flexibility through structured individually paced indoor cycling workouts. Instructors motivate participants through intervals, hill climbs and coasts for the ultimate workout. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 2. Cross-training. 1 Unit.
Students will be introduced to full-body conditioning training that targets the health-related components of physical fitness including: cardiorespiratory endurance, muscular strength, muscular endurance, and flexibility. A variety of mode of exercises such as weight training, core training, TRX, aqua jogging, and cycling will be incorporated in this course. Students will be able to design an exercise programs for lifelong fitness.

PE 3. Keep Calm, Jog On. 1 Unit.
Students will learn proper running mechanics (posture and gait), and how to condition and pace themselves throughout a variety of workouts such as tempo runs, easy runs, interval training (speed and hills) and other training methods. At the end of the quarter, students will have the tools to develop their own training programs. Students will also gain knowledge on how to make intelligent choices that contribute to a healthy active lifestyle. nPrerequisite: Students should be able to run continuously for at least 1.5 miles. If students can't run for 1.5 miles continuously, we recommend taking the following conditioning classes: PE 1: Indoor Cycling, PE 2: Cross-training, PE 5: TRX, PE 14: FUNctional Fitness Training, PE 7: Core Training, PE 8: Healthy Heart, PE 12 or 13: Weight Training, or PE 17: Total Body Training.

PE 4. Walk 'N Roll. 1 Unit.
Students will engage in a variety of campus walks that will help improve their overall physical, mental and emotional wellbeing by engaging in a variety of workouts such as easy walks, power walking, intervals (speed and hills), and other training methods. Students will learn proper walking posture and gait. Students will also learn how to foam roll and its benefits. This course will also utilize class instruction, assignments and student participation to enable students to: (1) Understand the basic components of fitness, health and wellness. (2) Develop a positive attitude toward wellness and physical activity, (3) Gain knowledge to make intelligent choices that contribute to a healthy active lifestyle.

PE 5. Fundamentals of TRX. 1 Unit.
Students will learn a variety of exercises that focuses on total body resistance exercise. This class allows you to move, stretch and strengthen the entire body. Exercising on the TRX utilizes gravity and movement to generate neuromuscular responses to changes in body position and mechanical advantage. Movements using the TRX integrate strength and balance into a single dynamic format. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 6. Barre Fusion. 1 Unit.
Students will learn a mix of Barre exercises, Pilates exercises, Yoga poses and stretching specifically designed to increase strength and muscle tone in the entire body and overall flexibility. We focus on proper alignment and improving posture. The exercises are intense and effective yet extremely accessible. This course will also utilize class instruction, assignments and student participation to enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 7. Core Training. 1 Unit.
Learn and practice methods and techniques to improve body mechanics, stability, and overall core (abdominals, lower back and pelvis) strength. A strong torso is an essential component in posture, performance (sports, leisure activities, or hobbies), and activities of daily living. Students will engage in variety of upper-body, lower-body and core exercises, utilizing the three planes of motion on a stable and unstable surface to intensify the work load and challenge balance. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as muscle strength and endurance (2) Develop physical fitness skills and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 8. Healthy Heart. 1 Unit.
Students will engage in a variety of cardiovascular exercises that will improve overall performance in sports and leisure activities. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand the health and skill-related components of sports and physical fitness such as: cardiorespiratory endurance, speed, agility, and power (2) Enhance cardiorespiratory fitness by using a variety of equipment and mode of activities (3) Develop a positive attitude towards sports and physical activities, which will facilitate a healthy, active, lifestyle.

PE 12. Weight Training: Beginning. 1 Unit.
This course is designed to teach the fundamentals of weight training, including equipment use, exercise technique and safety procedures. By the end of the course, students should be able to safely demonstrate a variety of exercise techniques, as well as have a general appreciation for the benefits of strength training.

PE 13. Weight Training: Intermediate. 1 Unit.
This course will allow students to expand upon skills learned in Beginning Weight Training. Students will learn to design and develop a balanced weight training program to meet their goals. This course also provides an opportunity to develop skills in specific areas of strength training, endurance, and power. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: muscular strength and endurance, power, and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.nnPrerequisite: Students should have taken one of the following PE classes prior to registering for this course (PE 12: Beginning Weight Training, PE 5: TRX, PE 7: Core Training, PE 14: FUNctional Fitness Training, PE16: Circuit Training and PE 17: Total Body Training) or have prior weight/resistance training experience and a understanding of the fundamental principles associated with weight/resistance training.

PE 14. FUNctional Fitness Training. 1 Unit.
Students will learn how to increase their cardiorespiratory fitness level, boost muscular strength and endurance, and improve flexibility. Class sessions incorporate different modes of activities that focus on core strength and endurance, balance, speed and agility, power, and joint range of motion. A variety of fitness equipment (free weights, weight machines, stability and medicine balls, cardiorespiratory machines, foam roller, TRX, resistance bands, etc.) will be utilized to optimally work the body through multiple movement planes. Through class discussions, assignments, assessments,, and student participation, students will leave with an (1) Understanding of basic components of health-related physical fitness (2) Ability to perform activities of daily life effortlessly and without injuries, and improve their overall health, fitness and well-being and (3) A positive attitude toward wellness and physical activity, which will facilitate a healthy lifestyle.

PE 15. Fundamentals of Resistance Training. 1 Unit.
Students will be introduced to the fundamental principles of resistance training and will learn how to properly use a wide variety of exercise equipment such as free-weights, machines, TRX, stability and medicine balls and more. Proper technique, stretching, and injury prevention will also be discussed to aid in the design of an exercise program for lifelong fitness.

PE 16. Skills and Drills. 1 Unit.
Students will engage in exercises focused on the skill-related components of physical fitness including: speed, agility, power, coordination, balance, reaction and movement time. Proper form and technique will be emphasized to execute drills such as foot speed, leg turnover, sprint endurance, upper and lower body plyometrics, eye-hand coordination and unilateral balance maneuvers. Students will be able to develop a fitness-focus or sport-specific training program based on the drills that are introduced and practiced in class.

PE 17. Total Body Training. 1 Unit.
Students will learn a variety of exercises that focuses on the body as a whole. This class allows you to move, stretch and strengthen the entire body. A variety of equipment will be used to target all major muscle groups. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 20. Badminton: Beginning. 1 Unit.
This course is designed to teach the basic skills necessary to play the game of badminton. Fitness and training principles will be discussed as well as singles and doubles strategy. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 21. Badminton: Intermediate. 1 Unit.
TThis course will introduce the student to more advanced skills and strategies of the game of badminton. Emphasis will be placed on conditioning, shot selection, court positioning, and singles and doubles play. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 22. Table Tennis: Beginning. 1 Unit.
Basic counters, topspins, and chops with both the forehand and backhand. Serve and return, emphasizing game situations and match play. All equipment provided.

PE 23. Table Tennis: Intermediate. 1 Unit.
This class is intended for players who have experience playing table-tennis including those who have taken the beginning table-tennis class. Students should have prior experience in countering, looping, chopping, and serving.

PE 24. Pickleball: Beginning. 1 Unit.
Students will learn and develop the essential stroke techniques with emphasis on posture and control. This course will also cover the biomechanics associated with pickleball, as well as the rules and etiquette. This course will utilize class discussions, class assignments, and student participation to enable students to: (1) Acquire knowledge of basic structures of the human anatomy to optimally perform the skills (2) Develop an understanding of exercises, stretches, and conditioning exercises to allow for more efficient movements, and (3) Understand and practice behaviors that contribute to a healthy lifestyle.

PE 25. Squash: Beginning/Intermediate. 1 Unit.
Techniques, rules and practice matches. Racquets, balls, and eye guards provided.

PE 26. Tennis: Beginning. 1 Unit.
Students will learn and develop the essential stroke techniques with emphasis on control. This course will also incorporate rules, etiquette, and basic play. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 27. Tennis: Advanced Beginning. 1 Unit.
Students will review and strengthen stroke techniques with emphasis on control, depth, and direction. This course will also incorporate rules, etiquette, and basic strategy and tactics. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisites: 26, or knowledge of rules and scoring and average ability in fundamental strokes but limited playing experience.

PE 28. Tennis: Intermediate. 1 Unit.
Students will review and strengthen stroke techniques with more emphasis on depth, direction, and spin. This course will also incorporate basic to advance strategies and tactics with performance enhancing cooperative and competitive drills. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisites: 27 or average ability in fundamental strokes, and regular playing experience.

PE 29. Tennis: Advanced. 1 Unit.
Students will refine stroke techniques with more emphasis on spin, power, and variety. This course will also incorporate advance strategies and tactics with performance enhancing competitive drills. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 33. Golf: Beginning. 1 Unit.
This course is designed to teach the fundamentals of the golf swing; putting, chipping, and sand play. We will also cover golf etiquette and rules. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 34. Golf: Advanced Beginning. 1 Unit.
This course allows students to further develop their golf swing and short game. This course will also review golf concepts, rules and etiquette. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 33 or golf experience.

PE 35. Golf: Intermediate. 1 Unit.
This course allows students to further develop their golf game by engaging in various golf drills and the opportunity to practice on all facets of golf. Students will learn how to lower scores and manage the game on the course. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: 34 or equivalent.

PE 36. Golf: Advanced. 1 Unit.
This course is designed to refine the golf swing and increase power, distance, and accuracy. This course will also cover topics such as: course management, mental preparation and visualization techniques. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 35 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance.

PE 42. Strength & Power. 1-2 Unit.
Provides students with a framework to develop a balanced strength, power and endurance program specific to their needs. Topics addressed will include mobility and stability training, posture awareness, designing strength and power programs, and injury prevention. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of basic structures of the human anatomy and posture awareness (2) Develop an understanding of exercises and stretches to allow for better movement, and (3) Understand and practice behaviors that contribute to a healthy lifestyle.

PE 43. F.I.T. 1 Unit.
Incorporates multiple modalities to allow students to learn how to integrate assessments and programming to facilitate adherence and behavior change, while also improving posture, movement, flexibility, balance, core function, cardiorespiratory fitness, muscular endurance and muscular strength. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of basic structures of the human anatomy and assess faulty movement patterns (2) Develop an understanding of exercises, stretches, and soft tissue work to allow for better movement, and (3) Understand and practice behaviors that contribute to a healthy lifestyle.
Same as: Fun, Integrated, Training

PE 46. Sailing: Beginning. 1 Unit.
Students will learn skills, theories, and techniques to enable beginners to sail with confidence in small centerboard boats. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 47. Sailing: Advanced Beginning. 1 Unit.
Students will have the opportunity to further development their sailing skills and techniques. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 48. Sailing: Intermediate. 1 Unit.
Students will have the opportunity to refine their sailing skills Students will also be introduced to racing. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 50. Swimming: Beginning I. 1 Unit.
This class is for first time swimmers and for individuals who have fear, anxiety or discomfort in water. This class is also designed for individuals who have previously taken beginning swim courses and have had little/no success or who struggle to move through water. A foundation of basic balance and movement skills will be developed through a series of fundamental water exercises. When safety or balance in the water is in question, so is the ability to move, and to some extent, the ability to breathe comfortably. As comfort and balance improves, the easier it is to accept breathing and movement skills. The goal is for a swimmer to become comfortable and in control in both shallow and deep water. The fundamental skills learned in this course will provide a foundation for learning stroke technique, such as freestyle, in an effortless manner. Prerequisites: None.

PE 51. Swimming: Beginning II. 1 Unit.
In this class you will learn how to relax in the water, breath effectively, float and tread, swim 4-5 strokes (freestyle, backstroke, sidestroke, elementary backstroke, and breaststroke, time permitting), jump in the water from the deck, use swimming equipment (kickboards, pull buoys, fins) and swim across a 25-yard pool. This course will utilize class discussions, class assignments, and student participation to enable students to: (1) Swim each stroke with proper form and technique (2) Develop an understanding of how to stay healthy and conditioned to further enhance swim strokes and decrease the risk of injuries. (3) Develop a positive attitude toward wellness and physical activity, which will facilitate a healthy lifestyle. n Prerequisite: Successfully completed PE 50: Swimming: Beginning I or able to satisfactorily complete all skills during the assessment.

PE 52. Swimming: Intermediate. 1 Unit.
This class is for those who can swim across a 50-yard pool. In this class you will learn how to: breathe effectively, tread water, dive in from the edge and use swimming equipment (kick boards, pull buoys, hand paddles, fins). You will be introduced to and gain further development of the 4 competitive swimming strokes (Freestyle, Backstroke, Breaststroke & Butterfly). An introduction to flipturns and intervals (50 yard repeats) will be taught. Underwater videotaping and stroke review and analysis will occur. Prerequisite: Ability to swim across a 50-yard pool continuously. You MUST be comfortable in deep water, if you are uncomfortable in deep water please take PE 50 or 51 Beginning Swim I or II.

PE 53. Swimming: Advanced. 1 Unit.
This class is for those who can swim 100 yards freestyle continuously and have had an introduction to backstroke and breaststroke. In this class you will learn: refinement of the 4 competitive swimming strokes: freestyle, breaststroke, backstroke, butterfly (review/intro) and efficient breathing techniques. You will gain additional development of flipturns using intervals (100 yard repeats), competitive starts and turns, use of swimming equipment (kick boards, pull buoys, hand paddles, fins) for fitness, and videotaping with review. nPrereq: Swim 100 yards continuous of freestyle. If you have not had an introduction to Breaststroke or backstroke, we recommend you take PE 52: Swimming Intermediate.

PE 54. Swimming: Stroke Refinement. 1 Unit.
Review and fine tune the 4 competitive strokes (freestyle, backstroke, butterfly, and breaststroke), with a primary emphasis on improving freestyle stroke efficiency. Flipturn refinement. Drill and technique work will be heavily emphasized. On average, 1000 meters will be swum per class. Prerequisite: Ability to tread deep water for 5 minutes, swim 100 meter intervals of freestyle, backstroke, and breaststroke with rhythmic breathing, and swim 200 meters continuously under 5 minutes.

PE 55. Swim Conditioning. 1 Unit.
Improve cardio-respiratory endurance through directed swimming workouts. Technique corrections as needed. Prerequisite: advanced swimmer.

PE 56. Aqua Fitness Training. 1 Unit.
Students will improve their overall health and fitness levels (cardiovascular, muscular endurance, and flexibility) through a variety of structured water workouts. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 65. Horsemanship: Beginning Riding. 1 Unit.
This course explores beginning riding. Topics include, but are not limited to, basic horse care, equitation at the walk/trot and negotiation of simple obstacles. This course will utilize class discussions, class assignments and student participation. No experience needed.

PE 66. Horsemanship: Advanced Beginning Riding. 1 Unit.
This course will review the basics of horsemanship and provides the necessary foundation for riding. Topics that will be covered include: horsemanship and horse care; work at the walk, trot and the foundations of jumping. This course will utilize class discussions, class assignments and student participation. Prerequisite: PE 65 within the last three quarters. Please signup for the waitlist on Axess. You will be contacted regarding available section times during the first week of the quarter. Fee $500, meets at Red Barn.

PE 67. Horsemanship: Intermediate Riding. 1 Unit.
Basic veterinary skills and barn management. Riding at all gaits and completing horsemanship patterns (Western) or jumping basic courses (English). Prerequisite: PE 65 or 66.

PE 68. Horsemanship: Student Assistant. 1 Unit.
Students will assist the primary instructor for PE 65 Horsemanship: Beginning Riding, PE 66 Horsemanship: Advanced Beginning Riding, and PE 67 Horsemanship: Intermediate Riding. Students will have the opportunity to assist other students with regards to horse care, horse handling and the foundational skills of riding such as steering, position as well as work at the walk and trot.

PE 70. Introduction to Martial Arts. 1 Unit.
This course will focus on techniques, training methods, history, and culture of Asian martial arts. Throughout the quarter, students will learn proper warm-ups, fundamental techniques, basic application, and conditioning. This course will focus on the development of (1) Martial Art skills for physical fitness and positive exercise experience, and (2) understanding of benefits of Martial Arts toward a positive attitude toward wellness and physical activity which will facilitate an active and healthy lifestyle.

PE 71. Taiji Quan. 1 Unit.
Tai Chi (Taiji Quan) is a slow meditative Chinese exercise designed for relaxation, and to improve balance, and health. This course will focus on the development of (1) motor Tai chi skills for physical fitness and positive exercise experience, (2) knowledge of Tai Chi and basic components of health-related physical fitness, and (3) understanding of benefits of Tai chi toward a positive attitude toward wellness and physical activity which will facilitate an active and healthy lifestyle.nAll levels are welcome.
Same as: Tai Chi

PE 72. Tai Chi: Intermediate. 1 Unit.
At the Intermediate level, students will develop a deeper and more internal understanding of Tai Chi. This course will introduce new concepts and movements that are more challenging. This course will also utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 71 or prior practice and courses in Tai Chi.

PE 75. Self-Defense. 1 Unit.
Develop fundamental self-defense awareness, knowledge, and strategies for handling violent crimes under a variety of conditions. Improve physical self-defense skills on different types of common physical attacks and applications via hands-on experience in simulated situations. Incorporate self-defense skill practice in daily physical activity routines for an active lifestyle.

PE 80. Yoga for Stress Management. 1 Unit.
Students will have the opportunity to learn ancient yoga/health practices for managing daily stressors. Students will learn to identify signs and symptoms of stress, how anxiety manifests in the body and mind, and yoga techniques for relief. The focus will be on breathing techniques to calm the nervous system and practicing mindfulness. Hatha, or physical yoga, will also be introduced as preliminary practices to balance the body, relax the breath, stretch and tone muscles, and massage internal organ systems. All practices are meant to provide students new options for gaining inner strength and self-control. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

PE 81. Yoga: Beginning. 1 Unit.
Students will learn basic yoga poses and how to reduce tension, increase energy levels, move efficiently, reconnect to self-awareness, and learn about the body. The poses are adaptable and can be personalized for any level of fitness. The emphasis of the class will be on asanas (poses) for increased flexibility, improved health, relaxation, and reduced stress in daily living. Students will also be exposed to the language, philosophy, history, and concepts of Yoga. A typical class will include breathing techniques, meditation and asana practice, including standing, balancing, stretching and some inverted poses. At the end of the quarter students will have: (1) Acquired knowledge of the basic components of health and wellness. (2) Developed physical fitness and motor skills, and (3) A positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 82. Yoga: Asana Practice. 1 Unit.
Yoga offers continual opportunities for growth and balance both physical and nemotional. Challenging yourself with different approaches will help you stay nfocused and keep your practice creative. In Asana Yoga Practice students will learn solid yoga practices that they can enjoy on their own as well as yoga foundations that they can apply in all types of yoga classes around the world.

PE 83. Flow Yoga. 1 Unit.
This course is for students who have a basic understanding and practice of yoga asanas (poses). Students will learn to control their breath to smoothly `flow¿ through a series of poses with inner awareness to postural alignment. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

PE 84. Yoga/Pilates Fusion. 1 Unit.
This class will focus on practicing yoga poses and Pilates exercises to enhance one¿s sense of proprioception, mind-body awareness, and muscular strength and endurance. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

PE 85. Yoga: Intermediate. 1 Unit.
This course is designed for students who already possess an ongoing yoga practice. Students will practice holding basic yoga poses for a longer period of time while focusing on pranayama (controlled breathing). Intermediate yoga will provide students with information and experience which will enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

PE 86. Power Yoga. 1 Unit.
Power yoga combines dynamic breathing and flowing sequences of asanas that focus on strengthening the entire body. Core muscle activation and stabilization is emphasized to ensure safe body mechanics. Power yoga will provide students with information and practical experience that will enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity, which will facilitate a healthy lifestyle.

PE 87. Essentials of Pilates. 1 Unit.
Students will focus on developing core strength, joint flexibility, and body awareness by engaging in a variety of exercises that integrate the principles of Pilates (concentration, control, center, flow, precision, and breathing). This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

PE 88. Pilates Mat: Intermediate. 1 Unit.
Students will focus on developing core strength and endurance by engaging in a variety of exercises that integrate the principles of Pilates (concentration, control, center, flow, precision, and breathing). Postural joint alignment and awareness will be emphasized through the use of additional equipment. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

PE 97. Lifeguard Training. 1 Unit.
This course allows students to learn lifeguard characteristics and responsibilities, recognize hazards and emergencies, patron and facility surveillance, interaction with the public, and rescue skills. Students will also learn first aid and CPR/AED for the Professional Rescuer. This course will utilize class discussions, class assignments and student participation, both in and out of water, to prepare students to become lifeguards.nnPrereq: 300 yard continuous swim with rhythmic breathing (100 yards of freestyle, 100 yards of breaststroke, and 100 yards of combination of the two); Swim 20 yards, surface dive 7ft, retrieve a 10lb diving brick, and return in one minute and forty seconds.

PE 98. Coaching Corps. 1 Unit.
This course is designed to build practical and educational foundations to prepare students to be instructional leaders (coaches) in sports activities. Students will have the opportunity to make a valuable contribution to youth while developing practical coaching skills. The course will explore topics including practice planning and designing curriculum, how to effectively engage youth in sports, youth development through sports, social issues facing urban youth in sports, the plight of sports programs in urban centers, and how to create a college-going culture among youth in low-income communities. Students will coach off campus at local schools/community-based organizations that offer after school sports programs.

PE 99. Selected Topics: PE. 1 Unit.
Exploration of a topic (to be determined) not covered by the standard curriculum but of interest to faculty and students in a particular quarter. May be repeated with change of content. For more information regarding specific course titles, please refer to the notes of each course section.

PE 101. Fitness for Life. 1 Unit.
Learn about the essential concepts related to fitness and exercise (i.e. biomechanics, exercise nutrition, setting SMART goals, injury prevention, flexibility, stress management, cardiovascular health, lower back care and principles of weight training). Students will apply these concepts in class by engaging in a variety of physical activities such as: weight-training, Pilates, yoga, H.I.I.T, plyometric-training, speed and agility training, aerobic-endurance activities and TRX.

PE 102. Nutrition for Lifelong Physical Activity. 1 Unit.
Understanding the bodies' nutritional needs in all capacities of human movement and daily physical activity is fundamental in achieving health and overall well-being. Learn how to nourish their body to build and maintain their health and well-being throughout their lives. Utilize class discussions, class assignments, and student participation to: identify basic principles of healthy eating to prevent disease and promote optimal health and performance; recognize the role of food and contexts in which food choices are made; and make confident and intelligent eating decisions that will contribute to building and maintaining a well-nourished body, meeting its changing needs.
Same as: WELLNESS 102

PE 103. Foundations of Health and Performance Psychology. 1 Unit.
Drawing upon research and models of sport and exercise psychology, this course examines the personal and social psychology of health and performance, in what ways they are interdependent, and how we can utilize mental skills techniques to boost performance in various areas of our lives.
Same as: WELLNESS 103

PE 104. Designing Personalized Workouts. 1 Unit.
Students will learn how to design safe, effective, exercise programs based on their individual needs and interest. Through class discussions, assignments and participation, students will learn all the health-related and skill-related components of fitness such as cardiovascular endurance, muscular strength and endurance, flexibility, balance, agility, speed, power, and coordination. Prerequisite: All levels and abilities welcome.

PE 105. Physical Activity and Exercise: Injury Awareness, Treatment and Management. 1 Unit.
Introduces common injuries associated with physical activity as well as methods for injury prevention and management. The fundamental biological processes related to healing of the human body and injury nomenclature will also be examined. Furthermore, human anatomy will be covered as it relates to common injuries related to physical activity in the general population. Additionally, students will apply common injury management methods in practical usage. Course materials will cover topics such as foam rolling, stretching, injury taping, healing phases of the body, fatigue, and muscle cramping among other related topics.

Wellness Education Courses

WELLNESS 102. Nutrition for Lifelong Physical Activity. 1 Unit.
Understanding the bodies' nutritional needs in all capacities of human movement and daily physical activity is fundamental in achieving health and overall well-being. Learn how to nourish their body to build and maintain their health and well-being throughout their lives. Utilize class discussions, class assignments, and student participation to: identify basic principles of healthy eating to prevent disease and promote optimal health and performance; recognize the role of food and contexts in which food choices are made; and make confident and intelligent eating decisions that will contribute to building and maintaining a well-nourished body, meeting its changing needs.
Same as: PE 102

WELLNESS 103. Foundations of Health and Performance Psychology. 1 Unit.
Drawing upon research and models of sport and exercise psychology, this course examines the personal and social psychology of health and performance, in what ways they are interdependent, and how we can utilize mental skills techniques to boost performance in various areas of our lives.
Same as: PE 103

WELLNESS 105. Meeting the Moment: Inner Resources for Hard Times. 1 Unit.
In the face of social, economic, environmental, and public health upheavals, many of us are experiencing an unprecedented degree of uncertainty, isolation, and stress affecting academic and day-to-day life. Challenging times ask us, in a voice louder than usual, to identify sources of strength and develop practices that sustain and even liberate. In this experiential, project-oriented class: Explore practices to find true ground and enact positive change for self and community; Cultivate natural capacities of presence, courage, and compassion; Develop resources to share with one another and the entire Stanford community.
Same as: LIFE 105

WELLNESS 110. The Science of Motivation and Procrastination. 1 Unit.
Examine the factors that increase motivation and decrease procrastination from a scientific point of view. Investigate research and models of motivation and procrastination in task engagement arising from the fields of psychology, behavioral economics, and cognitive neuroscience. Cultivate and apply cognitive, behavioral, and social tools that enhance motivation and decrease procrastination while supporting balanced and healthy achievement.

WELLNESS 111. Exploring Happiness. 1 Unit.
Explores how research-based happiness theory and principles are applied to enhance daily and life satisfaction. Positions happiness as a cornerstone construct of personal wellness, purpose, and fulfillment. Investigates the science of happiness through lecture, guided practice, dialogue, and course material in order to enhance understanding and implementation.

WELLNESS 112. Overcoming Imposter Syndrome and Building Confidence. 1 Unit.
Examine the science and societal implications of "imposter syndrome" and its counterpart, confidence. Utilize the lenses of social science, psychology, mindfulness, and neurobiology to explore your own relationship with imposter syndrome and to build confidence. Investigate the systemic impact of imposter syndrome and confidence in academia, the workforce, and other cultural spaces. Topics include: race, class, and gender; behavior change; neuroplasticity; body language and mindset; the psychology of stress; risk-taking; metacognition; and the physiology of confidence. By the end of this course students will be able to recognize imposter syndrome and utilize confidence-building strategies in their own lives.

WELLNESS 113. Stress Less, Sleep Better. 1-2 Unit.
Effectively manage stress and practice positive sleep strategies to enhance clarity, focus, and energy. Presents tools for assessing perceived stress and sleep quality, findings in the science of stress management, current research in sleep studies, and cognitive-behavioral theories and interventions (CBT-i) demonstrated to reduce stress and certain insomnias, while enhancing sleep quality.

WELLNESS 114. Emotional Intelligence: Enhancing Your Effectiveness and Balance. 1-2 Unit.
Examine the science and practice of emotional intelligence and how it increases effectiveness and balance. Utilize leading frameworks and tools for enhancing emotional and social intelligence, including the understanding, managing, perceiving, and use of emotions. Blends lecture with experiential learning to develop theoretical and practical knowledge resulting in enhanced intra- and interpersonal skills.

WELLNESS 115. Why Decisions are Difficult: Making Wise Choices from Love to Lunch. 1 Unit.
Examine why making decisions can be difficult and how making wiser decisions enhances satisfaction, happiness, and life success. Investigate practical decision-making frameworks and skills while building awareness around common decision-making fallacies and pitfalls. Develop skills in topic areas ranging from mindfulness, emotional intelligence, cognitive reframing, self-compassion, empathy, gratitude, and courage. Focus on making wiser decisions, big and small, short-term and long-term.

WELLNESS 116. Resilience: How to Bounce Back. 1 Unit.
Examine the science and practice of resilience. Investigate the emerging field of resilience studies and learn the frameworks and skills that allow people to bounce back more quickly and effectively from life challenges. Topics include mindset and cognitive appraisal, emotional and affect management, central nervous system and vagal system regulation, and perspectives on creating resilient social systems. Harness insights in service rising above life adversity and thriving, even in the midst of tough times.

WELLNESS 117. Changing For Good: Behavior Change Science & Practice. 1-2 Unit.
Change behaviors using evidence-based techniques. Addresses the roles of habit cycles, procrastination mitigation, productivity enhancement, motivational factors, self-compassion, and addiction and addictive processes (both substances and non-substance related) in changing behaviors from maladaptive to adaptive patterns. Drawing from current findings in the neuroscience and psychology of behavior change and habit formation, utilize motivational interviewing, cognitive reframing, peer coaching, and mindfulness meditation models and intervention strategies.

WELLNESS 118. Sexual and Emotional Intimacy Skills. 1-2 Unit.
Learn to cultivate and sustain emotional, physical, and sexual intimacy in relationships. Course takes a sex-positive approach. In addition to scholarly readings on science-based perspectives, the course includes individual, paired, and group exercises in and out of class. Didactic components address the art and science of intimacy through a sociological lens, addressing embodiment, the nuances of consent, needs and boundaries, empathy, safer sex and safer heart conversations, flirting, attunement, escalation and de-escalation, fantasies, pornography, pleasure, selecting partners, repairing relationships, and breaking up.

WELLNESS 119. Cultivating Healthy Romantic Relationships. 1 Unit.
Explore the factors that support healthy romantic relationships from psychological, sociological, historical, and cultural perspectives. Investigate the questions, What is a healthy romantic relationship and how do I know if my relationship is healthy? Study the structures of healthy romantic relationships through learning about attraction, attachment, attunement, individuation, cultural scripts, gender roles, and considerations of non-monogamous and non-heteronormative relationships.

WELLNESS 120. Let's Talk About Sex. 1-2 Unit.
TBA.

WELLNESS 121. Performance as Healing. 1 Unit.
TBA.

WELLNESS 122. Work With Purpose: Design Your Career. 1 Unit.
Presents meaningful work as an essential component for life-long wellbeing. Discusses decision making, navigating change, mindfulness, self-compassion, and resilience as these topics relate to your career journey. Blends lecture, discussion, individual and group coaching, and small and large group interactions. Learning activities enhance theoretical knowledge and guide career-related decisions.

WELLNESS 123. Living on Purpose. 1-2 Unit.
Explore the art and science of purpose-finding as it relates to living a more flourishing life at Stanford and beyond. Investigate the contemplative, psychological, social, and communal factors that deepen meaning-making, support authenticity, and encourage living more purposefully. Drawing from disciplines as diverse as art, storytelling, design, and positive psychology, create and utilize tools that promote wellbeing. Highly interactive course employs creative expression, group and individual activities, discussions, lectures, and mini-field trips to reflect on fundamental human questions in pragmatic ways.

WELLNESS 124. Intro to Wellness: Nutrition, Movement, Stress, and the Body. 1-2 Unit.
Investigate how physical factors (proper nutrition, adequate exercise, stress management, and effective sleep practices) serve as the foundation for mind-body wellness. Examine current controversies and research in the field of mind-body wellness and holistic health, with specific emphasis on the relationship between physical factors and psychological states. Provides guided practices on using established wellbeing principles to live a healthy and happy life.

WELLNESS 125. Live Better Longer: Enhancing Healthspan for Longer Lifespan. 1-2 Unit.
Explore ideas and practices that extend healthspan, the number of years we live free of disease or disability. Translate scientific research around current healthspan theories and understand social behaviors and available technologies that support rather than degrade human health. Apply course material to enhance one's own ability to adapt and self-manage in the face of adversity for improved performance and health.

WELLNESS 126. Connection Through Nature: The Art & Science of Natural History. 1 Unit.
Use art as an entry point for closer observation, deeper curiosity, and better understanding of natural systems. Guest experts in art, science, and the practice of natural history facilitate investigation of the Jasper Ridge Biological Preserve through microscopic to macroscopic lenses. Explore how field journaling, art and expressive language can mediate mindfulness, insight, and sense of connection. NOTE: application required. Apply here: https://docs.google.com/forms/d/e/1FAIpQLSeaf_mBuOuaKPWf_tSUzO0l1ANQpSmOwJsmVe0SLW2xoH2uag/viewform.

WELLNESS 127. Driving Your Metabolism. 2 Units.
Examine the main factors impacting metabolic rate including stress, sleep, movement, and nutrition. Review the science behind the continual need for nourishment including quality sleep, stress management, movement and consistent nutrient supply. Practically apply principles of metabolism to one¿s unique physiology and lifestyle for optimal well-being.

WELLNESS 130. Meditation. 1 Unit.
Introduces diverse forms of meditation practice in both theory (contemplative neuroscience, phenomenological traditions) and practice. Practices in guided imagery, compassion, loving kindness, positive emotion, mindfulness and mantra meditation will be offered to enhance stress management and well-being. While meditation practices emerge from religious traditions, all practice and instruction will be secular.

WELLNESS 131. Compassion Meditation: Strengthening the Heart. 1 Unit.
Investigate evidence-based models of compassion meditation and cultivation based on Stanford's Center for Compassion and Altruism Research and Education (CCARE) program and following the Stanford Compassion Training Protocol (CPT). Examine strategies to develop self-compassion, experience genuine happiness, reduce stress and negative thoughts, resolve differences with difficult others, and take compassionate action that makes a difference in the world. Courses mixes direct instruction, meditation, and group discussion on current research and its real world application.

WELLNESS 132. Breathwork for Wellbeing. 1 Unit.
Discover the power of the breath as a gateway to reach a meditative state of mind. Combine meditative practice with activities that inspire connection and purpose through community building and mindful leadership. Learn through breathwork, meditation, lecture, class discussion, experiential learning, and yoga. Cornerstone of the course is evidence-based SKY Meditation technique that utilizes the breath to quiet the mind, supporting a deep experience of meditation and a practical approach to happiness. Course requirements include attendance at a mini-retreat (see "notes" section). Also note: Wellness 132 was previously offered as MED 130.

WELLNESS 133. Meditation Retreat: Weekend Campus Intensive. 1 Unit.
Introduces diverse forms of meditation practice in both theory (contemplative neuroscience, phenomenological traditions) and practice. Selected practices in focused attention, mindfulness, guided imagery, compassion, loving kindness, positive emotion, and/or mantra meditation will be offered to enhance focused attention, insight, stress management, and well-being. Takes place in a weekend immersion format (on campus), which allows more immersive exploration of the topic space. While meditation practices emerge from religious traditions, all practice and instruction will be secular.

WELLNESS 134. Forgiveness Practice and Meditation. 1-2 Unit.
Examines forgiveness from a variety of perspectives with an emphasis on its value for physical and mental well-being. Presents forgiveness both as a useful response to interpersonal hurt and a teachable skill, backed by scientific research from preventative medicine and psychology. Explores the idea that forgiveness and grievance are both narrative responses to painful experience, but differ in their adaptability and utility. Spiritual and contemplative approaches to forgiveness will be considered, but the methods are secular and research-tested.

WELLNESS 135. Mindful Self-Compassion, Strength, and Courage. 1 Unit.
Investigate how harsh self-criticism adversely impacts well-being, strength, and performance. In contrast, explore how mindful self-compassion (MSC) enhances emotional well-being, increases resilience and strength in coping with life challenges, and supports positive personal relationships. Using the scientifically validated MSC method (Neff & Germer), learn how to better pursue goals and commitments (academic, personal/social development, community service, and/or activism) with greater inner-peace, confidence, and courage.

WELLNESS 136. Meditation and the Brain: Practicing the Science and Art of Contemplation. 1-2 Unit.
Investigate the power of meditation for training the mind and changing the brain, specifically in focusing attention, enhancing awareness, and generating compassion. Going beyond meditation as a tool for simply reducing stress, this course grounds the theory and practice of meditation in a neuroscientific understanding of how meditation changes brain structures and functioning in service of increasing overall cognitive performance and psychological wellbeing. Learn how to apply specific frameworks and tools for effectively practicing meditation in daily life.

WELLNESS 138. Mindfulness and Stress Management. 1 Unit.
Effectively manage stress through mindfulness meditation strategies (sitting and movement-based) that positively impact the brain-body system to enhance clarity, focus, and energy. Examine tools for assessing perceived stress and mindfulness, current findings in the science of stress management and meditation, and cognitive-behavioral theories and interventions demonstrated to reduce stress and enhance well-being. Course is based on the mindfulness-based stress reduction (MBSR) curriculum.

WELLNESS 150. Introduction to Nutrition. 1 Unit.
Optimize nutrition for health and performance based on established and emerging research. Discern between popular trends and scientific understandings of healthy nutrition and nutritional habits. Topics include evidence-based analysis of macronutrients, fad diets, sugar addiction, low-calorie sweeteners, caloric restriction, disease prevention, and general nutrition with an emphasis on translating research into implementable, day-to-day dietary practices.

WELLNESS 152. Mindfulness and Food. 1 Unit.
Explore the psychological foundations of a positive relationship with food to enhance mind-body health and optimize performance. Focuses on nutritional science and research-based mindfulness practices shown to enhance physical and psychological well-being. Covers topics ranging from inner and outer wisdom, self-assessment of hunger and satiety, critical thinking about food related media messages, stress, and transitions as they influence eating habits. Emphasizes translating theory and research into lifestyle practices.

WELLNESS 160. Radically Human Technology: Enhancing Connection and Wellbeing. 1-2 Unit.
Explore the present and future relationships between technology, humanity, and the search for happiness & flourishing. Investigate and develop the core questions, concerns, ethical considerations, and broad implications of technologies that shape human culture and consciousness. Course draws from science and technology studies, contemplative science, neurophenomenology, positive psychology, biomedical engineering, central nervous system stimulation, and neurofeedback. Evaluate the latest tech, interact with luminaries in the field, and rapid-design your own consumer tech concept.

WELLNESS 161. Introduction to the Technology of Flourishing: Weekend Campus Intensive. 1 Unit.
Investigate the present and future relationship between technology, humanity, and the search for happiness & flourishing. Explore and develop the core questions, concerns, ethical considerations, and broad implications of technologies that shape human culture and consciousness. Course draws from science and technology studies, contemplative science, neurophenomenology, positive psychology, biomedical engineering, and brain stimulation & neurofeedback. Utilize and evaluate some of the latest tech supporting human flourishing.

WELLNESS 162. Digital Wellbeing: Healthy Relationships With Technology. 1 Unit.
It¿s a brave new world of creative design, expression and innovation. The digital aspects of life provide a tremendous opportunity to optimize wellbeing, performance, relationships, purpose, and other important facets of life. Study the latest and most effective technologies in this space. Examine challenges around technology including loneliness, addiction and negative social comparison, while learning how to foster deeper connection and joy. Review current research exploring how to effectively integrate social media, digital media (audio, video, gaming), messaging, digital dating, privacy, and personal branding in a way that supports your goals and values. Design, experiment with, and implement a personalized plan for optimizing your day-to-day technology use with intention.

WELLNESS 163. Meditation and Technology. 1 Unit.
Challenge the traditional definition of meditation while examining and using the latest meditation technologies that amplify attention and awareness. Learn how these technologies can be integrated into existing practices or help support new meditators. Explore the range of tools, such as brain, heart, and breath sensing/feedback devices, and find what works best in one¿s own practice. Move past traditional boundaries of meditation and experiment with new ways that wearables, apps, and other tech can support meditation practice both in formal sitting practice and day-to-day living in a hyper-connected world.

WELLNESS 164. Designing Wellbeing. 1 Unit.
Design processes and technologies that support wellbeing and human connection. Learn about research-based models of human flourishing, explore existing technologies, and interact with innovators and thought leaders in the field of transformative design and technology. Utilize empathy-driven discovery methods that deepen understanding of existing wellbeing problems and, in interdisciplinary project teams, generate and pitch concepts for next-generation tech solutions. Personal and interpersonal development is essential for designing transformative technologies and this viewpoint is foundational for this design journey.

WELLNESS 170. Laughter & Play for Wellbeing. 1-2 Unit.
Learn about and practice laughter yoga, combined with theater exercises. Laughter yoga (distinct from traditional movement-based yoga) is a modality that integrates laughter exercises with yogic breathing. Explore the growing field of research on laughter yoga and its positive effects on wellbeing and other health outcomes. Examine the various dimensions of laughter yoga as a form of cardiovascular and aerobic exercise, mindfulness, and play. Use theater exercises to leverage the power of performative, healing laughter and to cultivate embodied awareness, creativity, resilience, and joy. Readings and exercises will draw from the work of pioneers in the fields of laughter wellness and socially engaged theater, such as Madan Kataria and Augusto Boal.
Same as: TAPS 170W

WELLNESS 180. The Flourishing Activist: Mindfully Being the Revolution. 1-2 Unit.
Explore how to blend the variety of ways social activism is expressed in the world with the mindful cultivation of human flourishing. Enhance mastery, self-acceptance, and personal agency while engaging in activism and the challenges inherent to activism, namely, confrontation with violence, trauma, and related mental and emotional struggles. Use self-reflection, embodied practice, and creative expression for contemplating how personal identity struggles can generate meaning beyond the self, how self-healing can lead to community healing, and how the personal is the political.

WELLNESS 181. Flourishing Leaders and Teams. 1 Unit.
Connect leadership and team performance models to models of human flourishing and well-being in order to broaden and build new definitions of success. Develop and practice leadership skill-sets that enhance human performance and flourishing of individuals and small groups in an engaging experiential format. Integrate leadership and well-being theory and practice through facilitated simulations. Covers topics ranging from resilience and well-being research, neuro-performance, emotional-social intelligence, team dynamics and group flow, communication theory and skills, and human development.

WELLNESS 182. Mindfulness & Yoga: Tools for Future Educators and Leaders. 1 Unit.
Explore the foundations of contemplation, mindfulness, and yoga as they are taught and experienced in educational and leadership settings. As a future educator or leader, learn to instruct basic contemplative, mindfulness, and yoga practices as resources that both increase self-awareness, emotional regulation, and self-care, as well as practices that promote personal, professional, and contemplative development. Topics include the physiological, neurobiological, psychological, social, and philosophical bases of contemplation, mindfulness, and yoga in educational and leadership contexts. The course requires an interest in and dedication to developing one's own practice in order to authentically and appropriately teach the concepts and practices to others.

WELLNESS 183. Financial Wellness for a Healthy, Long Life. 1 Unit.
This course will ground you in the knowledge, skills, and habits you need to identify and achieve your financial goals. We will infuse behavior science and psychology into our exploration of personal finance concepts (e.g., credit, debt, saving, and investing) to build your financial capability in the areas of managing money, planning ahead, making choices, and getting help. By the end of the quarter, you will have a personalized toolkit to create and refine actionable plans for increasing your financial well-being now and throughout your healthy, long life.

WELLNESS 191. Peer Counseling on Comprehensive Sexual Health. 1-2 Unit.
Presented by the Sexual Health Peer Resource Center (SHPRC), this class is intended for and required of students planning to become counselors at the SHPRC, but is open to all interested in sex and sexual health. Course addresses sexual and reproductive anatomy, sexually transmitted infections, contraceptive methods, menstruation, pregnancy, abortion, gender identity, sexual orientation, sexual assault and abuse, consent and communication, societal stigmas and pressures, kink, toys, and pleasure. Students are equipped to make responsible decisions about their own sexual interactions and to advise others appropriately. Course includes lecture series featuring guest experts and a student-led discussion section. Discussion, role-play, and peer-education outreach project support application of knowledge and development of counseling skills.

WELLNESS 193. Applying Wellness Individual Studies. 1-2 Unit.
Translate theoretical knowledge and acquired skills into actionable wellness projects that enhance an aspect of wellness within the Stanford community. Students work in collaborative groups or individually under the mentorship of the course instructor(s) to design, deliver, and evaluate a wellness initiative at Stanford.

WELLNESS 199. Selected Topics: Wellness. 1-2 Unit.
Exploration of a topic (to be determined) not covered by the standard curriculum but of interest to faculty and students in a particular quarter. May be repeated with change of content. For more information regarding specific course titles and topics, please refer to the notes of each course section.

HEALTH POLICY

Courses offered by the Center for Health Policy (CHP) are listed under the subject code HRP on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=HRP&filter-catalognumber-HRP=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=HRP&filter-catalognumber-HRP=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=HRP&filter-catalognumber-HRP=on).

Effective October 1, 2019, the former Department of Health Research and Policy was reorganized. CHP/PCOR is the new joint working name of the Center for Health Policy (CHP) and the Center for Primary Care and Outcomes Research (PCOR). Epidemiology moved from the Department of Health Research and Policy to become an independent department in the School of Medicine, the new Department of Epidemiology and Population Health *(p. 2414).*

The Center for Health Policy (CHP) conducts rigorous research that lays the foundation for better domestic and international health policy and health care. Drawing upon our multidisciplinary research, CHP/PCOR offers innovative educational programs from the undergraduate to the graduate level.

Located in the heart of Stanford's campus, CHP/PCOR is run under the auspices of the Freeman Spogli Institute for International Studies (CHP) and the Stanford University School of Medicine (PCOR). The jointly operated centers were founded in 1998 to engage faculty, staff and students from across Stanford—including medicine, economics, statistics, business, law, engineering and psychology—in research on health policy and clinical practice.

Health Policy/Health Services Research is concerned with many aspects of health policy analysis in the public and private sectors.

For additional information, send email to hrpadmissions@stanford.edu.

Master of Science in Health Policy

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The master's degree program in Health Policy seeks to train students in the quantitative analysis of issues in health and medical care. The program is based upon an individual development plan, and includes both course work and completion of a master's project under the direction of a program core faculty member. The typical student in the program is a physician who has completed residency training and is preparing for a research career; the program also admits Stanford medical students and others with a strong background in health policy analysis. The core faculty interests include outcomes research, health economics, health care organization, health care access, implementation science, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

Admission

Application deadline: February 23, 2021.

For additional information on course requirements and admissions process, see the program website (https://healthpolicy.fsi.stanford.edu/content/ms-health-policy/). Please address inquiries to the HRP Education Program Manager at hrpadmissions@stanford.edu.

Submit an application through the Stanford Graduate Admissions website (https://gradadmissions.stanford.edu/applying/) by clicking on "Apply Now."

Applications are evaluated based on the applicant's commitment to and aptitude for a career in health policy research as demonstrated via transcripts, statement of purpose, relevant work and research experience, and letters of recommendation. The Graduate Record Examination (GRE) is optional in the 2020-2021 application cycle, but is still highly encouraged and may be waived for applicants with an M.D. or similar degree. Applicants from non-English speaking countries should provide evidence of competence in English on the Test of English as a Foreign Language (TOEFL). See Stanford University GRE and TOEFL policies and requirements on the Graduate Admissions (https://gradadmissions.stanford.edu/applying/starting-your-application/required-exams/) website.

Required Supporting Documents

To be submitted in the Stanford Graduate Admissions Application:

- Statement of Purpose that includes area(s) of interest
- Three letters of recommendation
- Official GRE General Test scores (optional in 2020-2021 application cycle)
- Official TOEFL scores (if applicable)
- Unofficial transcripts for all college/university degrees
- CV with relevant work and research experience

Advisors and Mentors

Each student proposes a thesis committee, to be approved by the Program Director, comprised of at least two faculty members associated with the master's degree program, one of whom must be a core faculty member. The chair of the thesis committee is the student's faculty advisor, and a member of the core faculty. In addition to serving as a mentor for the student's thesis, the faculty advisor is responsible for advising the student on curriculum-related issues and ensuring that the student is progressing sufficiently toward completion of the program.

Thesis

Each student must submit a 1-2 page thesis proposal by the end of the first year in the program. The proposal should describe the research project which will fulfill the requirement for the master's thesis including identifying the research question and describing the data sources and methods to be used. For collaborative projects, the student should identify the collaborators and describe in detail their role on the project. For projects using secondary data, the student should provide evidence that the data will be available for the proposed research and describe how they will access the data. In the proposal, the student should identify the members of the thesis committee.

All committee members must read and approve the final thesis. Depending on the topic of the project, additional faculty members may serve as mentors either as a committee member or in a less formal arrangement. Other faculty members may be added to the thesis to serve as content experts for projects concerned with specific diseases or medical treatments.

Degree Requirements

To receive the degree, students are expected to demonstrate knowledge of issues in health policy and the quantitative skills necessary for research in this area. Students must take at least 45 units of course work and write a University thesis. The course work requirements are:

Course Requirements

		Units
Required Courses		
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4

EPI 261	Intermediate Biostatistics: Analysis of Discrete Data	3
EPI 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3
HRP 201A	Health Policy Graduate Student Tutorial I	1-2
HRP 201B	Health Policy Graduate Student Tutorial II	1-2
HRP 201C	Health Policy Graduate Student Tutorial III	1-2
Required for students funded by NIH training grants:		
MED 255	The Responsible Conduct of Research	1
or MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	
Concentration Requirements		
Choose one of the following Concentration Courses		
HRP 218	Methods for Health Care Delivery Innovation, Implementation and Evaluation	2
HRP 263	Advanced Decision Science Methods and Modeling in Health	3
HRP 391	Health Law: Finance and Insurance	3
HRP 252	Outcomes Analysis	4
EPI 292	Advanced Statistical Methods for Observational Studies	2-3
HRP 256	Economics of Health and Medical Care	5
HRP 249	Topics in Health Economics I	2-5
Thesis Units		
A total of 12 units of thesis units		
HRP 399	Graduate Research	12
Electives		
Additional approved elective courses to complete the program total of at least 45 units		
Total Units		**45**

Pre-approved electives

Other electives, consistent with the student's individual development plan, may be approved by the student's faculty advisor and the program director.

		Units
BIOMEDIN 215	Data Science for Medicine	3
EPI 202	R Fundamentals for Health Research	1-2
EPI 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
EPI 214	Scientific Writing	2-3
EPI 219	Evaluating Technologies for Diagnosis, Prediction and Screening	3
EPI 223	Introduction to Data Management and Analysis in SAS	2
EPI 251	Design and Conduct of Clinical Trials	3
EPI 259	Introduction to Probability and Statistics for Epidemiology	3
EPI 264	Foundations of Statistical and Scientific Inference	1
EPI 292	Advanced Statistical Methods for Observational Studies	2-3
HRP 224	Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health	3-4
HRP 249	Topics in Health Economics I	2-5
HRP 254	Quality & Safety in U.S. Healthcare	3
HRP 257	Advanced Topics in the Economics of Health and Medical Care	2
HRP 285	Global Leaders and Innovators in Human and Planetary Health	1-2
GSBGEN 551	Innovation and Management in Health Care	2
MED 273	Biodesign for Digital Health	3
PEDS 202A	Practical Applications for Qualitative Data Analysis	3
PEDS 202B	Practical Applications for Qualitative Data Analysis	3
STATS 216	Introduction to Statistical Learning	3
STATS 266	Advanced Statistical Methods for Observational Studies	2-3

Ph.D. in Health Policy

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Stanford Health Policy, through the Department of Medicine at the Stanford University School of Medicine, offers a Ph.D. program which promises to educate students to be scholarly leaders in the field of health policy, and to be highly knowledgeable about the theoretical and empirical approaches that can be applied in the development of improvements in health policy and the health care system. The curriculum offers courses across a wide range of health policy areas including health economics, health insurance and government program operation, health financing, international health policy and economic development, cost-effectiveness analysis and the evaluation of new technologies, relevant statistical and methodological approaches, and health policy issues related to public health concerns such as obesity and chronic disease.

Admission

The program welcomes applicants with diverse backgrounds. Applications and supporting documents (see below) must be submitted through Stanford's Office of Graduate Admissions (http://studentaffairs.stanford.edu/gradadmissions/) by December 1, 2020. This is the final deadline. All applications and all reference letters should be received electronically in the application no later than 11:59 pm on December 1, 2020.

Applications are evaluated based on the applicant's commitment to and aptitude for a career in health policy research as demonstrated via transcripts, and described in a statement of purpose, relevant work and research experience, and letters of recommendation. The Graduate Record Examination (GRE) is NOT required (submitting scores is optional) for the 2020-21 application cycle. Please note that this may change in future years. Applicants from non-English speaking countries should provide evidence of competence in English on the Test of English as a Foreign Language (TOEFL). For further information on Stanford University TOEFL requirements and exemptions, see the Graduate Admissions website (https://gradadmissions.stanford.edu/about/frequently-asked-questions/gre-and-toefl/).

See the program's website (https://healthpolicy.fsi.stanford.edu/content/phd-health-policy/) for additional information on degree requirements, advising, program milestones, and admissions processes. Address inquiries to the HRP Education Program Manager at hrpadmissions@stanford.edu.

Required Supporting Documents

To be submitted to Stanford's central application form:

- Statement of Purpose that includes the specialization track (Decision Sciences or Health Economics) and policy area(s) of interest
- Three letters of recommendation
- Official GRE General Test scores (optional in the 2020-2021 application cycle)

- Official TOEFL scores (if necessary) (Stanford Graduate Admissions TOEFL policy (https://gradadmissions.stanford.edu/about/frequently-asked-questions/gre-and-toefl/))
- Unofficial transcripts for all college/university degrees and courses
- CV with relevant work and research experience

For the 2020-2021 application cycle, the GRE is not required (it is optional to submit scores). The program may revert to requiring the GRE in subsequent years.

While not required, it is strongly encouraged that applicants have, or plan to have at the time of matriculation, mathematical skill at the level at the level of multivariate calculus, and one course each in linear algebra, analysis, probability, and statistics.

Interviews

Applicant interviews, if offered, are held in early to mid February.

Advising

Academic advising by program faculty is a critical component of the program's graduate students' education. All matriculating students are assigned a faculty advisor from the group of core faculty to help them design their academic program. Before or shortly after the time that they advance to candidacy for the degree, students are expected to identify a group of at least three thesis advisors (also known as the dissertation reading committee), including a primary thesis advisor. The thesis advisors are selected by the student on the basis of expertise relevant to the thesis project, and may or may not include the originally assigned faculty advisor.

Advisors meet with students within the first quarter of each year to discuss students' Individual Development Plan(s) (IDPs). Additionally, students meet with their advisor(s) on a regular basis throughout each year to discuss course selection, development of research projects, progress through the program, and career plans.

Academic progress and student completion of program requirements and milestones are monitored by the program staff and directors and also discussed at quarterly meetings of all Ph.D. advisors.

Requirements and milestones, as well as more detailed descriptions of the program's expectations of advisors and students, are listed in the Student Handbook, found on the program's website (https://healthpolicy.fsi.stanford.edu/content/phd-health-policy/).

The program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the Graduate Academic Policies and Procedures (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) manual.

See the "Graduate Advising (p. 2418)" tab of this section of this bulletin for additional information on advising expectations for student and faculty.

Degree Requirements

See the program's website (https://healthpolicy.fsi.stanford.edu/content/phd-health-policy/) for additional information on degree requirements, advising, and program milestone.

In addition to taking a set of core courses, students are expected to complete course work in one of two tracks:

- *Health Economics*: including the economic behavior of individuals, providers, insurers, and governments and how their actions affect health and medical care.
- *Decision Sciences:* with quantitative techniques to assess the effectiveness and value of medical treatments and for decision making about medical care at the individual and/or collective level.

Stanford Health Policy may offer a third track in the 2021-2022 academic year that will offer expertise in other areas of health policy research. The track is under development and additional information will be published here and on the department website once the track requirements are determined.

Requirements

- Completion of course work (see below) with minimum grades of 'B-' and an overall/average GPA of a B (3.0).
- Individual development plan (IDP) meeting with primary advisor within the first quarter of each year.
- Meeting with advisor(s) on a regular basis.
- Completion of progress assessment/milestone meeting with primary advisor each year (during Spring quarters).
- Completion of course work in the responsible conduct of research.
- Final course work (for both first and second year) must total at least 75 units for both core and track specific courses.
- Taking and passing the Written Qualifying Exam.
- Taking and passing the Oral Exam.
- Students must develop, write and present a Ph.D. dissertation that is the result of independent investigation and that constitutes a contribution to knowledge in health services research and health policy.
- A final presentation is required for graduation - the final presentation is a summary of the work accomplished on the Ph.D. research and should occur while the student is still matriculated, during the regular academic quarter.

Course Requirements

The minimum number of units required for a Ph.D. degree at Stanford (satisfied both through coursework and research units) is 135.

Ph.D. students complete work in one of the following two tracks.

Health Economics Track

		Units
Statistical Data Analysis, Econometrics, and Causal Inference		
Required - one year sequence in econometrics:		
ECON 270	Intermediate Econometrics I	2-5
ECON 271	Intermediate Econometrics II	2-5
ECON 272	Intermediate Econometrics III	3-5
OR		
MGTECON 603	Econometric Methods I	4
MGTECON 604	Econometric Methods II	4
MGTECON 605	Econometric Methods III	3
Micro-Economics		
Required - one year sequence in microeconomics:		
ECON 202	Microeconomics I	2-5
ECON 203	Microeconomics II	2-5
ECON 204	Microeconomics III	3-5
Or equivalent: GSBGEN 675 or MGTECON 600 can be substituted for ECON 202 and/or MGTECON 601 can be substituted for ECON 203.		
Discipline-Specific Courses		
Required:		
HRP 249	Topics in Health Economics I	3-5
HRP 257	Advanced Topics in the Economics of Health and Medical Care	2

Choose 4 courses in the following 4 fields in economics:		
Development Economics		
Public Finance		
Labor Economics		
Industrial Organization		
Health Policy		
Required:		
HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
Choose at least 8 units of additional health-policy-related courses such as:		
EASTASN 217	Health and Healthcare Systems in East Asia	3-5
HRP 209	Health Law: The FDA	2-3
HRP 391	Health Law: Finance and Insurance	3
LAW 3002	Health Law: Quality and Safety of Care	3
LAW 3009	Health Law: Improving Public Health	3
MED 238	Leading and Managing Health Care Organizations: Innovation and Collaboration in High Stakes Settings	3
Practice of Research		
Required:		
First-year core tutorial (HRP 201A, HRP 201B, and HRP 201C)		
Second-year core tutorial (HRP 800) - 3 quarters (Aut, Win & Spr)		
Health Economics Seminar		
Research in Progress Seminar		
MED 255	The Responsible Conduct of Research	1

Decision Science Track

		Units
Statistical Data Analysis, Econometrics, and Causal Inference		
Required: at least two quarters of one of the two following sequences:		
ECON 270	Intermediate Econometrics I	2-5
ECON 271	Intermediate Econometrics II	2-5
ECON 272	Intermediate Econometrics III	3-5
Or		
MGTECON 603	Econometric Methods I	4
MGTECON 604	Econometric Methods II	4
MGTECON 605	Econometric Methods III	3
Micro-Economics		
Required, at least one quarter:		
GSBGEN 675	Microeconomic Theory	3
Or		
MGTECON 600	Microeconomic Analysis I	3
MGTECON 601	Microeconomic Analysis II	3
Or		
ECON 202N	Microeconomics I For Non-Economics PhDs students	2-5
Or		
ECON 202	Microeconomics I	2-5
ECON 203	Microeconomics II	2-5
Discipline-Specific Courses		
Required:		
HRP 263	Advanced Decision Science Methods and Modeling in Health	3
Choose 4 methods courses such as:		
MS&E 201	Dynamic Systems	3
MS&E 211X	Introduction to Optimization (Accelerated)	3-4
MS&E 221	Stochastic Modeling	3
MS&E 223	Simulation	3
MS&E 226	Fundamentals of Data Science: Prediction, Inference, Causality	3
MS&E 263	Healthcare Operations Management	3
MS&E 463	Healthcare Systems Design	3-4
Health Policy		
Required:		
HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
Choose at least 8 units of additional health-policy-related courses such as:		
EASTASN 217	Health and Healthcare Systems in East Asia	3-5
HRP 209	Health Law: The FDA	2-3
HRP 391	Health Law: Finance and Insurance	3
LAW 3002	Health Law: Quality and Safety of Care	3
LAW 3009	Health Law: Improving Public Health	3
MED 238	Leading and Managing Health Care Organizations: Innovation and Collaboration in High Stakes Settings	3
Practice of Research		
Required:		
First-year core tutorial (HRP 201A, HRP 201B, HRP 201C)		
Second-year core tutorial (HRP 800) - 3 quarters (Aut, Win & Spr)		
Research in Progress Seminar		
MED 255	The Responsible Conduct of Research	1

New Track, 2021-22

Stanford Health Policy may offer a third track in the 2021-22 academic year that will offer expertise in other areas of health policy research. The track is under development and additional information will be published here and on the department website once the track requirements are determined.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

Stanford Health Policy counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Center for Health Policy (CHP) and the Center for Primary Care and Outcomes Research (PCOR) is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

CHP/PCOR programs adhere to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the Graduate Academic Policies and Procedures (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) manual.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Health Policy

Director of Graduate Studies and Director of Ph.D. Health Policy: Laurence Baker

Director of M.S. Health Policy: Kate Bundorf

Director of Education, Ph.D. Health Policy: Corinna Haberland

Core Faculty and Academic Teaching Staff:

Steven Asch (Professor, Medicine), Laurence Baker (Professor, Medicine), Eran Bendavid (Associate Professor, Medicine), Jay Bhattacharya (Professor, Medicine), Kate Bundorf (Associate Professor, Medicine), David Chan (Assistant Professor, Medicine), Jeremy Goldhaber-Fiebert (Associate Professor, Medicine), Mary Goldstein (Professor, Medicine), Corinna Haberland (Lecturer, Medicine), Mark Hlatky (Professor, Medicine), Michelle Mello (Professor, Law, and Medicine), Grant Miller (Associate Professor, Medicine), Arden Morris, (Professor, Surgery), Doug Owens (Professor, Medicine), Maria Polyakova (Assistant Professor, Medicine), Maya Rossin-Slater (Assistant Professor, Medicine), Joshua Salomon (Professor, Medicine), Lee Sanders (Associate Professor, Pediatrics), Sara Singer (Professor, Medicine), David Studdert (Professor, Law, and Medicine), Jason Wang (Associate Professor, Pediatrics), Paul Wise (Professor, Pediatrics), Donna Zulman (Assistant Professor, Medicine)

Affiliated Faculty and Staff by Department:

Anesthesiology, Perioperative, and Pain Medicine: Alex Macario (Professor), Eric Sun (Assistant Professor)

Biomedical Data Science: Bradley Efron (Professor), Philip Lavori (Professor), Robert Tibshirani (Professor)
Economics: Mark Duggan (Professor), Victor Fuchs (Professor)
Emergency Medicine: James Quinn (Professor)
Epidemiology & Population Health: Steven Goodman (Professor), Kristin Sainani (Associate Professor)
Graduate School of Business: Alain Enthoven (Professor)
Law: Daniel Kessler (Professor), Henry T. Greely (Professor)
Management Science & Engineering: Margaret Brandeau (Professor)
Medicine: Mark R. Cullen (Professor), Paul Heidenreich (Professor), Tina Hernandez-Boussard (Associate Professor), Stephen Luby (Professor), Nigam Shah (Associate Professor)
Ophthalmology: Suzann Pershing (Assistant Professor)
Pediatrics: Ciaran Phibbs (Associate Professor)
Surgery: Todd Wagner (Associate Professor)

Courses

HRP 89Q. Introduction to Cross Cultural Issues in Medicine. 3 Units.
Preference to sophomores. Introduction to social factors that impact health care delivery, such as ethnicity, immigration, language barriers, and patient service expectations. Focus is on developing a framework to understand culturally unique and non-English speaking populations in the health care system.

HRP 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

HRP 201A. Health Policy Graduate Student Tutorial I. 1-2 Unit.
Seminar series is the core tutorial for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study. 2 unit registration requires written responses to assigned reading questions.
Same as: MED 215A

HRP 201B. Health Policy Graduate Student Tutorial II. 1-2 Unit.
Second in a three-quarter seminar series, the core tutorial is for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.
Same as: MED 215B

HRP 201C. Health Policy Graduate Student Tutorial III. 1-2 Unit.
Third in a three-quarter seminar series, the core tutorial is for first-year Health Policy PhD students and all MS Health Policy students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study.
Same as: MED 215C

HRP 204. Models for Understanding and Controlling Global Infectious Diseases. 3-4 Units.
(HUMBIO students must enroll in HUMBIO 154D. Med/Graduate students must enroll in HRP 204.) This course introduces students to the dynamics of infectious diseases of global health importance, focusing on the use of mathematical models to characterize their transmission in populations. Relevant case examples of pathogens with differing natural history and transmission routes include tuberculosis, HIV, malaria, typhoid, and cholera, as well emerging infectious diseases such as Ebola and the 2019 novel coronavirus. Lectures will emphasize the theoretical basis underlying infectious disease dynamics and link them to in-class workshops and problem sets that will emphasize public health applications and will provide students with hands-on experience in creating and coding models. Students will learn the mathematical underpinnings of key topics in infectious disease transmission including herd immunity, the basic reproductive number, vaccine effects, social contact structure, host heterogeneities, and pathogen fitness. The course will teach students how to approach new questions in infectious disease transmission, from model selection, tradeoffs in model complexity or parsimony, parameterization, sensitivity and uncertainty analyses. Students will practice building models, evaluating the influence of model parameters, making predictions about disease trajectories, and projecting the impact of public health interventions. Prerequisites: HUMBIO 88 or 89 or STATS 141 or BIOSCI 141.
Same as: HUMBIO 154D

HRP 207. Introduction to Concepts and Methods in Health Services and Policy Research I. 2 Units.
Primarily for medical students in the Health Services and Policy Research scholarly concentration. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines.

HRP 208. Introduction to Concepts and Methods in Health Services and Policy Research II. 2 Units.
Primarily for medical students in the Health Services and Policy Research scholarly concentration; continuation of 207. Topics include health economics, statistics, decision analysis, study design, quality measurement, cost benefit and effectiveness analysis, and evidence based guidelines. Recommended: 207.

HRP 209. Health Law: The FDA. 2-3 Units.
(Same as LAW 3003) Open to law and medical students; other graduate students by consent of instructor. The FDA's regulatory authority over drugs, biologics, medical devices, and dietary supplements. The nature of the pharmaceutical, biotech, medical device, and nutritional supplement industries.

HRP 211. Law and Biosciences: Neuroscience. 3 Units.
(Same as LAW 3006) Legal, social, and ethical issues arising from advances in neuroscience, including effects upon law and society through improvements in predicting illnesses and behaviors, reading minds through neuroimaging, understanding responsibility and consciousness, treating criminal behavior, and cognitive enhancement.

HRP 213. Writing in the Sciences. 2-3 Units.
Primarily for medical students in the Clinical Research Scholarly concentration; open to graduate students except Epidemiology graduate students. Development of research questions and plans for statistical analysis. Study design, sample size and power calculations, and statistical analysis of study data. Analytic methods to carry out statistical power and sample size calculations. Prerequisites: 225, and 258 or 259, or consent of instructor.

HRP 218. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.
Preference given to postgraduate fellows and graduate students.Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students.
Same as: CHPR 212, MED 212

HRP 221. Law and the Biosciences: Genetics. 3 Units.
(Same as LAW 3004) Open to all law or medical students; other graduate students by consent of the instructor. Focus is on ethical, legal, and social issues arising from advances in our knowledge of human genetics. Includes forensic uses of genetics, genetic testing, widespread whole genome sequencing, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research. Research paper required.

HRP 224. Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health. 3-4 Units.
Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health is a Collaboratory workshop for students/fellows to design and develop innovative social ventures addressing key challenges in health and the environment, especially in support of the UN Sustainable Development Goals (SDGs 2030). Your mandate in identifying problems and designing solutions is broad and flexible! SE Lab is open to students and fellows across Stanford and combines design thinking exercises, short lectures & case studies, workshops, small group teamwork, presentations, guest speakers, and faculty, practitioner and peer feedback to support you and your team in generating and developing ideas and projects that will change the world! Join SE Lab with an idea or simply the desire to join a team. Enrollment limited to 30.
Same as: MED 224, PUBLPOL 224

HRP 232. Measurement for Health Policy. 3 Units.
Conceptual, technical and empirical basis for measurement essential to health policy. Principles and good practice for designing measures fit for purpose. Practical application of measurement concepts and methods. Main emphasis on measuring levels of health in individuals and populations, combining mortality/longevity and quality of life/functioning. Additional topics include measurement of inequalities and health care quality. Examples and applications include high income and low/middle-income settings.
Same as: MED 251

HRP 243. Health Policy Seminar: Population Health. 1 Unit.
This seminar course is intended to introduce students to the role of policy in public health in the United States. In addition to speakers from the law school, SIEPR, HRP, and School of Medicine, we will be bringing in speakers from outside organizations in the Bay Area with expertise in a variety of issues in public health. n There are no assignments and lunch will be provided.

HRP 246. Seminar in Healthcare Quality and Safety. 1 Unit.
Primarily for medical students in the Quality and Safety Scholarly Concentration. Almost everyone will be a patient at some point in their lives. It is estimated that over 98,000 patients die in US hospitals each year due to medical errors and recent articles suggest that medical errors are the third leading cause of death in the US. Patient safety is the foundation of high-quality health care, which has become a critical issue in health policy discussions. This course will provide an overview of the quality & patient safety movement, the array of measurement techniques and issues, and perspectives of quality improvement efforts under the current policy landscape. Lunch will be provided for enrolled students.
Same as: BIOMEDIN 246

HRP 249. Topics in Health Economics I. 3-5 Units.
Course will cover various topics in health economics, from theoretical and empirical perspectives. Topics will include public financing and public policy in health care and health insurance; demand and supply of health insurance and healthcare; physicians' incentives; patient decision-making; competition policy in healthcare markets, intellectual property in the context of pharmaceutical drugs and medical technology; other aspects of interaction between public and private sectors in healthcare and health insurance markets. Key emphasis on recent work and empirical methods and modelling. Prerequisites: Micro and Econometrics first year sequences (or equivalent). Curricular prerequisites (if applicable): First year graduate Microeconomics and Econometrics sequences (or equivalent).
Same as: ECON 249, MED 249

HRP 252. Outcomes Analysis. 4 Units.
Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.
Same as: BIOMEDIN 251, MED 252

HRP 254. Quality & Safety in U.S. Healthcare. 3 Units.
The course will provide an in-depth examination of the quality & patient safety movement in the US healthcare system, the array of quality measurement techniques and issues, and perspectives of quality and safety improvement efforts under the current policy landscape.
Same as: BIOMEDIN 254

HRP 256. Economics of Health and Medical Care. 5 Units.
Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.
Same as: BIOMEDIN 156, BIOMEDIN 256, ECON 126

HRP 257. Advanced Topics in the Economics of Health and Medical Care. 2 Units.
Emphasis is on research studies in health economics. Seminar style course focuses on health economics. Complimentary with HRP 256. Students will be expected to read and present papers to the group and discuss concepts with faculty. Restricted to second year or beyond PhD students in economics & economics-related disciplines.
Same as: MED 265

HRP 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.
Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.
Same as: MED 263

HRP 276. Introduction to Law and the Biosciences. 3 Units.
(SAME AS LAW 3012) This course will provide an introduction to the legal, ethical, and policy areas important to understanding Law and the Biosciences. Each topic will include both discussion of the relevant legal rules and ethical principles and their application to a specific case study. Topics to be covered include the structure and regulation of the biopharma industry and biosciences research, intellectual property relevant to the biosciences, federal regulation of bioscience products through the FDA and otherwise, the health care financing system, human subjects research, genetic technologies, reproductive technologies, neuroscience technologies, criminal law applications of bioscience technologies, and more. The course will prepare students for more advanced courses in these areas, as well as for working with or in the bioscience world. Special Instructions: The class is open to all law students and graduate or professional students from other parts of the University. Some undergraduates may be admitted with consent of the instructor Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Elements used in grading: Attendance, class participation, and final exam (In-school, open book). Cross listed with Health Research and Policy (HRP - TBA).

HRP 280. Spanish for Medical Students. 2 Units.
First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include anatomy, general hospital procedures, pediatrics, nutrition, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.
Same as: SPANLANG 121M

HRP 281. Spanish for Medical Students. 2 Units.
Second quarter of three-quarter series.Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include anatomy, general hospital procedures, reproductive health, emergency medicine, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.
Same as: SPANLANG 122M

HRP 282. Spanish for Medical Students. 2 Units.
Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include anatomy, diagnostic procedures, HIV, diabetes, hypertension, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Undergraduates are welcome to enroll.
Same as: SPANLANG 123M

HRP 283. Health Services Research Core Seminar. 1 Unit.
Presentation of research in progress and tutorials in the field of health services research.

HRP 285. Global Leaders and Innovators in Human and Planetary Health. 1-2 Unit.
Are you interested in innovative ideas and strategies for addressing urgent challenges in human and planetary health? This 7 session lecture series features a selection of noteworthy leaders, innovators and experts across diverse sectors in health and the environment such as: healthcare/medical innovation, environmental sustainability, foundations/venture capital, biotechnology/pharmaceuticals, social innovation/entrepreneurship, tech/media and artificial intelligence (AI), human rights, global poverty/development, sustainable agriculture/hunger/nutrition, public policy/systems change. Co-convened by faculty, fellows and students collaborating across several Stanford centers/departments/schools, the course invites the discussion of global problems, interdisciplinary perspectives and solutions in the fields of health and the environment. nSpecial themes for AY 2020-2021 include: 1) US and Global Responses in Combatting the Coronavirus Pandemic; 2) Climate Crisis, Wildfires, Extreme Weather and Environmental Sustainability; 3) Systemic Racism, Gender Inequality, Health Inequity and Community Well Being; 4) Democracy Under Siege, Political Landscape of Electoral, Judicial, Legislative Turmoil; 5) Partnership/Collaboration, Models of Leadership, Innovation, Sustainable Social Change; and Other Topics TBD by students/fellows. Students from all backgrounds are encouraged to enroll - registration open to all Stanford students and fellows. May be repeated for credit.
Same as: MED 285

HRP 299. Directed Reading in Health Research and Policy. 1-18 Unit.
Epidemiology, health services research, preventive medicine, medical genetics, public health, economics of medical care, occupational or environmental medicine, international health, or related fields. May be repeated for credit. Prerequisite: consent of instructor.

HRP 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

HRP 391. Health Law: Finance and Insurance. 3 Units.
(SAME AS LAW 3001, MGTECON 331) This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act , health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at https://syllabus.stanford.edu. Elements used in grading: Participation, attendance, class presentation, and final exam.
Same as: PUBLPOL 231

HRP 392. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.
For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.
Same as: BIOMEDIN 432

HRP 399. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

HRP 800. Second Year Health Policy PHD Tutorial. 1-3 Unit.
The goal of the second year tutorial is to provide PHD students with advanced training in health policy research and to assist them in successfully developing research proposals.

HRP 801. TGR Project. 0 Units.
.

HRP 802. TGR Dissertation. 0 Units.
.

IMMUNOLOGY

Courses offered by the Immunology Program are listed under the subject code IMMUNOL on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=IMMUNOL&filter-catalognumber-IMMUNOL=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=IMMUNOL&filter-catalognumber-IMMUNOL=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=IMMUNOL&filter-catalognumber-IMMUNOL=on).

Stanford Immunology is home to faculty, students, postdocs, and staff who work together to produce internationally recognized research in many areas of immunology. The long tradition of collaboration among the immunology laboratories at Stanford fosters productive interdisciplinary research, with an emphasis on the application of current approaches to problems in cellular, molecular and clinical immunology. Faculty research interests include both basic science research and bench-to-bedside research. Graduate students and postdoctoral scholars receive outstanding training through their participation in research, teaching, seminars, journal clubs, and the annual Stanford Immunology Scientific Conference.

Mission of the Ph.D. Program in Immunology

The Immunology doctoral program offers instruction and research opportunities leading to a Ph.D. in Immunology. Two tracks are offered:

1. Track 1: Molecular, Cellular, and Translational Immunology
2. Track 2: Computational and Systems Immunology

The goal of the Ph.D. Program in Immunology is to develop investigators who have a strong foundation in Immunology and related sciences in order to carry out innovative research. The program features a flexible choice of courses and seminars combined with extensive research training in the laboratories of participating Immunology faculty. Specifically, immunology graduate students:

1. acquire a fundamental, broad, and comprehensive body of knowledge and skills through an extensive curriculum.
2. identify important scientific questions, design, and conduct experiments using the most appropriate methods.
3. read and critically analyze current literature in immunology and other relevant fields.
4. present research findings and communicate ideas effectively to a variety of audiences.
5. prepare manuscripts that will be published in leading journals.
6. learn to teach effectively.

Master of Science in Immunology

Students in the Ph.D. program in Immunology may apply for an M.S. degree in Immunology only under special circumstances, assuming completion of appropriate requirements. Students must complete:

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
2. 3 quarters of graduate research (IMMUNOL 399 Graduate Research), consisting of rotations in the labs of three faculty members.
3. Participation in the Immunology journal club (IMMUNOL 305 Immunology Journal Club), and attendance at the Immunology seminar series (Immunol 311 Seminar in Immunology) and at the annual Stanford Immunology Scientific Conference.
4. First Year Rotations Presentations and General Advising Sessions, June. Students present on one of three lab rotations.
5. Students must submit a master's thesis paper on one of their rotations. This requirement may be waived under special circumstances.

Course work in Immunology as follows:

Track: Molecular, Cellular and Translational Immunology

		Units
BIOS 200	Foundations in Experimental Biology	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 203	Advanced Immunology III	3
IMMUNOL 311	Seminar in Immunology	1
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 399	Graduate Research	1-15
BIO 141	Biostatistics	5
MED 255	The Responsible Conduct of Research	1
Take one of the following courses:		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2

Track: Computational and Systems Immunology

		Units
BIOS 200	Foundations in Experimental Biology	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 310	Seminars in Computational and Systems Immunology	1
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
IMMUNOL 399	Graduate Research	1-15
MED 255	The Responsible Conduct of Research	1

Doctor of Philosophy in Immunology

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 65)" section of this bulletin.

Admissions

Students seeking admissions to the Immunology Ph.D. Program typically have an undergraduate major in biological sciences, but majors from other areas are acceptable if the applicants have sufficient coursework in biology, chemistry, general physics, and mathematics (through calculus). Applications are evaluated by the Immunology Graduate Program committee based upon: grades; evidence of research experience; letters of recommendation, including letters from research sponsor(s); and commitment to a career in biomedical research. The GRE Subject test is optional. If an applicant choses to submit a GRE score, they should plan on taking the GRE at least one month prior to the application

deadline of Tuesday, December 1, 2020, to ensure that official scores are available when applications are evaluated. Candidates who are selected to visit Stanford and interview are notified in January. The selected applicants are invited to the Biosciences interview session, March 3-6, 2021 (Wednesday-Saturday). This is the program's only interview session.

Interested Stanford medical students are welcome to apply to the program and should also submit a formal application by Tuesday, December 1, 2020.

Prospective graduate students must apply via Stanford's online graduate application (https://gradadmissions.stanford.edu/applying/).

Financial Aid

Students admitted to the program are offered financial support for tuition, a living stipend, health insurance coverage, and for first-year graduate students, a small allowance (tech funds). Applicants are urged to apply for independent fellowships such as from the National Science Foundation or National Defense Science and Engineering Graduate Fellowships. NSF Fellowship applications are due in October of the year prior to matriculation in the graduate program, and only one more NSF application is permitted in the first or second year. Immunology graduate students may continue to apply for outside fellowships after matriculation. Admitted students are typically offered financial support in the form of Stanford Graduate Fellowships, NIH traineeships, or research assistantships.

General Requirements

Immunology Startup and the First-Year Advising Process

Since students enter with differing backgrounds, each student is assisted by the first-year adviser in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. In addition, the Immunology Startup, a five-day introduction to immunology in early September, exposes incoming Immunology Ph.D. students to a variety of techniques and concepts. Students learn basic laboratory techniques in immunology and participate in in-depth discussions with faculty.

All students must be enrolled in exactly 10 units during Autumn, Winter, Spring, and Summer quarters until reaching Terminal Graduate Residence (TGR) status in the spring or summer quarter of their fourth year. Students are required to pass all courses in which they are enrolled; required and elective courses must be taken for a letter grade. Students must earn a grade of 'B-' or better in all courses applicable to the degree that are taken for a letter grade. Satisfactory completion of each year's general and track specific requirements listed below is required. During the first year, degree progress is monitored closely by the first-year adviser in quarterly meetings and by the Stanford Graduate Program Committee in a final advising session in June.

First-year students are required to complete three rotations in at least two immunology labs. In the Spring Quarter, two mini-rotations of six weeks each may be arranged. After joining a lab, students are required to meet with their thesis adviser within 30 days to complete the Individual Development Plan (IDP). Students continue to complete the IDP annually.

Students apply for any fellowships for which they are eligible (NSF, NDSEG, AHA, NIH NRSA are just a few).

A specific program of study for each student is developed individually with the first-year adviser.

Immunology Ph.D. Curriculum:

All students in the two tracks, Molecular, Cellular, and Translational Immunology (MCTI) and Computational and Systems Immunology (CSI) are required to enroll in the following core courses:

		Units
BIOS 200	Foundations in Experimental Biology	5
BIO 141	Biostatistics	5
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 258	Ethics, Science, and Society	1
IMMUNOL 290	Teaching in Immunology	1-15
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 311	Seminar in Immunology	1
IMMUNOL 399	Graduate Research	1-15
MED 255	The Responsible Conduct of Research	1

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members. Students in the MCTI track are expected to complete all their core course requirements by the end of their second year; students in the CSI track should complete their core course work by the end of the third year.

In the third through fifth year, students are required to take IMMUNOL 258 Ethics, Science, and Society, a refresher ethics course that is required by NIH and is offered every other year.

Immediately after the final examination period in Spring Quarter of the first year, first-year immunology graduate students are required to give a presentation on one of their three rotations to the Immunology graduate program committee (Qualifying Examination Process, Part I). After the rotation presentation, the first-year student will meet with the Stanford Graduate Program Committee in a one-on-one advising session to review degree progress and choice of a Ph.D. thesis lab.

In Autumn Quarter of the second year, students focus on preparing for Part II of the Qualifying Examination Process, the general oral examination and the Ph.D. thesis dissertation proposal. The student is required to pass the oral examination and write a thesis dissertation proposal which is presented to and evaluated by a qualifying examination committee composed of three faculty members, two of whom must be from the Immunology program faculty and the third faculty member may be from a department outside the program. The Ph.D. adviser is not present for Part II, but is required to submit an evaluation and grade for the Ph.D. thesis dissertation proposal. Upon successful completion of Part II, the student files a petition for Ph.D. candidacy and form their reading dissertation committee.

The dissertation reading committee (generally known as the Ph.D. thesis committee) must be comprised of at least four faculty members who guide the student in the Ph.D. research, and read and approve the final dissertation. Typically three of the four dissertation reading committee members are from the Immunology program faculty.

In the first through third years, the student must meet with the Ph.D. thesis committee at least once a year. In the fourth and fifth years, the student is expected to meet twice a year with the Ph.D. thesis committee. In addition, if requested by the student, a secondary adviser is assigned who can provide additional advice on issues such as career path choices and other non-academic issues.

Individual Development Plan: Graduate students are required to meet with their faculty mentors once a year to discuss an individual development plan (IDP). The IDP is intended to help the students take ownership of their training and professional development. The goals of the IDP are to: 1) pause, reflect and intentionally think on short-, mid- and long-term goals; 2) identify resources that help to achieve these goals; and 3) have open and direct dialogue with the Ph.D. thesis adviser and establish clear expectations and steps.

Track Specific Requirements

In addition to the general requirements listed above, students must also complete requirements within their track. Written petitions for exemptions to core curriculum and lab rotation requirements are considered only in the first year by the advising committee and the chair of the Graduate Program committee. Approval is contingent upon special circumstances and is not routinely granted.

Molecular, Cellular, and Translational Immunology

In addition to the core courses listed above, MCTI first-year students are required to take the following courses in their first year for a letter grade:

		Units
IMMUNOL 203	Advanced Immunology III	3
Take one of the following courses:		
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4

Electives:

One elective (see suggested elective list below)

		Units
CBIO 240	Molecular and Genetic Basis of Cancer	4
CSB 210	Cell Signaling	4
DBIO 210	Developmental Biology	4
IMMUNOL 223	Biology and Disease of Hematopoiesis	3
IMMUNOL 275	Tumor Immunology	3
IMMUNOL 286	Neuroimmunity	2-3
SBIO 241	Biological Macromolecules	5

Computational and Systems Immunology

In addition to the core courses listed above, the CSI curriculum trains students to be computational and experimental scientists, who are expected to identify important problems in immunology and to devise integrated computational/ experimental plans for addressing them.

CSI Core (Required):

Students in the CSI track are required to take the following core courses in their first and second years, unless demonstrated by proficiency or coursework. For example, a student, with proficiency in concepts taught in CS 106A, may petition to be exempt from this course and go on to take CS 106B. Petitions to exempt from the courses CS 106A, CS 109, and CS 161 must be approved by the Chair of the CSI track.

		Units
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
CS 106A	Programming Methodology	3-5
CS 106B	Programming Abstractions	3-5
CS 109	Introduction to Probability for Computer Scientists	3-5
CS 161	Design and Analysis of Algorithms	3-5
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 310	Seminars in Computational and Systems Immunology	1

CSI Electives:

Two electives (see suggested elective list below):

		Units
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3-5
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4
CME 206	Introduction to Numerical Methods for Engineering	3
CME 263	Introduction to Linear Dynamical Systems	3
CME 309	Randomized Algorithms and Probabilistic Analysis	3
CME 364A	Convex Optimization I	3
CME 372	Applied Fourier Analysis and Elements of Modern Signal Processing	3
EE 276	Information Theory	3
EE 278	Introduction to Statistical Signal Processing	3
STATS 116	Theory of Probability	4
STATS 202	Data Mining and Analysis	3
STATS 216	Introduction to Statistical Learning	3
STATS 217	Introduction to Stochastic Processes I	3
Other		

Journal Clubs

Both MCTI and CSI students are required to attend the IMMUNOL 305 Immunology Journal Club for their first through third years. Attendance is optional for fourth year and above graduate students.

Immunology and CSI Seminar Series

Graduate seminars are an important means of attaining a broad and comprehensive exposure to all areas in immunology as well as gaining a professional perspective and competence in the field. First-year students are required to attend all immunology seminars (IMMUNOL 311 Seminar in Immunology). Students in their second year and above are required to attend 50% of the seminar series each academic year until the last quarter in which their Ph.D. oral defense takes place. Students in the CSI track are required to attend the Computational and Systems Immunology Seminar Series (IMMUNOL 310 Seminars in Computational and Systems Immunology) held every Summer Quarter.

Immunology Scientific Retreat

In the autumn quarter, the annual Retreat is held at the Asilomar Conference Grounds, Pacific Grove, CA, and is attended by students, staff, postdocs and faculty of the Stanford immunology community. All immunology graduate students are required to attend. In the third through fifth years, students will present a poster and give a talk on their graduate research.

Teaching Assistantships

Teaching experience and training are part of the graduate curriculum. Each student assists in teaching two courses in the immunology core or electives. A TA match process is held in summer quarter in order to match the graduate student's research and teaching preferences to the appropriate courses. Before beginning their assigned teaching assistantships, students are required to attend a TA orientation workshop held by VPTL before the teaching quarter begins.

First Author Paper Submission

By the fourth or fifth year, graduate students are expected to submit a first author paper for publication. This milestone should be completed before defending a Ph.D. thesis.

Doctoral Dissertation

Before embarking on the dissertation defense process, the graduate student must submit a Petition to Defend to the Director of the Immunology Graduate Program. Important milestones and degree requirements must be met before proceeding to the oral examination. A substantial draft of the dissertation must be turned in to the student's oral examination committee at least one month before the oral exam is scheduled to take place. At the time of the Ph.D. orals defense, an orals chair is chosen to lead the orals committee, which is a distinct committee, but the basic membership is identical to that of the dissertation reading committee. The correct number of faculty committee members for the orals committee is five. For students with two Ph.D. thesis co-advisors, the exact number of faculty committee members is still five. The final written dissertation must be approved by the student's reading committee and submitted to the Registrar's Office. Upon completion of this final requirement, a student is eligible for conferral of the Ph.D. degree.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Immunology Program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Immunology Program is committed to providing academic advising in support of graduate student scholarly and professional development. This includes first year advising by the program director and ongoing advising with the research mentor in subsequent years. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. The Individual Development Plan (IDP) is required to be completed by the adviser and advisee annually and entails an extensive interactive written and personal assessment of trainee goals, accomplishments, coursework, and areas for development. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

In addition, the advising process includes guidelines and expectations for graduate student professional conduct, which prepares the student to be responsible members of professional communities. https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-6/page-5-6-1.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Faculty

Director, Stanford Immunology and Chair, Executive Committee for the Immunology Program and Director, Ph.D. Program in Immunology: Olivia Martinez (Professor, Surgery, Abdominal Transplantation)

Director of Graduate Studies: Olivia Martinez (Professor, Surgery, Abdominal Transplantation)

Participating Departments and Faculty (Molecular, Cellular, Translational Immunology Track)

Biochemistry: Peter Kim (Professor), Lingyin Li (Assistant Professor)

Bioengineering: Jennifer Cochran (Professor and Chair, and by courtesy, Chemical Engineering), Stephen Quake (Professor, and Applied Physics and Physics)

Biology: Patricia P. Jones (Professor)

Chemistry: Carolyn Bertozzi (Professor, Director, ChEM-H, and by courtesy, of Radiology and of Chemical and Systems Biology)

Genetics: William Greenleaf (Associate Professor, and by courtesy, Applied Physics), Leonore A. Herzenberg (Professor, Research), Karla Kirkegaard (Professor, and of Microbiology & Immunology), Stephen Montgomery (Associate Professor), Michael Snyder (Professor)

Medicine/Biomedical Informatics Research: Purvesh Khatri (Associate Professor, Research, and of Biomedical Data Science), Andrew Gentles (Assistant Professor, Research, and by courtesy, of Biomedical Data Science)

Medicine/Blood and Bone Marrow Transplantation Program: Everett Meyer (Assistant Professor), David Miklos (Associate Professor), Robert Negrin (Professor), Judith Shizuru (Professor, and of Pedicatrics, Stem Cell Transplantation)

Medicine/Cardiovascular Medicine: Joseph Wu (Professor, Director, Stanford Cardiovascular Institute, and Radiology)

Medicine/Endocrinology, Gerontology, & Metabolism: Joy Wu (Assistant Professor)

Medicine/Gastroenterology and Hepatology: Aida Habtezion (Associate Professor)

Medicine/Hematology: Ravi Majeti (Professor)

Medicine/Immunology and Rheumatology: C. Garrison Fathman (Professor, Emeritus), Jorg Goronzy (Professor), William Robinson (Professor), Samuel Strober (Professor), Paul J. Utz (Professor), Cornelia Weyand (Professor)

Medicine/Infectious Diseases: Catherine Blish (Associate Professor), Paul Bollyky (Assistant Professor, and of Microbiology & Immunology), Prasanna Jagannathan (Assistant Professor, and of Microbiology & Immunology), Taia T. Wang (Assistant Professor, and of Microbiology & Immunology)

Medicine/Oncology: Ash Alizadeh (Associate Professor), Gilbert Chu (Professor, and of Biochemistry), Dean Felsher (Professor, and of Pathology), Michael Khodadoust (Assistant Professor), Ronald Levy (Professor), Shoshana Levy (Professor, Research)

Medicine/Nephrology: Jonathan Maltzman (Associate Professor)

Medicine/Pulmonary and Critical Care Medicine: Mark Nicolls (Professor)

Microbiology and Immunology: John Boothroyd (Professor), Yueh-Hsiu Chien (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Juliana Idoyaga (Assistant Professor), Holden Maecker (Professor, Research), Hugh McDevitt (Professor, Emeritus), Denise Monack (Professor), Garry P. Nolan (Professor), David Schneider (Professor)

Molecular and Cellular Physiology: K. Christopher Garcia (Professor, and of Structural Biology), Richard S. Lewis (Professor)

Neurology and Neurological Sciences: Katrin Andreasson (Professor), May Han (Associate Professor), Lawrence Steinman (Professor, and of Pediatrics), Tony Wyss-Coray (Professor)

Neurosurgery: Theo Palmer (Professor)

Otolaryngology/Head and Neck Surgery (ENT): Jayakar Nayak (Associate Professor, and by courtesy, Neurosurgery), John B. Sunwoo (Professor, and by courtesy, Dermatology)

Pathology: Robert Michael Angelo (Assistant Professor), Sean Bendall (Assistant Professor, Research), Scott Boyd (Associate Professor), Eugene C. Butcher (Professor), Michael Cleary (Professor), Gerald R. Crabtree (Professor, and of Developmental Biology), Edgar G. Engleman (Professor, and of Medicine/Immunology and Rheumatology), Andrew Fire (Professor, and Genetics), Stephen Galli (Professor, and of Microbiology & Immuonlogy), Michael Howitt (Assistant Professor), Siddhartha Jaiswal (Assistant Professor), Sara Michie (Professor), Bali Pulendran (Professor, and of Microbiology & Immunology), Ansuman Satpathy (Assistant Professor), Raymond A. Sobel (Professor), Irving Weissman (Professor, and Director, Stem Cell and Regenerative Medicine Institute, and of Developmental Biology, Biology)

Pediatrics: Rosa Bacchetta (Associate Professor, Research, Stem Cell Transplantation), Alice Bertaina (Associate Professor, Stem Cell Transplantation), Agnieszka Czechowicz (Assistant Professor, Stem Cell Tranplantation), David B. Lewis (Professor, Immunology and Allergy), Crystal Mackall (Professor, Hematology/Oncology, and of Medicine), Maria Grazia Roncarolo (Professor, Stem Cell Transplantation, and of Medicine/Blood and Marrow Transplantation), Elizabeth Mellins (Professor, Human Gene Therapy), Kari Nadeau (Professor, Allergy and Clinical Immunology, and of Otolaryngology, Head & Neck Surgery)

Psychiatry and Behavioral Sciences: Emmanuel Mignot (Professor, Sleep Medicine)

Radiology: Parag Mallick (Assistant Professor, Research, and of Diagnostic Radiology)

Structural Biology: Peter Parham (Professor, and of Microbiology and Immunology), Theodore Jardetzky (Professor)

Surgery/Multi-Organ Transplantation: Charles F. Chan (Assistant Professor, Plastic Surgery and Reconstructive Surgery), Sheri Krams (Professor, Research), Olivia Martinez (Professor)

Participating Departments and Faculty (Computational and Systems Immunology)

Anesthesiology, Perioperative and Pain Medicine: Nima Aghaeepour (Assistant Professor)

Bioengineering: Stephen Quake (Professor, and Applied Physics and Physics)

Genetics: Michael Snyder (Professor), Karla Kirkegaard (Professor, and of Microbiology & Immunology)

Biomedical Data Science: Aaron Newman (Assistant Professor, and of Medicine/Biomedicine Biomedical Informatics)

Medicine/Biomedical Informatics Research: Andrew Gentles (Assistant Professor, Research, and by courtesy, of Biomedical Data Science), Purvesh Khatri (Assistant Professor, Research, and of Biomedical Data Science)

Medicine/Immunology and Rheumatology: Paul J. Utz (Professor)

Medicine/Oncology: Ash Alizadeh (Associate Professor)

Microbiology and Immunology: John Boothroyd (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Holden Maecker (Professor, Research), Garry Nolan (Professor)

Pathology: Sean Bendall (Assistant Professor, Research), Scott Boyd (Associate Professor), Andrew Fire (Professor, and of Genetics)

Radiology: Parag Mallick (Assistant Professor, Research, and of Diagnostic Radiology)

Affiliate Members:

Biochemistry: Ron Davis (Professor, and of Genetics)

Health and Research Policy - Biostatistics: Robert Tibshirani (Professor, and of Statistics)

Courses

IMMUNOL 199. Undergraduate Research. 1-18 Unit.
Presentations and discussions focus on how current research has progressed from the classic findings in Immunology. This third course in the Immunology core curriculum develops effective presentation skills that are appropriate for a given audience and situation. Students will gain experience in developing and presenting chalk talks, formal presentations, and the all-important elevator pitch on current research. Students will benefit from peer, TA and instructor feedback on all presentations.

IMMUNOL 201. Advanced Immunology I. 3 Units.
For graduate students, medical students and undergraduates. Topics include the innate and adaptive immune systems; genetics and function of immune cells and molecules; lymphocyte activation and regulation of immune responses. Recommended: undergraduate course in immunology.

IMMUNOL 202. Advanced Immunology II. 3 Units.
Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

IMMUNOL 203. Advanced Immunology III. 3 Units.
Key experiments and papers in immunology. Course focuses on the history of Immunology and how current research fits into the historical context. Students work on developing effective presentation skills.

IMMUNOL 205. Immunology in Health and Disease. 4 Units.
Concepts and application of adaptive and innate immunology and the role of the immune system in human diseases. Case presentations of diseases including autoimmune diseases, infectious disease and vaccination, hematopoietic and solid organ transplantation, cancer immunotherapy, genetic and acquired immunodeficiencies, hypersensitivity reactions, and allergic diseases. Problem sets based on lectures and current clinical literature. Laboratory in acute and chronic inflammation.

IMMUNOL 206. Introduction to Applied Computational Tools in Immunology. 2 Units.
Introduction to computational tools for analyses of immunological data sets, including but not limited to single-cell data such as that from flow cytometry or CyTOF, Luminex, and genomic analyses. Students become familiar with major web-based databases and analysis suites for immunological and genomic data; gain a working knowledge of the major software/algorithms for working with major data types, and be able to apply at least one computational tool in these areas to analyze a public data set. Lectures will be followed by a demonstration and interaction session on the topic. Students will complete a computational analysis project and present it to the class.

IMMUNOL 207. Essential Methods in Computational and Systems Immunology. 3 Units.
Introduction to the major underpinnings of systems immunology: first principles of development of computational approaches to immunological questions and research; details of the algorithms and statistical principles underlying commonly used tools; aspects of study design and analysis of data sets. Prerequisites: CS106a and CS161 strongly recommended.

IMMUNOL 209. Translational Immunology. 1 Unit.
Open to medical students (regardless of whether they are in foundations or applications), graduate students, and undergraduates (by consent of instructor). The format is a seminar series with weekly lectures from Immunology Faculty and guest speakers focusing on current basic immunology research and how it is translated into immunotherapies and clinical trials. Topics include hematopoiesis, transplantation, tolerance, immune monitoring, vaccination, autoimmunity and antibodies, rheumatoid arthritis, chronic pulmonary disease, and asthma. Med students in the immunology concentration major are allowed to take Imm 209 repeatedly for credit.

IMMUNOL 210. Immunology Research Seminars for Medical Students. 2 Units.
Required for medical students selecting the Immunology Concentration. Attendance at a minimum of ten seminars related to immunology outside of required medical school classes. A one-page essay on each seminar, what was presented and how it relates to a clinical immunologic problem, is required.

IMMUNOL 223. Biology and Disease of Hematopoiesis. 3 Units.
Hematopoiesis is the formation, development, and differentiation of blood cells. Lecture and journal club. Topics will include definitive and adult hematopoiesis, myeloid and lymphoid development, hematopoietic diseases, stem cell niche, bone marrow transplant, and methods and models used to study hematopoiesis. For upper level undergraduates or graduate students. Pre-requisite for undergraduates: Biology or Human Biology core, or consent of instructor.
Same as: STEMREM 223

IMMUNOL 258. Ethics, Science, and Society. 1 Unit.
This discussion focused Ethics, Science, and Society interactive mini-course will engage Immunology graduate students, postdoctoral fellows, and faculty in learning and conversations on topics in responsible research (including animal subjects, authorship, collaboration, conflicts of interest, data management, human subjects, mentor-mentee relationships, peer review, publication, research misconduct, and social responsibility) and diversity in science, informed by readings, case studies, individual reflections, and more. Some of the driving themes in this course include: what it means to do research well and how to and not to achieve this, why doing research well and with integrity is important, and who are researchers currently and who should they be. Prerequisite: MED 255.
Same as: INDE 281

IMMUNOL 275. Tumor Immunology. 3 Units.
Tumor Immunology focuses on the mechanisms by which tumors can escape from and subvert the immune system and conversely on the ability of innate and adaptive arms of the immune system to recognize and eliminate tumors. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor microenvironment, tumor iniduced immunosuppression, tumorimmunotherapy (including cancer vaccines, CARs, TILs, checkpoint antibodies, monoclonal antibodies and bispecific antibodies, as well as bone marrow transplantation and radiation therapy). Tracks the historical development of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.
Same as: CBIO 275

IMMUNOL 280. Early Clinical Experience in Immunology. 1-3 Unit.
Clinical observation experience for medical students in the Immunology Scholarly Concentration. At the end of the observation period, which may span over one to two quarters, the student submits a case observation paper to his/her faculty sponsor. Prerequisite: IMMUNOL 205.

IMMUNOL 286. Neuroimmunity. 2-3 Units.
Focus is on the homeostatic and pathogenic interactions between the immune and central nervous system. Topics include the role of immune cells and inflammatory mediators in the physiological functions, neural development, neuroexcitation, and the pathogenic impact of inflammatory responses. Prerequisite of Molecular and Cellular Immunology (Bio 230) or Advanced Immunology (Immunol 201). Otherwise, request permission from the course director to enroll.

IMMUNOL 290. Teaching in Immunology. 1-18 Unit.
Practical experience in teaching by serving as a teaching assistant in an immunology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student. May be repeated for credit.

IMMUNOL 299. Directed Reading in Immunology. 1-18 Unit.
Prerequisite: consent of instructor.

IMMUNOL 305. Immunology Journal Club. 1 Unit.
Required of first- to third-year graduate students. Graduate students present and discuss recent papers in the literature. May be repeated for credit.

IMMUNOL 310. Seminars in Computational and Systems Immunology. 1 Unit.
Presentation of CSI technologies from recent literature. Discussion of emerging application areas and limitations. Dissemination of computational resources.

IMMUNOL 311. Seminar in Immunology. 1 Unit.
Enrollment limited to Ph.D., M.D./Ph.D., and medical students whose scholarly concentrations are in Immunology. Current research topics.

IMMUNOL 399. Graduate Research. 1-18 Unit.
For Ph.D., M.D./Ph.D. students, and medical students whose scholarly concentrations are in Immunology.

IMMUNOL 801. TGR Project. 0 Units.

.

IMMUNOL 802. TGR Dissertation. 0 Units.

.

MEDICINE

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world's people through research, innovation, and leadership.

Mission of the Degree Programs in Medicine

The mission of the degree programs in Medicine is to educate and inspire leaders in medicine and science who will improve human health through discovery, innovation, scholarship, education, and the delivery of outstanding patient-centered care.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

Learning Outcomes

The following competencies serve as a guide for curriculum development and evaluation of the success of the training program and its graduates.

For additional information on the associated educational objectives please refer to the MD Program Handbook and Policy Manual Section 2.1 Competencies and Objectives for Medical Student Education (http://med.stanford.edu/md/mdhandbook/section-2-general-standards/2-1--competencies-and-objectives-for-medical-student-education.html).

1. *Patient Care:* Provide patient-centered care that is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health
2. *Knowledge for Practice:* Demonstrate knowledge of established and evolving biomedical, clinical, epidemiological and social-behavioral sciences, as well as the application of this knowledge to patient care
3. *Practice-Based Learning and Improvement:* Demonstrate the ability to investigate and evaluate one's care of patients, to appraise and assimilate scientific evidence, and to continuously improve patient care based on constant self-evaluation and life-long learning
4. *Interpersonal and Communication Skills:* Demonstrate interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and health professionals
5. *Professionalism:* Demonstrate a commitment to carrying out professional responsibilities and an adherence to ethical principles
6. *Systems-Based Practice:* Demonstrate an awareness of and responsiveness to the larger context and system of health care, as well as the ability to call effectively on other resources in the system to provide optimal health care
7. *Interprofessional Collaboration:* Demonstrate the ability to engage in an interprofessional team in a manner that optimizes safe, effective patient- and population-centered care
8. *Personal and Professional Development:* Demonstrate the qualities required to sustain lifelong personal and professional growth
9. *Discovery:* Explore scientific discovery and self-discovery

Degree Programs in Medicine

The School of Medicine offers a professional degree in Medicine (MD), a Masters in Medicine (MSM), a Masters in Medicine in Biomedical Investigation, and oversees a dual-degree Medical Scientist Training Program (MD-PhD). Additional School of Medicine graduate degree programs are available on the School of Medicine Education (http://med.stanford.edu/education.html) website.

The Master of Science in Medicine (http://msm.stanford.edu/) program admits current Stanford Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease to be better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master's program.

The Master of Science in Medicine in Biomedical Investigation (http://med.stanford.edu/md/discovery-curriculum/BergScholarsProgram.html) program admits current Stanford M.D. students who have a commitment to becoming physician-scientists. A major goal of the program is to address decreasing numbers of physician- scientists by shortening the training period without compromising quality of research – focusing instead on individualized career development of M.D.-only Physician-Scientists by placing them in outstanding research groups led by experienced faculty.

The Doctor of Medicine (M.D.) (http://med.stanford.edu/md/discovery-curriculum.html) program provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content, interactive approaches, and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. The flexible Discovery Curriculum supports student's scientific discovery and self-discovery by offering multiple learning pathways at a more individualized pace and opportunities for pursuing a second degree, such as an M.P.H., M.B.A., Master's of Science in Epidemiology or Health Services Research, a Ph.D., or participating in longitudinal and global health research experiences.

The Medical Scientist Training Program (MSTP) (http://med.stanford.edu/mstp.html) M.D.-Ph.D. program provides a select group of medical students with an opportunity to pursue a training program designed to equip them for careers in academic investigative medicine. Individualization of the curricular and research programs of each trainee is the hallmark of the Program. Training for a combined MD-PhD includes the same content encountered by students who pursue each degree separately, but the total time of training should be less than the sum of the time normally taken for each degree. To this end, students must plan their training carefully and commit to a rigorous and intensive period of study. The flexible curriculum at Stanford Medical School allows each student to satisfy the requirements for the MD degree and to pursue an independent research program.
In addition to a variety of other dual degree opportunities, Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at Stanford's Dual Degree and Multi-Degree Programs web site.

The M.D. degree requires 12 quarters of registration at full Med-M.D. tuition; the joint M.D./Ph.D. degree requires 15 quarters. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see the Stanford M.D. Program (http://med.stanford.edu/md.html) website.

Fellowships and Assistantships

Teaching Assistantships

The Office of Medical Education manages the Teaching Assistantships for the required M.D. courses. TAships provide medical students with an opportunity to develop teaching skills and enhance understanding of specific areas of the M.D. curriculum through teaching. Additionally, the work done by TAs enriches the overall curriculum and is an invaluable resource to the school.

In selecting TAs, all course directors consider each applicant's expertise in the subject matter, prior teaching experience, academic performance, and overall enthusiasm and participation throughout the course. Past performance in the course is a factor in selecting most TAs. Please note that some course directors may decide to interview potential candidates while others may not; the interview process varies from course to course. Some course directors may also require their TAs to participate in additional training; that will be noted in this document. TAs are expected to be and remain in good academic standing. However, all first-time TAs in the M.D. program are required to attend the training hosted by the Office of Medical Education. This training is mandatory and cannot be made up. Students may be asked to re-take this training if they have not taken it within the last 3 academic years.

Medical Scholars Research Program

Since 1980, the Stanford Medical Scholars Research Program has supported medical student research, both locally and off-site. Students carry out research in an academic setting under the direction of faculty members here at the medical school, hospital and clinics, and throughout the University. The fellowships provide funding and units as Medical Scholars Research 370.

M.D. students enrolled at Stanford are eligible.

M.D. students who obtained a Ph.D. prior to matriculation may apply for a fellowship only for research that has focus substantially different from that of their prior doctoral studies.
Students who are pursuing a dual degree (e.g.. M.D./M.B.A.) are not eligible when they "step out" to pursue the dual degree. Stepping out means that they are no longer paying tuition under the School of Medicine for that period of time, and any Financial Aid support is handled through the other degree program. When you "step back in" to the M.D. program, you resume eligibility for MedScholars.

Master of Science in Medicine

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Overview

The Master of Science in Medicine (MSM) program is a master degree program that provides Ph.D. candidates exposure to clinical medicine with a view to fostering translational research. The goal of the MSM program is to train a new generation of Ph.D. students about human biology and disease, and thus better prepare them to translate new scientific discoveries into useful medical advances.

The MSM program admits an elite group of highly talented people who have a serious commitment to translational research but are not interested in becoming clinicians. Students admitted to any of the Ph.D. programs offered at Stanford have the opportunity to apply for MSM admission on a competitive basis.

Funding for each student during the first year of the program is completely provided by scholarship support from the MSM program. Beginning in the second year, financial support is provided by each student's home Ph.D. program.

Degree Requirements

The Department of Medicine requires a minimum of 79 units for the master's degree to be taken in residence at Stanford. A Master's Program Proposal (https://stanford.box.com/progpropma/) form should be filled out, signed by the student's academic adviser, and submitted to the department's student services manager by the end of the student's first quarter of study. Final revisions to the master's program proposal must be submitted no later than one academic quarter prior to the quarter of expected degree conferral.

The program will extend the total training time by one-year beyond the usual length of Ph.D. training. During the program's first two years MSM participants will take basic biomedical science courses with the School of Medicine's MD students, This course schedule allows MSM students to concurrently undertake some Ph.D. course requirements and lab rotations. By early in the second program year, students will choose labs for thesis research and elect clinical mentors. The Master of Science in Medicine degree will be conferred upon successful completion of the required coursework and clinical experience.

Course Requirements

The basic medical science courses required by the MSM program are summarized below. This is an intensive sequence, but can also be flexible, depending on the student, and the student's background, Ph.D. program requirements, and interests.

In some cases, there is overlap between MSM courses and courses required for Ph.D. degree progress. Ph.D. students may be able to substitute courses required by their Ph.D. programs. For example, while most M.D. students take GENE 202, most Ph.D. students prefer to take GENE 205 which is a more advanced course and may satisfy a Ph.D. course requirement.

All MSM courses are taken Pass/Fail with the exception of courses required for the student's Ph.D. degree which must be taken for a letter grade. A more detailed description of each of the courses below can be found on ExploreCourses (https://explorecourses.stanford.edu/).

First Year	Units		
	Autumn	Winter	Spring
Clinical Anatomy (SURG 203)	11		
Molecular Foundations of Medicine (BIOC 205)	4		
Applied Biochemistry (BIOC 200)	2		
Human Genetics (GENE 202)	4		
Embryology (SURG 201)	1		
Histology (INDE 218)	1		
Basic Cardiac Life Support for Healthcare Professionals (EMED 201)	1		
Microbiology and Infectious Diseases I (INDE 263)			3
Immunology in Health and Disease (IMMUNOL 205)			4
The Nervous System (NBIO 206)			6
Cells and Signaling in Regenerative Medicine (DBIO 201)			2
Science of Medicine I (INDE 221)			12
Year Total:	24	15	12

Second Year	Units		
	Autumn	Winter	Spring
Science of Medicine II-A (INDE 222A)	7		
Science of Medicine II-B (INDE 222B)	7		
Microbiology and Infectious Diseases III (INDE 265)	2		
Science of Medicine III-A (INDE 223A)			5
Science of Medicine III-B (INDE 223B)			5
Pharmacological Treatment of Disease (INDE 260A)			1
Pharmacological Treatment of Disease (INDE 260B)			1
Year Total:	16	12	

Total Units in Sequence:	79

Non-Course Requirements

All students must complete a Clinical Experience prior to conferring the degree. Most often this takes the form of a shadow arrangement, equivalent to 1 week of full-time work (40 hours). This arrangement can be broken up as desired (e.g., four weeks quarter-time or two weeks part-time). Students are encouraged to match the clinical experience to their research interest. Primary responsibility to find these opportunities falls to each student.

Master of Science in Medicine, Subplan in Biomedical Investigation

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Overview

The goal of the Stanford Berg Scholars Program (Master of Science in Medicine with a subplan in Biomedical Investigation) is to address decreasing numbers of physician-scientists by shortening the training period without compromising quality of research, focusing instead on individualized career development of our M.D.-only physician-scientists by placing them in outstanding research groups led by experienced faculty.

Degree Requirements

Berg Scholars must complete all Stanford University requirements for the Master in Science (M.S.) in Medicine in Biomedical Investigation while pursuing their M.D. Students must adhere to the University's residency requirements (p. 72). Units may not be duplicated or double-counted toward the residency requirement for both degrees. Students must complete the master's degree requirements within three years of the first graduate quarter of the M.S.

Course Requirements

Students are required to complete 280 minimum units (combined M.S. and M.D.) to graduate. These unit are broken down as follows:

- 45 unduplicated units taken in specific courses for the M.S. degree
  - 33 units in research
  - 12 units of coursework (11 required plus 1 elective)
- 235 units in pre-clinical and clinical clerkships for the M.D. degree

Only courses 100 level or above can be counted towards the degree. A minimum of 23 units must be at the 200-level or above. All courses towards the 45 unit requirement must receive a passing grade.

		Units
Core Courses		
MED 255	The Responsible Conduct of Research	1
INDE 217	Physician Scientist Hour (take this course three times)	3
INDE 258	PSTP Career Development Symposium	1
SOMGEN 223	Introduction to R for data analysis	3
Choose one of the following		3
EPI 259	Introduction to Probability and Statistics for Epidemiology	
EPI 261	Intermediate Biostatistics: Analysis of Discrete Data	
or an equivalent course for a minimum of 3 units		
Research Units		
Complete 33 units of research from the SoM department in the student's file of study		33
Such courses are typically numbered 399		
Elective courses		
Choose one or more of the following:		1-5
MED 221	Translational Research and Applied Medicine	
BIOE 390/ MED 289	Introduction to Bioengineering Research	
BIO/BIOC 459	Frontiers in Interdisciplinary Biosciences	
BIODS 260A	Workshop in Biostatistics	
BIODS 260B	Workshop in Biostatistics	
BIODS 260C	Workshop in Biostatistics	
BIOE/BIOMEDIN/ GENE 212	Introduction to Biomedical Informatics Research Methodology	
BIOMEDIN 233	Intermediate Biostatistics: Analysis of Discrete Data	
BIOMEDIN 251/ HRP 252/MED 252	Outcomes Analysis	
BIOS 274	Introductory Python Programming for Genomics	
CHPR 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	
CHPR 227	The Science of Community Engagement in Health Research	
COMPMED 211	Biostatistics for the Life Sciences	
GENE 211	Genomics	
HRP 207	Introduction to Concepts and Methods in Health Services and Policy Research I	
HRP 208	Introduction to Concepts and Methods in Health Services and Policy Research II	
EPI 216	Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research	
HRP 218	Methods for Health Care Delivery Innovation, Implementation and Evaluation	
EPI 219	Evaluating Technologies for Diagnosis, Prediction and Screening	
EPI 223	Introduction to Data Management and Analysis in SAS	
EPI 225	Introduction to Epidemiologic and Clinical Research Methods	
EPI 226	Intermediate Epidemiologic and Clinical Research Methods	
EPI 261	Intermediate Biostatistics: Analysis of Discrete Data	
EPI 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	
EPI 264	Foundations of Statistical and Scientific Inference	
EPI 275	Population Health Research	
IMMUNOL 210	Immunology Research Seminars for Medical Students	
MED 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	
MED 224	Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health	
NSUR 249	Experimental Immersion in Neuroscience	
RADO 203SI		
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	

SURG 202A	Practical Applications for Qualitative Data Analysis	
SURG 202B		
SURG 202C	Qualitative Research Methods and Study Design	
Total Units		45-49

Non-Course Requirements

Additionally, students must complete the following non-course requirements in order to confer their degree.

Research Proposal

Students must submit a written research proposal for committee review.

Research Proposal Presentation

Students must orally present their proposed research to their research committee for approval.

Thesis Defense

Students must defend their thesis with an oral presentation and closed door questioning from their research committee.

Thesis

Students must publish their thesis in order to confer their M.S. degree.

Doctor of Medicine (M.D.)

Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. The requirements for the M.D. degree are detailed below and in the M.D. Handbook.

Overview

The Discovery Curriculum enables students to complete their M.D. program at a more individualized pace, introducing a greater diversity of learning pathways available to students. Depending on their unique goals and pursuits at Stanford, students can complete the pre-clerkship curriculum at full pace in two years or at a slower pace in three years. During the first year, all students complete the same courses at the same pace. In Autumn Quarter of the second year, students can complete the remainder of their pre-clerkship curriculum at full pace or apply for the option of splitting the course workload over two years. Students who are approved for the three-year option have substantially more open time to pursue independent research, a dual degree, or other longitudinal scholarship and leadership activities. The course requirements, learning objectives, and assessments are the same for two-year and three-year pre-clerkship students. The three-year option is selective with an application process; the majority of students are expected initially to opt for the traditional two-year pre-clerkship option.

Degree Requirements

Satisfactory completion of a minimum total of 238 required academic units as specified in the table Courses and Units for Students Matriculating Academic Year 2020-21.

Students cannot graduate with any uncorrected failing grade in a pre-clerkship course or any uncorrected failing or marginal pass grade in clinical clerkships. Students can graduate with one uncorrected marginal pass in a pre-clerkship course having fewer than 8 units.

Course Requirements

Students must successfully complete a minimum of the following:

- 124 pre-clerkship units
- 6 units of additional required coursework (INDE 297 and MED 295)
- 64 weeks of clerkships equaling at least 96 units
- 12 units of a Scholarly Concentration

Requirements & Timeline

The following is a list and timeline of required courses for students who continuously pursue the M.D. without engaging in a dual degree or separate research track.

		Units
Pre-Clerkship Coursework		
Quarter 1 (32-39 units)		
INDE 201	Practice of Medicine I	8
SURG 203	Clinical Anatomy	11
BIOC 200	Applied Biochemistry	2
BIOC 205	Molecular Foundations of Medicine	4
GENE 202	Human Genetics	4
SURG 201	Embryology	1
INDE 218	Histology	1
EMED 201	Basic Cardiac Life Support for Healthcare Professionals	1
Elective Coursework		0-7
Quarter 2 (21-26 units)		
INDE 202	Practice of Medicine II	5
INDE 263	Microbiology and Infectious Diseases I	3
IMMUNOL 205	Immunology in Health and Disease	4
NBIO 206	The Nervous System	6
DBIO 201	Cells and Signaling in Regenerative Medicine	2
Elective Coursework		0-5
Quarter 3 (19-26 units)		
INDE 203	Practice of Medicine III	6
INDE 221	Science of Medicine I	12
Elective Coursework		0-7
Early Clinical Engagement Requirement		
Must be completed during the 1st year of study.		
Complete one (1) of the following options:		
INDE 268	Early Clinical Engagement	1
Must commit to course by Autumn quarter Final Study List deadline. Enroll in the Spring. But must participate in the course in Aut, Win, and Spr.		
PEDS 281	Childhood Chronic Illness: Impact on Family Development	1
Must concurrently attend all of the INDE 268 didactic sessions throughout the year.		
INDE 290A	Walk With Me: A Patient and Family Centered Exploration of Health & The Health Care System	1
Or INDE 290B or INDE 290C; Must commit to course by Autumn Quarter Final Study List Deadline.		
FAMMED 280	Student Community Outreach and Physician Support (Must commit to course by Autumn Quarter Final Study List Deadline.)	1
Quarter 4 (24-39 units)		
INDE 204A	Practice of Medicine IV-A	4
INDE 204B	Practice of Medicine IV-B	4
INDE 222A	Science of Medicine II-A	7
INDE 222B	Science of Medicine II-B	7
INDE 265	Microbiology and Infectious Diseases III	2
Elective Coursework		0-15

Quarter 5 (18-26 units)		
INDE 205A	Practice of Medicine V	3
INDE 205B	Practice of Medicine V	3
INDE 223A	Science of Medicine III-A	5
INDE 223B	Science of Medicine III-B	5
INDE 260A	Pharmacological Treatment of Disease	1
INDE 260B	Pharmacological Treatment of Disease	1
Elective Coursework		0-8
Quarter 6 (10-26 units)		
INDE 206	Practice of Medicine VI	5
INDE 224	Pathophysiology Capstone	4
Elective Coursework		16
Core Clerkships		
The following must be taken within the student's first 12 months of clinical rotations		
MED 300A	Internal Medicine Core Clerkship	10
SURG 300A	Surgery Core Clerkship	10
Two (2) of the following must be completed within the student's first 12 months (16 periods) of clinical rotations		
OBGYN 300A	Obstetrics and Gynecology Core Clerkship	10
PEDS 300A	Pediatrics Core Clerkship	10
MED 313A	Ambulatory Medicine Core Clerkship	5
FAMMED 301A	Family Medicine Core Clerkship	5
NENS 301A	Neurology Core Clerkship	5
PSYC 300A	Psychiatry Core Clerkship	5
EMED 301A	Emergency Medicine Core Clerkship	5
Choose one (1) of the following		
ANES 306A	Critical Care Core Clerkship	5
ANES 306P	Critical Care Core Clerkship	5
Selective/Elective Clerkships		
Selective I: Fundamentals of Clinical Care		
Complete 3 weeks of clerkship listed under this category		
ANES 304A	Chronic Pain Management Clerkship	5
DERM 300A	Dermatology Clerkship	5
EMED 313A	Emergency Medicine Clerkship	5
EMED 313D	Emergency Medicine Clerkship	5
FAMMED 310A	Continuity of Care Clerkship	1-6
FAMMED 345E	Family Practice Office Clerkship	5
MED 303A	Cardiology Clerkship-Inpatient/Outpatient Consult	5
MED 303B	Cardiology Clerkship	5
MED 303C	Cardiology Clerkship	5
MED 306A	Endocrinology and Metabolism Clerkship	5
MED 322A	Outpatient Medical Oncology Clerkship	3-6
MED 323A	Trans-Disciplinary Breast Oncology Clerkship	5
MED 342A	Geriatric Medicine Clerkship	5
MED 343B	Palliative Care Clerkship	5
OPHT 300A	Ophthalmology Clerkship	5
OPHT 300E	Ophthalmology Clerkship	5
ORTHO 303C	Clinical Clerkship in Rehabilitation Medicine	5
ORTHO 304A	Physical Medicine and Rehabilitation Clerkship	5
ORTHO 306A	Orthopedics Clerkship	5
OTOHNS 307A	Otolaryngology/Head and Neck Surgery Clerkship	5
PEDS 315A	Adolescent Medicine	5
PEDS 340D	Child Health Clerkship	5
PSYC 328B	Addiction Treatment Services	5
RAD 301A	Diagnostic Radiology and Nuclear Medicine Clerkship	5
RADO 300A	Radiation Oncology Clerkship	5
UROL 308A	Urology Clerkship	5
UROL 308B	Urology Clerkship	5
UROL 308C	Urology Clerkship	5
Selective II: Subinternship		
Complete 3 weeks of clerkship listed under this category		
CTS 300A	Cardiothoracic Surgery Clerkship	5
FAMMED 364E	Subinternship in Family Medicine	5
MED 304A	Cardiovascular Medicine Clerkship - Inpatients	5
MED 311D	Advanced Medicine Clerkship	5
MED 312C	Advanced Medicine Clerkship	5
MED 314A	Advanced Medicine Clerkship	5
MED 321A	Inpatient Medical Oncology Clerkship	5
MED 339B	Advanced Medicine Clerkship	5
NENS 307A	Advanced Clinical Elective in Child Neurology	5
NENS 308A	Advanced Clinical Elective in Adult Neurology	5
NSUR 318A	Subinternship in Neurosurgery	5
OBGYN 304A	Inpatient Gynecology Clerkship	5
OBGYN 307A	Maternal-Fetal Medicine Clerkship	5
OBGYN 308A	Gynecologic Oncology Clerkship	5
ORTHO 318A	Subinternship in Orthopedic Surgery	5
OTOHNS 336A	Subinternship in Otolaryngology/Head and Neck Surgery	5
PEDS 313A	Neonatal Intensive Care Subinternship	5
PEDS 314A	Pediatric Intensive Care Clerkship	5
PEDS 335A	Pediatric Hematology and Oncology Subinternship	5
PEDS 336E	Subinternship in Community Hospital Pediatrics	5
PEDS 338A	Subinternship in Inpatient Pediatrics	5
PSYC 358A	Subinternship in Inpatient Psychiatry	5
PSYC 362B	Subinternship in Inpatient Psychiatry	5
SURG 311C	Clerkship at the Burn Center	5
SURG 316A	Pediatric Surgery Clerkship	5
SURG 333A	Multi-Organ Transplantation Clerkship	5
SURG 334A	Advanced Vascular Surgery Clerkship	5
SURG 338A	Advanced Surgery Clerkship	5
UROL 338A	Advanced Urology Clerkship	5
UROL 338C	Advanced Urology Clerkship	5
Elective Clerkship		
Students are required to complete 5-6 electives (of any 3**-series clerkships) to reach the minimum of 64 weeks of clerkship training [1]		
Additional Course Requirements		
INDE 297	Reflection and Contextual Medicine (students should enroll in INDE 297 in the last quarter of enrollment prior to graduation)	4
MED 295	Advanced Cardiac Life Support	2

[1] See the "Clinical Clerkships by department (https://med.stanford.edu/medfishbowl/ClrksDept.html)" website for a list of all available clerkships.

Examination Requirements

Completion of the following examination requirements are required prior to conferral:

- Mini-CPX
  - An exam administered at the end of the pre-clerkship period. Students must meet or exceed a minimum passing score on the exam to be eligible to enter clerkships.
- Clinical Performance Examination (CPX)
  - An exam administered to all medical students in the State of California that may be taken at the end of the first year of clerkships. Students must demonstrate at least a minimum competency in each of the four skill areas. Students who fail to attain an overall passing score on the exam or who fail individual skill domains will have to complete a remediation program in order to graduate.
- United States Medical Licensing Examination (USMLE)
  - In order to graduate, students must pass USMLE Step 1 and Step 2 CK (Clinical Knowledge) and must have taken the Step 2 CS (Clinical Skills). Students must receive an overall pass on Step 1 of the USMLE within 12 months of the start of clinical clerkships. Students must take the USMLE Step 2 CS examination prior to graduation. A passing grade is not required for graduation but is required to take Step 3.

Scholarly Concentration

All students are required to fulfill the scholarly concentration requirement. All students must declare a concentration using the Medical Education Platform (MEP) by September 1st of their second year of study.

Students must choose one (1) area of study from a Foundation area listed below and complete 12 units of coursework:

- Bioengineering
- Biomedical Ethics and Medical Humanities
- Informatics and Data-Driven Medicine
- Clinical Research
- Community Health
- Health Services and Policy Research
- Medical Education
- Molecular Basis of Medicine

If desired, students can apply the skills developed in their foundation area to one of the application areas below. Up to 6 of the 12 units can come from one of the application areas:

- Cancer Biology
- Cardiovascular and Pulmonary
- Global Health
- Immunology
- Neuroscience, Behavior, and Cognition
- Prevention Research
- Quality Improvement
- Women's Health and Sex Differences

The unit requirements for the Scholarly Concentration can also be achieved by completion of a graduate degree at Stanford alongside the M.D.

In addition, to the unit requirement, students must also complete two (2) non-course requirements (including those pursuing the additional graduate degree option):

Written Report

Students must submit a written report of their scholarly work by June 1 of their graduating year.

Presentation

Students must present their research and scholarly work by June 1 of their graduating year.

Medical Scientist Training Program

The Medical Scientist Training Program (MSTP) M.D.-Ph.D. program provides a select group of medical students with an opportunity to pursue a training program designed to equip them for careers in academic investigative medicine. Individualization of the curricular and research programs of each trainee is the hallmark of the Program.

Admission Requirements

Stanford's MSTP is interested in identifying students with significant undergraduate research experience that would predict successful completion of a Ph.D. program. In addition, successful candidates must meet the standards expected of the very best M.D. candidates. The Stanford Medical Scientist Training Program admissions process utilizes the same application, process, and all policies as the M.D.-only application. For information regarding the Stanford School of Medicine's M.D. Admissions process, policies and eligibility, visit the School of Medicine's How to Apply (http://med.stanford.edu/md-admissions/how-to-apply.html) website. For specific questions regarding the application process, please contact Stanford's M.D. Admissions directly at mdadmissions@stanford.edu.

Program Requirements

Training for a combined M.D.-Ph.D. includes the same content encountered by students who pursue each degree separately, but the total time of training should be less than the sum of the time normally taken for each degree. To this end, students must plan their training carefully and commit to a rigorous and intensive period of study. The flexible curriculum at the Stanford Medical School allows each student to satisfy the requirements for the M.D. degree and to pursue an independent research program.

For more information about the program structure, review the MSTP program website (http://med.stanford.edu/mstp/structure.html).

M.D. Degree Requirements

COVID-19 USMLE Exam Policies

Step 1

Per the MD Handbook, Section 3.22: *Students must take Step 1 of the USMLE within 12 months of the start of their first clinical clerkship.* However, due to testing center closures and postponed exams, the deadline date has been extended. **For all students who began clerkships prior to March 31, 2020, the deadline to take Step 1 is now March 31, 2021.** For students beginning clerkships after March 31, 2020 the original deadline of 12 months still applies. Please reference the full policy (http://med.stanford.edu/md/mdhandbook/section-3-md-requirements-procedures/section-3-22-united-states-medical-licensing-examinations-requirements.html) for more information. Students are encouraged discuss Step 1 plans with their Advising Deans.

Step 2 CS (Clinical Skills)

Per the MD Handbook, Section 3.22: *Students must take the USMLE Step 2 CS (Clinical Skills) examination prior to graduation. A passing score is not required for graduation but is required to sit for Step 3; passing Step 3 is required for licensure in California and virtually every other*

state. However, as of May 26, 2020, the USMLE has suspended Step 2 CS test administrations for the next 12-18 months. **Therefore, the requirement to take Step 2 CS will be waived for students graduating in June 2021 (or before).** Please reference the full policy (http://med.stanford.edu/md/mdhandbook/section-3-md-requirements-procedures/section-3-22-united-states-medical-licensing-examinations-requirements.html) for more information.

MICROBIOLOGY AND IMMUNOLOGY

Courses offered by the Department of Microbiology and Immunology are listed under the subject code MI on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MI&filter-catalognumber-MI=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MI&filter-catalognumber-MI=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MI&filter-catalognumber-MI=on).

Graduate Programs in Microbiology and Immunology

The Department of Microbiology and Immunology offers a program of training leading to the Ph.D. degree, as well as research training, courses, and seminars for medical students and postdoctoral fellows. Research interests focus on two broad areas: host-microbe interactions, and the function of the immune system. Laboratories investigate mechanisms of pathogenesis and commensalism and the physiology of viruses, bacteria, and protozoan parasites, as well as the lymphocyte function in antigen recognition, immune response, and autoimmunity.

Master of Science

A regular M.S. program is not offered, although this degree is awarded under special circumstances. Candidates for master's degrees are expected to have completed the preliminary requirements for the B.S. degree, or the equivalent. In addition, the candidate is expected to complete 45 quarter units of work related to microbiology; at least 25 of these units should concern research devoted to a thesis. The thesis must be approved by the student's committee.

Doctor of Philosophy in Microbiology and Immunology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Application, Admission, and Financial Aid

Students seeking admissions to the Microbiology and Immunology Ph.D program typically have an undergraduate major in biological sciences, but majors from other areas are acceptable if the applicant has sufficient coursework or interest in the field. Information for prospective students can be found on the Stanford Biosciences (https://biosciences.stanford.edu/prospective-students/) website. Applications should be submitted at the Office of Graduate Admissions (http://gradadmissions.stanford.edu/) website. The GRE is not required to apply for the Ph.D degree in Microbiology and Immunology.

In the absence of independent fellowship support, entering predoctoral students are fully supported with a stipend and tuition award. Highly qualified applicants may be honored by a nomination for a Stanford Graduate Fellowship. Successful applicants have been competitive for predoctoral fellowships such as those from the National Science Foundation.

Program for Graduate Study

The Ph.D degree requires course work and independent research demonstrating an individual's creative, scholastic, and intellectual abilities. On entering the department, students are oriented to the curriculum and the timetable for completion of the degree requirements by the Director of Graduate Studies. Typically, students plan three laboratory rotations (one rotation per quarter). During the first year of graduate study in the department, each student also takes seven upper-level (200-series) courses.

Course requirements:

		Units
BIOS 200	Foundations in Experimental Biology	5
BIO 214	Advanced Cell Biology	4
MED 255	The Responsible Conduct of Research	1
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
MI 215	Principles of Biological Technologies	3
MI 250	Frontiers in Microbiology and Immunology (Taken once in the first year and once in the second year for a total of 2 units.)	1

Recommended course:

		Units
BIO 230	Molecular and Cellular Immunology	4

One elective from the following:

		Units
DBIO 210	Developmental Biology	4
CSB 210	Cell Signaling	4
CSB 220	Chemistry of Biological Processes	3
GENE 205	Advanced Genetics	3
IMMUNOL 202	Advanced Immunology II	3
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	4
MI 221	Gut Microbiota in Health and Disease	3
SBIO 241	Biological Macromolecules	3-5
STATS 141	Biostatistics	5

Prior approval from the student's adviser and department graduate program director is required for courses not from the elective list.

In Autumn Quarter of the second year, each student defends orally a formal research proposal on a topic outside the intended thesis project. This qualifying examination proposal is due to the graduate program steering committee by September 1. In Spring Quarter of the second year, a research proposal based on the student's own thesis topic is defended to the thesis committee. The written thesis proposal is due May 1 and the oral defense is presented and completed by the end of the Spring Quarter. Based on successful performance on these proposals, the student is admitted to candidacy. Teaching experience and training are also part of the graduate curriculum. Graduate students are required to act as teaching assistants for one course. In addition, first- and second-year graduate students are required to participate in a bi-weekly journal club. Additional information on program requirements can be found on the Microbiology and Immunology (http://med.stanford.edu/microimmuno.html) web site.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count

courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Microbiology and Immunology Program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B" or better level.

Graduate Advising Expectations

The Department of Microbiology and Immunology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, development of teaching and mentoring skills, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

Additional information about the department's policy on graduate advising can be found on the Microbiology and Immunology (http://med.stanford.edu/microimmuno.html) web site. For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Hugh O. McDevitt, Edward S. Mocarski,

Chair: David Schneider

Associate Chair: Denise Monack

Director of Graduate Studies: Justin Sonnenburg

Professors: Manuel Amieva, Ann Arvin, Helen Blau, Matthew Bogyo, John C. Boothroyd, Yueh-Hsiu Chien, Wah Chiu, Mark M. Davis, Stephen J. Galli, Jeffrey Glenn,Harry B. Greenberg, K.C. Huang, Peter Jackson, Karla Kirkegaard, A.C. Matin, Denise Monack, Peter Parham, Phillip Pizzo, Charles Prober, Bali Pulendran, David Relman, Peter Sarnow, David Schneider, Upinder Singh, Lucy S. Tompkins.

Professor (Teaching): Robert D. Siegel

Associate Professors: Paul Bollyky, Jan Carette, Shirit Einav, Michael Fischbach, Justin Sonnenburg, Ellen Yeh

Assistant Professors: Dylan Dodd, Elizabeth Egan, Michael Howitt, Juliana Idoyaga, Prasanna Jagannathan, Taia Wang

Institute for Immunity, Transplantation and Infection

Director, Human Immune Monitoring Center and Professor (Research): Holden Maecker

Courses

MI 18SC. The Coming Influenza Pandemic. 2 Units.
Examines the H1N1 influenza virus from molecular, clinical, societal, historical, demographic, economic, and political perspectives. Examines the unique genetic, epidemiological, virologic, and pathogenic features of the influenza virus that allow it to continue to reinvent itself and re-emerge on an annual basis. Discusses past successes and failures, the current status of influenza, and the critical factors to consider to avert the coming influenza pandemic. Explores whether or not the lessons learned from influenza can be applied to other diseases. Includes guest lectures, field trips, student presentations.

MI 19SC. Measles and Sneezles and Things That Go Mumps in the Night. 2 Units.
A study of measles (until recently one of the leading causes of death in the world and the most contagious disease agent ever studied) and its relatives in the paramyxovirus family, including mumps, respiratory syncytial virus, hendra, and nipah, as well as a number of important animal pathogens. Investigates the nature of viruses using the paramyxoviruses as a paradigm. Topics include: the history of this devastating group of pathogens; basic aspects of paramyxovirus taxonomy and molecular virology; viral epidemiology, emergence, and eradication, including the pioneering studies of Peter Panum; the use, misuse, and abuse of science; the interactions between pathogen and host and how this interplay leads to disease, including the appearance of a bizarre brain complication with 100% mortality; the politics and economics of infection; how a putative link between the measles vaccine and autism entered the public eye, and how it refuses to disappear despite overwhelming evidence to the contrary. Field trips, guest speakers, student presentations. No science background necessary.

MI 70Q. Photographing Nature. 3 Units.
Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Eadweard J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critque.

MI 115B. The Vaccine Revolution. 6 Units.
Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 8. Prerequisite: prior enrollment in MI 116, The Human Virosphere or consent of instructor required.

MI 115C. Human Virology Inquiry Project. 3 Units.
Selected topics in human virology focusing on current issues in the field. Topics will include: clinical features of infection, epidemiology, molecular virology, drug development and policy, vaccinology, pathogenesis, host modulation, emerging infection, and media representations of viral infection. Student presentations and discussion in a small group setting. Prerequisite: concurrent enrollment in MI 116.

MI 116. The Human Virosphere. 3 Units.
Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy.
Same as: MI 216

MI 155A. Humans and Viruses I. 6 Units.
Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.

MI 155B. Humans and Viruses II. 6 Units.
Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer -causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatement, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: MI155A or HUMBIO 155H.

MI 155N. Viruses in the News. 3 Units.
Viruses include some of the most devastating and ubiquitous causes of human disease as illustrated by the recent Ebola and Zika epidemics. In books, movies, newspapers, and electronic feeds, viruses continue to make the news on a daily basis. Using contemporary media, talks by content experts, model building, interactive sessions and field trips, we will explore contemporary issues related to the essential nature of viruses, what makes them unique, key molecular processes, breakthroughs in prevention and treatment, current efforts in trying to eradicate viruses and cultural iconography pertaining to viruses. In short, this seminar intended to go viral. Humans and Viruses or consent of instructor required.

MI 198. Directed Reading in Microbiology and Immunology. 1-15 Unit.
Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.

MI 199. Undergraduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunology, virology, and molecular parasitology. Prerequisite: consent of instructor.

MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. 4 Units.
For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature. Undergraduate students interested in taking this class must meet with the instructor to obtain approval before enrolling.

MI 215. Principles of Biological Technologies. 3 Units.
The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program.

MI 216. The Human Virosphere. 3 Units.
Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy.
Same as: MI 116

MI 217. Genome Editing: Redefining Humanity. 4 Units.
Genome Editing is potentially the most important biological/medical strategy ever developed. Genome Editing has been used to manipulate diverse organisms and viruses including bacteria, plants, insects, nonhuman animals, human remediation, and treatment of genetic and other diseases in animals and humans. The advent of CRISPR-Cas9 and newer techniques has greatly increased the facility and speed with which Genome Editing can be carried out. It has become clear that the main factors limiting the power of Genome Editing are the human imagination and human imposed structures, - not technological limitations.

MI 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.
Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.
Same as: GENE 218, PATH 218

MI 221. Gut Microbiota in Health and Disease. 3 Units.
Preference to graduate students. Focus is on the human gut microbiota. Students will receive instruction on computational approaches to analyze microbiome data and must complete a related project.
Same as: BIOE 221G, GENE 208

MI 225. Viral Hemorrhagic Fevers. 4 Units.
Explores four families of human viruses (falviviruses, filoviruses, bunyaviruses, arenaviruses) that share certain clinical and pathological features. These families used to illustrate more general features of human virology ranging from molecular virology, viral replication cycles, transmission, clinical presentation, pathogenesis, diagnosis, treatment, epidemiology, public health responses, public policy, economics. After general introduction, each family will be presented, followed by sessions focused on comparisons and integration. Specific case studies focus on current events. Student assignments include problem sets, model-building, blogging, and comprehensive examinations. In-class sessions will include interactive lectures, guest speakers, students presentations, discussions.

MI 250. Frontiers in Microbiology and Immunology. 1 Unit.
Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.

MI 255. Measles and Sneezles and Things That Go Mumps in the Night. 3 Units.
A study of measles (until recently one of the leading causes of death in the world and the most contagious disease agent ever studied) and its relatives in the paramyxovirus family, including mumps, parainfluenza viruses, hendra, and nipah, as well as a number of important animal pathogens. Investigates the nature of viruses using the paramyxoviruses as a paradigm. Topics include: the history of this devastating group of pathogens; basic aspects of paramyxovirus taxonomy and molecular virology; viral epidemiology, emergence, and eradication, including the pioneering studies of Peter Panum; the use, misuse, and abuse of science; the interactions between pathogen and host and how this interplay leads to disease, including the appearance of a bizarre brain complication with 100% mortality; the politics and economics of infection; how a putative link between the measles vaccine and autism entered the public eye, and how it refuses to disappear despite overwhelming evidence to the contrary. Lectures, discussion, student presentations. No science background necessary.

MI 260. Creative Visualization Studio. 1-2 Unit.
In this class, we will teach students to build small, physical explanations of their data for display and use as visual aids in person, at a poster or in a talk. We will use a range of media, including laser cutters, paper cutters, silk screening, CNC routing, 3D printing, jewelry making, embroidery, mold making, stop motion animation, or stained glass cutting. Classes will be split into workshop time¿for learning techniques and brainstorming¿and lab time, where students can work on individual projects. Students will be expected to complete 5 small visualization projects over the course of the quarter. Permission numbers are required to enroll. To obtain a permission number please email Professor David Schneider at dschneid@stanford.edu.

MI 285. Topics in Microbiology. 3 Units.
For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core.

MI 299. Directed Reading in Microbiology and Immunology. 1-18 Unit.
Prerequisite: consent of instructor.

MI 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MI 399. Graduate Research. 1-18 Unit.
Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.

MI 801. TGR Master's Project. 0 Units.
.

MI 802. TGR PhD Dissertation. 0 Units.
.

MOLECULAR AND CELLULAR PHYSIOLOGY

Courses offered by the Department of Molecular and Cellular Physiology are listed under the subject code MCP on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MCP&filter-catalognumber-MCP=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MCP&filter-catalognumber-MCP=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=MCP&filter-catalognumber-MCP=on).

The Department of Molecular and Cellular Physiology is located in the Beckman Center for Molecular and Genetic Medicine.

A central goal of physiology in the post-genomic era is to understand how thousands of encoded proteins serve to bring about the highly coordinated behavior of cells and tissues. Research in the department approaches this goal at many levels of organization, ranging from single molecules and individual cells to multicellular systems and the whole organism. The faculty share common interests in the molecular mechanisms of cell signaling and behavior, with a special focus on structure/function analysis of ion channels and G-protein coupled receptors, and their roles at the cellular, organ, and whole-organism levels; the molecular basis of sensory transduction, synaptic transmission, plasticity and memory; the role of ion channels and calcium in controlling gene expression in neural and immune cells; and the regulation of vesicle trafficking and targeting, cell polarity, and cell-cell interactions in the nervous system and in epithelia. Research programs employ a wide range of approaches, including molecular and cell biology, biochemistry, genetics, biophysics, x-ray crystallography and solution NMR, electrophysiology, and in vitro and in vivo imaging with confocal and multi-photon microscopy.

Graduate Programs in Molecular and Cellular Physiology

The department offers required and elective courses for students in the School of Medicine and is also open to other qualified students with the consent of the instructor. Training of medical, graduate, and postdoctoral students is available. The program offers a course of study leading to the Ph.D. degree. No B.S. is offered, and an M.S. is offered only in the unusual circumstance where a student completes the course work, rotation, and the written section of the qualifying exam, but is unable to complete the requirements for the Ph.D.

Application and Admission

Applications are made through the Graduate Admissions (http://gradadmissions.stanford.edu) web site.

Applicants are assessed based on their undergraduate transcripts, test scores, research experience, statement of purpose and letters of recommendation that document exceptional potential, ability, or achievements.

Students admitted to the program are offered financial support covering tuition, a living stipend, and insurance coverage. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but MCP graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program.

Upon matriculation, each student is assisted in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee is composed to include the dissertation adviser and two additional MCP/Non-MCP faculty, to guide the student during their dissertation research. The student must meet with the dissertation committee at least once a year.

Doctor of Philosophy in Molecular and Cellular Physiology

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research.

Study toward the Ph.D. is expected to occupy five years, including summers. The MCP course requirements for the program are as follows:

- MCP 221 Advanced Cell Biology
- MCP 207 MCP Bootcamp

  MCP 208 MCP Journal Club and Professional Development Series
- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- BIOS 200 Foundations in Experimental Biology
- MED 255 The Responsible Conduct of Research, if funded on NSF or NIH training grants
- Advanced graduate courses or mini-courses for a minimum of 6 units total. These courses do not need to be MCP courses but must be in relevant scientific topic and approved by the Director of Graduate Studies.
- Two of the following courses:
  - BIOC 241 Biological Macromolecules
  - GENE 205 Advanced Genetics
  - NBIO 206 The Nervous System
  - BIO 230 Molecular and Cellular Immunology

Students are also required to participate in the Molecular and Cellular Physiology Seminar Series and attend the department scientific meeting.

Courses taken to meet program requirements must be taken for a letter grade and students must earn a minimum grade of at least a 'B' in every individual required course. Students must also maintain a minimum GPA of 3.0 by University policy. Failure to maintain the required grades and grade point average is taken as evidence of unsatisfactory progress in the program.

Students should complete their required courses within the first two years of study. Exceptions may be made in cases where it was impossible to schedule courses because they were not offered within a student's first two years. Students may petition the MCP graduate committee for variances in the specific courses required, and such petitions may be granted in special circumstances, in cases where a student's progress is otherwise exemplary.

Qualifying Examination

All students in the program must pass a qualifying examination to advance to candidacy for the Ph.D. It is expected that students take the qualifying examination by the end of the Autumn Quarter in the second year of study. Failure to take the qualifying exam by the end of Autumn Quarter of the second year of study is taken as evidence of unsatisfactory progress in the program. In any case where a student thinks they need additional time to schedule and take their exam, a request must be submitted in writing to the Director of Graduate Studies

(DGS) by November 15 of Autumn Quarter. The DGS may opt to grant additional time in compelling circumstances that do not indicate poor progress, or may refer the matter to the graduate committee for further action.

Students are given two chances to unconditionally pass the qualifying examination. Failure to achieve an unconditional pass of the qualifying examination by the end of the Spring Quarter of the second year is grounds for dismissal from the program.

Students form a qualifying examination committee consisting of at least 3 faculty members (members of the academic council, including the dissertation advisor), at least one of whom must be a member of MCP. This committee should be formed by the end of Spring Quarter of the first year of study. The composition of this committee should be approved by the Director of Graduate Studies. Students should also check with the department's student services office to make sure to file all required paperwork by the end of Spring Quarter. The University maintains certain deadlines for filing for candidacy, and it is the student's responsibility to be aware of these deadlines.

Dissertation and University Oral Examination

The results of independent, original work by the students are presented in a dissertation. The oral examination is largely a defense of the dissertation.

Advisers and Advisory Committees

A graduate advisory committee, currently professors Feng, Kobilka, Maduke and Madison, advises students during the period before the formation of their qualifying committees.

Financial Aid

Students may be funded by their advisers' research grants, by training grants, by department funds, or by extramural funds. Students are encouraged to obtain funding from outside sources such as NIH and NSF.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

The Molecular & Cellular Physiology Department is in the process of making decisions concerning COVID-19 policies and will update this tab when those decisions have been made.

Graduate Advising Expectations

The Department of Molecular and Cellular Physiology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 65)" section of this bulletin.

*Emeriti (*Professors*):* W. James Nelson, Stephen J. Smith, Richard W. Tsien

Chair: Miriam B. Goodman

Professors: Axel T. Brunger, K. Christopher Garcia, Miriam B. Goodman, Brian K. Kobilka, Richard S. Lewis, Georgios Skiniotis, Thomas C. Sudhof

Associate Professors: V. Daniel Madison, Merritt C. Maduke

Assistant Professors: Liang Feng, Lucy E. O'Brien

Joint Professors: Steve Chu, William Weis

Courtesy Professors: John Huguenard, Anthony J. Ricci, Ron Dror

Courses

MCP 126. Neurons and Disease. 4 Units.
Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). Prerequisite: Biology or Human Biology core.

MCP 156. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.
Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.
Same as: MCP 256

MCP 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MCP 207. MCP Bootcamp. 1-3 Unit.
Hands-on, week-long immersion in methods and concepts related to the physiology of cell signaling. Required of all first-year MCP students; other PhD students may enroll with consent of instructor.

MCP 208. MCP Journal Club and Professional Development Series. 1-2 Unit.
This class will entail discussion of current research in Molecular and Cellular Physiology (Journal Club) and sessions devoted to career development. Enrolled learners will gain experience in designing and delivering professional oral presentations and writing accessible lay summaries of primary research. They will also receive guidance in how to give and receive critiques following a rubric. Learners will choose research papers following a theme to e determined collaboratively. Career and professional development class sessions will provide information on a variety of topics related to career development and strategies for navigating research environment in productive and healthy ways (see below). nnThe class will meet 8 times per quarter, with 4 Journal Club and 4 Professional Development sessions per quarter. Journal Club sessions will consist of one member of the class giving an oral presentation on the topic of a current relevant research paper, followed by critique and discussion. Learners will prepare written critiques of these talks. The Professional Development session will consist of a series of lectures, discussions, or workshops designed to foster a better understanding of the practices and processes that are critical for navigating paths toward a research career, but which are not generally covered in a classroom setting. These sessions might include such topics as mentor/mentee relationships, authorship, navigating peer review, issues of diversity and respectful workplace, wellness, experiences Stanford alumni in their own career paths, and other topics, including those suggested by class participants. The class will be graded on participation and on the writing assignments, including critiques and lay summaries. The course will be required for MCP graduate students in their first 3 years of study, and open to all predoctoral graduate students. The broader membership of the MCP scientific community will be encouraged to participate including postdocs (with permission of the course director).

MCP 221. Advanced Cell Biology. 4 Units.
For Ph.D. students. Taught from the current literature on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, signaling, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Advanced undergraduates may participate with the permission of the Course Director.
Same as: BIO 214, BIOC 224

MCP 222. Imaging: Biological Light Microscopy. 3 Units.
This intensive laboratory and discussion course will provide participants with the theoretical and practical knowledge to utilize emerging imaging technologies based on light microscopy. Topics include microscope optics, resolution limits, Köhler illumination, confocal fluorescence, two-photon, TIRF, FRET, photobleaching, super-resolution (SIM, STED, STORM/PALM), tissue clearing/CLARITY/light-sheet microscopy, and live-cell imaging. Applications include using fluorescent probes to analyze subcellular localization and live cell-translocation dynamics. We will be using a flipped classroom for the course in that students will watch iBiology lectures before class, and class time will be used for engaging in extensive discussion. Lab portion involves extensive in-class use of microscopes in the CSIF and NMS core microscopy facilities.
Same as: BIO 152

MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.
Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.
Same as: MCP 156

MCP 299. Directed Reading in Molecular and Cellular Physiology. 1-18 Unit.
Prerequisite: consent of instructor.

MCP 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MCP 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff).

MCP 801. TGR Project. 0 Units.
.

MCP 802. TGR Dissertation. 0 Units.
.

NEUROBIOLOGY

Courses offered by the Department of Neurobiology are listed under the subject code NBIO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NBIO&filter-catalognumber-NBIO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NBIO&filter-catalognumber-NBIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NBIO&filter-catalognumber-NBIO=on).

Graduate Program in Neurobiology

Graduate students in the Department of Neurobiology obtain the Ph.D. degree through the interdepartmental Neurosciences Ph.D. program (p. 2475). Accepted students receive funding for tuition and a living stipend. Applicants should familiarize themselves with the research interests of the faculty and, when possible, indicate their preference on the application form which is submitted directly to the Neurosciences Program.

Medical students also are encouraged to enroll in the Ph.D. program. The requirements of the Ph.D. program are fitted to the interests and time schedules of the student. Postdoctoral training is available to graduates holding Ph.D. or M.D. degrees, and further information is obtained directly from the faculty member concerned.

Research interests of the department include information processing in vertebrate retina; structure, function, and development of auditory and visual systems; development and regeneration in the central and peripheral nervous system; neural mechanisms mediating higher nervous system functions, including perception, learning, attention and decision making.

Faculty

Emeriti (Professors): Denis Baylor, Eric I. Knudsen, Uel J. McMahan, Eric Shooter, Lubert Stryer

Department Chair: Thomas Clandinin

Professors: Stephen A. Baccus, Tirin Moore, William T. Newsome, Jennifer L. Raymond, Nirao Shah, Carla Shatz

Associate Professors: Lisa Giocomo, Andrew D. Huberman, Michael Z. Lin

Assistant Professors: Shaul Druckmann, Keren Haroush

Adjunct Professors: William Hurlbut

Courses

NBIO 101. Social and Ethical Issues in the Neurosciences. 2-4 Units.
Foundational scientific issues and philosophical perspectives related to advances in the study of brain and behavior. Implications of new insights from the neurosciences for medical therapy, social policy, and broader conceptions of human nature including consciousness, free will, personal identity, and moral responsibility. Topics include ethical issues related to genetic screening and editing, desire and addiction, criminal behavior, the biology of sexuality, fetal pain, aging and neurodegenerative disease, brain-computer interfaces, and neural enhancement and the human future. May be taken for 2 units without a research paper. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Undergraduates must enroll in NBIO101. Application required: http://bit.ly/NBIOApplication.
Same as: NBIO 201

NBIO 198. Directed Reading in Neurobiology. 1-18 Unit.
Prerequisite: consent of instructor. (Staff).

NBIO 199. Undergraduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NBIO 201. Social and Ethical Issues in the Neurosciences. 2-4 Units.
Foundational scientific issues and philosophical perspectives related to advances in the study of brain and behavior. Implications of new insights from the neurosciences for medical therapy, social policy, and broader conceptions of human nature including consciousness, free will, personal identity, and moral responsibility. Topics include ethical issues related to genetic screening and editing, desire and addiction, criminal behavior, the biology of sexuality, fetal pain, aging and neurodegenerative disease, brain-computer interfaces, and neural enhancement and the human future. May be taken for 2 units without a research paper. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Undergraduates must enroll in NBIO101. Application required: http://bit.ly/NBIOApplication.
Same as: NBIO 101

NBIO 206. The Nervous System. 6 Units.
Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.

NBIO 218. Neural Basis of Behavior. 5 Units.
Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

NBIO 220. Machine Learning Methods for Neural Data Analysis. 3 Units.
With modern high-density electrodes and optical imaging techniques, neuroscientists routinely measure the activity of hundreds, if not thousands, of cells simultaneously. Coupled with high-resolution behavioral measurements, genetic sequencing, and connectomics, these datasets offer unprecedented opportunities to learn how neural circuits function. This course will study statistical machine learning methods for analysing such datasets, including: spike sorting, calcium deconvolution, and voltage smoothing techniques for extracting relevant signals from raw data; markerless tracking methods for estimating animal pose in behavioral videos; network models for connectomics and fMRI data; state space models for analysis of high-dimensional neural and behavioral time-series; point process models of neural spike trains; and deep learning methods for neural encoding and decoding. We will develop the theory behind these models and algorithms and then apply them to real datasets in the homeworks and final project.This course is similar to STATS215: Statistical Models in Biology and STATS366: Modern Statistics for Modern Biology, but it is specifically focused on statistical machine learning methods for neuroscience data. Prerequisites: Students should be comfortable with basic probability (STATS 116) and statistics (at the level of STATS 200). This course will place a heavy emphasis on implementing models and algorithms, so coding proficiency is required.
Same as: CS 339N, STATS 220, STATS 320

NBIO 224. Glia and Neuroimmunology. 3 Units.
The role of glia in the brain, including development, normal functioning, and disease. Topics include astrocytes, microglia, oligodendrocyte lineage, the blood brain barrier, and neuroimmunology with special emphasis on tools for studying glia. Preference to graduate students.

NBIO 227. Understanding Techniques in Neuroscience. 2 Units.
Students will learn to select and evaluate multidisciplinary techniques for approaching modern neuroscience questions. A combination of lectures and small group paper discussions will introduce techniques from molecular, genetic, behavioral, electrophysiological, imaging, and computational neuroscience. Students will be expected to complete homework assignments analyzing primary literature and attend optional laboratory demonstrations. Intended for graduate students, postdocs, and staff from any discipline; and for advanced undergraduates in the biosciences, engineering, or medicine.

NBIO 228. Mathematical Tools for Neuroscience. 3 Units.
Student-instructed. This course aims to equip biosciences graduate students with the fundamental skills in quantitative modeling and data analysis necessary for neuroscience research. It covers techniques including linear algebra, Fourier transforms, probability and statistics, signal detection, statistical inference, and information theory. The course is required for first-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. Other students, including undergraduates, may enroll by special request.

NBIO 254. Molecular and Cellular Neurobiology. 3-5 Units.
For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.
Same as: BIO 254

NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits. 4 Units.
How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

NBIO 299. Directed Reading in Neurobiology. 1-18 Unit.
Prerequisite: consent of instructor.

NBIO 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NBIO 399. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NEUROSCIENCES

Courses offered by the Neurosciences Program are listed under the subject code NEPR on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NEPR&filter-catalognumber-NEPR=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NEPR&filter-catalognumber-NEPR=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=NEPR&filter-catalognumber-NEPR=on).

Master of Science in Neurosciences

The Neurosciences IDP does not offer a terminal or coterminal M.S. degree. An M.S. degree may only be pursued in combination with a doctoral degree from another department within the University or one of the University's professional schools.

Students interested in pursuing the M.S. must submit an unofficial Stanford transcript and a written scientific justification for adding the M.S. degree to the Neurosciences program administrator no later than February 1, 2021.

Requirements

- Completion of a minimum of 45 unduplicated units of course work, including the Neuroscience courses listed below or approved substitutes. Courses used for the Neurosciences M.S. may not be double-counted to meet the requirements of a Ph.D. degree.
- Course requirements must be completed before the student applies for terminal graduate registration (TGR) Status.
- In addition to required course work, students pursuing the M.S. in Neurosciences must sit for a qualifying exam that includes a written proposal for a thesis project and oral examination.

Required Courses		Units
All courses used for the Neurosciences M.S. must be taken for a letter grade and passed with a 3.0 (B) or better.		
NEPR 202	Neurosciences Development Core	2
NEPR 203	Neuroscience Systems Core	2
NEPR 204	Neuroscience Molecular Core	2
NEPR 205	Neurosciences Anatomy Core	2

Doctor of Philosophy in Neurosciences

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The interdepartmental Neurosciences Program offers instruction and research opportunities leading to a Ph.D. in Neurosciences. The requirements for a Ph.D. degree follow those of the University and in addition are tailored to fit the background and interests of the student. Qualified applicants should, where possible, apply for the predoctoral fellowships in open competition, especially those from the National Science Foundation.

Admissions

Applications are made through the Graduate Admissions (http://gradadmissions.stanford.edu) website and are due by Tuesday, December 1, 2020. GRE is not required. Applicants should familiarize themselves with the research interests of the faculty and indicate their preferences clearly on the application form. Applicants selected for an interview are notified in early January. Admitted students are notified from early March through mid-April. Accepted students receive an award covering tuition, a basic health plan, and a living stipend.

Requirements

Since students enter with differing backgrounds, and the labs in which they may elect to work cover several different disciplines, the specific program for each student is developed individually with an advisory committee. Students rotate through at least three labs during the first year while taking core courses. Passing of a comprehensive qualifying examination given by the student's advisory committee is required for admission to Ph.D. candidacy; the qualifying exam must be taken by the end of the second year. Students are required to prepare a Ph.D. dissertation that is the result of independent investigation accomplished while enrolled in the program that contributes to knowledge in an area of neuroscience, and to defend the dissertation in a University Oral Examination that includes a public seminar. Students must also publish a first-author paper in a peer-reviewed major scientific journal on the defended work and submit a written dissertation prior to completing the Ph.D. degree.

Medical students may participate in this program provided they meet the prerequisites and satisfy all the requirements of the graduate program as listed above. The timing of the program may be adjusted in consultation with the advisory committee to fit their special circumstances.

- Introduction to Neurobiology (NBIO 206 The Nervous System or equivalent).
- Nine (9) quarters of NBIO 300/MCP 300 /NEPR 280 Neuroscience Journal Club and Professional Development Series
- Five (5) advanced level courses within - and at least one course in each of - the following three areas:

1. Systems, Computational, Cognitive and Behavioral Neuroscience. Courses at this level focus on the computations performed by neural circuits and the role such computations play in behavior, perceptions, and plasticity. Students can expect to learn how neurons: Organize circuits into larger functional units; Represent and transform information; Produce myriad movement; and Subserve higher-level processing related to perception, reasoning and learning. Predominant methods in this area include modeling single cells and circuits, design of behavioral paradigms, and statistical analysis of behavioral and electrophysiological data.

Courses that fulfilled this requirement include:

- COMPMED 207 Vertebrate Brain Evolution
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- NENS 220 Computational Neuroscience
- PSYCH 202 Cognitive Neuroscience
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 232 Brain and Decision
- PSYCH 251 Experimental Methods
- PSYCH 266 Current Debates in Learning and Memory
- NBIO 218 Neural Basis of Behavior
- NBIO 220 Machine Learning Methods for Neural Data Analysis
- NENS 205

2. Cellular, Molecular and Developmental Neuroscience. Courses in this area address fundamental mechanisms that enable cells of the nervous system to develop, function in adulthood, change during learning and memory, and/or malfunction in disease states. Students can expect to learn core concepts in: Cell-cell communication; Intracellular signal transduction; Transcriptional and translational control; mRNA and protein trafficking; Membrane biophysics; and Cell motility. Dominant methods include molecular biology, genetics, cell biology, electrophysiology, and subcellular or multicellular imaging.

Courses offered that fulfilled this requirement include:

- BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIO 254 Molecular and Cellular Neurobiology
- BIOS 200 Foundations in Experimental Biology
- GENE 221 Current Issues in Aging
- NBIO 254 Molecular and Cellular Neurobiology
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- PSYCH 204B Computational Neuroimaging
- MCP 216 Genetic Analysis of Behavior (NBIO 216)
- NBIO 216 Genetic Analysis of Behavior (MCP 216)
- BIO 217
- COMPMED 215
- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology/MCP 156 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- NBIO 218 Neural Basis of Behavior

- NBIO 220 Machine Learning Methods for Neural Data Analysis

3. Translational Neuroscience. Courses in this area address fundamental concepts in studying disorders of the human brain and the peripheral nervous system and their treatment. Students can expect to learn about basic themes in: Pathophysiological mechanisms; Modeling of human diseases; Approaches to designing diagnoses and treatments; Implementing diagnoses and treatments. The courses highlight studies of human diseases that use genetics, molecular biology, psychological testing, and functional imaging.

Courses offered that fulfilled this requirement include:

- BIO 267 Molecular Mechanisms of Neurodegenerative Disease / NENS 267 Molecular Mechanisms of Neurodegenerative Disease
- GENE 210 Genomics and Personalized Medicine / DBIO 220 Genomics and Personalized Medicine
- CSB 278 Systems Biology
- IMMUNOL 285 Brain and the Immune System
- NENS 205

Courses from outside the Neuroscience core listed below that satisfied the remaining elective requirements include:

- BIO 217
- BIO 222 Exploring Neural Circuits
- BIO 230 Molecular and Cellular Immunology
- BIO 245 Ecology and Evolution of Animal Behavior
- BIO 258 Developmental Neurobiology
- BIOC 224 Advanced Cell Biology/BIO 214 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIOE 291 Principles and Practice of Optogenetics for Optical Control of Biological Tissues
- BIOE 332
- BIOS 200 Foundations in Experimental Biology
- BIOS 210 Axonal Transport and Neurodegenerative Diseases
- BIOS 241 Dissecting algorithms for RNA Sequencing
- COMPMED 207 Vertebrate Brain Evolution
- COMPMED 215
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 229 Machine Learning
- CS 379 Interdisciplinary Topics
- CSB 210 Cell Signaling
- DBIO 201 Cells and Signaling in Regenerative Medicine
- DBIO 210 Developmental Biology
- EE 263 Introduction to Linear Dynamical Systems/CME 263 Introduction to Linear Dynamical Systems
- IMMUNOL 285 Brain and the Immune System
- MCP 221 Advanced Cell Biology/BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology
- MCP 222 Imaging: Biological Light Microscopy
- MUSIC 257 Neuroplasticity and Musical Gaming
- NENS 204 Stroke Seminar
- NENS 267 Molecular Mechanisms of Neurodegenerative Disease/BIO 267 Molecular Mechanisms of Neurodegenerative Disease
- PSYCH 204 Computation and Cognition: The Probabilistic Approach
- RAD 227 Functional MRI Methods/BIOPHYS 227 Functional MRI Methods

Other courses not listed here can satisfy program requirements with prior approval of the Program Director.

The School of Law and the Neurosciences IDP offer a joint program leading to a J.D. degree combined with a Ph.D. in Neurosciences. The joint degree program provides an opportunity for students to develop expertise in both fields, and, in some cases, to prepare themselves intensively for careers in areas relating to both neuroscience and law.

Students interested in the joint degree program must apply and gain entrance separately to the School of Law and the Neurosciences IDP and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Neurosciences IDP may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Neurosciences IDP. Faculty advisers from each academic unit will participate in the planning and supervising of the student's joint program. Students must be enrolled full time in the Law School for the first year of law school and must be enrolled full time in the Neurosciences IDP for the first two years of that program, or until the student has passed the Qualifying Exam. At all other times, enrollment may be in the School of Medicine or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees as specified in the *Stanford Bulletin* or elsewhere.

The Law School shall approve courses from the Neurosciences IDP that may count toward the J.D. degree, and the Neurosciences IDP shall approve courses from the Law School that may count toward the Ph.D. degree in Neurosciences. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The total minimum number of university residency units required for both degrees is 190. No more than 54 units of approved courses may be counted toward both degrees.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The interdepartmental Neurosciences Program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Graduate Advising Expectations

The Neurosciences Program is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee.

Graduate students are active contributors to the advising relationship. They should proactively seeking academic and professional guidance and take responsibility for informing themselves of policies and degree requirements for the Neurosciences Ph.D. program.

All first year Neurosciences graduate student have an assigned first year adviser. This faculty member provides guidance on lab rotations, coursework, thesis lab selection, and reminds students of their academic and administrative responsibilities.

Graduate students are expected to select a thesis adviser by the end of the first year in the program and are encouraged to work collaboratively with their adviser to establish a dissertation project and form a Dissertation Reading Committee. Advancement to doctoral candidacy and the formation of a Dissertation Reading Committee is expected to occur by the end of the second year of the program.

Thesis advisers are expected to meet with graduate students at least once per year and help develop the student's Individual Development Plan (IDP). Additionally, advisers and students should meet on a regular basis throughout the year to discuss the student's professional development in key areas such as selecting courses, designing and conducting research, navigating policies and degree requirements, and exploring academic opportunities and professional pathways. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Graduate students are expected to meet with their Dissertation Reading Committee at least annually in the third and fourth year of training, and at least twice annually starting in the fifth year of training.

Academic progress and student completion of program requirements and milestones are monitored by the program director and staff, and may be discussed by faculty at meetings devoted to assessing graduate student progress. A detailed description of the program's requirements, milestones, and advising expectations are listed in the Neurosciences Ph.D. Student Handbook, found on the program website (http://med.stanford.edu/neurogradprogram.html).

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin, the Stanford Graduate Academic Policies and Procedures (GAP) (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) handbook. Additional guidance and resources are available from The Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/).

Director of Graduate Studies: Nirao Shah

Anesthesia: Bruce MacIver

Applied Physics: Surya Ganguli

Biochemistry: Suzanne Pfeffer

Bioengineering: Kwabena Boahen, Karl Deisseroth

Biology: Xiaoke Chen, Russ Fernald, H. Craig Heller, Liqun Luo, Susan McConnell, Mark Schnitzer, Carla Shatz, Kang Shen, Marc Tessier-Lavigne

Chemical and Systems Biology: Joanna Wysocka

Comparative Medicine: Paul Buckmaster, Shaul Hestrin

Developmental Biology: Seung Kim

Education: Candace Thille

Electrical Engineering: Krishna Shenoy

Genetics: Michael Bassik, Anne Brunet, Aaron Gitler

Molecular and Cellular Physiology: Axel Brunger, Miriam Goodman, Daniel Madison, Merritt Maduke, Thomas Sudhof

Neurobiology: Stephen Baccus, Thomas Clandinin, Shaul Druckmann, Lisa Giocomo, Keren Haroush, Michael Lin, Tirin Moore, William Newsome, Jennifer Raymond

Neurology and Neurological Sciences: Katrin Andreasson, Marion Buckwalter, Michael Greicius, Ting-Ting Huang, John Huguenard, Michelle Monje-Deisseroth, Josef Parvizi, David Prince, Thomas Rando, Richard Reimer, Tony Wyss-Coray, Yanmin Yang

Neurosurgery: Lu Chen, E.J. Chichilnisky, Jun Ding, Julia Kaltschmidt, Paul Nuyujukian, Theo Palmer, Giles Plant, Ivan Soltesz, Gary Steinberg, Suzanne Tharin, Xinnan Wang, Bradley Zuchero

Radiology: Raag Airan, Jennifer McNab

Courses

NEPR 201. Neuro-Cellular Core. 2 Units.
Focuses on fundamental aspects of cellular neurophysiology. Topics include exploration of electrophysiological properties of neurons, synaptic structure and function and synaptic plasticity. The course consists of didactic lectures and student-led discussions of classical papers. Incorporates simulation program Neuron. Enrollment restricted to students enrolled in Neurosciences Graduate Program.

NEPR 202. Neurosciences Development Core. 2 Units.
For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Introductory course covers all aspects of nervous system development, from cell fate determination, axon guidance, synapse development and critical periods to neurodevelopmental diseases. The goal is to understand what kinds of questions are asked in developmental neurobiology and how researchers use different tools and model systems to answer these questions. Overview of neural development, experimental approaches, and model organisms; signaling pathways regulating neural development; neural stem cell and neurogenesis during embryonic and adult life.

NEPR 203. Neuroscience Systems Core. 2 Units.
Open to first-year neuroscience graduate students and to other qualified students by permission of the instructors. Introduction to encoding and processing of information by neural systems. Focus is on sensory and motor circuits.

NEPR 204. Neuroscience Molecular Core. 2 Units.
For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Course provides an overview of molecular neuroscience by focusing on a few selected key topics, such as molecular neuroscience methods, voltage-gated ion channels, synaptic transmission, neuronal gene expression, and signal transduction pathways.

NEPR 205. Neurosciences Anatomy Core. 2 Units.
For first-year Neuroscience graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Focus is on the anatomical organization underlying the principal functions of the nervous system, including sensation, perception, emotions, autonomic responses and movement. Students also learn modern techniques for studying neuroanatomical circuits, in the peripheral nervous system, spinal cord, and brain, and using different model systems.

NEPR 207. Neurosciences Cognitive Core. 2 Units.
For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Focus is on several domains of cognitive function where cognitive neuroscience approaches have been successfully applied across many different model systems from mice to monkeys to humans: attention, decision-making, and memory.

NEPR 208. Neuroscience Computational Core. 2 Units.
For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neurosciences students. Introduces students to computational and theoretical methods in neuroscience. Emphasis on what questions are important, and how those questions can be answered with quantitative methods. Topics range from cellular/molecular to cognitive, and emphasizes similarity and differences of methods across neural scales.

NEPR 212. Responsible Conduct of Neuroscience Research. 1 Unit.
Enrollment restricted to Neurosciences IDP students. Responsible conduct of research and ethics as it relates to research in neuroscience. Topics are in accord with NIH guidelines. Each topic has guest lecturers with specific insight into the particular topic.

NEPR 212R. Responsible Conduct of Neuroscience Research Refresher Course. 1 Unit.
For Neurosciences PhD students. Responsible conduct of research and ethics as it relates to research in neuroscience. Topics are in accord with NIH guidelines and to meet additional training requirements for predoctoral trainees.

NEPR 213. Neurogenetics Core. 2 Units.
For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neurosciences students. Intensive introduction to genetics. Classical and modern genetics with an emphasis on their application to neurosciences research. Topics include: model organisms, genetic screens, genome editing, genetically-encoded tools, GWAS, next-generation sequencing, epigenetics, genetic interactions, human genetics, and neurological disease genetics. Interactive class with student-led discussions, presentations, and group work, including next-generation sequencing workshops and data analysis tutorials. Limited enrollment.

NEPR 224. Mapping the human visual system. 1-3 Unit.
The human visual system has more than two dozen topographic maps of the visual field. This course will explain principles of topographic maps in the visual system, mapping of visual areas using retinotopy, as well as modeling spatial and temporal computations in the visual system using population receptive fields. The class will combine reading and discussing papers that discovered these maps and computational principles with a lab component in which the students will analyze fMRI datasets that are used to map visual cortex.
Same as: PSYCH 224

NEPR 280. Neuroscience Journal Club and Professional Development Series. 1-2 Unit.
Neuroscience Journal Club and Professional Development Series New description: Required of Neurosciences Ph.D. students in Autumn, Winter, and Spring of the first three years of study. Recent papers in neuroscience literature presented by graduate student.

NEPR 299. Directed Reading in Neurosciences. 1-18 Unit.
Prerequisite: consent of instructor.

NEPR 399. Graduate Research. 1-18 Unit.
StudenInvestigations sponsored by individual faculty members.
Prerequisite: consent of instructor.

NEPR 801. TGR Project. 0 Units.
.

NEPR 802. TGR Dissertation. 0 Units.
.

OBSTETRICS AND GYNECOLOGY

Courses offered by the Department of Obstetrics and Gynecology are listed under the subject code OBGYN on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=OBGYN&filter-catalognumber-OBGYN=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=OBGYN&filter-catalognumber-OBGYN=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=OBGYN&filter-catalognumber-OBGYN=on).

The Department of Obstetrics and Gynecology does not offer degrees; however, qualified medical, graduate students, or undergraduates with an interest in basic research in reproductive biology may apply to arrange individual projects under the supervision of the faculty. The focus for the Division of Reproductive, Stem Cell, and Perinatal Biology is the study of the molecular and cellular biology of male and female reproductive organs.

Chair: Leslee L.Subak, Professor

Vice Chair: Maurice L. Druzin, Professor

Division of Gynecology

Paul Blumenthal, M.P.H., Professor — Director

Paula Hillard, Professor, Associate Chair, Medical Education; Director, Pediatric/Adolescent Gynecology

Juno Obedin-Maliver, Assistant Professor — Co-Director of PRIDE

Deirdre Lum, Clinical Assistant Professor

Leah Millheiser, Clinical Assistant Professor

John Wachtel, Clinical Professor

Diana Atashroo, Clinical Assistant Professor

Stephanie Cizek, Clinical Assistant Professor

Division of Family Planning

Paul Blumenthal, Professor, Director

Kate Shaw, Clinical Associate Professor — Associate Division Director, Family Planning

Lisa Goldthwaite, Clinical Assistant Professor

Erica Cahill, Clinical Assistant Professor

Amy Voedisch, Clinical Assistant Professor

Jade Shorter, Clinical Assistant Professor

Michele Hugin, Clinical Associate Professor

Division of Gynecologic Oncology

Oliver Dorigo, Associate Professor; Director

Amer Karam, MD Clinical Associate Professor, Associate Director, Director of Outreach

Jonathan Berek, MMS, Professor

Nelson N.H. Teng, Professor

Erinn Rankin, Assistant Professor

Valerie Sugiyama, Clinical Assistant Professor

Elizabeth Diver, Clinical Assistant Professor

Babak Litkouhi, Clinical Assistant Professor

Venkatesh Krishnan, Instructor

Isabel Lazo, Clinical Assistant Professor

Malte Renz, Instructor

Division of Female Pelvic Medicine & Reconstructive Surgery/Urogynecology

Bertha Chen, Professor; Chief

Leslee L.Subak, Professor

Eric Sokol, Associate Professor

Lisa Rogo-Gupta, Clinical Associate Professor

Kavita Mishra, Clinical Assistant Professor

Division of Reproductive Endocrinology and Infertility

Ruben Alvero, Professor; Director

Barry Behr, HCLD, Professor (non-clinical)

Amin Milki, Professor

Ruth Lathi, Professor; Director, REI Fellowship

Steven Nakajima, Clinical Professor

Lusine Aghajanova, Clinical Assistant Professor

Anna Sokalska, Clinical Assistant Professor

Gaya Murugappan, Instructor, Associate Director, REI Fellowship

Division of Maternal-Fetal Medicine

Yasser El-Sayed, Professor; Director

Deirdre Lyell, Professor, Associate Director; Director, MFM Fellowship

Maurice Druzin, Professor

Yair Blumenfeld, Associate Professor

Jane Chueh, Clinical Professor

Natali Aziz, Clinical Associate Professor

Katherine Bianco, Clinical Associate Professor

Mark Boddy, Clinical Associate Professor

Martha Rode, Clinical Associate Professor

Scarlett Karakash, Clinical Assistant Professor

Amy Judy, Clinical Assistant Professor

Tiffany Herrero, Clinical Assistant Professor

Erica Wu, Clinical Assistant Professor

Charlotte Conturie, Clinical Assistant Professor

Elliot Main, Clinical Professor

Ronald Gibbs, Clinical Professor

Stephanie Leonard, Instructor

Division of General Obstetrics

Yasser El-Sayed, Professor; Director

Kay Daniels, Clinical Professor

Jeffrey Faig, Clinical Professor

Kimberly Harney, Clinical Professor

Laura Brodzinsky, Clinical Associate Professor

Susan Crowe, Clinical Associate Professor

Cynthia DeTata, Clinical Assistant Professor

Caroline Bowker, Clinical Professor

Sylvie Blumstein, Clinical Assistant Professor

Kathryn Sanserino, Clinical Assistant Professor

Joanne Nino, Clinical Instructor

Colleen Moreno, Clinical Instructor — Nurse Midwife

Division of Reproductive, Stem Cell and Perinatal Biology (Research)

Virginia Winn, Associate Professor; Director

Aaron J. Hsueh, Professor

Vittorio Sebastiano, Assistant Professor

Roger Pedersen, Adjunct Professor

Courses

OBGYN 81Q. Perspectives on the Abortion Experience in Western Fiction. 3 Units.
Explores the role of media in delivering abortion-related messages as well as the broader questions of how abortion and related issues are fundamentally integrated into the social fabric of US and global societies. Abortion remains one of the most controversial and polarizing challenges of our time. Yet, it has been a clinical, social, political, and cultural fact in a broad swath of societies for centuries. As is common for such lightning rod issues, the topic of abortion has featured prominently in novels and films. Each treatment provides a unique perspective on at least one aspect of abortion, whether it be clinical, social, political or cultural. How abortion is portrayed in novels and films provides the student of history, anthropology, and biology with insights into the author's or director's perspectives, and into societal attitudes and mores.

OBGYN 199. Undergraduate Research in Reproductive Biology. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OBGYN 216. Current Issues in Reproductive Health. 1 Unit.
Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. Course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access.

OBGYN 222. Obstetrics and Gynecologic Skills Simulation. 1-2 Unit.
This course will give students the opportunity to develop the necessary skills critical to practicing Ob/Gyn clinicians. Simulations will be used to help students practice procedures and apply knowledge without risk of injury to patients. A variety of simulation models will be used to practice a range of possible Ob/Gyn conditions and procedures, including but not limited to deliveries, family planning, ultrasound & pre-natal care, and infertility care. Each sessions will include an introductory didactic lecture, followed by simulation practice.

OBGYN 256. Current Topics and Controversies in Women's Health. 2-3 Units.
(HUMBIO students must enroll in HUMBIO 125. PhD minor in FGSS must enroll in FEMGEN 256. Med students must enroll in OBGYN 256.) Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. Undergraduates must enroll for 3 units. PhD minor in FGSS should enroll for 2 - 3 units. Med students should enroll for 2 units. To receive a letter grade in any listing, students must enroll for 3 units. This course must be taken for a letter grade and a minimum of 3 units to be eligible for Ways credit. Enrollment limited to students with sophomore academic standing or above. Undergraduate prerequisite: Human Biology Core or Biology Foundations or equivalent or consent of instructor.
Same as: FEMGEN 256, HUMBIO 125

OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology. 1-2 Unit.
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

OBGYN 282. Pregnancy, Birth, and Infancy. 3 Units.
Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. Students are expected to be engaged in the clinical experiences throughout the quarter and attend the weekly 2-hour seminar. Prerequisite: pre-clinical medical student or physician assistant student. Course directors: Janelle Aby, MD and Yasser El-Sayed, MD. TAs: Jill Anderson (janders5@stanford.edu) and Jenny Tiskus (tiskus@stanford.edu).
Same as: PEDS 282

OBGYN 299. Directed Reading in Obstetrics and Gynecology. 1-18 Unit.
Prerequisite: consent of instructor.

OBGYN 300A. Obstetrics and Gynecology Core Clerkship. 10 Units. VISITING: Closed to visitors. TYPE OF CLERKSHIP. Required. DESCRIPTION: Provides the student with skills and knowledge needed to care for patients with common gynecological problems, the well-woman examination, and pregnancy from prenatal care through delivery and postpartum. The clerkship is a full-time, 6-week rotation at one of the 3 sites: Stanford University Medical Center & satellite clinics, Santa Clara Valley Medical Center, and Kaiser Santa Clara. Emphasis is placed on history and physical examination skills in the evaluation and management of pregnancy, vaginal delivery, and both office gynecology and gynecologic surgical procedures through exposure to patients in the outpatient clinics, Labor and Delivery, and the operating room. The student participates in all the academic functions of the department including conferences, grand rounds, lectures, and weekly case studies. A one day orientation is held at the beginning of the clerkship, and students attend a simulation session for OB and Surgical skills during the first week. All students on the clerkship meet for a once weekly didactic session at Stanford. Attendance at the first day of the clerkship, the first Wednesday afternoon of the clerkship, and for the OSCE activity and the NBME shelf exam on the last day of the clerkship are all required. Students may make up absences for the orientation day and first Wednesday afternoon of the clerkship by attending these activities during a prior clerkship session. Absences for the OSCE and the shelf exam may be made up after the clerkship ends. (No drops allowed). PREREQUISITES: None. PERIODS AVAILABLE: 1-16 full-time for 6 weeks, 16 students per period. CLERKSHIP DIRECTOR: Rachel Seay, MD and Erica Wu, MD. CLERKSHIP COORDINATOR: Amanda Garley-Reynolds, 650-721-1036. REPORTING INSTRUCTIONS: Where: HH330, Ob/Gyn Conference Room, students will be sent information by e-mail; Time: 8:00 am. CALL CODE: 2 (Stanford students rotate through Obstetrics for 2 weeks. During these 2 weeks students are assigned two weekend calls from 8am-7pm. Kaiser and Valley students take 1 weekend call. These sites also have 1 week of night float that begins on Sunday). OTHER FACULTY: Staff. LOCATION: SUMC, SCVMC, KPMC.

OBGYN 304A. Inpatient Gynecology Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Exposes students to advanced care of benign gynecologic diseases in the inpatient and operative settings with full-time faculty and community physicians at Stanford University Medical Center. Students should perform as a core member of the benign gynecology team. Expect to be involved in inpatient care including rounding, consultations and surgical cases, Emergency Room care including consultations and procedures, and outpatient care including routine visits and triage. Students participate in departmental teaching, lectures, and grand rounds, and are expected to present a case discussion highlighting a notable clinical experience or topic. Note: Visiting students contact Gloria King, Residency Administrator, for application approval (gking1@stanford.edu). Interested students must send their CV, USMLE score(s), current transcript and a letter of recommendation from their Ob/Gyn Clerkship Director attesting to clinical abilities (i.e. proficient H&Ps and exam skills) at least 4-6 weeks prior to the start of the period in which the student would like to enroll. The letter of recommendation must be emailed to Gloria by the letter writer or their supporting administrative assistant. PREREQUISITES: OBGYN 300A. PERIODS AVAILABLE: 1-9, 12-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Lisa Rogo-Gupta, M.D. CLERKSHIP COORDINATOR: Jennifer Nguyen 650-725-5986, 300 Pasteur, Room G304, Stanford, CA 94305. REPORTING INSTRUCTIONS: Where: Upon acceptance of your application, please contact coordinator to obtain detailed information; Time: 8:00 am. CALL CODE: 0. OTHER FACULTY: D. Atashroo, P. Blumenthal, E. Cahill, B. Chen, S. Cizek, L. Goldthwaite, P. Hillard, D. Lum, L. Millheiser, K. Mishra, J. Obedin-Maliver, K. Shaw, E. Sokol, M. Solone, L. Subak, A. Voedisch, J. Wachtel. LOCATION: SUMC.

OBGYN 305A. Family Planning Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Open to highly motivated students, including visitors. Students will have the opportunity learn about complex contraception and abortion care, including long acting reversible methods, contraception for the medically complex patient, medication abortion, and surgical abortion . Students will work with Faculty and Fellows in Complex Family Planning Division at a variety of clinical settings, including Stanford ambulatory clinic and operating room, as well as community locations such as Planned Parenthood. Please note: Visiting students must obtain approval through Gloria King, Residency Program Manager, prior to applying for this clerkship. Please e-mail requests to gking1@stanford.edu. To apply for approval, students must send their CV, a paragraph explaining their interest in learning about contraception and abortion specifically along with USMLE score(s), current transcript and a letter of recommendation from the Ob/Gyn Clerkship Director or a faculty mentor attesting to clinical abilities (i.e. proficient H&Ps and exam skills). The letter of recommendation must be emailed to Gloria by the letter writer or their supporting administrative assistant. These must be received at least 4-6 weeks prior to the start of the period in which the student would like to enroll. PREREQUISITES: OBGYN 300A and SURG 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Erica P. Cahill, M.D. CLERKSHIP COORDINATOR: Victoria Contreras, vcontrer@stanford.edu. REPORTING INSTRUCTIONS: Where: 300 Pasteur Dr, Room HG332; Time: 9:00 am. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC.

OBGYN 306A. Reproductive Endocrinology-Infertility Clerkship. 5 Units. VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Exposes students to the work-up and management of infertility and common reproductive endocrinology problems. Includes extensive exposure to assisted reproductive technologies and some exposure to ambulatory surgery. Note: Visiting students must obtain approval through Gloria King, Residency Program Manager, prior to applying for this clerkship. Please e-mail requests to gking1@stanford.edu. Interested students must send their CV, USMLE score(s), current transcript and a letter of recommendation from the Ob/Gyn Clerkship Director or a faculty mentor attesting to clinical abilities (i.e. proficient H&Ps and exam skills). The letter of recommendation must be emailed to Gloria by the letter writer or their supporting administrative assistant. These items must be sent at least 4-6 weeks prior to the start of the period in which the student would like to enroll. Students should check with Dr. Milki's office regarding the schedule for in vitro fertilization. Not recommended to take this clerkship in P2A, P2B and P3A -- light schedule. PREREQUISITES: OBGYN 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Amin Milki, M.D. CLERKSHIP COORDINATOR: Tracy A. Lindsay, 408-426-5483, tracyl@stanford.edu. REPORTING INSTRUCTIONS: Where: Stanford Fertility and Reproductive Health, 1195 West Fremont Ave, Sunnyvale, CA 94087; Time: 8:00 am. CALL CODE: 2 (no call, weekend operating). OTHER FACULTY: Staff. LOCATION: SUMC.

OBGYN 307A. Maternal-Fetal Medicine Clerkship. 5 Units.
VISITING: Open to visitors.TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Provides a focused experience in the care of ambulatory and hospitalized high-risk obstetric patients at Stanford University Medical Center. The student serves as a sub-intern with responsibility for ongoing care of assigned patients with problem pregnancies, under the supervision of the faculty of the Division of Maternal-Fetal Medicine. Note: Visiting students must obtain approval through Gloria King, Residency Program Manager, prior to applying for this clerkship. Please e-mail requests to gking1@stanford.edu. Interested students must send their CV, USMLE score(s), current transcript and a letter of recommendation from the Ob/Gyn Clerkship Director or a faculty mentor attesting to clinical abilities (i.e. proficient H&Ps and exam skills). The letter of recommendation must be emailed to Gloria by the letter writer or their supporting administrative assistant. These must be sent at least 4-6 weeks prior to the start of the period in which the student would like to enroll. PREREQUISITES: OBGYN 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Yasser Yehia El-Sayed, M.D. CLERKSHIP COORDINATOR: Jacquie Laskey (650-725-8623), HH333. REPORTING INSTRUCTIONS: Where: F2 Conference Room, LPCH; (OB faculty member on rounds); Time: 8:00 am. CALL CODE: 2 (optional). OTHER FACULTY: Staff. LOCATION: SUMC.

OBGYN 308A. Gynecologic Oncology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 2. DESCRIPTION: Rotation where one student will function as a subintern on the gynecologic oncology service. Involves evaluation of outpatients in gynonc clinic with opportunities for extensive history and physical, review of radiologic studies. Involves care of hospitalized patients and post-operative care. Involves operating room experience in radical surgery for gynecologic cancers. Students have a multi-disciplinary exposure with teaching rounds. Presentations may be required at teaching rounds and journal clubs. Note: Visiting students must obtain approval through Gloria King, Residency Program Manager, prior to applying for this clerkship. Please e-mail requests to gking1@stanford.edu. Interested students must send their CV, USMLE score(s), current transcript and a letter of recommendation from the Ob/Gyn Clerkship Director or a faculty mentor attesting to clinical abilities (i.e. proficient H&Ps and exam skills). The letter of recommendation must be emailed to Gloria by the letter writer or their supporting administrative assistant. These must be sent at least 4-6 weeks prior to the start of the period in which the student would like to enroll. PREREQUISITES: OBGYN 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Elisabeth Diver, M.D. CLERKSHIP COORDINATOR: Helen Wong, 650-724-0456, HG332. REPORTING INSTRUCTIONS: Where: Page the gyn/onc fellow or intern (pager 12825) for reporting instructions; Time: 6:00 am. CALL CODE: 1. OTHER FACULTY: J. Berek, E. Diver, O. Dorigo, A. Karam, B. Litkouhi, N. Teng. LOCATION: SUMC.

OBGYN 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OBGYN 398A. Clinical Elective in Gynecology & Obstetrics. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides an opportunity for a student in the clinical years to have a clinical experience in one of the fields of Gynecology and Obstetrics, of a quality and duration to be decided upon by the student and a faculty preceptor in the Department of Gynecology and Obstetrics. For a clerkship experience in Prenatal Genetics and Obstetrics, please contact clinical Preceptor: Katherine Bianco, MD. Please note: Students cannot add 398A clerkships directly to their fishbowl schedules through the regular shuffles. Please contact Caroline Cheang in the Office of Medical Student Affairs at cheang@stanford.edu or 650-498-7619 with the faculty preceptor's name and email address to add this clerkship. PREREQUISITES: OBGYN 300A, consent of the designated faculty preceptor, and approval by Advisor. PERIODS AVAILABLE: 1-16, 4 students per period. CLERKSHIP DIRECTOR: Erica Wu, M.D. CLERKSHIP COORDINATOR: Amanda Garley-Reynolds (650-721-1036). REPORTING INSTRUCTIONS: Where: As soon as you are enrolled, please email Amanda Garley-Reynolds (amanda33@stanford.edu) and cc Gloria King (gking1@stanford.edu), ObGyn Residency Program Manager. If you're paired with an OBGYN preceptor, please include your preceptors name and email address; Time: TBA. CALL CODE: 2 (varies with preceptor). OTHER FACULTY: K. Bianco. LOCATION: SUMC, SCVMC.

OBGYN 399. Graduate Research in Reproductive Biology. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

PATHOLOGY

Courses offered by the Department of Pathology are listed under the subject code PATH on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PATH&filter-catalognumber-PATH=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PATH&filter-catalognumber-PATH=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PATH&filter-catalognumber-PATH=on).

Programs of Study in Pathology

The Department of Pathology offers advanced courses in aspects of pathology. The department does not offer advanced degrees in pathology, but qualified graduate students who are admitted to department-based or interdepartmental graduate programs may elect to pursue their thesis requirements in the department's research laboratories. The discipline of pathology has served as a bridge between the preclinical and clinical sciences and is focused on the application of advances in the basic biological sciences, both to the diagnosis of human disease and the elucidation of the mechanisms of normal molecular, cellular, and organ structure and function that manifest themselves in clinical disease. Accordingly, the department's research interests extend from fundamental molecular biology to clinical-pathological correlations, with an emphasis on experimental oncology.

Investigation in the department includes basic studies in areas using molecular biological, biochemical, and genetic cell biological techniques: DNA replication in yeast and cultured eukaryotic cells, cell cycle control in animal cells and yeast, identification and pathogenetic role of chromosomal aberrations in human malignancies and mechanisms of activation of oncogenes in human and animal cells, lymphocyte and neutrophil-interactions with endothelial cells, cell type specification and signal transduction pathways leading to specific gene expression or modulation of cytoskeletal behavior; cytoskeletal architecture, cell-matrix interaction, developmental biology of hematopoietic stem cells and thymus, regulation of the immune system, mechanisms of immune and other responses in the central nervous system, and neuro-degenerative diseases. Various studies focus on the development of novel diagnostic and immunotherapeutic treatment modalities and techniques for solid tumors, lymphomas, HIV, and genetic diseases. Research training in all of these areas is available for qualified medical and graduate students by individual arrangement with the appropriate faculty member.

A summary of the research interests of the department faculty is available at Sanford's School of Medicine (http://pathology.stanford.edu) web site.

Emeriti: (Professor) Ellen Jo Baron, Susan Galel, Sharon Geaghan, Michael Hendrickson, Richard L. Kempson, Jon Kosek, Roger Warnke

Chair: Stephen J. Galli

Professors: Daniel Arber, Jeffrey D. Axelrod, Gerald J. Berry, Matt Bogyo, Eugene C. Butcher, Athena Cherry, Michael L. Cleary, Gerald R. Crabtree, Edgar G. Engleman, Dean Felsher, Marcelo Fernandez-Vina, Andrew Fire, Steven Foung, Stephen J. Galli, Lawrence Tim Goodnough, John Higgins, Neeraja Kambham, Christina Kong, Teri Longacre, Joseph S. Lipsick, Bingwei Lu, Sara Michie, Yasodha Natkunam, Donald P. Regula, Robert V. Rouse, Kang Shen, Iris Schrijver, Hua Shan, Richard K. Sibley, Raymond Sobel, Dolly Tyan, Matt van de Rijn, Hannes Vogel, Irving L. Weissman, Eduardo Zambano, James Zehnder

Associate Professors: Kim Allison, Jeffrey D. Axelrod, Matt Bogyo, Niaz Banaie, Andrew Connolly, Tina Cowan, Jonathan R. Pollack, Arend Sidow, Marius Wernig, Robert West

Assistant Professors: Sean Bendall, Scott Boyd, Ann Folkins, Isabella Graef, Dita Gratzinger, F. Kim Hazard, Kristin Jensen, Chia-Sui Kao, Jinah Kim, Jason Merker, Stephen Montgomery, Robert Ohgami, Benjamin Pinsky, Ed Plowey, Erich Schwartz, Gerlinde Wernig, Monte Winslow, Ellen Yeh

Courtesy Professors: Donna Bouley, John Day, Bertil Glader

Courtesy Associate Professor: Euan Ashley, Robert Shafer

Courtesy Assistant Professor: Michaela Liedtke, Michelle Monje-Deisseroth

Clinician Educators: Jennifer Andrews, Raffick Bowen, Susan Atwater, David Bingham, Brittany Holmes, Christian Kunder, Steven Long, Melanie Manning, Roberto Novoa, David Oh, Tho Pham, Kerri Rieger, Matthew Rumery, Darren Salmi, Neil Shah, Run Shi, Carlos Suarez, Brent Tan, Eric Yang

Instructors: Mike Angelo, Joseph Hernandez, Marisa Juntilla, Franklin Mullins, Justin Odegaard, Riccardo Sibliano, Albert Tsai, Kitchener Wilson

Adjunct Clinical Faculty: Swaroop Aradhya, Robert Archibald, Jerome S. Burke, Glenn Cockerham, Seth Haber, Maie K. Herrick, Paul W. Herrmann, Michelle Jorden, Charles Lombard, Robert Luo, Gregory Moes, Joseph O'Hara, William Rueh, Matrina Schmidt, Thomas W. Rogers

Clinical Educators (Affiliated): Melissa Clark, Dean Fong, Barbara Egbert

Courses

PATH 21N. The Living Genome: Implications for Biology and Beyond. 3 Units.
IntroSem with Freshmen preference. The human genome carries the instructions for normal human development and reproduction. But it also carries predispositions to disease and clues to our evolution, ancestry, and identity. The genome may also be pliable to environmental influences and genetic engineering. Through directed readings, discussion, and activities, students will learn about the human genome and applications of genome science and technology across diverse disciplines including medicine, comparative biology, evolutionary biology, paternity testing, and forensics. The broad goal is to become informed and engaged about genome science and its implications for both the individual and society. Prerequisites: High School Biology.

PATH 101. Cancer Biology. 4 Units.
Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.
Same as: CBIO 101

PATH 103Q. Lymphocyte Migration. 1 Unit.
Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

PATH 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

PATH 213. Gross Autopsy Pathology Laboratory. 2-3 Units.
Examine/discuss unfixed dissected organs from current autopsies and correlate morphologic findings with the clinical history. Students view postmortem examinations and may participate (in a small group) in one postmortem examination with the assistance of residents and staff, and present the case to the class. Class scheduling is flexible. Additional unit for participation in a postmortem examination. Class may not be repeated. Concurrent enrollment in INDE223 required.

PATH 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.
Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.
Same as: GENE 218, MI 218

PATH 240. Clinical Studies in Pathology I. 3-9 Units.
A broad exposure to the practice of pathology in an academic medical center. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosections and formulate final anatomic diagnoses under the supervision of faculty. This course must be combined with Clinical Studies in Pathology II, and two additional quarters of PATH 399, Directed Research, to fulfill a 12 month Post-Sophomore year Fellowship in Pathology. Prerequisite: MD candidate; instructor consent.

PATH 241. Clinical Studies in Pathology II. 3-9 Units.
An in-depth exposure to the practice of pathology for students who have completed Clinical Studies in Pathology I. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in sub-specialty areas of pathology that include dermatopatholgy, neuropathology, renal pathology, lymph node pathology or cytology. This course must be combined with Clinical Studies in Pathology I and two additional quarters of PATH 399, Directed Research, to fulfill a 12-month Post-Sophomore year Fellowship in Pathology. Prerequisite: consent of instructor and successful completion of Clinical Studies in Pathology I (PATH 240).

PATH 280. Early Clinical Experience in Pathology. 1-2 Unit.
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

PATH 290. Pediatric Nonmalignant Hematology and Stem Cell Biology. 2 Units.
Pediatric hematologic disorders provide an important paradigm to study other developmental systems. Subjects covered include hematopoiesis, basic stem cell biology, endothelial cell development, alternative models to study nonmalignant hematology and stem cell biology (zebrafish and drosophila), defects in white cell function, basic research in stem cell transplantation, state of the art methods in nonmalignant hematology and stem cell biology (genomics, proteomics, and gene therapy), and bioinformatics. The course is also open to graduate students and junior and senior undergraduate students who are pre-med.

PATH 299. Directed Reading in Pathology. 1-18 Unit.
Prerequisite: consent of instructor.

PATH 302A. Pathology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: The purpose of this clerkship is to introduce students to pathology clinical services. The clerkship is customizable based on student interests, with experiences on services in both anatomic and clinical pathology or just one of these fields. For students contemplating a career in pathology, this clerkship provides an excellent opportunity for exposure to the field and to the residency program in pathology at Stanford. Students interested in other fields will learn how pathology interfaces with other areas in medicine, as well as the basic sciences. Student rotations are typically by week on a specific service. Anatomic Pathology services include surgical pathology subspecialties (breast, CT/ENT, GYN, GI, Pediatric, Bone/Soft tissue and GU pathology), intra-operative consultation/frozens service, cytopathology, dermatopathology, neuropathology, hematopathology and autopsy. Clinical Pathology services include hematology, coagulation, transfusion medicine, chemistry/immunology, biochemical genetics, cytogenetics, microbiology/virology, and molecular diagnostics. Exposure to some services may be limited based on service specific scheduling. Students are expected to work-up cases and review findings with faculty at signout times. Occasional presentations on educational cases/topics are also sometimes a component of the clerkship depending on rotation/service. AP rotations may require handing gross specimens and learning the basics of gross dissection for pathology diagnosis (with supervision). Attendance at pathology conferences is an essential part of the clerkship. Internal Rotators: please download the Department of Pathology Clerkship Application and return to pathology clerkship coordinator as soon as your registration is complete, or you receive an approval from the program director. Visiting Rotators: must complete the Department of Pathology Clerkship Application at: http://med.stanford.edu/pathology/education.html and submit for approval to the clerkship coordinator, prior to applying for this course. Score Program: This clerkship participates in the SCORE program, a diversity promotion program run by the Stanford Clerkship Office that provides other support for outside rotators. Please note that if you are a visiting student and a minority, you may qualify for this program. Please see the following for further details: https://med.stanford.edu/clerkships/score-program.html. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, full-time for three weeks, 4 students per period (location and rotation dependent). CLERKSHIP DIRECTOR: Kimberly H Allison, M.D. (650-723-7211 or 650-498-6460), John Higgins, M.D. (650-724-4340) Niaz Banaei, M.D. (650-736-8052). CLERKSHIP COORDINATOR: Gabby Barela, 650-721-5755, gbarela@stanford.edu, Markell Stine, 650-497-6371, markell@stanford.edu. REPORTING INSTRUCTIONS: Where: will be arranged by Chief Resident; Time: 8:00 am. CALL CODE: 2 (weekend review of cases for Monday morning signout). OTHER FACULTY: G. Berry, T. Longacre, B. Howitt, G. Bean, M. Van de Rijn, C. Kong, N. Kambham, M. Troxell, D. Bingham, H. Vogel, R. Sibley, K. Hazard, A. Folkins, R. West, T. Cowan, T. Cherry, J. Zehnder, Y. Natkunam, B. Pinsky, CJ. Suarez, N. Shah, M. Virk, H. Shan, D. Gratzinger, J. Oak, S. Fernandez-Pol, B. Tan, C. Kunder, R. Bowen, J. Kurzer, T. Goodnough, K. Jensen. LOCATION: SHC, LPCH, PAVMC.

PATH 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PATH 398A. Clinical Elective in Pathology. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides an opportunity for a student in the clinical years to have an in-depth experience in one of the fields of Pathology, of a quality and duration to decide upon by the student and a faculty preceptor in the Department of Pathology. Please note: Students cannot add 398A clerkships directly to their fishbowl schedules through the regular shuffles. Please contact Caroline Cheang in the Office of Medical Student Affairs at cheang@stanford.edu or 650-498-7619 with the faculty preceptors name and email address to add this clerkship. Please note: INTERNAL ROTATORS: please download the Department of Pathology Clerkship Application at: http://med.stanford.edu/pathology/education.html and return to pathology clerkship coordinator as soon as your registration is complete, or you receive an approval from the program director. VISITING ROTATORS: must complete the Department of Pathology Clerkship Application at: http://med.stanford.edu/pathology/education.html and submit for approval to the clerkship coordinator, prior to applying for this course. PREREQUISITES: None. PERIODS AVAILABLE: 1-16, 2 students per period. CLERKSHIP DIRECTOR: Kimberly Allison, M.D. CLERKSHIP COORDINATOR: Gabby Barela, 650-721-5755, gbarela@stanford.edu. REPORTING INSTRUCTIONS: Where: TBA (designated faculty preceptor); Time: TBA. CALL CODE: 2 (varies according to preceptor). OTHER FACULTY: Staff. LOCATION: SHC.

PATH 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Opportunities at the molecular, cellular, and clinicopathologic levels. Prerequisite: consent of instructor.

PHYSICIAN ASSISTANT STUDIES

Courses offered by the Master of Science in Physician Assistant Studies program are listed under the subject code PAS (https://explorecourses.stanford.edu/search/?view=catalog&academicYear=&page=0&q=PAS&filter-departmentcode-PAS=on&filter-coursestatus-Active=on) on the Stanford Bulletin's Explore Courses website.

The Master of Science (M.S.) in Physician Assistant Studies, or MSPA, program is a 9-quarter program (with one summer break) that includes streamlined courses with innovative content delivery, a state-of-the-art simulation lab, and world-class clinical anatomy experiences as well as early exposure to patient care. Students receive mentorship and support in their academic and research focus areas by clinically practicing Stanford PAs. During the didactic work, PA students are located at the School of Medicine and enroll as a cohort in a clinically focused curriculum. A substantial portion of their courses are integrated with medical students, allowing for an invaluable interprofessional education experience. During their clerkship year, students rotate through Stanford-affiliated hospitals and ambulatory practices as well as select sites throughout California. In an innovative approach to PA education that encourages the next generation of PA leaders, students are required to select one leadership track and complete a capstone project in that area. The leadership tracks include:

- Community Health
- Health Services and Policy Research
- Clinical Research
- Medical Education
- Healthcare Administration

Upon completion of this program, students are prepared to sit for the Physician Assistant National Certification Examination (PANCE).

The Master of Science in Physician Assistant Studies program is open to external as well as internal applicants. Advanced placement and coterminal degrees for Stanford University undergraduates are not available at this time. Individuals who wish to apply to the program should do so via the Central Application Service for Physician Assistants (CASPA) (https://caspa.liaisoncas.com). The application window typically opens at the end of April and closes on August 1, though the deadline has been extended to October 1 for the 2020 application cycle only. GRE scores *or* MCAT scores are typically required, though this requirement is being waived for the 2020 application cycle. The CASPer exam (https://takecasper.com) is also required, and this requirement has not been waived for the 2020 cycle. An undergraduate degree from a regionally accredited US educational institution is required; applicants with a graduate degree from a regionally accredited U.S. academic institution **and** an equivalent undergraduate degree (see required minimum level of study (https://gradadmissions.stanford.edu/applying/international-applicants/)) from a recognized academic institution outside the U.S. are also eligible to apply. For detailed information on applying, please visit the Admissions section (http://med.stanford.edu/pa/admissions.html) of our website.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Master of Science in Physician Assistant Studies

The Master of Science (M.S) in Physician Assistant (PA) Studies program is for individuals who wish to pursue a career as a PA. The program is available to external and internal candidates. Advanced placement and coterminal degrees for Stanford University undergraduates are not available at this time.

The first five quarters of the nine quarter program involve acquiring fundamental medical knowledge through coursework in clinical anatomy, the basic sciences, pharmacology, and pathophysiology and disease management, as well as attaining core skills in medical interviewing and the physical examination. The last four quarters of the program are dedicated to experiential learning through clinical rotations in inpatient and outpatient medicine, pediatrics, women's health, emergency medicine, surgery, and behavioral medicine, as well as elective rotations.

Admission

- Applicants must have received an undergraduate degree from a regionally accredited U.S. college or university (or a graduate degree from a regionally accredited U.S. academic institution **and** an equivalent undergraduate degree from a recognized academic institution outside the U.S.) by July 15 of the year of matriculation; no specific discipline or major is prescribed.
- Prior healthcare experience (> 500 hours) through either prior employment and/or volunteer work is strongly recommended.
- The Graduate Record Examination (GRE) or the MCAT is required, though this requirement is being waived and changed to a recommendation for the 2020 application cycle. Note that GRE scores are only valid for five years and must be current at the time of application.
- Candidates are required to submit two personal statements of no more than 2,000 characters and three letters of reference as part of the application process via CASPA (https://caspa.liaisoncas.com/).
- Candidates are also required to answer questions in CASPA (https://caspa.liaisoncas.com/) specifically designed for the Stanford School of Medicine M.S. in PA Studies program. The questions relate to future PA practice, leadership potential, leadership track, and contributions to diversity. There is no supplemental application.

It is strongly recommended that students complete the following coursework prior to applying to the program:

- Anatomy
- Physiology
- Chemistry
- General Statistics or Biostatistics
- Psychology

Three upper-division science courses (e.g., in cell biology, genetics, or microbiology) are recommended before matriculation.

Degree Requirements

All students in the program must complete the Master of Science in PA Studies program core curriculum (182 units) and additional work in a leadership track (~6 units).

Upon completion of the didactic coursework (5 quarters), students begin 12 months of clinical clerkship within the Stanford Health Care community and in other select clinical sites.

Students must choose a leadership track from the following:

- Community Health
- Health Services and Policy Research
- Clinical Research

- Medical Education
- Healthcare Administration

All students must complete a capstone project in their leadership track.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The MSPA program has not changed its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21.

Graduate Advising Expectations

The Master of Science in Physician Assistant Studies program is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, development of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Leadership

Associate Dean for PA Education and Program Director: Susan Fernandes
Associate Program Director: Rhonda Larsen
Medical Director: Andrew Nevins
Associate Medical Director: Ian Nelligan

Core Faculty

Director of Pre-Clerkship Education: Nicole Burwell
Director of Clerkship Education: Kendra Patton Silverman
Director of Student Scholarship: Michele Toussaint
Clinical Site Director - Central Valley: Sampath (Sam) Wijesinghe

Educators for Care PA (E4C-PA) Faculty

Lead E4C-PA: Courtney Nelson

Chad Anderson
Camille Bloom
Andrea Fox
Jennifer Hunter
Rochelle Reyes
Hannah Wright

Courses

PAS 201. Foundations of Clinical Medicine. 4 Units.
This course explores fundamental concepts of biochemistry, genetics, microbiology, and immunology as applied to clinical medicine in a mostly "flipped classroom" format. This course will help to establish a foundation for understanding the pathophysiology of disease and the targets for therapeutic interventions. Disciple-specific topics include: Biochemistry: thermodynamics, enzyme kinetics, vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metaboloic pathways. Genetics: basic principles of inheritance and risk assessment, illustrated with the use of clinical examples from many areas of medicine including prenatal, pediatric, adult and cancer genetics. Microbiology: Basic bacteriology, virology, mycology and parasitology, including pathogenesis and clinical scenarios associated with infectious diseases. Immunology: concepts and applications of adaptive and innate immunity and the role of the immune system in human disease.

PAS 202. Foundations of Clinical Neurosciences. 2 Units.
Foundations of Clinical Neurosciences introduces students to the structure and function of the nervous system, including neuroanatomy and neurophysiology. Applications to clinical medicine and neurology are emphasized. Enrollment limited to Master of Science in Physician Assistant Studies students. Prerequisite: PAS 201.

PAS 212. Principles of Clinical Medicine I. 8 Units.
This is the first in a four-course sequence presenting organ-system based physiology, pathology and pathophysiology. Each organ-specific block includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease, and how diseases of that organ system are treated. In PAS 212, the focus us on the structure, function, disease and corresponding therapeutics of several "primary care" topics, particularly the musuloskeletal and dermatologic systems. In addition, basic neurology otorhinolargyngology, and ophthalmology will be covered.

PAS 213. Principles of Clinical Medicine II. 10 Units.
This is the second in a four-course sequence presenting organ-system based physiology, pathology and pathophysiology. Each organ-specific block includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease, and how diseases of that organ system are treated. In PAS 213, the focus is on the structure, function, disease, and corresponding therapeutics of the pulmonary and cardiovascular systems.

PAS 214. Principles of Clinical Medicine III. 12 Units.
This is the third in a four-course sequence presenting organ-system based physiology, pathology, and pathophysiology. Each organ-specific block includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease, and how diseases of that organ system are treated. In PAS 213, the focus is on the structure, function, disease, and corresponding therapeutics of the Renal, Gastroenterology, Endocrine and Reproductive Health systems.

PAS 215. Principles of Clinical Medicine IV. 10 Units.
This is the fourth in a four-course sequence presenting organ-system based physiology, pathology, and pathophysiology. Each organ-specific block includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease, and how diseases of that organ system are treated. In PAS 214, the focus is on the structure, function, disease, and corresponding therapeutics of the Neurologic, Psychiatric, Hematologic, Oncologic, and Autoimmune/Rheumatologic systems.

PAS 222. Clinical Therapeutics I. 2 Units.
This course will provide a foundation for learning pharmaceutical therapies related to subjects covered in the Principles of Clinical Medicine I course. In addition to general pharmacokinetic principles, the first segment of the course will cover the use of drugs applied to the skin and topical and systemically administered drugs for dermatologic diseases. Pharmacology of the autonomic nervous system, both sympathetic and parasympathetic divisions, will be overviewed in addition to gaining an understanding of how drug manipulation on cholinergic and adrenergic receptors modulate nerve activity. The course will conclude with an examination of drugs acting on the allergenic and pathogenic pathways as they pertain to ENT conditions.

PAS 223. Clinical Therapeutics II. 2 Units.
This course will provide students a detailed comprehension of drug mechanisms and clinical drug therapies for cardiovascular and pulmonary diseases as covered in the Principles of Clinical Medicine II course. The course will examine anti-hypertensive agents, drugs used for cardiovascular therapies. Clinical treatment for common pulmonary diseases including emphysema and asthma, in addition to the pharmacology of medications including bronchodilators and anti-inflammatory drugs will be discussed.

PAS 224. Clinical Therapeutics III. 3 Units.
This is the third course of a 4-part series focused on pharmacology and clinical therapeutics with topics related to subjects covered in the Principles of Clinical Medicine III course. Topics will include renal, gastrointestinal, endocrine, and men¿s/women¿s health. The pharmacology component will focus on mechanism of action, clinical use, contraindications, adverse reactions, and clinically significant drug interactions of various drug classes. The clinical therapeutics component will focus on medical management of diseases with an emphasis on patient specific drug management.

PAS 225. Clinical Therapeutics IV. 2 Units.
This is the fourth course of a 4-part series focused on pharmacology and clinical therapeutics with topics related to subjects covered in the Principles of Clinical Medicine IV course. Topics will include neurology, psychiatry, oncology, and rheumatology. The pharmacology component will focus on mechanism of action, clinical use, contraindications, adverse reactions, and clinically significant drug interactions of various drug classes. The clinical therapeutics component will focus on medical management of diseases with an emphasis on patient specific drug management.

PAS 251. Design and Conduct of Clinical and Epidemiological Studies. 3-4 Units.
Intermediate Level. The skills to design, carry out, and interpret epidemiological studies, particularly of chronic diseases. Topics: epidemiologic concepts, sources of data, cohort studies, case-control studies, cross-sectional studies, sampling, measures of association, estimating sample size, and sources of bias. Prerequisite: A basic/introductory course in statistics or consent of instructor.

PAS 255. Introduction to Qualitative Research I. 2 Units.
This course will provide the physician assistant student with an introduction to qualitative manuscripts, describing types of qualitative research methods, and discussing their own tentative qualitative research questions/designs.Prerequisites: Enrollment in the Master of Science in Physician Assistant Studies program.

PAS 256. Introduction to Qualitative Research II. 2 Units.
This course will provide the physician assistant students with an introduction to qualitative research methods, specifically data analysis, with significant time focused on thematic analysis coding. Prerequisites: successful completion of PAS 255.

PAS 282. AHEC Scholars Program. 2 Units.
Acceptance into the AHEC Scholars Program.

PAS 291. PAs in Health Care I: Introduction to the Profession. 1 Unit.
This course provides an overview of the PA profession. The first portion of the course covers the history of the PA profession, the role of the PA within the health care team, and an overview of the laws, regulations and committees that provide oversight to the profession. The second portion of the course focuses on health disparities, social determinants of health and undeserved communities, and the role of the PA in the care of these populations. It includes development of the awareness, knowledge, and skills needed in order to practice culturally competent and sensitive health care.

PAS 292. PAs in Health Care II: Introduction to Advanced Skill Training for PAs. 2 Units.
The PAs in Health Care II: Introduction to Advanced Skill Training for PAs course will focus on advanced clinical skills including basic and advanced cardiac life support, imaging skills and interpretation along with additional proceduralnskills in preparation for clerkships.

PAS 293. PAs in Health Care III: Transition to Clerkships. 2 Units.
The PAs in Health Care III course provides the skills necessary for a smooth transition from didactic learning to clerkship experiences. The first portion will focus on clerkship expectations, the PA student role as a member of the health care team, avoiding medical errors, and improving quality. Advanced skill training will also be included such as vascular line and chest tube placement, advanced suturing, and intubation.

PAS 294. PAs in Healthcare IV: Leadership, Advocacy, and Preparation for Practice. 1 Unit.
The final course in the PAs in Health Care series will provide students with the skills necessary for transition from PA student to practicing PA and will continue to expand on leadership skills. One portion of the course will focus on preparation from the transition to clinical practice, which will include requirements for licensure and certification, medical liability, and ethics. Another thread will consist of lectures on advanced and novel topics in medicine. Additionally, there will be a thread for development of leadership skills and advocacy. The culmination of the Capstone research project will also occur during this course.

PAS 299. Directed Reading in PA Studies. 1-10 Unit.
Students organize an individualized study program in physician assistant studies. Prerequisites: Successful completion of PAS 214.

PAS 301. Internal Medicine Clerkship I. 6 Units.
Teaches the natural history, pathophysiology, diagnosis, and treatment of a wide range of medical illnesses. Emphasis is placed on acquiring the understanding, skills, and attitudes desirable in a scientific and compassionate PA. Students will perform histories and physical examinations, identify appropriate orders, order and interpret appropriate diagnostics studies to develop a differential diagnosis, and interpret information gathered from the patient assessment data to formulate a patient-centered treatment plan. Developing sound clinical reasoning skills is continuously emphasized. Students will be able to provide an accurate verbal presentation to the rotation preceptor, counsel patients about therapeutic procedures; and help to coordinate medical consultations by sub-specialty providers as needed to take appropriate care. Students will follow the progress of patients through their hospitalization, write a note appropriate for the patient¿s medical record and develop a discharge plan. Students will attend and participate in medical rounds and conferences.

PAS 302. Internal Medicine Clerkship II. 6 Units.
Teaches the natural history, pathophysiology, diagnosis, and treatment of a wide range of medical illnesses. Emphasis is placed on acquiring the understanding, skills, and attitudes desirable in a scientific and compassionate PA. Students will perform histories and physical examinations, identify appropriate orders, order and interpret appropriate diagnostics studies to develop a differential diagnosis, and interpret information gathered from the patient assessment data to formulate a patient-centered treatment plan. Developing sound clinical reasoning skills is continuously emphasized. Students will be able to provide an accurate verbal presentation to the rotation preceptor, counsel patients about therapeutic procedures; and help to coordinate medical consultations by subspecialty providers as needed to take appropriate care. Students will follow the progress of patients through their hospitalization, write a note appropriate for the patient¿s medical record and develop a discharge plan. Students will attend and participate in medical rounds and conferences.

PAS 303. Primary Care I. 6 Units.
During the outpatient medicine rotation students will be involved in the initial and ongoing assessment of patients in all age groups. In addition to routine health maintenance, students will become familiar with common primary care and urgent care problems. Students will be responsible for taking medical histories, performing physical examinations, ordering appropriate diagnostic testing, interpreting results and forming a plan. The student will provide an accurate, pertinent and time-effective verbal presentation to the rotation preceptor and will write an accurate note suitable for inclusion in the patient's medical record. Patient education, counseling, and coordination of additional resources for patient care will also be included. The outpatient medicine rotations may take place in private offices, family practices, urgent care clinics, hospitals, or other ambulatory care clinics.

PAS 304. Primary Care II. 6 Units.
During the outpatient medicine rotation students will be involved in the initial and ongoing assessment of patients in all age groups. In addition to routine health maintenance, students will become familiar with common primary care and urgent care problems. Students will be responsible for taking medical histories, performing physical examinations, ordering appropriate diagnostic testing, interpreting results and forming a plan. The student will provide an accurate, pertinent and time-effective verbal presentation to the rotation preceptor and will write an accurate note suitable for inclusion in the patient's medical record. Patient education, counseling, and coordination of additional resources for patient care will also be included. The outpatient medicine rotations may take place in private offices, family practices, urgent care clinics, hospitals, or other ambulatory care clinics.

PAS 311. Pediatrics. 6 Units.
The Pediatrics rotation will take place in outpatient pediatric clinics and private pediatric offices. The clerkship provides an introduction to a wide range of clinical problems in pediatrics and arms students with the basic skills needed to work with children and families. The rotation will emphasize caring for a child from birth through late adolescence. Students will assess, evaluate and develop a patient-centered treatment plan according to published guidelines when appropriate. Students will provide an accurate verbal presentation to the rotation preceptor and write an accurate note suitable for inclusion in the patient's medical record. The rotation will stress diagnosis and treatment of common childhood illnesses and assessment of growth and development. Students will develop skills to counsel parents about well-visits, immunizations, nutrition, growth and development.

PAS 320. Surgery. 6 Units.
Provides PA students with clinical experience in the evaluation and treatment of a wide variety of surgical diseases. Emphasis is placed on teaching students to recognize and manage basic clinical problems. As members of the surgical team, students participate in preoperative management, including patient education and procedures necessary to prepare patients for surgery. Students will perform admitting histories and physical examinations, identify appropriate admitting orders for surgical patients and identify appropriate diagnostic studies required prior to surgical procedures. In the operating room setting, students will assist surgeons and have an opportunity to become familiar with protocols and equipment. Students will be involved in pre-operative, intra-operative and post-operative care. The clerkship offers an opportunity for students to integrate their knowledge of anatomy, physiology and physical diagnosis into a treatment plan for patients with surgical diseases. When possible, students attend surgical grand rounds and other surgically-oriented conferences.

PAS 321. Emergency Medicine. 6 Units.
Provides students with exposure to common problems encountered in an emergency room setting. Students will be responsible for taking medical histories, performing physical examinations, ordering and interpreting appropriate diagnostic testing, performing diagnostic and therapeutic procedures as needed under appropriate supervision, and forming a patient-centered care plan for patients seen for emergent and non-emergent issues. The student will provide an accurate, pertinent and time-effective verbal presentation to the rotation preceptor and will write an accurate note suitable for inclusion in the patient's medical record. Students will identify criteria for hospital admission and coordinate the admission to the appropriate setting and service. During the Emergency Medicine rotation students may also be exposed to patients with life-threatening conditions such as cardiac/respiratory failure, trauma, shock, overdose, poisoning, allergic reactions, seizures.

PAS 331. Women's Health. 6 Units.
Provides the student with skills and knowledge needed to care for patients with common gynecological problems, the well-woman examination, and pregnancy from prenatal care through delivery and postpartum. As an active member of the obstetrical and gynecological care team, students will be exposed to a wide range of common gynecological problems. They will perform histories and physical examinations, order and interpret diagnostic testing, and formulate a patient- centered treatment plan. Emphasis is placed on history and physical examination skills in the evaluation and management of pregnancy, vaginal delivery, and both office gynecology and gynecologic surgical procedures through exposure to patients in the outpatient clinics, Labor and Delivery, and the operating room. They will learn the role of a surgical assistant for gynecologic procedures and how to counsel patients on family planning and contraception. For obstetrical patients, students will develop prenatal plans for uncomplicated pregnancies, assist with deliveries and develop skills to supervise and manage labor and delivery in an emergency situation.

PAS 336. Behavioral Medicine. 6 Units.
Provides students with exposure to a wide range of mental health issues in hospital and/or clinic-based settings. The clerkship is designed to solidify the knowledge of psychiatry that students have acquired in the Practice of Medicine course, as students gain practical skills in the application of this knowledge to clinical situations. Students will perform thorough histories including a mental status examination and will use tools for cognitive testing, order appropriate diagnostic studies, interpret information gathered from patient assessment data, and formulate a patient-centered treatment plan including pharmacological treatment when appropriate. The course will also offer an overview of psychosocial and biological treatment modalities for the major psychiatric disorders. Students will be required to recognize the various types of mental health issues that require referral to a specialist and to know which mental health problems can be handled by the non-specialist.

PAS 351. MSPA Elective I. 6 Units.

.

PAS 352. MSPA Elective II. 6 Units.

.

PAS 353. MSPA Elective III. 6 Units.

.

PAS 399. Directed Reading in PA Studies. 1-10 Unit.
Students organize an individualized study program in physician assistant studies.

RADIATION ONCOLOGY

Courses offered by the Department of Radiation Oncology are listed under the subject code RADO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RADO&filter-catalognumber-RADO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RADO&filter-catalognumber-RADO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RADO&filter-catalognumber-RADO=on).

Radiation Oncology focuses on the use of radiation for cancer therapy and research. The department does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Graduate students in Biophysics and Cancer Biology may perform their thesis research in the department. Undergraduates may arrange individual research projects under supervision of faculty.

At the present time, the major areas of basic research investigation in the department include: DNA repair in mammalian cells after ionizing irradiation; studies of the mechanism of tumor hypoxia in animal tumors; development of new anti-cancer drugs to exploit tumor hypoxia; cytogenetic and molecular methods of predicting the sensitivity of individual tumors to cancer therapy; radiolabeled monoclonal antibodies for cancer detection and treatment; studies of oxygen levels in human tumors using polarographic electrodes; clinical trials of a new hypoxic cytotoxic agent (tirapazamine); studies of the late effects of cancer therapy; and techniques of conformal and intensity modulated radiation therapy.

Faculty

Emeriti: Malcolm A. Bagshaw, Peter Fessenden, Don R. Goffinet, George M. Hahn, Kendric Smith

Chair: Richard T. Hoppe

Professors: J. Martin Brown, Sarah S. Donaldson, Amato J. Giaccia, Steven L. Hancock, Richard T. Hoppe, Quynh-Thu Le, Daniel S. Kapp, Steven A. Liebel

Associate Professors: Iris C. Gibbs, Paul Keall, Christopher R. King, Susan J. Knox, Gary Luxton, Lei Xing

Assistant Professors: Laura Attardi, Daniel Chang, Nicholas Denko, Edward Graves, Albert C. Koong

Consulting Professor: Robert M. Sutherland

Courses

RADO 101. Readings in Radiation Biology. 1-18 Unit.

.

RADO 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RADO 202. The Basic Science of Radiation and Cancer Biology. 1 Unit.
For residents or fellows in the training program in the Division of Radiation Therapy, and for interested medical students. Basic processes of radiation biology that underly the treatment of malignant diseases by radiation. Carcinogenesis and mutagenesis by radiation are also covered. Prerequisite: familiarity with cell biology and physiology; consent of instructor.

RADO 203. Perspectives on Clinical Research. 1 Unit.
This is an introductory seminar that introduces goals and methods of clinical research to first-year medical students and undergraduates interested in clinical research. The course will consist of a speaker series of clinical researchers and statisticians. Students will also have the opportunity to participate in research projects utilizing methods taught in class.

RADO 210. Current Topics in Oncology. 1 Unit.
Student lead: This is a lunch seminar introducing preclinical students to current topics in oncology, including research, ethics, clinical care, health policies, humanities, etc. Speakers will come from multiple areas of cancer care, research and industry.

RADO 244. Program in Radiation Biology Seminar Series. 1 Unit.
Open to graduate and undergraduate students. Current research in radiation and cancer biology summarized by two laboratories.

RADO 280. Early Clinical Experience in Radiation Oncology. 1-2 Unit.
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

RADO 299. Directed Reading in Radiation Oncology. 1-18 Unit.
Prerequisite: consent of instructor.

RADO 300A. Radiation Oncology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: The Stanford Department of Radiation Oncology welcomes 3rd and 4th year medical students. THIS ROTATION IS CURRENTLY OFFERED IN A COMPLETELY VIRTUAL ENVIRONMENT. During this rotation, students will be exposed to different radiation oncology topics including history of radiation oncology, basic principles of radiation physics and radiation/cancer biology, radiation treatment planning and work-up and management of a broad range of malignant conditions. Students will participate in didactic Zoom sessions with faculty and residents and attend virtual tumor boards and chart rounds. Students will work with faculty in virtual clinic and be expected to work up patients and present cases to faculty. Students will also be exposed to radiation treatment planning. At the end of the rotation, students will be expected to give a talk over Zoom on a topic of their choosing to the department. PREREQUISITES: MED 300A and/or SURG 300A. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 4 students per period. CLERKSHIP DIRECTOR: Erqi Pollom, M.D., MS. CLERKSHIP COORDINATOR: Jessica Frank, 650-724-7673, jefrank@stanford.edu. REPORTING INSTRUCTIONS: Where: Contact Jessica Frank at jefrank@stanford.edu, 650-724-7673 for time and location; Time: TBA. CALL CODE: 0. OTHER FACULTY: Staff. LOCATION: SUMC.

RADO 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

RADO 398A. Clinical Elective in Radiation Oncology. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides an opportunity for a student in the clinical years to have an in-depth clinical experience in Radiation Therapy, of a quality and duration to be decided upon by the student and a faculty preceptor in the Department of Radiation Oncology to build on the RADO 300A experience. Please note: Students cannot add 398A clerkships directly to their fishbowl schedules through the regular shuffles. Please contact Caroline Cheang in the Office of Medical Student Affairs at cheang@stanford.edu or 650-498-7619 with the faculty preceptor's name and email address to add this clerkship. PREREQUISITES: RADO 300A and permission from the Program Director. PERIODS AVAILABLE: 1-16, full time for 3 weeks, 4 students per period. CLERKSHIP DIRECTOR: Erqi Pollom, M.D., MS. CLERKSHIP COORDINATOR: Jessica Frank (650-724-7673; jefrank@stanford.edu). REPORTING INSTRUCTIONS: Where: Contact Jessica Frank @ 650-724-7673 for time and location; Time: TBA. CALL CODE: 2 (varies according to preceptor). OTHER FACULTY: P. Dubrowski and staff. LOCATION: SUMC.

RADO 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RADIOLOGY

Web site: https://med.stanford.edu/radiology.html

Courses offered by the Department of Radiology are listed under the subject code RAD on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RAD&filter-catalognumber-RAD=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RAD&filter-catalognumber-RAD=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RAD&filter-catalognumber-RAD=on).

The Department of Radiology does not offer degrees. However, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Undergraduates may also arrange individual research projects under the supervision of the department's faculty. This discipline focuses on the use of radiation, ultrasound, and magnetic resonance as diagnostic, therapeutic, and research tools. The fundamental and applied research within the department reflects this broad spectrum as it relates to anatomy, pathology, physiology, and interventional procedures. Original research and development of new clinical applications in medical imaging is supported within the Radiological Sciences Laboratory.

Faculty

Emeriti: (Professors) Herbert L. Abrams, Ronald Castellino, Barton Lane, Gerald Friedland, David A. Goodwin, Michael L. Goris, Henry H. Jones, William Marshall, I. Ross McDougall, Robert E. Mindelzun, Matilde Nino-Murcia, William H. Northway, Bruce R. Parker, Lewis Wexler, Leslie M. Zatz

Chair: Sanjiv Sam Gambhir

Professors: Patgrick Barnes, Richard A. Barth, Christopher F. Beaulieu, Bruce Daniel, Huy M. Do, Michael Federle, Nancy Fischbein, Dominik Fleischmann, Sanjiv Sam Gambhir, Gabriela Gayer, Gary H. Glover, Garry E. Gold, Robert J. Herfkens, Lawrence Hofmann, Dave Hovsepian, Debra M. Ikeda, R. Brooke Jeffrey, Peter Kane, Ralph Lachman, Barton Lane, Ann Leung, Craig Levin, Michael Marks, Tarik Massoud, Michael Moseley, Peter Moskowitz, Sandy Napel, Beverley Newman, Norbert J. Pelc, Allan Reiss, Brian Rutt, George Segall, F. Graham Sommer, Daniel Spielman, Daniel Y. Sze, Volney Van Dalsem, Joseph Wu

Professor (Research): R. Kim Butts-Pauly, Sylvia Plevritis

Associate Professors: Sandip Biswal, Francis Blankenberg, Frandics P. Chan, Terry Desser, Andrei H. Iagaru, Nishita Kothary, William Kuo, David Larson, John Louie, Eric W. Olcott, Sunita Pal, Geoffrey Riley, Erika Rubesova, Kathryn J. Stevens, Shreyas Vasanawala, Dorcas Yao, Greg Zaharchuk

Associate Professors (Research): Roland Bammer, Zhen Cheng, Heike Daldrup-Link, Rebecca Fahrig, Brian Hargreaves, Sylvia Plevritis, Jianghong Rao

Assistant Professors: Robert Dodd, Pejman Ghanouni, Howard Harvin, Gloria Hwang, Aya Kamaya, Sirisha Komakula, Amelie Lutz, Payam Massaband, Erik Mittra, Zina Payman, Peter Poullos, Jianghong Rao, Daniel Rubin, Rajesh Shah, Lewis Shin, Minal Vasanawala,David Wang, Joseph Wu, Kristen Yeom, Michael Zeineh, Ashwini, Zenooz

Assistant Professors (Research): Frederick T. Chin, Parag Mallick, Jennifer McNab, David Paik, Ramasamy Paulmurugan, Sharon Pitteri

Clinical Instructors: Bao Do, H. Henry Guo, Stefan Hura, Linda Morimoto

Courses

RAD 101. Readings in Radiology Research. 1-18 Unit.
Prerequisite: consent of instructor.

RAD 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RAD 201. Introduction to Radiology. 1 Unit.
This seminar is offered to pre-clinical medical students interested in learning about how image-based anatomy can reinforce their knowledge of gross anatomy as they progress through the term. This also serves as a refresher for MSII students. Within this seminar, students will explore image findings in human anatomy in the normal and diseased state. The course will also cover when to request X-Ray, Flouroscopy, Ultrasound, CT, MRI, and Nuclear Medicine. There will be time to explore Radiology as a career choice as well as research opportunities in Radiology.

RAD 202. Introduction to Cardiac Image Processing Techniques. 1 Unit.
Student lead: This course offers a unique opportunity for students to learn about the anatomy, function and physiology of the cardiovascular system by using advanced image processing technology based on CT and MRI. Students will learn to use different clinical software to visualize and interpret 3D and 4D images and to construct patient specific that can be used for surgical planning. Image data will be presented in the context of a clinical scenario, and student will learn about the cardiovascular anatomy and the pathogenesis of the disease being presented, while they practice image interpretation and model construction. The course will be held in the 3DQ Lab.

RAD 206. Mixed-Reality in Medicine. 3 Units.
Mixed reality uses transparent displays to place virtual objects in the user's field of vision such that they can be aligned to and interact with actual objects. This has tremendous potential for medical applications. The course aims to teach the basics of mixed-reality device technology, and to directly connect engineering students to physicians for real-world applications. Student teams would compete guided assignments on developing new mixed-reality technology and a final project applying mixed-reality to solve real medical challenges. Prerequisites: (1) Programming competency in a language such as C, C++. or Python. (2) A basic signal processing course such as EE102B (Digital Signal Processing). A medical imaging course, while not required, will be helpful. Please contact the instructors with any questions about prerequisites.

RAD 220. Introduction to Imaging and Image-based Human Anatomy. 3 Units.
Focus on learning the fundamentals of each imaging modality including X-ray Imaging, Ultrasound, CT, and MRI, to learn normal human anatomy and how it appears on medical images, to learn the relative strengths of the modalities, and to answer, "What am I looking at?" Course website: http://bioe220.stanford.edu.
Same as: BIOE 220

RAD 221. Physics and Engineering of Radionuclide-based Medical Imaging. 3 Units.
Physics, instrumentation, and algorithms for radionuclide-based medical imaging, with a focus on positron emission tomography (PET) and single photon emission computed tomography (SPECT). Topics include basic physics of photon emission from the body and detection, sensors, readout and data acquisition electronics, system design, strategies for tomographic image reconstruction, system calibration and data correction algorithms, methods of image quantification, and image quality assessment, and current developments in the field. Prerequisites: A year of university-level mathematics and physics.
Same as: BIOE 221

RAD 222. Physics and Engineering Principles of Multi-modality Molecular Imaging of Living Subjects. 3-4 Units.
Physics and Engineering Principles of Multi-modality Molecular Imaging of Living Subjects (RAD 222A). Focuses on instruments, algorithms and other technologies for non-invasive imaging of molecular processes in living subjects. Introduces research and clinical molecular imaging modalities, including PET, SPECT, MRI, Ultrasound, Optics, and Photoacoustics. For each modality, lectures cover the basics of the origin and properties of imaging signal generation, instrumentation physics and engineering of signal detection, signal processing, image reconstruction, image data quantification, applications of machine learning, and applications of molecular imaging in medicine and biology research.
Same as: BIOE 222

RAD 223. Physics and Engineering of X-Ray Computed Tomography. 3 Units.
CT scanning geometries, production of x-rays, interactions of x-rays with matter, 2D and 3D CT reconstruction, image presentation, image quality performance parameters, system components, image artirfacts, radiation dose. Prerequisites: differential and integral calculus. Knowledge of Fourier transforms (EE261) recommended.
Same as: BIOE 223

RAD 224. Probes and Applications for Multi-modality Molecular Imaging of Living Subjects. 4 Units.
We will focus on design, development, and application of imaging agents that target specific cellular and molecular aspects of disease. Covers the strengths and limitations of different imaging agents and how to optimize their design for image-guided intra-operative procedures, brain imaging, probing infection, or interrogating tumor metabolism. Emphasis this year will be on clinical molecular imaging, state-of-the-art strategies for early detection of dementia, imaging response to cancer immunotherapy, and how ¿Deep Learning¿ can be used for probe design and high-throughput automated image analysis.
Same as: BIOE 224

RAD 225. Intro to Ultrasound Physics and Ultrasound Neuromodulation. 3 Units.
This course covers the basic concepts of ultrasound physics including acoustic properties of biological tissues, transducer hardware, beam formation, and beam modeling. The course will then cover basic neuronal physiology and how ultrasound can be used to affect it. It will cover how we study ultrasound neuromodulation through animal models and human studies. The course will conclude with a series of lectures on the breadth of research on ultrasonic manipulation of behavior and psychiatric disorders.Course website: http://bioe225.stanford.edu.
Same as: BIOE 225

RAD 226. MRI Spin Physics, Relaxation Theory, and Contrast Mechanisms. 3 Units.
This course covers fundamental principles of magnetic resonance imaging (MRI) and spectroscopy (MRS) focusing on the analytic tools needed to understand interactions among nuclear spins, relaxation processes, and image contrast. Starting from a quantum mechanical description of NMR, we'll study J-coupling, the most mathematically tractable coupling mechanism, and its fundamental importance in MRS. Next, we will extend these concepts to develop NMR relaxation theory, which provides the foundation for analyzing multiple in vivo MRI contrast mechanisms and contrast agents.
Same as: BIOE 226

RAD 227. Functional MRI Methods. 3 Units.
Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.
Same as: BIOE 227, BIOPHYS 227

RAD 228. Magnetic Resonance Imaging Programming Topics. 3 Units.
Primarily for students working on research projects involving MRI pulse sequence programming. Introductory and student-initiated topics in seminars and hands-on labs. Image contrast mechanisms achieved by pulse sequences that control radiofrequency and gradient magnetic fields in real time, while acquiring data in an organized manner for image reconstruction. Prerequisites: EE 369B and consent of instructor.

RAD 229. MRI Sequences and Signals. 3 Units.
Magnetic Resonance Imaging (MRI) uses sequences of radiofrequency excitation and magnetic field gradients to generate a signal and form images. Numerous common and advanced sequences will be studied, including analysis techniques to predict signal and contrast levels, and to measure and reduce unwanted image artifacts. Prerequisite: EE 369B.

RAD 230. Ultrasound Instrumentation for Imaging and Therapy. 1-2 Unit.
This course teaches the physics, materials, modeling and processing steps involved in the design and fabrication of medical ultrasound transducers for diagnostic imaging and therapeutic applications. Students will learn how to consider various tradeoffs in the design and selection of clinical probes for particular uses, and a lab activity will reinforce the fundamentals of transducers and demonstrate how to assess probe performance in the real world.

RAD 235. Advanced Ultrasound Imaging. 3 Units.
The focus of this course is on advanced ultrasound imaging techniques for medical imaging applications. Topics include beamforming, adaptive beamforming, Fourier beamforming, synthetic aperture techniques, speckle, speckle reduction, k-space, harmonic imaging, coherence imaging, phase aberration, radiation force imaging, elastography, quantitative ultrasound, Doppler and flow imaging, ultrasounds modeling and advanced ultrasound theory.

RAD 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.
The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab or Python highly recommended.
Same as: BIOMEDIN 260, CS 235

RAD 280. Early Clinical Experience in Radiology. 1-2 Unit.
Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

RAD 299. Directed Reading in Radiology. 1-18 Unit.
Prerequisite: consent of instructor.

RAD 301A. Diagnostic Radiology and Nuclear Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Selective 1. DESCRIPTION: This clerkship is currently offered in a completely virtual environment. This is the core radiology clerkship designed for students going into any medical subspecialty, including radiology. The three-week course has traditionally been lecture-based and provides a framework for understanding the role of various medical imaging modalities in diagnosis and management of a broad range of medical disorders. Emphasis is placed on learning the benefits and drawbacks of radiography, ultrasound, computed tomography, magnetic resonance imaging, nuclear medicine studies, and basic interventional techniques for application to clinical practice. Core concepts that apply across medical subspecialties, including radiation exposure, the utilization (and risks) of radiographic contrast agents, and effective ordering of imaging studies are covered. Students are taught by radiology faculty, fellows, and residents including sessions focused on essential topics in chest, abdominal, neurological, and musculoskeletal imaging. Sessions on pediatric imaging, breast imaging and obstetric ultrasound are also included. Online radiology texts and other web based materials will be made available to all participants. One quiz is administered at the end of the course and must be passed for credit. PREREQUISITES: Medicine 300A, Pediatrics 300A, or Surgery 300A strongly advised. Visiting students wishing to do this clerkship must receive prior approval from the Clerkship Coordinator before applying. PERIODS AVAILABLE: 5, 6, 11, and 12, full-time for three weeks, 22 students per period. CLERKSHIP DIRECTOR: Christopher Beaulieu, M.D., Ph.D. CLERKSHIP COORDINATOR: Ann Vo, 650-497-5407, annvo@stanford.edu. REPORTING INSTRUCTIONS: Where: Varies - P080, P083, P265, H2211 (instructions on Canvas); Time: Check schedule. CALL CODE: 2 - Optional Shadow Call with Radiology Resident Director. OTHER FACULTY: Radiology faculty, fellows, and residents. LOCATION: SUMC.

RAD 302A. Nuclear Medicine Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Acquaints students with the basic principles of nuclear medicine, the instrumentation used, the gamut of procedures available, and the judgments used to select specific diagnostic or therapeutic procedures and interpret results. The experience should be especially helpful for students planning a career in diagnostic radiology, nuclear medicine, cardiology, or oncology. The student experience includes instruction in radiologic physics, instrumentation, responsibility for selected isotopic procedures, daily teaching rounds for review of all cases studies, and special conferences. Please note: Visiting students must obtain approval from the Department prior to applying for this clerkship. Please email requests to Sofia Gonzales (sofias@stanford.edu). PREREQUISITES: Medicine 300A. PERIODS AVAILABLE: 1-16, full-time for three weeks, 1 student per period. CLERKSHIP DIRECTOR: Andrei Iagaru, M.D. CLERKSHIP COORDINATOR: Sofia Gonzales (650-724-9139), Room H2200. REPORTING INSTRUCTIONS: Where: Nuclear Medicine Clinic, Second Floor, C21; Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: C. Aparici, G. Davidzon, B. Franc, F. Moradi. LOCATION: SUMC.

RAD 303A. Specialty Clerkship in Diagnostic Radiology. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides subspecialty radiology reading room experience for students considering a career in radiology or other specialties. Students work alongside residents, fellows, and faculty to actively interpret and communicate diagnostic radiology studies. Up to 12 students can be accommodated per session, with a maximum of two students on each subspecialty service at a time. Typically, students spend three weeks in each of two subspecialties. (Subspecialty rotations and interventional radiology are listed elsewhere in the course catalog.) For Rad 303A, subspecialty rotations include: Chest (primarily ICU radiographs and CT), Cardiovascular (inpatient and outpatient CT and MRI), Abdominal CT (primarily inpatient and emergency), Abdominal US (primarily inpatient and emergency), GI Fluoroscopy, Musculoskeletal (primarily radiography), Neuroradiology (inpatient and emergency), Body MRI, Pediatric Imaging, Breast Imaging, and Nuclear Medicine. Similar rotations are also possible at the Palo Alto Veterans Administration Medical Center. PREREQUISITES: Visiting students wishing to do this clerkship must receive prior approval from the Clerkship Coordinator before applying. Stanford students are asked to inform the clerkship coordinator of enrollment for coordination with subspecialty services. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 12 students per period. CLERKSHIP DIRECTOR: Christopher Beaulieu, M.D., Ph.D. CLERKSHIP COORDINATOR: Ann Vo, 650-497-5407, annvo@stanford.edu. REPORTING INSTRUCTIONS: Where: TBA (call 4-8 weeks prior); Time: TBA. CALL CODE: 2 - Shadow Call with Radiology Resident. OTHER FACULTY: Staff. LOCATION: SUMC.

RAD 304A. Pediatric Radiology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Our clerkship is designed to give you an overview of the exciting field of pediatric radiology. The rotation includes a comprehensive curriculum including a wealth of didactic and clinical conferences, directed reading assignments, interactive online teaching modules, and image interpretation with our outstanding pediatric radiology faculty. You will be exposed to all radiologic imaging modalities including MRI, CT, ultrasound, fluoroscopy, and plain radiography and will have the unique opportunity to participate in perinatal imaging including prenatal ultrasound and fetal MRI. If time allows, additional exposure to Nuclear Medicine, Interventional Radiology, and Neuroradiology is available. Students will be expected to give a short presentation of an interesting imaging case to faculty and fellows at the end of their rotation. Visiting students wishing to do this clerkship must receive prior approval from Clerkship Coordinator before applying. PREREQUISITES: Radiology 301A or a similar general radiology clerkship or consent of instructor. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 2 students per period. CLERKSHIP DIRECTOR: Jayne Seekins, D.O. CLERKSHIP COORDINATOR: Ann Vo (650-497-5407, annvo@stanford.edu). REPORTING INSTRUCTIONS: Where: LPCH (Radiology Dept. Secretary); Time: 8:30 am. CALL CODE: 0. OTHER FACULTY: R. Barth, F. Blankenberg, F. Chan, H. Dahmoush, H. Daldrup-Link, L. Donnelly, D. Frush, C. Guimaraes, S. Halabi, S. Josephs, D. Larson, M. Lungren, H. Nadel, B. Newman, E. Rubesova, J. Seekins, A. Thakor, S. Vasanawala, K. Yeom, E. Zucker. LOCATION: LPCH.

RAD 305A. Interventional Radiology Clerkship. 5 Units.
VISITING: Open to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Interventional radiology (IR) has become integral to the practice of modern medicine. In 2013, the American Board of Medical Specialties recognized IR as a primary specialty distinct from diagnostic radiology. Subsequently, the ACGME approved the formation of a new IR residency training program (http://www.sirweb.org/clinical/IR_DR_cert.shtml), which has begun at Stanford. This 3 week elective introduces medical students to image-guided, minimally invasive vascular and nonvascular interventions and is appropriate for students considering residency training in IR as well as those interested in learning more about the field in general. Students will be exposed to a broad range of IR procedures, including interventional oncology, peripheral vascular (venous and arterial), genitourinary, gastrointestinal, and pediatric interventions. This elective provides students experience in basic IR skills such as vascular access, placement of venous access catheters and ports, and image-guided biopsies and drain placement. Students are encouraged to take part in more advanced procedures such as chemoembolization, radioembolization, and TIPS. Our service operates like a surgical subspecialty and students are expected to be an integral part of the IR team and actively participate in the pre-procedure evaluation and post-procedure care of our patients. Students may attend various departmental and interdepartmental conferences. Interested students are encouraged to give a short presentation on an interesting case at the end of the rotation. Note: Visiting students interested in rotating through this clerkship must receive prior approval from the Clerkship Coordinator before applying. PREREQUISITES: Surgery 300A, Medicine 300A and Radiology 301A recommended but not required. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 3 students per period. CLERKSHIP DIRECTOR: David S. Wang, M.D. CLERKSHIP COORDINATOR: Ann Vo, 650-497-5407, annvo@stanford.edu. REPORTING INSTRUCTIONS: Where: H3652; Time: 7:30 am. CALL CODE: 0. OTHER FACULTY: L. Hofmann, D. Hovsepian, G. Hwang, N. Kothary, W. Kuo, J. Louie, D. Sze. LOCATION: SUMC.

RAD 306A. Neuroradiology Clerkship. 5 Units.
VISITING: Open to visitors.TYPE OF CLERKSHIP. Elective. DESCRIPTION: Our clerkship provides students with further exposure to basic and advanced neuroimaging of the brain, spine, and head and neck. The curriculum will be tailored to the specific interests of the student incorporating participation in real-time read-out and consultations with our residents, fellows, physician colleagues, and Neuroradiology faculty, didactic and clinical conferences (e.g. weekly interesting case conference and tumor board). Students will learn the utility of CT and MRI in diagnosing and treating diseases of the central nervous system and head and neck in both the pediatric and adult populations and will also have the unique opportunity to participate in fluoroscopy-guided lumbar punctures for CSF collection, intrathecal chemotherapy administration, and myelograms. Students are expected to give a short presentation of a case of their choice to fellows and/or faculty at the end of the clerkship rotation. PREREQUISITES: Visiting students wishing to do this clerkship must receive prior approval from the clerkship coordinator before applying. Stanford students are asked to inform the clerkship coordinator of enrollment. Once enrollment is confirmed, students are asked to email the course co-director, Bryan Lanzman at bryan3@stanford.edu, for further details. PERIODS AVAILABLE: 1-16, full-time for 3 weeks, 1 student per period. CLERKSHIP DIRECTOR: Bryan Lanzman, M.D., Michael Iv, M.D., and Max Wintermark, M.D. CLERKSHIP COORDINATOR: Ann Vo, 650-497-5407, annvo@stanford.edu. REPORTING INSTRUCTIONS: Where: Grant S031A; Time: 9:00 am. CALL CODE: 0. OTHER FACULTY: Neuroradiology faculty. LOCATION: SUMC, LPCH.

RAD 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

RAD 398A. Clinical Elective in Diagnostic Radiology & Nuclear Medicine. 5 Units.
VISITING: Closed to visitors. TYPE OF CLERKSHIP. Elective. DESCRIPTION: Provides an opportunity for a student in the clinical years to have a clinical experience in Diagnostic Radiology or Nuclear Medicine, of a quality and duration to be decided upon by the student and a faculty preceptor in the Department. The student must make individual arrangements with a faculty member in Diagnostic Radiology or Nuclear Medicine. Please note: Students cannot add 398A clerkships directly to their fishbowl schedules through the regular shuffles. Please contact Caroline Cheang in the Office of Medical Student Affairs at cheang@stanford.edu or 650-498-7619 with the faculty preceptor's name and email address to add this clerkship. PREREQUISITES: None for Diagnostic Radiology; Medicine 300A for Nuclear Medicine. Consent of the designated faculty preceptor and approval by Advisor. PERIODS AVAILABLE: 1-16. CLERKSHIP DIRECTOR: Christopher Beaulieu, M.D., Ph.D. CLERKSHIP COORDINATOR: Ann Vo, 650-497-5407, annvo@stanford.edu. REPORTING INSTRUCTIONS: Where: TBA (designated faculty preceptor); Time: TBA. CALL CODE: 2 (varies with preceptor). OTHER FACULTY: Staff. LOCATION: SUMC, LPCH.

RAD 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

RAD 802. TGR Dissertation. 0 Units.
.

STEM CELL BIOLOGY AND REGENERATIVE MEDICINE

Courses offered by the Program in Stem Cell Biology and Regenerative Medicine are listed under the subject code STEMREM on the Stanford Bulletin's Explore Courses web site.

Graduate Program in Stem Cell Biology and Regenerative Medicine

The Stanford Stem Cell Biology and Regenerative Medicine (SCBRM) program is dedicated to doctoral education that translates basic science to clinical applications, typically referred to as Translational Science, and of intense interest internationally in medical schools and universities. Our doctoral program provides exceptional didactic education and research experience in the basic sciences underlying stem cell biology. In addition, program participants will receive specialized training in the development and clinical application of discoveries in the basic sciences to achieve regenerative therapies. Thus, our graduates will be uniquely positioned to develop successful translational careers in Stem Cell Biology and Regenerative Medicine, and will emerge prepared to deliver on their passion to improve the human condition. The core curriculum is combined with unique research and clinical/professional immersion rotations to provide opportunities for doctoral students to specialize in the broad subject of translational medicine and yet focus specifically on fundamentals of SCBRM. The curriculum combines education in genetics and developmental biology with an introductory laboratory-based stem cell course, an advanced course in stem cell biology and regenerative medicine, and a clinical rotation with alternative opportunities in law, business and/or engineering.

The mission of the SCBRM graduate program is to produce future leaders in translational science through a combination of basic science and clinical/professional immersion. The program aims to be innovative and to change the landscape for graduate education in the biomedical sciences by having the immersion tailored to each student's translational goals. The program accommodates students who wish to focus primarily at the basic science level alongside those who wish to focus specifically on innovation such as a new device to solve a clinical problem. In the former case, the student might seek out a primary mentor affiliated with the basic sciences and take electives that reflect the more basic interest. In the latter case, the student might select an elective with an engineering focus and seek out primary mentorship with a more clinically or engineering focused mentor. In this way, graduates from our doctoral program receive exceptional didactic education and research experience and are well positioned to develop successful translational careers in SCBRM by applying their knowledge and passion to improve human health.

Master of Science in Stem Cell Biology and Regenerative Medicine

University requirements for the M.S. degree are described in the "Graduate Degree (p. 65)s" section of this bulletin.

Students in the Ph.D. program in SCBRM may apply for an M.S. degree in SCBRM, assuming completion of appropriate requirements. The program does not accept applications for a standalone M.S. degree.

To receive an M.S. in Stem Cell Biology and Regenerative Medicine, Students must complete the following:

1. Four full-tuition quarters of residency as a graduate student at Stanford.
2. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 16 units of which must be at or above the 200 level.
3. Four quarters of graduate research, consisting of rotations in the labs of at least three SCBRM faculty members.
4. Course work in Stem Cell Biology and Regenerative Medicine as well as other core requirements:
   a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
   b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
   c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
   d. STEMREM 202 Stem Cells and Translational Medicine, advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
   e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law, students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.
   f. STEMREM 250 Regenerative Medicine Seminar Series, a forum for researchers to meet and discuss Stem Cell Biology and Regenerative Medicine and to spark collaborations. 6 units of this course is required.
   g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club, review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.

		Units
STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology	5
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-3
STEMREM 201B	Stem Cells and Human Development Laboratory	1
STEMREM 202	Stem Cells and Translational Medicine	1-3
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	1
BIOC 224/BIO 214/ MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3
MED 255	The Responsible Conduct of Research	1
DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18

   h. Students are also required to take 2 electives, totaling a minimum of 6 units.

i. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.

5. Participation and attendance at the annual SCBRM Retreat.
6. The qualifying examination process in SCBRM before admission to Ph.D. candidacy has two parts:
   - Part I: a comprehensive written exam in the form of a 5-page NIH grant proposal
   - Part II: a 15-minute oral presentation of the proposal to the thesis committee followed by open questions from the qualifying exam committee on the proposal or encompassing areas of research/academic scholarship that are deemed relevant to the proposal.

Students who do not pass the qualifying exam may retake the full qualifying exam, be retested in a sub-area, or be asked to redo their presentation. Those students who fail the qualifying exam twice may be awarded a master's degree based on completion of course work and rotations. In addition, students who choose to voluntarily leave the program are also awarded a master's degree based on completion of the qualifying exam.

Doctor of Philosophy in Stem Cell Biology and Regenerative Medicine

University requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

The Stem Cell Biology and Regenerative Medicine curriculum, combined with the research and rotation opportunities, provides a flexible educational opportunity for doctoral students to specialize in the broad subject of translational medicine while being focused more specifically on the fundamentals of Stem Cell Biology and Regenerative Medicine while training in the laboratories of participating SCBRM faculty. The goal of the SCBRM program is to provide an avenue for graduate education to translate the best of basic research into a clinical setting.

Application and Admission

Applications are made through the Graduate Admissions (http://gradadmissions.stanford.edu) web site.

Applicants will be assessed based on their undergraduate transcripts, test scores, research experience, statement of purpose and letters of recommendation that document exceptional potential, ability, or achievements.

Students admitted to the program are offered financial support covering tuition, a living stipend, and insurance coverage. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but SCBRM graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program. Upon matriculation, each student is assisted in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee is composed to include the dissertation adviser and two additional SCBRM faculty, to guide the student during their dissertation research. The student must meet with the dissertation committee at least once a year.

Degree Requirements

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research.

Requirements for the Ph.D. degree in SCBRM include:

1. Completion of at least 3 research rotations in the labs of SCBRM faculty members.
2. Completion of the following courses:
   a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
   b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
   c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
   d. STEMREM 202 Stem Cells and Translational Medicine advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
   e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.
   f. STEMREM 250 Regenerative Medicine Seminar Series a forum for researchers to meet and discuss Stem Cell Biology and Regenerative Medicine and to spark collaborations. 6 units of this course is required.
   g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.
3. Students have the option to select from the following courses in the first year:

		Units
STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology (Offered in Autumn and Spring)	5
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-2
STEMREM 201B	Stem Cells and Human Development Laboratory	1
STEMREM 202	Stem Cells and Translational Medicine	3-5
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	1
BIOC 224/BIO 214/MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3

MED 255	The Responsible Conduct of Research	1
DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18
Total Units		29-49

4. Students are also required to take two electives, totaling a minimum of 6 units.
5. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.
6. STEMREM 802 TGR Dissertation.

Students unable to meet Ph.D. milestones after remediation are offered a M.S. degree if they have completed all requirements.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

The Stanford Stem Cell Biology and Regenerative Medicine program counts all courses taken in the academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Program in Stem Cell Biology and Regenerative Medicine is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Program Director: Irv Weissman

Institute Faculty:

- Arash A. Alizadeh (Assistant Professor, Medicine/Oncology and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Philip A. Beachy (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Biochemistry and Developmental Biology and Member of Bio-X and Stanford Cancer Institute)
- Charles K.F. Chan (Assistant Professor, Surgery - Plastic & Reconstructive Surgery, and Member of Bio-X, Institute for Stem Cell Biology and Regenerative Medicine)
- Michael F. Clarke (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Medicine/Oncology and Member of Bio-X and Stanford Cancer Institute)
- Tushar Desai (Assistant Professor, Medicine/Pulmonary & Critical Care Medicine and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Maximilian Diehn (Assistant Professor, Radiation Oncology/Radiation Therapy and Member of Bio-X and Stanford Cancer Institute)
- Agnieszka Czechowicz, (Assistant Professor, Department of Pediatrics and Member of Bio-X, Institute for Stem Cell Biology and Regenerative Medicine, Maternal & Child Health Research Institute)
- Stefan Heller (Professor, Otolaryngology/Head and Neck Surgery and Member of Bio-X, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Sidd Jaiswal (Assistant Professor of Pathology, Member of Bio-X, Cardiovascular Institute, Cancer Institute, Institute for Stem Cell Biology and Regenerative Medicine)
- Kyle Loh (Assistant Professor, Developmental Biology and Member of Bio-X, Institute for Stem Cell Biology and Regenerative Medicine, Stanford Neurosciences Institute, and Faculty Fellow)
- Michael T. Longaker (Professor, Surgery/Plastic and Reconstructive Surgery, and (by courtesy) Bioengineering and Materials Science and Engineering and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Ravindra Majeti (Associate Professor, Medicine/Hematology and Member of Bio-X and Stanford Cancer Institute)
- Michelle Monje-Deisseroth (Assistant Professor, Neurology & Neurological Sciences and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Hiromitsu Nakauchi (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Genetics and Member of Bio-X)
- Aaron Newman (Assistant Professor, Department of Biomedical Data Science, Member of Bio-X and Institute for Stem Cell Biology and Regenerative Medicine)
- Roeland Nusse (Professor, Developmental Biology and Member of Bio-X and Stanford Cancer Institute)
- Anthony Oro (Professor, Dermatology and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)
- Theo D. Palmer (Associate Professor, Neurosurgery and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Matthew Porteus (Associate Professor, Pediatrics/Stem Cell Transplantation and Member of Bio-X, Cardiovascular Institute, Child Health Research Institute and Stanford Cancer Institute)
- Kristy Red-Horse (Associate Professor, Biology, Member of Bio-X, Cancer Institute, Institute for Biology and Regenerative Medicine)
- Maria Grazia Roncarolo (Professor, Pediatrics/Stem Cell Transplantation and Medicine/Blood & Marrow Transplantation and Member of Bio-X, Child Health Research Institute and Stanford Cancer Institute)

- Vittorio Sebastiano (Assistant Professor, Obstetrics & Gynecology/ Reproductive Biology and Member of Bio-X and Child Health Research Institute)
- Judith Shizuru (Professor, Medicine/Blood & Marrow Transplantation and Member Stanford Cancer Institute)
- Irving L. Weissman (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Pathology and Developmental Biology and (by courtesy) Department of Biology and Member of Bio-X and Stanford Cancer Institute)
- Gerlinde Wernig (Assistant Professor, Pathology, Member of Bio-X, Institute for Biology and Regenerative Medicine)
- Marius Wernig (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Pathology and (by courtesy) Chemical & Systems Biology and Member of Bio-X, Child Health Research Institute, Stanford Cancer Institute and Stanford Neurosciences Institute)
- Joanna Wysocka (Professor, Chemical & Systems Biology and Developmental Biology and Member Bio-X and Stanford Cancer Institute)

Courses

STEMREM 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

STEMREM 200. Stem Cell Intensive. 1 Unit.
Open to first year Stem Cell Biology and Regenerative Medicine graduate students or consent of Instructor. Introductory lectures given by faculty in the Stem Cell Biology and Regenerative Medicine interdisciplinary graduate program are intended to provide students with insight into potential rotation labs. Includes some hands-on laboratory exercises covering basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, flow cytometry, and basic microscopy.

STEMREM 201A. Stem Cells and Human Development: From Embryo to Cell Lineage Determination. 1-3 Unit.
For graduate, medical, and advanced undergraduate students. Prepares students for the future of regenerative medicine by exploring central concepts in stem cell biology and the actual experiments that led to these concepts. Provides educational foundation for future physician-scientists to understand mechanisms underlying regenerative therapies. The latest advances in stem cell research will be discussed, including tissue regeneration; how stem cells are discovered by lineage tracing or transplantation; how stem cells differentiate and form organized tissues; stem cell niches; signaling centers and extracellular signals; chromatin and cellular reprogramming; organoids; and cancer stem cells, with emphasis on unresolved issues in the field.

STEMREM 201B. Stem Cells and Human Development Laboratory. 1 Unit.
Targeted enrollment to first year graduate students or any other student who wishes to improve their ability to design, perform, analyze, and communicate results from laboratory-based experiments. Content early in the quarter is focused on how to design an experimental aim and approach. Practical examples are drawn from the participating students¿ fall-quarter research rotations (or current research projects). In mid-quarter, the focus shifts from how to design the experiment to how to update the PI on this week¿s experimental progress and the weekly meeting emulates a typical lab meeting with brief presentations of experimental progress from each student. Focus shifts at the end of the quarter to strategies for concise presentation of data and conclusions drawn from experimental results. Provides hands-on skills to maximize both the student¿s experience during a research rotation and to improve communication skills between student and mentor (skills that are valuable to any student at any stage of their research career). SCBRM students must take concurrently with STEMREM 201A.

STEMREM 202. Stem Cells and Translational Medicine. 1-3 Unit.
For graduate, undergraduate and medical students. Focus is on the fundamentals of stem cell biology and stem cell applications in basic research and translational medicine. Topics include exploration of the well-studied system of hematopoiesis, molecular pathways of pluripotency and tissue-specific stem cells and ends with coverage of aging as related to stem cell dynamics. Lectures are topically paired to cover the basic science of each topic, followed by clinical applications within each field of study. Students will use lecture and literature content to construct a research proposal based on biological or clinical concepts learned during the quarter.

STEMREM 203. Stem Cells Immersion: Applications in Medicine, Business and Law. 3 Units.
For graduate and medical students enrolled in the SCBRM PhD program or other students by permission from the Instructor. Career-development immersions are custom designed by the student and advisor to provide clinical, pharmaceutical, biotechnology or business insights into the world of stem cell biology and regenerative medicine from multiple vantage points. The Immersion sets the stage for students to explore research and translation beyond the academic sphere and gain the necessary knowledge to move their career forward when completing the PhD.

STEMREM 205. Bioinformatics for Stem Cell and Cancer Biology. 2 Units.
For graduate and medical students. High-throughput technologies and data science are essential tools in modern stem cell biology and cancer research. Students will gain practical exposure to bioinformatics concepts and techniques required to address biological questions within these research areas. The beginning of the quarter is focused on foundational principles underlying bioinformatics and genomics. Focus for the remainder of the quarter is on direct, hands-on experience with applications to common research problems. Topics include analysis of bulk and single-cell sequencing data, single gene to whole-genome analysis, machine learning, and data visualization. Intended for biology students without a background in computer science, or for students in a quantitative discipline interested in gaining exposure to key challenges in stem cell and cancer genomics. Basic programming experience is recommended but not required.

STEMREM 223. Biology and Disease of Hematopoiesis. 3 Units.
Hematopoiesis is the formation, development, and differentiation of blood cells. Lecture and journal club. Topics will include definitive and adult hematopoiesis, myeloid and lymphoid development, hematopoietic diseases, stem cell niche, bone marrow transplant, and methods and models used to study hematopoiesis. For upper level undergraduates or graduate students. Pre-requisite for undergraduates: Biology or Human Biology core, or consent of instructor.
Same as: IMMUNOL 223

STEMREM 250. Regenerative Medicine Seminar Series. 1 Unit.
For graduate, medical and undergraduate students. A forum for Stanford researchers to meet, hear about what is going on in Stem Cell Biology and Regenerative Medicine at Stanford, and spark collaborations. Topics include all areas of regenerative medicine, broadly defined, ranging from fundamental biological principles and basic science advances to novel applications in biotechnology, stem cell biology, and human disease.

STEMREM 280. Stem Cell Biology and Regenerative Medicine Journal Club. 1 Unit.
For graduate, medical and undergraduate students. Review of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine in a seminar format consisting of both faculty and student presentations. Includes discussions led by faculty experts in the area covered for that particular session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class presentations and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to stem cell biology and/or regenerative medicine.

STEMREM 281. Landmark Papers in Immunology and Stem Cell Biology: How to Pose Experimental Questions. 2 Units.
Focus on deciphering article titles to accurately assess the biological question being asked, and what experiment design might best approach the question, encouraging students to become experimentalists, not memorizers, of information presented by authors. Topics include implications of paper questions for the field, deciphering paper titles, hypothesizing research questions.

STEMREM 299. Directed Reading in Stem Cell Biology and Regenerative Medicine. 1-18 Unit.
Prerequisite: consent of instructor.

STEMREM 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

STEMREM 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

STEMREM 801. TGR Project. 0 Units.
.

STEMREM 802. TGR Dissertation. 0 Units.
.

STRUCTURAL BIOLOGY

Courses offered by the Department of Structural Biology are listed under the subject code SBIO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SBIO&filter-catalognumber-SBIO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SBIO&filter-catalognumber-SBIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SBIO&filter-catalognumber-SBIO=on).

The department offers course work and opportunities for research in structural biology.

The emphasis of research in the department is on understanding fundamental cellular processes in terms of the structure and function of biological macromolecules and their assemblies. Techniques used include standard methods of biochemistry, cell culture, single-molecule fluorescence spectroscopy, genetic engineering, and three dimensional structure determination by x-ray diffraction, nuclear magnetic resonance spectroscopy and electron microscopy, coupled with the development of computational methods.

Doctor of Philosophy in Structural Biology

Admission

Applicants to the program should have a bachelor's degree and should have completed at least a year of coursework in biology, mathematics, organic chemistry, physical chemistry, and physics. Applications must be received by the department before December 15 for notification by April 15. Application to the National Science Foundation for fellowship support is also encouraged. Prospective applicants should contact the Department of Structural Biology for further information. GRE general score is optional and GRE subject score is not required.

The recommendations for applying to the Ph.D. program in the Department of Structural Biology include:

		Units
CHEM 123	Organic Polyfunctional Compounds	3
CHEM 171	Foundations of Physical Chemistry	4
CHEM 173	Physical Chemistry II	3
CHEM 175	Physical Chemistry III	3
BIOC 200	Applied Biochemistry	2

Graduate Studies:

Ph.D. students in the Department of Structural Biology are required to complete all the following requirements:

		Units
BIOS 200	Foundations in Experimental Biology	5
SBIO 241	Biological Macromolecules	3-5
or BIOE 300A	Molecular and Cellular Bioengineering	
SBIO 242	Methods in Molecular Biophysics (offered every other year)	3
BIOPHYS 250	Seminar in Biophysics	1
MED 255	The Responsible Conduct of Research	1
AND, at least 3 additional graduate level courses in physical or biological science, with		
at least 1 course in physical science		
at least 1 course in literature-based biological science		

1. The graduate program is intended to prepare students for careers as independent investigators in cell and molecular biology. The principal requirement of a Ph.D. degree is the completion of research constituting an original and significant contribution to the advancement of knowledge. It is a training in a major with connections to biophysics (e.g., physics, chemistry, or biology, with a quantitative background equivalent to that of an undergraduate physics or chemistry major at Stanford).
2. Opportunities for teaching are available during the first nine quarters at the discretion of the advising committee.
3. The student must prepare a dissertation proposal defining the research to be undertaken including methods of procedure. This proposal should be submitted by the end of summer quarter of the second year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Department of Structural Biology. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
4. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of structural biology.
5. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

Current topics of research in the department lie in the areas of gene expression; theoretical, crystallographic, and genetic analysis of protein structure; and cell-cell interaction. See Stanford's School of Medicine (http://www.med.stanford.edu/school/structuralbio/) web site for further information.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Department of Structural Biology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

The Department of Structural Biology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the

adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Chair: William I. Weis

Associate Chair: Michael Levitt

Director of Graduate Studies: Theodore Jardetzky

Professors:

- K. Christopher Garcia
- Theodore Jardetzky
- Roger D. Kornberg
- Michael Levitt
- Peter Parham
- Joseph D. Puglisi
- Georgios Skiniotis
- Soichi Wakatsuki
- William I. Weis

Associate Professor (Research):

- Yahli Lorch

Assistant Professor (Research):

- Elizabetta Viani Puglisi

Associate Professor:

- Adam de la Zerda

- Axel Brunger
- Vijay Pande

Courtesy Associate Professor:

- Zev Bryant

Courses

SBIO 199. Undergraduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

SBIO 225. Biochips and Medical Imaging. 3 Units.
The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.
Same as: EE 225, MATSCI 225

SBIO 241. Biological Macromolecules. 3-5 Units.
The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 30. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.
Same as: BIOC 241, BIOE 241, BIOPHYS 241

SBIO 242. Methods in Molecular Biophysics. 3 Units.
Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, electron microscopy, nuclear magnetic resonance, and fluorescence spectcroscopy. Prerequisite: physical chemistry or consent of instructor.
Same as: BIOPHYS 242

SBIO 251. Biotechnology in the Natural World. 1 Unit.
Life can be found in some of the strangest and most inhospitable places of Earth. Whether in hot springs, oceanic depths, or dense rainforests, living organisms must be natural specialists to survive. This course explores a selection of strange and ingenious biomolecules that natural organisms have evolved in order to survive. Lectures will cover historical background as well as detailed investigations of the structure and function of selected biomolecules of interest. The majority of each lecture and discussion will focus on the adaptation of those molecules for fundamental and innovative approaches in modern biotechnology, especially in medicine and biophotonics. Key biophysical and biochemical techniques will be discussed as they are encountered within primary literature.
Same as: BIOS 251

SBIO 280. Curricular Practical Training. 1 Unit.
CPT Course required for international students completing degree requirements.

SBIO 299. Directed Reading in Structural Biology. 1-18 Unit.
Prerequisite: consent of instructor.

SBIO 370. Medical Scholars Research. 4-18 Units.
Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

SBIO 399. Graduate Research. 1-18 Unit.
Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

SBIO 801. TGR Project. 0 Units.
.

SBIO 802. TGR Dissertation. 0 Units.
.

OTHER OFFICES

These pages list various offices, centers, laboratories, and institutes of direct relevance to study at Stanford. The listings are not all-inclusive.

- A comprehensive list of Stanford offices is available on the University's A to Z Index page (http://www.stanford.edu/atoz/).
- A comprehensive list of Independent Labs, Institutes and Centers (http://doresearch.stanford.edu/research-scholarship/interdisciplinary-laboratories-centers-and-institutes/)

Our Mission

From its founding in 1891, Stanford University's leaders have believed that physical activity is valuable for its own sake and that vigorous exercise is complementary to the educational purposes of the university. Within this context for human development, it is the mission of Stanford Athletics to offer a wide range of high quality programs which will encourage and facilitate all participants to realize opportunities for championship athletic participation, physical fitness, health and well being.

Principles That Guide Us

We Will Teach

- By encouraging our student-athletes to capture all the joy, power and extraordinary personal growth that comes to those who compete and support athletic excellence.
- By hiring and retaining the best coaches and staff members available and arming them with the tools to achieve at the highest level.
- By fostering and nurturing a coaching, physical education and recreation staff that is committed to teaching with integrity and ambition and that performs in a manner which is consistent with the academic priorities of Stanford University.
- By recognizing the need to work as a team while valuing each individual's unique characteristics and abilities.
- By committing ourselves to the personal development and well being of our student-athletes and staff. Those who participate at all levels will learn the benefits of teamwork, discipline, goal setting, physical fitness, healthy lifestyles, character development, self confidence, sportsmanship, and an appreciation for lifelong learning.

We Will Lead

- By being the model of success, of universal opportunity, and of unwavering commitment to the ideal of the scholar-athlete.
- By operating with integrity as we follow the spirit and the letter of each rule. Integrity will be displayed in our policies, performances and programs.
- By continuing our long history of conference and national prominence through a commitment to cutting edge involvement in athletic issues.

We Will Win

- By maximizing our effort in every competition, on every team and in every setting where skill, determination and hard work combine to achieve singularly successful results.
- By having an uncompromising commitment to Conference and National championships and by providing each student-athlete with the tools necessary to be successful at the highest levels of both academic and athletic performance.
- By creating a commitment to a university-wide wellness culture that will allow Stanford students, faculty and staff to maximize their health and fitness opportunities throughout their lives.

We Will Serve

- By respecting, honoring and responding to the needs of our student-athletes, coaches, colleagues, advocates and members of our larger community.
- By encouraging innovation and creativity. We will harness technology to extend our reach and to interface with our various internal and external constituencies.
- Through fiscal responsibility in all elements of departmental operations.
- By advancing outreach as a fundamental component of the department, we will strive to enhance the overall mission of the University through competitive excellence, effective outreach and an on-going commitment to customer service.
- By utilizing the department resources and physical facilities to serve the campus community, our alumni and our supporters throughout the world.
- By valuing our heritage, and in doing so we commit ourselves to championship caliber athletic achievement and the on-going enhancement of the traditions of Stanford Athletics, including leadership, individual and team achievement and intense pride and loyalty.

Courses

Courses offered for intercollegiate and club sport athletes are listed under the subject code ATHLETIC (https://explorecourses.stanford.edu/search/?view=catalog&academicYear=&page=0&q=ATHLETIC&filter-departmentcode-ATHLETIC=on&filter-coursestatus-Active=on) on the Stanford Bulletin's ExploreCourses (https://explorecourses.stanford.edu/browse/) web site. Courses are activity classes (ACT) and carry 1-2 units of credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other University activity classes) may be applied toward undergraduate graduation requirements. See the "Credit (p. 37)" tab of the "Undergraduate Degrees (p. 31)" section of this bulletin for complete information. Course fees, as applicable, are posted to the student's University account.

Men's Intercollegiate Teams

Academic Services

Academic Advising (https://undergrad.stanford.edu/) provides academic advising, programming, and support for students as they shape their Stanford education. In guiding students to engage with faculty and in supporting students' personal and intellectual development, UAR encourages students to explore the full breadth and depth of their intellectual opportunities, to find their intellectual homes, and to discover a sense of belonging at Stanford. Academic advisers for student-athletes are housed in the Athletic Academic Resource Center (AARC) and are the primary undergraduate advising contact for varsity student-athletes. AARC advisers are full-time, professional staff within Undergraduate Advising and Research who partner closely with colleagues across campus to provide a comprehensive network of support that promotes a student's academic success and furthers his or her intellectual goals.

Sports Performance

Stanford's Sports Medicine Program is dedicated to providing the best possible medical care for the student athlete's injuries and illnesses. The program is unique in its team approach to health care, as the Team Physicians (http://ortho.stanford.edu/lacob/physicians.html), Athletic Trainers (http://www.stanfordsportsmedicine.com/?page_id=53), Physical Therapists (http://www.stanfordsportsmedicine.com/physical-therapy/), and Sports Scientists (http://ortho.stanford.edu/humanperformance/personnel.html) all collaborate on the care provided to each athlete. The team physicians provide diagnosis, treatment, arrange for consultations, order lab tests, x-rays and MRIs, and make decisions on the participation status. Athletic trainers work under the supervision of our team physicians to provide prevention, evaluation, and treatment of athletic injuries. Physical therapists design specific programs for rehabilitation and communicate directly with the athletic trainer, physician, and sports performance coaches. Sport Scientists work with coaches and athletes to test and analyze athletes using state-of-the-art motion capture, biomechanics and physiology equipment.

Sports Psychology Services

The mission of Stanford Athletics Sport Psychology Services is to provide psychological services to Stanford University student-athletes that foster mental health and well-being, promote excellence in educational and athletic goals, and contribute to a safe, welcoming, and multiculturally aware athletic department and campus community.

Stanford Athletics has had an ongoing and collaborative relationship with the Department of Psychiatry and Behavioral Sciences to provide integrated behavioral health services to Stanford student-athletes, including a full-service sport psychology program.

- Dr. Kelli Moran-Miller (http://www.gostanford.com/staff.aspx?staff=208), Director of Sport Psychology for Stanford Athletics, is a licensed psychologist, a certified consultant with the Association of Applied Sport Psychology, and a member of the USOC registry. She uses a strengths-based, solution-focused, and student-centered approach to assist student-athletes in the achievement of personal, educational, and sport goals. Her office is in the Sports Medicine Center.
- *Dr. Lisa Post,* Director of Sports Medicine in Psychiatry, is a licensed psychologist who specializes in working with collegiate and professional athletes and coordinates referrals and care within the Department of Psychiatry and Behavioral Sciences. Her office is on campus at 401 Quarry.

Services

Sport Psychology Services offers confidential personal counseling, performance psychology consulting, psychological rehabilitation from injury, career counseling, medication evaluation and management, and specialized care referrals. Team-centered workshops for varsity teams, crisis intervention, and consultation with coaches and athletic department staff also are available.

Individual sessions provide a unique opportunity to explore issues that may be preventing you from reaching your potential athletically, academically, or personally.

Team-centered workshops are designed to address the unique goals of the participating team and to provide memorable active learning experiences to build team unity, reinforce team mission and vision, clarify team goals, roles, and responsibilities or teach mental skills.

The Jaquish & Kenninger Director of Athletics: Bernard Muir

Deputy Athletics Director: Patrick Dunkley

Deputy Director of Athletics: Ray Purpur

Executive Associate Athletics Director: Beth Goode

Executive Associate Athletics Director • External Relations: Tommy Gray

Executive Associate Athletics Director: Heather M. Owen

Executive Associate Athletics Director: Brian Talbott

Senior Associate Athletics Director • Facilities, Operations and Events: Jamie Breslin

Associate Athletics Director • Finance & Business Operations: Brian Favat

Associate Athletics Director • Compliance Services: Jacquelyn Kulgevich

Associate Athletics Director • Corporate Partnerships: Adam Requarth

Associate Athletics Director • Development: Adam Schneberger

Associate Athletics Director • Academic Services: Melissa Stringer

Courses

ATHLETIC 1. Thriving in Athletics: Health and Wellness Concepts. 2 Units.
Develops the understanding, self-awareness, confidence, and skills necessary for students to serve as a resource for their peers in the areas of building resilience, promoting wellbeing, and supporting emotional balance. Examines personal values, identity, signature strengths, self-care and stress management practices, signs and symptoms of common mental health concerns, and barriers for care-seeking in the student population. Develops skills for enhancing personal well-being, communication, connecting students with existing resources, and promoting a culture of support, health and wellness.

ATHLETIC 3. PUBLIC HEALTH. 0-60 Units.
.

ATHLETIC 10. Varsity sport experience. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator.

ATHLETIC 11. Athletic Team Manager. 1 Unit.
For student managers of intercollegiate teams. Limit 1 credit per quarter with a maximum of 8 credits able to be applied towards graduation. Prerequisite: consent of respective varsity team head coach. May repeat for credit.

ATHLETIC 12. VARSITY - Baseball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 13. VARSITY - Basketball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 14. VARSITY - Basketball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 15. VARSITY - Cross Country. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 16. VARSITY - Cross Country. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 17. VARSITY - Track and Field. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 18. VARSITY - Track and Field. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 19. VARSITY - Fencing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 20. VARSITY - Fencing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 21. VARSITY - Field Hockey. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 22. VARSITY - Football. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 23. VARSITY - Golf. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 24. VARSITY - Golf. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 25. VARSITY - Gymnastics. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 26. VARSITY - Gymnastics. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 27. VARSITY - Lacrosse. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 28. VARSITY - Rowing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 29. VARSITY - Rowing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 30. VARSITY - Lightweight Rowing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 31. VARSITY - Sailing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 32. VARSITY - Sailing. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 33. VARSITY - Soccer. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 34. VARSITY - Soccer. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 35. VARSITY - Softball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 36. VARSITY - Squash. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 37. VARSITY - Swimming. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 38. VARSITY - Swimming. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 39. VARSITY - Diving. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 40. VARSITY - Diving. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 41. VARSITY - Synchronized Swimming. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 42. VARSITY - Tennis. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 43. VARSITY - Tennis. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 44. VARSITY - Volleyball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 45. VARSITY - Volleyball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 46. VARSITY - Beach Volleyball. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 47. VARSITY - Water Polo. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Men

ATHLETIC 48. VARSITY - Water Polo. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.
Same as: Women

ATHLETIC 49. VARSITY - Wrestling. 1-2 Unit.
Designed for the Varsity Athlete; conditioning; practice; game preparation; and weight training. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. Prerequisite: Must be a Varsity Athlete in the specific sport; Permission of appropriate sport administrator. May repeat for credit.

ATHLETIC 50. Olympic Training. 1-2 Unit.
Designed for students training for Olympic competition; conditioning; practice; competition preparation; weight training; and leadership skill development. Limit 2 credits per quarter with a maximum of 8 activity units may be applied towards graduation. nnPrerequisite: Must be a verified candidate for an Olympic team with a specified training schedule calling for at least 30 hours (1 unit) or 60 hours (2 units) of training time in the 10 week quarter. Instructor approval required. May repeat for credit.

ATHLETIC 60. CLUB - Sport Experience. 1 Unit.
This course is offered to club sport athletes who participate on credit approved Club Sports teams. Teams who are eligible to receive credit, are required to have a coach and/or administrator to supervise their class. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

ATHLETIC 61. CLUB - Martial Arts Experience. 1 Unit.
This course is offered to Martial Arts athletes who participate on credit approved Martial Arts teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of martial arts administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

ATHLETIC 62. CLUB - Band. 1 Unit.
This course is offered to club members who participate on credit approved Club Sports teams. All members must complete 30 hours of participation during the quarter. To be eligible for credit, the club must practice 2x a week for a maximum total of 4 hours and participate in 1-3 events in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

ATHLETIC 63. CLUB - Climbing. 1 Unit.
his course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

ATHLETIC 64. CLUB - Equestrian. 1 Unit.
This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.

ATHLETIC 65. CLUB - Rugby. 1 Unit.
This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.
Same as: Men

ATHLETIC 66. CLUB - Rugby. 1 Unit.
This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.
Same as: Women

ATHLETIC 67. CLUB - Squash. 1 Unit.
This course is offered to club sport athletes who participate on credit approved Club Sports teams. All teams and athletes on the team must complete 30 hours of participation during the quarter. To be eligible for credit, teams must practice 2x a week for a maximum total of 4 hours and participate in 1-3 competitions in the quarter. Prerequisite: Permission of club sport administrator. May repeat for credit. A maximum of 8 activity units may be applied towards graduation.
Same as: Men

CENTERS, LABORATORIES, INSTITUTES

Independent research laboratories, centers, and institutes perform multidisciplinary research that extends beyond the scope of any one of the University's organized schools. The listings are not all-inclusive. A comprehensive list of Stanford offices is available on the University's A to Z Index page (http://www.stanford.edu/atoz/).

The following tabs contain information on programs for undergraduates:

- Arts Institute (p. 1079)
  - Interdisciplinary Honors in the Arts Program
  - Arts Immersion
  - Creative Cities
- Center for Spatial and Textual Analysis (CESTA) (https://cesta.stanford.edu)
  - Graduate Certificate of Digital Humanities
- Center for the Study of Poverty and Inequality (CPI (p. 2513))
  - Certificate Program on Poverty and Inequality
- Freeman Spogli Institute for International Studies (FSI) (p. 2515)
  - Interschool Honors Program in Democracy, Development, and the Rule of Law
  - Interschool Honors Program in International Security Studies

Office of Vice Provost and Dean of Research

Vice Provost and Dean of Research: Ann M. Arvin

Office: 450 Serra Mall, Main Quadrangle, Building 60

Stanford Center on Poverty and Inequality

Certificate Program on Poverty and Inequality

The Stanford Center on Poverty and Inequality (CPI) monitors and publicizes trends in poverty and inequality, publishes the country's leading magazine on poverty and inequality (*Pathways Magazine*), supports research on the causes of poverty and inequality, and examines the effects of public policy on poverty and inequality. The center carries out these activities with ten research groups addressing the following topics:

- poverty measurement and trends
- educational access and achievement
- income inequality
- social mobility
- safety net use
- recession and recovery effects
- spatial segregation
- racial and ethnic inequality
- discrimination, poverty, and the labor market
- Hispanic poverty, inequality, and mobility.

The Certificate in Poverty and Inequality recognizes undergraduates who have developed expertise in one or more of these research areas. The certificate is conferred as soon as the coursework and research requirements listed below are completed. Although the certificate does not appear on an official University transcript, it provides formal recognition of a rigorous program of study in the field of poverty and inequality.

Admission

Applications to the CPI certificate program are available on the CPI web site (http://www.stanford.edu/group/scspi/) and may be filed at any time. Admitted students are assigned an adviser who assists in planning coursework and providing research opportunities within CPI. Contact CPI (inequality@stanford.edu) with any questions.

Requirements

The student's course and research plan, which is submitted with the application, should meet the four requirements listed below.

1. *Core Foundation Course:* (SOC 140 Introduction to Social Stratification. This required introductory course examines the causes and consequences of poverty, inequality, and mobility. It is available as both a regular and online course.
2. *Elective Foundation Course:* The second foundation course is selected from among the normative, empirical, and policy courses listed below. These courses examine the principles by which certain types of living conditions may be deemed unjust or impoverished (i.e., normative analysis), the social processes and forces by which poverty and inequality are generated and maintained (i.e., empirical analysis), and the types of policies and interventions that might reduce or increase poverty and inequality (i.e., policy analysis).

Elective Foundation Courses		Units
Normative Foundation		
ETHICSOC 136R	Introduction to Global Justice	4
ETHICSOC 171	Justice	4-5
INTNLREL 136R	Introduction to Global Justice	4
PHIL 76	Introduction to Global Justice	4
PHIL 171	Justice	4-5
POLISCI 136R	Introduction to Global Justice	4
PUBLPOL 103C	Justice	4-5
Empirical Foundation		
SOC 144	Inequality and the Workplace	5
Policy Foundation		
ECON 11N	Understanding the Welfare System	3
SOC 135	Poverty, Inequality, and Social Policy in the United States	3-4

3. *Research Project:* Students must complete a research paper on poverty or inequality. Students are invited to join one of the ten CPI research groups and become involved in an ongoing CPI research project that might become the basis for their research paper. Alternatively, students write an independent research paper rather than joining a CPI Research Group. The research paper may either take the form of a research proposal or an empirical research project based on quantitative or qualitative methods. This paper should be completed while the student is enrolled in Independent Study with a CPI faculty affiliate (http://www.stanford.edu/group/scspi/).
4. *Additional Elective:* Students must take an elective course with a poverty or inequality focus. This requirement may be satisfied by taking an additional foundation course from the list provided above or by taking any of the preapproved elective courses listed below. Additionally, other unlisted courses addressing issues of poverty and inequality may also satisfy this requirement, although such courses require CPI approval (which is requested by submitting the Course Approval Form (http://www.stanford.edu/group/scspi/)). It is recommended that approval be secured in advance of taking an unlisted course. If a new applicant to the certificate program wishes to count a completed course toward the requirements, that should be indicated on the application form and, if necessary, the Course Approval Form (http://www.stanford.edu/group/scspi/) should be filled out).

Preapproved Elective Courses		Units
Poverty		
EARTHSYS 106	World Food Economy	5
ECON 11N	Understanding the Welfare System	3
ECON 106	World Food Economy	5
SOC 135	Poverty, Inequality, and Social Policy in the United States	3-4
Educational Access and Achievement		
ECON 146	Economics of Education	5
EDUC 102	Examining Social Structures, Power, and Educational Access	2-4
EDUC 173	Gender and Higher Education: National and International Perspectives	3-4

EDUC 181	Multicultural Issues in Higher Education	4
EDUC 221A	Policy Analysis in Education	4-5
EDUC 232	Culture, Learning, and Poverty	2-3
SOC 134	Gender and Education in Global and Comparative Perspectives	3-4
SOC 173	Gender and Higher Education: National and International Perspectives	3-4
Income Inequality		
POLISCI 127P	Economic Inequality and Political Dysfunction	5
SOC 14N	Inequality in American Society	4
SOC 117D	Recognizing Inequality	3
Social Mobility		
EDUC 102	Examining Social Structures, Power, and Educational Access	2-4
SOC 144	Inequality and the Workplace	5
Safety Net		
ECON 11N	Understanding the Welfare System	3
PUBLPOL 101	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	4-5
Recession and Recovery		
SOC 114D	Sociology of the Great Recession	5
Spatial Segregation		
SOC 149	The Urban Underclass	4
Racial and Ethnic Income Inequalities		
CSRE 45Q	Understanding Race and Ethnicity in American Society	4
CSRE 145	Race and Ethnic Relations in the USA	4
NATIVEAM 139	American Indians in Contemporary Society	4
SOC 45Q	Understanding Race and Ethnicity in American Society	4
SOC 46N	Race, Ethnic, and National Identities: Imagined Communities	3
SOC 139	American Indians in Contemporary Society	4
SOC 145	Race and Ethnic Relations in the USA	4
Discrimination and the Labor Market		
ECON 11N	Understanding the Welfare System	3
ECON 118	Development Economics	5
ECON 145	Labor Economics	5
SOC 142	Sociology of Gender	3
SOC 144	Inequality and the Workplace	5
Poverty, Inequality, and Mobility among Hispanics		
CHILATST 125S	Chicano/Latino Politics	5
CHILATST 166	Mexicans, Mexican Americans, and Chicanos in American Society	5
POLISCI 125S	Chicano/Latino Politics	5
SOC 165	Seminar on the Everday Lives of Immigrants	5
SOC 166	Mexicans, Mexican Americans, and Chicanos in American Society	5

Graduate Certificate in Digital Humanities

Overview

The Center for Spatial and Textual Analysis (CESTA) offers a Graduate Certificate in Digital Humanities (GCDH) to meet a growing need among the humanities for training in digital methods by leveraging existing resources at Stanford University. The Graduate Certificate in Digital Humanities allows graduate students to acquire and deepen their technical and conceptual skills as well as to strengthen their position in the competitive job market within and beyond the academy. The certificate program has been established as a pilot program from 2014 -17.

Completion of the program results in a Certificate, signed by the CESTA director and the chair of the doctoral student's home department.

The Graduate Certificate in Digital Humanities is issued by the Center for Spatial and Textual Analysis (CESTA) and will not appear on any University record, including the student's transcript.

Contact

Office: Wallenberg Hall, 450 Serra Mall, Building 160
Mail Code: 94305-2084
Phone: (650) 721-1385

Fax: (650) 725-5916
Web Site: http://cesta.stanford.edu

Staff

Core Faculty: Mark Algee-Hewitt, Franco Moretti, Richard White, Dan Edelstein, Paula Findlen, Giovanna Ceserani, Walter Scheidel, Elaine Treharne, Amir Eschel, Zephyr Frank

Affiliated CESTA Faculty: Allyson Hobbs, Edith Scheffer, Caroline Winterer, Mark McGurl, Ana Minian, Mikael Wolfe.

CESTA Staff, Affiliates, and others: Celena Allen (GIS), Erik Steiner (visualization design and cartography), Ryan Heuser (programming), Nicole Coleman (information design and visualization), Jason Heppler (digital history), Elijah Meeks (information design), Karl Grossner (information design and cartography).

Admission

Admission to the program is on a rolling basis, and students may apply at any time. Submit a letter of interest and any supporting information to CESTA Lab Manager Matt Bryant (mattbryant.stanford@gmail.com) at mattbryant.stanford@gmail.com. For more information about the new GDCH program or CESTA in general, see the program's web site (http://cesta.stanford.edu/gcdh/).

Course work

Students wishing to take part in the first cohort starting in 2014-15 and thereafter are expected to complete one GCDH-approved graduate core course for a letter grade, and one additional approved elective course. The approved core courses for the first year of the program are:

- HISTORY 401A Spatial History: Concepts, Methods, Problems
- ENGLISH 303C
- DLCL 396 Humanities+Design: Visualizing the Grand Tour (same as CLASSICS 396, HISTORY 336E)

Students who have completed any of the core courses, or equivalent courses taught by members of the program, in past years are eligible to move to the next step in the GCDH program.

Following or concurrent with the completion of the required core course, students must complete the following two certificate components:

1. Additional course work (1 or more classes, may be taken credit/no credit, and must be approved in advance by the committee in charge) in computer science, information design, statistics, network analysis, linguistics, or other fields approved by the student's supervisor and the CESTA committee in charge. A list of course recommendations is forthcoming.

2. One of the following:
   a. Independent research project and portfolio including a finished project which is evaluated and approved by an Academic Council supervisor and accepted as an affiliated project in one of CESTA's labs. The duration of such projects must be a minimum of one academic quarter. Students may take up to 5 units of credit of directed reading for the purpose of completing the independent research project. Final projects are included in the student's ePortfolio and published on the CESTA web site.
   b. Supervised collaborative research in a CESTA lab with the expectation that the student's participation culminates in a digital humanities product substantially of the authorship of the student; this must be a minimum of two quarters in duration. The student's portion of the research is included in the ePortfolio and published on the CESTA web site.

Freeman Spogli Institute for International Studies (FSI)

Contacts

Office: Encina Hall Center, First Floor, 616 Serra Street
Mail Code: 94305-6055
Phone: 650-723-4581 / Fax 650-725-2592
Web Site: http://fsi.stanford.edu/

The Freeman Spogli Institute for International Studies (FSI) provides opportunities for undergraduate research through the CDDRL Undergraduate Honors Program and the CISAC Interschool Honors Program in International Security Studies.

Interschool Honors Program in Democracy, Development, and the Rule of Law

Director: Stephen J. Stedman

The Center on Democracy, Development, and the Rule of Law (CDDRL) Undergraduate Senior Honors Program provides students majoring in any Stanford academic department the opportunity to conduct an independent honors thesis focused on the fields of democracy, development, and the rule of law. Students are required to complete a three quarter long honors research seminar that begins Spring Quarter of the junior year. They will spend the last quarter of the senior year working independently with their faculty adviser to complete and submit their honors thesis ahead of their formal defense in mid-May. Upon fulfilling individual department course requirements and completing the honors program, students graduate with a certificate in Honors in Democracy, Development, and the Rule of Law.

Students interested in the program consult with their prospective honors advisers in their junior year to determine the tentative thesis topic, which should have some degree of policy relevance. Prerequisites for the program include; a 3.5 grade-point average at the time they apply; a strong overall academic record; sufficient depth and breadth in the fields of democracy, economic and social development, rule of law, and human rights course work; and demonstrated skills in writing and conducting independent research.

Students are required to attend honors college in Washington, D.C. in September before Autumn Quarter classes begin. Applicants are discouraged from studying abroad during the duration of the CDDRL Undergraduate Honors program.

Required Course Work

Two courses that explore the areas of democracy, development, and the rule of law to be approved by the faculty director. CDDRL's flagship undergraduate lecture course taught during Autumn Quarter, which ideally should be completed before the student enters the honors program. DDRL Honors Research Methods Seminars meet on a weekly basis to present their project theses and receive feedback.

Typical Schedule for CDDRL Honors Program

Junior	Units		
	Autumn	Winter	Spring
Select one of the following:		5	
Democracy, Development, and the Rule of Law (INTNLREL 114D)			
Democracy, Development, and the Rule of Law (POLISCI 114D)			
DDRL 189 Honors Research Methods			3
Year Total:		5	3

Senior	Units		
	Autumn	Winter	Spring
DDRL 190 Honors Research Workshop		3	
DDRL 190 Honors Research Workshop			3
DDRL 191 Independent Study (Optional)[1]			
Year Total:		3	3

Total Units in Sequence:	14

[1] Optional any quarter during senior year for 1-5 units, repeatable once for credit.

Admitted students must be able to fulfill all course requirements in their individual majors by the time they graduate, in addition to the units required for the honors program. For more information, contact Kristin Chandler, CDDRL Administrative Manager at kdchandl@stanford.edu or go to http://cddrl.stanford.edu/.

Interschool Honors Program in International Security Studies

Co-Directors: Rod Ewing, Amy Zegart

The Center for International Security and Cooperation (CISAC) coordinates a University-wide Interschool Honors Program in International Security Studies. Students chosen for the honors program intern with a security-related organization (prior to the start of senior year), attend the program's honors college in Washington, D.C., in September, participate in a year-long core seminar, and under the direction of a faculty advisor produce an honors thesis relevant to international security policy. Upon fulfilling individual department course requirements and completing the honors program, students graduate in their major with the award of Honors in International Security Studies. To be considered for the program, students must demonstrate sufficient depth and breadth of international security course work.

- Students must be enrolled at Stanford for all three quarters of the 2020-21 academic year (Autumn, Winter, Spring) to participate in CISAC honors.
- Students who elect to take a leave of absence for any part of the 2020-21 academic year are encouraged to reapply to honors for 2021-22. Given the small size of the program and the large number of applications, the program is unable to offer deferred admissions.
- The deadline for informing the program that a student intends to take a leave of absence and withdraw from CISAC honors is August 1, 2020.

		Units
Successful applicants to the program are expected to have taken:		
MS&E 193	Technology and National Security: Past, Present, and Future	3-4

POLISCI 114S	International Security in a Changing World	5
and at least one related course such as		4-5
ECON 106	World Food Economy	5
HISTORY 103F	The Changing Face of War: Introduction to Military History	5
HUMBIO 129S	Global Public Health	3
INTNLREL 114D	Democracy, Development, and the Rule of Law	5
INTNLREL 140A	International Law and International Relations	5
LAW 5013	International Law (formerly LAW 479)	4
MS&E 93Q		3
MS&E 190		3
POLISCI 42Q	The Rwandan Genocide	5
POLISCI 110D	War and Peace in American Foreign Policy	5
PUBLPOL 101/ POLISCI 102	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	4-5
SOC 160	Formal Organizations	4

Students in the program enroll in IIS 199 Interschool Honors Program in International Security Studies, in Autumn, Winter, and Spring quarters for 3-5 credits per quarter (9-12 total credits). Information about this program may be obtained from the Center for International Security and Cooperation (CISAC), Encina Hall, cisachonors@stanford.edu, or the CISAC Interschool Honors Program in International Security Studies (https://cisac.fsi.stanford.edu/education/honors-program/) website.

Center for Space Science and Astrophysics

Emeriti: (Professors) Robert Cannon, (Professors, Research) Donald L. Carpenter, Aldo V. daRosa, Daniel B. DeBra, W.Gary Ernst, Von R. Eshleman, Antony Fraser-Smith, Robert A. Helliwell, Bruce B. Lusignan, Ronald J. P. Lyon, Laurence A. Manning, Bradford W. Parkinson, J. David Powell, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

Director: Roger W. Romani

Associate Directors: Umran S. Inan, Philip H. Scherrer

Professors: Roger Blandford (Physics, SLAC), Elliot Bloom (SLAC), Lambertus Hesselink (Electrical Engineering), Umran S. Inan (Electrical Engineering), Steven Kahn (Physics, SLAC), Tune Kame (SLAC), Peter F. Michelson (Physics), Vahé Petrosian (Physics), Roger W. Romani (Physics), Norman H. Sleep (Geophysics), Guenther Walther (Statistics), Howard Zebker (Electrical Engineering, Geophysics)

Associate Professors: Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Sarah Church (Physics),

Assistant Professors: Stefan Funk (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Risa Wechsler (Physics, SLAC)

Professors (Research): C-W. Francis Everitt (HEPL), Philip H. Scherrer (Physics)

SLAC Staff Physicist: Grzegorz Madejski

Center Offices: Varian, Room 340

Mail Code: 94305-4060

Phone: (650) 723-1439

Email: danav@stanford.edu

Web Site: http://www.stanford.edu/dept/astro (http://www.stanford.edu/dept/astro/)

The Center for Space Science and Astrophysics is an interdepartmental organization coordinating research in space science and astrophysics. Its members are drawn from the Department of Geological and Environmental Sciences in the School of Earth Sciences; the departments of Aeronautics and Astronautics, Electrical Engineering, and Mechanical Engineering in the School of Engineering; the departments of Applied Physics, Physics, and Statistics in the School of Humanities and Sciences; the W. W. Hansen Experimental Physics Laboratory; and the SLAC National Accelerator Laboratory. Its membership also includes all faculty and appropriate staff at the Kavli Institute for Particle Astrophysics and Cosmology, located at SLAC and the Physics department.

The facilities of the center are available to any interested and qualified student, who must be admitted by and registered in a department. The departments of Aeronautics and Astronautics, Applied Physics, Electrical Engineering, Mechanical Engineering, and Physics offer opportunities leading to an M.S. or Ph.D. degree for work in space science or astrophysics. The center also offers opportunities to undergraduates who may, for instance, participate in research projects in their junior or senior years, on a part-time basis during the school year or on a full-time basis during the summer. The Astronomy Course Program operates a small student observatory where students may gain practical experience in astronomical observing.

Other Academic Programs and Centers, and Independent Research Laboratories, Centers, and Institutes

- Hoover Institution on War, Revolution and Peace, http://www.hoover.org (http://www.hoover.org/)
- SLAC National Accelerator Laboratory (SLAC), http://www.slac.stanford.edu (http://www.slac.stanford.edu/)
- Stanford Synchrotron Radiation Laboratory (SSRL), http://ssrl.slac.stanford.edu (http://www-ssrl.slac.stanford.edu/)

CONTINUING STUDIES

The Continuing Studies Program provides adults from the surrounding communities the opportunity to take courses for the purpose of intellectual enrichment. Courses and events are offered in all four academic quarters, with over 400 courses planned throughout the year. The Continuing Studies Program, except for the MLA program, is a non-degree granting program.

The instructors are largely drawn from the ranks of the University's professoriate and academic staff. The program presents a wide variety of courses, with a central concentration in the liberal arts, including literature, history, art and architecture, and music.

Tuition discounts are available to University employees, Stanford students and faculty, Stanford Alumni Association members, educators, and those over age 65.

For a list of offered courses, see the Courses tab the Continuing Studies web site (http://continuingstudies.stanford.edu).

Summer Session

Associate Dean & Director of Stanford Summer Session: Larry Lagerstrom

Contact

Program Offices: 365 Lasuen Street and 220 Panama Street
Mail Code: 94305-6079
Phone: (650) 723-3109 (Summer Session); (650) 725-7250 (High School Summer College); Fax: (650) 725-6080
Email: summersession@stanford.edu (Summer Session); summercollege@stanford.edu (http://exploredegrees.stanford.edu/continuingstudies/summercollege@stanford.edu) (High School Summer College)
Web Site: summer.stanford.edu (http://summer.stanford.edu/)

Students attending Stanford Summer Session are either matriculated Stanford students, visiting undergraduate or graduate students, or enrolled in the High School Summer College.

Degree-seeking Stanford students should indicate on Axess during Spring Quarter that they intend to register for Summer Quarter. Separate application is not required.

Visiting undergraduate or graduate students are not presently candidates for a Stanford degree. These are students and adults who have taken at least one course at another college or university. These students must complete a short application, available at summer.stanford.edu (http://summer.stanford.edu). Qualified high school students who are at least sixteen years old may apply to the High School Summer College (http://summer.stanford.edu/programs/) program.

Students in Stanford Summer Session, in general, enjoy the privileges of students in the regular degree programs, except that work completed cannot be applied toward a Stanford degree or credential unless and until the student has been admitted to regular Stanford student standing. Admission as a visiting student does not imply later admission to matriculated status. However, should the visiting student matriculate at a later date through normal admission procedures, the summer work may be applied toward the requirements for a Stanford degree or credential at the discretion of the University or academic department.

Visiting undergraduate and graduate students and students in the High School Summer College are not matriculated Stanford University students, and not all University student policies apply to such students. The University reserves the right, at its discretion, to withhold registration from or require withdrawal from Stanford Summer Session for these students or applicants.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

For more information, contact Summer Session by email, mail, phone, or fax using the listings above. Information is updated annually in January and may also be found online at http://summer.stanford.edu. Information is updated annually in January and may also be found online at summer.stanford.edu (http://summer.stanford.edu).

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, in the administration of the University's programs and activities, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

This policy applies to Stanford programs and activities both on and off-campus, including overseas programs.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford's Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this website: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html.

Dean and Associate Provost: Charles Junkerman

Associate Dean and Director: Dan Colman

HAAS CENTER FOR PUBLIC SERVICE

Haas Center for Public Service

Center Office: 562 Salvatierra Walk
Mail Code: 8620
Phone: (650) 723-0992
Web Site: https://haas.stanford.edu (https://haas.stanford.edu/)

- The Haas Center for Public Service engages Stanford students in local and global public service across diverse pathways: direct service, community engaged learning and research, activism, philanthropy, public policy, and social entrepreneurship. The Haas Center offers:
- Walk-in advising on public service opportunities and careers.
- Community engaged learning and research across disciplines.
- Supported full-time, quarter-long service opportunities in the U.S. and abroad.
- Tutoring and mentoring programs rooted in enduring partnerships and cutting-edge education research.
- Leadership training, service trips, and support for more than 125 service-related student organizations.

The Haas Center is the hub for Cardinal Service, a university-wide initiative to elevate service at Stanford in four areas:

- Cardinal Quarter: Students can select from more than 350 supported opportunities to participate full-time in service for a quarter or more. In the next five years, this will grow to 500 local, national and global opportunities.
- Cardinal Courses: Students can participate in more than 70 courses across 25 academic disciplines that integrate a community experience, examine a public issue, and explore civic identities.
- Cardinal Commitments: Students participate in and sustain a significant service experience to explore particular social issues or concerns.
- Cardinal Careers: Students explore multiple public service career options and learn about ways to integrate service into any career.

LIBRARIES AND COMPUTING

Stanford University Libraries and Academic Information Resources

University Librarian and Director of Academic Information Resources: Michael A. Keller
Web Site: http://library.stanford.edu (http://library.stanford.edu/)

Stanford University Libraries and Academic Information Resources (SULAIR) includes more than 30 libraries and programs supporting research, teaching, and learning at Stanford University. SULAIR acquires and delivers library collections in all formats, establishes policies and standards to guide the use of academic information resources, develops training and support programs for academic uses of computers, and maintains a broad array of electronic information resources, including the online library catalog and several hundred article and indexing databases and electronic journal subscriptions.

In each library unit, knowledgeable professional staff provide assistance in locating and using print and online information resources. Subject specialists and reference librarians are available for individual consultation, group classes, demonstrations, and special workshops by request.

Libraries throughout campus provide group and individual study spaces, public computers, personal laptop connections, photocopy machines, and digital scanners for use by Stanford faculty, staff, and students.

For information about library hours, see the Library Hours (http://libraryhours.stanford.edu) web site.

In support of the University's academic mission, Academic Computing Services provides technology expertise, resources and services to students and faculty. Academic Computing Services supports the use of technology in teaching, learning, research, and community; operates and manages technology-enabled teaching and learning environments including classrooms and public study spaces, the Multimedia Studio in Meyer Library, the Digital Language Lab, and computer clusters in Green Library, Tresidder Union, and the student residences; provides technology education, consulting support, and multimedia services at Meyer and in the residences; provides faculty-specific computing resources through the Academic Technology Specialist Program and Academic Technology Lab; and provides technology support to Stanford University Libraries' services.

Information about the library collections, facilities, services, and policies is available at the Libraries & Academic Information Resources (http://library.stanford.edu) web site.

Further information about library services and resources is available from the Information Center staff in Cecil H. Green Library (http://infocenter.stanford.edu) and from reference staff in all University libraries.

Central Campus Libraries

The Cecil H. Green Library (East and Bing Wings) maintains research collections in the humanities, social sciences, area studies, and interdisciplinary areas. These collections number approximately 2.8 million volumes. Major services in Green Library include: the Information Center, the Media Microtext Center, the Jonsson Reading Room, the Lane Reading Room, the Bender Room, Loan Desk and Privileges, Interlibrary Services, course reserves, the Department of Special Collections, and the University Archives.

The J. Henry Meyer Memorial Library houses the East Asia Library as well as the Academic Computing Services group of SULAIR and provides study, multimedia, consulting, and instructional support services. In addition, Meyer Library houses the University's Digital Language Lab, technology enabled study spaces and classrooms, the Academic Technology Lab, and the central offices of Student Computing and Academic Computing Services.

Branch Libraries

Humanities and Social Sciences Branch Libraries include the Art and Architecture Library, Cubberley Education Library, East Asia Library, Music Library, and Archive of Recorded Sound.

Science Branch Libraries include the Branner Earth Sciences Library, Engineering Library, Falconer Biology Library, Mathematical and Computer Sciences Library, Harold A. Miller Library at the Hopkins Marine Station, Physics Library, and Swain Library of Chemistry and Chemical Engineering.

For a complete list of campus libraries, see the Libraries and Collections (http://libraries.stanford.edu) web site.

Coordinate Libraries

J. Hugh Jackson Library (http://www.gsb.stanford.edu/jacksonlibrary/), Graduate School of Business

Director: Kathy Long

Lane Medical Library (http://lane.stanford.edu/)

Director: Debra Ketchell

Crown Law Library (http://www.law.stanford.edu/library/)

Director: Paul Lomio

SLAC Research Library (http://www-group.slac.stanford.edu/library/)

Director of Technical Information Services: Patricia Kreitz

Hoover Institution Library and Archives

Director: John Raisian
Web Site: http://www.hoover.org/library-and-archives (http://www.hoover.org/library-and-archives/)

Since its founding by Herbert Hoover in 1919 as a special collection dealing with the causes and consequences of World War I, the Hoover Institution has become an international center for documentation, research, and publication on political, economic, social, and educational change in the 20th and 21st centuries.

The Hoover Library and Archives include one of the largest private archives in the world and contain outstanding area collections on Africa, East Asia, Eastern Europe, Russia and the former Soviet Union, Latin America, the Middle East, North America, and Western Europe.

Holdings include government documents, files of newspapers and serials, manuscripts, memoirs, diaries, and personal papers of men and women who have played significant roles in the events of these centuries, the publications of societies and of resistance and underground movements, the publications and records of national and international bodies, both official and unofficial, and books and pamphlets, many of them rare and irreplaceable. The materials are open to all Stanford students, faculty, and staff, to scholars from outside the University, and to the public at large.

Information Technology Services (IT Services)

Web Site: http://itservices.stanford.edu

IT Services manages the University's central information technology infrastructure and provides hundreds of services and applications for use in academic and business activities. Support is provided in four layers:

- Participation and client-focused leadership in institutional IT planning, including strategies for data center expansion, centrally managed storage and backup, and business continuity and disaster recovery.
- Applications and services for departments and end-users including email, calendaring, wireless connectivity, web authentication, and Windows and Linux server hosting. These services are supported by a help desk, contract-support consultants, online self-help, and training.
- Applications and services that support other campus service providers, including the help desk, change management, and network registration systems.
- A communications and collaboration infrastructure robust enough to support advanced network, voice, and web-based services.

To learn about the variety of information technology resources available at Stanford, see the Information Technology Services (http://computing.stanford.edu) web site. For assistance with technology services at Stanford, contact the Stanford IT Help Desk at (650) 725-HELP (5-4357) or submit an SU Services & Support Request (https://stanford.service-now.com/it_services/?id=portal_home).

RECREATION

Stanford Recreation is organizationally housed within The Department of Athletics, Physical Education, and Recreation and more specifically within Recreation and Wellness. Recreation offers sports, fitness, health and well-being programs to meet the diverse needs of the Stanford community. Through collaborative team efforts, Recreation takes pride in presenting high quality and fun programs focusing on providing excellent service. A wide-breadth of programs and services are offered by Recreation in aquatics, club sports, fitness facilities, group exercise and personal training, intramural sports, membership and recreation services, recreation classes, and youth programs.

Purpose

Stanford Recreation is committed to provide diverse recreational opportunities that inspire health and well-being for our community.

Values

Inspiring a healthier Stanford by:

- Providing inclusive programs and facilities that welcome the entire Stanford community.
- Creating a collaborative growth-oriented team.
- Offering industry leading and highest quality programs and instruction.
- Maximizing fun and enjoyment through friendly and positive interactions in health, well-being and sports.

AOERC

285 Santa Teresa St

The Arrillaga Outdoor Education and Recreation Center (AOERC) includes a 14,000 square foot fitness center which offers the latest in cardio and strength training equipment, enclosed indoor cycling studio, 50m pool, three basketball courts, the largest indoor collegiate climbing wall in the United States and more.

ACSR

341 Galvez St.

The Arrillaga Center for Sports and Recreation (ACSR) includes an 11,000 square foot fitness center with our Olympic Lifting platforms and several pieces of adaptive equipment. The ACSR also has three basketball courts, a mat room, and seven squash courts.

Outdoor Center

Located in the AOERC, the Outdoor Center is home to a full-service rental and retail facility, a lounge, an outdoor resource library and a multimedia classroom. The lounge serves as a central meeting space for Stanford community members who are interested in outdoor adventures. For current hours please visit outdoorcenter.stanford.edu as hours can change during the quarter.

Climbing Walls

The AOERC Climbing Wall and the ACSR Bouldering Wall are open to all Stanford community members regardless of experience. A valid SUID is required in order to access the facilities. Belay classes are available for free and climbing shoes are available to rent for $2.00. For current hours please visit climbing.stanford.edu as hours change quarter to quarter.

Recreation Services

Desk Staff are your first point of contact at the entrances and also in the Fitness Centers of the ACSR & AOERC. We provide services and access for Stanford community members including Daily Recreation Facility Pass sales, equipment checkout and locker rentals. Please let us serve you if you have any questions or needs.

ID Card Policy

All recreational facilities require a SUID Card or approved facility access card for access. Guest passes can be purchased by Stanford affiliates. All guest pass users must carry a government issued photo ID at all times while using the facilities. For more ID Card Information, please see the Member Services section of recreation.stanford.edu.

Lockers

Recreational-use lockers and showers are available at the Ford Center and the Arrillaga Outdoor Education and Recreation Center (AOERC). There are no lockers at the Arrillaga Center for Sports and Recreation (ACSR). The following are our locker rental fees:

$20/quarter or $50/year for Students

$30/quarter or $70/year for Faculty/Staff

*Payable by credit card or check. All lockers are available for rental at both the ACSR and AOERC Front Desks.

Day-use lockers are available at the AOERC, the ACSR and the Avery Aquatic Center. These lockers use keypad locks and do not require you to bring your own lock. Day-use lockers are free of charge and please note they will be cleared out each night at the close of business and any left behind contents will be added to the lost and found.

Aquatics

We offer recreational swimming at two outdoor campus locations. The Avery Aquatic Center (AAC) is located in the center of the Stanford Athletics' facilities and is home to the Men's and Women's Swimming, Diving and Water Polo Teams, as well as the Synchronized Swimming team. In addition to hosting Rec Swim, the AAC has hosted the Intramural Swim Meet and Inner-tube Water Polo Tournament. The Avery Recreation Pool, located at the Arrillaga Outdoor Education and RecreationCenter (AOERC) is a 50 meter pool set up in short course yards, used for recreational swimming and instructional classes. Stanford Recreation provides aquatic activities including Masters Swimming, Lifeguard Classes, Club Water Polo and several P.E. swim classes. Recreation instructional and fitness swimming classes are offered at the Avery Recreation Pool and include a BeWell rate for eligible staff.

For employment opportunities, contact information, and further details, please visit recreation.stanford.edu/aquatics.

Adventure Pursuits

The Stanford Adventure Program (SAP) is the organization that advises adventure experiences for Recreation & Wellness, Student Activities & Leadership (SAL), Stanford School of Medicine, Residential Education, the Haas Center and other formal SAP campus partners. SAP's student leadership model follows the Voluntary Student Organization structure established by SAL.

- *Outdoor Trips*: provides students the opportunity to participate in peer led adventure activities such as day trips and weekend experiences in a multitude of mediums including backpacking, rock climbing, surfing, kayaking, skiing, etc.

- *Outdoor House*: a new community within Suites founded with the intentions of creating a place for people to explore, educate and connect via their interests in adventures and the outdoors.
- *Stanford Outdoor Outreach Program (SOOP)*: enhances interpersonal relationships, fosters community, and instills personal confidence in San Francisco Bay Area youth through facilitated outdoor experiences.
- *Stanford Pre-Orientation Trips (SPOT)*: immersive experiences that take place the week before New Student Orientation and are designed to ease the transition of students to life at Stanford as well as foster Stanford Identity, community, and personal growth.

Visit adventure.stanford.edu for more information.

Club Sports

We brings together 27 diverse sports and more than 1,200 athletes with the common goal of creating an environment that fosters student development and leadership through sports. Teams compete in intercollegiate competitions at the highest level, while offering opportunities for participants of all skill levels, from beginners to experienced players.

Teams include the following: Archery, Badminton, Baseball, Basketball, Climbing, Cheer, Cycling, Equestrian, Golf, Hockey, Hurling, Judo, Lacrosse, Polo, Rugby, Running, Ski & Snowboard, Soccer, Squash, Swimming, Table Tennis, Taekwondo, Tennis, Triathlon, Ultimate, Volleyball, & Water Polo.

Visit clubsports (http://exploredegrees.stanford.edu/recreation/clubsports.stanford.edu).stanford.edu (http://exploredegrees.stanford.edu/recreation/adventure.stanford.edu) for more information.

Martial Arts

The Stanford Martial Arts Program (SMAP) is an umbrella organization that supports the various member martial art groups on campus. The main goals are to educate the Stanford community through outreach programming about the variety of martial arts instruction on campus, serve as a centralized communications network between the different groups and preserve the martial arts as a vital and distinctive component of Stanford life. SMAP has 12 distinct martial art offerings covering a wide variety of technical, physical and cultural skills.

Here are the following teams and clubs that are affiliated with the Stanford Martial Arts Programs: Aikido, Capoeira, Eskrima, Judo, Jujitsu, Kendo, Muay Thai Kickboxing, JKA Shotokan Karate, Taekwondo, Wing Chun Kung Fu, & Wushu.

Visit smap.stanford.edu (http://exploredegrees.stanford.edu/recreation/smap.stanford.edu) for more information.

Group Fitness Classes

Pay a single fee for one of two pass options and drop-in to any of our select classes, such as F45, Cardio Dance and more, throughout the quarter.

Personal Training

Work with one of our experienced and certified trainers to tailor a fitness program for you.

Fitness Assessments

Measure your health status and learn how you can achieve your fitness and wellness goals.

Olympic Lifting Classes

Learn proper lifting etiquette from our experienced staff and receive an annual Olympic Lifting sticker to use our platforms

Intramural Sports

IM's at Stanford include formal competition in a variety of team and individual sports using league, single elimination tournament, one day special event tournament, and ladder play structure. Registration occurs during the second week of classes during the Autumn, and during finals for the Winter and Spring. Mandatory Captains meetings can be completed during the registration period.

Our IM Sports leagues include the following: Flag Football (fall), Indoor Volleyball (winter), Basketball (winter), Outdoor Soccer (spring) and more.

For Intramural leagues information and further details, please visit recreation.stanford.edu/intramurals.

Senior Associate Athletic Director - Recreation and Wellness: Eric Stein

Director of Recreation: Rick Craig

Senior Associate Director of Competitive Sports: Christian Obando

Assistant Director of Competitive Sports: New Hire

Associate Director of Recreation: Daralisa Kelley

Assistant Director of Aquatics: Alisha Garcia

Assistant Director of Fitness: Zach Trahan

Assistant Director of Youth Programs: New Hire

Associate Director of Recreation Services: Robin Embry

Assistant Director of Recreation Facilities: Ebone Cobb

Director of Wellness: Jen Sexton

Assistant Director of BeWell: Syrous Parsay

Assistant Director of BeWell: New Hire

Senior Associate Director of Adventure Programs: Sue Lowley

Assistant Director of Outdoor Programs: Emily McCune

Assistant Director of Indoor Climbing: Phil Sandlin

Assistant Director of Leadership Engagement: Andrew De Torres

Senior Associate Director of Business Operations: Dennis Phan

Recreation Classes

Our classes provide participants with professional instruction in a safe and fun workout environment. Our Recreation Class offerings are non-credit classes. Stanford students, Faculty/Staff and Stanford community members are eligible to participate in Recreation Classes. Recreation classes that are offered throughout the academic year are the following:

- *Ashtanga Yoga*: taught in the Mysore style (a guided self practice), by Russell Case, authorized Level II Instructor by Pattabhi Jois and the
- Ashtanga Yoga Research Institute in Mysore India.
- *Golf*: covering all basic rules and etiquette of the sport including the fundamentals of grip, stance, alignment, posture and putting.
- *Gymnastics*: introducing participants to all gymnastics apparatus including floor exercise, vault, high bar, uneven bars, trampoline, rings, tumble track, pommel horse, balance beam and parallel bars.

- *Olympic Weightlifting*: develop the skills and strength necessary to perform the Olympic Lift (snatch, clean and jerk).
- *Squash*: learn the rules, tactics and techniques of this fast-paced game that will help to boost your skills on the courts.
- *Tennis*: helping to improve your forehand, backhand, serve and net play while simulating real game situations and explaining the rules of the game.

In addition, we often release occasional courses that will be offered throughout the academic year. Occasional courses that could be offered include our Pre- & Post-Natal Fitness Program, the Private Pilates Training Program and our Train to Run Program. Visit recreationclasses.stanford.edu (http://exploredegrees.stanford.edu/recreation/recreationclasses.stanford.edu) for more information on all class offerings and registration details.

SERVICES AND PROGRAMS

Bookstore

Web Site: http://stanfordbookstore.com (http://www.stanfordbookstore.com/)

Organized in 1897, Stanford Bookstore, (650) 329-1217, located at 519 Lasuen Mall (White Plaza), provides a diverse selection of books, course materials, and supplies to the students, faculty, staff, and community in and surrounding Stanford. The bookstore carries over 130,000 titles, including a wide selection of medical books and books written by Stanford authors, making it one of the largest bookstores in the nation. The bookstore also carries medical instruments, Stanford logo apparel, gifts and souvenirs, periodicals, and features a café that provides an enhanced shopping experience. The Computer Store, in the main branch, sells academically priced computer hardware and software. Other services include shipping of purchases, gift cards, book buyback, fax service, postage stamp sales, an ATM, and Enterprise Rent-A-Car hotline.

There are four branches in addition to the Stanford Bookstore that also serve the community: the Stanford Athletics Shop (formerly the Track House Sports Shop), (650) 327-8870, underneath the Cobb Track and Angell Field bleachers, is the headquarters for Stanford Athletic Gear; Tresidder Express convenience store, (650) 723-9224 in Tresidder Union; the Stanford Shop, (650) 614-0295, at the Stanford Shopping Center, provides Stanford apparel; and the Bookshop, (650) 725-2775, at the Cantor Center for the Arts, carries books on the arts, fine gifts, apparel, and jewelry.

Stanford Conference Services

Phone: (650) 723-3126
Email: conferenceinquiries@stanford.edu
Web Site: http://conference.stanford.edu (http://conference.stanford.edu/)

A conference is defined as any student, youth, or adult group that convenes for part of a day (including a luncheon), overnight, or for several days, outside the regular or summer academic sessions for registered students. Policies concerning conferences are the responsibility of the offices of the President and the Provost.

To make arrangements for hosting a new, academically sponsored residential summer conference during the mid-June through late-August time frame, contact Stanford Conference Services by phone or email as listed above. Stanford Conference Services also offers meeting planning services on a year-round basis for academically sponsored conference groups seeking assistance with planning and managing residential and non-residential conferences. In addition, conference organizers seeking to conduct conferences outside of the late August to early June time frame can also contact the non-academic facilities scheduling in the Office of the University Registrar, (650) 723-6755 or reg-events@stanford.edu, or contact Stanford Events, (650) 723-2551 or stanfordevents@stanford.edu.

Academic sponsorship by a Stanford dean or department head is required for first time conferences hosted by University departments or by conferences hosted by external organizations interested in meeting at Stanford. Conferences initiated by University departments or external organizations must demonstrate consistency with the University's academic mission. For summer conferences, the sponsoring department submits its proposal to the Director of Stanford Conference Services for review in terms of available facilities and for the approval of the President's Office. At least half of the participants in any summer conference at Stanford hosted by an external organization must be housed in Stanford's campus residences and participate in daily meal plans provided by Stanford Dining. On-campus residential housing and dining services are normally available from the Sunday following Commencement through late August.

Summer conference groups should contact Stanford Conference Services concerning arrangements for tables, chairs, audio-visual aids, signage, janitorial services, trash pick-up and removal, sprinkler shutoffs, and other conference-related products/services. During the academic year, housing arrangements for University-sponsored visitors can be made through the Stanford Guest House (http://guesthouse.stanford.edu) web site or call (650) 926-2800.

Ombuds

Interim Stanford University Ombuds: Rosan Gomperts
Phone: (650) 723-3682
Fax: (650) 725-7288
Mail Code: 94305-8200
Email: rosang@stanford.edu
Web Site: https://ombuds.stanford.edu/

School of Medicine Ombuds: James Laflin
Office: Medical School Office Building, 1265 Welch Road, Suite X301, MC: 5404
Phone: (650) 498-5744
Fax: (650) 498-5865
Mail Code: 94305-5404
Email: jlaflin@stanford.edu
Web Site: http://med.stanford.edu/ombuds (http://med.stanford.edu/ombuds/)

The charge to the Ombuds office at Stanford is: "The Ombudsperson's task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual's experience with University activities. The Ombudsperson's office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress."

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision making authority, the Ombuds has wide powers of inquiry. The Ombuds refers matters to the proper person or office expeditiously and also provides conflict resolution services. For the role of the office of the Ombuds in cases of sexual harassment, see the "Non-Academic Regulations (p. 100)" section of this bulletin.

Police Services

Department Office: Corner of Campus Drive and Serra Street
Phone: (650) 723-9633
Web Site: http://police.stanford.edu (http://police.stanford.edu/)

The Stanford Department of Public Safety is a full service police department that operates 24 hours a day, 7 days a week. For police, fire, or ambulance response, dial 9-1-1, or 9-9-1-1 from a University phone. Emergency assistance can also be obtained by using one of the nearly 100 Blue Emergency Phone Towers strategically placed around campus.

The department is composed of the following divisions:

The Field Services Division consists of sworn and non-sworn officers who patrol the campus and respond to calls for service. Sworn officers receive their police powers through the Santa Clara County Sheriff's Office. Sworn officers have the legal authority to stop vehicles, make arrests, and enforce all laws. Non-sworn officers assist the sworn officers

with security patrols, evidence collection, crime prevention presentations, and other assigned tasks.

Community Service Division: Community Service Officers (CSOs) enforce the parking rules and regulations on campus, and provide traffic control at special events, construction zones, and accident scenes. CSOs also provide building security during emergency or critical incidents.

The Support Services Division provides logistical, technical, and accounting support to the department. Special events are handled through this division as well. Special Events Personnel (SEPs) provide security at campus events including athletic events, concerts, student-sponsored events, and dignitary visits. SEPs are available for hire by groups needing security at their University events. Contact the special events office at (650) 723-4924, or email event_security@stanford.edu, for more information.

The Administrative Support Division supports the department through training, recruiting, payroll, human resources, and other business functions.

For additional safety information or to view the yearly crime statistics, see the Stanford Safety and Security Almanac, available free from the Public Safety (http://police.stanford.edu) web site.

Office for Religious Life

Office: Memorial Church
Phone: (650) 723-1762
Web Site: http://religiouslife.stanford.edu (http://religiouslife.stanford.edu/)

The mission of the Office for Religious Life (ORL) is to guide and enhance spiritual, religious, and ethical life within the Stanford University community. Multifaith exploration and dialogue, central in Stanford's history from its founding, is a vital part of both its ethos and education.

The ORL is committed to welcoming students of all genders and sexual identities, all religious and non-religious traditions, and all cultural backgrounds, striving to ensure that students, faculty, and staff have access to supportive contexts in which to pursue their spiritual journeys on the Stanford campus.

The ORL oversees and provides support for Stanford Associated Religions (SAR), more than thirty religious organizations that offer their spiritual services to the campus, as well as the Center for Inter-Religious Community, Learning, and Experiences (the CIRCLE). Located on the third floor of the remodeled Old Union, the CIRCLE offers an interfaith sanctuary, a seminar room, a common room, a student lounge, a non-lending library, and offices housing many SAR member groups.

Stanford Alumni Association

Web Site: http://stanfordalumni.org (http://www.stanfordalumni.org/)
Phone: (800) 786-2586 or (650) 723-2021

The Stanford Alumni Association (SAA) seeks to serve all Stanford alumni and students by offering programs and services such as reunions, regional events, Stanford Magazine, online services, volunteer and learning opportunities, and the alumni directory.

The Stanford Alumni Association's alumni and student class outreach department (ASCO) provides undergraduates and graduate students with networking opportunities, celebratory and social events, and programs that enhance their Stanford experience and help connect them to the 200,000 alumni worldwide who make up the Stanford alumni community. ASCO programs bring students and alumni together through Reunion Homecoming Weekend each autumn and Commencement weekend in the spring, along with alumni networking events throughout the year.

For students, SAA sponsors events such as student tailgates, alumni panels, Senior Send-off, Senior Dinner on the Quad, and Class Day. The Alumni Association gives out the J.E. Wallace Sterling Award and the Stanford Award of Excellence annually to honor graduating seniors for exemplary service to the University. For more information on student programs at the Stanford Alumni Association (http://police.stanford.edu) web site.

Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (https://osep.stanford.edu/) and Stanford Ticket Office (STO) (http://tickets.stanford.edu/) are divisions of the Office of Public Affairs (http://publicaffairs.stanford.edu/). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile university events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups. The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and University facilities, see the OSEP (https://osep.stanford.edu/) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (http://tickets.stanford.edu/) web site, or call (650) 725-ARTS (2787).

Diversity and Access Office

Director of the Diversity and Access Office: Rosa Gonzalez
Office: 419 Lagunita Drive, Suite 130
Mail Code: 94305-8550
Phone: (650) 723-0755; TTY: (650) 723-1216
Email: equal.opportunity@stanford.edu, disability.access@stanford.edu
Web Site: https://diversityandaccess.stanford.edu/

The Diversity and Access Office ensures compliance with Titles VI and VII of the Civil Rights Act, the Equal Pay Act, the Americans with Disabilities Act (ADA) and Sections 503 and 504 of the Rehabilitation Act, the Age Discrimination in Employment Act, and Executive Order 11246, the California Fair Employment and Housing Act (FEHA), and the Unruh Civil Rights Act, among other laws.

The Diversity and Access Office was created to advance Stanford University's equal opportunity and affirmative action goals and commitment to diversity. The office also ensures University compliance with federal, state and local regulations concerning nondiscrimination and disability access. The Director of the Diversity and Access Office is responsible for administering the ADA/Section 504 Grievance Procedure (Student) and the Student Non-Academic Grievance Procedure. Finally, the office also provides an array of services and resources designed to ensure equal opportunity and address bias and discrimination prohibited by law or official University policy, as well as assists individuals with

disabilities who have requests for accommodations in the workplace and access to Stanford facilities, programs, and activities.

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, in the administration of the University's programs and activities, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

This policy applies to Stanford programs and activities both on and off-campus, including overseas programs.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford's Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this website: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html.

Awards and Honors

Faculty and Staff Awards

Kenneth M. Cuthbertson Award

The Kenneth M. Cuthbertson Award was established in 1981 to recognize exceptional service to Stanford University. It was established by members of the faculty who wish to remain anonymous. All members of the Stanford community are eligible for the award; the sole criterion is the quality of the contribution that the recipients have made to the University. The award provides a way of honoring members of the staff and faculty for their efforts on behalf of the University.

Ordinarily, one award is made each year. The award was first presented in 1981 to the person for whom it is named. Kenneth M. Cuthbertson was one of the early architects of Stanford's long-term financial planning and fundraising program. His service to Stanford set an enduring standard for those who will come after him. The award is made annually at the University Commencement Ceremony.

Lloyd W. Dinkelspiel Awards

The Lloyd W. Dinkelspiel Awards recognize distinctive and exceptional contributions to undergraduate education at Stanford University. The two principal awards are made to the faculty or staff members adjudged to have made the most distinctive contribution to the development and enrichment of undergraduate education in its broadest sense. Two awards are also made to graduating seniors who combine academic achievement with effective contributions to undergraduate student life. Preference is given to service in the School of Humanities and Sciences in the area of liberal education. The awards are made from an endowment fund established in memory of Lloyd W. Dinkelspiel, a Stanford alumnus and trustee. The awards are made annually at the University Commencement Ceremony.

Walter J. Gores Awards

The Walter J. Gores Faculty Achievement Awards for excellence in teaching were established by bequest of Walter J. Gores, Stanford Alumnus of the Class of 1917 and a professor at the University of Michigan for 30 years. Teaching is understood in its broadest sense and includes, in particular, lecturing, leading discussions, tutoring, and advising at the undergraduate or graduate levels. Any member of the teaching staff of the University is eligible for an award, including all faculty of professorial rank, instructors, lecturers, teaching fellows, and teaching and course assistants. Ordinarily, awards are made to a senior faculty member (associate or full professor) or senior lecturer; a junior faculty member or member of the teaching staff; and a teaching assistant (graduate or undergraduate student). The awards are made annually at the University Commencement Ceremony.

Herbert Hoover Medal For Distinguished Service

David Starr Jordan's belief that every academic degree should represent work actually done in or under the direction of the institution granting it has meant that, since its founding, Stanford has awarded no honorary degrees. As a means of recognizing extraordinary individuals who deserve special acknowledgment, the Stanford Alumni Association in 1962 voted to establish the Herbert Hoover Medal for Distinguished Service. The name pays tribute to the former President's example of service to his University, to his country, and to the cause of world humanitarianism. Indeed, Mr. Hoover was the first award recipient. The gold medal is presented following selection by an anonymous committee appointed by the Chair of the Board of Directors of the Alumni Association.

Student Awards

Boothe Prize for Excellence in Writing

Awarded during the freshman year, the Boothe Prize recognizes excellence in writing. Students are selected for this honor on the basis of essays written for courses fulfilling the Introduction to the Humanities or Writing and Rhetoric requirements. The prize is named for Mr. and Mrs. D. Power Boothe, Jr., whose gifts to the University reflect their interest in the humanities.

Deans' Award for Academic Achievement

The Deans of Earth Sciences, Engineering, and Humanities and Sciences recognize from five to ten undergraduate students each year for their academic endeavors. Honorees are cited for noteworthy accomplishments which represent more than a high grade point average or success in course work. Faculty nominate students who have exceptional tangible achievements in classes or independent research, national academic competitions, a presentation or publication for a regional or national audience, or exceptional performance in the creative arts.

Firestone Medal for Excellence in Research

The Firestone Medal is awarded to seniors in recognition of excellence in undergraduate research. Departments in the School of Humanities and Sciences nominate students who have completed outstanding honors projects in the social, physical, and natural sciences.

Robert M. Golden Medal for Excellence in the Humanities and Creative Arts

The Golden Medal recognizes outstanding achievement in the humanities and the creative arts. Seniors receive these medals upon nomination by their major department.

Hoefer Prize for Excellence in Undergraduate Writing

The Hoefer Prize recognizes students and faculty for their work in courses that meet the University Writing Requirement for writing in the major. Prizes are awarded in each of the five areas of the undergraduate curriculum: humanities, social sciences, natural sciences, engineering, and earth sciences.

Frederick Emmons Terman Engineering Scholastic Award

The School of Engineering annually presents the Terman Award to seniors for outstanding academic achievement. The awardees share their award with a high school teacher of their nomination.

Phi Beta Kappa

Phi Beta Kappa is a nationwide society honoring students for the excellence and breadth of their undergraduate scholarly accomplishments. Membership in the Stanford Chapter (Beta of California) is open to undergraduates of all majors. To be elected to Phi Beta Kappa at Stanford, a student must achieve academic distinction in the major as well as in courses across a broad range of fields.

Approximately a tenth of the members of a graduating class are elected to Phi Beta Kappa. Of this number, about one fifth are chosen in their junior year, the remainder in their senior year.

The chapter's election guidelines define breadth of study as excellence beyond the major field. To be considered for election, a student must have taken at least three courses of 3 units or more at Stanford by the time elections are held early in the Spring Quarter with a letter grade of 'B-' or better in each of the following three major domains of knowledge: humanities; science, engineering, and math; and social sciences. Students who transfer in their junior year must have taken at least two courses at Stanford in two of the major domains and at least one course in the third domain, and must have completed a minimum of 75 units of academic work at Stanford by the end of Winter Quarter. Students who transfer in their sophomore year must have taken at least two courses at Stanford in each of the major domains.

There is no direct correlation between Stanford University General Education Requirements (GERs) and Phi Beta Kappa breadth requirements. The elections committee analyzes the content of individual courses to determine which major domain requirement they may satisfy. IHUM, PWR, and first-year language courses do not satisfy the PBK breadth criterion.

A grade of '+' or 'CR' is not considered a sign of distinction. Minimally satisfying the breadth criterion is not considered a sign of distinction.

The academic records of eligible students are automatically reviewed, so no special action is required for students wishing to be considered for membership. Anonymity in the election process is ensured by removal of the students' names from their academic records before consideration. Students who desire that their records not be made available for consideration by the Stanford chapter of Phi Beta Kappa should inform the Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032.

Exchange Programs and Cross-enrollment Agreements

Stanford has exchange programs and cross-enrollment agreements with a number of other colleges and universities. The purpose of these programs and agreements is to offer Stanford students courses and training that are not available in the Stanford curriculum.

Undergraduate

Stanford has exchange programs with four colleges and universities that allow students to exchange schools for a quarter/semester or for a year, depending on the school. These programs are best suited to students in their junior year, when the major area of study has been determined. Stanford students register for zero units at Stanford during the quarter(s) in which they are attending another college or university and pay the regular Stanford tuition. Courses taken at the other institution are treated as transfer credit back to Stanford. Students should contact the External Credit Evaluation section of the Office of the University Registrar to determine whether the courses taken through an exchange program may qualify for credit toward a Stanford degree. Only the number of units accepted in transfer, not the course titles or the grades received, are recorded on the Stanford transcript.

Exchange programs are currently available at three historically black institutions: Howard University in Washington D.C.; and Morehouse College and Spelman College in Atlanta, Georgia. The exchange program at Dartmouth College in Hanover, New Hampshire, focuses on Native American Studies. Further information is available at the Undergraduate Advising and Research Center.

Graduate

The Exchange Scholar Program is open to doctoral students in programs other than the Graduate School of Business or Stanford Law School who have completed one full year of study at one of the participating institutions. These students may apply to study at Stanford, and Stanford students may apply to one of these other institutions, for a maximum of one academic year (Autumn, Winter, and Spring quarters) to take advantage of particular educational opportunities not available on the home campus. The participating institutions are Brown University, University of Chicago, Columbia University, Cornell University, Harvard University, Massachusetts Institute of Technology, Princeton University, Stanford University, University of Pennsylvania, and Yale University. Further information on the program may be obtained from the Office of the University Registrar, or the graduate dean's office at participating institutions. Some institutions may place restrictions on specific departments.

Stanford also has separate exchange programs with the University of California, Berkeley, the University of California, San Francisco, and the University of California, Santa Cruz for students in marine sciences. Further information may be obtained at the Office of the University Registrar.

Cross-Enrollment

See the "ROTC section (p. 244)" of this bulletin for information on ROTC cross-enrollment programs.

SPECIAL EVENTS AND PROTOCOL

Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (https://osep.stanford.edu/) and Stanford Ticket Office (STO) (http://tickets.stanford.edu/) are divisions of the Office of Public Affairs (http://publicaffairs.stanford.edu/). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile University events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia, and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups. The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and University facilities, see the OSEP (https://osep.stanford.edu/) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (http://tickets.stanford.edu/) web site, or call (650) 725-ARTS (2787).

STUDENT AFFAIRS

Web Site: http://studentaffairs.stanford.edu/

Student Affairs is led by the Vice Provost for Student Affairs. The Vice Provost for Student Affairs reports directly to the Provost and is responsible for providing leadership, policy direction, and administrative support for budget, personnel, facilities, and development, as well as oversight of the efficiency and effectiveness of each of the division's units. The Vice Provost interacts with the President, the Provost, the Vice Provosts, faculty, schools, department representatives, students, and parents. The Vice Provost is a member of the Stanford University Cabinet, and ex officio member of the Stanford Alumni Association Board of Directors, Stanford Athletic Board, and Haas Center for Public Service National Advisory Board. The Vice Provost also attends the Senate meetings of the Academic Council.

There are six main units in Student Affairs:

1. Administration
2. BEAM, Stanford Career Education, and Experiential Education
3. Dean of Students
4. Residential Education
5. Student and Academic Services and University Registrar
6. Vaden Health Center

The division encompasses 25 programs for undergraduates and graduate students, which are administered by the following offices and centers. Links are to the relevant office's web site; see below for a short description of what each office does.

- Office of Accessible Education (http://oae.stanford.edu)
- Office of Alcohol Policy and Education (https://alcohol.stanford.edu/)
- Asian American Activities Center (A (http://a3c.stanford.edu)^{3}C)
- Bechtel International Center (http://bechtel.stanford.edu)
- Black Community Services Center (http://bcsc.stanford.edu)
- BEAM, Stanford Career Education (http://beam.stanford.edu)
- Community Standards (OCS) (http://communitystandards.stanford.edu)
- Dean of Students (https://deanofstudents.stanford.edu/)
- Diversity and First-Gen Office (https://diversityandfirstgen.stanford.edu/)
- El Centro Chicano y Latino (http://elcentro.stanford.edu)
- Graduate Admissions (https://studentaffairs.stanford.edu/gradadmissions/)
- Graduate Life Office (https://glo.stanford.edu)
- The Markaz: Resource Center (http://markaz.stanford.edu)
- Native American Cultural Center (https://nacc.stanford.edu/)
- Office for Military-Affiliated Communities (OMAC) (http://military.stanford.edu)
- Office of Student Engagement (http://sal.stanford.edu)
- Old Union (https://oldunion.stanford.edu/)
- Queer Student Resources (https://queer.stanford.edu/)
- Registrar's Office (https://studentaffairs.stanford.edu/registrar/)
- Residential Education (http://resed.stanford.edu)
- Schwab Learning Center (https://slc.stanford.edu/)
- Student Financial Services (http://sfs.stanford.edu)
- Student Services Center (https://studentservicescenter.stanford.edu/)
- Tresidder Memorial Union (https://tresidder.stanford.edu/)
- Vaden Health Center (http://vaden.stanford.edu/)
- Weiland Health Initiative (http://weiland.stanford.edu)
- Well-Being at Stanford (https://vaden.stanford.edu/well-being/)
- Windhover Contemplative Center (https://windhover.stanford.edu/)
- Women's Community Center (https://wcc.stanford.edu/)

Accessible Education (OAE)

Offices: 563 Salvatierra Walk
Phone: (650) 723-1066; TDD (650) 723-1067
Web Site: https://oae.stanford.edu/
Email: oae-contactus@stanford.edu

The Office of Accessible Education (OAE) is the campus office designated to work with students, faculty, and staff to put in place appropriate accommodations for all Stanford students with disabilities, at both the undergraduate and graduate levels (including the professional schools). The OAE provides a wide array of support services, accommodations, and programs to remove barriers to full participation in the life of the university.

In reaching its determinations about appropriate accommodations, the OAE considers factors such as the documentation from professionals specializing in the area of the student's diagnosed disability, the student's functional limitations, and the student's input and accommodation history in regard to particular needs and limitations. The OAE then works with the student and relevant faculty and staff through an interactive process designed to achieve an accommodation that meets the needs of all parties.

Alcohol Policy and Education (OAPE)

Offices: Rogers House, 581 Capistrano Way
Phone: (650) 723-5947
Web Site: https://alcohol.stanford.edu/
Email: alcohol@stanford.edu

The Office of Alcohol Policy and Education (OAPE) empowers students to make healthy decisions about drinking behaviors that not only affect them as individuals, but ultimately impact the campus community as a whole. OAPE is focused on reducing the harm of high-risk behaviors while increasing safe, legal, responsible actions. Services offered include individual consultation, educational workshops and seminars, and academic coursework. OAPE also sponsors Cardinal Nights, a program of weekly events that allow students to socialize in an environment free of alcohol.

Asian American Activities Center (A ^{3}C)

Offices: Old Union Clubhouse, 2nd Floor, 524 Lasuen Mall
Phone: (650) 723-3681
Web Site: https://a3c.stanford.edu/
Email: stanforda3c@stanford.edu

The A³C builds a community of Asian and Asian American students, faculty, staff and alumni that fosters greater understanding and awareness of the Asian experience in America. It offers many resources for the community. The A³C is home to over thirty student organizations that hold weekly meetings and rehearsals in the center and also use the office as workspace for planning events.

The center houses the Asian American Resource Library which contains Asian American literature, reference texts, hard-to find-periodicals, university documents, newspaper clippings and videos. Located in the center for student use are a computer cluster, fax machine, TV, VCR, DVD and stereo.

Students come to the A³C for information on campus resources and community service opportunities; for meetings; for cultural and educational programs and workshops; for research materials; for organizational and personal advising; for relaxing between classes; and to study. In the evenings, student organizations utilize the space for

group meetings and events. Staff come to the A³C to attend events, meet as staff and connect with and mentor students. Faculty come to the A³C for resources, help with research projects and to speak at workshops and on panels. Alumni come to the A³C to meet students and to host meetings and events. Campus partners come to the A³C for advice, collaborations and to connect with students.

Bechtel International Center

Office: 584 Capistrano Way
Web Site: https://bechtel.stanford.edu

Bechtel International Center is the immigration and community center at Stanford for students, postdocs, visiting scholars, and their families from around the world, and for all those on the Stanford campus who are interested in and/or oriented to international experiences. In addition to providing extensive immigration services to the international community, Bechtel also offers social, cultural, and educational programs, not only to acquaint students and scholars with the life of the University and the U.S., but also to bring the international community together to showcase unique cultures and traditions in a spirit of respect and understanding.

The Overseas Resource Center (ORC) is an important part of the Bechtel International Center. The ORC supports and advises U.S. Stanford students as well as recent alumni who are seeking prestigious scholarships for study and research abroad, such as the Rhodes, Marshall, and Fulbright awards.

Bechtel believes that international educational exchange nurtures a lifelong global perspective, and plays a key role in supporting Stanford's standing as a truly international university in the following ways:

- Bechtel provides information about and assistance with obtaining and maintaining legal status in the U.S. to international students, scholars, and Stanford departments.
- It advises Stanford students who are pursuing scholarships for study and research abroad.
- It enables international students, scholars, and their family members at Stanford to receive maximum academic, cultural, and personal benefit from their stays in the U.S.
- Bechtel contributes to international activities at Stanford by helping to create a welcoming and supportive environment that is responsive to the needs of the international community.
- It provides opportunities for Stanford students, faculty, staff, and members of the local community to broaden their horizons by interacting with people from different cultures through programs to increase international awareness and understanding.

BEAM, Stanford Career Education

Offices: 563 Salvatierra Walk
Phone: 650-725-1789
Web Site: https://beam.stanford.edu/ (https://careers.stanford.edu/)

BEAM (Bridging Education, Ambition, and Meaningful Work), Stanford Career Education, empowers students to cultivate personalized networks that shape their professional journey through customized support for students based on their interests, academic majors and degrees. BEAM offers many opportunities to engage with employers and alumni via events, mentorships, experiential learning, and much more. Tools and digital resources are also made available through meetups, labs, or individual appointments to help students transform their ambitions into meaningful work.

Support is available to undergraduate and graduate students, and all students are encouraged to login to Handshake, our online platform that connects students and employers, to stay up to date on events and opportunities. Events and appointments are free to students and limited services are available to first-year alumni and student spouses/domestic partners.

The following suggestions may assist students in getting the most out of their journey toward meaningful work:

- Begin building your personalized network early in your Stanford career.
- Register with Handshake to access career events, internships, part-time and full-time jobs, and interview opportunities.
- Discover yourself and gain clarity of your interests and skills through meetups, assessments, and taking advantage of individual career coaching appointments that can be made via Handshake.
- Make exploration a priority by connecting with alumni mentors, planning informational interviews, signing up for a career trek, and meet with an industry consultant.
- Make a plan to pursue opportunities by attending labs, familiarizing yourself with resources, and utilize your connections.

Visit Career Communities for career coaching in academic departments and student communities:
Monday–Friday, 9 a.m. to noon, 1 p.m. to 5 p.m.; (650) 725-1789

Visit Career Ventures for customized industry connections and employer engagement opportunities:
Monday–Friday, 8:15 a.m. to 4:30 p.m.; (650) 723-9014

Black Community Services Center

Offices: 418 Santa Teresa Street
Phone: (650) 723-1587
Web Site: https://bcsc.stanford.edu

The BCSC supports over 25 BVSOs which include pre-professional organizations, academic support groups, political groups, graduate student organizations, performance groups, cultural organizations, international organizations and historically Black Greek letter organizations and publications. By participating in these groups, students are able to hone their leadership, critical thinking and communication skills. We provide advising, training and guidance that helps students realize their ideas and supports their creativity and growth as leaders. Many of our students have applied the lessons of leadership they have learned by participating in BVSOs and working in our center to positions of leadership in other areas of the university.

The connection to the Black community at Stanford does not end at graduation. The BCSC serves as a vital link between Black alumni and the university through collaborative programming with Black Alumni Chapters across the country, the National Black Alumni Association and the Stanford Alumni Association. Our recent fundraising success has increased communication and expectation of alumni.

Throughout our existence, the BCSC has been instrumental in creating a community that fosters intellectual, personal and cultural growth. Our sustained commitment to promoting academic excellence and to the empowerment of the African Diaspora has created a legacy of scholars, leaders and agents of social change that have not only impacted Stanford, but the nation, and the world.

Community Centers

There are seven ethnic and community centers that support students who seek services associated with a particular group or community. Each center has its own site and professional staff who advise and counsel students. In addition, the centers sponsor programs throughout

the year that foster intellectual, personal, and cultural growth. Detailed information is available on the following web sites:

- Asian American Activities Center (https://a3c.stanford.edu/)
- Black Community Services Center (https://bcsc.stanford.edu)
- El Centro Chicano y Latino (https://elcentro.stanford.edu)
- The Markaz: Resource Center for Engagement with the Cultures and Peoples of the Muslim World (https://markaz.stanford.edu)
- Native American Cultural Center (https://nacc.stanford.edu)
- Queer Student Resources (https://queer.stanford.edu/)
- Women's Community Center (https://wcc.stanford.edu)

The programs offered through the centers are open to all Stanford students.

Community Standards

Office: Tresidder Memorial Union, 2nd floor
Mailing Address: 459 Lagunita Drive, Suite 9
Mail Code: 94305-3010
Phone: (650) 725-2485
Fax: (650) 736-0247
Web Site: https://communitystandards.stanford.edu/
Email: community_standards@stanford.edu
(judicial.affairs@stanford.edu)

The primary codes of conduct for students are the Fundamental Standard and Honor Code. Cases of alleged violations of the university's Honor Code, Fundamental Standard, and other student conduct or University policies proceed through an established student conduct process (https://communitystandards.stanford.edu/student-conduct-process/) outlined in the Student Judicial Charter of 1997, which can be found in its entirety at the Office of Community Standards (https://communitystandards.stanford.edu/) web site. The web site also contains the policies, rules, and interpretations, as well as the university's Student Conduct Penalty Code, applicable to those students found responsible for violating the Honor Code, the Fundamental Standard, or other university policy or rule.

The Stanford Title IX Office oversees the Stanford Student Title IX Process and offers resources for students affected by interpersonal violence and gender-based discrimination. Student-related concerns of sexual harassment, sexual assault, sexual misconduct, relationship (dating or domestic) violence and stalking involving students, regardless of whether the alleged Prohibited Conduct occurred on or off of campus and regardless of the sex of the parties involved, should be reported to the Title IX Office (https://titleix.stanford.edu/).

When a violation of the Fundamental Standard, Honor Code, or other university policy or rule governing student conduct is alleged, or whenever a member of the university community believes such a violation has occurred, he or she should contact the Office of Community Standards.

Fundamental Standard

Students at Stanford are expected to know, understand, and abide by the Fundamental Standard, which is the university's basic statement on behavioral expectations articulated in 1896 by Stanford's first President, David Starr Jordan, as follows:

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

The Fundamental Standard is an aspirational statement of Stanford's ideal of civic and moral community. Although the spirit of the Fundamental Standard remains unchanged since 1896, these aspirational learning goals for all Stanford students elaborate its basic values today:

i. Students are expected to respect and uphold the rights and dignity of others regardless of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or socioeconomic status.

ii. Students are expected to uphold the integrity of the university as a community of scholars in which free speech is available to all and intellectual honesty is demanded of all.

iii. Students are expected to respect university policies as well as state and federal law.

iv. For the purposes of clarity, students should be aware that they may be subject to discipline at Stanford University for acts of misconduct including:

- Violation of university policy
- Violation of a specific university directive
- Violation of an applicable law
- Physical assault
- Sexual misconduct, sexual assault, sexual harassment, stalking
- Theft of property or services
- Threats
- Hazing
- Hate crimes
- Alcohol- and drug-related violations, including driving under the influence
- Intentional or reckless property damage
- Seeking a university benefit to which a student is not entitled
- Falsifying a document
- Impersonating another
- Computer violations
- Knowingly or recklessly exposing others to significant danger

There is no standard penalty that applies to violations of the Fundamental Standard. Infractions have led to penalties ranging from formal warning and community service to expulsion. In each case, the nature and seriousness of the offense, the motivation underlying the offense, and precedent in similar cases are considered.

Honor Code

The Honor Code is the University's statement on academic integrity. It is essentially the application of the Fundamental Standard to academic matters. Provisions of the Honor Code date from 1921, when the honor system was established by the Academic Council of the University Faculty at the request of the student body and with the approval of the President. The Honor Code reads:

"1. The Honor Code is an undertaking of the students, individually and collectively:

a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;

b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as

practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

Examples of conduct that has been found to be in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading without the instructor's knowledge and consent
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

For more information, see the Student Conduct Process (https://communitystandards.stanford.edu/student-conduct-process/) pages at the Community Standards (http://communitystandards.stanford.edu) web site. The standard sanction for a first violation is a one quarter suspension from the University and 40 hours of community service. In addition, many faculty members issue a 'No Pass' for the course in which the violation occurred. Information for teachers is available on the Teaching Commons web site (https://teachingcommons.stanford.edu/resources/teaching-resources/how-evaluate-students/academic-honesty-and-dishonesty/).

Dean of Students

Interim Dean of Students: Ken Hsu
Office: Tresidder Memorial Union, 459 Lagunita Drive, Ste. 9
Phone: (650) 723-2733
Web Site: https://deanofstudents.stanford.edu/
Email: deanofstudents@stanford.edu

The mssion of the Dean of Students is to foster an environment where all students can be successful during their Stanford tenure by providing support to undergraduate and graduate students, as well as the university community, regarding issues concerning student life, across all facets of a student's experience.

The Dean of Students has responsibility for overseeing the Graduate Life Office, Office of Community Standards, Residential Education, and the Office of Alcohol Policy and Education, as well as responsibility for the Acts of Intolerance Protocol. The Dean reports to the Vice Provost for Student Affairs and is a member of her executive committee.

Diversity and First-Gen Office

Office: Old Union, 520 Lasuen Mall, Suite 206
Phone: (650) 723-2733
Web Site: https://diversityandfirstgen.stanford.edu/
Email: stanfordfli@stanford.edu

The DGen office provides campus leadership for students, faculty and staff to consciously and actively affirm intersectional identities and foster intergroup relationships. Through research, forums, classes and workshops, we build student capacity and confidence to experience a sense of belonging and develop authentic connections with people from different backgrounds. Within this mission is a special focus on enriching the experience of first-generation and low-income college students by supporting their academic and social transitions, empowerment and community building.

Graduate Admissions

Phone: (866) 432-7472
Web Site: https://gradadmissions.stanford.edu/
Submit a Service Ticket (https://stanford.service-now.com/student_services/?id=sc_category&sys_id=a7afdf3c135de7c08a9175c36144b0ca) for Questions and Issues

The Graduate Admissions office, an office with Student and Academic Services, oversees the online application process. The individual departments establish application deadlines, manage the status of applications, and make admission and financial aid decisions.

Graduate Life Office (GLO)

Graduate Life Office, Graduate Community Center: 750 Escondido Road, Suite 207
Graduate Life Office: Escondido Village Office, 859 Comstock Circle
Phone: (650) 736-7078
Web Site: https://glo.stanford.edu/
Email: graduatelife@stanford.edu

The Graduate Life Office (GLO) works with students on and off campus and with student groups, including Community Associates (student residence staff), the Graduate Student Programming Board, and the Graduate Student Council, to create an inclusive environment through programs in the residences and campus-wide. The Graduate Community Center (GCC) serves as a focal point for meetings and activities in the graduate community.

The GLO staff also works with individual students who need information and support or who may be experiencing personal difficulties. Staff members are knowledgeable about and have access to support and resources available throughout the university. Staff work closely with student services administrators in academic departments to provide consultation and services to students in need.

Graduate Student Residence Program

The University's philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the university. By providing affordable housing in proximity to academic resources, the University creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members. The Community Associate (CA) program in the residences serves as a supportive resource for residents and to connect student neighbors through social events and activities to build a sense of community in the residences.

Markaz Resource Center

Office: The Nitery, Rooms 210, 211, and 212, 514 Lasuen Mall
Phone: (650) 736-7078
Web Site: https://markaz.stanford.edu/
Email: the-markaz@stanford.edu

The Markaz supports a vibrant community of students who identify with or are interested in Muslim experiences both here and around the world. It provides a welcoming space, resources, and programming to engage, educate and empower the entire Stanford community. Whether addressing the issues of today or celebrating our rich heritage, the Markaz fosters a sense of belonging and builds connections across Stanford's diverse community.

Native American Cultural Center

Office: Old Union Clubhouse Ground Floor, 524 Lasuen Mall
Phone: (650) 725-6944
Web Site: https://nacc.stanford.edu/

Email: the-markaz@stanford.edu

Our roots at Stanford date back earlier than the institution itself. Built on land originally inhabited by the Muwekma Ohlone Tribe, Stanford University opened its doors in 1891. Three years later, John Milton Oskison was the first Native American to graduate from Stanford. Fueled by the spirit of social and political change during the 1960s, a group of Native students worked with the university administration to increase educational opportunities for Natives at Stanford. Since then, our numbers have increased, and students have continued to take an active role in increasing opportunities for our community at Stanford. Today, there are more than 350 undergraduate and graduate students representing more than 50 tribes studying at Stanford.

Ours is a community of similarities and differences. Over the years, the Native American community at Stanford has brought together people from a wide range of affiliations and a hundred different tribal backgrounds—all with different talents and experiences. Once here, students explore different interests, become involved in a range of activities and participate in the community in many important ways. In our diversity we find strength as each individual brings a new gift, talent or perspective to the group. Though we may be very different in terms of background, viewpoint or level of involvement, each of us make up a part of the whole that is our community.

Office for Military-Affiliated Communities (OMAC)

Office: Tresidder Memorial Union, 2nd floor
Phone: (650) 736-5439
Web Site: https://military.stanford.edu (http://military.stanford.edu/)

The Office for Military-Affiliated Communities (OMAC) focuses on the administration and management of VA financial benefits, coordinates and supports educational opportunities for military-affiliated communities, and conducts outreach to faculty regarding engagement and support for faculty grants or other funding specifically identified for military and veteran communities.

Office of Student Engagement (OSE)

Office: Old Union, 520 Lasuen Mall, Suite 206
Phone: 650-723-2445
Web Site: https://sal.stanford.edu/
Email: studentengagement@stanford.edu

The Office of Student Activities and Leadership (SAL), located in Old Union, supports student activities, over 600 student organizations and the ASSU through publications, workshops, one-on-one consultation, advising and major event planning support.

Voluntary Student Organizations

There are over 600 different Voluntary Student Organizations (VSOs) at Stanford. VSOs are organizations

1. in which membership is not mandatory and is nondiscriminatory,
2. in which membership is both open and limited to current Stanford students registered in a degree-granting program,
3. in which students make all organizational decisions, and
4. whose purposes and procedures are consistent with the goals and standards of the University. In order to use University facilities, the Stanford name, or to receive ASSU funding, all voluntary student organizations must register with the University through the Office of Student Activities, Old Union, room 206.

As a condition of registration, each voluntary student organization must file and have approved each of the following:

1. A statement of purpose and organizational constitution.
2. A statement about membership eligibility.
3. Clear procedures for officer elections.
4. Identification of the authorized representatives of the group, who must be a currently registered student, and at least five active members in the organization who are currently registered students.

Each voluntary student organization must renew its registration with the University annually, early in Autumn Quarter, by submitting new registration materials.

If a voluntary student organization that is registered with the University seeks to use University facilities for meetings open to more than its own members and to specifically invited guests, such meetings shall be subject to the policies of the Committee on Public Events. All organization events held in University facilities must receive event approval from the Student Activities and Leadership and Stanford Events.

A voluntary student religious organization may hold open meetings in University facilities only with the approval of the Office of the Dean for Religious Life (as the delegatee of Student Activities and Leadership).

A registered voluntary student organization may advocate publicly a position on a public issue, provided the organization clearly identifies itself, and provided such an organization in any public statement makes clear it does not represent or speak for the University or the Associated Students.

No student group or individual student(s) may use University space or facilities or receive other University support for purposes of supporting candidates for public office. Groups may use White Plaza for tables, speeches, and similar activities and may request to reserve auditoriums and similar space for public events including speeches by political candidates as long as all University guidelines are followed.

Queer Student Resources

Office: Fire Truck House, Second Floor, 433 Santa Teresa Street
Phone: (650) 725-4222
Web Site: https://queer.stanford.edu/
Email: QueerStudentResources@stanford.edu

The Queer Campus team welcomes students with questions about coming out or how to navigate campus, reach out. Queer Events and Services Team (QuEST) consultants have one goal: to help queer communites thrive at Stanford. They share their in-depth knowledge of campus resources with students, faculty, and staff so that these individuals can make their ideas a reality.

Registrar's Office

Student Services: Tresidder Memorial Union, 2nd Floor
Phone: (866) 993-7772
Web Site: https://registrar.stanford.edu/

The Office of the University Registrar, a unit within Student and Academic Services, supports teaching and learning at Stanford by maintaining the integrity of academic policies and the student information system. We are the stewards of Stanford's student records from application to degree conferral in perpetuity.

Residential Education

Office: Tresidder Memorial Union, 459 Lagunita Drive, Suite 4
Phone: (650) 725-2800
Web Site: https://resed.stanford.edu/
Email: residentialeducation@stanford.edu

We are concerned with the experience of individual residents and how to best serve each of them given the diversity and complexity of each

experience. Our work seeks to provide every student the opportunity to engage and challenge themselves in a way that is unique to them whether that is through facilitating the process to become a member of a theme community, creating a selection process or trainings that seek to help both our applicants and our appointed team members grow and develop skills they can take with them after they leave the farm, providing space for the creation and engagement in the arts, or simply providing the support network and resources students need to navigate their time at Stanford.

ResEd strives to provide the undergrads on campus with a community experience within our larger research "university bubble" by bringing together the conviction that living and learning are integrated and integral as a part of the undergraduate educational experience at Stanford University.

Residential Education Program

The Residential Education program provides Stanford undergraduates with a small community experience within a large research university. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students' preparation for a life of leadership, intellectual engagement, citizenship, and service. An extensive network of staff, including many who live in the residence halls, supports students during their undergraduate careers.

Residence Deans

Residence Deans provide assistance to on- and off-campus undergraduate students. They can advise students about personal matters, occasionally intervene directly in behavioral problems or mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of students, and administrative matters. Residence Deans work closely with the Dean of Student Life and other University offices. They are assigned to specific residences and to off-campus students. For further information, undergraduates should call Residential Education at (650) 725-2800. For assistance, graduate students can consult assistant deans in the Graduate Life Office at (650) 736-7078.

Schwab Learning Center

Office: 563 Salvatierra Walk, Rm 126
Web Site: https://slc.stanford.edu/
Email: schwablearningcenter@stanford.edu

The Schwab Learning Center is committed to teaching individuals to understand their learning history, their unique cognitive strengths and recommends strategies to optimize potential across the lifespan. We help students with learner variability understand how they learn and leverage their strengths.

Student Financial Services

Office: 408 Panama Mall, 2nd floor
Phone: (866) 993-7772 (toll-free)
Web Site: https://sfs.stanford.edu (http://sfs.stanford.edu)

Student Financial Services is responsible for managing billing, payment, and collections of student accounts receivable; and managing student loan receivables and collections. Student Financial Services also manages the refunding of aid to students in collaboration with the financial aid offices and in compliance with Title IV regulations. Furthermore, Student Financial Services provides resources and guidance to University departments to ensure accurate receipting and depositing of monies.

Student Services Center

Office: Tresidder Memorial Union, 2nd floor
Submit a SU Services & Support Request (https://stanford.service-now.com/student_services/) to the SSC
Phone: (650) 723-7772 or (866) 993-7772 (toll-free)
Web Site: https://studentservicescenter.stanford.edu (http://studentservicescenter.stanford.edu/)

The Student Services Center (SSC) is committed to providing a single point of friendly, professional service for answers to questions concerning administrative and financial issues. The center strives to resolve 90 percent of students' issues upon first contact. The SSC represents Student Financial Services, the Office of the University Registrar, the University Cashier's Office, the Financial Aid Office, and Stanford ID Card Services, and is able to assist students with questions including those related to University billing, financial aid disbursements, refunds, payroll deductions, payment plan, enrollment, Stanford degree policies and procedures, Stanford ID card, and forms pickup and submission.

Vaden Health Center

Center Office: 866 Campus Drive
Phone: 650-498-2336
Web Site: https://vaden.stanford.edu (http://vaden.stanford.edu/)

The Allene G. Vaden Health Center strictly protects the confidentiality of information obtained in medical care and counseling.

Medical Services

Medical Services (650-498-2336, ext. 1) is the first stop for diagnosis and treatment of illness, injury, and ongoing conditions, as well as preventive counseling and education. Services available without additional charge for students who have paid the Campus Health Service fee include:

- Medical appointments in general medicine and sports medicine.
- Medical advice for routine concerns throughout the day. When Medical Services is closed, advice for urgent conditions is available from the on-call physician.
- Referral to specialists, primarily at Stanford Hospital and Clinics and Menlo Medical Clinic.

Additional services (fees apply):

- Allergy injections, immunizations, travel services, physical exams for employment and scholarships, HIV testing, laboratory, X-rays, drug screening (academic year only).
- Pharmacy (650-498-2336, ext. 3) and physical therapy (650-723-3195) are available on site.

Counseling and Psychological Services (CAPS)

CAPS (650-723-3785) helps students who experience a wide variety of personal, academic, and relationship concerns. Services available without additional charge for students who have paid the Campus Health Service Fee include:

- Evaluation and brief counseling, including personal, couples and group therapy. Students requesting or requiring longer, ongoing therapy incur fees.
- Workshops and groups that focus on students' social, personal and academic effectiveness.
- Crisis counseling for urgent situations 24 hours a day.
- Consultation and outreach to faculty, staff, and student organizations.

Confidential Support Team (CST)

Office: Kingscote Gardens (https://campus-map.stanford.edu/?id=02-140&lat=37.42390892&lng=-122.17283829&zoom=17&srch=419%20lagunita%20dr)
Phone: 650-736-6933
CST 24/7 Hotline (for urgent concerns): 650-725-9955

Web Site: https://vaden.stanford.edu/get-help-now/confidential-support-team (https://vaden.stanford.edu/get-help-now/confidential-support-team/)

The Confidential Support Team (CST) offers emotional support, consultation, and short-term individual counseling to Stanford students impacted by sexual assault and relationship/domestic violence as well as intimate partner abuse, stalking, and sexual harassment. CST is staffed by clinical psychologists and a clinical social worker. At CST, students can receive information and guidance about their rights and reporting options. Confidentiality is strictly maintained. There is no charge for Stanford students.

Additional Services

- Consultation to faculty, staff, and student organizations
- Assistance connecting to other on- and off-campus support resources

Hours of Service

- To access CST services, call the hotline at 650-725-9955 or stop by the main office at Kingscote Gardens (https://campus-map.stanford.edu/?id=02-140&lat=37.42390892&lng=-122.17283829&zoom=17&srch=419%20lagunita%20dr) on Monday - Friday from 8:30 am - 5 pm.
- At all other times, call the hotline at 650-725-9955, which is directed to a CAPS on-call clinician.
- To contact the CST Office when not seeking to access confidential support services, call the general business line at 650-736-6933.

Health Promotion Services

Health Promotion Services (650-723-0821) educates and supports students to help them make informed, healthy decisions about their lifestyle. Services include:

- Individual preventive counseling and resource referral concerning nutrition, weight management, eating and body image, alcohol, tobacco and other drug use, sexual assault and harassment, relationships, intimacy and gender issues, and sexual health.
- Health education speakers, programs, and events and workshops at student residences, community centers, student organizations, and for new students (such as Real World: Stanford).
- Academic courses and internships.
- Student groups and volunteer opportunities including Peer Health Educators, HIV Peer Anonymous Counseling and Testing (HIV*PACT), Sexual Health Peer Resource Center (SHPRC), and CPR/First Aid classes.

Health Insurance

All registered students are required to have health insurance. Call (650) 723-2135 for more information. Cardinal Care (http://vaden.stanford.edu/insurance/), the University-sponsored plan for students, fulfills this requirement. Insured by Aetna Student Health (medical), and ValueOptions (mental health), Cardinal Care features comprehensive, worldwide coverage, services by referral at Stanford University Medical Center and Menlo Medical Clinic, and lowest costs when one initiates care at Vaden Health Center. Stanford does not sponsor a health insurance plan for dependents; for available options, see the Dependent Health Insurance (http://vaden.stanford.edu/insurance/dependent-coverage/) web site. Options for voluntary dental insurance are also offered.

Under certain circumstances, students with their own health insurance may waive Cardinal Care coverage. Domestic students who choose not to participate in Cardinal Care only have to waive once each academic year and must waive coverage before the first quarter in which they are enrolled for that academic year. At that time, and that time only, they will be able to waive Cardinal Care for the rest of the year by documenting equivalent health insurance in Axess (http://axess.stanford.edu) by the applicable deadline listed on Vaden's web site (http://vaden.stanford.edu/insurance/using_your_own.html#waive). International students must have coverage that meets or exceeds minimum standards established by the University in order to opt out of Cardinal Care; for more information see Vaden's web site (http://vaden.stanford.edu/insurance/using_your_own.html#international).

Weiland Health Initiative

Office: Kingscote Gardens, G level, 419 Lagunita Drive
Phone: 650-723-2005
Web Site: https://weiland.stanford.edu/
Email: weilandhealth@stanford.edu

Our mission is to promote mental health and wellness across the spectrum of gender identities and sexual orientations through education, training and clinical services at Stanford and beyond.

Women's Community Center

Office: Fire Truck House, First Floor, 433 Santa Teresa Street
Phone: 650-723-2005
Web Site: https://wcc.stanford.edu/
Email: stanfordwcc@stanford.edu

The Women's Community Center exists to facilitate growth and engagement for Stanford students around issues of gender, equity, identity, and justice. We do this by building community and providing innovative opportunities to explore scholarship, leadership, and activism. Our approach is inclusive, intersectional, and welcoming of people of any background or level of prior engagement with these issues.

Executive Committee

Vice Provost for Student Affairs: Susie Brubaker-Cole

Associate Vice Provost and University Registrar, Student and Academic Services: Johanna Metzgar

Interim Associate Vice Provost for Experiential Education: Margaret Dyer-Chamberlain

Associate Vice Provost and Director of Vaden Health Center: Jim Jacobs

Interim Associate Vice Provost and Dean of Students: Brenda McComb

Interim Associate Vice Provost and Dean of Residential Education: Koren Bakkegard

Associate Vice Provost for Administration: Margaret Dyer-Chamberlain
