More than in any other tradition, Italian poets of the twentieth century focus on "ultimate questions," and look all the way back to Dante in doing so: why do we die? is there a God? what does it mean to love? are we responsible for our neighbors? is beauty related to truth? what do we learn from the past? what makes life meaningful? Poets include Ungaretti, Montale, Caproni, Sereni, Rosselli, Pasolini, Luzi, Merini, and Zanzotto. Taught in Italian. Prerequisites: Second-year Italian minimum.

ITALIAN 227. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English.

Same as: FRENCH 230, FRENCH 330, ITALIAN 327

ITALIAN 228. Science, Technology, and Society in the Face of the Looming Disaster. 3-5 Units.

The major topic will be the indeterminacy regarding the survival of humankind. With the advent of the atomic bomb humankind became potentially the maker of its own demise. Will combine a number of significant case studies (environmental disasters, industrial catastrophes, threat of nuclear devastation, technological risks) with the lessons drawn from a form of literature that is at the intersection of STS and the Humanities, in particular the early warnings made by such thinkers as Ivan Illich, Martin Heidegger, Hans Jonas, Günther Anders, and Hannah Arendt.

Same as: FRENCH 228, POLISCI 233F

ITALIAN 232B. Heretics, Prostitutes and Merchants: The Venetian Empire. 5 Units.

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.

Same as: HISTORY 232B

ITALIAN 234. Courtly Love: Deceit and Desire in the Middle Ages. 3-5 Units.

A comparative seminar on medieval love books and their reception. We will examine and question the notion of "amour courtois," which arose in the lyrics and romances of medieval France and was codified in Romantic-era criticism. Primary readings will be enriched by thinking about this notion through the lens of modern theories of desire, such as those of Girard, Lacan, and Žižek. Conducted in English with readings in translation.

Same as: COMPLIT 221A, FRENCH 234

ITALIAN 235E. Dante's "Inferno". 3-5 Units.

Intensive reading of Dante's "Inferno" (the first canticle of his three canticle poem *The Divine Comedy*). Main objective: to learn how to read the *Inferno* in detail and in depth, which entails both close textual analysis as well as a systematic reconstruction of the Christian doctrines that subtend the poem. The other main objective is to understand how Dante's civic and political identity as a Florentine, and especially his exile from Florence, determined his literary career and turned him into the author of the poem. Special emphasis on Dante's moral world view and his representation of character. Taught in English.

ITALIAN 236E. Dante's "Purgatorio and Paradiso". 4-5 Units.

Reading the second and third canticles of Dante's *Divine Comedy*. Prerequisite: students must have read Dante's *Inferno* in a course or on their own. Taught in English. Recommended: reading knowledge of Italian.

ITALIAN 247. Shakespeare and Italy. 3-5 Units.

Focus on Italy's presence in Shakespeare's corpus; his use of Italian literary sources, and the Italian settings of some of his plays. It will also look at the reception of Shakespeare in Italy, especially in Italian opera and film. Readings will include Petrarch, Boccaccio, Bandello and Machiavelli; Shakespeare's sonnets and some of his major plays that are set in Italy. We will also discuss Verdi's opera, *Otello*, and Zeffirelli's movie *Romeo and Juliette*, among others Italian renditions of Shakespeare's plays. Taught in English.

ITALIAN 251. Writing, Memory, and Self-Fashioning. 3-5 Units.

Writing is not a mere recording of the past, but a selection and reinvention of our experiences. We will look at how writing is central to the philosophical project of fashioning the self, even as it reveals that much of what we call the self is a fictional construct. Materials include fiction and memoirs (Primo Levi, Michel Tournier, Melania Mazzucco, Jonathan Littell), and theoretical works in philosophy (Bergson, James, Freud, Jung, Derrida, Wyschogrod, Nehamas), psycholinguistics, and neuroscience. Taught in English.

Same as: FRENCH 251

ITALIAN 256. North/South in Contemporary Italy. 4 Units.

One of the most difficult tasks of Italian unification was to negotiate the many differences between North and South -- economic, social, cultural, and linguistic. The phenomenal growth of regional and even separatist sentiment exemplified in the Northern League shows that Italian integration is far from complete. In this course we will explore the history of conflict between North and South from the Risorgimento to the present day, with a primary focus on prose fiction and film. Taught in English.

ITALIAN 260. Italy, France, and Postcolonialism. 3-5 Units.

The starting point for our seminar is the question of how postcolonial thought enhances our possible understandings of Italy - as a nation, as a territorial unit coalescing cultural parts that remain disparate to this day, and as a population that has not come fully to terms with its fascist history, its crimes in World War II, or the atrocities it perpetrated as a colonizing state. The Italian case is unusual compared to others, in that the country's colonial past in north and east Africa is still being uncovered after a long period of public silence and government suppression; and what might be called the postcolonial Italian project has begun only recently, driven by a distinct minority of scholars, 'migrant' authors, and activists. French cultural politics and history are often taken as a point of reference from which to analyze Italian phenomena. In this case, we will make use of the French postcolonial tradition as a point of both comparison and differentiation. Among other things, we will focus on the different meanings of 'postcolonial' in a country that is strongly centralized (France) and another which is unremittingly fragmented (Italy). As just one example, we will scrutinize how Gramsci's work has been understood in Anglophone and Francophone criticism (cultural studies, Subaltern studies, and so on), as opposed to how it may be read in its original Italian context, where it concerned subalterns within the nation-state. Asking what is postcolonial, for whom, when, and where?, ultimately our goal is to discern the specific contours of Italy's postcolonialism by juxtaposing it with France's, and to simultaneously ask what light can be shed on French postcolonial particularities by placing it in this dialogue. Beginning with fundamental historical readings (Gramsci, Fanon, Memmi) and touching on some early Anglophone postcolonial critics (Said, Bhabha), the seminar will then be structured around key literary and theoretical readings from Italy and France. Ideally, readings will be in the original language, but as often as possible they will be selected such that they will be accessible in English translation as well. Taught in English.

Same as: FRENCH 260

ITALIAN 266. Women's Voices in Contemporary Italian Literature. 3-5 Units.

The traditional canon of Italian literature consists almost exclusively of male authors. Yet Italian women writers have been active since the time of Dante. This presents an overview of women's prose fiction of the last 100 years, from Sibilla Aleramo's groundbreaking feminist novel **Una donna** (1906) to novels from the 80's and 90's. We will examine such issues as the central issue of sexual violence in many female autobiographies; the experience of motherhood; the conflict between maternal love and the desire for self-determination and autonomy; paths to political awareness; reinventing the historical novel. Taught in English.

ITALIAN 281. Novels into Film. 4-5 Units.

Some critics claim that film has displaced the novel as the most popular narrative form of contemporary culture. What is the relationship between the two media? Which novels are chosen for adaptation and why? What are the relative strengths and limitations of literature and film as media? What are the specific pleasures of adaptations? In this course we will read five Italian novels and analyze their film versions, viewing adaptation as a legitimate creative response to a work of literature. We will first read the novel and consider the particular challenges it presents to transposition into film. We will follow this discussion with a close reading of the film version. The goal of the course is to examine cinematic adaptation as a cultural process by introducing a group of significant texts from the Italian tradition. Taught in English.

ITALIAN 314. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include *The Late Mattia Pascal*, *Six Characters in Search of an Author*, *Henry IV*; *Nausea*, *No Exit*, "Existentialism is a Humanism"; *Molloy*, *Endgame*, *Krapp's Last Tape*, *Waiting for Godot*. Taught in English.

Same as: COMPLIT 281E, COMPLIT 381E, FRENCH 214, FRENCH 314, ITALIAN 214

ITALIAN 315. Italian Film, Fashion, and Design, 1950-1968. 3-5 Units.

In a close analysis of films by Fellini, Antonioni, Rossellini, Pasolini, and Bertolucci, we will explore the various contradictions that fueled the Italian cultural imagination in the 50s and 60s: minimalism and multiplicity, male and female, industrial and archaic, comic and tragic, wealth and poverty. Special emphasis placed on fashion, design, and modernist art. Taught in English, with the option of an additional discussion section in Italian. Occasional screenings Monday evenings at 7pm.

Same as: ITALIAN 215

ITALIAN 324. Leopardi, Baudelaire, and Modernity. 3-5 Units.

A close reading of Giacomo Leopardi's *Canti* and Charles Baudelaire's *Flowers of Evil* and *Paris Spleen* in the context of 19th-century Europe. Discussion of the poetry will be enriched by selections from their essays on literature and art and by notes from the *Zibaldone* and *Mon coeur mis a nu*. Key themes and concepts include language, imagination, "noia," "spleen," and the oppositions between nature and civilization, modernity and antiquity. Taught in English.

Same as: FRENCH 224, FRENCH 324, ITALIAN 224

ITALIAN 325. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 225E, COMPLIT 325E, ITALIAN 225

ITALIAN 327. Giambattista Vico & Claude Lévi-Strauss. 3-5 Units.

An intensive reading of Vico's *New Science* with special emphasis on Vico's theory of anthropogenesis, myth, and the poetic origins of human consciousness. Vico's thought will be placed in relation to Lévi-Strauss's theories of myth and so-called "primitive thought". Readings include Vico's *New Science* and Lévi-Strauss's "The Structural Study of Myth", and the first chapters of his book *The Savage Mind*. Taught in English.

Same as: FRENCH 230, FRENCH 330, ITALIAN 227

ITALIAN 328. Literature, Narrative, and the Self. 3-5 Units.

The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Aristotle, Montaigne, Schopenhauer, Nietzsche, Camus, Sartre, MacIntyre, G. Strawson, Velleman; Ricoeur, Brooks; Shakespeare, Stendhal, Musil, Levi, Beckett, Morrison; film. Taught in English. Same as: COMPLIT 328, FRENCH 328

ITALIAN 332B. Heretics, Prostitutes and Merchants: The Venetian Empire. 4-5 Units.

Between 1200-1600, Venice created a powerful empire at the boundary between East and West that controlled much of the Mediterranean, with a merchant society that allowed social groups, religions, and ethnicities to coexist. Topics include the features of Venetian society, the relationship between center and periphery, order and disorder, orthodoxy and heresy, the role of politics, art, and culture in the Venetian Renaissance, and the empire's decline as a political power and reinvention as a tourist site and living museum.

Same as: HISTORY 332B

ITALIAN 352. Boccaccio's Decameron: The Ethics of Storytelling. 3-5 Units.

This course involves an in-depth study of Boccaccio's Decameron in the context of medieval theories of poetry and interpretation. The goal is to understand more fully the relationship between literature and lived experience implied by Boccaccio's fictions. We will address key critical issues and theoretical approaches related to the text. Taught in English translation, there will be an optional supplementary Italian discussion section during weeks 2-9.

Same as: ITALIAN 152

ITALIAN 369. Introduction to Graduate Studies: Criticism as Profession. 3 Units.

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: COMPLIT 369, DLCL 369, FRENCH 369, GERMAN 369

ITALIAN 395. Philosophical Reading Group. 1 Unit.

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: COMPLIT 359A, FRENCH 395

ITALIAN 398. Intensive Reading in French/Italian. 10 Units.

Enrollment is limited to French/Italian Ph.D. students. Course is designed for French/Italian Ph.D. students to prepare for department milestone exams.

Same as: FRENCH 398

ITALIAN 399. Individual Work. 1-12 Unit.

Repeatable for Credit.

ITALIAN 802. TGR Dissertation. 0 Units.

Japanese General Courses

JAPANGEN 51. Japanese Business Culture and Systems. 3-5 Units.

Japanese sociocultural dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Practicum on Japan market strategies.

Same as: JAPANGEN 251

JAPANGEN 57. How to Find Modern Japan: A Gateway Course. 4 Units.

An introduction to key locales in the cultural production of modern Japanese identity, offering a virtual tour of Japan and its significant others through major works of Japanese literature and film. Particular attention to sociohistorical context.

Same as: JAPANGEN 157

JAPANGEN 60. Asian Arts and Cultures. 5 Units.

An introduction to major monuments, themes, styles, and media of East and South Asian visual arts, in their social, literary, religious, and political contexts. Through close study of primary monuments of architectural, pictorial, and sculptural arts and related texts, this course will explore ritual and mortuary arts; Buddhist arts across Asia; narrative and landscape images; and courtly, urban, monastic, and studio environments for art from Bronze Age to modern eras.

Same as: ARTHIST 2

JAPANGEN 75N. Around the World in Seventeen Syllables: Haiku in Japan, the U.S., and the Digital World. 3-4 Units.

Preference to freshmen. Origins of the haiku form in Japan, its place in the discourse of Orientalism during the 19th and early 20th centuries in the West, its appropriation by U.S. devotees of Zen and the beat poets after WW II, and its current transformation into a global form through the Internet.

JAPANGEN 79. Japanese Ghosts: The Supernatural in Japanese Art and Entertainment. 4 Units.

The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history.

Same as: JAPANGEN 179

JAPANGEN 82N. Joys and Pains of Growing Up and Older in Japan. 3 Units.

What do old and young people share in common? With a focus on Japan, a country with a large long-living population, this seminar spotlights older people's lives as a reflection of culture and society, history, and current social and personal changes. Through discussion of multidisciplinary studies on age, analysis of narratives, and films, we will gain a closer understanding of Japanese society and the multiple meanings of growing up and older. Students will also create a short video/audio profile of an older individual, and we will explore cross-cultural comparisons. Held in Knight Bldg. Rm. 201.

JAPANGEN 92. Introduction to Japan. 5 Units.

Required Japanese majors. Introduction to Japanese culture in historical context. Previous topics include: shifting paradigms of gender relations and performance, ancient mythology, court poetry and romance, medieval war tales, and the theaters of Noh, Bunraku, and Kabuki.

JAPANGEN 121. Translating Japan, Translating the West. 3-4 Units.

Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.

Same as: COMPLIT 142B, JAPANGEN 221

JAPANGEN 124. Manga as Literature. 3-5 Units.

Analysis of representative manga as narratives that combine verbal and visual elements, with attention to historical and cultural background. Representative manga by Tezuka Osamu, Tatsumi Yoshihiro, Koike Kazuo, Taniguchi Jiro, Natsume Ono, Kono Fumiyo, and others. All readings in English.

JAPANGEN 126. The Vampire in Anime. 3-4 Units.

Analysis of anime where vampires play central roles as characters and/or in plot development. Comparison of character and plot development within anime series and Western vampire literature will be the main focus; attention will also be paid to the development of the vampire as a literary and film character in the West, the conception of the supernatural in Japanese culture, and the points of similarity and difference between the two.

JAPANGEN 127. JAPANimals: Fauna in the Cultural History of Japan. 3-5 Units.

Multifarious roles played by animals throughout Japanese art and culture. Signs of the zodiac; shape-changers and tricksters; fabulous beasts and sacred animals; the notorious "Dog Shogun" and animal satires; commodification of animals, representation of animals in anime. Same as: JAPANGEN 227

JAPANGEN 133. Japanese Media Culture. 2-4 Units.

Focuses on the intertwined histories of the postwar Japanese television, anime, music, and video game industries, and how their development intersects with wider trends in Japanese society. We will pay particular attention to questions of affect, labor, and environment in media production, consumption, and style.

Same as: JAPANGEN 233

JAPANGEN 137. Classical Japanese Literature in Translation. 4 Units.

Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor.

Same as: JAPANGEN 237

JAPANGEN 138. Introduction to Modern Japanese Literature and Culture. 3-4 Units.

This class introduces key literary texts from Japan's modern era (1868-present), locating these works in the larger political, social, and cultural trends of the period. Primary texts include: Futabatei Shimei's *Floating Clouds*, Higuchi Ichiyō's *Child's Play*, Natsume Sōseki's *Kokoro*, Kobayashi Takiji's *Cannery Boat*, Ōe Kenzaburo's *The Catch*, and Yoshimoto Banana's *Kitchen*. Examination of these literary works will be contextualized within larger political trends (e.g., the modernization program of the Meiji regime, the policies of Japan's wartime government, and postwar Japanese responses to the cold war), social developments (e.g., changing notions of social class, the women's rights movement, and the social effects of the postwar economic expansion), and cultural movements (e.g., literary reform movement of the 1890s, modernism of the 1920s and 30s, and postmodernism of the 1980s). The goal of the class is to use literary texts as a point of entry to understand the grand narrative of Japan's journey from its tentative re-entry into the international community in the 1850s, through the cataclysm of the Pacific War, to the remarkable prosperity of the bubble years in the 1980s.

Same as: JAPANGEN 238

JAPANGEN 141. Japanese Performance Traditions. 3-4 Units.

Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.

Same as: JAPANGEN 241

JAPANGEN 142. Gender, Sex, and Text in Early Modern Japan. 3-4 Units.

The early modern period in Japan (1600-1868) was a vibrant time when popular culture flourished, cities expanded, and people enjoyed a 'floating world' of transient, sensual delights. Reading popular literature from the time (in translation), including novels and poetry, and looking at explicit erotic imagery in woodblock prints as well as other visual media, we will discuss topics related to gender, sex, and sexuality. Critical scholarship by historians, art historians and scholars of literature will add to students' own readings of these primary sources.

Same as: JAPANGEN 242

JAPANGEN 148. Modern Japanese Narratives: Literature and Film. 3-5 Units.

Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ōgai, Akutagawa, Tanizaki, Abe, and Ōe.

Same as: JAPANGEN 248

JAPANGEN 149. Screening Japan: Issues in Crosscultural Interpretation. 3-4 Units.

Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required.

Same as: JAPANGEN 249

JAPANGEN 152. Art Animation. 2-4 Units.

While anime has spread around the world, Japanese art animators have been busy developing a parallel tradition, built from a more personal, experimental, and idiosyncratic approach to the medium. Looking closely at key works from major artists in the field, this course explores art animation from a variety of perspectives: animation scene; philosophical attempts to account for animated movement; and art animation's unique perspective on Japanese culture.

Same as: FILMSTUD 146, JAPANGEN 252

JAPANGEN 157. How to Find Modern Japan: A Gateway Course. 4 Units.

An introduction to key locales in the cultural production of modern Japanese identity, offering a virtual tour of Japan and its significant others through major works of Japanese literature and film. Particular attention to sociohistorical context.

Same as: JAPANGEN 57

JAPANGEN 160. Early Modern Japan: The Floating World of Chikamatsu. 4 Units.

Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan's leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.

Same as: JAPANGEN 260

JAPANGEN 179. Japanese Ghosts: The Supernatural in Japanese Art and Entertainment. 4 Units.

The complex meanings of ghosts in Japanese culture. Representations of the supernatural in images, drama, oral narratives, prose, film, comics and animation at different moments in Japanese history.

Same as: JAPANGEN 79

JAPANGEN 184. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 184, ARTHIST 384, JAPANGEN 384

JAPANGEN 185. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.

Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.

Same as: ARTHIST 187, ARTHIST 387

JAPANGEN 186. Theme and Style in Japanese Art. 4 Units.

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 186, ARTHIST 386, JAPANGEN 286

JAPANGEN 187. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: FEMGEN 187, JAPANGEN 287

JAPANGEN 198. Senior Colloquium in Japanese Studies. 1 Unit.

Research, write, and present capstone essay or honors thesis.

Same as: KORGEN 198

JAPANGEN 200. Directed Reading in Asian Languages. 1-12 Unit.

For Japanese literature. Prerequisite: consent of instructor. (Staff).

JAPANGEN 201. Teaching Japanese Humanities. 1 Unit.

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

JAPANGEN 220. The Situation of the Artist in Traditional Japan. 5 Units.

Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons/quest; desires and artists/quest; modes of production.

Same as: ARTHIST 485

JAPANGEN 221. Translating Japan, Translating the West. 3-4 Units.

Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.

Same as: COMPLIT 142B, JAPANGEN 121

JAPANGEN 227. JAPANimals: Fauna in the Cultural History of Japan. 3-5 Units.

Multifarious roles played by animals throughout Japanese art and culture. Signs of the zodiac; shape-changers and tricksters; fabulous beasts and sacred animals; the notorious "Dog Shogun" and animal satires; commodification of animals, representation of animals in anime.

Same as: JAPANGEN 127

JAPANGEN 229. Topophilia: Place in Japanese Visual Culture through 19th Century. 5 Units.

Attachments to "place" and "home" are hard-wired into the biology of humans and animals alike, although such attachments vary according to specific times, cultures, and states of mind. Can we speak of a "Japanese sense of place" and if so, what is distinctive about it? Seminar explores religious visions and ritual fields; narratives of itinerancy; cityscapes; topographic taxonomies. Knowledge of Japanese culture is beneficial but not mandatory.

Same as: ARTHIST 229D

JAPANGEN 233. Japanese Media Culture. 2-4 Units.

Focuses on the intertwined histories of the postwar Japanese television, anime, music, and video game industries, and how their development intersects with wider trends in Japanese society. We will pay particular attention to questions of affect, labor, and environment in media production, consumption, and style.

Same as: JAPANGEN 133

JAPANGEN 237. Classical Japanese Literature in Translation. 4 Units.

Prose, poetry, and drama from the 10th-19th centuries. Historical, intellectual, and cultural context. Works vary each year. May be repeated for credit with consent of instructor.

Same as: JAPANGEN 137

JAPANGEN 238. Introduction to Modern Japanese Literature and Culture. 3-4 Units.

This class introduces key literary texts from Japan's modern era (1868-present), locating these works in the larger political, social, and cultural trends of the period. Primary texts include: Futabatei Shimei's *Floating Clouds*, Higuchi Ichiyocirc;'s *Child's Play*, Natsume Socirc;'s *Kokoro*, Kobayashi Takiji's *Cannery Boat*, Ocirc;'e *Kenzaburocirc;'s The Catch*, and Yoshimoto Banana's *Kitchen*. Examination of these literary works will be contextualized within larger political trends (e.g., the modernization program of the Meiji regime, the policies of Japan's wartime government, and postwar Japanese responses to the cold war), social developments (e.g., changing notions of social class, the women's rights movement, and the social effects of the postwar economic expansion), and cultural movements (e.g., literary reform movement of the 1890s, modernism of the 1920s and 30s, and postmodernism of the 1980s). The goal of the class is to use literary texts as a point of entry to understand the grand narrative of Japan's journey from its tentative re-entry into the international community in the 1850s, through the cataclysm of the Pacific War, to the remarkable prosperity of the bubble years in the 1980s.

Same as: JAPANGEN 138

JAPANGEN 241. Japanese Performance Traditions. 3-4 Units.

Major paradigms of gender in Japanese performance traditions from ancient to modern times, covering Noh, Kabuki, Bunraku, and Takarazuka.

Same as: JAPANGEN 141

JAPANGEN 242. Gender, Sex, and Text in Early Modern Japan. 3-4 Units.

The early modern period in Japan (1600-1868) was a vibrant time when popular culture flourished, cities expanded, and people enjoyed a 'floating world' of transient, sensual delights. Reading popular literature from the time (in translation), including novels and poetry, and looking at explicit erotic imagery in woodblock prints as well as other visual media, we will discuss topics related to gender, sex, and sexuality. Critical scholarship by historians, art historians and scholars of literature will add to students' own readings of these primary sources.

Same as: JAPANGEN 142

JAPANGEN 248. Modern Japanese Narratives: Literature and Film. 3-5 Units.

Central issues in modern Japanese visual and written narrative. Focus is on competing views of modernity, war, and crises of individual and collective identity and responsibility. Directors and authors include Kurosawa, Mizoguchi, Ozu, Ogai, Akutagawa, Tanizaki, Abe, and Oe.

Same as: JAPANGEN 148

JAPANGEN 249. Screening Japan: Issues in Crosscultural Interpretation. 3-4 Units.

Is the cinematic language of moving images universal? How have cultural differences, political interests, and genre expectations affected the ways in which Japanese cinema makes meaning across national borders? Sources include the works of major Japanese directors and seminal works of Japanese film criticism, theory, and scholarship in English. No Japanese language skills required.

Same as: JAPANGEN 149

JAPANGEN 251. Japanese Business Culture and Systems. 3-5 Units.

Japanese sociocultural dynamics in industrial and corporate structures, negotiating styles, decision making, and crisis management. Practicum on Japan market strategies.

Same as: JAPANGEN 51

JAPANGEN 252. Art Animation. 2-4 Units.

While anime has spread around the world, Japanese art animators have been busy developing a parallel tradition, built from a more personal, experimental, and idiosyncratic approach to the medium. Looking closely at key works from major artists in the field, this course explores art animation from a variety of perspectives: animation scene; philosophical attempts to account for animated movement; and art animation's unique perspective on Japanese culture.

Same as: FILMSTUD 146, JAPANGEN 152

JAPANGEN 260. Early Modern Japan: The Floating World of Chikamatsu. 4 Units.

Early modern Japan as dramatized in the puppet theater of Chikamatsu Monzaemon (1653-1725), Japan's leading dramatist, who depicted militarization, commercialization, and urbanization in the Tokugawa period (1603-1868). Emperors, shogun, daimyo, samurai, merchants, monks, geisha, and masterless ronin in his bunraku plays as denizens of a floating world. Themes of loyalty, love, heroism, suicide, and renunciation in the early modern world. In English.

Same as: JAPANGEN 160

JAPANGEN 286. Theme and Style in Japanese Art. 4 Units.

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 186, ARTHIST 386, JAPANGEN 186

JAPANGEN 287. Romance, Desire, and Sexuality in Modern Japanese Literature. 3-4 Units.

This class is structured around three motifs: love suicide (as a romantic ideal), female desire, and same-sex sexuality. Over the course of the quarter we will look at how these motifs are treated in the art and entertainment from three different moments of Japanese history: the Edo period (1615-1868), the modern period (1920-65), and the contemporary period (1965-present). We will start by focusing on the most traditional representations of these topics. Subsequently, we will consider how later artists and entertainers revisited the conventional treatments of these motifs, informing them with new meanings and social significance. We will devote particular attention to how this material comments upon issues of gender, sexuality, and human relationships in the context of Japan. Informing our perspective will be feminist and queer theories of reading and interpretation.

Same as: FEMGEN 187, JAPANGEN 187

JAPANGEN 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime. 5 Units.

The Japanese tea ceremony, the ultimate premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and other treasured objects into a choreographed ritual wherein host, objects, and guests perform designated roles on a tiny stage sometimes only six feet square. In addition to its much-touted aesthetic and philosophical aspects, the practice of tea includes inevitable political and rhetorical dimensions. This course traces the evolution of tea practice from its inception within the milieu of courtier diversions, Zen monasteries, and warrior villas, through its various permutations into the 20th century, where it was manipulated by the emerging industrialist class for different-but ultimately similar-ends.

Same as: ARTHIST 287A

JAPANGEN 384. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 184, ARTHIST 384, JAPANGEN 184

Japanese Language Courses

JAPANLNG 1. First-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.

(Formerly JAPANLNG 7). First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. 300 kanji characters. See http://japanese.stanford.edu/?page_id=5.

JAPANLNG 2. First-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

(Formerly JAPANLNG 8). Continuation of 1. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: placement test, 1. 300 kanji characters. http://japanese.stanford.edu/?page_id=5.

JAPANLNG 3. First-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly JAPANLNG 9). Continuation of 2. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: placement test, 2. 300 kanji characters. http://japanese.stanford.edu/?page_id=5.

JAPANLNG 4A. First-Year Japanese Language Essentials, First Quarter. 3 Units.

(Formerly JAPANLNG 7A.) For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. See http://japanese.stanford.edu/?page_id=73.

JAPANLNG 4B. First-Year Japanese Language Essentials, Second Quarter. 3 Units.

(Formerly JAPANLNG 8A.) Continuation of JAPANLNG 4A. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite: Placement Test, JAPANLNG 4A. See http://japanese.stanford.edu/?page_id=73.

JAPANLNG 4C. First-Year Japanese Language Essentials, Third Quarter. 3 Units.

(Formerly JAPANLNG 9A.) Continuation of JAPANLNG 4B. For students who want to build communication skills in limited time. Online listening exercises, audiovisual materials, kanji exercises. Prerequisite: Placement Test, JAPANLNG 4B. See http://japanese.stanford.edu/?page_id=73.

JAPANLNG 5. Intensive First-Year Japanese Language. 15 Units.

Equivalent to 1, 2, and 3 combined. See http://japanese.stanford.edu/?page_id=323. Graduate students restricted to 9 units should enroll in 305.

JAPANLNG 11A. Intermediate Japanese Conversation, First Quarter. 2 Units.

(Formerly JAPANLNG 27.) Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: JAPANLNG 3.

JAPANLNG 11B. Intermediate Japanese Conversation, Second Quarter. 2 Units.

(Formerly JAPANLNG 28.) Continuation of JAPANLNG 11A. Develops oral proficiency through simple sentence patterns, audio materials, tapes, and, oral presentations. For the practical use of Japanese. Prerequisite: JAPANLNG 11A.

JAPANLNG 11C. Intermediate Japanese Conversation, Third Quarter. 2 Units.

(Formerly JAPANLNG 29.) Continuation of JAPANLNG 11B. Develops oral proficiency through simple sentence patterns, audio materials, and oral presentations. For the practical use of Japanese. Prerequisite: JAPANLNG 11B.

JAPANLNG 14A. Second-Year Japanese Language Essentials, First Quarter. 3 Units.

(Formerly JAPANLNG 17A.) Continuation of JAPANLNG 4C. For students who want to build communication skills in limited time. Prerequisite: JAPANLNG 4C. See http://japanese.stanford.edu/?page_id=89.

JAPANLNG 14B. Second-Year Japanese Language Essentials, Second Quarter. 3 Units.

(Formerly JAPANLNG 18A.) Continuation of JAPANLNG 14A. For students who want to build communication skills in limited time. Prerequisite: JAPANLNG 14A. See http://japanese.stanford.edu/?page_id=89.

JAPANLNG 14C. Second-Year Japanese Language Essentials, Third Quarter. 3 Units.

(Formerly JAPANLNG 19A.) Continuation of JAPANLNG 14B. For students who want to build communication skills in limited time. Prerequisite: JAPANLNG 14B. See http://japanese.stanford.edu/?page_id=89.

JAPANLNG 20. Intensive Second-Year Japanese. 15 Units.

Equivalent to 21,22,23 combined. Prerequisite: 3, 5 or consent of instructor. Graduate students restricted to 9 units may take the course under JAPANLNG 320. See http://japanese.stanford.edu/?page_id=323.

JAPANLNG 21. Second-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.

(Formerly JAPANLNG 17.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: Placement Test, JAPANLNG 3. See http://japanese.stanford.edu/?page_id=23.

JAPANLNG 22. Second-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

(Formerly JAPANLNG 18.) Continuation of JAPANLNG 21. Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: Placement Test, JAPANLNG 21. See http://japanese.stanford.edu/?page_id=23.

JAPANLNG 23. Second-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly JAPANLNG 19.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. (Formerly JAPANLNG 18B.) Prerequisite: 22. http://japanese.stanford.edu/?page_id=23.

JAPANLNG 31A. Intermediate to Advanced Conversation, First Quarter. 2 Units.

Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program. May be taken concurrently with JAPANLNG 21, 22, and 23. Prerequisite: 9K, or consent of instructor. See http://japanese.stanford.edu/?page_id=421.

JAPANLNG 31B. Intermediate to Advanced Conversation, Second Quarter. 2 Units.

Continuation of JAPANLNG 31A. (Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program. May be taken concurrently with JAPANLNG 21, 22, and 23. Prerequisite: JAPANLNG 31A. See http://japanese.stanford.edu/?page_id=421.

JAPANLNG 31C. Intermediate to Advanced Conversation, Third Quarter. 2 Units.

(Continuation of JAPANLNG 31B. Oral proficiency through role play, oral presentations, and discussion. Recommended for those who have participated in Kyoto SCTI program. May be taken concurrently with JAPANLNG 21, 22, and 23. Prerequisite: JAPANLNG 32B. See http://japanese.stanford.edu/?page_id=421.

JAPANLNG 31E. Accelerated Beginning Japanese for Engineering Students. 4 Units.

Restricted to engineering students participating in the School of Engineering Japan Internship Program. Grad students enroll in JAPANLNG 331E.

JAPANLNG 32G. Accelerated Beginning Business Japanese II. 4 Units.

For GSB students only. Limited enrollment.

JAPANLNG 33G. Accelerated Beginning Business Japanese III. 4 Units.

For GSB students only. Limited enrollment.

JAPANLNG 99. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor.nn (Staff).

JAPANLNG 101. Third-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.

(Formerly JAPANLNG 117.) Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: Placement Tests, JAPANLNG 23. See http://japanese.stanford.edu/?page_id=39.

JAPANLNG 102. Third-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

(Formerly JAPANLNG 118.) Continuation of 101. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 101. See http://japanese.stanford.edu/?page_id=39.

JAPANLNG 103. Third-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly JAPANLNG 119.) Continuation of 102. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: 102. See http://japanese.stanford.edu/?page_id=39 Prerequisite.

JAPANLNG 104A. Japanese for Professionals, First Quarter. 3 Units.
Recommended for students who have the basic grammatical foundation (equivalent to completion of JAPANLNG 14C or 3), and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: JAPANLNG 14C, JAPANLNG 3. See http://japanese.stanford.edu/?page_id=223.

JAPANLNG 104B. Japanese for Professionals, Second Quarter. 3 Units.

Continuation of JAPANLNG 104A. Recommended for students who have the basic grammatical foundation, and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: JAPANLNG 104A.

JAPANLNG 104C. Japanese for Professionals, Third Quarter. 3 Units.

Continuation of JAPANLNG 104B. Recommended for students who have the basic grammatical foundation, and are ready to develop further communication skills in a limited time not only in their field of interest but also in a professional environment. Prerequisite: JAPANLNG 104B. .

JAPANLNG 105. Intensive 3rd Year Modern Japanese. 15 Units.

Equivalent to 101, 102, 103 combined. Prerequisite 20, 23, or, equivalent. Graduate students restricted to 9 units may take the course for 9 units under 405.

JAPANLNG 111A. Advanced Japanese Conversation, First Quarter. 2 Units.

(formerly JAPANLNG 121) The J111A, B, & C course sequence is designed for students who wish to advance their speaking skills of the Japanese language to the advanced level. Its goals are to help students gain proficiency and confidence in the use of Japanese and to prepare them for their lifelong study. This is a "students-driven, students-centered" course. The instructor will not "teach." Instead she is there to facilitate interactions and "help the students obtain their goals." Students are expected to come to class with their concrete goals as to what they want to do with their Japanese, and be ready to work hard in class to reach their goals.

JAPANLNG 111B. Advanced Japanese Conversation, Second Quarter. 2 Units.

(Formerly JAPANLNG 122.) Continuation of JAPANLNG 111A. The J111A, B, & C course sequence is designed for students who wish to advance their speaking skills of the Japanese language to the advanced level. Its goals are to help students gain proficiency and confidence in the use of Japanese and to prepare them for their lifelong study. This is a "students-driven, students-centered" course. The instructor will not "teach." Instead she is there to facilitate interactions and "help the students obtain their goals." Students are expected to come to class with their concrete goals as to what they want to do with their Japanese, and be ready to work hard in class to reach their goals.

JAPANLNG 111C. Advanced Japanese Conversation, Third Quarter. 2 Units.

(Formerly JAPANLNG 123.) Continuation of JAPANLNG 111B. The J111A, B, & C course sequence is designed for students who wish to advance their speaking skills of the Japanese language to the advanced level. Its goals are to help students gain proficiency and confidence in the use of Japanese and to prepare them for their life-long study. This is a "students-driven, students-centered" course. The instructor will not "teach." Instead she is there to facilitate interactions and "help the students obtain their goals." Students are expected to come to class with their concrete goals as to what they want to do with their Japanese, and be ready to work hard in class to reach their goals.

JAPANLNG 113F. Japanese Through Film, Part 1. 2-4 Units.

Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: JAPANLNG 23. See http://japanese.stanford.edu/?page_id=255.

JAPANLNG 114F. Japanese Through Film, Part 2. 2-4 Units.

Continuation of JAPANLNG 113F. Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: JAPANLNG 113F. See http://japanese.stanford.edu/?page_id=255.

JAPANLNG 115F. Japanese Through Film, Part 3. 2-4 Units.

Continuation of JAPANLNG 114F. Contemporary Japanese culture through Japanese films, documentaries, news, and TV dramas. Structured for students with a strong desire to advance their Japanese communication skills quickly and who have limited class preparation time. In-depth discussion and exploration of current issues, cultural icons, idiomatic expressions and nonverbal social cues. Prerequisite: JAPANLNG 114F. See http://japanese.stanford.edu/?page_id=255.

JAPANLNG 200. Directed Reading. 1-5 Unit.

Prerequisite: 213 and consent of instructor.

JAPANLNG 211. Fourth-Year Japanese, First Quarter. 3-5 Units.

Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: JAPANLNG 103. See http://japanese.stanford.edu/?page_id=263.

JAPANLNG 212. Fourth-Year Japanese, Second Quarter. 3-5 Units.

Continuation of JAPANLNG 211. Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: JAPANLNG 211. See http://japanese.stanford.edu/?page_id=263.

JAPANLNG 213. Fourth-Year Japanese, Third Quarter. 3-5 Units.

Continuation of JAPANLNG 212. Structure of Japanese, writings in different genres and styles, using such knowledge in writing, and expressing opinions on a variety of topics. Original writings, including fiction, essays, newspaper, and journal articles. Recommended taken in sequence. Prerequisite: JAPANLNG 212. See http://japanese.stanford.edu/?page_id=263.

JAPANLNG 305. Intensive First-Year Japanese for Stanford Graduate Students. 9 Units.

Equivalent to 3 quarters of JAPANLNG 1, 2, and 3 combined. Same as JAPANLNG nn5. Stanford Grads only. http://japanese.stanford.edu/?page_id=323. nnSum.

JAPANLNG 320. Intensive Second-Year Japanese for Stanford Graduate Students. 9 Units.

Equivalent to 21, 22, 23 combined or 20. Stanford Grads only. See http://japanese.stanford.edu/?page_id=323.

JAPANLNG 331E. Accelerated Beginning Japanese for Engineering Students, First Quarter. 1-4 Unit.

Restricted to engineering students participating in the School of Engineering Japan Internship Program.

JAPANLNG 394. Graduate Studies in Japanese Conversation. 1-3 Unit.

Prerequisite: consent of instructor. (Staff).

JAPANLNG 395. Graduate Studies in Japanese. 1-5 Unit.

Prerequisite: consent of instructor. (Staff).

JAPANLNG 405. Intensive third Year Japanese for Graduate Students. 9 Units.

Equivalent to 101, 102, and 103 combined or 105. Prerequisite 23 or 20. For Stanford grads only.

Japanese Literature Courses

JAPANLIT 146. Introduction to Premodern Japanese. 3-5 Units.

Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.

Same as: JAPANLIT 246

JAPANLIT 157. Points in Japanese Grammar. 2-4 Units.

Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.

Same as: JAPANLIT 257

JAPANLIT 170. The Tale of Genji and Its Historical Reception. 4 Units.

Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent.

Same as: JAPANLIT 270

JAPANLIT 181. Japanese Pragmatics. 2-4 Units.

The choice of linguistic expressions and our understanding of what is said involve multiple sociocultural, cognitive and discourse factors. Can such pragmatic factors and processes be considered universal to all languages, or are there variations among languages? The course will investigate an array of phenomena observed in Japanese. Through readings and projects, students will deepen their knowledge of Japanese and consider theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.

Same as: JAPANLIT 281

JAPANLIT 189A. Honors Research. 2-5 Units.

.

JAPANLIT 189B. Honors Research. 5 Units.

Open to senior honors students to write thesis.

JAPANLIT 199. Individual Reading in Japanese. 1-4 Unit.

Asian Languages majors only. May be repeated for credit. Prerequisites: JAPANLNG 129B or 103, and consent of instructor.

JAPANLIT 200. Directed Reading in Japanese. 1-12 Unit.

.

JAPANLIT 201. Proseminar: Introduction to Graduate Study in Japanese. 2-5 Units.

Bibliographical and research methods. Major trends in literary and cultural theory and critical practice. May be repeated once for credit. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.

JAPANLIT 202. Bibliographic and Research Methods in Japanese. 1-3 Unit.

The use of library and online resources for the study of Japanese literature, language, and culture. Prerequisite: JAPANLNG 103 or 129B, or consent of instructor.

JAPANLIT 224. Dramatic Manga. 2-4 Units.

In depth reading and analysis of so-called "dramatic" or "realistic" manga (gekiga), concentrating on one of the major contributors to that genre (Saito Takao, Tatsumi Yoshihiro, Taniguchi Jiro, Sugiura Hinako, Mase Moto, and others). Readings in Japanese and English translation. Prerequisite: four years of Japanese, or consent of instructor.

JAPANLIT 235. Academic Readings in Japanese I. 2-4 Units.

Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.

JAPANLIT 236. Academic Readings in Japanese II. 2-4 Units.

Strategies for reading academic writings in Japanese. Readings of scholarly papers and advanced materials in Japanese in students' research areas in the humanities and social sciences. May be taken independently of 264. May be repeated for credit. Prerequisites: JAPANLNG 103, 129B, or equivalent; and consent of instructor.

JAPANLIT 246. Introduction to Premodern Japanese. 3-5 Units.

Readings from Heian, Kamakura, Muromachi, and early Edo periods with focus on grammar and reading comprehension. Prerequisite: JAPANLNG 129B or 103, or equivalent.

Same as: JAPANLIT 146

JAPANLIT 247. Readings in Premodern Japanese. 2-5 Units.

Edo and Meiji periods with focus on grammar and reading comprehension. May be repeated for credit. Prerequisite: 246 or equivalent.

JAPANLIT 248. Readings in Classical Japanese. 5 Units.

Edo and Meiji periods including travel writings, fictions, miscellanies, and poetry. Focus is on grammar, stylistic analysis, and rhetoric. Can be taken independently. Prerequisite: 246.

JAPANLIT 257. Points in Japanese Grammar. 2-4 Units.

Meaning and grammatical differences of similar expressions, and distinctions that may not be salient in English. Prerequisite: JAPANLNG 18B or 22, or equivalent.

Same as: JAPANLIT 157

JAPANLIT 260. Japanese Poetry and Poetics. 2-4 Units.

Heian through Meiji periods with emphasis on relationships between the social and aesthetic. Works vary each year. This year's genre is the diary. Prerequisites: 246, 247, or equivalent.

JAPANLIT 266. Introduction to Sino-Japanese. 3-5 Units.

Readings in Sino-Japanese (*kambun*) texts of the Heian, Kamakura, and Muromachi periods, with focus on grammar and reading comprehension. Prerequisite: 246 or equivalent.

JAPANLIT 267. Readings in Sino-Japanese. 2-4 Units.

Readings in Sino-Japanese (*kambun*) texts of the Edo and Meiji periods, with focus on grammar and reading comprehension. Prerequisite: 264 or equivalent.

JAPANLIT 270. The Tale of Genji and Its Historical Reception. 4 Units.

Approaches to the tale including 12th-century allegorical and modern feminist readings. Influence upon other works including poetry, Noh plays, short stories, modern novels, and comic book (manga) retellings. Prerequisite for graduate students: JAPANLNG 129B or 103, or equivalent.

Same as: JAPANLIT 170

JAPANLIT 276. Modern Japanese Short Stories. 2-4 Units.

This course explores the postwar Japanese short story. We will read representative works by major authors, such as Ishikawa Jun, Hayashi Fumiko, Abe Kobe and Murakami Haruki. Attention will be devoted to both accurate reading of the Japanese prose and more general discussion of the literary features of the texts.

JAPANLIT 279. Research in Japanese Linguistics. 2-4 Units.

Introduction to graduate research in Japanese linguistics. Fields of research, methods and bibliographical background. Conduct a pilot research project in a chosen area. May be repeated for credit. Prerequisite: JAPANLNG 119 or consent of instructor.

JAPANLIT 281. Japanese Pragmatics. 2-4 Units.

The choice of linguistic expressions and our understanding of what is said involve multiple sociocultural, cognitive and discourse factors. Can such pragmatic factors and processes be considered universal to all languages, or are there variations among languages? The course will investigate an array of phenomena observed in Japanese. Through readings and projects, students will deepen their knowledge of Japanese and consider theoretical implications. Prerequisites: one year of Japanese and a course in linguistics, or two years of Japanese, or consent of instructor.

Same as: JAPANLIT 181

JAPANLIT 287. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.

Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.

Same as: ARTHIST 287, ARTHIST 487X

JAPANLIT 296. Modern Japanese Literature. 2-5 Units.

Advanced readings. May be repeated for credit. Prerequisite: JAPANLNG 213. Formerly JAPANLIT 396.

JAPANLIT 298. The Theory and Practice of Japanese Literary Translation. 2-5 Units.

Theory and cultural status of translation in modern Japanese and English. Comparative analysis of practical translation strategies. Final project is a literary translation of publishable quality. Prerequisite: fourth-year Japanese or consent of instructor.

JAPANLIT 299. Master's Thesis or Translation. 1-5 Unit.

A total of 5 units, taken in one or more quarters.nn (Staff).

JAPANLIT 350. Japanese Historical Fiction. 3-5 Units.

Authors include Mori Ogai, Akutagawa Ryunosuke, Tanizaki Jun'ichiro, Enchi Fumiko, Shiba Ryotaro, Fujisawa Shuhei, and Hiraiwa Yumie. Genre theory, and historical and cultural context. Works vary each year. May be repeated for credit.

JAPANLIT 377. Seminar: Structure of Japanese. 2-4 Units.

Linguistic constructions in Japanese. Topics vary annually. In 2009-10, focus is on noun-modifying constructions in Japanese from multiple perspectives including syntax, semantics, pragmatics, and acquisition. Contrasts with similar constructions in other languages. Typological implications. Prerequisites: courses in Japanese linguistics, consent of instructor.

JAPANLIT 381. Topics in Pragmatics and Discourse Analysis. 2-4 Units.

Naturally occurring discourse (conversational, narrative, or written) and theoretical implications. Discourse of different age groups, expressions of identity and persona, and individual styles. May be repeated for credit.

JAPANLIT 382. Research Projects in Japanese Linguistics. 2-5 Units.

For advanced graduate students with specific research projects in Japanese linguistics. Consent of instructor required.

JAPANLIT 395. Early Modern Japanese Literature. 2-4 Units.

May be repeated for credit. Prerequisite: 247.

JAPANLIT 396. Modern Japanese Literature Seminar. 2-5 Units.

Works and topics vary each year. May be repeated for credit. Prerequisite: fourth-year Japanese or consent of instructor.

JAPANLIT 399. Dissertation Research. 1-12 Unit.

For doctoral students in Japanese working on dissertations.

JAPANLIT 801. TGR Project. 0 Units.**JAPANLIT 802. TGR Dissertation. 0 Units.**

Jewish Studies Courses

JEWISHST 4N. A World History of Genocide. 3-5 Units.

Reviews the history of genocide from ancient times until the present. Defines genocide, both in legal and historical terms, and investigates its causes, consequences, and global dimensions. Issues of prevention, punishment, and interdiction. Main periods of concern are the ancient world, Spanish colonial conquest; early modern Asia; settler genocides in America, Australia, and Africa; the Armenian genocide and the Holocaust; genocide in communist societies; and late 20th century genocide.

Same as: HISTORY 4N

JEWISHST 5. Biblical Greek. 3-5 Units.

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: CLASSICS 6G, RELIGST 171A

JEWISHST 5B. Biblical Greek. 3-5 Units.

(Formerly CLASSGRK 6) This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G (Formerly CLASSGRK 5) or a similar introductory course in Ancient Greek.

Same as: CLASSICS 7G

JEWISHST 5G. Intensive Biblical Greek. 8 Units.

Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.

Same as: CLASSICS 9G, RELIGST 171X

JEWISHST 18N. Religion and Politics: Comparing Europe to the U.S.. 3-4 Units.

Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature.

Same as: RELIGST 18N

JEWISHST 19N. "Land of Milk and Honey": Food, Justice, and Ethnic Identity in Jewish Culture. 3 Units.

Food is an essential aspect of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. This seminar examines Jewish culture and the food practices and traditions that have shaped and continue to shape it. Why has Jewish culture been centered around food practices? How have religious laws and rituals about food and food production shaped Jewish culture and vice versa? Dietary laws prescribe which animals are and are not "kosher" and what can be eaten with them, holidays are celebrated with traditional foods, and regional foods contribute to the formation of distinct Jewish ethnic identities. More recently, American Jews have begun to organize around issues of food justice, and joined the sustainability movement, adapting Jewish traditions about food production into their cause. What is the significance of animal welfare, environmental issues, and labor practices in Jewish culture? This multi-disciplinary seminar explores the connection between food practices and ethnic and religious identity(ies), the history of the dietary laws and their multiple interpretations, the cultural significance of the phenomenal success of kosher certification in the U.S. food market, and the rise of the Jewish food justice movement. These issues raise a multitude of comparative questions, and you are encouraged to engage in research into other religious and ethnic food cultures. Course materials include: biblical and later religious, legal, and philosophical texts; cook-books (as cultural and historical sources); literature (both fiction and academic); films; news media, and food experts. We will visit an urban farming community (Urban Adamah) to learn from those involved in the Jewish sustainability movement.

Same as: CSRE 19N, RELIGST 19N

JEWISHST 37Q. Zionism and the Novel. 4 Units.

At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe.

Same as: COMPLIT 37Q

JEWISHST 38A. Germany and the World Wars. 3 Units.

(Same as HISTORY 138A. Majors and others taking 5 units, enroll in 138A.) Germany's tumultuous history from the Second Empire through the end of the Cold War. International conflict, social upheaval, and state transformation during Bismarck's wars of unification, World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.

Same as: HISTORY 38A

JEWISHST 71. Jews and Christians: Conflict and Coexistence. 3 Units.

The relationship between Judaism and Christianity has had a long a controversial history. Christianity originated as a dissident Jewish sect but eventually evolved into an independent religion, with only tenuous ties to its Jewish past and present. At the same time, Judaism has at times considered Christianity a form of idolatry. It seems that only since the catastrophe of the Holocaust, Jews and Christians (Catholics and Protestants) have begun the serious work of forging more meaningful relationships with each other. This course explores the most significant moments, both difficult and conciliatory ones, that have shaped the relationship between Judaism and Christianity, and introduces students to some of the most important literature, art, and music that are part of it. Selected literature: Gospel according Matthew, the letters of St. Paul, St. Augustine, the Talmud (selections), Maimonides, Martin Luther's sermons on the Jews, Nostra Aetate (Vatican II) Art and Music: Medieval art and sculpture, Haendel's Messiah.

Same as: RELIGST 71

JEWISHST 80T. Jewish Music in the Lands of Islam. 4 Units.

An Interdisciplinary study of Music, Society, and Culture in communities of the Jewish Diaspora in Islamic countries. The course examines the diverse and rich musical traditions of the Jews in North Africa and the Middle East. Based on the "Maqamat" system, the Arabic musical modes, Jewish music flourished under Islamic rule, encompassing the fields of sacred music, popular songs, and art music. Using musicological, historical, and anthropological tools, the course compares and contrasts these traditions from their original roots through their adaptation, appropriation, and re-synthesis in contemporary art music and popular songs.

Same as: MUSIC 80T

JEWISHST 84. Zionism. 3 Units.

(Same as HISTORY 184. History majors and others taking 5 units, register for 184.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: CSRE 84, HISTORY 84, REES 84

JEWISHST 85B. Jews, 1500 to the Present. 3 Units.

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) Topics include the restructuring of Jewish existence during the Enlightenment and legal emancipation at the end of the 18th century in W. Europe; the transformation of Jewish life in E. Europe under the authoritarian Russian regime; colonialism in the Sephardic world; new ideologies (Reform Judaism and Jewish nationalisms); the persistence and renewal of antisemitism; the destruction of European Jewry under the Nazis; new Jewish centers in the U.S.; and the State of Israel.

JEWISHST 105. Hebrew Forum. 2-4 Units.

Intermediate and advanced level. Biweekly Hebrew discussion on contemporary issues with Israeli guest speakers. Vocabulary enhancement. Focus on exposure to academic Hebrew.
Same as: AMELANG 131B

JEWISHST 106. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music.
Same as: AMELANG 126, COMPLIT 145

JEWISHST 107A. Biblical Hebrew, First Quarter. 2 Units.

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own.
Same as: AMELANG 170A, RELIGST 170A

JEWISHST 107B. Biblical Hebrew, Second Quarter. 1 Unit.

Continuation of 170A.
Same as: AMELANG 170B

JEWISHST 120. Sex and Gender in Judaism and Christianity. 3 Units.

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.
Same as: FEMGEN 130, RELIGST 130

JEWISHST 127D. Readings in Talmudic Literature. 1 Unit.

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit.
Same as: JEWISHST 227D, RELIGST 170D

JEWISHST 129. Modern Jewish Thought. 4 Units.

From 1870 to the late twentieth century, Jewish thought and philosophy attempted to understand Judaism in response to the developments and crises of Jewish life in the modern world. In this course we shall explore the responses of figures such as Martin Buber, Franz Rosenzweig, Hermann Cohen, Abraham Joshua Heschel, Joseph Soloveitchik, Emil Fackenheim, and Emmanuel Levinas. Central topics will concern ethics and politics, faith and revelation, redemption and messianism, and the religious responses to catastrophe and atrocity. We shall discuss Judaism in European culture before and after World War I and in North America in the postwar period and after the Six Day War. A central theme will be the ways in which attempts to understand Jewish experience are related to history.
Same as: RELIGST 129

JEWISHST 132D. Sociology of Jewishness. 3-5 Units.

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.
Same as: CSRE 132J, SOC 132J

JEWISHST 138A. Germany and the World Wars. 5 Units.

(Same as HISTORY 38A. Majors and others taking 5 units, enroll in 138A.) Germany's tumultuous history from the Second Empire through the end of the Cold War. International conflict, social upheaval, and state transformation during Bismarck's wars of unification, World War One, the Weimar Republic, the rise of Nazism, World War Two, the Holocaust, the division of communist East and capitalist West Germany, and the fall of the Iron Curtain.
Same as: HISTORY 138A

JEWISHST 139. Rereading Judaism in Light of Feminism. 4 Units.

During the past three decades, Jewish feminists have asked new questions of traditional rabbinic texts, Jewish law, history, and religious life and thought. Analysis of the legal and narrative texts, rituals, theology, and community to better understand contemporary Jewish life as influenced by feminism.
Same as: FEMGEN 139

JEWISHST 143. Literature and Society in Africa and the Caribbean. 4 Units.

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts, as well as excerpts of Francophone theater. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Required readings include: Aimeaceute; Ceacute;saire, "Cahier d'un retour au pays natal," Albert Memmi, "La Statue de Sel," Kaouthier Adimi, "L'envers des autres," Maryse Condeacute;," "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Rome plutocirc;t sue Vous". Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.
Same as: AFRICAAM 133, FRENCH 133

JEWISHST 144B. Poetic Thinking Across Media. 4 Units.

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclestias, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts--from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 154B, COMPLIT 354B, GERMAN 154, GERMAN 354

JEWISHST 145. Masterpieces: Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. Same as: COMPLIT 114, GERMAN 150

JEWISHST 146. Co-Existence in Hebrew Literature. 4-5 Units.

Is co-existence possible? Does pluralism require co-existence? Can texts serve as forms of co-existence? The class will focus on these and other questions related to coexistence and literature. Through reading works mostly by Jewish authors writing in Europe, Israel and the US we will explore attempts for complete equality, for a variety of hierarchical systems and for different kinds of co-dependence. Guest speaker: professor Anat Weisman, Ben Gurion University of the Negev.

Same as: AMELANG 175, COMPLIT 161

JEWISHST 147. German Capstone: Reading Franz Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 111, COMPLIT 311C, GERMAN 190, GERMAN 390, JEWISHST 349

JEWISHST 147A. The Hebrew Bible in Literature. 3-5 Units.

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres.

Same as: COMPLIT 147A, COMPLIT 347A, JEWISHST 347A

JEWISHST 148. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

Same as: JEWISHST 348, SLAVIC 198, SLAVIC 398

JEWISHST 155D. Jewish American Literature. 5 Units.

Fiction of Jewish-American writers across the 20th and into the 21st centuries, both immigrants and subsequent generations of native-born Jews, to show how the topic of assimilation is thematized in the literature and to evaluate the distinctiveness of Jewish-American literature as a minority literature.

Same as: REES 145D

JEWISHST 183. The Holocaust. 4 Units.

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, HISTORY 337, JEWISHST 383

JEWISHST 184. Zionism. 5 Units.

(Same as History 84.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: CSRE 184C, HISTORY 184, REES 184

JEWISHST 199B. Directed Reading in Yiddish, Second Quarter. 1-5 Unit.

For intermediate or advanced students. May be repeated for credit.

JEWISHST 205. Reading Hebrew, First Quarter. 2-4 Units.

Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.

Same as: AMELANG 250A

JEWISHST 224. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 324, RELIGST 234, RELIGST 334

JEWISHST 227D. Readings in Talmudic Literature. 1 Unit.

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit.

Same as: JEWISHST 127D, RELIGST 170D

JEWISHST 242. Beyond Casablanca: North African Cinema and Literature. 3-5 Units.

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, exile, language message, race and gender relations, collective memory, parallax, nationalism, laïcité, religion, emigration and immigration, and the Arab Spring will be covered. Special attention will be given to judeo-maghrebi history, and to the notions of francophone / maghrebi / "beur" / diasporic cinema and literature. Readings from Frantz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Colette Fellous, Abdelkebir Khatibi, Leila Sebbar, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include Viva Laldjeacutie, Tenja, Le Chant des Marieacutes, Franccedil;aise, Bled Number One, Omar Gatlatto, Casanegra, La Saison des Hommes. Taught in French. Films in French and Arabic with English subtitles.

Same as: COMPLIT 247F, FRENCH 242

JEWISHST 243. Masterpieces of Hebrew Literature from the Bible to the Present. 3-5 Units.

This course presents and reflects on some of the canonical works of Hebrew literature, from biblical era to the present. Discussing works such as the Wisdom Books and selections from the Midrash; and reflecting on important periods such as the Golden Age of Jewish Culture in Spain, the Renaissance, and contemporary Israeli literature, we will highlight linguistic innovation, as well as crucial thematic and philosophical concerns. Readings include the Book of Job, Psalm, Ibn Gabirol, Mapu, Rachel, Goldbegr, Agnon, S. Yizhar, Amichai, Oz and more.

Same as: COMPLIT 283

JEWISHST 271C. Campaigns and Elections in Israel. 5 Units.

Employing a theoretical and comparative framework, this seminar focuses on campaigns and elections in Israel. The seminar is divided into two interrelated sections. In the first section, we will cover voting behavior. Here we will look at Israeli election laws, its political culture, socialization and cleavages, turnout, political sophistication, ideology, partisanship and issue voting. In the second half of the semester we will examine elections from the perspective of candidates and campaign strategists. The topics we will focus on include election laws, public and private campaign finance, campaign strategy, media, polling, and advertising. In examining these topics, we will cover a variety of elections campaigns since Israeli election laws, with an emphasis on the most recent ones.

Same as: POLISCI 241C

JEWISHST 279P. Introduction to Israeli Politics. 5 Units.

This course aims to introduce students to Israeli political system and its major actors. We will survey Israeli political landscape, both chronologically and thematically, covering the major issues and conflicts which have dominated Israeli politics since its inception.

Same as: INTNLREL 163, POLISCI 249P

JEWISHST 282. Circles of Hell: Poland in World War II. 5 Units.

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.

Same as: HISTORY 228, HISTORY 328, JEWISHST 382

JEWISHST 283D. The Holocaust in Recent Memory: Conflicts - Commemorations - Challenges. 5 Units.

This course offers an in-depth approach to the study of the Holocaust as a historical point of reference for European memory, or for the memory cultures of European nations, where the international context in particular the USA and Israel will also be taken into consideration. The starting point is the transformations in Holocaust memory: after 1945, in the era of European postwar myths, the Holocaust was on the periphery of historical thinking, of scholarly and public interest. Today the Holocaust is acknowledged as a 'break in civilization', a watershed event in human history. This approach has only evolved since the 1980s.

Same as: HISTORY 203D, HISTORY 303D, JEWISHST 383D

JEWISHST 284C. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 224C, HISTORY 324C, JEWISHST 384C, PEDS 224

JEWISHST 286. Jews Among Muslims in Modern Times. 4-5 Units.

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 286, HISTORY 386, JEWISHST 386

JEWISHST 287S. Research Seminar in Middle East History. 4-5 Units.

Student-selected research topics.

Same as: HISTORY 481, JEWISHST 481

JEWISHST 288. Palestine and the Arab-Israeli Conflict. 4-5 Units.

This course examines some salient issues of the Israeli-Palestinian conflict from the late 19th century to the present. At the end of the course you should be able to articulate the positions of the major parties to the conflict, with the understanding that there is no single, unified Zionist (or Jewish) or Palestinian (or Arab) position. One quarter does not allow sufficient time to cover even all of the important topics comprehensively (for example, the role of the Arab states, the USA and the USSR, and the internal history of Israel receive less attention than is desirable). Some prior knowledge of Middle East history is desirable, but not required. Vigorous debate and criticism are strongly encouraged. Criticism and response expressed in a civil tone is an important way to get a fuller and more truthful picture of something. This is not only a fundamental democratic right and a basic citizenship skill, but it is essential to interpreting information and making good policy. Rights not used are easily lost.

Same as: HISTORY 288, JEWISHST 388

JEWISHST 291X. Knowing God: Learning Religion in Popular Culture. 4 Units.

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: AMSTUD 231X, EDUC 231X, RELIGST 231X

JEWISHST 297X. American Jewish History: Learning to be Jewish in America. 2-4 Units.

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.

JEWISHST 299A. Directed Reading in Yiddish, First Quarter. 1-5 Unit.

Directed Reading in Yiddish, First Quarter.

JEWISHST 324. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, RELIGST 234, RELIGST 334

JEWISHST 347A. The Hebrew Bible in Literature. 3-5 Units.

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres.

Same as: COMPLIT 147A, COMPLIT 347A, JEWISHST 147A

JEWISHST 348. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

Same as: JEWISHST 148, SLAVIC 198, SLAVIC 398

JEWISHST 349. German Capstone: Reading Franz Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 111, COMPLIT 311C, GERMAN 190, GERMAN 390, JEWISHST 147

JEWISHST 382. Circles of Hell: Poland in World War II. 5 Units.

Looks at the experience and representation of Poland's wartime history from the Nazi-Soviet Pact (1939) to the aftermath of Yalta (1945). Examines Nazi and Soviet ideology and practice in Poland, as well as the ways Poles responded, resisted, and survived. Considers wartime relations among Polish citizens, particularly Poles and Jews. In this regard, interrogates the traditional self-characterization of Poles as innocent victims, looking at their relationship to the Holocaust, thus engaging in a passionate debate still raging in Polish society.

Same as: HISTORY 228, HISTORY 328, JEWISHST 282

JEWISHST 383. The Holocaust. 4 Units.

The emergence of modern racism and radical anti-Semitism. The Nazi rise to power and the Jews. Anti-Semitic legislation in the 30s. WW II and the beginning of mass killings in the East. Deportations and ghettos. The mass extermination of European Jewry.

Same as: HISTORY 137, HISTORY 337, JEWISHST 183

JEWISHST 383D. The Holocaust in Recent Memory: Conflicts - Commemorations - Challenges. 5 Units.

This course offers an in-depth approach to the study of the Holocaust as a historical point of reference for European memory, or for the memory cultures of European nations, where the international context in particular the USA and Israel will also be taken into consideration. The starting point is the transformations in Holocaust memory: after 1945, in the era of European postwar myths, the Holocaust was on the periphery of historical thinking, of scholarly and public interest. Today the Holocaust is acknowledged as a 'break in civilization', a watershed event in human history. This approach has only evolved since the 1980s.

Same as: HISTORY 203D, HISTORY 303D, JEWISHST 283D

JEWISHST 384C. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 385A

JEWISHST 385B. Core in Jewish History, 20th Century. 4-5 Units.

Instructor consent required.

Same as: HISTORY 385B

JEWISHST 386. Jews Among Muslims in Modern Times. 4-5 Units.

The history of Jewish communities in the lands of Islam and their relations with the surrounding Muslim populations from the time of Muhammad to the 20th century. Topics: the place of Jews in Muslim societies, Jewish communal life, variation in the experience of communities in different Muslim lands, the impact of the West in the Modern period, the rise of nationalisms, and the end of Jewish life in Muslim countries.

Same as: HISTORY 286, HISTORY 386, JEWISHST 286

JEWISHST 388. Palestine and the Arab-Israeli Conflict. 4-5 Units.

This course examines some salient issues of the Israeli-Palestinian conflict from the late 19th century to the present. At the end of the course you should be able to articulate the positions of the major parties to the conflict, with the understanding that there is no single, unified Zionist (or Jewish) or Palestinian (or Arab) position. One quarter does not allow sufficient time to cover even all of the important topics comprehensively (for example, the role of the Arab states, the USA and the USSR, and the internal history of Israel receive less attention than is desirable). Some prior knowledge of Middle East history is desirable, but not required. Vigorous debate and criticism are strongly encouraged. Criticism and response expressed in a civil tone is an important way to get a fuller and more truthful picture of something. This is not only a fundamental democratic right and a basic citizenship skill, but it is essential to interpreting information and making good policy. Rights not used are easily lost.

Same as: HISTORY 288, JEWISHST 288

JEWISHST 393X. The Education of American Jews. 4 Units.

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Korean General Courses

KORGEN 101. Kangnam Style: Korean Media and Pop Culture. 4 Units.

For over a decade now, South Korea has established itself as a tireless generator of soft power, the popularity of its pop-culture spreading from Asia to the rest of the world. This class will look into the economic engine that moves this "cultural contents" industry, and will examine some of its expressions in the form of K-pop, soap operas, tourism, food, sports, and fashion in order to illuminate the ways in which Korean culture is being (self-)narrated and consumed in this era of globalization of the 21st century.

Same as: KORGEN 201

KORGEN 101N. Kangnam Style: Korean Media and Pop Culture. 4 Units.

For over a decade now, South Korea has established itself as a tireless generator of soft power, the popularity of its pop-culture spreading from Asia to the rest of the world. This class will look into the economic engine that moves this "cultural contents" industry, and will examine some of its expressions in the form of K-pop. Will be held in Rm. 212, Lathrop Library.

KORGEN 120. Narratives of Modern and Contemporary Korea. 4-5 Units.

This introductory survey will examine the development of South and North Korean literature from the turn of the 20th century until the present. The course will be guided by historical and thematic inquiries as we explore literature in the colonial period, in the period of postwar industrialization, and contemporary literature from the last decade. We will supplement our readings with critical writing about Korea from the fields of cultural studies and the social sciences in order to broaden the terms of our engagement with our primary texts.

Same as: KORGEN 220

KORGEN 121. Doing the Right Thing: Ethical Dilemmas in Korean Film and Literature. 3-4 Units.

Ethics and violence seem to be contradictory terms, yet much of Korean film and literature in the past five decades has demonstrated that they are an intricate part of the fabric of contemporary existence. Film and literature exposes time and again the complex ways in which the supposed vanguards of morality are sites of religious transgression, family, schools, and the state are sites of inflicted transgression, wherein spiritual and physical violation is inflicted relentlessly. This class will explore the ways in which questions about Truth and the origins of good and evil are mediated through film and literature in the particular context of the political, social, and economic development of postwar South Korea. Class held in Lathrop Library Rm. 212.

Same as: KORGEN 221

KORGEN 140. Childhood and Children: Culture in East Asia. 3-5 Units.

Literature for children often reflects society's deepest-held convictions and anxieties, and is therefore a critical site for the examination of what is deemed to be the most imperative knowledge for the young generation. In this respect, the analysis of both texts and visual culture for children, including prose, poetry, folk tales, film, and picture books illuminates prevalent discourses of national identity, family, education and gender. Through an examination of a diverse range of genres and supported by the application of literary theories, students will obtain an understanding, in broad strokes, of the birth of childhood and the emergence of children's literature of China, Korea and Japan from the turn of the century until the present.

Same as: KORGEN 240

KORGEN 198. Senior Colloquium in Japanese Studies. 1 Unit.

Research, write, and present capstone essay or honors thesis.

Same as: JAPANGEN 198

Korean Language Courses

KORLANG 1. First-Year Korean, First Quarter. 5 Units.

Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language.

KORLANG 1H. Beginning Korean for Heritage Learners, First Quarter. 3 Units.

For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials.

KORLANG 2. First-Year Korean, Second Quarter. 5 Units.

Continuation of KORLANG 1. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: Placement Test, KORLANG 1.

KORLANG 2H. Beginning Korean for Heritage Learners, Second Quarter. 3 Units.

Continuation of KORLANG 1H. For students with previous knowledge of Korean or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: KORLANG 1H.

KORLANG 3. First-Year Korean, Third Quarter. 5 Units.

Continuation of KORLANG 2. Communication skills, vocabulary, and grammar patterns. Culturally appropriate conduct relevant to contexts such as greetings, gestures, and body language. Prerequisite: Placement Test, KORLANG 2. Fulfills the University language requirement.

KORLANG 3H. Beginning Korean for Heritage Learners, Third Quarter. 3 Units.

Continuation of KORLANG 2H. For students with previous knowledge or a strong background in listening and speaking. Focus is on reading, writing, and spelling rather than speaking and listening. Sources include textbook, workbook, and digitized listening materials. Prerequisite: KORLANG 2H. Fulfills University Language requirement.

KORLANG 21. Second-Year Korean, First Quarter. 5 Units.

Continuation of KORLANG 3. More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: Placement Test, KORLANG 3.

KORLANG 22. Second-Year Korean, Second Quarter. 5 Units.

Continuation of KORLANG 21. More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: Placement Test, KORLANG 21.

KORLANG 23. Second-Year Korean, Third Quarter. 5 Units.

Continuation of KORLANG 22. More complex sentences and grammatical patterns. Conversation in daily situations such as making a polite request or suggestion, reading simple texts, and Korean culture. Prerequisite: Placement Test, KORLANG 22.

KORLANG 101. Third-Year Korean, First Quarter. 4-5 Units.

Continuation of KORLANG 23. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: Placement Test, KORLANG 23.

KORLANG 102. Third-Year Korean, Second Quarter. 4-5 Units.

Continuation of KORLANG 101. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: Placement Test or KORLANG 101.

KORLANG 103. Third-Year Korean, Third Quarter. 4-5 Units.

Continuation of KORLANG 102. Materials about Korean culture and society. Proficiency in interpersonal, interpretive, and presentational communication. Vocabulary, reading, and aural/oral skills. Prerequisite: Placement Test, or KORLANG 102.

KORLANG 110. Korean Pronunciation and Intonation. 1-2 Unit.

Goal is intelligibility and fluency. Lab assignments. Prerequisite: 3.

KORLANG 111. Medical Korean, First Quarter. 2-3 Units.

Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 23.

KORLANG 112. Medical Korean, Second Quarter. 2 Units.

Medical vocabulary; cultural attitude. Video clips, technical journal and prescription reading, and class simulations. Prerequisite: 111.

KORLANG 120A. Korean Culture. 1-3 Unit.

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisite: 103.

KORLANG 120B. Korean Culture. 1-2 Unit.

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisite: 103.

KORLANG 120C. Korean Culture. 1-2 Unit.

Examination of Korean culture and society to develop fluency and vocabulary through newspapers and short essays. May be repeated for credit. Prerequisites: 103.

KORLANG 120K. Korean Language and Culture through Drama and Film. 2-3 Units.

Korean culture and society through contemporary Korean drama and films. Advanced vocabulary, grammar, and idiomatic expressions. Prerequisite: placement test or 103.

KORLANG 130. Reading Korean. 2-3 Units.

Contemporary literature and academic texts. May be repeated for credit. Prerequisite: KORLANG 103.

KORLANG 200. Directed Reading in Korean. 1-5 Unit.

Prerequisite: consent of instructor.nn (Staff).

KORLANG 395. Graduate Studies in Korean. 1-5 Unit.

Prerequisite: consent of instructor.

Korean Literature Courses

KORLIT 230. Intimate Encounters: Reading and Translating Korean Literature. 4-5 Units.

Close analysis of fiction and poetry in original Korean. Discussion of the works in a broader context of Korean literature, history, and current events. Translation of Korean fiction that has not previously been translated; select translations will be considered for publication. Prerequisite: three years of Korean language.

Same as: KORLIT 330

KORLIT 231. Topics in Korean Literature. 4-5 Units.

Colonial period fiction is often described in binary terms in Korean literary history, via genre (modernism/realism), politics (resistance/collaboration), aesthetics (verisimilitude/style), interpretive focus (content/form), subject (collective/individual), and class (engaged/elite), among others. This term we will focus on major works and authors but will also raise questions regarding the status of cultural production under colonial rule. nPrerequisite: KORGEN 120/220.

KORLIT 330. Intimate Encounters: Reading and Translating Korean Literature. 4-5 Units.

Close analysis of fiction and poetry in original Korean. Discussion of the works in a broader context of Korean literature, history, and current events. Translation of Korean fiction that has not previously been translated; select translations will be considered for publication. Prerequisite: three years of Korean language.

Same as: KORLIT 230

Latin American Studies Courses

LATINAM 197. Directed Individual Research. 1-10 Unit.

For students engaged in interdisciplinary work that cannot be arranged by department. May be repeated for credit. Prerequisite: consent of instructor.

LATINAM 198. Honors Thesis. 1-10 Unit.

Restricted to those writing an honors thesis in Latin American Studies.

LATINAM 200. Seminar on Contemporary Issues in Latin American Studies. 1 Unit.

Guest scholars present analyses of major Latin American themes.

LATINAM 207. Spanish in Science/Science in Spanish. 2 Units.

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology. Same as: BIO 208, EARTHSYS 207

LATINAM 398. Master's Thesis. 1-10 Unit.

Restricted to students writing a master's thesis in Latin American Studies. May be repeated for credit.

LATINAM 801. TGR Project. 0 Units.

Law Courses

LAW 201. Civil Procedure I. 4 Units.

This course is part of the required first-year JD curriculum. This course is a study of the process of civil litigation from the commencement of a lawsuit through final judgment under modern statutes and rules of court, with emphasis on the federal rules of civil procedure. May include class participation, written assignments, or other elements. Your instructor will advise you of the basis for grading.

LAW 203. Constitutional Law. 3 Units.

This course is part of the required first-year JD curriculum. This course offers an introduction to American constitutional law. In addition to examining questions of interpretive method, the course focuses on the powers of the federal government and the allocation of decision making authority among government institutions, including both federalism and separation of powers. Class participation, attendance, written assignments, and final exam. This course is open to first-year Law School students only.

LAW 205. Contracts. 4 Units.

This course is part of the required first-year JD curriculum. It provides exposure to basic contract law. The course will identify the scope and purpose of the legal protection accorded to interests predicated on contract and will focus on problems of contract formation, interpretation, performance, and remedies for breach.

LAW 207. Criminal Law. 4 Units.

This course is part of the required first-year JD curriculum. It examines the traditional general issues in the substantive criminal law, including the purposes of punishment and the appropriate limits on the use of the criminal sanction. It focuses predominantly on how criminal statutes are organized around objective offense elements (conduct, causation, and attendant circumstances) and mental states, and to a lesser degree on inchoate crimes, complicity, justification and excuse.

LAW 217. Property. 4 Units.

This course is part of the required first-year JD curriculum. It deals with possession and ownership of land and with the incidents thereof, including private and public restrictions on its use and development, nuisance, trespass, concurrent interests, landlord and tenant, and eminent domain. Attendance and final exam. Your instructor will advise you of other basis of grading. This course is open to first-year Law School students only.

LAW 218. JSD Research Colloquium. 0 Units.

Required for and limited to JSD candidates. The objective of the colloquium is to assist students in developing their dissertation research proposals. Weekly colloquium sessions will include a mix of lectures and discussions on selected methodological topics, relevant to the candidates' dissertation research; guest lectures by empirical legal research scholars; presentations by and discussions with more advanced doctoral candidates; and presentations by the first year JSD candidates.

LAW 219. Legal Research and Writing. 2 Units.

Legal Research and Writing is a two-unit course taught as a simulation. Students work on a legal problem starting with an initial interview, and they conduct fact investigation and legal research related to that problem. Students receive rigorous training in reading and analyzing legal authority, and in using persuasive strategies--legal analysis, narrative, rhetoric, legal theory, and public policy--to frame and develop legal arguments. Students write predictive memos and persuasive briefs, and are introduced to the professional norms of ethics, timeliness, and courtesy. This course is part of the required first-year JD curriculum.

LAW 220. Regulatory Economics. 5 Units.

Law 220 examines public policies for dealing with problems arising in markets in which competitive forces are weak. The focus is on monopolies, oligopolies, cartels, and other environments where market mechanisms are unlikely to produce outcomes that benefit consumers more than the alternatives involving costly government intervention. The two main areas examined are competition policy and economic regulation. Competition policy refers to laws that define certain market behavior as illegal because it is harmful to competition or fails to provide consumer benefits that justify its costs to consumers. Economic regulation refers to policies in which government controls prices and/or decides the terms and conditions under which firms can participate in a market. A growing area of study and policy design is the introduction of market mechanisms into formerly regulated industries such as: telecommunications, electricity, airlines, railroads, postal delivery services and environmental regulation. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper and Final Exam. Cross-listed with Economics (ECON 158).

LAW 221. Intellectual Property: Commercial Law. 3 Units.

This seminar, co-taught by eBay's first In-House Counsel and former Director of Law & Public Policy, Brad Handler, examines the ways in which intellectual property rights are asserted, exchanged, protected, and respected, both in theory and in practice. Special attention is devoted to the regulatory and strategic considerations involved in the business and legal decisions implicating intellectual property. See SLS Registrar's website for prerequisites.

LAW 222. Advanced Legal Research. 3 Units.

The course is designed to prepare law students for research in practice and clerkships. The course will review who produces legal authority and how this material is organized, published, indexed and kept current. Objectives for the course: 1) to show students how to evaluate legal research sources and use them effectively, with particular emphasis on cost-effective research; 2) to expand skills in primary and secondary U.S. legal sources; and 3) to introduce students to the array of non-legal information resources that could be useful to legal practice. Since learning legal research requires a hands-on approach, students are required to complete homework assignments and in-class exercises. Each student is also required to analyze a recent California Supreme Court opinion. This course is open to Stanford graduate students with permission from the instructor. Elements used in grading: Written assignments and in-class exercises.

LAW 223. Torts. 4 Units.

This course is part of the required first-year JD curriculum. It considers issues involved in determining whether the law should require a person to compensate for harm intentionally or unintentionally caused. These problems arise in situations as diverse as automobile collisions, operations of nuclear facilities, and consumption of defective food products. Among other considerations, the course explores various resolutions in terms of their social, economic, and political implications.

LAW 224. Federal Litigation: Coursework. 2 Units.

This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated public interest case set in a federal district court that raises complex issues of federal civil procedure, privacy, and first amendment law. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions for dismissal, class action certification, and preliminary injunctive relief. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and constitutional law. Attendance, class participation and written assignments. This course is open to first-year Law School students only.

LAW 224B. Federal Litigation: Methods. 1 Unit.

This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated public interest case set in a federal district court that raises complex issues of federal civil procedure, privacy, and first amendment law. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions for dismissal, class action certification, and preliminary injunctive relief. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and constitutional law. Attendance, class participation and written assignments. This course is open to first-year Law School students only.

LAW 224C. Federal Litigation: Practice. 1 Unit.

This course is part of the required first-year JD curriculum. It is an introductory course in the litigation process. Students represent the plaintiff or defendant in a simulated public interest case set in a federal district court that raises complex issues of federal civil procedure, privacy, and first amendment law. Students plan litigation strategy, draft pleadings, conduct discovery, write short briefs, and orally argue major motions for dismissal, class action certification, and preliminary injunctive relief. While developing students' written and oral advocacy skills, the course also focuses on substantive issues of civil procedure and constitutional law. Attendance, class participation and written assignments. This course is open to first-year Law School students only.

LAW 225A. Immigrants' Rights Clinic: Clinical Practice. 4 Units.

The Immigrants' Rights Clinic offers students the opportunity to represent immigrants before the San Francisco Immigration Court, the Board of Immigration Appeals, and the Ninth Circuit Court of Appeals. Students in the clinic conduct mini-trials in immigration court, write motions and appellate briefs, interview clients and witnesses, investigate facts, develop case strategy, and argue cases. The Clinic represents immigrants with past criminal convictions, asylum seekers, and survivors of domestic violence. All clinic students also work on a variety of impact litigation and advocacy projects to address federal government immigration enforcement practices at the national and local levels, including impact litigation to challenge prolonged immigration detention, local and state advocacy to limit enforcement activity by police, the creation of model pleadings and know your rights materials for immigrant detainees, and advocacy with the federal agencies that regulate immigration. No prior substantive experience or background in immigration or immigrants' rights work is necessary. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Attendance and participation in class, case and project work and writing assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 225B. Immigrants' Rights Clinic: Clinical Methods. 4 Units.

The Immigrants' Rights Clinic offers students the opportunity to represent immigrants before the San Francisco Immigration Court, the Board of Immigration Appeals, and the Ninth Circuit Court of Appeals. Students in the clinic conduct mini-trials in immigration court, write motions and appellate briefs, interview clients and witnesses, investigate facts, develop case strategy, and argue cases. The Clinic represents immigrants with past criminal convictions, asylum seekers, and survivors of domestic violence. All clinic students also work on a variety of impact litigation and advocacy projects to address federal government immigration enforcement practices at the national and local levels, including impact litigation to challenge prolonged immigration detention, local and state advocacy to limit enforcement activity by police, the creation of model pleadings and know your rights materials for immigrant detainees, and advocacy with the federal agencies that regulate immigration. No prior substantive experience or background in immigration or immigrants' rights work is necessary. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Attendance and participation in class, case and project work and writing assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 225C. Immigrants' Rights Clinic: Clinical Coursework. 4 Units.

The Immigrants' Rights Clinic offers students the opportunity to represent immigrants before the San Francisco Immigration Court, the Board of Immigration Appeals, and the Ninth Circuit Court of Appeals. Students in the clinic conduct mini-trials in immigration court, write motions and appellate briefs, interview clients and witnesses, investigate facts, develop case strategy, and argue cases. The Clinic represents immigrants with past criminal convictions, asylum seekers, and survivors of domestic violence. All clinic students also work on a variety of impact litigation and advocacy projects to address federal government immigration enforcement practices at the national and local levels, including impact litigation to challenge prolonged immigration detention, local and state advocacy to limit enforcement activity by police, the creation of model pleadings and know your rights materials for immigrant detainees, and advocacy with the federal agencies that regulate immigration. No prior substantive experience or background in immigration or immigrants' rights work is necessary. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Attendance and participation in class, case and project work and writing assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 226. Accounting. 3 Units.

The objective of financial accounting is to measure economic activity for decision-making. Financial statements are a key product of this measurement process and an important component of firms' financial reporting activities. This course is aimed at developing students' ability to read, understand, and use corporate financial statements. The primary focus is on understanding the mapping between underlying economic events and financial statements, and how this mapping can affect inferences about future firm profitability. To this end, the course will provide an introduction to: (1) accrual accounting concepts, principles and conventions; (2) the process of preparing and presenting the primary financial statements (income statement, balance sheet, and statement of cash flows); (3) the judgment involved and discretion allowed in making accounting choices; (4) the effects of accounting discretion on the quality of the (reported) financial information; and (5) the fundamentals of financial statement analysis. Class time will be allocated to a combination of short lectures and discussions of the assigned cases. The assigned cases are based on actual corporate financial statements and/or "real life" financial situations. Elements used in grading: Class participation, attendance, written assignments, final paper.

LAW 229. Equal Protection: Race and the Law. 3 Units.

This course will examine the application of constitutional and statutory antidiscrimination law to race related controversies across a variety of settings. The course will begin with an exploration of the historical developments that led to antidiscrimination law, and with an introduction to the competing frameworks that define current antidiscrimination law: the discriminatory purpose and anti-classification approaches that feature prominently in equal protection doctrine, and the disparate impact framework that is incorporated into some statutory law. After some exploration of the historical origins of antidiscrimination law and its alternative formulations, the course will then turn to the specific contexts in which controversies arise. The settings that will be examined include criminal justice, college admissions, political participation, primary/secondary education, employment, housing, hate speech, and the formation of family relationships. In each of these settings, we will devote close attention to the role of antidiscrimination law in specific controversies. Throughout, our intellectual goals will be twofold: to understand the special challenges that race poses, and to appreciate more generally some of the dilemmas of legal regulation.

LAW 230. Creation of the Constitution. 4 Units.

The course begins with readings setting forth the intellectual and experiential background of the framing, including common law and natural rights theory, republicanism, economic & political scientific ideas, and colonial and post-Independence experience. We then study large parts of the debates at the Constitutional Convention, primarily using Madison's Notes. Next come the ratification debates, including readings from antifederalist writers, about half of *The Federalist*, and overviews of the Virginia and New York ratification conventions. We conclude with the addition of the Bill of Rights. Classes consist of a combination of lecture and extensive participation by students. Elements used in grading: Exam. Cross-listed with History (HISTORY 153).

LAW 233. Antitrust. 4 Units.

Antitrust law sets the ground rules for competition. This course will explore the basic concepts in antitrust law. We will examine cartels and competitor collaborations, monopolization, vertical restraints and mergers. There are no prerequisites for this course. No economic background is required. The course is open to GSB students and graduate students in the Economics Department. To apply for this course, non-Law students must complete a Non-Law Student Add Request Form available on the SLS Registrar's Office website (see Non-Law Students). Elements used in grading: Class participation, attendance and final exam.

LAW 236. Art and the Law. 2 Units.

This course covers the legal, public policy, and ethical issues that concern artists, art dealers, auction houses, museums, collectors, and others who comprise the world of visual art. Our focus will be on artists' rights (including copyright, resale royalties, moral rights, and freedom of expression issues), how the market in art functions (such as the artist-dealer relationship, auction rules, and issues faced by collectors), and the legal and ethical rules governing the collection, donation, and display of visual art, particularly for museums and their donors. The course focuses on certain recurrent themes: How do statutes and courts define (or attempt to define) art and how is art defined differently for different legal purposes? How does the special character of art justify or require different treatment under the law from that accorded other tangible personal property, and how does (and should) the expressive nature of art affect the way it is owned, protected, regulated, or funded? We anticipate having two or three visitors to the class during the quarter, such as a gallery owner, auctioneer, and museum director. In addition, we will also have the students participate in at least one or two interactive negotiation simulation exercises inspired by real situations and controversies in the art world. Special Instructions: Students have the option to write a research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, final paper or final exam.

LAW 238. Administrative Law. 4 Units.

Law made by administrative agencies dominates the modern legal system and modern legal practice. This course examines the legal and practical foundations of the modern administrative state. Topics include rationales for delegation to administrative agencies; the legal framework (both constitutional and statutory) that governs agency decision-making; the proper role of agencies in interpreting statutory and regulatory law; and judicial review of agency action. The course will cover these topics through a combination of cases and examples drawn primarily from separation of powers doctrine; the constitutional law of due process; health, safety, and environmental policy; criminal justice; and national security law. The central theme of the course is how administrative law balances "rule of law" values (procedural regularity, substantive limits on arbitrary action) against the often competing values of political accountability, democratic participation, and effective administrative governance. Elements used in grading: Class participation, attendance and final exam.

LAW 239. Writing Workshop: Law and Creativity. 3 Units.

Practicing law is very much a creative enterprise. Effective advocates and counselors provide innovative and thoughtful solutions to complex problems. But there often isn't enough attention devoted in law school either to thinking creatively or to reflecting in a creative way on the issues students confront inside and outside the classroom. This course will respond to this gap by building a bridge between law and the arts, with the goal of helping students hone their ability to think creatively and use disciplined imagination. Law & Creativity will meet twice a week and have dual components designed to inform one another. The first session will be structured as a seminar in which students gather to examine and discuss creative treatments of legal and professional issues in a variety of media (including film, fiction, and nonfiction). The second session will follow the creative-writing workshop model in which students submit their own fiction and creative nonfiction pieces for group discussion. Through the workshop process, students will develop the skills necessary to constructively critique and workshop one another's work, and learn a variety of techniques for improving their own creative writing. Writing (W) credit is for students entering prior to Autumn 2012. Elements used in grading: Class attendance, participation and final paper.

LAW 240. Bankruptcy. 3 Units.

This course concerns the law and finance of corporate bankruptcy with an emphasis on reorganization. The course reviews the fundamentals of debt contracting, including the role of events of default, debt priority, and security interests. The course examines various aspects of the bankruptcy process: including the automatic stay, the avoidance of prebankruptcy transactions (e.g. fraudulent conveyances and preferences), the treatment of executory contracts, the debtor's governance structure during bankruptcy, the financing of operations and investments in bankruptcy, sales of assets during bankruptcy, and the process of negotiating, voting, and ultimately confirming a plan of reorganization. Elements used in grading: Class participation and exam.

LAW 241. Payment Systems. 3 Units.

Negotiable instruments, letters of credit, checks, credit cards, electronic fund transfers, and cash. This course surveys the legal mechanisms by which funds can be transferred, including new mechanisms that have become more important as a result of (a) changes in electronic technology and (b) increased international trade. Designing a system for transferring funds is not easy -- as e-firms like PayPal have discovered -- and the law has had to deal with the difficulties of each new system in turn. The principal focus will be on articles 3, 4, 4A, and 5 of the Uniform Commercial Code, with occasional reference to other statutes and to international conventions and treaties. Bankruptcy is the first of three courses (the other two are Secured Credit and Payment Systems) dealing with the financing of commercial ventures through means other than the sale of corporate stock. These courses may be taken in any order: neither presupposes any knowledge of the others. Students who cannot take all three should probably prioritize them in the order they are listed--that is, Bankruptcy is the single most important course to take, then Secured Credit, then Payment Systems. Elements Used in Grading: In-School, open book.

LAW 242. Corporations. 4 Units.

This course is an introduction to the law of organizations with a focus on business corporations. The course is the foundation for advanced business courses. We will examine how organizational law mitigates the conflicts among owners, managers, and creditors and facilitates enterprise. Topics covered will include the law of agency, fiduciary duties, voting rights, and mergers and acquisitions. Elements used in grading: Class Participation, Attendance, Final Exam.

LAW 245. China Law and Business. 3 Units.

This introductory course provides an overview of the Chinese legal system and business environment and examines Chinese legal rules and principles in select business-related areas. These areas include intellectual property, dispute resolution, foreign investment, mergers and acquisitions, antimonopoly law, and environment. Through active class participation and analysis of business case studies, students will learn both the law in the books and the law in action, as well as strategies that businesses could use to overcome limitations in the Chinese legal system. Leaders from the law and business community will be invited to share their experiences and insights. This course is particularly suitable for law students and students enrolled in the MBA program and/or the East Asian Studies Program. Undergraduates who have permission from the instructor may also take this course. A Stanford Non-Law Student Course Registration Form is available on the SLS Registrar's Office website. Elements used in grading: Class participation (30%) and extended take-home exam (70%).

LAW 248. Corporate Reorganization. 3 Units.

This course examines the reorganization of a financially distressed company under chapter 11 of the Bankruptcy Code. Among other things, the course follows a fictitious company through several stages of a business turnaround and financial restructuring, including an out-of-court workout, a chapter 11 filing, selected chapter 11 operating issues, and the negotiation, formulation and confirmation of a plan of reorganization. In addition, the course follows current developments relating to bankruptcy, primarily through reports in the media. For example, in recent years the course has examined developments in actual chapter 11 cases (e.g., General Motors, Chrysler Corporation, American Airlines and Lehman Brothers) and the effects of bankruptcy on various industries (e.g., airlines, automotive, and retail). The course also touches on various issues that often arise in a reorganization setting, such as valuation, leveraged buyouts, debt and derivative instruments, and distressed debt trading. Elements used in grading: Class participation and final exam.

LAW 251. Conflict of Laws. 3 Units.

Instances are common in law where more than one legal authority potentially governs a particular event, occurrence or transaction. When the outcome required by these authorities differs, which law governs? Beginning with the classic problem of choosing an applicable law in cases with facts touching more than one jurisdiction, this course is designed broadly to explore the variety of theories and systems used to resolve this question. The course thus uses state/state conflicts to develop a set of approaches and then extends these to such other problems as adjudicatory jurisdiction, judgments, federal subject-matter jurisdiction, and public and private international law. Elements used in grading: Attendance, preparation, participation and final examination.

LAW 253. Advanced Civil Procedure. 3 Units.

This course will address major areas of civil procedure that receive little attention in the basic first-year course as well as broader questions of procedural design. We will address more complex forms of litigation by studying the joinder of claims and parties, preclusion doctrines, class actions, and arbitration, with special attention to the impact of these doctrines and practices on civil rights and social justice litigation. We will also explore questions of procedural design, especially through comparing U.S. procedure to procedural regimes of other countries. Elements used in grading: Exam.

LAW 255. Constitutional Law: The Fourteenth Amendment. 3 Units.

This course examines various aspects of the Fourteenth Amendment, with special attention to equal protection, substantive due process, and state action. Topics addressed will include equal protection in relation to race, gender, and sexual orientation, and substantive due process in relation to procreation, sexuality, and relationships. Elements used in grading: Class participation and exam.

LAW 259. State-Building and the Rule of Law Workshop. 4 Units.

Students previously selected through a competitive application process to participate in the Rule of Law Projects (the Afghanistan Legal Education Project, Iraq Legal Education Initiative, and Rwanda Law and Development Project) are required to take the State-Building and Rule of Law Seminar. The seminar introduces the key theories relevant to state-building generally and strengthening the rule of law in particular. This course expounds on the multidisciplinary nature of development -- through readings, lectures, guest lectures, and seminar discussions -- and asks how lawyers fit in and contribute to the process. Students will explore these issues in a weekly 3-hour seminar and then discuss application to their particular Rule of Law Project countries in weekly hour long workshops. This course will employ case studies as a way to analyze rule-of-law practice within development theory. The set of developing countries considered within the scope of this workshop is broad. It includes, among others, states engaged in post-conflict reconstruction, e.g., Cambodia, Timor Leste, Rwanda, Iraq, Sierra Leone; states still in conflict, e.g., Afghanistan, Somalia; the poorest states of the world that may not fall neatly into the categories of conflict or post-conflict, e.g., Nepal, Haiti; and least developed states that are not marked by high levels of violent conflict at all, e.g., Bhutan. Special Instructions: Students have the option to receive Writing (W) credit or Research (R) credit upon instructor approval. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Class participation and presentation of final written product, reaction papers, and final paper/project/proposal. Automatic grading penalty waived for writers. Writing (W) credit is for 3Ls only.

LAW 260. Contemporary Issues in Law and Politics. 2-3 Units.

This seminar covers high profile legal controversies from the previous few years. Topics to be covered this semester will include recent Supreme Court decisions concerning affirmative action, the Voting Rights Act, campaign finance, the First Amendment, national security, and criminal procedure, as well as other legislative controversies and cases pending during the term. Students are required to complete a considerable amount of reading each week and participate actively in the seminar. The final paper will be approximately 30 pages in length and will concern a topic of the student's choice dealing with law and politics. Students can take the seminar for either 2 or 3 units. Students taking the seminar for 3 units are required to complete weekly written assignments in addition to the final paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), for 3 units with instructor consent. Elements used in grading: Class participation, final paper and written assignments (optional).

LAW 262. Corporate Finance I. 3 Units.

There are many contexts in which lawyers need an understanding of finance. For example, many of the disputes that give rise to litigation center on the financial valuation of firms and the securities they issue. In addition, an understanding of firms' capital structures and the design of corporate securities is necessary in analyzing many legal issues, especially those arising in corporate transactions, executive compensation, and bankruptcy proceedings. This course is designed to provide students with a rigorous conceptual understanding of finance and to give students the analytical tools needed to make financial decisions and value financial securities. The course stresses problem solving and includes problem sets, cases, and a midterm and final examination. The course is designed to be accessible to students with a fairly limited mathematical background. In general we will not assume any knowledge of mathematics beyond high-school algebra. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

LAW 266A. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Practice. 4 Units.

The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. A background in technology may be useful in some cases but is not necessary to a successful experience in the clinic. - Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system.

LAW 266B. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Methods. 4 Units.

The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system.

LAW 266C. Juelsgaard Intellectual Property and Innovation Clinic: Clinical Coursework. 4 Units.

The Juelsgaard Intellectual Property and Innovation Clinic provides students the opportunity to understand and advocate for sound innovation policies. Students in the clinic will help shape the course and outcome of significant legal and policy debates before courts, legislators, regulatory bodies, and other policy makers. Our work focuses on the relationship between law, regulation and innovation in areas ranging from biotechnology to information technology, pharmaceuticals, clean technology, and the creation and distribution of information. Students will represent a variety of NGOs and non-profit entities and, in certain cases, groups or associations of innovators, entrepreneurs, technology users or consumers, economists, technologists, legal academics, and the like, and occasionally individual inventors, start-ups, journalists, or researchers. Students will address their client's complex issues through tools that may include amicus briefs; comments or testimony in rulemaking and regulatory proceedings (i.e., DMCA exemption requests, comments to OSTP on issues such as open access, privacy or open data, comments to the FTC as part of IP and innovation hearings and reports, comments to the PTO or FDA, etc.); comments or testimony on proposed legislation; and whitepapers or other "best practices" documents to encourage sensible and balanced legal approaches to innovation and creativity. Our policy advocacy will often involve intertwined factual, technological, business, economic, political and public relations considerations along with the substantive legal issues. Students in the clinic may be called upon to collaborate with technologists, researchers, doctors, economists, social scientists, industry experts, and others to develop and articulate the appropriate policy advocacy for their clients. The clinic seminar will focus on student-led workshops regarding client projects, and on engaging with current thinking around innovation, innovation economics and the impact of IP, antitrust, and other law and regulation on innovation. We will explore the process of policy advocacy, including various policy levers, the types of tools available to advocates and the strategies and tactics that may be employed, and will consider and critique a variety of case studies of previous advocacy, situating them in the larger context in which these efforts occurred. Students will critically examine the role of lawyers advocating for the public interest and for sound and sensible innovation policy outcomes and bring those lessons to bear on their own clinic work. A background in technology may be useful in some cases but is not necessary to a successful experience in the clinic. - - Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system.

LAW 267. Law of Nonprofits. 3 Units.

This course provides an overview of the rules governing the formation and operation of nonprofit organizations. The course will focus both on the state laws governing nonprofit corporations and on federal tax laws. Topics will include the fiduciary duties of nonprofit directors, obtaining and maintaining tax-exempt status, nonprofit lobbying and political activities, and nonprofit earned income strategies, including social enterprise.

LAW 268. Democracy and the Constitution. 3 Units.

This course will explore connections between democratic theory, constitutional theory, and constitutional law. We will discuss issues in political philosophy, law, and jurisprudence, and leading cases about freedom of expression, campaign finance, deference to administrative agencies, and legislative apportionment. Readings from Scalia, Breyer, Ely, Rawls, Dahl, Sunstein, Siegel, Kramer, Habermas, Dworkin, Przeworski, Riker, and Schumpeter. Special Instructions: Enrollment is limited to 20 students, 10 from SLS and 10 from H&S, who will be selected by lottery. Elements used in grading: Class participation and final paper. Writing (W) credit is for students entering prior to Autumn 2012. Cross-listed with Political Science (POLISCI 438) and Philosophy (PHIL 374C).

LAW 272A. Organizations and Transactions Clinic: Clinical Practice. 4 Units.

The O&T Clinic is targeted at both students planning to do M&A, finance, securities, IP licensing or other corporate or transactional work at major firms and those seeking to explore a non-litigation, advisory-oriented practice. In the clinic, students develop legal advice, learn to review and write contracts and governance materials, meet with client executives, examine commercial relationships, and receive extensive feedback about their work. No prior experience in business, finance, or corporate law is necessary. Students work on structural, programmatic, contractual, affiliation, and governance matters for corporate entities. Students typically represent multiple clients during the term, interact with client CEOs, CFOs, board members, and general counsels, and work in teams with other students and the instructors. Students receive detailed comments about the design, content, and execution of work-products and client communications, and about their performance in client meetings and calls. Students regularly assess their own work throughout the quarter and prepare a self-evaluation at the end of the term. O&T clients are all established Northern California nonprofit corporations. Most of the clients generate annual revenues in the range of \$1 - \$25 million, and some are considerably larger. We focus on these organizations because they are corporations that typically have substantial governance and external disclosure obligations, active boards of directors, audited financial statements, complex programs, varied collaborations, and diverse funding sources and contractual relationships -- all of which are relevant to and productive of corporate work -- yet are small enough that the clinic's contact is a senior executive. We think they provide excellent material for students learning about organizational representation and institutional corporate practice. The course includes a seminar that generally meets twice a week. Seminar meetings focus on student-led workshops regarding client projects, and on orientation to corporate practice, including discussion of core commercial relationships such as acquisition, credit, and licensing, and practice skills such as transaction planning and management. Evaluation and grading are based on detailed points of emphasis that reflect ways of working we believe characterize an effective lawyer and responsible colleague. Course design and operation reflect the instructors' combined 40+ years of corporate practice representing consumer products, finance, technology, and life science companies, in both law firm and senior in-house roles. Information about prior projects is available from the instructors and on the SLS website. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. LAW 273. Deals I. 3 Units.

This course applies economic concepts to the practice of structuring contracts. Our goal is to understand common problems and solutions that arise in complex deals. The course extends over two quarters, meeting three hours per week the first quarter and two hours per week the second quarter. Students enrolled in the course must take both quarters. The first quarter will be spent in a traditional classroom setting, discussing economics articles and case studies of actual contracts that illustrate the concepts described in the articles. We focus on the issues arising from transaction costs, adverse selection, moral hazard, problems of enforceability, agency problems, and contracting over time. During the second quarter, we will explore the connection between economic theory and contracting practice by studying specific deals. Students, divided into groups, will study a deal and give a class presentation based on their deal. A lawyer or another participant in the deal will also lead a class discussion of that deal. When it works, the students' and the practitioners' analyses are mutually enlightening. In the past, we have studied movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, and corporate reorganizations. This course is capped at 30 Students, 12 GSB, 18 Law School students. Students enrolled in the course must take both quarters. The course is open to first-year Law School students. Writing (W) credit is for 3Ls only. No exam in Winter Term. An In-School exam will be given at the conclusion of the course in the Spring Term. Elements used in grading: Attendance, class participation, presentation, written assignments, a group paper, and exam. Grades will be given at the end of the second quarter and will be applied to both quarters. This course is cross-listed with GSBGEN 304. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 274. Advanced Immigrants' Rights Clinic. 2-7 Units.

The Immigrants' Rights Advanced Clinic offers the opportunity for students who have already successfully completed the Immigrants' Rights Clinic to pursue: a specific immigrants' rights advocacy project; advanced individual client representation; and/or working with the clinic director to provide direction/guidance to those enrolled in the Clinic for the first time. All advanced Clinic projects will be jointly designed by the director and the advanced student. Advanced students providing guidance/direction to first-time students will receive additional training on providing supervision. Special instructions: Advanced students are expected to attend the case-rounds portion of the weekly seminar, and to participate as needed in the lecture/discussion portion of the seminar. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Elements used in grading: Attendance and participation in class, project work, writing assignments, and case preparation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 275. Deals II. 2 Units.

This course applies economic concepts to the practice of structuring contracts. Our goal is to understand common problems and solutions that arise in complex deals. The course extends over two quarters, meeting three hours per week the first quarter and two hours per week the second quarter. Students enrolled in the course must take both quarters. The first quarter will be spent in a traditional classroom setting, discussing economics articles and case studies of actual contracts that illustrate the concepts described in the articles. We focus on the issues arising from transaction costs, adverse selection, moral hazard, problems of enforceability, agency problems and contracting over time. During the second quarter, we will explore the connection between economic theory and contracting practice by studying specific deals. Students, divided into groups, will study a deal and give a class presentation based on their deal. A lawyer or another participant in the deal will also lead a class discussion of that deal. When it works, the students' and the practitioners' analyses are mutually enlightening. In the past, we have studied movie financings, biotech alliances, venture capital financings, cross-border joint ventures, private equity investments, and corporate reorganizations. This course is capped at 30 Students, 12 GSB, 18 Law School students. Students enrolled in the course must take both quarters. The course is open to first-year Law School students. Writing (W) credit is for 3Ls only. No exam in Winter Term. An In-School exam will be given at the conclusion of the course in the Spring Term. Elements used in grading: Attendance, class participation, presentation, written assignments, a group paper, and exam. Grades will be given at the end of the second quarter and will be applied to both quarters. (Cross-listed as GSBGEN 508).

LAW 276. Employee Benefits Law. 3 Units.

Employee benefits law focuses on the various forms of benefits and compensation employers provide to their employees: cash and equity compensation, retirement plans, and health and welfare benefits. The field lies at the intersection of a number of different legal disciplines, including employment and labor law, tax, health care law and even corporate and securities law. As such it is a uniquely challenging field of law, one which offers insight into many of the major issues our society currently faces: fears about the adequacy of retirement savings, struggles over the new health care law, and attempts to rein in outside executive compensation arrangements. Elements used in grading: Class participation, attendance and final paper. Writing (W) credit is for 3Ls only.

LAW 278. The Article III Judge. 2 Units.

The contemporary debate over the proper role of a federal judge under the Constitution turns, in large measure, on what it is we think an Article III judge is doing when she is called upon to resolve a "case or controversy." Is she looking for the fair result? If so, by whose lights? Is she a political actor, or is she instead looking for a rule of decision that has been previously established by law (a "mere translator" of the law, in Justice Frankfurter's words). If so, by natural law or positive law? These are some of the questions we will consider in discussing what role a federal judge plays when she exercises "the judicial Power of the United States" conferred by Article III of the Constitution. Readings will include books and articles by some of the leading legal thinkers in the nation's history. Special Instructions: This class will meet the first three weeks of the quarter only. Elements used in grading: Class attendance and participation, reading the assigned material, and a 10-15 page paper that uses the readings to analyze a significant judicial opinion. Special Instructions: This class will meet the first three weeks of the quarter only.

LAW 279. Advanced Organizations and Transactions Clinic. 2-7 Units.

Advanced clinic allows students who have taken the Organizations & Transactions Clinic to work on ongoing projects. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical credits during their law school career. Students must have taken Organizations & Transactions Clinic (Law 272). Writing (W) credit is for 3Ls only. Elements used in grading: Written assignments and client interactions.

LAW 280. Toxic Harms. 2 Units.

This seminar will examine the concerns arising from exposure to toxic substances from a variety of perspectives. A principal focus will be tort liability, and a central theme in the course will be whether tort law is an effective method of compensating victims of toxic exposure and controlling the distribution and/or emission of toxic substances. In order to assess the efficacy of tort, it is essential to compare the liability system with alternatives such as restructured "public law" litigation, administrative compensation schemes, and regulatory control strategies. Moreover, it seems equally important that these options be grounded in a concrete understanding of the major current problem areas. To accomplish these aims, the course will focus on a number of specific present concerns, including tobacco, asbestos, anti-inflammatory drugs, and workplace emissions exposures. In each instance, we will look at the nature of the public health problem as well as ensuing tort litigation and regulatory activity. In addition to examining these distinctive problem areas, we will look at broader, cross-cutting institutional reform proposals that have received recent attention. Students in Section (01) will write three ten-page writing exercises on topics discussed in class. After the term begins, students accepted into the course can transfer from section (01) into section (02), and have the option to write a final independent research paper for Research credit, with instructor consent. Elements used in grading: Three ten-page writing exercises or final independent research paper. Early drop deadline.

LAW 281. Natural Resources Law and Policy. 3 Units.

Natural resource management presents extremely difficult and contentious issues of law and public policy. Major debates continue to rage over issues such as the Endangered Species Act, whether the United States should permit drilling in the Arctic National Wildlife Refuge, and how to prevent the overfishing of the oceans. This course will focus on two major aspects of natural-resource management: biodiversity protection (including the Endangered Species Act, ocean fisheries management, and global protection of marine mammals) and public lands in the United States such as national parks and wilderness areas. The course also will examine the National Environmental Protection Act and the effectiveness of environmental impact assessments. Class sessions will include critical examinations of current law and policy and in-depth discussions of situational case studies that force you to consider how you would resolve real-life issues. Students will be expected to participate actively in class discussions. (This course will not examine either water law or energy law in any depth. Water Law will be offered again in the 2015-2016 academic year. Several other courses in the Law School deal with energy-law questions.) Elements used in grading: Class participation and final exam (open book).

LAW 283. Federal Courts. 4 Units.

This course addresses the role of the federal courts in the American system of federalism and separation of powers, as well as their role in the development of substantive federal law and constitutional rights. A central premise of the course is that the institutional, political, and constitutional features of federal court litigation cannot be understood without engaging the historical context, especially the social, political, and legal movements, in response to which the federal courts have developed. Thus while many of the traditional aspects of federal court jurisprudence will be covered (e.g., federal common law including implied rights of action, justiciability doctrines and other doctrines of restraint, congressional power to limit the jurisdiction of the federal courts and to create "legislative courts" outside of Article III, Supreme Court review of judgments, state sovereign immunity, litigating against the government, and federal habeas corpus), doctrine will be placed alongside interdisciplinary readings on social, political, and theoretical accounts that reveal how the courts and ordinary Americans have come to understand the distinctive role of the federal courts, as well as claims for expansion or contraction of their powers. The course is strongly recommended for students interested in pursuing a career in litigation and/or judicial clerkships in the federal courts. Elements used in grading: Class attendance, class participation, take home exam and short paper.

LAW 285. International Trade Regulation. 3 Units.

This course will survey the law and policy of the WTO system and related legal regimes. Topics will include the relationship between international and domestic law, the WTO dispute resolution system, legal restrictions on border instruments, nondiscrimination obligations in international trade, preferential trading agreements such as NAFTA, the perceived tension between WTO obligations and domestic environmental/health/safety regulations, subsidies in international trade, antidumping law, trade in services, and investor rights under trade agreements. Elements used in grading: Class participation and final exam.

LAW 287. Advanced Juelsgaard Intellectual Property and Innovation Clinic. 2-7 Units.

Advanced clinic allows students who have taken the Advanced Juelsgaard Intellectual Property and Innovation Clinic to continue working on cases. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical credits during their law school career.

LAW 290. Evidence. 5 Units.

Evidence rules constrain proof at criminal and civil trials. We will study the Federal Rules of Evidence, related case law, and those constitutional concepts that limit proof at criminal trials. Topics include relevance, unfair prejudice, character evidence, impeachment, the rape shield law, hearsay, and the Confrontation and Compulsory Process Clauses. Please note that the California Bar Examiners have posted this announcement: "Applicants should be prepared to answer questions that have issues concerning the Federal Rules of Evidence and the California Evidence Code. Applicants should be prepared to compare and contrast the differences between the Federal Rules and the California Evidence Code, especially where the California rules of evidence have no specific counterparts in the Federal Rules." This evidence course covers only the Federal Rules of Evidence and does not address the California Evidence Code. Although similar principles of law govern the Federal Rules and California Code, the two sets of rules are not identical. Students preparing for the California Bar Exam will have to learn some new material. Special Instructions: Add-drop decisions need to be resolved by the end of the first week of instruction; no drops will be permitted thereafter. Elements used in grading: Final exam (one-half essay and one-half multiple choice).

LAW 291. Advanced Evidence. 3 Units.

Public interest lawyers often spend much of their time in the courtroom. Yet, prosecution, defender, and legal aid offices usually do not have the resources to train their lawyers in trial work. This course seeks to help remedy this deficiency by helping students who plan to do public interest work develop witness interrogation skills. Students will apply their theoretical grasp of evidence to concrete trial problems involving the direct and cross examination of lay and expert witnesses, the introduction of documentary evidence, and the use of illustrative evidence in California and federal courts. The goal is to train students in the art of examining friendly and hostile witness and in the use of documentary and illustrative evidence. The text will be Meacute;ndez, Evidence: The California Code and the Federal Rules -- A Problem Approach (West 5th ed. 2012) and additional course materials. Special Instructions: The course will be limited to 6 students who will be selected by the professor. Credit is contingent on attending all classes and participating in all exercises. Participation is crucial to the success of the course, as students will be working in teams of three. Do not take this course unless you are willing and able to participate fully and can accept criticism. Evidence (Law 290) is a prerequisite. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline. Elements used in grading: Attendance and class participation.

LAW 292. Estate Planning. 3 Units.

This class will cover the basics of the gift and estate tax system and estate planning principles. With these fundamentals, the course will then examine basic and advanced estate planning and wealth transfer techniques, including wills, various types of trusts, titling property, gifts during lifetime, charitable vehicles, handling closely held businesses and valuation matters--with an emphasis on how to use these tools in planning an estate to meet the objectives of a couple or individual. Probate of an estate, durable power of attorneys, conservatorships, and planning for other life situations will be explored. Elements used in grading: Class participation (is a small factor and only in the positive direction) and final exam. This course is open to GSB and graduate students with consent of the instructor.

LAW 293. Family Law. 3 Units.

If there were no legal institution called marriage, would we want to create one? In the context of people's intimate relationships, when and how does the law facilitate and reinforce people's preferences/choices, and when does and should it restrict them? What are (and should be) the sources of legally enforceable obligations between intimates or family members? How does and should the law take account of children, who cannot fend for themselves? This course will consider these questions and more. Elements used in grading: Exam, with minor adjustments for class participation.

LAW 297. Entertainment Law. 3 Units.

Entertainment law is not, in and of itself, a separate legal discipline. Instead, the practice of entertainment law lies at the intersection of various traditional legal disciplines, such as contract, tort, copyright, trademark, antitrust, secured transactions, etc., and applies those disciplines to a unique business setting. This course is intended to approach the study of entertainment law from a practical perspective, applying the principles of traditional legal disciplines to avoid problems and find solutions in various facets of the entertainment industry. To accomplish the necessary background, we will study the entertainment industry from both a macro level (i.e., the organization of the motion picture, television and music business, including the function of studios, producers, networks, record companies, agencies, managers, lawyers and labor unions) and a micro level (i.e., examining actual agreements in order to understand the principal components of motion picture talent, production and distribution contracts, television series contracts, music and book publishing contracts). We will also examine key litigation issues that affect the industry, such as the interaction of the First Amendment and the right of publicity, the right of privacy and libel, the anti-SLAPP laws, the "final cut" and profit participation cases. The impact of the digital media (including the internet) will, of course, be analyzed, along with the future of the entertainment industry, including convergence, holograms, syntho-thespians and the like. We plan to include guest speakers from the entertainment industry so that this class will embody both business and legal considerations. The overall goals of this course are (1) to expose students to the unique and increasingly complex structure of the entertainment business; (2) to foster an understanding of the role the law and entertainment lawyers play in that unique business structure; (3) to strengthen students' ability to draft key documents and craft persuasive legal arguments to accomplish the goals they may seek to achieve as lawyers in the entertainment industry; and (4) to develop the analytical and problem-solving skills necessary to make them into effective entertainment lawyers. Elements used in grading: Class participation, brief writing exercises, team contract negotiation and drafting projects. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 299. Derivatives. 2 Units.

The course will examine the legal, regulatory, trading and risk management aspects of the \$600 trillion notional over-the-counter and exchange traded derivatives markets. Derivatives are not well-understood by regulators or the public, and have been blamed for causing or contributing to the economic crisis. This course will offer students the opportunity to understand how various derivative products are designed, traded and risk-managed and what role regulators play in the derivatives industry. In addition, students will focus on understanding key legal contracts that underpin the global derivatives industry, in particular focusing on the ISDAcopy; Master Agreement and Credit Support Annex, as well as documentation supporting credit derivatives. Students will also consider the shifting regulatory landscape for financial institutions and hedge funds as it relates to the way in which these products are traded, with rates and credit products migrating to clearinghouses, as well as how conduct of business rules and disclosures may shift. The course will conclude with an examination of the economic crisis that erupted with Lehman Brothers' bankruptcy in September 2008 and the consequent policy reactions to that event from a derivatives and bankruptcy perspective. Elements used in grading: Attendance, written assignments and final exam.

LAW 300. Securities Litigation. 4 Units.

Securities litigation is a multi-billion dollar enterprise that addresses a complex web of legal, economic, and public policy questions that often have international implications. The course focuses on "big-ticket" class actions associated with potential SEC enforcement proceedings, criminal exposure, and foreign liability. The BP oil spill, GM ignition recall, Enron fraud, and Foreign Corrupt Practices Act cases serve as touch points for analysis. In addition to teaching substantive skills useful for success as a litigator or transaction attorney, the course addresses a range of public policy questions, including optimal damage rules, whether entities or individuals should be held responsible for corporate wrongdoing, and the operation, consequences, and enforcement of anti-corruption regimes. Elements used in grading: Final Exam.

LAW 301. Labor Law. 3 Units.

This course will consider the fundamental legal principles affecting collective labor relations in the private sector workplace, with particular attention to the National Labor Relations Act. Students will consider the strategies adopted by labor groups, employers, and legal actors in response to evolving economic and social conditions. The course will emphasize union organizing, the collective bargaining process, and related topics, including the scope of statutory coverage, interference with union rights, elections, negotiations, strikes, picketing, secondary boycotts, arbitration, and individual employee rights in the labor-management context. There is no prerequisite for the course. Special Instructions: Regular, punctual attendance is required. If you expect (or are unexpectedly forced) to miss more than two classes, please consult with the instructor as soon as possible, as exceptions will be considered on a case-by-case basis. Early Add/Drop Deadline: Add/Drop decisions must be made the first week of class. Exceptions are at the instructor's discretion and will be considered on a case-by-case basis. Elements used in grading: Final Exam.

LAW 302. Advanced Topics in Federalism. 2-3 Units.

This seminar will deal with a variety of legal issues arising out of our federal system. The goal is to go beyond well-worn debates about Congress's enumerated powers and look at a series of more intricate legal problems. The first part of the course will examine several discrete issues about the relationship of states to federal institutions, such as whether states have any reserved rights under the Tenth Amendment, and what relationship states have to federal courts. The second part of the course will look at "horizontal" federalism--i.e., relations between the states themselves. The final part of the course will reflect on the bigger picture--what purposes, if any, is federalism supposed to serve, and which of these doctrines, if any, serve them well?.

LAW 304. Law and the Rhetorical Tradition. 3 Units.

In this interdisciplinary seminar we will explore the rhetorical underpinnings of legal argument. In the first half of the course, we will acquaint ourselves with relevant elements of the rhetorical tradition. In the second half, we will analyze a variety of legal texts (both written and oral) with an eye to the use and function of rhetorical principles, as well as the ways form and content are mutually constitutive. This course aims both to increase students' understanding of rhetoric as readers and interpreters of legal texts and to develop students' skills as writers and speakers. Students will be expected to participate in class discussion in addition to completing a series of writing assignments including the rhetorical analysis of legal and non-legal texts and the revision of students' legal writing. Special Instructions: This course can satisfy either the Writing "W" or Research "R" requirement. The instructor and the student must agree whether the student will receive "W" or "R" credit. For "R" credit, the paper is substantial and is based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, assignments, final paper. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 307. Gender, Law, and Public Policy. 3 Units.

Topics in this course will include equal protection standards, employment, family, reproductive rights, sexual harassment, rape, domestic violence, pornography, sexual orientation, diversity in the profession, feminist legal theory, international human rights, and intersections with race, ethnicity, class, and sexual orientation. Materials will include cases, commentary, problems, and media portrayals. Special Instructions: Course requirements will include class participation and a presentation and either (1) a long paper, which will satisfy the research requirement or (2) short weekly reflection papers on the assigned readings, and a short final research paper, which will satisfy the writing requirement. Students writing reflection papers will form teams and each member will be responsible for writing comments on one classmate's paper each week. There will be no final examination. A maximum of 10 students will be permitted to write the long paper for R credit. All students interested in R credit should pre-register by lottery for Law 307-0-02. Students who do not receive a spot in section 02 may enroll in section 01. Writing (W) credit is for 3Ls only. Open to students from other schools with the consent of the instructor. To apply for this course, non-Law students must complete a Non-Law Student Course Add Request Form available on the SLS Registrar's Office website (see Stanford Non-Law Student Course Registration). Elements used in grading: Class participation, attendance, written assignments, final paper, short reflection papers and class presentation.

LAW 310. Protecting Workers' Rights in Hard Times. 2-3 Units.

Workplace law is at a difficult crossroads. With high unemployment, violations of labor laws widespread, and unionization at an all-time low, promoting workers' rights poses unprecedented challenges. This seminar will explore, in turn, a variety of pressing issues confronting worker advocates and policymakers. Through analysis of academic and non-academic readings, and candid conversations with attorneys and officials in the trenches, we will evaluate the contours of each problem and consider a variety of solutions that have been attempted or proposed. We will consider statutory and common-law reforms, as well as the quality of enforcement, new regulatory approaches, and private/nonprofit-sector initiatives. Among the topics to be explored are the impact of outsourcing; of employment relationships through outsourcing, franchising, reliance on independent contractors, and the like; the prevalence of wage theft; the difficulties of redressing more subtle forms of workplace discrimination; the decline of private-sector unionization and the attack on public-sector unions; the precarious legal status of undocumented workers; the regulatory challenges involved in protecting workers' safety and health; and the proliferating contractual bans on workers' ability to pursue class actions and court adjudication. The course format will combine lecture, group discussions and guest presentations. Although there are no formal prerequisites, prior experience and/or coursework in at least one workplace-related field such as employment law, employment discrimination law, or labor law is recommended.

LAW 311. Comparative Law. 2 Units.

The big question in comparative law today—and one that is of key importance to anyone interested in international law—is whether we are currently witnessing a convergence of national legal systems. This course examines this question, as well as the related problem of American exceptionalism, by exploring key aspects of contemporary Western European legal systems. We will study a range of legal institutions and practices, including such topics as legal education, the role of judges and judging, the function and meaning of codes versus precedent, constitutional courts, judicial review, and criminal procedure and punishment. In contrast to the traditional comparative law course, we will also devote substantial time to such pressing public-law questions as racial equality and affirmative action, gender equality and sexual harassment, church and state, and the relationship between European institutions, on the one hand, and national legal systems, on the other. Elements used in grading: Class participation and exam.

LAW 312. Criminal Procedure: Investigation. 4 Units.

The law school offers two survey courses dealing with constitutional criminal procedure. "Criminal Adjudication" covers the formal pretrial and trial processes, including the right of counsel, prosecutorial charging criteria, grand juries, bail, speedy trial, discovery, plea bargaining, trial by jury, and double jeopardy. This course, "Criminal Investigation," covers police investigation in the form of searches and seizures, interrogations, lineups, and undercover operations, and hence examines the Fourth, Fifth, and Sixth Amendment rules regulating the police in these endeavors. It also incorporates some of the new statutory law of investigation under the USA Patriot Act and other laws relating to national security. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Class participation, Final exam (In-school, open book).

LAW 315. Criminal Procedure: Adjudication. 4 Units.

The Law School offers two survey courses dealing with constitutional criminal procedure. "Criminal Investigation" will consider questions that arise under the fourth, fifth, and sixth amendments regarding investigations, interrogations, and charging decisions. This course, "Criminal Adjudication," will look at the way the judicial system handles criminal cases. Topics will include the right to counsel (and the concomitant right to "effective assistance" of counsel), prosecutorial discretion and plea bargaining, joinder and severance, discovery, the right to jury trial, double jeopardy, sentencing, and appellate review. Students may take both Criminal Investigation and Criminal Adjudication. (There is, of course, no requirement to do so.) Elements used in grading: Attendance, participation and final exam.

LAW 317. The Criminal Trial Jury. 3 Units.

This seminar, which is taught by a local state court judge, examines the criminal trial jury from both a practical and theoretical perspective. The course will consider the history of the criminal jury trial, legal and strategic considerations in jury selection, jurors' ability to act as fact-finders, rules protecting jury deliberations, the consequences of juror misconduct, and the practical importance of plea bargains as an alternative to jury trials. Students will observe portions of actual jury trials occurring at the Palo Alto Superior Court courthouse. They will also examine legal decisions, theoretical critiques, and empirical research about the jury. Class discussion will consider the practical challenges for lawyers and judges posed by jury trials. The course will culminate in a discussion of potential reforms to the jury system, with each student proposing a reform based on his or her in-person observations and review of the relevant literature. This course will combine a 2 hour seminar with a mandatory 1 hour per week "practicum" involving time spent at court. Elements used in grading: Class participation and a final research paper.

LAW 318. History of American Law. 3 Units.

This course examines the growth and development of American legal institutions with particular attention to crime and punishment, slavery, and race relations, the role of law in developing the economy, and the place of lawyers in American society, from colonial times to the present. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or paper. Automatic grading penalty waived for writers. Cross-listed with History (HISTORY 152 - Consent of instructor required) & (HISTORY 352B).

LAW 319. Legislation. 3 Units.

Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation and final exam. (Cross-listed with PUBLPOL 319).

LAW 321. Patent Prosecution. 2 Units.

The course follows the patent application process through the important stages: inventor interviews, patentability analysis, drafting claims, drafting a specification, filing a patent application, and responding to an office action. The subject matter and practical instruction relevant to each stage will be addressed in the context of current rules and case law. The course will include four written assignments: an invention capture, a claim set, a full patent application, and an Office Action response. Pre-requisites: IP: Patents (Law326), Intro to IP (Law 409) or Patent Law and Strategy for Innovators and Entrepreneurs (ME 208). Elements used in grading: Class participation and four written assignments. Cross-listed with Mechanical Engineering (ME 238).

LAW 322. Patent Litigation Workshop. 3 Units.

This course simulates the strategy and pretrial preparation of a patent lawsuit. The course materials include information typical to a patent lawsuit: a patent, file history, prior art, and information regarding the accused product. Students will represent either the patentee or the accused infringer. Students will plan litigation strategy, meet with and advise a client, conduct written discovery, take and defend depositions, and brief and argue claim construction and motions for summary judgment. Some knowledge of patent law is presumed. Special Instructions: IP: Patents (Law 326) is a prerequisite for this course, but can be taken coterminously. Students must attend the first class session (or contact the instructor) or they will be dropped from the class or waitlist. Elements used in grading: Attendance, participation, writing assignments, exercises and oral arguments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 323. Cross-Border Mergers and Acquisitions. 3 Units.

The course will explore the complexities of cross-border mergers and acquisitions, with a particular focus on transatlantic and other international public M&A transactions. The subject-matter provides an opportunity to tie together different bodies of law relevant to M&A (corporate, contracts, securities, antitrust and other regulatory fields) and to confront the US, European, and emerging markets legal, business, and cultural environments in a deal-oriented context, including case studies of major transactions. We will go over the business and legal framework of cross-border M&A, deal-making strategies, transaction structures and key deal considerations, and explore the content of cross-border M&A agreements. Regulatory matters, deal risk management and hostile takeovers will also be addressed, as well as the broader policy and cross-cultural considerations underlying global M&A practice. International guest speakers will be invited to share their experience. The course will aim to provide students with a broad understanding of the legal and business aspects of major cross-border M&A transactions. This is an interactive, primarily practice-oriented course requiring active student participation. Special Instructions: Corporations recommended but not required. This course is open to GSB students with permission of the instructor. Elements used in grading: Class participation, oral presentations, contractual practice exercise, and final exam.

LAW 324. Intellectual Property: Copyright. 3 Units.

Copyright crosses many corners of law practice today - not only litigation and licensing, but corporate due diligence, tax, trusts and estates, labor, and general business counselling. This course examines all aspects of copyright doctrine, as well as the business and policy challenges and opportunities that the Internet and other new technologies present for the exploitation of copyrighted works. There are no prerequisites for this class. Elements used in grading: Final Exam (In-School, open book).

LAW 325. The Role of the Modern General Counsel. 2 Units.

(Same as GSBGEN 544) The news is filled with reports of one corporate crisis after another - names like BP, Goldman Sachs, Bank of America, AIG, Siemens, Toyota, and issues like backdating, bribery, antitrust violations, insider trading, procurement fraud, health and safety violations, consumer class actions and the like. And often the cry is heard - where are the lawyers? This course explores the evolution of the role of the general counsel in major American public companies and, more broadly, the expanding role of in-house counsel. These are the lawyers in the trenches, on the front lines of American businesses. Each week, we'll review another dimension of the general counsel's job. We'll consider how general counsel today play an important role on the executive team of major companies and explore the different ways in which general counsels manage large corporate legal departments and direct functional legal areas like litigation, IP, corporate and securities, M&A, environmental and employment law. We will also examine the professional responsibilities and legal obligations of the general counsel -- including the delicate and sometimes conflicting reporting relationships to the CEO and the board of directors -- and consider how an in-house legal department fits into a corporation's organizational structure and how it supports the company's operating units on a day-to-day basis. We will explore the general counsel's role in internal investigations, regulatory investigations and compliance programs, and governmental affairs. We will also consider current practices in how in-house lawyers select, collaborate with and evaluate outside counsel. The class will meet weekly and we will invite current and former general counsels to join us occasionally for our discussions. Each student will be expected to participate actively in class discussions, and will be required to complete two projects, each in collaboration with three other students and submitted as a team, presenting how the team would address a complex set of legal and business issues.

LAW 326. Intellectual Property: Patents. 3 Units.

In this course we cover the major aspects of patent law, primarily as applied in the United States: patentability, including novelty, nonobviousness, and enablement; infringement; and remedies. The emphasis is on essential legal principles and a policy analysis of the patent system. The course is designed to be useful both as solid background for non-patent-specialists and for those planning a career in the field. Introduction to Intellectual Property or consent of the instructor is a prerequisite for this course. No technical background is required. Elements used in grading: Class participation and final exam.

LAW 327. Introduction to Organizational Behavior. 3 Units.

Why are some organizations more successful than others? Is it their emphasis on innovation and risk taking? Their founders' eccentric and visionary personalities? Or perhaps their bureaucratic discipline and effectiveness? We will explore these questions by reviewing existing theory and research on organizational problems in a number of areas including: individual motivation and behavior; decision making and leadership; interpersonal and intergroup communication, influence and conflict; organizational culture; and inter-organizational competition and cooperation. The course focuses on the reasons for organizational founding and failure, the variety of organizational forms and the ways in which organizations and their members affect one another. You will participate in a number of group exercises to illustrate the theoretical and practical implications of addressing organizational problems and increasing overall performance. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 328. Intellectual Property: Advanced Patents. 3 Units.

This is an advanced seminar, open only to those who have taken patent law. We will discuss current cases, as well as some issues not covered in the basic class. We will also focus on current efforts to reform the patent system. Students will write and present a research paper on a patent law topic.

LAW 329. Intellectual Property: International. 3 Units.

Music, motion pictures, even books travel instantaneously around the globe. So do patented inventions; so do brands and trademarks. Copyright and trademark licenses increasingly take foreign exploitation into account. Litigation over an important patented invention often proceeds on several foreign fronts. No lawyer practicing intellectual property law today can afford to overlook the substantive and procedural differences that separate one country's law from another's. This course will focus on the counseling considerations that surround the exploitation of intellectual properties in domestic and foreign markets through licensing, litigation, or both. The course will survey the principal legal systems and international treaty arrangements for copyright, patent, trademark and neighboring rights, as well as questions of jurisdiction, territoriality, national treatment and choice of law.

LAW 330. International Human Rights. 3 Units.

This course examines the law of international human rights, analyzing various categories of rights, from civil and political human rights, to social and economic human rights, to group and collective rights. It studies the structure and processes of international and regional courts that adjudicate human rights claims and international treaty bodies that report on State human rights action. It explores debates about the normative justifications for human rights, and whether and how these debates impact upon the application and enforcement of human rights. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation; exam or final long research paper.

LAW 331. Intellectual Property: Strategy for Technology Companies. 3 Units.

This course focuses on the actual day-to-day intellectual property issues faced by a technology-based company. Each class will cover a different aspect of an intellectual property practice, covering such topics as the establishment of a patent program, trade secret management, intellectual property licensing, the intellectual property issues arising during M&A transactions and strategic alliances, patent litigation, and managing open source software. The emphasis in each class will be on case studies, guest speakers, and interactive exercises designed to simulate scenarios commonly faced by an intellectual property attorney, including the negotiation of patent cross licenses, the drafting of intellectual property representations and warranties, the generation of intellectual property disclosure and licensing policies, and the identification and prioritization of patentable inventions. Prerequisite: Basic familiarity with patent law is strongly recommended for this course. If necessary, Intellectual Property: Patents can be taken concurrently. Elements used in grading: Class participation and written assignments.

LAW 333. Problem Solving and Decision Making for Public Policy and Social Change. 4 Units.

This course introduces skills and bodies of knowledge useful for careers in law, public policy, and achieving social change at scale. These include framing problems; designing, implementing, and evaluating strategies; systems design; cost-benefit analysis; decision making under uncertainty; heuristics and biases that affect empirical judgments and decision making; methods for influencing people's behavior ranging from incentives and penalties to "nudges;" and human-centered design. The course will be taught through problems, cases, and a field project to solve real-world problems on or near the Stanford campus, with the goal of integrating strategic thinking and behavioral insights with human-centered design and systems design. The course may be of interest to students in Law and Policy Lab practicums who wish to broaden their policy analysis skills. Enrollment: Limited to 30 students, with priority given to students in Law School, the MPP program, and the IPS program in that order. Elements used in grading: Class participation, midterm assignment, and final assignment. Cross-listed with International Policy Studies (IPS 207A) & Public Policy (PUBLPOL 305A).

LAW 334. International Criminal Law. 3 Units.

The roots of modern international criminal law can be traced to the Nuremberg and Tokyo war crimes trials held after World War II. Since the establishment by the Security Council of the United Nations established the International Criminal Tribunal for the former Yugoslavia twenty years ago, the field has experienced remarkable growth. The international community has created a range of new international criminal tribunals to investigate and prosecute international crimes. National courts are now also exercising an expanded domestic and universal criminal jurisdiction over international or transnational crimes. The substantive criminal law has also expanded, and notions of individual responsibility for international crimes have evolved and extend the reach of international criminal law. At the same time, new debates have emerged about the suitability of using criminal justice mechanisms to respond to mass atrocity situations. This course will explore legal and institutional responses to transnational and international crime. It will examine traditional forms of international cooperation to address transnational crimes and the concept of universal jurisdiction that provides a basis for treating certain crimes as "international." It will cover the range of institutions created to punish international criminals, including the Nuremberg and Tokyo tribunals, the ad hoc tribunals for the former Yugoslavia and Rwanda, the "mixed" international/domestic tribunals such as the Special Court for Sierra Leone, the Cambodia war crimes tribunal, the Special Tribunal for Lebanon. As these tribunals approach the end of their mandates, the International Criminal Court is assuming greater importance. The progress of the ICC will be considered and, so too, the role of the United States in all of these developments. Alternative institutional arrangements and options for responding to international crimes, such as truth commissions and amnesties will also be examined. The course will also include: (1) the moral and political goals that motivate responses to international crimes; (2) the role of international politics and foreign policy considerations in shaping responses to international crimes; (3) the suitability of different institutional models for addressing international crimes. The grade for this course will be based on a final research paper of 26 pages, double spaced. The topic should relate to a subject covered directly or indirectly by the syllabus or readings. Elements used in grading: Class participation and final paper.

LAW 335. Legal Ethics. 3 Units.

A survey of the major legal and ethical issues presented in the practice of law. We will examine the concept of the lawyer endorsed by the rules of professional responsibility and assess the relationship between this concept and the personal, political, and economic constraints of law practice. To this end, emphasis will be given to the rules of professional responsibility and their elaboration in case law, but we will study modern practice from a range of interdisciplinary perspectives throughout the course. These include the philosophy of law, the history and sociology of the American legal profession, the philosophy of role morality, and theories of professional identity. Elements used in grading: Attendance, class participation, short papers and final exam.

LAW 336. Real Estate Transactions. 3 Units.

Real Estate Transactions will have a "real world" focus, helping students apply some of the substantive concepts covered in the first-year property course to actual commercial property transactions involving the transfer, leasing and financing of real property interests. Among the topics covered will be preparing the letter of intent, preparing and negotiating the purchase and sale contract, examining title and survey issues, reviewing leases, negotiating finance documents, and closing the transaction. The course will also explore various negotiation strategies. Emphasis will be on California law, with some discussion of how the laws of other states may affect how a transaction is structured. Tangential issues that may be covered include selecting the appropriate entity to be used in various real estate transactions, the role of the attorney v. the role of the businessperson on a transaction, and what actions should be taken when something goes wrong on a real estate transaction, including a discussion of applicable remedies. The course will be taught through a combination of lectures, reading assignments and drafting exercises. Time and size of class permitting, there may also be some practice negotiation exercises.

LAW 337. Intellectual Property: Trademark and Unfair Competition Law. 3 Units.

This course will consider the protection and enforcement of trademarks and related state rights in brands and names, including the right of publicity. There is no prerequisite, though some students will have taken Introduction to Intellectual Property. Elements used in grading: Class Participation, Exam (Open-book take-home).

LAW 338. Land Use. 3 Units.

This course focuses on the pragmatic (rather than theoretical) aspects of contemporary land use law and policy, including: nuisance as a land use tool and foundation for modern land use law; use and abuse of the "police power" (the legal basis for land use control); zoning flexibility; vested property rights, development agreements, and takings; redevelopment; growth control; and direct democracy. We explore how land use decisions affect environmental quality and how land use decision-making addresses environmental impacts. Special Instructions: All graduate students from other departments are encouraged to enroll, and no pre-requisites apply. Student participation is essential. Roughly two-thirds of the class time will involve a combination of lecture and classroom discussion. The remaining time will engage students in case studies based on actual land use issues and disputes. Elements used in grading: Attendance, class participation, writing assignments, and final exam. This course is cross-listed with Earth Systems 238.

LAW 339. Employment Law. 3 Units.

Workplace issues have become one of the fastest-growing areas of state and federal law. Employment-related lawsuits filed in federal court have tripled in volume in the past decade, and now account for a tenth of all civil cases. Many state courts have experienced a similar burgeoning of their employment law caseloads. This course examines this diverse, rewarding, and rapidly evolving area of legal practice by considering the diverse array of laws and institutions that regulate the employment relationship. The focus of the course is on laws that affect employees in non-unionized settings, such as protections against dismissal without cause, wage and hour restrictions, workplace privacy, covenants not to compete, the Family and Medical Leave Act, and mandatory arbitration of employment disputes. The course does not cover either Employment Discrimination or Labor Law, both of which are offered as separate courses. Special Instructions: Regular, punctual attendance is required. If you expect (or are unexpectedly forced) to miss more than two classes, please consult with the instructor as soon as possible, as exceptions will be considered on a case-by-case basis. Early Add/Drop Deadline: Add/Drop decisions must be made the first week of class. Exceptions are at the instructor's discretion and will be considered on a case-by-case basis. Elements used in grading: Final Exam.

LAW 340. Comparative Corporate Capitalism. 2 Units.

Forms of corporate ownership and control vary widely from one country to another. The type of corporate capitalism based on widely distributed share ownership that is found in the United States, and that is the usual subject of law school corporate law and corporate governance courses, is in fact an outlier. For example, in most countries public corporations have a controlling shareholder. In this seminar we'll examine the organization of enterprise in a range of both developed and developing countries to the end of understanding their variety, including the influence of a country's political governance. As part of this exercise, we'll look at the ways in which organizations and organizational law have evolved in different countries, and we'll speculate on the directions in which they'll continue to evolve in the future. Finally, we'll address the relationship between forms of capitalism and economic development. Students will do a series of short weekly papers on the readings. Elements used in grading: Series of short weekly papers.

LAW 343. Intellectual Property: Scientific Evidence in Patent Litigation. 3 Units.

(Same as GENE 243). This seminar will explore the role of scientific experts in patent infringement litigation. The class will have a mix of law students and doctoral candidates from the sciences and engineering. The law students must have some familiarity with United States patent law from classes or work experience. The graduate students must have completed their required coursework and have TGR status. In other areas of the law where scientific experts are used -- medical malpractice, environmental law, criminal law -- the science itself is often in dispute. In patent cases, however, the parties generally agree on the science. This affects the relationship between the lawyer and the expert and the substantive content of their interactions. Patent experts need to be able to explain science to the judge and jury, of course. But they also must help the litigators to choose which legal issues to press and which to concede, and to be aware of how the complications of the science might help, hurt, obscure or reveal how the law should be applied to the facts. Thus, both the lawyer and the scientist must educate the other about their specialties. For the first several weeks, the class will examine judicial decisions and trial documents involving scientific evidence in patent litigation. The rest of the quarter is largely devoted to work on the final projects: simulations of expert testimony in a patent case. Students will work together in teams and will meet regularly with the instructor in order to: select suitable patents; identify a balanced issue on either validity or infringement; prepare claim charts and materials for testimony; and give short, illustrated talks to inform their classmates about their projects. Finally, they will choose sides (patent owner or accused infringer) and finetune their presentations. The simulations will be performed at the end of the quarter before panels of practicing patent lawyers.

LAW 344. Law and Economics Seminar II. 2-3 Units.

This seminar will examine current research by lawyers and economists on a variety of topics in law and economics. Several sessions of the seminar will consist of an invited speaker, usually from another university, who will discuss his or her current research. Representative of these sessions have been discussions of compensation for government regulations and takings, liability rules for controlling accidents, the definition of markets in antitrust analysis, the role of the government as a controlling shareholder, and optimal drug patent length. Special Instructions: Students may enroll in this seminar for either W or R credit. You may write a series of short commentaries on the guest speakers' papers, of which there will be four. This will satisfy the Law School's Writing requirement. Students electing this option will be graded on a Mandatory Pass/Restricted Credit/Fail basis and receive 2 units of credit. Alternatively, you may write a single research paper on a law and economics topic of your choice. This will satisfy the Law School's Research requirement. These papers will be graded on an Honors/Pass/Restricted Credit/Fail basis. (You may write a single longer paper for two quarters if you enroll in the Seminar in the Autumn as well.) Students taking the seminar for R credit can take the seminar for either 2 or 3 units of credit, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. There is no formal economics prerequisite to take this seminar, though students doing the longer research papers typically have some prior training in economics. Students may take both Law and Economics Seminar I and Law and Economics Seminar II in either order (neither is a prerequisite for the other). CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Four commentaries or one research paper. Writing (W) credit is for students entering prior to Autumn 2012. Cross-listed with Economics (ECON 354).

LAW 345. Law and Culture in American Fiction. 3 Units.

This seminar examines the way literary texts register changes in property law, the law of contracts, intellectual property and legal constructions of race, gender, and privacy, especially as they relate to the maintenance of personal identity, community stability, and linguistic meaning. The terms and stakes of these relationships will inform our readings of the texts themselves, as well as our understanding of their representations of law. The writers whose work we will consider include James Fenimore Cooper, Herman Melville, Henry James, Nella Larsen, Willa Cather, William Faulkner, and Sherman Alexie. Each week, a novel or story will be paired with relevant legal and historical readings. We will also consider the points of contact between literary narrative and narrative in law. English Department cognate course. Special instructions: Course requirements include class attendance and participation, three short response papers, and two longer papers. For Research "R" credit, students may petition to complete one long paper based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, written assignments and final paper. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 347. Law and Culture in American Film. 3 Units.

In this course we will attend to representations of law in 20th century American film - particularly Westerns, gangster films, and courtroom dramas. The themes we will address include: the asymmetry of law and justice, the relationship between law and social change, the public and private identities of lawyers, anxiety that the rule of law fails individuals and minorities, and the disciplinary modes of both law and culture. We will also attend to the convergence of narrative, visual, aural, and dramatic practices in legal proceedings and cinematic productions. Special instructions: Course requirements include class attendance and participation, three short response papers, and two longer papers. For Research "R" credit, students must complete one long paper based on independent research. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, assignments, final paper. Automatic grading penalty waived for writers. This course is open to first year Law School students. Writing (W) credit is for 3Ls only.

LAW 348. Health Law: Finance and Insurance. 3 Units.

This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at <https://syllabus.stanford.edu>. Elements used in grading: Participation, attendance, class presentation, and final exam. Cross-listed with Health Research & Policy (HRP 391) & Public Policy (PUBLPOL 231).

LAW 349. Employment Discrimination. 3 Units.

This course will examine legal responses to the barriers to workplace equality that are faced by minority groups. The course will survey the relevant doctrine, focusing primarily on federal employment discrimination statutes, but also addressing more expansive antidiscrimination protections under some state statutes, and local ordinances. Covered topics include sexual and racial harassment, sexual orientation discrimination, and affirmative interventions aimed at increasing the minority group and/or female representation in certain job categories or segments of the labor market. In addition to surveying the doctrine as it stands and as it has developed over time, we will also explore the doctrinal and conceptual difficulties inherent in identifying invidious discrimination and in devising appropriate remedies. Elements used in grading: Class participation and exam.

LAW 351. Corporate Income Taxation. 3 Units.

Overview of the fundamental tax rules and principles regarding the taxation of domestic corporate entities. Course will address choice of entity (C corporation, S corporation and non-corporate pass-through entities), capital structure and formation issues, corporate operations, including cash and property distributions and shareholder exit transactions. Approximately half of the course will be devoted to taxable and non-taxable acquisitions, dispositions and reorganizations, including planning and structuring strategies; a portion will address current tax policy considerations. The student's final grade will be based on a final exam, although class participation may improve a student's grade. Elements used in grading: Class Participation, Final Exam.

LAW 352. International Tax. 2 Units.

This course examines the United States federal income taxation of international operations and transactions, including international joint ventures and M&A transactions. Income source, foreign tax credits and Subpart F are important. International transfer pricing rules also will be addressed. Elements used in grading: Final Exam.

LAW 353. Corporate Acquisitions. 4 Units.

This course examines the corporate acquisitions from a transactional and financial perspective. It begins with a review of a corporate acquisition agreement, the document at the center of a friendly transaction. We then consider a variety of explanations for how corporate acquisitions may promise to create value, and think about why they often fail to meet that expectation. In doing so, we will review the basics of accounting for acquisitions and their tax treatment. From there we move on to the corporate law side of acquisitions - the different forms the transaction can take, the rules governing hostile transactions, freezeouts of minority shareholders, and proxy fights. Elements used in grading: Final exam.

LAW 355. Taxation I. 5 Units.

This class teaches the fundamentals of the federal income tax as applied to individuals. It considers what is taxed as income and what is deductible, timing issues, and the taxation of capital gains and losses. The class considers the politics of tax reform as well as fundamental tax policy issues. Elements Used in Grading: Final Exam.

LAW 358. Advanced Antitrust: Litigating an Antitrust Case. 3 Units.

We will examine in depth four pivotal antitrust cases: Polygram Holdings, Microsoft, Leegin and Oracle. We will study the record created in the lower courts and then analyze how the court came to the conclusions it did. Students will write an amicus brief and argue a motion for preliminary injunction or an appeal.

LAW 359. Tax Policy. 2 Units.

This course will explore various tax policy issues. In past years, the issues we've explored have included the carbon tax, health care, social security, consumption tax, tax compliance, tax shelters and school financing. Special Instructions: Grades will be based on either (A) class participation and memos responding to the discussion questions for any three of the sessions or (B) class participation and a research paper on a topic of your choosing (subject to instructor approval). Option A is Writing (W) credit and option B is Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, attendance and written assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 360. Advanced Empirical Methods. 3 Units.

This course will examine topics in the empirical evaluation of law and policy for those who have already been exposed to basic statistics and regression. The course will begin with a discussion of problems of causal inference that have plagued some traditional statistical approaches and then examine the virtues and limitations associated with some more advanced techniques, such as regression discontinuity analyses and instrumental variables estimation. The course is designed to move students towards a publishable empirical research project. Given the constraints of the quarter system, the product is more likely to end with a detailed project design rather than a fully implemented study. Successful completion of the course requires regular attendance, and: (1) Careful reading of the course assignments coupled with frequent one page written assignments on the reading; (2) A PowerPoint presentation to the class discussing a major paper; and (3) A detailed project design using one of the empirical approaches discussed in the class. Elements used in grading: Attendance, written assignments, class-room presentation and paper.

LAW 363. History of the Common Law in England and America. 3 Units.

The right to a trial by jury, the presumption of public access to criminal proceedings, and citizenship by birth rather than blood, all enshrined in the U.S. Constitution, ultimately derive from English common law. American private law-including contracts, torts, and property-is indebted to the same heritage. This course will examine the history and theory of the common law with the aim of demonstrating its continuing relevance. Three principal strands will run through the class. The first will trace the substantive and procedural evolution of the common law from its early English roots and writs to its role in the American legal system today. Another thread will emphasize conceptions of the common law, including both historical accounts derived from the writings of Sir Edward Coke, Matthew Hale, Jeremy Bentham, and Oliver Wendell Holmes, and more recent theoretical contributions by Guido Calabresi and Ronald Dworkin, among others. Finally, the course will examine certain central institutions of the common law, including the judge who follows precedent and the jury, and compare common law modes of adjudication with the alternative methods employed by the Chancellor in equity and judges in the civil law system. Source materials will include historical cases and documents as well as some secondary articles. Special Instructions: Grades will be based on class participation and (1) the final exam or (2) a long independent research paper for Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, assignments, final exam or final paper. This course is cross-listed with Hist 131B.

LAW 368. Law and Biosciences: Neuroscience. 3 Units.

(Same as HRP211) This seminar examines legal, social, and ethical issues arising from advances in the biosciences. This year it will focus exclusively on neuroscience. It will examine how neuroscience will affect the law, and society, through improvements in predicting illnesses and behaviors, in "reading minds" through neuroimaging, in understanding responsibility and consciousness, in "treating" criminal behavior, and in cognitive enhancement. Students who have taken the Law and the Biosciences seminar in past years may receive additional credit for taking this year's class.

LAW 372. Legal History Workshop. 2-3 Units.

The Legal History Workshop is designed as a forum in which faculty and students from both the Law School and the History Department can discuss some of the best work now being done in the field of legal history. Every other week, an invited speaker will present his or her current research for discussion. This year the theme of the Workshop will be Conservative Legal Movements from 1950 to the Present. Speakers will include Reva Siegel, the Nicholas deB. Katzenbach Professor of Law at Yale Law School, and Thomas Sugrue, the David Boies Professor of History and Sociology at the University of Pennsylvania, as well several other scholars of law, the social sciences and humanities writing about this topic. In the week prior to a given speaker's presentation, the class will meet as a group to discuss secondary literature relevant to understanding and critiquing the speaker's research. Students will then read the speaker's paper in advance of the following week's workshop presentation. Special Instructions: Students are required to write a brief response to each speaker's paper. There will be a total of four speakers, and thus four papers. Guidance will be provided concerning how to frame these response papers, which will be due every two weeks - i.e., on the day before speaker presents and students will receive "W" writing credit. Students taking the course to receive "R" research credit are required to write a research paper on a legal history topic that they choose (in consultation with the professor). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Enrollment will be limited to 30 students -- 20 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class participation, attendance, assignments and final paper. Writing (W) credit is for students entering prior to Autumn 2012. Cross-listed with History (HISTORY 307A).

LAW 373. Protection of Personality. 3 Units.

This course will examine the theoretical foundations and common law development of the range of tort remedies designed to afford protection to the interests in personality. Defamation, the right of privacy, and claims of emotional distress and harassment will receive particular attention, along with the constitutional defenses to these claims, based on the First Amendment, which have arisen since the mid-1960's. Elements used in grading: Final Exam.

LAW 377. Partnership Tax. 2 Units.

This course will cover the basic rules that govern the tax treatment of partnerships and partners. Prerequisites: Taxation I required; Corporate Income Taxation suggested but not required. Elements used in grading: Class Participation, Final Exam.

LAW 378. Banking Law. 3 Units.

This course will examine the legal and regulatory system governing financial institutions, with an emphasis on banks. It will do so by exploring the underlying economics of banking, and the ongoing effort to reform financial regulation. Questions addressed will include: Why do we regulate financial institutions? What dangers do we want to avoid? How well does the current regulatory system achieve what we want to achieve? What alternative approaches can be taken? What are the costs and benefits of the current system, and those of the alternatives? Elements used in grading: Class participation, attendance, final exam.

LAW 381. Wrongful Convictions: Causes, Preventions and Remedies. 3 Units.

Over the course of the past two decades there has been increasing recognition that, despite its commitment to the concept of proof beyond a reasonable doubt, our criminal justice system yields a steady stream of wrongful convictions. This Seminar will focus on some causes, preventions and potential remedies for this phenomenon. Subjects to be addressed include eyewitness identification, interrogations and confessions, jailhouse informant testimony, forensic evidence, the psychology of tunnel vision and confirmation bias, the role of appellate review and habeas corpus, the role of clemency, the impact of the problem on the death penalty, and issues around compensation of those who have been wrongly convicted. The class will meet for two hours each week. In addition, there will be three additional evening or weekend sessions (to be scheduled at the convenience of the participants). During each of these additional sessions, students will watch a film involving a wrongful conviction and will engage in conversation about the particular case involved. Each student will be responsible for preparing a paper on an appropriate topic to be chosen in consultation with the instructor. Consent Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Writing (W) credit is for students entering prior to Autumn 2012. Elements used in grading: Class participation; Paper.

LAW 386. Health Law and Policy: Public Health and Bioethics. 3 Units.

This course will focus on the physician/patient relationship, medical ethics, and public health law.

LAW 387. Internet Torts and Crimes. 2 Units.

The purpose of this course is to cover the highlights of torts and crimes on the Internet. Topics include cybercrimes (spam, fraud, cyberbullying), privacy, and First Amendment issues (defamation, threats, and indecent speech). The perspective will be from that of a practitioner faced with various fact patterns and known case law who has to advise his/her client on the best course of action. (Think stud poker as applied to the practice of law.).

LAW 388. Technological, Economic and Business Forces Transforming the Private Practice of Law. 2 Units.

The private commercial practice of law is undergoing fundamental change. Modern technological, economic and business forces are placing extreme pressure on the traditional private attorney law firm model. These forces will transform, eliminate or replace virtually every aspect of legal services provided by attorneys. Traditional foundations of the large law firm model such as "billable" hours, summer associate programs, large staffs (e.g., paralegals and secretaries) and high associate-to-partner ratios are becoming (or have already become) relics of a bygone era. Today, the business need for clients to select a one-stop, full-service law firm for their important legal work has, in a variety of circumstances, disappeared. Sophisticated clients are utilizing a wide range of legal services firms and companies for their legal work. As a result, the diversity of legal business models and manner of providing legal services has greatly expanded. Often individual lawyers (or very small firms) can provide high-level legal services by assembling "virtual" teams in which each team member handles a different constituent part of the representation. "In-sourcing," "out-sourcing" and the transferring of large portions of work to non-lawyer legal support vendors are all becoming fixtures of the legal economy. This rapid increase in diversity on both the supply and demand side of the legal economy will greatly alter the skills and prerequisites required for the successful private practice of law. The course is composed of two parts. In part one, the technological, economic and business practices transforming the legal profession are identified and their impact on the traditional approaches to private practice law firms will be examined. In part two, the course focuses on how individual lawyers can adapt to or embrace the forces transforming law to improve their practice and succeed in the new environment. Part two of the course will additionally focus on how specific skills such as project management, social networking and information management will be crucial to a successful legal career. Part two of the course will also discuss how the changing legal environment creates new ethical and professional challenges for attorneys. Elements used in grading: Attendance, class participation and written assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 393. Remedies. 3 Units.

The remedy is arguably the most important part of any lawsuit, and often the most neglected. This course considers the question of what plaintiffs are entitled to when they win a case and why. It will cover damages, punitive damages, restitution, unjust enrichment, and injunctive relief. While we will consider public remedies in constitutional cases, the majority of the course will focus on remedies in private law civil actions.

LAW 395. Creating New Legal Tools to Address the Environmental Impacts of Energy Projects. 3 Units.

A domestic energy boom is underway with major new energy projects being sited on both private and public lands, including wind projects, utility-scale solar projects, oil and gas projects, and associated transmission lines and pipeline projects. Many of these projects have significant footprints, with related negative impacts on their local environments. Students will work with policymakers in Sacramento and Washington this fall in evaluating new regulatory and market-based options to address the environmental impacts of energy-related projects. In doing so, seminar participants will be working "in real time" on new state and federal initiatives to develop more expedited and effective mechanisms to compensate for environmental impacts of energy and other infrastructure projects, including a number of large renewable energy projects that currently are being developed on public and private lands in the southwest. The seminar also will explore the full range of environmental issues associated with major infrastructure development, including an in-depth discussion and evaluation of permitting reforms and environmental issues that the Administration is now addressing under Executive Order 13604 (President Obama's infrastructure permitting reform initiative).

LAW 397. Law and Economics of Death Penalty Seminar. 2-3 Units.

This seminar will examine the legal and policy aspects of a capital punishment regime. Students will have the option to take the seminar alone or to combine it with a practicum. This seminar component will explore three primary issues: 1) the Supreme Court's forty-year effort to define what cases can permissibly receive the death penalty and the procedures under which it must be imposed; 2) the arguments for and against the death penalty, with a major focus on whether the death penalty deters, is administered in a racially biased way, or is otherwise implemented in an arbitrary and capricious manner; and 3) what the U.S. and international status of the death penalty is today and what the prospects are for the future. The readings on deterrence and racial discrimination will entail some substantial statistical analysis, although a background in statistics, though helpful, will not be required. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Writing (W) credit is for students entering prior to Autumn 2012. Elements used in grading seminar: Written assignments and final paper. Students who take the practicum component must attend the 9 seminar class meetings and do all reading and writing assignments of the seminar except that instead of writing a final paper of their choosing they will focus on actual policy or litigation work that will be arranged with various death penalty abolition groups. I expect that there will be an opportunity to work on policy relevant research that will be of assistance in the repeal movement (as well as attending the 9 seminar class meetings and doing the readings for each class).

LAW 400. Directed Research. 1-4 Unit.

Directed Research is an extraordinary opportunity for students beyond the first-year to research problems in any field of law. The final product must be embodied in a paper or other form of written work involving a substantial independent effort on the part of the student. A student must submit a detailed petition of at least 250 words, approved by the sponsoring faculty member, outlining his or her proposed project and demonstrating that the research is likely to result in a significant scholarly contribution. A petition will not be approved for work assigned or performed in a course, clinic, or externship for which the student has or will receive credit. A petition must indicate whether the product is intended for publication in a law review or elsewhere. A student may petition for "Directed Research: Curricular Development" when the work involves assisting a Law School faculty member in developing concepts or materials for new and innovative law school courses. Both the supervising faculty member and the Associate Dean for Curriculum must approve petition for "Directed Research: Curricular Development." Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. Students whose projects warrant more than four units should consider a Senior Thesis or the Research Track. See SLS Student Handbook for requirements and limitations. With the approval of the instructor, a directed research project of two-units or more may satisfy one research writing course (R course). Elements used in grading: As agreed to by instructor. Directed Research petitions are available on the Law School Registrar's Office website (see Petition Process and Forms).

LAW 401. Venture Capital II: Starting and Running a Venture-Backed Company. 3 Units.

This class will focus on the legal and non-legal tactical details of entrepreneurial endeavors. The legal specifics of corporate formation, tax, and contracts are well covered by a variety of other courses at the Law School and will only be reviewed briefly in this course. Instead, the course will examine the life stages (formation, financing, execution, and exit) of a venture-backed company from the entrepreneur's perspective. Students who are interested in either starting companies or working with startup founders as their legal counsel will solidify their foundations in this course. There will be no textbook - course materials will include PowerPoint slides, readings from various entrepreneur and venture capital blogs, sample business plans, and other sources. Grades will be based on class participation (10%), short reflection papers and/or short problem sets (15%), and a 60 minute oral business plan presentation with accompanying slide deck and written business plan. This course is limited to 16 students with students who have taken VC I receiving priority in enrollment. Prerequisites: A modest background in financial analysis or Excel, such as might be obtained in QM finance (Law 467), is a prerequisite for this course. Venture Capital I will be helpful but is not a prerequisite. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class participation (10%), several short reflection papers and/or short problem sets (15%), and a 60 minute oral business plan presentation with accompanying slide deck and written business plan (75%).

LAW 402. Moot Court. 1 Unit.

The major moot court activity at Stanford Law School is the Marion Rice Kirkwood Memorial Competition, which takes place each year during Autumn and Winter terms. Autumn term will be dedicated to brief writing and completion of the written portion of the Competition; the oral portion of the Competition will be conducted during the first four weeks (approx.) of Winter term. Students on externship and in clinics may enroll if permitted by their respective programs as class attendance is not required Autumn or Winter term and students must only participate in scheduled oral arguments Winter term, which are in the evenings or late afternoons. Prior to the Competition itself, materials and lectures are provided on research, brief writing, and oral advocacy techniques. Registration for the Kirkwood Competition is by team. Each team is required to submit an appellate brief of substantial length and quality, and to complete at least two oral arguments, one on each side of an actual case. The first draft of the brief is reviewed and critiqued by the course instructors. The final draft of the brief is scored by the course instructors and members of the Moot Court Board. The course also offers digital recording and critiques of practice oral arguments. Panels of local attorneys and judges serve as judges who score the oral argument portion of the Competition. Teams are selected for the quarterfinal, semifinal and final round of the Competition based on their brief score and oral advocacy scores. The final round of the Competition is held before a panel of distinguished judges and the entire Law School community is invited to attend. Special Instructions: In order to maintain academic standards, enrollment in the Kirkwood Competition is limited to 20 two-person teams. This limit will be strictly enforced. Registration forms will be distributed Spring term. If the program is oversubscribed, a lottery will be held to determine participating teams and to establish a waiting list. The final drop deadline for the course will be Friday of the first week of classes. Enrollment in both Autumn (2 units) and Winter (1 unit) terms is required. The final grade for both Autumn and Winter terms and the Writing and Professional Skills credit will be awarded upon the completion of the course requirements. Registration and Consent Instructions: Instructions on how to register for the Moot Court competition are sent out to students each year in Spring term for the coming academic year. The registration process is separate from the regular class registration process. Elements used in grading: Satisfactory completion of appellate brief and oral arguments. Writing (W) credit is for students entering prior to Autumn 2012. Early application and drop deadlines.

LAW 403. Senior Thesis. 5-8 Units.

An opportunity for third-year students to engage in original research and to prepare a substantial written-work product on the scale of a law review article. The thesis topic should be chosen no later than two weeks after the beginning of the seventh term of law study and may be chosen during the sixth term. The topic is subject to the approval of the thesis supervisor, who may be any member of the Law School faculty under whose direction the student wishes to write the thesis and who is willing to assume the responsibility therefor. An oral defense of the thesis before members of the faculty, including the thesis supervisor, will be conducted late in the student's ninth academic term. Acceptance of the thesis for credit requires the approval of the thesis supervisor and one or more other members of the faculty who will be selected by the supervisor. Satisfactory completion of the senior thesis will satisfy graduation requirements to the extent of (a) 5 - 8 units of credit and (b) two research courses. The exact requirements for a senior thesis are in the discretion of the supervising faculty member. Special Instructions: Two Research credits are possible. Elements Used in Grading: Paper.

LAW 404B. Foreign Legal Study: Bucerius Law School. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 404H. Foreign Legal Study: Hebrew University of Jerusalem. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 404I. Foreign Legal Study: Institut d'Etudes Politiques de Paris. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 404P. Foreign Legal Study: Peking University Law School. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 404S. Foreign Legal Study: National University of Singapore. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 404W. Foreign Legal Study: Waseda University. 9-14 Units.

This course is for J.D. students who have been approved by the Law School to study at one of the following schools: Bucerius Law School (BLS): Hamburg, Germany, Hebrew University of Jerusalem (HU): Jerusalem, Israel, Institut d'Etudes Politiques de Paris (Sciences Po): Paris, France, National University of Singapore (NUS): Singapore, Peking University Law School (PKU): Beijing, China, or the Waseda University Law School (WLS): Tokyo, Japan. See SLS Foreign Legal Study Exchange Program at <http://www.law.stanford.edu/organizations/programs-and-centers/stanford-program-in-international-and-comparative-law/the-foreign-legal-study-program>. Elements used in grading: Satisfactory evaluation of course work at the exchange institution.

LAW 405. Privacy and Technology in Law and Practice. 2 Units.

In this lecture course, students will identify instances in which new technologies have changed the likelihood that information about individuals will be created, collected, stored, analyzed, and disclosed to both private entities and to governments. We will look at the internet, mobile platforms and drones, among other developments. The class will identify both privacy defeating and privacy enhancing technologies, and consider how legal regimes and policy choices as well as technological design can mitigate or heighten the risk of unwanted information disclosure. Assignments will ask for both descriptive and normative analysis. Students will examine the interrelationship between privacy, security, free speech, innovation and other public goods and be asked to debate particular policy outcomes in light of competing values about information privacy with regard to both the public and private sector. We will cover issues such as Do-Not-Track and online advertising, data security breaches, consumer notice, privacy by design, corporate best practices, Federal Trade Commission enforcement, workplace monitoring, and law enforcement and national security access.

LAW 406. Research Track. 9-12 Units.

The Research Track is for students who wish to carry out a research project of a scope larger than that contemplated for a Senior Thesis. Research Track projects are to be supervised by two or more professors, at least one of whom must be a member of the Law School faculty. At least one faculty member in addition to the supervisors must read the written product of the research, and the student must defend the written work orally before the readers. Students will be admitted to Research Track only if they have a demonstrated capability for substantial independent research, and propose a significant and well-formulated project at the time of application. Special Instructions: Two Research credits are possible. Elements Used in Grading: Paper.

LAW 407. International Deal Making. 2 Units.

This course specifically focuses on the application of legal and business knowledge to real world transactions in the international context. This is a practical course for students who are interested in applying their knowledge to deal structuring, identifying and resolving legal and business concerns, negotiations, documentation and deal closing. The caselets (short-form cases), developed by the instructor (JD/MBA/CPA) from his 25 years' experience in deal-making in China and Asia, raising \$9 billion in equity and debt, often place the student inside the negotiating room and challenge the student to strike deals with senior private and public officials. This course is structured as an intense large seminar with a maximum of 30 law and 10 business students, mixed into groups for class work and presentations. Course objectives: (1) To give the law student a deeper understanding of the legal issues that arise in cross-border transactions, and a broader understanding of the business context in which legal advice is asked for and given; (2) to give the business student an appreciation of the importance of reading the legal documents which purport to describe his/her business transaction, and an understanding of the role the legal advisor can and should play in deal structuring, negotiating and documenting aspects; and (3) for both sets of students, there will be the opportunity to strategize, structure and be the principal negotiator in real world, substantive, international business deals. Following the outcomes decided in class, the actual outcomes and subsequent events will be shared. This is an applied business law course focused on structuring, negotiating and closing pioneering business transactions which have several legal and business obstacles to overcome. Elements used in grading: Class participation (30%), attendance, final paper (30%) and group presentation (40%).

LAW 408A. Criminal Defense Clinic: Clinical Practice. 4 Units.

Students in the Criminal Defense Clinic will represent indigent criminal defendants in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students will be California Bar Certified and thus will be bound by the rules and ethics of the profession, notably zealous advocacy on behalf of clients. Students will take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with the prosecutor, drafting and arguing motions, and trying cases before judges and juries. Common charges include drug possession, public order offenses, assault, theft, and weapons possession. While students will have primary responsibility for all aspects of their cases, all trial work will be closely supervised. In addition to casework, there will be weekly workshop sessions. These classes will focus both on case-rounds and on broader systemic issues. The goal of the clinic is to train students how to try a criminal case from beginning to end while engaging in thoughtful reflection on the role of the criminal defense attorney in the criminal justice system. While the work is often challenging and sometimes heartbreaking, it offers students a unique opportunity to put their skills, intellect and compassion to use by serving people in a moment of great need. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Class participation, attendance, written assignments and case work and professionalism. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 408B. Criminal Defense Clinic: Clinical Methods. 4 Units.

Students in the Criminal Defense Clinic will represent indigent criminal defendants in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students will be California Bar Certified and thus will be bound by the rules and ethics of the profession, notably zealous advocacy on behalf of clients. Students will take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with the prosecutor, drafting and arguing motions, and trying cases before judges and juries. Common charges include drug possession, public order offenses, assault, theft, and weapons possession. While students will have primary responsibility for all aspects of their cases, all trial work will be closely supervised. In addition to casework, there will be weekly workshop sessions. These classes will focus both on case-rounds and on broader systemic issues. The goal of the clinic is to train students how to try a criminal case from beginning to end while engaging in thoughtful reflection on the role of the criminal defense attorney in the criminal justice system. While the work is often challenging and sometimes heartbreaking, it offers students a unique opportunity to put their skills, intellect and compassion to use by serving people in a moment of great need. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Class participation, attendance, written assignments and case work and professionalism. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 408C. Criminal Defense Clinic: Clinical Coursework. 4 Units. Students in the Criminal Defense Clinic will represent indigent criminal defendants in a wide range of misdemeanor cases in Santa Clara and San Mateo counties. Students will be California Bar Certified and thus will be bound by the rules and ethics of the profession, notably zealous advocacy on behalf of clients. Students will take the lead role in all aspects of case development, including interviewing clients and witnesses, investigating facts, developing case strategy, negotiating with the prosecutor, drafting and arguing motions, and trying cases before judges and juries. Common charges include drug possession, public order offenses, assault, theft, and weapons possession. While students will have primary responsibility for all aspects of their cases, all trial work will be closely supervised. In addition to casework, there will be weekly workshop sessions. These classes will focus both on case-rounds and on broader systemic issues. The goal of the clinic is to train students how to try a criminal case from beginning to end while engaging in thoughtful reflection on the role of the criminal defense attorney in the criminal justice system. While the work is often challenging and sometimes heartbreaking, it offers students a unique opportunity to put their skills, intellect and compassion to use by serving people in a moment of great need. Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Class participation, attendance, written assignments and case work and professionalism. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 409. Introduction to Intellectual Property. 4 Units.

This is an overview course covering the basics of intellectual property law -- trade secrets, patents, copyrights, and trademarks, as well as selected other state intellectual property rights. This course is designed both for those who are interested in pursuing IP as a career, and those who are looking only for a basic knowledge of the subject. There are no prerequisites, and a scientific background is not required. Elements used in grading: Class participation and final exam (4-hour, open-book, in-class final).

LAW 411. Directed Writing. 1-4 Unit.

Teams of students may earn "Directed Writing" credit for collaborative problems involving professional writing, such as briefs, proposed legislation or other legal writing. Only projects supervised by a member of the faculty (tenured, tenure-track, senior lecturer, or professor from practice) may qualify for Directed Writing credit. It will not necessarily be appropriate to require each member of the team to write the number of pages that would be required for an individual directed research project earning the number of credits that each team member will earn for the team project. The page length guidelines applicable to individual papers may be considered in determining the appropriate page length, but the faculty supervisor has discretion to make the final page-length determination. Students must meet with the instructor frequently for the purposes of report and guidance. Unit credit is by arrangement. A petition will not be approved for work assigned or performed in a course, clinic, or externship for which the student has or will receive credit. Special Instructions: A Directed Writing project may count as the equivalent of a "W" (Writing - For students entering prior to Autumn 2012) course with the approval of the supervising faculty member. A Directed Writing project may not count as the equivalent of a "PW" (Professional Writing - For students entering Autumn 2012 and thereafter) course.

LAW 413A. Policy Practicum: Obesity in Santa Clara County. 1-3 Unit.

This course will develop obesity initiatives for Santa Clara County. Law, medical, and public policy students will work with representatives from the County Board of Supervisors to identify strategies for reducing child and adult obesity that the County can implement. A paper focusing on particular initiatives will be required. Course must be taken for two-units or more to satisfy the Research requirement. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for contact information and submission deadline. Elements used in grading: Class Participation, Attendance, Final Paper.

LAW 413B. Policy Practicum: Election Administration and Reform. 2 Units.

Students in this policy lab will be conducting research on problems in administration that have plagued recent elections, as well as potential reform proposals. The areas of inquiry will include: wait times to vote, polling place location and management, poll worker recruitment and training, voting accessibility for uniformed and overseas voters, individuals with disabilities, limited English proficiency, voter rolls and poll books, voting machine capacity and technology, ballot simplicity and voter education, provisional ballots, absentee and early voting, and the adequacy of contingency plans for natural disasters and other emergencies that may disrupt elections. Students will be responsible for white papers on one or more of these issues, as well as creating bibliographies on these and related topics. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for contact information and submission deadline. Elements used in grading: Written Assignments.

LAW 413C. Policy Practicum: Improving Bone Marrow Donation Programs. 2-3 Units.

The National Bone Marrow Donation Program (NBMD) operates the "Be the Match Registry." Individuals who register with Be the Match may be identified as potential donors of hematopoietic cells (most typically bone marrow) to patients facing life-threatening disorders such as leukemia, lymphoma, and aplastic anemia who do not have family members who are good matches to serve as donors. (Family members are appropriate for only 30% of patients needing these transplants.) The NBMD is considering whether the procedures that it uses to attract people to enroll as potential donors in the registry could be improved, and also wants to investigate the further possibility that the proportion of potential donors who actually donate cells once it is discovered that they are a match for a particular patient could be increased. Social psychologists here at Stanford are interested in working with the NBMD to examine some of the organization's practices, taking advantage of the sorts of social psychological insights often employed by those interested in marketing products or increasing charitable donations. There are questions, of course, about the efficacy of the techniques that they might recommend in terms of increasing ultimate donation levels, but there are also significant questions about whether some of the techniques might run afoul of existing legal regulation or pose other sorts of problems for the organization. Law students who choose to work on this practicum will almost surely work (in teams with other law students and in conjunction with social psychologists working on this issue and the NBMD) on the following issues: -- To what extent is it consonant with existing medical privacy law (or laws that the NBMD might press to adopt) to reveal personal information about donees to potential donors, assuming that donors are more likely to donate to those with whom they feel a greater personal connection? -- To what degree can NBMD simplify the process of registering potential donors without running afoul of current (or ideal) regulation protecting people against undergoing medical procedures in the absence of informed consent? -- What sorts of material incentives for donation, if any, are permissible under current (or ideal) law and what stance should the NBMD take on the use of material incentives? There may well be other related topics upon which students will work as well. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors at mkelman@stanford.edu and lmarsall@law.stanford.edu. See Consent Application Form for submission deadline. Elements used in grading: Written Assignments, Class Participation, Group Work.

LAW 413D. Policy Practicum: Institutional and Legislative Copyright Reform. 2-3 Units.

The US Copyright Office has developed an ambitious agenda for legislative and institutional reform of the American copyright system, and the Register of Copyrights would like us to assist in researching and formulating policy on two of the more pressing projects on its agenda, at least one of which may be the subject of hearings before the House Judiciary Committee this fall. Students will be responsible for developing and implementing the research design; consulting regularly with Copyright Office personnel on development of policy proposals; and preparing a final report for presentation to the Copyright Office. This will require a student commitment to two quarters of work during the Fall and Winter Quarters. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advance by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Elements used in grading: As agreed to by instructor. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413E. Policy Practicum: Empirical Study of Patent Troll Litigation. 1-3 Unit.

Many believe litigation by patent trolls—those in the business of asserting patents rather than making products—is rampant and has harmed innovation and raised consumer prices. This concern has spread to Congress and the U.S. Patent Office, which are considering new regulation of patent trolls. However, there remains insufficient data to determine the amount and impact of patent troll litigation. Students selected for this course will work with renowned patent law scholar Mark Lemley and Law, Science & Technology Teaching Fellow Shawn Miller to produce the first patent litigation database to include comprehensive identification of the type of patent plaintiff involved in each lawsuit. Students' principal responsibility will be to identify and code patent plaintiffs by type. Though voluntary, Professor Lemley and Dr. Miller will encourage and aid students in utilizing this experience and the database for their own scholarly work. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 413F. Policy Practicum: Mediation Confidentiality and Attorney Malpractice in California. 2 Units.

The issue of confidentiality is central to contemporary mediation practice, yet raises significant public policy issues. The California Legislature has directed the California Law Revision Commission to analyze "the relationship under current law between mediation confidentiality and attorney malpractice and other misconduct and the purposes for, and impact of, those laws on public protection, professional ethics, attorney discipline, client rights, the willingness of parties to participate in voluntary and mandatory mediation, and the effectiveness of mediation, as well as any other issues that the Commission deems relevant," with an eye to making recommendations for revising relevant state law. California is a leader in the ADR domain and significant changes in its policies regarding mediation have the potential to affect mediation law in other state courts as well as the federal court system. In this practicum students will work collaboratively to assist Commission staff identify issues for research and analysis, conduct research and prepare policy memoranda for consideration of Commission staff. Elements used in grading: Class Participation, Attendance, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413G. Policy Practicum: Social Mobility In Higher Education. 2 Units.

The Mobility Project will explore ways to increase the representation at elite universities of high achieving students who are socioeconomically disadvantaged. Economically disadvantaged students are underrepresented at most selective colleges or universities. This despite the fact that in recent years a number of prominent universities (Stanford among them) have made their financial aid policies considerably more generous for students from lower income families. Recent research indicates that the pool of resource disadvantaged, high achieving high school students is much larger than commonly thought. Each year, there are more than 25,000 high school seniors from relatively low income families whose standardized test scores and grades place them in the top 4% of high school students, making it likely that they could be admitted to, receive financial aid from, and thrive at a selective institution. Yet many thousands of these talented students do not apply to any top tier college. Some do not even apply to any four year school. This failure in the matching of students to schools is socially significant. While higher education has long been a means of promoting mobility for individuals and across generations, the economic benefits of advanced education are even greater now than in past eras. Thus, it has become especially important that universities provide an avenue of advancement for talented students of all backgrounds. The Mobility Project is also timely given the likelihood of increasing restrictions on race-based affirmative action. Expanding access to elite colleges for economically disadvantaged students will also contribute to the racial diversity of those institutions. The group of low income, high achievers is more racially diverse (and more specifically, has a higher representation of African Americans and Latinos) than the group of high achieving students from affluent families. We will examine a variety of initiatives to increase the enrollment at elite universities of high achieving economically disadvantaged students. We hope to assemble a small interdisciplinary team of faculty and students from the Schools of Law, Education, and Humanities and Sciences to explore scalable interventions. Students have the option to write papers for Research credit with instructor approval. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors at rbanks@law.stanford.edu and pbrest@law.stanford.edu. See Consent Application Form for submission deadline.

LAW 413H. Policy Practicum: State Law Enforcement Access to Customer Records of Communication Companies. 2 Units.

If California Senate Bill SCR 54 is enacted, as seems likely, the California Law Revision Commission will be tasked with modernizing California statutory law on law enforcement access to customer records of cell phone providers, internet service providers, social media companies, and other mobile and internet-based communication providers. The Commission would like us to prepare a thorough and balanced background study of the relevant legal and policy concerns, including civil liberties, public safety, and the scope of federal preemption in the area, with an emphasis on new and emerging communication services. This is likely to be a high profile project, with close attention from the Legislature and many interest groups. This project involves complex issues under the Fourth Amendment and such statutory structures as the Electronic Communications Privacy Act. Completion of the course in Criminal Investigation is a prerequisite, with exceptions only for those with demonstrable alternative background in Fourth Amendment law. Elements used in grading: As agreed to by instructor. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413I. Policy Practicum: Tax Regulatory Project. 3 Units.

The changing economic landscape places great stress on the tax legislative process. This stress is magnified by flaws in existing statutes, and by taxpayer attempts to exploit those flaws. There are no statutory rules governing hundreds of billions of dollars of annual transactions. Much of this void is filled in (imperfectly) by Treasury regulations. This practicum will take a close look at one or two issues raised by one proposed Treasury regulation. We will look at the relevant literature, talk to stakeholders, and (possibly) and in our individual names, provide public comments and testimony on the regulation. Since the primary output will be a public (and therefore published in the leading tax journal, *Tax Notes*) comment, the course will offer Professional Writing (PW) credit. Students with a research interest in this area that is aligned with the project can with permission of the professor write a paper that receives Research (R) credit. After the term begins, students accepted into the course can transfer from the PW section (01) to the R section (02) with consent of the instructor. Elements used in grading: Class Participation, Written Assignments or Research Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413J. Policy Practicum: Court-Supervised Remediation of Complex Environmental Problems. 2 Units.

The Law School's Environmental Law Clinic is representing an environmental group in a lawsuit against the Monterey County Water Resources Agency. The suit asserts that the agency has been polluting both surface and ground waters in the Salinas River Valley and Elkhorn Slough by discharging pesticide-laden farm irrigation run-off in violation of California environmental laws. If the plaintiffs prevail, the appropriate injunctive relief is likely to be complex. Neither the precise dimensions of the problem nor those of the most effective interventions to remedy it are known. So, ideally, relief should combine adaptive flexibility for the agency, meaningful accountability to the plaintiffs and the public, and an opportunity for all parties to learn in the process of the implementation. Policy Lab students will work with Professors Deborah Sivas (lead plaintiffs' counsel) and Bill Simon on some aspect of a possible remedial regime. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class Participation, Final Paper.

LAW 413K. Policy Practicum: Stream Flow Restoration Transactions. 1-3 Unit.

Water in the West (a joint program of the Woods Institute and the Lane Center for the American West) is working with the National Fish and Wildlife Foundation (NFWF) on research related to water rights transactions that restore water to the environment. Rivers in the western United States are subject to significant water withdrawals that have had major impacts on the health of their ecosystems. In an effort to restore the health of such rivers, a number of conservation groups have begun to facilitate voluntary transactions to restore water to the environment, such as acquiring water rights and funding irrigation efficiency improvements. NFWF has extensive experience with these efforts through its funding of the Columbia Basin Water Transaction Program and implementation of the Walker Basin Restoration Program, and intends to expand its efforts to other parts of the West. It faces the challenge of deciding where to invest funds and resources in order to achieve the greatest conservation benefits for available dollars. Students in this policy lab will assist NFWF in the development of an assessment methodology for identifying and analyzing watersheds in the western United States as potential locations for expanding its efforts. Our work will focus on evaluating western states in terms of the extent to which they allow the transfer of water rights for environmental use and in terms of the regulatory, financial, and social hurdles such transactions face in each state. We will also analyze data related to stream flow alteration and work with NFWF to integrate this information into its broader assessment. Finally, we will work with NFWF staff to integrate our work into their broader assessment and help them begin to evaluate specific candidate watersheds. Elements used in grading: As agreed to by instructor. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413L. Policy Practicum: Advising Congress on Health Policy. 2 Units.

This policy lab will conduct research on national health policy problems for the Medicare Payment Advisory Commission, or MedPAC (MedPAC is an independent Congressional agency established by the Balanced Budget Act of 1997 to advise the U.S. Congress on issues affecting the Medicare program). Students will work in teams with lawyers and PhD economists from MedPAC, resident and fellow physicians from Stanford Hospital, and other students from throughout the University on one of two topics: Expanding the healthcare workforce through reform of states' scope of practice regulation. This project will examine how changes in licensing rules governing health care providers' allowed scope of practice can accommodate the expansion of demand for health services due to the Affordable Care Act and other factors. Specific questions include: 1) Under existing state law, what additional tasks can non-physicians such as nurse practitioners, physician assistants, and pharmacists undertake that would reduce cost and/or improve quality? 2) What changes to state law might expand the allowed scope of practice of non-physicians that would reduce cost and/or improve quality? 3) What incentives might the federal government provide, either through Medicare or other means, to encourage states to reform optimally their scope of practice rules to reflect new available technologies? Designing antitrust policy to achieve the benefits of coordination and avoid the costs of consolidation. On one hand, closer links between physicians, hospitals, and other health care providers has the potential to reduce cost and improve quality by improving communication across care settings, avoiding wasteful duplication of effort, and reducing medical errors. On the other hand, consolidation may be used to exploit consumers by facilitating the exercise of health care providers' market power. This tension has become especially important due to incentives in the Affordable Care Act that encourage doctors and hospitals to join together in Accountable Care Organizations. This project will examine the following questions: 1) How can the U.S. Department of Justice and Federal Trade Commission use existing federal antitrust law to allow welfare-improving coordination while prohibiting welfare-reducing consolidation in ways that minimize costs of enforcement, including the legal uncertainty facing providers? 2) Can adoption of health-care-specific antitrust laws, such as those proposed or enacted in Massachusetts and California, effectively fill in the gaps in existing federal antitrust laws? 3) What incentives might the federal government provide, through design of reimbursement policies in the Medicare program, to complement federal and state antitrust laws? Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Written Assignments, Final Paper. This course is cross-listed with HRP 222A and B.

LAW 413M. Policy Practicum: Stereotype Threat and Higher Education. 2 Units.

A large body of social psychological research has established the existence of stereotype threat—a worry that one might be viewed through the lens of a negative intellectual stereotype. This concern provokes anxiety and can undermine the academic performance of members of negatively stereotyped groups, underrepresented minority groups in particular. Stereotype threat acts like an intellectual headwind. This project will consider changes that colleges and universities institutions might undertake to reduce the effect of stereotype threat. Elements use in grading: Class Participation, Attendance, Written Assignments, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413N. Policy Practicum: Court Online Mediation Service Practicum. 2 Units.

California is a leader in alternative dispute resolution (ADR), and its innovations have the potential to affect mediation law in state and federal courts across the nation. In this practicum students will work collaboratively to build a new online dispute resolution (ODR) system to be piloted in the San Mateo Superior Court for Family Law. Stanford students will work side by side with faculty, court staff, and experts from Modria Inc. (a leading mediation software designer) to implement the Beta Test of the design. The core of this quarter's work will focus on introducing the platform to its first users - claimants with family law disputes - and designing an evaluation program for collecting feedback and implementing improvements. The project will include opportunities to learn basic coding skills, innovate user experience (UX) design for a tech product, and work directly in family law client services. Most importantly, this project addresses a long-neglected access-to-justice issue in California, where 60-80% of claimants arriving in civil courts cannot afford an attorney. ODR, designed and tested properly, may streamline the system for those who need it most while still offering supervision and quality control of the court staff. Special Instructions: Enrollment in Thinking Like a Policy Analyst (Law 444) encouraged. Preference given to students who have taken LAW 615 Negotiation, LAW 613 Dispute System Design, LAW 638 Mediation, or demonstrate substantial experience in ADR, or law and technology. Students have the option to write a paper for R credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Participation, Attendance, and Contribution to Project. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413O. Policy Practicum: China's Solar Industry and its Global Implications. 2-3 Units.

China dominates and defines a growing global market for solar power. That market faces a stark dichotomy. Solar energy's prospects as a meaningful electricity source are increasingly bright. Yet, amid a global glut of solar panels, the future contours of the industry - the relative roles of leading players such as the United States and China - are increasingly unclear. Students in this seminar will analyze industry and policy data to assess China's competitive strengths in the global solar industry and, based on those conclusions, to suggest finance and policy approaches that the US and China each could adopt so that the two countries operate more strategically in an economically efficient global solar market - and, by extension, a globalizing market for cleaner sources of energy. This research will figure into a project on this theme underway at the Steyer-Taylor Center for Energy Policy and Finance. Course deliverables will vary among students and will be based on discussions at the start of the class between the instructors and the students. Some students will produce papers; others will develop and analyze key sets of data. Students from graduate programs around the university - the law school and others - are encouraged to apply. Preference will be given to those with demonstrated interest in energy finance and policy, particularly bearing on China, and with fluency in Mandarin, though neither is a firm requirement. Given that the Steyer-Taylor Center project will continue through the academic year, preference also will be given to students who intend to continue with the practicum in both the winter and spring quarters. Students have the option to write papers for W or R credit. If the paper involves independent research, then it will be eligible for R credit. The instructor and student must agree whether the student will receive an R or a W. After the term begins, students accepted into the course can transfer from the W writing section (01) into section (02), which meets the R requirement, with consent of the instructor. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. Elements used in grading: Class Participation, Written Assignments or Paper. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413P. Policy Practicum: Wildlife Trafficking: Stopping the Scourge. 2 Units.

This policy lab seminar will address the international wildlife trafficking crisis, with a focus on legal and policy tools that can help combat the scourge. The price of ivory on black markets has skyrocketed and elephant and rhino populations in Africa are being decimated. At current poaching rates, African elephants could be wiped out within 8 to 10 years. Trafficking also is hitting tigers, great apes, sharks and other important species. The seminar will key into the President's recent Executive Order on this subject (E.O. 13658, issued on July 1, 2013) and related international efforts to reduce the killing in host countries, the transshipment of poached materials, and consumer demand for ivory and other wildlife parts. The seminar will address US laws and their role in addressing trade in wildlife parts. It also will undertake a comparative review of the legal structures in relevant African and Asian nations, and the potential role of the international endangered species treaty (CITES) and transnational enforcement efforts in cracking down on ivory and other wildlife-related trafficking. The seminar will review prior poaching crises, including the elephant/ivory crisis in the late 1980s, and evaluate why the strategies that reduced killings in the 1990s are no longer successful. Based on these analyses, the class will develop and submit recommendations for reforms to US, African, and international laws and practices to two groups established under the Executive Order: (1) the President's Wildlife Trafficking Task Force, which is chaired by the Secretaries of State and Interior and the Attorney General; and (2) the Wildlife Trafficking Advisory Council, which is composed of outside experts who are advising the Task Force. (Professor Hayes is an appointed member of the Advisory Council.) Elements used in grading: Class Participation, Attendance, Final Paper. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413Q. Policy Practicum: Constitutional Design in Libya: The Division of National & Provincial Powers. 1 Unit.

Libya's government has experienced significant strains stemming from various interest groups and armed militias calling for federalism. The General National Congress, elected in 2012, is mandated to form a government, promulgate legislation for Libya's transitional period, and establish a constitution-drafting entity. A de facto federal structure has emerged since the fall of the Qaddafi regime, and it appears that a federal state structure is the only way forward for Libya. Even a decentralized framework may be threatened, however, if it does not clearly delineate the powers of the executive heads of provincial territories. Students in this Practicum will work to support the Public Interest Law and Policy Group (PILPG), a pro bono international law firm, which in turn is providing advice to civil society groups in Libya. To assist PILPG in supporting its clients' engagement on constitutional issues and decentralization, students in this Practicum will develop a legal memorandum analyzing comparative state practice of the distribution of powers between the national executive and provincial level executives in federal or decentralized states. The memorandum will address approaches states have taken on key issues such as whether the national executive can remove the heads of provincial governments; whether the provincial executive has a role in national-level policies; whether provincial executives maintain any control over the military; and whether the provincial executives' powers can supersede the national executive's powers on certain regional issues. State practice from the Middle East and North Africa region will be of particular relevance to PILPG's Libyan clients, but state practice examples will ultimately be selected based on their value in explaining or illustrating mechanisms and processes that shed light on the efficacy of different approaches to distributing powers between national and provincial executives. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class participation, Written Assignments.

LAW 413R. Policy Practicum: The National Environmental Policy Act: Pushing the Reset Button. 2 Units.

This policy lab will focus on recommendations for the reform and modernization of the National Environmental Policy Act (NEPA) -- the granddaddy of our environmental laws. NEPA is a disclosure statute which requires that before federal officials can issue a permit, commit federal funds, or otherwise take an action that may have a significant impact on the environment, decision-makers must have the opportunity to review an Environmental Impact Statement (EIS) that analyzes the potential environmental consequences of the proposed action and its alternatives. Many critics from both the right and left are dissatisfied with the way that NEPA and its state analogues are being implemented, prompting some legislators to advocate statutory overrides and agency officials to expand the use of categorical exemptions. Meanwhile, NEPA proponents are interested in making the environmental review process more user-friendly and efficient, while preserving its core disclosure requirements. In this policy lab, students will review, analyze, and develop positions on potential NEPA reform options. Students will interact with NEPA experts at the White House; the Council on Environmental Quality (CEQ) and produce work product that CEQ can use as it responds to Congressional and outside pressure to reform the NEPA process. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413S. Policy Practicum: Carbon Pollution Standards and Carbon Taxes. 2 Units.

This policy lab seminar will address the ongoing effort by the Environmental Protection Agency to reduce carbon pollution from electric power plants. The EPA is currently in the process of writing New Source Performance Standards for new and existing coal and natural gas fired electric power plants. A critical question in writing these rules will be the extent to which EPA can allow for economically efficient approaches to cutting emissions. States, including California, industry, and environmental groups are all pushing EPA to incorporate some sort of emissions pricing as either a safe harbor or to propose it as a Federal Implementation Plan that States may choose to join. By doing so, not only will costs fall for regulated sectors but also, deeper cuts in emissions may become feasible. Almost all parties expect, based on prior precedent, that such a proposal will take the form of a cap-and-trade or at least some sort of mass-based cap on emissions. Adele Morris, the Policy Director for the Climate and Energy Economics Project at the Brookings Institution, has asked for our assistance in formulating and assessing the legal implications of an alternative proposal - a carbon tax. Students will prepare briefings and written comments to EPA and OMB explaining the potential benefits of a carbon tax approach to New Source Performance Standards as well as exploring the legal risks that might be created by this approach. We anticipate that students will also participate in briefings with key OMB and EPA Air and Radiation staff involved in drafting the proposed rule. The New Source Performance Standard rulemaking for greenhouse gases is the most environmentally and economically significant regulatory effort that EPA will undertake this decade. Partnering with Brookings will allow us to both leverage legal and economic expertise and to inject students into the most exciting environmental policy making currently underway in the United States. Doing so now, before the draft rule is published, allows us to exert maximum influence before the agency loses flexibility to respond to outside input. To develop skills relevant to the work of practicing lawyers, students will research and write parts of memos and written comments to EPA and OMB on behalf of Morris based on their research into various legal and policy aspects of Clean Air Act Section 111 as applied to the problem of power plant emissions. These assignments, for Writing (W) or Professional Writing (PW), or Research (R) credit, will be due before the end of the quarter. Students must obtain the instructor's approval of their election to take the course for writing (PW or W) or research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413T. Policy Practicum: Human Rights in the Americas: the Inter-American System. 3-4 Units.

In this practicum, students will contribute to analyses of the current state of human rights in the Americas and, in particular, to analyses of areas of focus for the Inter-American Commission (the "Commission"). Students will become familiar with international and regional standards in human rights and with the procedures, history and practice of the Commission and will contribute, through their policy analysis, to the work of the Commission. Working independently and/or in teams, students will prepare studies on situations of rights abuse, as well as on best practices across the region. The scope of students' work product will expand as they acquire more expertise with international standards and transnational comparative tools in policy analysis. Fluency in Spanish or Portuguese helpful, but not required. One or more students may travel in conjunction with this practicum to sessions of the Inter-American Commission in October/November 2014. This course will be offered in the Fall of 2014. While priority will be given to students who enrolled in the course in the Spring of 2014, all students are encouraged to apply. Special Instructions: Students must enroll with a minimum of 3 units, but are encouraged to enroll in 4 units. This class meets the PW requirement. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Students who have taken the practicum in the Spring of 2014 have consent to take this course in the Fall of 2014 and need not file a Consent Application. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 413U. Policy Practicum: Next Steps in Network Neutrality. 1-3 Unit.

Earlier this year, the Court of Appeals for the D.C. Circuit struck down the Federal Communications Commission's Open Internet rules. This policy practicum will help policy makers assess the available options in the wake of the court's decision. In December 2010, the Federal Communications Commission (FCC) adopted the Open Internet Order, which enacted binding network neutrality rules for the first time. Network neutrality rules limit the ability of Internet service providers to interfere with the applications, content and services on their networks; they allow users to decide how they want to use the Internet without interference from Internet service providers. In January of this year, the Court of Appeals for the D.C. Circuit struck down the core provisions of the Open Internet Order - the rules against blocking and discrimination. The decision combined two wins for the FCC with one decisive loss. According to the Court, the FCC has authority to regulate providers of broadband Internet access service under Section 706 of the Telecommunications Act of 1996, and the FCC's justification for the Open Internet Order is "reasonable and supported by substantial evidence." The no-blocking and non-discrimination rules, the Court found, however, violate the Communications Act's ban on imposing common carrier obligations on entities like Internet service providers that the FCC has not classified as telecommunications service providers under Title II of the Communications Act. As a result of this ruling, Internet service providers like Verizon, AT&T or Cox Cable that connect users to the Internet are now free to block any content, service or application they want. They can slow down selected applications, speed up others, or ask application or content providers like Netflix or Spotify to pay fees to reach their users. These practices would fundamentally change how we experience the Internet. In the wake of the Court's decision, policy makers, stakeholders and observers are debating how to best ensure that the Internet remains open and free. Policy makers essentially have three options: First, the FCC can preserve the Open Internet Rules by reclassifying Internet service as a telecommunications service under Title II of the Communications Act. Second, it can develop a different, narrower network neutrality regime under Section 706 of the Telecommunications Act within the boundaries established by the Court of Appeal's decision. Finally, Congress or the FCC can adopt a new network neutrality regime, but only, in the case of the FCC, after reclassifying Internet service as a telecommunications service. In mid-February, the Federal Communications Commission opened a docket within which to consider how the Commission should proceed. Special Instructions: Upon consent of the instructor, students may choose enrollment Option 1 or Option 2: Option 1 (3 units) - Students who elect Option 1 will research and write parts of white papers and comments to the Federal Communications Commission that will help policy makers assess the available options. In special cases, students electing Option 1 may take the policy practicum for 2 units. Students interested in this option should indicate this on their application. Option 2 (1 to 2 units) - In order to elect Option 2, students must concurrently enroll (with consent of instructor) in the seminar component, "Current Issues in Network Neutrality" (2 units), which meets Thursdays from 4:15pm-6:15pm. Students in the policy practicum with the seminar component will research and write parts of white papers and comments to the Federal Communications Commission that will help policy makers assess the available options. Students will be required to attend the seminar and participate in the discussion, but will not do any of the written assignments for the seminar. Depending on the type of work in Option 1 or Option 2, students taking the policy practicum for two-units or more may receive professional writing (PW) or research (R) credit. Students must obtain the instructor's approval of their election to take the course for writing (PW or W) or research (R) credit. After the term begins, students accepted into the course can transfer from the W/PW writing section (01) into section (02), which meets the R requirement, with consent of the instructor. The class is open to law students and students from other parts of the university. It does not require any technical background. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413V. Policy Practicum: Law and Economics of the Death Penalty. 2 Units.

This is the practicum component of the Law and Economics of the Death Penalty Seminar. See Law and Economics of the Death Penalty Seminar (Law 397) for a detailed course description. Students who take the practicum component must attend the 9 seminar class meetings and do all reading and writing assignments of the seminar except that instead of writing a final paper of their choosing they will focus on actual policy or litigation work that will be arranged with various death penalty abolition groups. Only students enrolled in the Law and Economics of the Death Penalty Seminar (whether for two or three units) may enroll in the practicum component for two additional units. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413W. Policy Practicum: Expanding Access to Justice in California Courts for Limited-English Court Users. 1-4 Unit.

This policy practicum will offer recommendations to the California Supreme Court Chief Justice Tani Cantil-Sakauye, Associate Justice Maria Rivera (First District Court of Appeal), Hon. Manuel Cavarrubius (California Superior Court, County of Ventura) and members of the California Judicial Council to increase access to justice for limited English proficient (LEP) court users. The project interacts with the process of the Joint Working Group for California's Language Access Plan and assists development of a response to a U.S. Department of Justice notice that certain Court policies and procedures may be inconsistent with Title VI of the Civil Right Act of 1964 and its implementing regulations. Numerous state and local laws are also implicated by a potential lack of access for LEP court users. The California Commission on Access to Justice estimates that well over 7 million Californians, almost 20% of our state's population, "cannot access the courts without significant language assistance, cannot understand pleadings, forms or other legal documents and cannot participate meaningfully in court proceedings." Through fieldwork, literature review, legal research, and interviews with relevant participants and stakeholders students will identify challenges facing LEP litigants. Students will interview and consult with such parties as the Chief Justice, appellate court judges, state bar leaders and other attorneys, members of the Language Access Task Force of California, and individual stakeholders to develop recommendations for potential reform options, including whether the use of such technologies as video remote interpreting (VRI) can expand access to justice for LEP litigants. Students will be asked to produce written materials (findings and recommendations) as well as make oral presentations to California judges, Judicial Council staff, and others at meetings at each quarter. This policy practicum will be offered Fall 2014 and Winter 2015. We encourage students to participate both quarters if they are able to do so. Students should also note that field work will require some number of students to engage in overnight travel for court observation and local interviews in areas outside the Bay Area. Your availability to take the practicum both quarters and to travel for field research should be noted in your consent form. Students have the option to write papers for PW or R credit. If the paper involves independent research, then it will be eligible for R credit. The instructor and student must agree whether the student will receive an R or a PW. After the term begins, students accepted into the course can transfer from the PW writing section (01) into section (02), which meets the R requirement, with consent of the instructor. The practicum must be taken for at least two-units or more to receive R or PW credit. Elements used in grading: Class Participation, Attendance, Written Assignments. Oral presentations to judges, commissions and California Judicial Council representatives, quality of research. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413X. Policy Practicum: Designing a Social Impact Bond for Santa Clara County Mental Health. 3 Units.

Social impact bonds, also called "Pay for Success" initiatives, are an innovative finance mechanism through which investors provide the funds for organizations to provide social services at the request of a government entity. These investors may be repaid, with interest, depending on the organizations' success in achieving specified outcomes. The most noteworthy examples to date involve pay-for-success schemes to reduce recidivism in the UK, Massachusetts, and New York City prisons. Santa Clara County will soon issue a request for proposals for a social impact bond to reduce the hospitalization of mentally ill patients at the Santa Clara Valley Medical Center. It has retained Third Sector Capital Partners as an advisor and Keith Humphreys, Ph.D., Professor and Section Director for Mental Health Policy in the Department of Psychiatry and Behavioral Sciences at Stanford University, as the evaluator. Students in this Policy Lab practicum will work with Dr. Humphreys, the Santa Clara County Counsel's Office, and Third Sector to develop the scheme, including designing clear metrics for success and undertaking a cost-benefit analysis of the de-institutionalization of mental health patients. It is likely that we will collaborate with faculty and students from other schools and departments having particular expertise in cost-benefit analysis and evaluation. Special Instructions: Total enrollment in this course will be limited to 12 (4 SLS students, 4 Medical School students & 4 other). A preference will be given to students who can enroll for both the Autumn and Winter quarters. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Cross-listed with Psychiatry (PSYC 213).

LAW 413Y. Policy Practicum: Catalyzing Nature-Based Coastal Flood Mitigation and Adaptation. 2 Units.

Recently, several perilous and costly flood events have raised public awareness of the threats posed by coastal and riverine floods nationally. It is likely that with climate change, the frequency of heavy precipitation will increase in some areas over the 21st century, and that the return interval of flood events will decrease, greatly increasing overall flood risk. Traditionally, flood mitigation has occurred through the use of hard engineering - seawalls, revetments and levees. However, natural habitats and ecosystems also offer significant, and often overlooked and undervalued protections in mitigating or buffering flood hazards. Hazard mitigation plans and conservation project plans very rarely explicitly recognize the protective value of natural habitats, even though this value has been well documented. Moreover, hazard mitigation agents and environmental conservation organizations seldom work together, although recent catastrophic events highlight why it would make sense to do so. FEMA Region IX and The Nature Conservancy in California have recognized this and wish to develop a paradigm for working together to promote nature-based flood mitigation, and have asked for our help. Students in this practicum will: (a) Identify a coastal community with areas of both high flood risk and conservation value; (b) Design a nature-based strategy for risk reduction, which could include managed retreat and/or other mitigation/adaptation tactics; (c) Identify available resources/programs/incentives for and barriers to implementation at the local, state and federal levels; (d) Design a process for enabling the community to avail themselves of these resources; and (e) Comment on how laws, regulations and programs could be changed to better facilitate nature-based flood risk reduction. Students will also provide insight into the transferability of this approach beyond the study area. Elements Used in Grading: Class Participation, Attendance, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 413Z. Policy Practicum: Endstage Decisions: Health Directives in Law and Practice. 2 Units.

Medical decisions toward the end of life can be crucial and difficult for patients, doctors, and the families of patients. Law and medicine have been struggling to find ways to strike a balance between what the patients might want (or say they want), and what makes medical, economic, and ethical sense. People have been encouraged to fill out "Advanced Health Care Directives," which give guidance to doctors and surrogates (usually a family member) on what to do when faced with end-of-life dilemmas. Another form, adopted in just over half the states (including California) is the POLST form (Physician Orders for Life-Sustaining Treatment). The two types are supposed to complement each other, but they are different in important ways. The Advanced Health Care Directive expresses what a person wants, or thinks she wants, and/or appoints a surrogate, in case the patient is unable to express her wishes. Anybody can fill out a Directive, at any time of life. Ideally, a copy goes to the surrogate, if one is appointed, and another to the primary care physician. The POLST form is meant for people who are seriously ill. It is a one page form, printed on bright pink paper. It is signed by patient and doctor. The directives (for example "no artificial nutrition by tube") are supposed to be controlling; the patient, of course, can change her mind; but there is no surrogate. It is an agreement between the patient and the doctor. Who uses these forms? How effective are they? To what extent and in what situations are they useful? In what situations are they not useful? Can they be made more useful and, if so, how? There has been research on the subject; and a major report on the end-of-life issue (originally due out in December) will be released this summer. The class will look at some of this literature, but the main point will be to find out what local hospitals and nursing homes are doing. Students will conduct interviews with doctors, nurses, and other health care specialists in order to find out what one might call the living law of the Directive and of Polst. The aim is to get a more realistic picture of the situation in the area: how are these forms used, when are they used, what has the experience of health care professionals been; perhaps also some insight into the experience of patients and family members. The ultimately goal would, one hopes, be policy recommendations for improvements in the forms themselves, and the laws relating to the forms, along with recommendations for ways to improve the way the forms are or can be used; or whether some entirely different approach to the problem might be needed. Stanford Hospital and Clinics will be the client in researching and addressing the above questions. Elements used in grading: Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 414A. Policy Practicum: Central Valley Habitat Exchange. 3 Units.

This policy lab will assist in developing more flexible and effective wildlife habitat mitigation tools for use in California's Central Valley, a landscape that presents the challenge of taking advantage of the habitat potential provided by working agricultural lands. Habitat mitigation is an important tool under a variety of environmental and wildlife protection statutes, both state and federal. Current regulatory frameworks usually require that habitat mitigation employ permanent easements or long-term contracts fixed in particular locations, despite the fact that species have changing habitat needs. Many species are migratory and must move across the landscape to survive; a changing climate and shifting human activity only increase the dynamic nature of habitat needs. To ensure that species and their habitat are protected in the most effective manner possible, legal and policy frameworks must be structured to address this and other challenges. Additionally, there is a need for a robust market mechanism that recognizes the inherent natural capital and species habitat provided by working agricultural lands, and compensates landowners for the value of those resources. In the face of significant upcoming conservation and mitigation needs for California, new policies and regulatory frameworks are necessary, and must be rooted in rigorous science, be consistent with existing legal frameworks, and accomplish the dual goals of promoting species recovery and maintaining agricultural production. Students in the Law and Policy Lab will analyze cutting edge issues related to species habitat and protection. They will help provide recommendations to the Central Valley Habitat Exchange (CVHE) in the development of more flexible and marketable habitat mitigation tools that can be used under a variety of programs, including the Endangered Species Act, the Clean Water Act, state wildlife laws, and the Bay Delta Conservation Plan. The CVHE is a new initiative taking advantage of the emerging market of habitat credits by maximize the benefits of the habitat that willing agricultural landowners can provide. The CVHE will facilitate investment in conservation and restoration of vital and dynamic Central Valley floodplain and riparian habitat by promoting, monitoring and assisting in the exchange of habitat credits. Students will tackle issues of permanence and change from legal, policy, economic, and scientific perspectives, depending on their existing skill set and research needs. During the quarter, visitors from the CVHE Working Group - which includes members from national environmental non-profits, government agencies, and the private sector - will share their perspectives, and students will be invited to present their findings and make recommendations to help inform development of the CVHE. The course will meet at a mutually convenient time that will be chosen after the quarter begins. Meetings will include a mix of individual meetings and group meetings. Special Instructions: This practicum is offered in autumn quarter and winter quarter. Students enrolled in autumn quarter who intend to continue with the practicum will be given preference in winter quarter. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for contact information and submission deadline. Elements used in grading: As agreed to by instructor.

LAW 414B. Policy Practicum: Analyzing Alternative Laws and Policies for Psychoactive Drugs. 3 Units.

Four states have already legalized marijuana, and there is a strong likelihood that California will significantly change its marijuana laws. This practicum works closely with a policy client to assess alternative options for California marijuana laws. We will examine possible options through many lenses, including moral philosophy, welfare economics, neuroscience and medicine, criminal justice, and political analysis. Students will gain exposure to such policy analysis methodologies as epidemiology, econometrics, quasi-experimentation, simulation modeling, and cross-national case studies to identify and analyze options and likely tradeoffs to help the client and the citizens of California make informed choices. Elements used in grading: Class Participation, Attendance, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 414C. Policy Practicum: Strategic Litigation in Global Context. 3-4 Units.

Students will work with litigators at the Open Society Justice Initiative, a law center housed inside a global foundation, on a comparative research project exploring the impacts of strategic litigation in the public interest. The resulting publication aims to assist strategic litigators, social change actors and rights activists in understanding the promise, risks and complexity of the burgeoning global practice of strategic litigation and in wielding this specialized justice tool more skillfully. The autumn practicum will culminate in a conference at the Law School in December 2014 before an international audience of practitioners, with the possibility of student papers appearing in a conference compilation. Students who are available both autumn and winter quarter may continue their work on the project through the winter. The project on the impacts of strategic litigation will examine how legal judgments - both positive and negative - and the ensuing record of implementation have influenced, together with other tools of change, the advancement of human rights in a variety of settings. Over the course of the Practicum, students will explore one or more of the following human rights themes: equal access to quality education, the death penalty, disability, housing rights, land rights and/or state-sponsored violence/torture. Cases will be drawn from domestic courts across the globe, as well as regional human rights tribunals and UN treaty bodies. Specific questions to be examined include: What contributions to social, political and legal change has strategic litigation made on particular issues in particular places? What were the conditions, circumstances and manner in which litigation was pursued (in conjunction with other tools) which enhanced its contribution(s), and which diminished them? What does comparative experience teach about the risks and trade-offs involved in deciding whether, when and how to litigate so that it generates the strongest and most enduring impacts? There is a preference for students who can enroll for both autumn and winter quarter. Elements used in grading: Class Participation, Attendance, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 414D. Policy Practicum: Copyright Policy Practicum. 3 Units.

One of today's great challenges for creative production on and off the Internet is to connect creative users of copyrighted works with the works' owners quickly and cheaply in order to enable licensed uses. With the United States Copyright Office as its client, this practicum will develop a feasibility study/rough prototype for a Web-based copyright clearance system. Law students will work with computer science and business students to inventory existing sources of copyright ownership information; explore with the managers of these sources (including the Copyright Office) protocols for integrating the sources in a Web-based platform; explore use protocols with potential copyright users; develop strategies for gathering ownership data that do not presently reside in databases; and develop (and possibly implement) criteria for platform-enabling software. Elements used in grading: Class Participation, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for contact information and submission deadline. Elements used in grading: As agreed to by instructor.

LAW 414E. Policy Practicum: Legal and Policy Tools for Preventing Atrocities. 1-4 Unit.

In 2012, at the U.S. Holocaust Museum and Memorial, President Obama announced the adoption of a comprehensive global strategy to prevent atrocities. This strategy is based on a set of recommendations generated by an interagency review of the U.S. government's capabilities mandated by Presidential Study Directive 10 (PSD-10) of 2011. In unveiling this major new initiative, President Obama underscored that Preventing mass atrocities and genocide is a core national security interest and a core moral responsibility of the United States. Foundational to the PSD-10 recommendations was the creation of a high-level interagency Atrocities Prevention Board (APB) to monitor at-risk countries and emerging threats in order to coordinate the U.S. government's responses thereto. Since being established in 2012, the APB has worked to amass and strengthen a range of legal, diplomatic, military, and financial tools for atrocity prevention. This policy lab would support the APB primarily through one of its constitutive entities, the Office of Global Criminal Justice (GCJ) in the U.S. Department of State. GCJ is headed by an Ambassador-at-Large (Assistant Secretary equivalent) and advises the Secretary of State and the Under Secretary for Civilian Security, Democracy, and Human Rights on U.S. policy addressed to the prevention of, responses to, and accountability for mass atrocities. Students enrolled in the lab will pursue a range of projects devoted to (a) strengthening existing tools (such as hybrid accountability mechanisms and commissions of inquiry), (b) developing new capabilities (such as a global atrocities prevention sanctions regime), (c) evaluating the efficacy of past efforts in order to glean lessons learned, and (d) gathering best practices from other states and entities engaged in similar endeavors, all with an eye toward developing concrete recommendations for future action. The client is the Office of Global Criminal Justice in the State Department. Students may have the opportunity to travel to Washington to meet with the client and other government agencies involved in the APB and to present preliminary findings for feedback and additional direction. This is designed as a two quarter policy lab, although students may enroll for a single quarter (WINTER OR SPRING). Course must be taken for at least two units to meet "R" (Research) requirement. Elements used in grading: Class Participation, Written Assignments, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for contact information and submission deadline.

LAW 414F. Policy Practicum: Rethinking Penal Code Enhancements in California. 3 Units.

The Stanford Criminal Justice Center was approached by the Chief Justice of California to advise the judiciary, and indirectly the Legislature, on potential revisions to the California Penal Code. The California prison system remains under federal court control for unconstitutional overcrowding, and the federal court is loath to terminate the injunction without some reassurance of reforms that might prevent the overcrowding from recurring. In the absence of a state sentencing commission, the Chief Justice believes that we at Stanford can perform a fresh new analysis of the parts of the Penal Code that most merit review, in terms of their undue complexity, their arguably disproportionate severity, and the possibility that they are major drivers of the size of the prison population. Enhancements are an incredibly complex part of the Penal Code. Tens of provisions, many of them obscure even to judges, allow for very large upgrades to sentences because of aspects of conduct that are said to aggravate the underlying crime. (Please note that while some of the enhancements under review involve prior crimes, we are not dealing with the Three Strikes Law.) The Chief Justice's administrative arm, the Administrative Office of the Courts (AOC), acknowledges that no one has performed even a statutory analysis of the overall scheme of enhancements, much less any empirical effort to connect them to prison inputs. This will likely be a multi-term Policy Lab that will ultimately gather data to attempt this empirical analysis, but the first term effort is more circumscribed. A team of students will undertake the mapping of the statutory terrain - a charting of all the enhancements in the Penal Code and the many cross-permutations of these enhancements and the crimes to which they attach, and as a first empirical cut, identification of the permutations of crime and enhancements that are most often charged in California. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for contact information and submission deadline. Elements used in grading: As agreed to by instructor.

LAW 414G. Policy Practicum: Energy and Environmental Governance. 1-3 Unit.

Important energy and environmental initiatives cut across many agencies in the federal government, leading to significant policymaking and implementation challenges. Many of the agencies operating in the energy and environmental sphere have overlapping jurisdictions, but they also have different missions, priorities, and resources that push them toward agency-specific policies and programs and away from cross-cutting, government-wide initiatives. The result has been sub-optimal federal implementation of clean energy solutions, responses to climate change, the coordination of regulatory and permitting activity, and the like. In this SPRING QUARTER policy lab (3 units), students will work with the Center for American Progress (CAP) and the Office of Management & Budget in Washington to scope out the governance challenge and to review and analyze administrative tools (e.g., Executive Orders; Presidential Memoranda; inter-agency Task Forces; budget-led initiatives, etc.) that have been used to address it. Students will develop candid assessments of successes and failures and seek to identify common ingredients that may help predict the efficacy of cross-agency efforts. The policy lab will produce a report to CAP that should assist future Administrations in deploying more effective administrative governance tools in the energy and environmental arena. Elements used in grading - Individual and Team Development of Written Analyses and Policy Recommendations . NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 414H. Policy Practicum: Preparing for Transition in Syria: Head of State Exile. 1 Unit.

Syria is in the midst of a devastating civil war, during which almost 200,000 persons have been killed, many more have been injured, and millions have been displaced. One major coalition of Syrian opposition groups, known as the National Coalition for Syrian Revolution and Opposition Forces, or the Syrian National Coalition, seeks to replace the current Syrian government, led by President Bashar al-Assad. As the Coalition plans for a post-Assad transition, it has encountered a number of legal and policy challenges that implicate international law, international relations, and administrative problems. Students in this Practicum will work to support the Public Interest Law and Policy Group PILPG), a pro bono international law firm, which in turn is providing advice to the Coalition on these issues. Students in the Practicum will focus in particular on potential head of state exile arrangements. Many observers imagine that no political solution to the Syria conflict is possible unless arrangements are put in place to permit President Assad to safely depart the country for resettlement outside Syria. A threshold challenge will be to analyze whether any such exile arrangement for President Assad would be legally permissible under international law in light of his alleged responsibility for serious international humanitarian law violations. The project would also explore pragmatic questions, such as how head of state exile arrangements fit into the overall peace negotiation process, and under what circumstances head of state exile is a successful component of a peace agreement. Finally, the project could consider the role that third-party states play in head of state exile arrangements. Elements used in grading: Class Participation, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT: Contact Professor Weiner at aweiner@stanford.edu.

LAW 414I. Policy Practicum: Procedural Reform at the California Public Utilities Commission. 2 Units.

The CPUC is an administrative agency headquartered in San Francisco that regulates electricity, natural gas, telecommunications, water, and transportation. Many of its decisions (both adjudicatory decisions and regulations) are of enormous importance to the California economy. The proceedings to adopt these decisions are often lengthy and complex. The CPUC is interested in working with the Stanford Law and Policy Lab to consider procedural reforms to promote transparency and efficiency in its decisionmaking. There are three areas of potential procedural reform that the Policy Lab might consider. Which of the areas are selected for study will be decided after discussion between the CPUC, the supervising professor, and students enrolled in the practicum. i) Ex parte communication rules. Ex parte communications between outsiders and PUC decisionmakers are prohibited in adjudicatory cases; permitted in ratemaking cases but must be disclosed; and permitted in rulemaking without disclosure. Some CPUC decisionmakers believe that ex parte communications are essential to enable them to properly consider different points of view and to facilitate timely decisionmaking. Others view such communications as inherently unreliable and as undermining the transparency and accountability of the agency. The CPUC is interested in studying this problem and considering amendments to relevant statutes and regulations. ii) Open Meetings law. The Bagley Keene Act requires the CPUC to conduct open meetings when a quorum of its 5 commissioners meet. Bagley Keene has, in practice, effectively prevented the CPUC from properly managing its operations and engaging in useful deliberation. The CPUC and the Little Hoover Commission are considering whether to seek an amendment to Bagley Keene in order to permit more coordination and collaboration among CPUC Commissioners. iii) Evidence rules. The "residuum rule" requires that on judicial review of an agency decision, the record must contain at least some evidence, other than hearsay, to support the agency's findings and conclusions. A recent court decision has said the CPUC is subject to the residuum rule because it has been declared CPUC policy. A variety of evidence (such as studies by other government agencies) often comprise the underpinning of CPUC decisions and may not come under any hearsay exception. As a result, the residuum rule could compromise the efficiency of CPUC proceedings and risk reversal of future decisions on technical evidentiary grounds. The CPUC is interested in investigating potential solutions for remedying this problem. This practicum will carry two units of credit. It will be supervised by Visiting Professor Michael Asimow. Students will be expected to do field work and legal research and write a paper that makes policy proposals in one or more of the three areas discussed above. Enrollment is limited to three students and will be graded under the H/P/R/F system. Grades will be based on the level of a student's participation and the quality of the final paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline. Same as: CPUC

LAW 414J. Policy Practicum: Designing a Children's Coordinating Council. 2-4 Units.

The Lab would work with the San Francisco Mayor's Office, helping create the structure for a new "Our Children, Our Families Council" that was established by a recent amendment to the City's charter. It is tasked with coordinating the City's efforts, and aligning with the SF Unified School District, to better support children, youth and families. In the lab, we would look at other places that have established children's councils in order to see how they are made to work most effectively, examine the current landscape of policy activity related to children, youth and families in SF, and help shape initial structures and plans for the Council. Special Instructions: Not open to 1Ls. Requires early commitment. Minimum number of students required. Elements used in grading: Class Participation, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 414K. Policy Practicum: Veterans Research. 2 Units.

The Stanford Veterans Policy Practicum will explore the possibilities for veterans policy research programs at Stanford. The course is open to Stanford students from all departments, and will focus on researching the current disposition of veterans research at academic and research institutions nationwide, with a particular emphasis on entities and individuals engaged in conducting policy research. Through our research, we hope to identify the key entities, offices, and individuals engaged in veterans-related work, what they have studied and are studying, how they are funded, what models they use to operate and conduct research, how they publish their work, what impact their work has on policy and practice, and any other relevant information. Students interested in particular veterans policy issues are encouraged to study related research programs and all students will develop a strong understanding of veterans policy issues, the body of existing research on veterans issues and the current research framework. Students will present their research and findings in a suitable format, and there will be opportunities for students who choose to continue their work after the term. Elements used in grading: Class Participation, Attendance, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 414L. Policy Practicum: Race, Gender and Prosecution. 3 Units.

This policy practicum will focus on the gender and racial diversity of prosecutors' offices in California. Although police departments have collected and reported data of this kind for decades, no similar information is publicly available for prosecutors, despite the longstanding belief that diversity is important for criminal justice decision makers. Recent controversies around the country about the investigation and prosecution of killings by police officers have only underscored the continued importance of attention to the role that race plays in the administration of justice in our country. Students will request workforce demographic data from the 62 prosecutors offices in CA (58 county District Attorney offices and 4 US Attorney offices) based on the California Public Records Act and the federal Freedom of Information Act, collate and analyze the collected data, and collaborate in drafting a public report describing and analyzing the results. Work on the report will likely involve a literature review on the importance of staff diversity in criminal justice agencies. Students may also research public records laws in other states in anticipation of expanding the study. Elements used in grading: Class Participation, Attendance, Written Assignments. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT INSTRUCTIONS: If you're interested in enrolling in this class, please send your resume, a writing sample, and a one-page statement of your interest and relevant experience to Debbie Mukamal (dmukamal@law.stanford.edu) by March 6, 2015.

LAW 414M. Policy Practicum: Policing and Data Innovation. 2-4 Units.

This course will place students in projects with a local Police Department. Each student will work as part of a team that will communicate and work directly with Department officials. The projects will focus on one of three areas where the Dept. seeks to improve its operations. One project will examine ways the Department might better elicit and receive feedback from community members. Another project will examine how the Dept. might better use the information from the stop data forms that its officers complete. A third project will consider the use of body worn cameras. Each student team will produce a written report and present its findings to Dept officials. Elements used in grading: Class Participation, Attendance, Final Paper. NOTE: Students may not count more than a combined total of eight units of directed research projects and policy lab practica toward graduation unless the additional counted units are approved in advance by the Petitions Committee. Such approval will be granted only for good cause shown. Even in the case of a successful petition for additional units, a student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. For detailed information, see "Directed Research/Policy Labs" in the SLS Student Handbook. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 417. Advanced Criminal Law and Public Policy: A Research Practicum. 3 Units.

This course will provide students with a rare opportunity to engage in real-world crime policy analysis, both as a way to use some of the skills they have learned in previous SLS courses, as well as to help them learn about the political and practical issues involved in constructing public policies. Students will work with a "client" agency or organization in the crime policy sector to carry out a policy-related research and analysis project. We will organize ourselves as a provisional policy think-tank or, if you prefer, a makeshift policy institute or short-term consulting group. As such, this practice-oriented course has both learning and real-world policy reform goals, which makes this course unique within SLS and, I hope, refreshing and compelling. Students will learn how to: Identify and analyze empirical data for policy purposes; develop evidence-based policy proposals; interact with high-level policymakers around politically sensitive issues; and effectively prepare a policy brief and deliver a formal presentation to high-level government officials.

LAW 418. Advanced Criminal Defense Clinic. 2-7 Units.

Advanced clinic allows students who have taken the Criminal Defense Clinic to continue working on cases. Participation in case rounds is required. Advanced clinic may be taken for 2-7 units. Students may not enroll in any clinic (basic or advanced) which would result in them earning more than 27 clinical credits during their law school career. Students must have taken Criminal Defense Clinic (Law 408). Elements used in grading: Class participation, attendance, written assignments and case work. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 419. Three Strikes Project: Criminal Justice Reform & Individual Representation. 3 Units.

This seminar offers a unique opportunity to study criminal justice reform in real time. In this seminar, students will read and discuss a variety of cases and articles, examining the evolution of incarceration and sentencing reform in California as a case study in the history, politics, practical considerations and legal regulation of sentencing and "mass incarceration" in the United States. Students will also have an opportunity to test their skills in the field, assisting in the representation of inmates currently seeking sentence reductions under recently enacted criminal justice legislation. California's criminal justice system has been under turmoil and scrutiny in recent years. The state remains under an order from the United States Supreme Court in its landmark decision, *Brown v. Plata*, to reduce its prison overall population. California began its effort to address prison overcrowding in 2011 by enacting sweeping legislation to "realign" criminal justice resources and shift major responsibilities from the state level to local counties. In 2012, voters passed the Three Strikes Reform Act of 2012 (Proposition 36) by ballot measure, reforming the California's famously harsh recidivist sentencing statute. And this past November, voters extended the reforms by passing the Safe Neighborhoods and Schools Act of 2014 (Proposition 47), reducing several nonviolent crimes to misdemeanors. Past Project students were closely involved in enacting last two reforms and are now engaged in implementing the new sentencing statutes. In addition to studying the law and related criminal justice policy, students will assist with different stages of ongoing litigation on behalf of nonviolent inmates seeking sentence reductions. Students will visit a Project client in prison, conduct factual investigation in the field, and draft petitions on our client's behalf. Students will also contribute to ongoing policy work to ensure the effective implementation of reforms impacting our clients, which include individual prisoners and the NAACP Legal Defense and Educational Fund. The Project is an ongoing, fast-paced organization that depends on the hard work and contributions of law students enrolled in the seminar. This course offers the opportunity to both study the theory behind the law, and to hone practical litigation and advocacy skills in and out of the courtroom. The seminar will meet for 3 hours per week. Students will also meet for 1 hour individually and in teams with Project director Mike Romano each week to discuss their work on their projects. CONSENT APPLICATION: Interested students must apply to enroll in the seminar by sending a one-page statement of interest and resume by email with the subject line "application" to Mike Romano (mromano@stanford.edu). Applications will be considered on a rolling basis. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 423. Advanced Supreme Court Litigation Clinic. 2-7 Units.

The Advanced Supreme Court Litigation Clinic provides an opportunity for students who have already successfully completed the Supreme Court Litigation Clinic to continue their work in the Clinic. Work includes research and drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting on drafts of briefs being filed by lawyers in other cases. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. For a more elaborate description of the clinic's content, see the course description for Course Number 436-0-01. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Students have the option to receive R credit upon instructor approval. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Projects and participation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 424. Secured Credit. 3 Units.

This course surveys the law of raising funds by granting security interests in personal property. Security interests affect the creditor's rights if the debtor is unable to repay the loan; as a result, they significantly affect the terms on which capital can be raised. They affect industries ranging from traditional manufacturing to high tech start-ups; they also play a role in consumer loans (and help explain the movie "Repo Man"). The course focuses primarily on Article 9 of the Uniform Commercial Code, but also considers the federal Bankruptcy Code, the federal intellectual property statutes, and other state and federal laws. Bankruptcy is the first of three courses (the other two are Secured Credit and Payment Systems) dealing with the financing of commercial ventures through means other than the sale of corporate stock. These courses may be taken in any order: neither presupposes any knowledge of the others. Students who cannot take all three should probably prioritize them in the order they are listed—that is, Bankruptcy is the single most important course to take, then Secured Credit, then Payment Systems. Elements used in grading: Final exam.

LAW 425. Statutory Interpretation. 2 Units.

Statutory law is the dominant source of contemporary law, and it is the form of law that lawyers are likely to confront most often in almost any area of practice. It is also an area of vibrant intellectual debate, as scholars, Supreme Court justices, and others debate the methods and aims of statutory interpretation. In this course, students will learn and apply the methods of statutory interpretation, such as the use of legislative history and the canons of construction. The goal will be to prepare students to be lawyers who can effectively identify, craft, and assess arguments and counter-arguments on behalf of a client about how a statute should be interpreted. We will also spend some time on the theoretical debates about textualist, purposive and dynamic interpretation, for example, but primarily to inform students' ability to assess and make arguments about how a statute should be interpreted. No laptops in class, except when designated by instructor. Elements used in grading: Class participation (30%), two 5-7 page (single-spaced) memos involving research, one due mid-quarter and one due at the end of the quarter (35% each).

LAW 427. Local Government Law. 3 Units.

This course will examine the source, scope and limits of local government power. It will consider the relationship of local governments to state and federal government and of the relationship of local governments to the individuals and communities within and around them. Specific themes will include the potential of local governments to be responsive democratic communities, the potential of local governments to become isolated or exclusive enclaves, and the effect of local governments on the metropolitan political economy. Using the casebook *Local Government Law* by Frug, Ford and Barron, the course will examine state and federal doctrine that affects local government, political/ social theory and urban planning/ development literature. Open to first-year Law School students with prior instructor approval. Special Instructions: Students may write papers in lieu of the final exam. Upon instructor consent, students interested in writing should enroll in Law 427-0-02. Students who do not receive a spot in section 02 may enroll in section 01. Elements used in grading: Exam or paper and class participation.

LAW 430. Trusts and Estates. 2 Units.

This course will cover the following topics: intestacy; will execution and revocation; will provisions and interpretations; restrictions on the right to devise; probate; creation, amendment and termination of trusts; revocable and irrevocable trusts; trust provisions; charitable trusts; trust administration; and substitutes and conservatorships. Elements used in grading: Final exam (In-School: open book, essay).

LAW 432. Modern Fossil Fuel Extraction. 2-3 Units.

This workshop seminar will provide students with the opportunity to examine and critique cutting-edge research and work in the field of environment, energy, and natural resources. Although it is open to all students, the seminar is designed especially for those with an interest in the field who wish to stay abreast of current issues, work, and ideas. In each class, an academic expert, policy maker, or practitioner will present their current research or work and engage in a robust discussion. Special Instructions: Grades will be based on class participation and; Option 1 (Section 01, 2 units) - You will receive a course credit if you choose to write reflection/discussion papers. Grading for this option is Mandatory P/R/F. Option 2 (Section 02 or 03, 2-3 units) - Students will have the option, to write reflection/discussion papers and a longer paper for Research (R) credit or Writing (W) credit, with consent of the instructor. If the longer paper involves independent research, then it is eligible for "R" credit. The instructor and student must agree whether the student will receive "R" credit or "W" credit. Students approved for "R" credit will be enrolled in Section 02 for 2-3 units depending on paper length, student approved for "W" credit will be enrolled in Section 03 for 2 units. Grading for this option is H/P/R/F. Elements used in grading: (1) Class participation and reflection/discussion papers (2) Class participation, reflection/discussion papers and longer papers for Writing/Research students. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 434. Contract Design: Principles and Practice. 2 Units.

Although transaction lawyers spend much time drafting contracts and related documents, they can contribute very significant value by designing transactions. Transactions should be tailored to the goals and circumstances of each set of parties, but there are some general principles that can guide the design process. This seminar examines some of these principles: such as the use of embedded options in contracts, of third parties, and of tailored procedures for dispute resolution and enforcement. Some of the readings and discussion will be at a fairly high level of abstraction, drawing on economic and sociological theories of contracting. The rest will closer to ground level, looking at particular types of transactions, such as franchising, construction, joint ventures, or start-up financing. We will also look at the process of innovation in contract design, including the role of lawyers and digital document production. Students will be required to write paper for the seminar, and encouraged to focus on a specific type of transaction. Special Instructions: Grades will be based on (1) short papers for "W" (Writing credit) or (2) an independent research paper for "R" (Research credit). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Short papers or research paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 436A. Supreme Court Litigation Clinic: Clinical Practice. 4 Units.

The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. The course will involve substantial amounts of legal research. The Supreme Court operates on a tight, and unyielding deadline, and students must be prepared both to complete their own work in a timely fashion and to assist one another and the instructors on other cases. The instructors will not ask students to do any kind of "grunt work" that they themselves will not also be handling, but grunt work there will be: proofreading, cite-checking, dealing with the joint appendix, and the like. The nature of the work product means that while students will average thirty hours per week on their case-related work, that work will surely be distributed unevenly across the quarter. Unlike most other courts, the Supreme Court has no student practice rules. Thus, students will not be able to argue cases before the Court. But they will participate in moot courts on their cases, as both advocates and Justices. Each student will also have the opportunity to travel to Washington to see the Court in session, preferably with respect to a case on which the student has worked. Ideally students will already have experience with persuasive doctrinal writing, through a course like Federal Pretrial Litigation or through intensive supervision during their summer jobs or other clinics. Admission to the Clinic is by consent of the instructors. Students will need to submit a writing sample that reflects their facility with doctrinal legal arguments and the name of at least one reference who can comment on their legal analytic ability. - - Special instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter

LAW 436B. Supreme Court Litigation Clinic: Clinical Methods. 4 Units.

The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. The course will involve substantial amounts of legal research. The Supreme Court operates on a tight, and unyielding deadline, and students must be prepared both to complete their own work in a timely fashion and to assist one another and the instructors on other cases. The instructors will not ask students to do any kind of "grunt work" that they themselves will not also be handling, but grunt work there will be: proofreading, cite-checking, dealing with the joint appendix, and the like. The nature of the work product means that while students will average thirty hours per week on their case-related work, that work will surely be distributed unevenly across the quarter. Unlike most other courts, the Supreme Court has no student practice rules. Thus, students will not be able to argue cases before the Court. But they will participate in moot courts on their cases, as both advocates and Justices. Each student will also have the opportunity to travel to Washington to see the Court in session, preferably with respect to a case on which the student has worked. Ideally students will already have experience with persuasive doctrinal writing, through a course like Federal Pretrial Litigation or through intensive supervision during their summer jobs or other clinics. Admission to the Clinic is by consent of the instructors. Students will need to submit a writing sample that reflects their facility with doctrinal legal arguments and the name of at least one reference who can comment on their legal analytic ability. - - Special instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter

LAW 436C. Supreme Court Litigation Clinic: Clinical Coursework. 4 Units.

The Supreme Court Litigation Clinic will expose students to the joys and frustrations of litigation before the Supreme Court of the United States. The bulk of the clinic will be run as a small law firm working on live cases before the Court. Students will participate in drafting petitions for certiorari and oppositions, merits briefs, and amicus briefs, compiling joint appendices, and preparing advocates for oral argument, as well as commenting (the technical term is "kibbitzing") on drafts of briefs being filed by lawyers in other cases. The precise nature of the cases will depend on the Court's docket, but in recent Terms, the clinic's cases have involved federal criminal law and procedure, habeas corpus, constitutional and statutory antidiscrimination and employment law, bankruptcy law, and the First Amendment. Our aim is to involve students as fully as possible in this type of litigation. The Clinic begins with an intensive introduction to the distinctive nature of Supreme Court practice, including the key differences between merits arguments and the certiorari process, the role of amicus briefs, and the Supreme Court Rules. After that, seminar meetings will be devoted primarily to collaborative work on the cases the clinic is handling. While students will be primarily responsible for working in teams on one case at a time, they will also be expected to acquire familiarity with the issues raised in other students' cases and will both edit each others' substantive work and assist each other and the instructors with the technical production work attendant on filing briefs with the Supreme Court. The course will involve substantial amounts of legal research. The Supreme Court operates on a tight, and unyielding deadline, and students must be prepared both to complete their own work in a timely fashion and to assist one another and the instructors on other cases. The instructors will not ask students to do any kind of "grunt work" that they themselves will not also be handling, but grunt work there will be: proofreading, cite-checking, dealing with the joint appendix, and the like. The nature of the work product means that while students will average thirty hours per week on their case-related work, that work will surely be distributed unevenly across the quarter. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities come and time goes on and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter

LAW 437. Water Law and Policy. 3 Units.

This course will study how society allocates and protects its most crucial natural resource -- water. The emphasis will be on current legal and policy debates, although we will also examine the history of water development and politics in the United States. Among the many issues that we will consider are: alternative means of responding to the growing worldwide demand for water; the appropriate role for the market and private companies in meeting society's water needs; protection of threatened groundwater resources; environmental limits on water development (including the Endangered Species Act and the "public trust" doctrine); Indian water rights; and interstate and international disputes over water. Students will be expected to participate actively in classroom discussions. Elements Used in Grading: Class participation, attendance and final exam.

LAW 439. Mind the Gap: Exploring Selected Areas of American Inequality. 2 Units.

This course will explore the equity of resource distribution and opportunity in the United States in the 21st century. We will explore and evaluate the common critique that the contemporary structure of various entities (such as schools, courts, and the legislature) contributes to increased inequality. Some of the likely topics to be covered in class, along with their concomitant impact on equity, include: language and identity; trade-offs between equality of opportunity and equality of outcome; stereotype threat; felon disenfranchisement; labor market inequality; urban vs. rural poverty; the erosion of mental health services; and how factors such as race, ethnicity, gender, and income can contribute to academic achievement gaps. The class will explore the substantive issues related to equality and inequality as well develop written and oral skills for advocacy, including drafting op-eds, position papers, and other written materials and preparing for oral presentations. Each student will be responsible for leading at least one class at San Quentin State Prison to a mixed class composed of Stanford and San Quentin prisoner students. Students will be also be expected to write weekly reflection papers in response to the assigned reading and to attend and participate heavily in each class discussion; they will also be expected to edit and provide individual feedback on the written assignments of the San Quentin students. In addition, attendance at a one day training conducted by the Prison University Project is mandatory. Class will meet on Fridays from 3:00 - 5:00pm. Grades will be based on a combination of active class participation and preparation, consistent attendance, and several written assignments. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form to the instructors; the form is available on the SLS Registrar's Office website (See Registration and then Law Students). See Consent Application Form for submission deadline.

LAW 441. European Legal History. 3 Units.

This seminar will explore major topics in European legal history from ancient Rome through the present: Roman law, canon law, feudalism, sixteenth- and seventeenth-century constitutionalism, modern natural law, the age of absolutism and the rise of the centralized, administrative state, the structure of Old Regime law and society and the radical changes brought about by revolution, the German historical school of jurisprudence, and the rise of the European Union and a new culture of international human rights. In exploring these topics, we will focus on certain core, recurring themes that continue profoundly to shape the world in which we live. These include the sources and nature of law (positive law vs. custom), the relationship between law and society, and the relationship between law and history. Classroom discussion will focus on selected primary- and secondary-source texts that we will read as a group. The course will be limited to 12 SLS students with 10 additional slots held for students enrolling in HISTORY 238E/338E. Elements used in grading: Brief analytical paper (6-8 pages, worth 35% of the total course grade) and final exam (worth 65% of the total course grade). Cross-listed with History (HISTORY 238E & HISTORY 338E).

LAW 444. Thinking Like a Policy Analyst: Introduction to Policy Analysis. 2 Units.

This seminar is designed primarily for students working on Policy Lab projects, but will be open to other students as well subject to a total enrollment of 15 students. It will be offered both the Autumn and Winter quarters during 2013-14, with any individual student eligible to enroll only in one quarter. You already know how to think like a lawyer, but if you are interested in policymaking, policy advocacy or policy research; whether in the public, nonprofit, or corporate sector; you need to know how to think like a policy analyst as well. This seminar, designed primarily for students beginning or continuing in Policy Lab practicums, has three purposes. First, it introduces students to the ways in which policy analysts approach public policy problems and controversies, focusing on perspectives that distinguish policy analysis from traditional legal analysis. Second, it introduces students to the tools of policy analysis, including approaches to collecting and analyzing information. Third, it provides hand-on lessons on communicating with policy makers orally and in writing. There is no text for the course. Readings for the course will include examples of policy analyses conducted to inform public policymaking. Students engaged in policy practicums will use their practicum experience as a basis for assessing the value of various policy analytic perspectives and research approaches. Students not engaged in policy practicums will pick a policy problem they are interested in and develop a plan for conducting a policy analysis relevant to this problem. Elements used in grading (Autumn): Attendance, class participation, three short reflection papers. Elements used in grading (Winter): Course paper and class participation. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 447. Communications Law: Broadcast and Cable Television. 3 Units.

Most people watch television on a regular basis (although not necessarily on TV). Television entertains, delivers the news, and provides an important forum for debating political issues. Focusing on communications law and first amendment law, the course will discuss how and why regulation shapes what we see on TV, and how it attempts to ensure that television can fulfill its functions for society. For example, why is cable television so expensive? Why can comedians swear on cable TV, but not on broadcast TV? Should regulators care as much about violence as they do about indecency? Can we trust the market to give the audience what it wants? Will the market provide content that is in the public interest, such as local news or educational programming, or do regulators need to intervene? Should we care if media outlets are increasingly owned by a few small conglomerates? And how does the Internet affect the need for ownership regulation? The course mostly focuses on the U.S., but highlights developments elsewhere where appropriate. Special instructions: Students may take Communications Law: Internet and Telephony and Communications Law: Broadcast and Cable Television in any order (neither is a prerequisite for the other). There are no prerequisites for this course. No technical background is required. Elements used in grading: Class participation, attendance, final exam.

LAW 448. Contemporary Issues in Constitutional Law. 2 Units.

This is an advanced constitutional law seminar for students who have already taken the introductory Constitutional Law course. The seminar will provide an opportunity for in-depth discussion of competing theories of constitutional interpretation, the role of the Supreme Court in our political system, and analysis of judicial behavior. Each week, these themes will be examined through the lens of a current "hot topic" in constitutional law - for example, the Affordable Care Act, affirmative action, the Second Amendment, the death penalty, executive power in the war on terrorism, campaign finance, immigration, same-sex marriage, and other topics. This is not a "spectator" class; all students will be expected to participate actively in class discussion each week. This is a good seminar for students interested in clerking or pursuing academia.

LAW 451. European Union Law. 2-3 Units.

The U.S. and the European Union (which comprises 28 European states and 500 million people) have the largest bilateral trade relationship in the world. About 60% of the world's GDP is generated on the Transatlantic Marketplace. U.S. companies rely on the EU market for more than half of their global foreign profits, and U.S. investment in the EU is currently three times greater than U.S. investment in the whole of Asia. The new Transatlantic Trade and Investment Partnership (TTIP), a free trade agreement currently under negotiation between the EU and the U.S., will further strengthen substantially the economic ties between the EU and the U.S. in the near future. In the past few years, even several proposed mergers between U.S. companies have been killed solely by the EU antitrust authorities, although approved by the U.S. antitrust regulators. In recent years, this has tremendously heightened the need for a sound understanding of the legal system of the EU, especially for business and technology lawyers. Responding to this need, this course will, first, examine the internationally unique legal system of the EU as such, as it is applicable to any field of substantive and procedural EU law. Thus, we will look at the legal nature and the different sources of EU law and its relationship with the national law of the EU Member States. We will cover the relevant EU law enforcement actions including state liability issues as well as the jurisdiction of both European Courts and relevant remedies in national courts. Secondly, we will explore the legal framework of doing business in the EU, from the perspective of a business entity as an internationally operating actor in a European business environment. In this context, we will focus on the most essential fields of EU business law, i.e. (a) the four fundamental economic freedoms of the European Internal Market for goods, services, capital and persons, (b) EU competition/antitrust law, as well as (c) EU e-commerce law. Special attention will be given to the question how companies established outside the EU can efficiently use EU business law to pursue their interests in the EU. Additional education and research opportunities for students in EU law, building on this course, can be found in the course syllabus. Special Instructions: Students have the option to write a research paper in lieu of the response papers (01). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, response papers or research paper.

LAW 453A. State-Building and the Rule of Law Workshop: Advanced. 3 Units.

The Advanced Workshop on State-Building and the Rule of Law builds on the State-Building and Rule of Law Seminar offered in the fall quarter. Enrollment is by consent and limited to students who successfully completed the fall seminar and are members of one of the three Rule of Law Projects: the Afghanistan Legal Education Project (ALEP), the Rwanda Law and Development Project (RLDP), or the the Iraq Legal Education Initiative (ILEI). Project members will undertake research, writing, and programmatic responsibilities to support the work of their respective local partners in Afghanistan, Rwanda and Iraqi Kurdistan. Elements used in grading: Class Participation, Attendance, Written Assignments. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012. Same as: ALEP

LAW 453B. State-Building and the Rule of Law Workshop: Advanced. 3 Units.

The Advanced Workshop on State-Building and the Rule of Law builds on the State-Building and Rule of Law Seminar offered in the fall quarter. Enrollment is by consent and limited to students who successfully completed the fall seminar and are members of one of the four Rule of Law Projects: the Afghanistan Legal Education Project (ALEP), the Rwanda Law and Development Project (RLDP), the Timor Leste Legal Education Project (TLLEP), or the Iraq Legal Education Initiative (ILEI). The ALEP team will write textbooks and develop curriculum for, and provide program support to, the Department of Law at American University of Afghanistan. The RLDP team will conduct research and analysis culminating in a background paper on statutory interpretation for the Rwandan Law Review Commission. The TLLEP team will write textbooks and teaching manuals for use at the National Law School of Timor-Leste and the judicial training center. The ILEI team will write textbooks and materials to begin the process of building out a law program at the American University of Iraq, Sulaimani. Automatic grading penalty waived for writers. Writing (W) credit is for 3Ls only.

Same as: BLPP

LAW 453C. State-Building and the Rule of Law Workshop: Advanced. 3 Units.

The Advanced Workshop on State-Building and the Rule of Law builds on the State-Building and Rule of Law Seminar offered in the fall quarter. Enrollment is by consent and limited to students who successfully completed the fall seminar and are members of one of the four Rule of Law Projects: the Afghanistan Legal Education Project (ALEP), the Rwanda Law and Development Project (RLDP), the Timor Leste Legal Education Project (TLLEP), or the Iraq Legal Education Initiative (ILEI). The ALEP team will write textbooks and develop curriculum for, and provide program support to, the Department of Law at American University of Afghanistan. The RLDP team will conduct research and analysis culminating in a background paper on statutory interpretation for the Rwandan Law Review Commission. The TLLEP team will write textbooks and teaching manuals for use at the National Law School of Timor-Leste and the judicial training center. The ILEI team will write textbooks and materials to begin the process of building out a law program at the American University of Iraq, Sulaimani. Automatic grading penalty waived for writers. Writing (W) credit is for 3Ls only.

Same as: TLLEP

LAW 453D. State-Building and the Rule of Law Workshop: Advanced. 3 Units.

The Advanced Workshop on State-Building and the Rule of Law builds on the State-Building and Rule of Law Seminar offered in the fall quarter. Enrollment is by consent and limited to students who successfully completed the fall seminar and are members of one of the three Rule of Law Projects: the Afghanistan Legal Education Project (ALEP), the Rwanda Law and Development Project (RLDP), or the the Iraq Legal Education Initiative (ILEI). Project members will undertake research, writing, and programmatic responsibilities to support the work of their respective local partners in Afghanistan, Rwanda and Iraqi Kurdistan. Elements used in grading: Class Participation, Attendance, Written Assignments. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012.

Same as: ILEI

LAW 453E. State-Building and the Rule of Law Workshop: Advanced. 3 Units.

The Advanced Workshop on State-Building and the Rule of Law builds on the State-Building and Rule of Law Seminar offered in the fall quarter. Enrollment is by consent and limited to students who successfully completed the fall seminar and are members of one of the three Rule of Law Projects: the Afghanistan Legal Education Project (ALEP), the Rwanda Law and Development Project (RLDP), or the the Iraq Legal Education Initiative (ILEI). Project members will undertake research, writing, and programmatic responsibilities to support the work of their respective local partners in Afghanistan, Rwanda and Iraqi Kurdistan. Elements used in grading: Class Participation, Attendance, Written Assignments. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012.

Same as: RLDP

LAW 455. Energy Law. 3 Units.

The supply of a reliable, low-cost and clean energy supply for the United States is a key determinant of current and future prosperity. Perhaps as a result, electricity suppliers are among the most heavily regulated of large firms. This regulation is composed of a complex patchwork of overlapping state and federal regulation that is constantly evolving to meet emerging challenges to the energy system. In this course, students will acquire a basic understanding of the law of rate-based regulation of utilities. We will then examine the history of natural gas pipeline regulation in the United States, concluding with the introduction of market competition into US natural gas markets and the advent of shale gas. Next, we will cover the basics of the electricity system, including consumer demand, grid operations, and power plant technologies and economics. We will then revisit cost of service rate regulation as it has been applied in the electricity context. Next we will examine reform of both rate-regulated and wholesale market-based structures, focusing on various attempts to introduce market competition into aspects of the industry and to strengthen incentives for utility investment in energy efficiency. Finally, students will examine various approaches to subsidization of utility scale renewable energy and the growth of distributed energy. Throughout, the course will focus on the sometimes cooperative, sometimes competing, but ever evolving federal and state roles in regulating the supply of electric power. Students will write two 1000 word response papers to questions related to readings and outside speakers in addition to taking a final exam. Elements used in grading: Class participation (20%), written assignments (40%), and final exam (40%).

LAW 458. Health Law: The FDA. 3 Units.

This course will examine the Food and Drug Administration. It will focus largely on the FDA's regulation of drugs and biologics, but will also cover its regulation of medical devices, nutritional supplements, and, to some extent, its jurisdiction over special legal, social, and ethical issues arising from advances in the biosciences. Special Instructions: The class is open to all law or medical students. Graduate students may be admitted from other parts of the University by consent of the instructor. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Elements used in grading: Attendance, class participation, and final exam (In-school, open book). (Cross listed with Health Research and Policy (HRP 209).

LAW 459. Intellectual Property and Antitrust Law. 3 Units.

This is an advanced seminar focusing on antitrust law as it applies to the creation, licensing, and exercise of intellectual property rights. At least one IP or antitrust class is a prerequisite, and ideally both. Papers will be due before the Law School deadline. Draft papers will be due in time for student presentations. Elements use in grading: Class participation and final paper.

LAW 461. Foreign and International Legal Research. 2 Units.

This course will introduce students to concepts and skills used in international and foreign law research. Students will learn to construct successful research strategies for questions of foreign law, public international law, and private international law. Both primary and secondary authority will be covered in various formats. Students will understand how different legal systems and cultures influence the use and assessment of legal resources. The course will also equip students to critically evaluate current and future research tools. No pre-requisites or foreign language ability required. Advanced degree and non-law students are welcome to enroll in the course. Learning Outcomes - *Identify primary and secondary sources of materials on international law and foreign legal systems. *Develop effective research strategies using online and print resources. *Critically evaluate research tools for international and foreign legal research. *Appreciate cultural and historical influences on the development of legal systems and their relevance to legal research. *Understand the role of language and translation tools in researching foreign and international law. Elements used in grading: Class participation & attendance (10%), written assignments (70%) and final paper (20%).

LAW 465. Venture Capital I. 3 Units.

This course introduces the operation of the venture capital industry from both a theoretical and practical perspective. The course follows the start-up process from initial formation of a new High-Tech venture through its private capitalization, the navigation of typical operational or strategic hurdles/milestones, and potential exit through merger or initial public offering. It analyzes each step in the process from perspective of the entity, of the founder-employees, and of the venture backers. It also considers the incentive mechanisms and control structures used at each step of the transaction (and alternatives to these structures), with a focus on both the underlying economic and financial theory, as well as on pragmatic considerations in structuring the transactions. Students are required to complete a term sheet negotiation exercise, write a short paper on a current topic relevant to the industry (topics to be distributed), and and sit for an examination. Special Instructions: modest background in financial analysis or Excel, such as might be obtained in QM finance (Law 467), is a prerequisite for this course. Elements used in grading: Class assignments and final exam (In-School, Essay and Objective, closed book).

LAW 467. Quantitative Methods: Finance. 2 Units.

This course covers some of the central ideas in modern finance with a particular focus on the time value of money. Topics include present value and future value analysis, discounting, net present value, "IRR", bond valuations, and a critique of other project valuation methods. Along with a brief overview of "market fundamentals" and an introduction to the vocabulary of modern "popular finance" (as found in such publications as the Wall Street Journal), additional topics will include diversification, the risk-return trade-off, portfolio performance measurement, and market efficiency. Issues of arbitrage and tax considerations will be considered as time allows. Each topic is introduced with an emphasis on applications in legal settings. The course is intended to provide students with very little or no background in finance with the essential vocabulary, tools, and insights to spot "finance related issues" in various legal practice areas. The problem sets, class discussions, and applied hypotheticals should allow students to develop the skills necessary to ask the right questions when confronted with problems that involve elements of modern finance. Special Instructions: You are expected to have little or no background in finance or related areas prior to taking this course. Required math skills are very modest (low-level high school algebra, at most) and students will rely mainly on the use of Excel and/or financial calculators for simple calculations. Elements used in grading: Class participation, written assignments and final exam (In-School: closed book, objective).

LAW 468. Statistical Inference in Law. 3 Units.

Drawing an inference from quantitative evidence lies at the heart of many legal and policy decisions. This course provides the tools, concepts, and framework for lawyers to become sophisticated consumers of quantitative evidence and social science. Unlike traditional statistics courses, it will be taught using substantive case law as a springboard for considering quantitative evidence. The class is geared with students with no background, drawing only on high school algebra. Elements used in grading: Class participation, attendance, and assignments. Attendance is required to retain a seat in class.

LAW 471. Constitutional Law: Freedom of Speech. 3 Units.

A survey of First Amendment law, including a close study of text, the drafting and ratification process, and the development of modern First Amendment theory. The course will explore the multiple participants in the speech process, including the speaker, hearer, publisher, target and regulator, and ask why the law favors certain participants over others. The evolution of Supreme Court case law will be analyzed historically, with special emphasis on the relationship between free speech and democracy..

LAW 472. Externship Companion Seminar. 2 Units.

The practice of public interest law - whether in the criminal or civil context or a government or non-profit setting - requires an attorney to consider a host of issues distinct from one in private practice. How should decisions be made about priorities with limited resources? Where an organization has a broad social justice mission, where does litigation on behalf of individual clients or a group of clients fit in? Prior to initiating litigation or advancing a defense, what quantum of evidence should an attorney require? What role, if any, should an attorney's personal beliefs play in a course of representation? Through directed supervision of their externships in prosecutors', public defenders' or civil non-profit and government offices, as well as participation in weekly seminars, students will evaluate such questions in the context of their practical experience. Students are required to write weekly reflection papers of 3 to 5 pages and a 15 page paper at the end of the course. Elements used in grading: Attendance, class participation, weekly reflection papers and final reflection paper.

LAW 473. Externship, Special Circumstances. 12 Units.

Following approval of a student's application, the Special Circumstances Externship Program (SCEP) allows second and third year students to work for credit for one quarter in non-profit public interest, public policy, and government agencies outside of the Bay Area. Standards for approval of a SCEP placement are similar to those for Directed Research proposals, although they are higher. Because there is a preference for local civil and criminal SEP placements (see Law 474 and Law 475), your SCEP proposal must explain (a) how it meets the goals of the externship program; and (b) why a similar project cannot be accomplished in one of the placements offered in the Bay Area. SCEP placements outside the Bay Area must be full-time. Students wishing to undertake a SCEP placement obtain the supervision of a faculty member who will oversee their externship and an accompanying tutorial. For a full description of the SCEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0> . Students wishing to enroll in an externship must meet the various requirements that are set out in the Handbook. Interested students should speak to Jory Steele, Lecturer in Law and Director of Externship and Pro Bono Programs at jsteele@law.stanford.edu. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of three to five pages, and a final reflection paper of a length to be determined by your faculty supervisor.

LAW 473X. U.S. SEC Law Student Observer Program and Securities Regulation Seminar. 3 Units.

The U.S. SEC, Law Student Observer Program, is a one-semester volunteer/for-credit externship position offered to current law students selected by representatives of the SEC. The program provides exposure to the workings of the SEC and to the regulation of securities markets. Students are assigned to work with SEC staff members on a broad range of projects, including the investigation of industry and issuer practices, litigation of civil enforcement actions, and the drafting of proposed statutes and rules. In addition to working 40-hour weeks, students attend a weekly securities regulation seminar that includes lectures by SEC Commissioners and senior staff, and prominent members of the private bar. The topics for discussion at this seminar are chosen to complement the materials covered in basic securities regulation courses offered at the participating law schools.

LAW 474. Externship, Civil Law. 5-12 Units.

Following approval of a student's application, the Civil Standard Externship Program (SEP) allows second and third year students to obtain academic credit for externing in select non-profit public interest, public policy, and government agencies in the Bay Area for one quarter. The Civil SEP allows students to (a) gain experience in a field where a clinical course is not offered, or (b) pursue advanced work in an area of prior clinical practice. Placements can be either full time (40 hours per week) or part time, but no fewer than 16 hours per week. Because of other Law School requirements, students in their final quarter are limited to part-time externships of no more than 16 hours per week. For a complete description of the Civil SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0>. Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Interested students should speak to Jory Steele, Lecturer in Law and Director of Externship and Pro Bono Programs at jsteele@law.stanford.edu. Students participating in the Civil SEP must also concurrently enroll in the Externship Companion Seminar. In some cases, where other seminars would be more appropriate companion courses for a student's placement, the student can request to substitute a different course in the application process. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of three to five pages, as well as a final, longer reflection paper.

LAW 475. Externship, Criminal Law. 5-12 Units.

Following approval of a student's application, the Criminal Standard Externship Program (SEP) allows second and third year students to work for credit in criminal prosecutors' and defenders' offices in the Bay Area for one quarter. Placements can be either full time (40 hours per week) or part-time, but no fewer than 16 hours per week. Because of other Law School requirements, students in their final quarter are limited to part-time externships of no more than 16 hours per week. For a complete description of the Criminal SEP, students should read the Externship Handbook, which is available from the Levin Center for Public Service and Public Interest Law or online at: <http://www.law.stanford.edu/organizations/programs-and-centers/john-and-terry-levin-center-for-public-service-and-public-interest-law/externship-program-0>. Students wishing to enroll in an externship must meet various requirements that are set out in the Handbook. Interested students should speak to Jory Steele, Lecturer in Law and Director of Externship and Pro Bono Programs at jsteele@law.stanford.edu. Students participating in the Criminal SEP must also concurrently enroll in the Externship Companion Seminar. In some cases, where other seminars would be more appropriate companion courses for a student's placement, the student can request to substitute a different course in the application process. Grading Elements used: Full participation and attendance, satisfactory evaluation by field placement supervisor, weekly reflection papers of three to five pages, and a final, longer reflection paper.

LAW 476. Advanced Criminal Practice. 3 Units.

In this seminar, we will discuss the most pressing current issues and cases across the criminal justice spectrum, from arrest through appeal and collateral attack. Our focus will be on the practice of criminal law -- how prosecutors and defense lawyers actually develop and use the latest cases and arguments. The subjects that we will take up will include, for example, ineffective assistance and the death penalty, sentencing, the "drug court" development, public prosecution and white collar crime. Each student will choose a case from the Supreme Court's current criminal docket and write about the issues that either arose or should have arisen during any of the stages of the case. Understanding these issues will require a careful investigation of the case history and the way it is developed for the Supreme Court. Particular attention will be paid to the ethical issues that arise in practice. Our text for the course will be pre-assigned cases from the current Criminal Law Reporter, along with articles and litigation materials in connection with a particular topic. Students should use the class to develop the habit of keeping up with the constantly evolving law in the specialized fields of criminal law and criminal procedure.

LAW 477. Intellectual Property: Patent Litigation. 3 Units.

This patent litigation course offers students the opportunity to gain experience in oral and written advocacy, while becoming familiar with the most prevalent real world issues in such cases. It does so by simulating a patent action from complaint filing to appeal. Students take turns presenting mock oral arguments, which are held each class. Sitting Federal judges will critique student arguments and provide instruction during several classes. Hot issues in patent law are explored as litigation skills are developed. While not a prerequisite, completion of Introduction to Intellectual Property or Intellectual Property: Patents, is preferred. Elements used in grading: Elements used in oral arguments: papers.

LAW 478. IP Advanced Topics: The Future of Online Music and Online Video. 3 Units.

The online music and online video industries are undergoing profound changes. In online video, the rise of Netflix and Hulu are just two examples of this trend. This class will explore how the different technical, economic or regulatory decisions we make today will interact to shape the future of these industries, and what the different options under consideration will mean for specific companies in this space. Class sessions will consist of a mix of guest lectures by industry leaders and class discussions of the assigned readings. Throughout the class, the students will work in interdisciplinary groups on problems facing specific companies in the online and online video industry today. For the final project, the groups will address specific policy problems from the perspective of a specific company, with different groups representing companies on different sides of an issue.

LAW 479. International Law. 4 Units.

This course examines what diplomats and scholars once referred to as the "law of nations," as it has matured and evolved to adapt to today's complex and interdependent world. We will begin by considering fundamental questions about the nature of international law - the sources of international law (including treaties), the subjects of international law, the origins of international law in the sovereign equality of states, and the absence of mechanisms for the authoritative interpretation or enforcement of international law. We will explore core international law concepts and issues such as state responsibility and the bases upon which states may exercise jurisdiction. We will then examine the operation of international law in the U.S. legal system. In the second half of the course, we will look at a series of international law topics and issues, including some of particular interest today, such as mechanisms for the settlement of international disputes, international human rights law, the law governing coercion and the use of armed force, the law of armed conflict, international environmental law, and the emergence of a body of international criminal law and international criminal tribunals for its enforcement. Throughout, we will consider current issues and problems arising in the international arena and the extent to which international law actually affects the behavior of states. This course provides a general grounding in public international law and a foundation for more advanced or specialized international law courses. Elements used in grading: Class participation, optional paper, and final exam.

LAW 480. Law and Biosciences: Genetics. 3 Units.

This seminar will focus on ethical, legal, and social issues arising from advances in our knowledge of human genetics. These include forensic uses of genetics, genetic testing, widespread whole genome sequencing, the consequences of genetics for human reproduction, and the ethics of genomic biobanks for research, among other things. Students are required to write a research paper for this course. This class is crosslisted with HRP221. Special Instructions: The class is open to all law students and to other graduate students with consent of instructor. Substantial class attendance is required; in addition, the quality of class participation will play a small role in grading. Students will be required to submit an independent research paper. Elements used in grading: Class participation, attendance and final paper.

LAW 481. Communications Law: Internet and Telephony. 4 Units.

New developments in Internet and other technology enable new forms of innovation, content production and political participation that have the potential to significantly transform our economy, society and democratic system. This transformation will not happen automatically. Technical, legal and economic choices will affect whether the Internet can realize its potential or not. Communications law - the law that governs both the physical infrastructures for communications services such as cable and telephone networks as well as the communication services which are provided over these infrastructures - has become one of the most important arenas in which choices affecting the future of the information society are made. The debates over network neutrality (whether network providers should be able to restrict the applications and content that their Internet service customers can access over the network) or the right ways to foster broadband deployment are examples of this trend. At the same time, the Internet's ability to support a variety of different communications services such as telephony, information services or video over the same physical network infrastructure challenges the existing communications law, which is based on the assumption that different physical infrastructures offer different communications services. What are the features of the Internet that are at the core of its economic, social, cultural and political potential? What can regulators and legislators do to allow the Internet to realize this potential? And how can they allow applications like Internet telephony and traditional telephony to coexist without giving one an unfair advantage over the other? The course will address how current law deals with these questions, but also explore what regulators and legislators may do to better deal with the challenges posed by the Internet. The course is mostly focused on the US, but highlights developments elsewhere where appropriate. Special Instructions: Students may take Communications Law: Internet and Telephony and Communications Law: Broadcast and Cable Television in any order (neither is a prerequisite for the other). There are no prerequisites for this course. No technical background is required. Elements used in grading: Class participation, attendance, final exam.

LAW 483. Deal Litigation Seminar. 2-3 Units.

This seminar is designed as an introduction to mergers and acquisitions litigation. The course aims to provide both a practical and doctrinal perspective on M&A-related litigation and will rely heavily on readings and issues derived from practice in the Delaware courts where much contemporary deal litigation occurs. Students will be asked to apply cases and legal principles in various practical situations that may arise in a transactional litigation practice. Familiarity with basic corporate law principles is assumed. Classes and readings. The first segment of the course will introduce basic doctrinal principles of M&A law and provide an introduction to the litigator's role in the transactional setting. The remaining sessions will revolve around three detailed M&A case studies, with seminar members divided into group roles. The first week of each case study will involve the negotiation and structuring of an M&A transaction. The second week will involve litigation relating to the transaction. Reading for these sessions will include case scenarios, supporting materials, and additional relevant case law and articles. The attendance and active participation of seminar members is essential. Readings for all classes will be provided in spiral-bound volumes distributed in class. Written assignments and grading. Students will be expected to (i) write a final paper; (ii) prepare two additional short written assignments associated with the case study assignments (such as marking up draft documents or preparing court papers); and (iii) participate actively in class. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Students taking the seminar for R credit can take the seminar for either 2 or 3 units, depending on the paper length. Corporations (Law 242) is a prerequisite. Elements used in grading: Attendance, class participation, written assignments and paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 487. The Evolution of Finance. 3 Units.

This course discusses the financial crisis of 2008-9, developments since that time, and the future of finance. We consider how regulation, technology, and the changing world economy will create challenges and opportunities. We have guest speakers for about half of the classes. The list changes from year to year, but 2013's speakers included Tanya Beder, Sue Decker, Jacob Goldfield, Tom Kempner, Ana Marshall, Vincent Reinhart, Larry Summers, and Kevin Warsh. Elements used in grading: Group Project/Paper. Mandatory attendance. Absences impact grade. Participation 25% Project/Paper 75%. Cross-listed with Graduate School of Business (MGTECON 343).

LAW 488. Legal Aspects of Autonomous Driving. 2-3 Units.

Self-driving cars and trucks are rapidly entering the mainstream. They raise key legal and policy questions, which this seminar explores through source materials (from case law to treaties), academic scholarship, and industry speakers. Topics include state and federal regulation, public and private standards, liability and insurance, privacy and security, and social norms. Because the course is intended to meaningfully advance—rather than to merely present—legal analysis of this emerging technology.

LAW 490. Reproductive Justice: Law, Policy and Advocacy. 2 Units.

This course offers an opportunity to explore constitutional doctrines on childbearing and to consider contemporary strategies for advancing reproductive justice. We will examine federal court decisions defining reproductive rights, including cases involving conflicts between reproductive freedom, religious liberty and freedom of speech. We will consider the limits of federal constitutional protection for vulnerable women's reproductive choices (prisoners, teenagers, women who need public assistance and soldiers). In light of those limitations, we will consider alternative strategies to strengthen reproductive freedom: state constitutional litigation, legislation, administrative advocacy, communications, organizing and initiative campaigns. Each of these will be paired with a current reproductive rights controversy, such as the federal ban on abortion in military facilities, insurance coverage of contraception, teenagers access to confidential reproductive health care, shackling of pregnant inmates and abstinence-only sex education. Reproductive justice advocates, including litigators, communications experts and empirical health researchers will make guest appearances. The success of this course depends on lively class participation. Students will write a short piece on each week's topic using a different advocacy style (such as a legislative fact sheet, blog post, initiative ballot argument, op-ed article) and will make oral presentations in class.

LAW 491. Myth, Law, and Practice. 2 Units.

Collective myths from a variety of traditions and cultures capture enduring psychological truths about human choices and the human condition. Lawyers at various stages in their careers have their own personal myths, sometimes conscious and sometimes not. These personal myths embody key tendencies that determine or heavily influence each lawyer's personal and professional path. This course examines both collective myths that capture relevant archetypal human tendencies and the personal myths along with the associated histories of individual lawyers. It offers a space and time for each student to consider his or her own personal and professional direction through the course materials, class interactions, and a series of reflection papers. The course benefits from the collaboration of Michael Guasperini, a Ph.D. mythologist and lawyer whose primary vocation is working intimately with lawyers and firms during periods of personal and institutional transition. Mr. Guasperini has deep experience with the personal lives of hundreds of lawyers at various ages and levels of professional development. Elements used in grading: A series of reflection papers totaling at least 18-pages. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 492. Multi-Party Litigation. 3 Units.

This introduction to aggregative litigation will cover joinder of claims and parties, class actions, and multidistrict litigation, as well as related topics such as preclusion and brief coverage of remedies and choice of law. The focus will be both doctrinal and practice-oriented, and we will also consider broader questions of how the civil justice system should respond to mass harms as well as proposals for reform. This course is strongly recommended for students planning a practice in private or public civil litigation, managing or supervising litigation, or a judicial clerkship. It provides a basis for advanced courses such as complex litigation. Elements used in grading: Class participation, assignments and final exam. This course is open to first-year Law School students.

LAW 493. Entrepreneurship, Leadership and the Law Practicum. 2 Units.

Starting or advising a growing social enterprise requires on-the-ground experience. This class brings theory and case studies examined in Entrepreneurship, Leadership and Law in Social Enterprise to use through placements as consultants with local social enterprises. Students will make connections in the community; learn creative and hands-on problem solving skills; teamwork and communication skills; and be inspired to innovate and break away from the traditional lawyer path.

LAW 496. Legal Studies Workshop. 1 Unit.

The Legal Studies Workshop is designed to support students working on a piece of legal scholarship with an eye to publication. The workshop will meet every other week throughout the academic year. Students may sign up for any combination of quarters, and will receive one credit for each quarter they are enrolled. Each session will be devoted to presentations of one or two student works-in-progress. Every student is expected to present his or her own work at least once in the academic year, and to provide constructive oral feedback on others'. Attendance is mandatory (except of course for extenuating circumstances). Other faculty will participate on an informal basis when their expertise will be helpful for a particular paper. There are no written requirements for the course, and no requirement that the work presented be original to the Workshop. Students may wish to use the Workshop as an opportunity to expand on seminar papers or pursue independent research projects for which they are getting separate credit through one of the research tracks (e.g., directed research, dissertation). Whether students are working on a new project or revising an old, the expectation is that students will develop their topics independent of the course. Students who would like to participate in the Workshop but feel they need help in developing a workable research topic should consult Profs. Meyler and Ho ahead of time. Elements used in grading: Class participation and attendance.

LAW 498. Designing Liberation Technologies. 3-4 Units.

Small project teams will work with selected NGOs to design new technologies for promoting development and democracy. They will conduct observations to identify needs, generate concepts, create prototypes, and test their appropriateness. Some projects may continue past the quarter towards full-scale implementation. Taught through the Hasso Plattner Institute of Design at Stanford (d.school.stanford.edu). This course is cross-listed with the Computer Science and Political Science Departments (Same as CS 379L and POLISCI 337T). Enrollment is limited to a total of 16 students (under all course numbers combined), by consent of instructor. Students may enroll for 3 credits or 4 credits with additional assignments. Consent Application: To apply for this course, students must complete and submit a consent application available at <http://bit.ly/libtech2014>. See Consent Application Form for submission deadline and additional course information. Elements used in grading: Attendance and participation in all phases of the team project, from conception through execution. (Cross-listed as CS 379L and POLISCI 337T).

LAW 499. Intellectual Property: Trade Secrets. 3 Units.

Industry increasingly emphasizes technology as a means of achieving efficiency and competitive success. The law must provide an environment that encourages commercial investment in research, but that also protects an individual's right to change employment or compete directly with a former employer. This course is designed to explore the theoretical and practical aspects of protecting information as a trade secret. It will examine the basic legal doctrines and social issues which define this field, and will address the process of trade secret litigation. It will focus on a number of topics of current interest, such as state and federal legislation, "inevitable disclosure," non-competition agreements, corporate programs to protect trade secrets, and criminal sanctions." Elements used in grading: Class participation and final exam.

LAW 500. Modern American Legal Thought. 3 Units.

The course is a survey of the theories of law and adjudication that have been most important in this country since the Civil War, concluding with an introduction to presently significant schools of legal thought. The past schools of thought we treat are Formalist Legal Science, Sociological Jurisprudence, American Legal Realism, and Legal Process. The more recent and still active movements include such as Law and Moral Philosophy, Law and Economics, Critical Legal Studies, Feminist Jurisprudence, Public Choice Theory, and Neo-formalism. The readings are drawn primarily from primary materials - the important contemporary manifestos and critiques of the schools of thought studied, along with writings that involve their application or reveal their influence. Among the recurring issues treated are: How political is law? How objective? How much do and should courts legislate? Is law mostly rules? Principles? Policies? Decisions? How much should law be bound up with other intellectual disciplines? What should legal education be like? Elements used in grading: Final Exam.

LAW 504. International Business Negotiation. 3 Units.

This course is structured around a quarter-long, simulated negotiation exercise which is intended to provide an in-depth study of the structuring and negotiating of an international business transaction. This class will be taught in counterpart with a class at Berkeley Law School. Students in this class will represent a U.S. pharmaceutical company, and the students in the class at Berkeley will represent an African agricultural production company. The two companies are interested in working together to exploit a new technology developed by the pharmaceutical company that uses the cassava produced by the African agricultural production company. The form of their collaboration could be a joint venture, a licensing agreement or a long term supply contract. The negotiations between the two classes will take place through written exchanges and through real-time negotiation which will be conducted both in-person and via videoconferences. The purpose of the course is to provide students with an opportunity (i) to experience the sequential development of a business transaction over an extended negotiation, (ii) to study the businesses and legal issues and strategies that impact the negotiation, (iii) to gain insight into the dynamics of negotiating and structuring international business transactions, (iv) to learn about the role that lawyers and law play in these negotiations, (v) to give students experience in drafting communications, and (vi) to provide negotiating experience in a context that replicates actual legal practice with an unfamiliar opposing party (here, the students at Berkeley). Students will also learn about the legal and business issues that may arise in joint ventures, supply agreements and licensing agreements. The thrust of this course is class participation and active involvement in the negotiations process. Students are expected to spend time outside of class, working in teams, to prepare for class discussions involving the written exchanges, as well as preparing for the live negotiations. Class discussions will focus on the strategy for, and progress of, the negotiations, as well as the substantive legal, business and policy matters that impact on the negotiations. In addition to the regular Monday class, classes will meet for the live negotiations on two Thursday evenings on-campus at 7:00 PM (10/16 and 10/30) and three Saturday mornings at 10:30 AM (10/11, 10/25 and 11/15) in the San Francisco office of DLA Piper (555 Mission Street; close to Montgomery St. BART station). Due to the Thursday and Saturday classes, this class will conclude on November 17. The course will be limited by lottery to eight (8) law students (additional students from engineering or business may also participate). Attention Non-Law Students: You must complete and submit a Non-Law Student Course Add Request Form to the Law School Registrar's Office (Room 100). See Stanford Non-Law Student Course Registration on the SLS Registrar's Office website. Prerequisites: A course in basic negotiations (e.g., Law 615) or comparable prior experience is recommended. A primer on basic negotiations skills will be offered at a time TBD as an alternative for students who have not had a prior negotiations class or experience. Elements used in grading: Class participation, written assignments and final paper.

LAW 508. Law and Social Change in the Global Context. 3 Units.

This colloquium will examine the impact of human rights and rule of law strategies on social change in the global context. Over the past two decades, the establishment of international criminal courts and the expansion of regional human rights tribunals have significantly improved the enforceability of international human rights law in many regions of the world. Within a similar timeframe, building the rule of law, especially in transitional societies, has found an increasingly important place on the development agenda of international organizations, governmental development agencies and private foundations. One issue that remains unclear is the impact of human rights enforceability on the reform of domestic justice systems. During the first half of the course, students will read and discuss articles that provide an overall framework for understanding the field of international human rights and the field of rule of law, including the most common critiques of both fields as they are currently practiced. In the latter half of the course, students will hear examine case studies and hear perspectives from leading public interest attorneys about how they are deploying human rights mechanisms and engaging with the process of legal reform in their respective countries. There will be a focus on equal treatment and the lack of discrimination on the basis of race or ethnicity as a case study. The attorneys will offer on-the-ground observations of both the complex relationship between human rights and rule of law, and the potential and limitations of both approaches. Students will be required to participate in a symposium of leading international practitioners that addresses the same topic, and to synthesize lessons learned from the symposium as their final writing assignment. Special instructions: Requirements will include class participation, a class presentation and (1) either short written weekly reflection papers (about 3-4 pages) for and a short research paper (about 5 pages) for iquest;Wquest; credit or (2) a long paper (approximately 30 pages) for "R" credit with consent of the instructor. Writing (W) credit is for 3Ls only.

LAW 509. Facilitation for Attorneys. 2 Units.

This course is designed to help students develop an understanding of the practice of facilitation in the legal context and to develop skills as facilitators. As the practice of law becomes more complex, it includes more and more situations where groups of people need to work together. Common examples include: planning complex legal strategies, developing firm policies, coordinating work among attorneys and staff, working with corporations or other multi-person clients, shareholder meetings, public commissions and councils, corporate and non-profit Board of Directors meetings. Countless hours are spent in meetings - a typical lawyer in the United States can expect to spend at least 10,000 hours in meetings during his or her working life. This course will help students improve the quality of both the processes and products of meetings, as a facilitator, leader, or meeting participant. Class Schedule dates: Sunday Oct 26 from 8:30 - 5:30, Friday Oct. 31 from 1-6, and Sunday Nov. 9 from 8:30 - 5:30. Elements used in grading: Class attendance, participation and final paper.

LAW 511. Legal Cultures and Legal Professionals in Latin America and Latin Europe. 2 Units.

The Latin countries of Europe and Latin America are the most direct inheritors of Roman language and law. They have made very important contributions to the history of law and mankind. They have not only an important legal tradition iquest;the civil law tradition- but also some countries of the area among the fast growing economies of the world and are undergoing quick social change. This course proposes to give a broad picture of the transformation of law and legal thinking, and the relation between law and society in this important part of the world.

LAW 512. Intellectual Property: Licensing. 2 Units.

In this course we cover the major aspects of intellectual property licenses. We will cover patent, copyright, trademark and trade secret licenses in a variety of industries. We will focus on agreements governed by US federal and state law, but will cover select issues in cross border transactions. Topics include: grant language, upstream and downstream immunities, change of control events, indemnities, and insolvency. Using a case law-based approach, we will examine the interrelationship between contract language and background law. Introduction to Intellectual Property or consent of the instructor is a prerequisite for this course.

LAW 514. California Coast: Science, Policy and Law. 4 Units.

This interdisciplinary course integrates the legal, science, and policy dimensions of characterizing and managing our coastal resources in California. Our focus is on the land-sea interface as we explore contemporary coastal land use and marine resource decision-making. Among the focal issues we will examine are: coastal pollution, public health, ecosystem management; public access; private development; local community and state infrastructure; natural systems and significant threats; resource extraction; and conservation, mitigation and restoration. Students will learn the fundamental physics, chemistry, and biology of the coastal zone, tools for exploring data collected in the coastal ocean (time series analysis), as well as the institutional framework that shapes public and private decision-making affecting coastal resources. This course will take a "place-based" approach. Special Instructions: THIS COURSE IS TAUGHT AS A HIGH LEVEL GRADUATE-STYLE COURSE WITH EXTENSIVE IN-CLASS DISCUSSION THAT REQUIRES CAREFUL PREPARATION FOR EACH CLASS SESSION. Students will be expected to participate fully in field studies designed to provide a personal understanding of how experts from different disciplines confront and work to resolve coastal policy questions. At least three mandatory field trips are required in this course. Elements used in grading: Participation, including class session attendance and field trip attendance, as well as writing and quantitative assignments. (Cross-listed with CEE 175A/275A, EARTHSYS 175/275).

LAW 515. Sustainable Energy: Business Opportunities and Public Policy. 3 Units.

This course examines trends and opportunities in the sustainable energy sector with a particular focus on low carbon energy. We examine these trends in the context of technological change, emerging business opportunities and the parameters set by public policy. Specific topics to be examined include: > The State of the Global Cleantech Industry.> The Impact of Regulatory Policies and Tax Subsidies.> Cost Competitiveness of Alternative Energy Technologies.> VC Perspective on Sustainable Energy Start-ups.> Project Finance > Fossil Fuels and Carbon Capture.> Renewable Energy, including Solar PV and Biofuels.> Energy Efficiency and Storage. Elements used in grading: Active class participation (30% of grade), case studies (30% of grade) and a course project (group project) to be delivered at the end of the fall quarter (40% of grade). The course project can alternatively (i) develop a (rough) business plan, (ii) analyze an existing business or technology in the sustainable energy domain, or (iii) analyze the impact of an existing regulation or proposed policy. Enrollment is capped at 60 students. The class is open to all MBA and Law School students. 10 seats will be set aside for graduate students from outside the two schools. These students are required to obtain instructors' permission for enrollment. Compressed class: Fall quarter, weeks 3-5 and 7, Mo., Wed., Fri. 4:00-6:15 p.m., Oct 6-24 and Nov 3-7. Graduate School of Business (GSBGEN 332).

LAW 517. Why Intellectual Property?: Rationales and Critiques of IP Law. 2 Units.

Why do societies decide to grant special legal protection to various types of creative works? A number of answers have been given over the years. Some are utilitarian: we grant these rights because doing so maximizes social welfare. Some are deontological: we grant rights because this is morally required in a just society. We will examine these various justifications, as well as variants on them. We will also ask how a society, having decided to grant some version of IP rights, ought best structure them. Should they be true property rights, with all or most of the powers this implies (creator control over uses, right to compensation from exploitation, etc.), or something else? Would a state-backed reward system work better, so that compensation is divorced from individual control? Should compensation for successful creators be limited or capped, as part of a wider attempt to moderate the distributional impacts of granting individual property rights; or must we tolerate big winners; as an inducement or symbolic reward for other creators? We will address these and related questions by reading two sets of materials: (1) classic treatments of property rights (Locke, Kant, etc.) and social justice (Rawls); and (2) material from the contemporary literature on IP theory. We may also host some of the most interesting scholars working in the field of IP theory today, to come and explain their thinking and their work.

LAW 518. International Public Interest Lawyering Colloquium. 2-3 Units.

Over the past two decades, the establishment of international criminal courts and the expansion of regional human rights tribunals have significantly improved the enforceability of international human rights law in many regions of the world. Within a similar timeframe, building the rule of law, especially in transitional societies, has found an increasingly important place on the development agenda of international organizations, governmental development agencies and private foundations. One issue that remains unclear is the impact of human rights enforceability on the reform of domestic justice systems. This colloquium will examine the relationship between international human rights and domestic rule of law in transitional societies from the perspective of public interest attorneys who are seeking to achieve justice for clients who are low-income and marginalized. During the first half of the course, students will read and discuss articles that provide an overall framework for understanding the field of international human rights and the field of rule of law, including the most common critiques of both fields as they are currently practiced. In the latter half of the course, students will hear perspectives from leading public interest attorneys about how they are deploying human rights mechanisms and engaging with the process of legal reform in their respective countries. There will be a focus on gender equality and protecting the human rights of women as a case study. The attorneys will offer on-the-ground observations of both the complex relationship between human rights and rule of law, and the potential and limitations of both approaches. Students will be required to participate in a symposium of leading international practitioners that addresses the same topic, and to synthesize lessons learned from the symposium as their final writing assignment.

LAW 519. 21st Century Professional Skills and Practice Management. 2 Units.

This course will help students to develop the professional management skills that are essential for a successful legal career. The course will focus on team dynamics and leadership; effectively communicating with clients, colleagues, other parties and tribunals; client development and service; managing expectations and unexpected adversity; and the economics of law practice, including forecasting demand for legal services and project management. For the final paper, students will create a comprehensive, personal plan outlining the substantive knowledge, professional skills, and business focus they need to build a fulfilling law practice. Assignments and simulations will demonstrate and model various skills and instructors will provide real-time feedback to students on class exercises. The course is not limited to any particular type of practice (size or substantive area). Elements used in grading: Class participation and attendance, course exercises and written assignments.

LAW 520. Betrayal and Loyalty, Treason and Trust. 2 Units.

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. Elements used in grading: Class Participation, Attendance, Final Paper. This course is cross-listed with PHIL 174L/274L ETHICSOC 174L/274L.

LAW 522. Private Equity Investing. 3 Units.

This course will concern itself with the central issues related to private equity investing. Topics to be covered include the following: valuation, pricing and structuring of private investments; leveraged buyouts and other transactions involving multitiered capital structures; the structure and governance of pe funds; conceptual issues (such as option theory, asymmetric information and bounded rationality) relevant in this realm; and private equity as a distinct asset class. The primary pedagogical objective is to have students learn skills and tools used in the private equity arena including, inter alia, financial analysis, conducting a multipronged due diligence process, spreadsheet modeling and the crafting of legal documents. Case studies requiring the assessment of actual transactions will be utilized. We will have a number of guest speakers during the term, and will use various materials illustrative of what one would encounter in private equity deals and funds. Special Instructions: In order to enroll in Private Equity Investing students must concurrently enroll in PEI: Quantitative Skills Seminar (Law 721; 1 unit). In other words, no student may enroll in either Law 522 or Law 721 without also enrolling in the other. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class attendance, participation and written assignments.

LAW 524. Mental Health Law. 3 Units.

This seminar explores topics in mental health law with special emphasis on liberty issues. After a brief introduction to mental disorders, their treatment and the mental health profession, the seminar sessions will explore topics such as: civil commitment, criminal responsibility, competency determinations, and the right to refuse and consent to psychiatric treatment. A research paper is required. Elements used in grading: Final Paper.

LAW 527. Juvenile Justice and Social Policy. 3 Units.

Juveniles are accorded special status under the American legal system. This introductory course will examine the historical precedents and philosophical reasons for treating juveniles differently from adults, and review empirical evidence about child development that can illuminate the reasons for their special status within the court system. Students will learn about the distribution of juvenile delinquency and the impact of significant social and institutional influences on delinquency: family, school, peers, and drugs. The course will also provide a detailed overview of the juvenile system, from its beginning to the current state of the institution, which will include a review of police work with juveniles, pretrial procedures, and the juvenile court and corrections systems. Major court rulings that have shaped contemporary juvenile justice will be presented. Finally, the course will consider dispositional options available to Courts, and will identify the most effective in reducing delinquency. By the conclusion of this course, students should have an understanding of the juvenile justice system and how it compares with the adult justice system, what programs work to reduce recidivism, and be cognizant of some of the major legal and policy issues confronting that system today. The course format will combine lecture, group discussions, and guest presentations. Students may also have the opportunity to observe the juvenile justice system first hand by attending a juvenile court session, visiting a correctional facility for adjudicated delinquents, and hearing directly from those who work with high-risk youth on probation or in the community. Written Work. Each student will write four reflection papers, 5-7 pages each (about 1,700 words) over the quarter. Due dates will be listed in the class syllabus. Elements used in grading: Final grades will be based on the four reflection papers (20% each) and class participation (20%). This course is open to 2Ls, and 3Ls in the Law School.

LAW 528. Economic Analysis of Law. 4 Units.

This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differ from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. There is no formal economics prerequisite to take this course, though some prior training in economics will be helpful. Elements used in grading: Final exam. Midterm exam grade will be used to boost your final grade if you do better on the midterm exam than on the final exam. Cross-listed with Public Policy (PUBLPOL 302B).

LAW 531. Wine and the Law. 2-3 Units.

The wine industry is the subject of intense activity in many legal subject areas, including constitutional law, intellectual property, environmental and land use regulation, trade protectionism, and internet commerce. This seminar surveys the legal landscape of this multibillion dollar industry, focusing on contemporary debates and developments in judicial, legislative, and administrative arenas. Course materials will consist of a blend of judicial opinions, governmental materials, and secondary sources. The instructor specializes in litigation concerning the California wine industry, and the course will feature several guest speakers addressing the economic, political, and legal aspects of the subject in its state, national, and international dimensions. A paper will be required of all students on some topic of their choosing concerning the course subject matter. Students may earn an optional third unit by writing a longer paper. Special Instructions: Students may earn credit in this seminar in one of two alternative ways, both of which will be graded under the Honors/Pass system. The first alternative is to write a series of short commentaries (about 4-5 pages each) on the material covered in four weeks of your choosing. This alternative will satisfy the Law School's "W" writing requirement. If you elect this option, you may earn two credits. The second alternative is to write a single research paper on a topic of your choosing relating to the subject matter of the course. This alternative will satisfy the Law School's "R" research requirement. If you elect the second alternative, you may earn two or three credits; the required length of the paper is approximately 20 pages for two credits and approximately 30 pages for three credits. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, attendance and final paper. Constitutional law is a prerequisite. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 532. Understanding the Legislative Process: American Legislative Institutions in Analytical Perspective. 3 Units.

Statutes are central to the legal system in the United States and virtually every other country, but they are generated through an intricate legislative process that is often poorly understood and has in recent years been subject to intense criticism. The primary goal of this course is to explore certain categories, procedures, and norms used in the U.S. Congress. The class will also consider how the U.S. legislative process functions relative to approaches in other countries (particularly advanced industrialized countries with mature legislative and executive institutions), and will critically examine some of the concerns that have been raised among scholars and commentators about the efficacy of the U.S. legislative process. Specific topics covered in the course will include the legislative budgeting and appropriations process; legal (including constitutional) interpretation in the legislature; oversight of executive and administrative action; legislative agenda-setting and other counter-majoritarian features of the lawmaking process; and the division of labor between legislative chambers, committees, and subcommittees. Students will have an option of either choosing between writing 4 short response papers (4-5 pp. each), or one longer paper for writing "W" credit for 3Ls only. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the W requirement, with consent of the instructor. Special Instructions Writing (W) credit is for 3Ls only. Elements Used in Grading: Class participation, attendance, four short response papers or final paper.

LAW 534. Law and Psychology. 3 Units.

This course will examine the implications of psychological theory and research for normative legal theory and for contemporary legal policies, procedures, and practices. The course will draw on contemporary cognitive, social, and clinical psychology to address the concepts of intent, responsibility, deterrence, retribution, morality, and procedural and distributive justice. We will examine evidence law (e.g. eyewitness testimony, polygraphy, expert testimony, psychiatric diagnosis and prediction), procedure (e.g., trial conduct, jury selection, settlement negotiations, alternative dispute resolution), and various topics in criminal law, torts, contracts, property, discrimination, family law, and other areas. We will compare "rational actor" and psychological perspectives on decision making by juries, judges, attorneys, and litigants. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Series of shorter papers or final independent research paper totaling 28-pages. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 537. The United States Senate as a Legal Institution. 3 Units.

This course will familiarize students with major, and/or emerging legal and constitutional issues concerning the U.S. Senate. In so doing, it will examine: 1) the Senate's nature as a complex legal institution, and 2) the issue of the Senate's legitimacy in the context of the current and largely unprecedented criticism of the Senate from all parts of the political spectrum. This first portion of the course will consider institutional-legitimacy issues facing the Senate, including the appointment of senators to fill vacancies as well as disputes concerning Senate rules and procedures such as the filibuster and holds. The second part of the course will explore how the Senate interfaces with the Constitution and the Supreme Court. It will examine how senators should regard the issue of constitutionality in voting on legislation, be it campaign-finance reform, internet decency, or health care. This part of the course will also consider how senators should approach proposed constitutional amendments. The final portion of the course will review the wide range of issues that have emerged in recent years regarding the constitutional relationship between the Senate and the Executive Branch, including the increasingly acrimonious issue of the standard to apply to executive appointments under the advice and consent power. Particular emphasis on this part of the course will be given to issues that have gained greater prominence since 9/11, including the relationship between enacted, constitutional legislation and the presidential assertion of Article II powers, as well as the Senate's abdication of its Article I war-declaration power.

LAW 538. Sociology of Law. 3-4 Units.

This course explores major issues and debates in the sociology of law. Topics include historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance, with particular attention to the problem of mass incarceration; the "law in action" versus the "law on the books;" organizational responses to law, particularly in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change with particular emphasis on the American civil rights movement. Special Instructions: Students are expected to attend a weekly TA-led discussion section in addition to lecture. Sections will be scheduled after the start of term at times when all students can attend. Paper requirements are flexible. Cross listed with the Sociology Department (Soc 136/236). See "Special Instructions" in course description above. Elements Used in Grading: Class participation, paper proposal, three short papers and a final paper (see syllabus for details).

LAW 540. Litigation and Institutional Design. 2-3 Units.

This seminar will focus on issues of institutional design as they relate to complex litigation in the contemporary American legal system. Topics addressed will include explanations for the general move away from regulation and toward litigation in recent decades, the legal and policy implications of that trend, and contemporary efforts to retrench or remake the system. We will examine these topics from a number of substantive and procedural angles using case law, readings, and case studies. We will explore such disparate substantive areas of law as employment discrimination, securities regulation, qui tam actions, and mass torts. We will also discuss trans-substantive topics such as the class action device, private enforcement of public law (through regimes that deputize "private attorneys general" as enforcers), and federal regulatory pre-emption. Though the seminar will integrate knowledge from a number of fields of law and from other disciplines, emphasis will be given to the functional analysis of practical problems of institutional design. (Note: This course was previously titled "Reconstructing the Litigation State.") Grades will be based on class participation and either (1) several short reflection papers or (2) an independent research paper with consent of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Writing (W) credit is for 3Ls only. Elements used in grading: Class participation, attendance, reflection papers or research paper.

LAW 541. Legal Profession Workshop: Deconstructing Big Law. 3 Units.

Wondering what life in a large law firm will be like in this age of radical change in the delivery of legal services? How the new economics are shaping the structure and management of large law firms? How law firms are re-thinking professional development and advancement within firms? What the globalization of legal services portends for your future? The goal of the workshop is to bring research and practical experience to bear on helping you think about how to build a professional career in an era of professional change.

LAW 543. Entrepreneurship, Leadership and Law in Social Enterprises. 2 Units.

Many believe that society's greatest challenges have already been solved by social entrepreneurs and the challenge is how to take their ideas to scale. However, it has become increasingly difficult to start and sustain social ventures. The lines between the public and private sectors have become increasingly blurry as best practices in the social sector now include innovation, strategy and accountability. This course will expose students to the work of social entrepreneurs in social enterprises - focusing primarily on domestic non-profit organizations. Using the "case study method" typically used in MBA programs, students will examine the challenges of starting, counseling, serving, funding and scaling social ventures through the eyes of the entrepreneur, investor, attorney and community leader. The course will explore the intricacies of remaining mission driven, talent, board relations, managing and sustaining growth, the changing role of corporate governance, and leveraging private sector partnerships and resources. Students will also explore innovative public / private sector partnerships and the challenges and opportunities of engaging diverse partners with differing agendas. The course will include guest speakers from the fields of law, business and the social sector. Throughout, students will explore the valuable roles that attorneys can and have played in such ventures. Students will be expected to attend, participate actively, present to the class and write reflection papers. Elements used in grading: Reflection Papers.

LAW 545. Alternate Dispute Resolution: Law, Practice, and Policy. 3 Units.

Lawyers' representation of their clients increasingly calls for skills within a broad range of alternative dispute resolution processes. In this course, you will learn about the variety of dispute resolution procedures that operate under the ADR umbrella, within and outside of the court system (including mediation and arbitration). The goal is for students to understand the law and policy behind these alternatives relative to court adjudication, to be able to select the appropriate process for a client, and to effectively represent that client in the selected process. Guests include third party neutrals and advocates from a range of contexts, including federal court, private mediation, private and public arbitration, and corporate legal counsel.

LAW 546. Alternative Dispute Resolution: Practicum. 2 Units.

Effective client representation increasingly calls for lawyers with skill within a broad range of alternative dispute resolution processes. In this course, you will have the opportunity to observe 2-3 ADR processes being handled by Bay Area third-party neutral practitioners. Students in the class will meet periodically to review relevant law and policy, and to discuss observed cases. Grades will be based on seminar participation and 3 short papers. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Co- or Prerequisites: Mediation or Arbitration. Elements used in grading: Class participation, attendance and written assignments.

LAW 554. International Commercial Arbitration. 2 Units.

This course is designed to provide students with an introduction to the theory and practice of international commercial arbitration, the preferred method of dispute resolution in international trade and commerce. It will familiarize students with the framework of international treaties and federal and state laws that undergird the international arbitral system and explore U.S. jurisprudence on the respective roles of courts and arbitral tribunals in resolving disputes subject to international arbitration. In addition the course will analyze alternatives in drafting international arbitration clauses, including the applicable arbitration rules, the significance of the agreed-upon place of arbitration, the number of arbitrators, and the method of their selection. The course will also impart a practical, in-depth understanding of each of the principal stages of arbitration, including the enforcement of the arbitration agreement; initiation of the arbitral proceedings; the availability of provisional remedies; the conduct of the arbitration from the pleading stage through discovery and briefing to the hearing; the arbitral tribunal's preparation of the award; and the judicial enforcement proceedings that conclude the process. Although the course will focus on the practice of international arbitration from the U.S. perspective, it will also introduce students to perspectives from other leading civil and common law jurisdictions. Elements used in grading: Class Attendance, Class Participation, Final Exam.

LAW 555. The Plaintiffs' Lawyer: Institutional Constraints and Ethical Challenges. 3 Units.

Plaintiffs' lawyers are the interpreters and gatekeepers of the civil justice system. They alone sift through possible claims and decide which will, or will not, be filed, and they alone shepherd personal injury clients through the baffling maze that is contemporary civil litigation. Because of their pivotal role, to study "the plaintiffs lawyer" is to study many of the most controversial and important issues at the intersection of tort law, civil procedure, and legal ethics. In this course, we will study who personal injury lawyers are, how they find clients, how they fund litigation, and how they usher complex cases to conclusion. In so doing, we will address: the role and regulation of lawyers, the use and abuse of the contingency fee, the legality and normative consequences of solicitation and attorney advertising, the propriety of secret settlements, the rise and impact of "alternative litigation finance," and the difficult ethical and practical issues posed by class actions, aggregate actions, and multidistrict litigations (MDLs). The final segment of the course will involve a series of case studies, where students will have the opportunity to see the course's themes echoed and expressed in recent real-world controversies. Specifically, we will study litigation involving the diet drug fen-phen, the pain reliever Vioxx, and Chevron's operations in the Ecuadorian rainforest. Elements used in grading: Class participation, reflection papers, final paper, and group presentation. The final paper will be due shortly after the course's conclusion.

LAW 556. Counterterrorism Law and Institutions. 2 Units.

This seminar will explore a range of legal and policy questions in U.S. law related to the prevention of terrorism. Topics include intelligence-gathering, investigations, and the prosecution of suspects in U.S. courts, including controversies surrounding the use of informants, material support laws, racial and religious profiling, electronic surveillance, terrorist watchlists, and terrorism trials. In exploring these controversies, the course focuses on several core themes: 1) the contested relationship between rights and security; 2) the question of institutional choice in national security decision-making and oversight; and 3) the challenge of assessing the efficacy of counterterrorism measures. The course pays special attention to the policy controversies that affect U.S. communities, including minority and immigrant communities. To develop skills central to the work of practicing lawyers, students will write two short papers that simulate the actual work assignments of lawyers for government agencies, human rights groups, or other interested parties. For instance, students might draft a local ordinance on police intelligence-gathering, prepare a memo for a national security agency head or member of Congress, or design an administrative mechanism for resolving watchlist complaints. These assignments, for Writing (W) or Professional Writing (PW) credit, will be due before the end of the quarter. Alternatively, students may opt to take the seminar for Research (R) credit with the professor's approval, according to the standard requirements and deadlines. In addition to completing the writing assignments, students are expected to read thoroughly and contribute to a thoughtful and lively discussion each class. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and two short papers or research paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 557. Direct Democracy. 2-3 Units.

In recent years, the use of ballot measures has sharply risen, and initiatives and referenda have featured prominently in contested debates over immigration, affirmative action, abortion, same sex marriage and term limits. This seminar will focus on direct democracy as a method of lawmaking. Our principal focus will be on initiatives and referenda, but we will allocate some time to the recall, as well. We will consider the history, practice, theoretical justifications, and constitutional dimensions of direct democracy, as well as how direct democracy interacts with representative democracy. We will also explore many legal questions that have arisen in as ballot measures have been used as instruments of governance and policy. Topics will include whether direct democracy comports with the federal constitution; judicial review and interpretation of ballot measures; minority rights under direct democracy; election rules relating to signature gathering, qualifying ballot measures and campaign finance; and the role of interest groups. I anticipate one or more guest lecturers. Each student will present on one particular ballot measure that is linked to that week's topics. Students will write either multiple response papers (for W credit) or a final research paper (for R credit) on a topic to be worked out with the instructor. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the seminar for R credit can take the seminar for either 2 or 3 units, depending on the paper length. Elements used in grading: Class participation, written assignments, multiple response papers or a final paper. Writing (W) credit is for 3Ls only.

LAW 558. Workshop on International Security, Law, and Social Science. 1 Unit.

Societies throughout the world face pressing security and international cooperation problems involving insurgency, transnational crime, risk regulation, migration, arms control, and related areas. This seminar, based at Stanford's university-wide Center for International Security and Cooperation covers a variety of issues of interest for a multi-disciplinary audience of social scientists, lawyers and legal scholars, and natural scientists, among others. Issues include nuclear weapons proliferation and arms control, war and civil conflict, international and transnational organizations, governance, counter-terrorism, biosecurity and global public health, and migration.

LAW 560. Mental Health Law: Forensics. 3 Units.

It is estimated that nearly one-third of Americans experience a diagnosable mental disorder each year. This course is designed to provide law students with a working knowledge of the major areas of mental health and illness, as well as a basic understanding of legal issues affecting the practice of psychology and psychiatry. Basic concepts of clinical psychiatry and psychopathology will be highlighted throughout the course. We will also address legal issues that pertain to the needs and rights of individuals with a mental disorder and explore the delivery of mental health services, the regulation of mental health professionals, and the relationship between society and individuals with a mental disability. Whenever appropriate, landmark cases will be discussed and their impact in the practice of mental health delivery (i.e., psychiatry and psychology) and on the practice of law, will be discussed. This course is intended to be interactive and while the core of the course is pre-determined, some of the content will be tailored to address interests and needs of participants. The structure of most sessions will begin with case presentations highlighting the day's topic, followed by a didactic portion from the instructor, ending with an interactive discussion between class members and invited panelists. Grades will be based on class participation, group participation in a mock deposition/trial, and a research paper for R credit- the topic for the paper is to be agreed upon between the student and the course director. Elements used in grading: Class participation, attendance, group participation in a mock deposition/trial and final paper.

LAW 562. Comparative Civil Rights. 4 Units.

This course will compare civil rights laws in the United States to those in several other countries in Europe and the developing world. We will focus on how differing national histories, priorities, politics and demographics have led to distinct approaches to anti-discrimination as well as on how civil rights movements have influenced and borrowed from each other. Special Instructions: The course will be taught using a "flipped classroom" format: students will complete a series of on line class segments that include video interviews with experts from around the world, texts and quizzes. The on line materials will allow flexibility so that students can focus in greater depth on areas of interest as well as review foundational material on American anti discrimination law, international law and international human rights. Classroom time will be dedicated to discussion and questions. Students have the option to write papers for either Writing (W) or Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance and final paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 563. Beyond the Common Law: Tort Reform and Tort Alternatives. 2-3 Units.

Over the past century, tort law has been under sustained attack. Using a broad mix of case law, case studies, and scholarly analysis, this seminar will interrogate those attacks-including their historical roots, their theoretical justifications, and their practical effects. We will first study "replacement reforms"-attempts to jettison the common law in favor of alternative compensation mechanisms, including workers' compensation, auto no-fault, the September 11th Victim Compensation Fund, and the Vaccine Injury Compensation Program, housed within the U.S. Court of Claims. Second, we will study modern tort reform initiatives, often dubbed "discouragement reforms," which have chiseled away at damages and chilled personal injury victims' incentives and capacity to seek relief. Finally, we will study the United States Supreme Court's own tort reform activity, including recent jurisprudence limiting punitive damages and granting broad preemptive effect to agency actions. Through this analysis, students will develop a deeper and richer understanding of the tort system, its contemporary operation and excesses, and the uneasy but important place tort law- and civil litigation more generally-occupies in contemporary American society. Special Instructions: Grades will be based on class attendance, class participation, and either several short reflection papers (section (01)) or an independent research paper (section (02)). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation, class attendance, panel group questions, reflection papers or research paper. Writing (W) credit is for students entering prior to Autumn 2012. Early drop deadline.

LAW 565. Immigration Law and the Constitutional Rights of Non-Citizens. 3 Units.

This survey course will provide a foundation in immigration law, the system of admission and removal, and constitutional principles relating to immigration. While surveying the laws and norms governing immigration and the regulation of non-citizens, we will explore their application to selected current topics by drawing on the instructor's extensive experience litigating civil rights cases on behalf of non-citizens. These current topics may include: detention of immigrants; state and local laws relating to immigrants; extraterritorial application of the Constitution; and the intersection of immigration and criminal law, including criminal grounds of deportability, immigration-related crimes, and Fourth Amendment issues arising in immigration enforcement. No prior course or background in immigration law is required, but familiarity with basic constitutional law and criminal procedure will be helpful. Elements used in grading: Class participation and attendance (20%), final exam (limited open book) (80%).

LAW 572. Social Justice Impact Litigation: Issues and Strategies. 2 Units.

This seminar is designed to examine strategic and legal issues related to litigating impact and social justice cases that advance the constitutional and civil rights of vulnerable communities. The course will be informed by the instructor's three decades of experience litigating class action and appellate cases, including in the Supreme Court, on behalf of immigrants and civil rights plaintiffs as the founder and former director of the ACLU national Immigrants' Rights Project. We will consider some key doctrinal issues as a prelude to exploring litigation strategy and approaches through a variety of case studies, pending litigation, and guest lecturers. Among the issues we may examine are: selecting and using test cases; strategic pleading; class action problems; ethical questions; the role of amicus briefs; suits for damages versus injunctive relief; standing and mootness; settlement strategies; coalition litigation; use of public advocacy and media; the impact of litigation on policymakers and government officials; and the role litigation in furthering legislative action. Some guest speakers will be invited. This seminar is not appropriate for 1L students. Enrollment is limited. Grading will be based on class participation and written work of at least 18 pages. In consultation with the instructor at the beginning of the course, students will have the option of choosing either to submit a final paper or a series of reflection or analytical pieces responding to the seminar readings. All students enrolled in the course are eligible for Writing (W) credit. With the instructor's prior consent, a limited number of students may be approved for Research (R) credit for writing a substantial research paper on an approved topic. After the term begins, students approved for R credit will transfer from section (01) into section (02). Elements used in grading: Class participation (50%) and written submissions (50%). Writing (W) credit is for students entering prior to Autumn 2012. The seminar is not open to 1L students. - - - CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. There are no prerequisites but familiarity with constitutional litigation and federal jurisdictional issues is helpful. See Consent Application Form for submission deadline.

LAW 576. Law and Sexuality. 2-3 Units.

This seminar will focus on how the law regulates sexuality. We will approach the material as an exercise in advanced constitutional law, exploring how courts have used--or might use--federal or state constitutional provisions to address issues regarding a wide array of issues involving sexuality. The core of the class will relate to contemporary controversies concerning sexual orientation and gender identity (including, for example, regulation of sexual conduct, defining sexual identity, the Boy Scouts' policy, marriage and parenting rights of same-sex couples, among others). But we will also discuss other issues, including controversies about sex education and polygamy. We will maintain an interdisciplinary focus throughout as we consider how social, cultural, and political forces shape, and are shaped by, legal doctrine. Special attention will be paid to the unfolding debate on same-sex marriage as a case study in the contested role of courts as engines of social change. All students taking the seminar for 2 credits will write a final research paper of approximately 18 pages (for R credit). Students who wish to write a longer R paper (approx. 26 pages) may enroll in the seminar for 3 credits. Elements used in grading: Class participation and final paper.

LAW 577. Regulation of the Political Process. 3 Units.

This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and exam. Cross-listed with Communication (COMM 361) and Political Science (POLISCI 327C).

LAW 583. International Investment Law. 2 Units.

International investment law and arbitration is one of the fastest-developing areas of international law. It is an area that combines elements of treaty and customary international law, public policy, and private dispute resolution. In the past decade, there has been a dramatic increase in the number of bilateral investment treaties and other agreements with investment-related provisions, followed by a sharp rise in the number of disputes between private investors and sovereign states under those specialized legal regimes. In particular, investment arbitration under the auspices of the World Bank's International Centre for Settlement of Investment Disputes (ICSID) is booming, with some 419 arbitration and conciliation proceedings instituted under the ICSID Convention and Additional Facility Rules as of 31 December 2012. Due to the widespread geographical participation of states and private investors in investment arbitration, involving significant amounts of money in every conceivable investment sector--from oil, gas & mining, construction, transportation to the financial sector--the particularities and dynamics of investment treaty law and arbitration are becoming increasingly important to foreign investors, sovereign states, and the global economy that is increasingly fueled by foreign investment. The rise of international investment law and arbitration has also bred a new and exciting practice area in global law firms, where teams of lawyers act on behalf of investors against sovereign states, or defending sovereign states against investor claims, before international arbitral tribunals. This course will cover four broad areas: (I) the historic, theoretical and policy grounds underpinning international investment law; (II) the substantive obligations and standards governing the investor-state relationship; (III) the growth of investor-state arbitration and its impact on international law; and (IV) the wider issues of fairness and functionality of investment treaty law and investor-state dispute resolution. The course uses materials from international investment treaty texts, case law, and commentaries to enable students to evaluate and apply legal doctrine to future situations. As international investment law and investment arbitration is a dynamic, unsettled, and controversial body of law, this course will highlight different and sometimes conflicting interpretations and decisions in the area, and invite students to analyze, discuss, and form their own views on key issues. Elements used in grading: Class participation and final paper.

LAW 586. Islamic Law. 4 Units.

Topics include marriage, divorce, inheritance, ritual, war, rebellion, abortion, and relations with non-Muslims. The course begins with the premodern period, in which jurists were organized in legal traditions called *madhabs*; schools of law. After examining the nature and functions of these institutions, we turn to the present era to study the relationship between customary law, state law, and the Islamic legal heritage in Egypt and Indonesia. The course explores Muslim laws and legal institutions and the factors that have shaped them, including social values and customs, politics, legal precedents, and textual interpretation. Elements used in grading: Participation & final paper. Cross-listed with Religious Studies (RELIGST 201/301).

LAW 588. Sports Law. 3 Units.

This seminar covers various legal and business aspects of professional sports, the Olympics and college athletics. Topics covered may include antitrust law, labor law, collective bargaining, torts, contracts, agency, constitutional law, administrative law and intellectual property. Class lecture and discussion will be supplemented with speakers from the sports industry, with an emphasis on current and future sports law issues. Students who have taken Labor Law (Law 301) will be given priority. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from the exam section (01) to the paper section (02) with consent of the instructor. Elements used in grading: attendance, participation, one-day take-home exam or final paper. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 590. Modern Capital Markets and the Financial Crisis. 4 Units.
 Money: Shadow Banking, Dark Financial Matter and the Future of Finance.
 This course introduces law students to the structure of the shadow banking system and related financial markets. Emphasis is placed on the securitization process, the swaps markets (including credit default swaps, total returns swaps, interest rate, and currency swaps), repo agreements, forwards, futures, and related institutions such as clearing houses and exchanges. The course will consider the role that these markets played in the recent and ongoing financial crisis, their potential implications for future crises, and several of the regulatory initiatives proposed by the Dodd Frank Act. Much of the course will operate through the lens of a series of case studies including the Greek debt crisis, Harvard's loss of \$500 million in the swaps market, the AIG bailout, and JPMorgan's loss of \$2 billion in its hedge book. Special Instructions: If you have taken Law 559: Modern Securities Regulation (Sonsini) and/or Law 542: Modern Securities Fraud Litigation (Eth), you may take Law 590: Modern Capital Markets (Grundfest). Elements used in grading: Class attendance, participation and exam.

LAW 591. Securities Regulation: Raising Capital in U.S. Markets, from Start-up through IPO and Beyond. 4 Units.

A complex web of securities regulations governs the process by which businesses raise capital in the United States. This course reviews the legal regime governing capital formation, from angel financing and venture capital rounds that fuel start-up activity in Silicon Valley, through the initial public offerings (IPOs) by which companies "go public" (with special reference to the recent Alibaba IPO), and reporting obligations that arise once firms are publicly traded. The course also considers the evolving role of on-line securities placement markets, such as Angel List. In addition, the course examines the "Rule 144A market" through which many of the world's largest entities raise billions of dollars a year in U.S. markets, without ever becoming subject to SEC public disclosure requirements. Elements used in grading: Final exam.

LAW 592. Law, Race, and Inequality. 2-3 Units.

This course will examine the application of constitutional and statutory antidiscrimination law to race related controversies across a variety of settings. After some exploration of the historical origins of statutory and constitutional antidiscrimination law, the course will then consider antidiscrimination law as applied to contemporary controversies in specific settings, which may include criminal justice, college admissions, political participation, primary/secondary education, employment, housing, hate speech, and the formation of family relationships. The readings will be varied and will include judicial opinions, scholarly commentary, and social science research. Throughout, we will aim to understand both the specific challenges of regulating race in particular contexts, and the broader (and conflicting) conceptions of racial justice that inform law, policy and morality. Students in the seminar will write a substantial research paper of either 18 pages to receive 2 units of credit or 26 pages to receive 3 credits. Elements used in grading: Class participation and research paper.

LAW 593. Terrorism and the Courts. 3 Units.

The emergence of international terrorism and governments' responses to it have led to novel questions for courts at the intersection of constitutional, criminal, international, and procedural law. This seminar will consider a series of interrelated problems that have arisen in federal courts over the treatment and punishment of suspected terrorists and compensation for victims. Topics will include habeas litigation by detainees; the creation and use of non-Article III courts such as military commissions as alternatives to criminal prosecution; congressional attempts to withdraw jurisdiction from federal courts over litigation involving terrorism; separation of powers issues involving the roles of the President, Congress, and the courts in the treatment and punishment of suspected terrorists; compensation claims by victims of terrorism (through statutory compensation funds, litigation against foreign states under the Foreign Sovereign Immunities Act, and tort litigation against individuals and entities); techniques for handling complex litigation involving terrorism; the Alien Tort Statute; and civil litigation by detainees over their treatment. The course is designed to be complementary to Professor Shirin Sinnar's Counterterrorism and the Law. Students are encouraged to take both courses. Grading will be based on class participation, a paper, and an oral presentation of the paper topic to the class. Papers meeting the requirements for Research (R) credit will be eligible for R credit with the consent of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Special Instructions: If the course is over-subscribed preference will be given to third year students, then to students who have relevant background in federal courts, national security, international law, or other related topics, then to second year students without such background, then to first year students. Selection within those categories will be by lottery. Students wishing to have prior coursework or experience considered in case of oversubscription should submit a short statement describing their background. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class participation, written assignments, final paper and oral presentation. This course is open to first-year Law School students. Automatic grading penalty waived for writers. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 600. Federal Indian Law. 3 Units.

This course offers an overview of federal Indian law through a study of cases, statutes, and historical material. It focuses on the interlocking relationships of tribes, states, and the federal government with special emphasis on economic development, religious freedom, and environmental justice. Elements used in grading: Final Exam.

LAW 602. Religion and the First Amendment. 3 Units.

This course covers the major doctrines and decisions interpreting the provisions of the First Amendment affecting religion, especially the free exercise and establishment clauses. Special emphasis is placed on the historical, philosophical, and theological roots of first amendment principles, and it also studies the briefs and arguments in a case currently in litigation.

LAW 603. Environmental Law and Policy. 3 Units.

This course provides an introduction to federal environmental law, regulation, and policy in the United States. The course emphasizes the cooperative and competing roles that the federal and state governments play in implementing environmental law in the United States. The course encourages students to adopt a comparative and dynamic view of environmental protection under U.S. law. We begin with a discussion of the property law roots of environmental law. Next we briefly touch on some aspects of U.S. administrative law that are essential to understanding the material that follows (students should feel free to take this class without having taken Administrative Law). This is followed by a discussion of the risk assessment and cost-benefit frameworks essential to understanding the current U.S. approach to environmental problems. We conclude this segment with a comparison of two approaches to chemical safety regulation - the U.S. Toxic Substances Control Act and the EU REACH directive. Next, we focus on three key substantive federal environmental statutes: the Clean Air Act, the Clean Water Act, and the Endangered Species Act. Next, we turn to the National Environmental Policy Act to understand how environmental concerns are included in the process of making agency decisions. The course concludes with a discussion of current EPA efforts to address emissions of greenhouse gases under the Clean Air Act. Special Instructions: Substantial participation is expected and class participation constitutes twenty percent (20%) of the overall grade for the course. In addition, students are expected to complete two 1000 word written assignments during the course that will constitute forty percent (40%) of the overall grade. Finally, an in-school exam will, similar in format and length to the written assignments, constitute the remaining forty percent (40%) of the overall grade. Elements used in grading: Class participation (20%), written assignments (40%) and final exam (40%).

LAW 605. International Environmental Law. 3 Units.

This course examines the legal, scientific, political, economic, and organizational issues associated with the creation of international environmental regimes. The principal emphasis will be on the issue of climate change, with a focus on the current regime(s) and the post-Kyoto negotiations, now underway. The course will also address the Montreal Protocol for Ozone Depleting Substances, the International Convention for Regulation of Whaling, and the U.N. Convention on Straddling Fish Stocks and Highly Migratory Fish Stocks. The course examines the choice of treaty instrument, as well as the implementation and evolution of environmental regimes. The course also looks closely at the structure and performance of environmental markets as solutions to global commons problems. Finally, close attention is paid to equity and development issues that are critical in bridging north-south divides on international environmental issues. Substantial student participation is expected and class participation will constitute twenty percent (20%) of the overall grade for the course. Elements used in grading: Class participation and final paper.

LAW 606. Supreme Court Simulation Seminar. 3 Units.

This seminar provides students with the opportunity to analyze, argue, hear oral arguments and draft opinions in cases that are currently pending before the Supreme Court of the United States. Professor Larry Marshall will serve as the instructor in the seminar, but many of the Law School's esteemed group of Supreme Court litigators will be participating in one or more of the sessions. The 18 students in the seminar will be divided into two courts. One of these courts will sit five times and the other will sit four times. During each sitting, the court will hear arguments in a case currently pending before the Supreme Court. The cases chosen will provide a mix of constitutional and statutory issues, as well as a mix between criminal and civil cases. Each student will be assigned the role of a particular Justice for the entire quarter. Each student's task while sitting on cases is to do his or her best to understand that particular justice, based on that justice's prior opinions and judicial philosophy. In this sense, the seminar is intended to help promote insight into the role of judicial personality and philosophy within the decisional process. The weekly seminars will proceed as follows: In preparation for each week's session, all students (whether they are the two students arguing that week, the nine students judging that week, or the seven students observing that week) will read the lower courts' decisions, the briefs (the party briefs and selected amicus briefs) and the major precedents implicated. During the first portion of each week's session (approximately one hour), two of the students (who are members of the Court that is not sitting that week) will present oral arguments to the nine "justices" sitting that week. The arguments will be based on the briefs that were actually filed in the case. During the second segment of each week's session (approximately 45 minutes), the "justices" who are sitting that week will "conference" the case while the other non-sitting students, students who argued, instructors and guests will observe. Again, each student will be in the role of a particular justice. At the end of the "conference," the opinion-writing will be assigned to one "justice" in the majority and one "justice" in the dissent. During the final portion of each session (approximately one hour), the instructors, guests and students will engage in a broad discussion of what they just observed. This may include analysis of the briefing, discussion about the oral argument, reflections on the "conference," and, more generally, a discussion about the case and its significance. After each class, the student assigned to draft the majority opinion will have two weeks to circulate a draft to the "Court." The student writing the dissent will then have two weeks to circulate his or her opinion. The other sitting "justices" can join one of these opinions, request some changes as a condition of joining, or decide to write separately. Over the course of the Quarter, then, each student will argue one case, sit on four or five cases, and draft at least one opinion.

LAW 610. Trial Advocacy Workshop. 5 Units.

This lawyering skills course gives students an orientation to and constant practice in most basic pretrial and trial advocacy skills areas. Topics include: taking and defending depositions, motion practice, trial evidence, including admission of trial exhibits in evidence and use of prior witness statements to refresh and impeach a witness, jury selection and voir dire, opening statements, direct and cross-examination of witnesses, and closing arguments. Students will try a full jury case through to verdict with use of jurors and before a real judge in the Superior Court in Palo Alto at the end of the course. Students will also have a chance to watch the jurors deliberate and talk with them after their verdict. The course takes place during seven weeks of the Autumn Quarter with two classes (one lecture and one workshop) per week on most weeks from 4:15-9:00 (these usually occur on T, W, or Th, plus an occasional M), plus two Saturday workshops and the final weekend of jury trials, Saturday and Sunday November 15 and 16. Each day's ending time will vary; most sessions will end before 9:00. For a detailed schedule, contact Stephanie Basso at sbasso@law.stanford.edu. The format for each topic begins with a lecture/discussion featuring video vignettes of various techniques and a live demonstration by an expert trial lawyer. Following the discussion portion of each topic are small group sessions during which each student practices the skills involved. Constructive feedback is given after each exercise by two of our faculty of very experienced Bay Area litigators and judges. Most exercises are also videoed for further one-on-one critique by another faculty member. The course ends with full jury trials. The central philosophy of the workshop is that skills are best acquired in an experiential manner by seeing and doing. Frequent short, well-defined exercises followed by immediate constructive feedback in a non-competitive, non-threatening atmosphere provide the core of the program. The workshop directors are Tim Hallahan, Sallie Kim and Jeff Kobrick. Tim has taught similar programs at Harvard Law School, the University of San Francisco School of Law, Boalt Hall, the California Continuing Education of the Bar, and in private and public interest law firms around the country. Sallie is a partner in a civil litigation firm and taught a class at SLS previously and served as Associate Dean for Student Affairs previously. Jeff is a partner in a civil litigation firm and has taught practical litigation skills courses at Harvard and Stanford Law Schools for a number of years. Special Instructions: If you haven't taken Evidence you must contact Mr. Hallahan before the course begins for some brief pre-course reading assignments. There are no papers or tests, but attendance at every session is required. Since we will begin our trial advocacy exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the professor.) Add-drop decisions need to be resolved at the first class; no drops will be permitted thereafter. Exceptions to this rule will be made by petition only. Mandatory attendance. Elements used in grading: Attendance and in-class assignments.

LAW 612. Constitutional Law: Speech and Religion. 4 Units.

This is a course about the freedoms of speech, press, religion, association, and assembly under the First Amendment. Two-thirds of the course will be about freedoms of speech, press, and assembly. We will examine historical context, doctrinal development, and current caselaw. We will ask why government regulates speech (to prevent harms? to protect sensibilities? to redistribute power? to advance the interests and ideas of the politically powerful?), how government regulates speech (by aiming at messages? by aiming at markets? by aiming at when and where speech takes place? by conditioning subsidies?), and what justifications are ever sufficient for limiting speech. We will include consideration of the institutional press and new technologies including the Internet, as well as the rights of private organizations to determine their membership and organization. About a third of the course will be about religion. We will ask how the twin constraints of the Free Exercise and Establishment Clauses relate, looking especially at notions of neutrality, voluntarism, separation, and accommodation. Elements used in grading: Exam.

LAW 613. Dispute Systems Design. 3 Units.

Lawyers are often called upon to help design systems for managing and resolving conflicts that support or supplant existing legal structures. The crisis of September 11 led Congress to pass a law creating the September 11 Fund; a California Supreme Court challenge to its method of resolving health care disputes led Kaiser Permanente to reform its arbitration system; years of atrocities committed against the people of South Africa, Guatemala and many other countries led to the formation of truth commissions. Lawyers helped to structure these and many other conflict resolution systems. We'll use a case study model to survey different kinds of conflict prevention, management and resolution systems, and examine different factors in their design. Special Instructions: Grades will be based on class participation and Option 1 (section 01) a series of short essays and a short research paper; or Option 2 (section 02) a long research paper involving independent research. Students electing option 2 (section 02) will be graded on the H/P/R/F system and will receive Research (R) credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Negotiation Seminar (LAW 615) strongly preferred but not required. Elements used in grading: Class participation, attendance, written assignments and final paper. Attendance at the first class is mandatory.

LAW 615. Negotiation. 3 Units.

As a lawyer, you will probably negotiate more than you do anything else. You will negotiate not just over cases, but any time that you need something that you cannot get alone. You will negotiate with your boss, your clients, your secretary, and all of their counterparts (plus the lawyers) on the other side. You will negotiate with "the system" whether it is the court, the government, the structure of society, or the law. You will also continue to negotiate with your family, your friends, and yourself. This course is designed to: (1) develop your understanding of negotiation, and your awareness of yourself as a negotiator; (2) give you some tools and concepts for analyzing and preparing for negotiations; (3) enhance your negotiating skills through frequent role plays, reflection, and feedback; and (4) teach you how to keep learning from your own negotiation experience. In addition to negotiation skills and theory, you will be introduced to issues of representation, ethics, and the place of negotiation in our legal system. The Negotiation Seminar is an intense, interactive course. We will require weekly preparation of readings, simulations, and written assignments. Basically, you will learn by reading about specific research and doing simulated negotiations -- figuring out with the rest of the class what works and what does not, writing about what you're learning, and trying again. Because participation in the simulations is central to the course, attendance at all classes is required. Since we will begin our simulation exercises on the first day of class, all students who are interested in taking the course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the professor.) Add-drop decisions need to be resolved at the first class; no drops will be permitted thereafter. Once you commit to the class, you must complete it or receive a failing grade. Exceptions to this rule will be made by petition only. Petitions of this type must be extraordinarily strong in order to be granted. Elements used in grading: Class participation, attendance and written assignments.

LAW 616. Complex Litigation. 3 Units.

This course will examine the variety of procedures used to develop and manage large-scale litigation within and outside the U.S., and the policy controversies surrounding them. Topics include class actions, multidistrict litigation, pretrial procedure, special trial and evidentiary issues, judicial case management, issues of federalism, problems of absent and future claimants, settlement issues, alternate dispute resolution techniques within litigation, and proposals for law reform. Much of the course will consider these topics as they play out in current cases, with guest lectures by judges, lawyers, and others from the U.S. and elsewhere. Early in the quarter each student will choose a recent or ongoing complex litigation to investigate. (A list of candidate litigations will be provided, but students are free to choose any complex litigation that interests them.) During the quarter, students will conduct research on the litigation including, where possible, contacting key participants for information and perspective. This research will serve as the basis for in-class discussion, focusing on different aspects of the litigation as the quarter progresses. Students will hand in 3 papers during the course of the quarter, for review and comment, but not for grading. Regular reading assignments will be tailored to allow time for this on-going student research. Elements used in grading: Final paper and class participation.

LAW 617. Public Interest Law and Practice. 2-3 Units.

This course will examine the history, theoretical frameworks, strategies and political position of public interest law practice and attorneys in the United States. We will consider the role of lawyers and the legal system in advancing reforms; different career paths of public interest lawyers; ethical issues related to working as a lawyer within a social movement; the personal impacts of this type of career choice; and strategies employed by lawyering in differing settings, from issue-based non-profits to government agencies, and private public interest law firms or legal services groups. Readings will include law review articles, legal pleadings and case studies that allow analysis and exploration of the tensions and challenges that exist within the legal system for public interest practitioners. Students will also be exposed to practical skills outside of litigation that social justice lawyers should understand. Students will be asked to produce several short papers throughout the quarter. For an additional credit and Research credit, students will be asked to produce a substantially longer paper on a related topic and can be excused from some of the shorter assignments. Students taking the seminar for Research credit can take the seminar for either 2 or 3 units, depending on the paper length. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Attendance, class participation, written assignments. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 620A. Criminal Prosecution Clinic: Clinical Practice. 4 Units.

Clinic students prosecute cases at the San Jose Superior Court under the guidance of Santa Clara County prosecutors. They formulate case strategy, identify and interview witnesses, and advocate before the court at evidentiary motions or preliminary hearings. The cases, almost always felonies, include drug offenses, thefts, burglaries, assaults, weapons possession, and a range of less common crimes. Police witnesses are most common, though students sometimes offer testimony from crime victims. When defendants testify or offer other witnesses, they face cross-examination by clinic students. Students spend at least three full days a week in the D.A.'s office. All six students must spend all day on Tuesdays and Wednesdays on site. Each student also must choose a third on-site day, when the student will work closely with the student's on-site supervisor. The six students need not all choose the same third day, but each student must pick a day that stays constant through the term. There generally will be two class sessions each week—a three-hour on-campus class and a lunchtime seminar in the D.A.'s office. At the beginning of the term classes focus on skills training, including direct and cross-examination, admission of physical evidence, and argument. Toward the end of the term the focus shifts to an examination and critique of the local mechanisms of criminal justice. Topics include the impact of race, gender, and class on the quality of justice; the institutional strengths and weaknesses of the actors in the system; prison conditions and prison reform; and the ethical issues that confront prosecutors and defense lawyers. Students typically tour the Santa Clara County jail and crime lab, San Quentin Prison, and the Chaderjian Youth Correctional Facility in Stockton and have the option to spend an evening on a police ride-along. Students must submit regular written reflections on their experiences in and observations of the local justice system. Their assigned cases often will demand written court filings. During most weeks students will meet one-on-one with the faculty supervisor. Evidence is a prerequisite. In rare cases a concurrent clinic module in evidence can fulfill this requirement. Courses in criminal procedure (investigation) and trial advocacy are strongly encouraged. Class attendance is mandatory, and class participation will be considered in grading. Students will be asked to commit to the course in the summer of 2014; dropping the course after committing will not be permitted. Students will earn twelve credits. The clinical quarter begins the first day of classes and runs through the final day of exam period. Students should not plan personal travel during the Monday-to-Friday workweek without permission from on-site and faculty supervisors. Students are expected to be available by email or cell phone during workday hours Monday through Friday. Students are expected to devote at least thirty-five hours per week to various facets of this work. In some weeks casework may demand longer hours. Students will be awarded three separate grades, each reflecting four credits, for clinical practice, clinical methods, and clinical coursework. Grading is on the H/P system. Please also refer to special instructions for the general structure of clinical courses. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in

LAW 620B. Criminal Prosecution Clinic: Clinical Methods. 4 Units.

Clinic students prosecute cases at the San Jose Superior Court under the guidance of Santa Clara County prosecutors. They formulate case strategy, identify and interview witnesses, and advocate before the court at evidentiary motions or preliminary hearings. The cases, almost always felonies, include drug offenses, thefts, burglaries, assaults, weapons possession, and a range of less common crimes. LAW 621. Sentencing and Corrections. 3 Units.

This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to ILs, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation and (1) weekly reflection papers of 3-5 pages each week for each of our speakers/topics or (2) a long research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Weekly reflection papers or research paper.

LAW 622A. Environmental Law Clinic: Clinical Practice. 4 Units.

Students enrolled in the Clinic provide legal assistance to national, regional and grassroots non-profit organizations on a variety of environmental issues, with a focus on complex natural resource conservation and biodiversity matters at the interface of law, science and policy. Working under the direct supervision of practicing environmental attorneys, Clinic students help screen new matters and potential clients; formulate strategies; research and develop factual and legal issues; and prosecute administrative and litigation proceedings. During the term, students may meet with clients, opposing counsel or agency decision-makers; review administrative records; develop expert testimony; draft comment letters, petitions, pleading or briefs; and/or attend and participate in administrative and court hearings. In regular one-on-one meetings with supervising faculty, there is a heavy emphasis on learning how to write persuasively and present oral arguments. In addition, students participate in a regular seminar where we examine strategic, ethical and substantive issues arising out of the Clinic's work. The Clinic is a particularly good place to learn how to conduct effective legal research, marshal facts in support of legal arguments, and, above all, write well. We practice at all levels of state and federal court and before many local, state and federal administrative agencies. Our work involves extensive motions practice and brief writing, and often involves administrative petitions and policy papers. Our work is inherently cross-disciplinary. No prior environmental experience or background is necessary, but an interest in learning about environmental and natural resources law is important. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Attendance and participation in class, professionalism, timeliness, initiative, and follow-through on project work and other class requirements. Writing (W) credit is for students entering prior to Autumn

LAW 622B. Environmental Law Clinic: Clinical Methods. 4 Units.

Students enrolled in the Clinic provide legal assistance to national, regional and grassroots non-profit organizations on a variety of environmental issues, with a focus on complex natural resource conservation and biodiversity matters at the interface of law, science and policy. Working under the direct supervision of practicing environmental attorneys, Clinic students help screen new matters and potential clients; formulate strategies; research and develop factual and legal issues; and prosecute administrative and litigation proceedings. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Attendance and participation in class, professionalism, timeliness, initiative, and follow-through on project work and other class requirements. Writing (W) credit is for students entering prior to Autumn

LAW 623. Advanced Environmental Law Clinic. 2-7 Units.

The Advanced Environmental Law Clinic provides students who have already taken the Environmental Law Clinic the opportunity to continue intense individual project work. Advanced students often work on matters they worked on as full-time students, but they also have the chance to work on new matters and develop new skills. Advanced students work closely with supervising faculty on their designated projects and are expected to take increasing responsibility for managing their work and representing clients. In addition, advanced students often serve as mentors to less experienced full-time students and thereby receive training in basic team building and supervision. Advanced students may arrange to receive between two and seven credits. No student may receive more than 27 total clinical credits during the course of the student's law school career. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 626. Legislative Simulation: The Federal Budget. 3 Units.

How does a bill really become a law? This course is about the formal and informal American legislative and budget process. The course is part lecture, part simulation. You will learn the formal processes that govern legislating and White House policymaking, including: how a President decides what policy to propose; Congressional committee markups; House and Senate floor debate, rules, and the amendment process; conference committees; and Presidential signatures and vetoes. You will then learn how legislative coalitions are built and broken, how and why bargaining occurs, the roles of interest groups and lobbyists, how an Executive Branch tries to influence Congress, how political parties and elections influence legislative behavior, and how the press and personalities influence all of the above. While this is primarily a class about policymaking process, we will learn enough about federal budget policy to make your participation in budget legislative simulations more effective. Can your class solve America's long-term budget problems when your counterparts in Washington have so far been ineffective at doing so? Elements used in grading: Class participation (for lectures and the simulations), attendance and written assignments (memos).

LAW 628A. Oral Argument Workshop. 2 Units.

Building on the skills developed in Federal Litigation, this simulation course will give students the unique opportunity to argue and judge pretrial motions from actual federal court cases. The instructor will provide the written briefs, and each week half the class will argue and half the class will judge a motion. Preparation will require reading the cases cited in the briefs and coming to class ready either to present an argument (attorneys) or interrogate counsel (judges). Students will critique each other both orally and in writing, and the instructor will provide oral critiques of all arguments. The goals of this class are: to train students to argue in court; to provide them with a chance to polish their public speaking skills and practice thinking on their feet; to prepare students to engage in challenging dialogue with both colleagues and future clients; and to improve self-confidence. Thus, while the context of the course is litigation, the objectives are much broader than the mastery of litigation technique. This course is not open to first year Law School students. Priority will be given to those students who commit to taking the class if given consent to enroll. Please indicate your commitment on the consent form. Elements used in grading: Class attendance, participation, and preparation. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 628B. Oral Argument Workshop. 1 Unit.

This course is offered in conjunction with "OAP" (Law 628-A-01). All students registered in Law 628-A-01 have the option to take an additional unit. The focus of this component will be on oral presentation skills and will consist primarily of interactive exercises designed to enhance voice and body control, increase poise, reduce anxiety, and improve overall effectiveness in public speaking. Doree Allen, the Director of the Oral Communication Program at Stanford's Center for Teaching and Learning, along with guest lecturers from throughout the university, will lead these classes with the goal of giving students an opportunity to improve their oral presentation skills in a supportive and fun environment.

LAW 629. Spanish For Lawyers. 3 Units.

The Spanish and Cultural Competency for Lawyers course offers an opportunity for students to enhance their existing Spanish communication skills in legal practice. The course will cover specific Spanish vocabulary necessary to communicate in a variety of legal settings from direct client representation in administrative and judicial proceedings to community education and policy reform efforts. The course will also provide exposure to the linguistic and cultural diversity of Latino communities and improve cultural competency for client interaction and communication. The course will emphasize speaking and listening skills, however, students will also be responsible for reading and writing assignments. Student Eligibility: Students must already have basic proficiency in Spanish. The goal of the class is to strengthen existing Spanish language skills. The class is aimed at learning Spanish legal vocabulary and developing culturally competent communication skills. To verify basic Spanish proficiency, the instructor may seek to speak with students by phone prior to admitting them.

LAW 632A. Religious Liberty Clinic: Practice. 4 Units.

The Religious Liberty Clinic provides students a dynamic, real-world experience representing a diverse group of clients in disputes arising from a wide range of religious beliefs, practices, and customs, and in a variety of circumstances. Students learn in class and apply in practice the laws affecting religious liberty, whether statutory or constitutional, and counsel individual or institutional clients and litigate on their behalf with excellence, professionalism, and maturity. Students can expect to handle a discrete accommodation project-e.g., represent a prisoner, student, or employee facing obstacles in the practice of his or her faith-and participate in a longer-term project involving the exercise of religion-e.g., represent a church, synagogue, or mosque with zoning issues. Opportunities to draft amicus briefs also arise. The clinic involves administrative, trial, and appellate work-though time constraints may not permit each student to work in all areas. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Clinical case/project work, clinical performance, seminar preparation and participation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 632B. Religious Liberty Clinic: Clinical Methods. 4 Units.

The Religious Liberty Clinic provides students a dynamic, real-world experience representing a diverse group of clients in disputes arising from a wide range of religious beliefs, practices, and customs, and in a variety of circumstances. Students learn in class and apply in practice the laws affecting religious liberty, whether statutory or constitutional, and counsel individual or institutional clients and litigate on their behalf with excellence, professionalism, and maturity. Students can expect to handle a discrete accommodation project-e.g., represent a prisoner, student, or employee facing obstacles in the practice of his or her faith-and participate in a longer-term project involving the exercise of religion-e.g., represent a church, synagogue, or mosque with zoning issues. Opportunities to draft amicus briefs also arise. The clinic involves administrative, trial, and appellate work-though time constraints may not permit each student to work in all areas. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. For more information about clinic enrollment and operations, please see the clinic policy document posted on the SLS website. Elements used in grading: Clinical case/project work, clinical performance, seminar preparation and participation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 635. The Future of Labor Law & Policy. 2 Units.

The course covers the current and past NLRB political crises, with particular focus upon rule making initiatives; union tactics and efforts to organize domestics, home care workers, agricultural and white collar workers, independent contractors and the problems peculiar to such; right-to-work legislation, particularly recent initiatives in Michigan and Indiana; the impact of recent Supreme Court and other decisions on union ability to participate in the political process; new legislation restricting public employee union activity, with particular focus on Wisconsin and union efforts to invoke the First Amendment; the First Amendment rights of free speech in the workplace in the public sector, and social media and free speech in the private sector; new and innovative dispute resolution procedures involving union recognition and discrimination issues as well as rights and interest arbitration and mediation; the globalization of labor disputes. Students will write a final paper. There are no prerequisites to this seminar, and students need not have had basic Labor Law to take it. This course prerequisite Sports Law. Students who complete this seminar will have preference for enrollment in Sports Law when it is next offered in 2014-15. This course is open to first year Law School students. Elements used in grading: Class participation and a final paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 638. Mediation. 3 Units.

In recent years, individuals and their lawyers have increasingly turned to mediation to resolve disputes. In mediation, the parties to the dispute, who may be represented by lawyers, are in charge of the outcome. With the assistance of a mediator they may be able to reach agreements at any stage in a dispute, in some cases avoiding litigation altogether, in other cases agreeing when the case is on appeal. This course will introduce you to the theory and practice of mediation. You will learn about the mediation process primarily by experiencing it in roleplay and hands-on exercises. The course also includes readings and discussions, brief lectures, demonstrations, student presentations, and videotapes. You will mediate disputes based on actual cases, and be coached in small groups by Bay Area mediators. The course goals are to understand the nature of conflict and principles of conflict management, to develop the communication skills essential to effective mediation, to evaluate various mediation models and mediator styles, to consider the policy and ethical implications of the expanding use of mediation, and to develop the skills necessary to represent clients in mediation. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Prerequisite: Negotiation (LAW 615). Mandatory attendance at first class and attendance as required by the instructor. Elements used in grading: Class participation, attendance, assignments.

LAW 639. Lawyering and Social Intelligence. 3 Units.

Building a successful legal career or practice involves both technical expertise as well as relational skills. Becoming a trusted advisor or effective advocate is essentially an interpersonal process that relies upon social and emotional skills, such as listening in ways that gain client trust and engagement or delivering tough messages in ways that reduce defensiveness and increase mutual problem solving. These skills can be learned. Unlike conceptual knowledge, they are acquired through practicing new behaviors that expand skills or undo old habits. Adult learning is strengthened through experiencing the concept in action, reflecting upon the experience and practicing it. I will construct such exercises for use in class as well as in workgroups outside of class. This course will introduce students to simple frameworks that raise awareness and understanding of social intelligence and expose them to a process of learning they can employ in their everyday interactions for continued growth and development.

Special Instructions: This course develops student skills and not simply conceptual knowledge. Learning will come from consistent class attendance and a willingness to participate actively - not only in occasional role plays but primarily as one's self, practicing new behaviors that build skill sets. Written assignments will be brief weekly reflections on personal learning. Since I will establish workgroups following the first day of class, all students who are interested in taking this course (whether enrolled or on the wait-list) need to be present for the first class. (Students who are not present will be dropped from the class or waiting list unless they have made previous arrangements with the professor.) Add-drop decisions need to be made at the conclusion of the first class; no drops will be permitted thereafter as learning will depend upon intact workgroups throughout the quarter. Once you commit to the class, you must complete it or receive a failing grade. Exceptions to this rule will be made by petition only.

Elements used in grading: Class participation, attendance, written assignments.

LAW 640A. Community Law Clinic: Clinical Practice. 4 Units.

The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Skills emphasized include those trial lawyering skills, as well as time management and developing client-centered lawyering practices. Students may also have the chance to participate in outreach or policy-level projects, such as representing the clinic on a state or regional committee on a substantive issue, doing community education workshops at sites around the Peninsula, and/or legislative research and advocacy. In the clinic seminar and in regular supervision, students are encouraged to interrogate the effectiveness of the legal system at delivering "justice" for their clients and to explore creative ways that legal knowledge can be deployed to attack the social problems attendant to low wages, substandard and unstable housing, and other features of low-income life in Silicon Valley.

Special Instructions: General Structure of Clinical Courses -- The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend four or five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment

LAW 640B. Community Law Clinic: Clinical Methods. 4 Units.

The CLC is the closest thing to a general legal services office among Stanford's clinical offerings. Based in East Palo Alto, the CLC provides students with the opportunity to provide direct legal services to low-income residents, while thinking critically about the role of lawyers and lawyering in addressing the problems of America's so-called "working poor." The Clinic's practice is in four areas: (1) housing (eviction defense and Section 8 termination); (2) wage and hour and related workers' rights; (3) social security and disability benefits; and (4) criminal record expungement. Each student handles his or her own caseload, which is comprised of cases matters in all of the practice areas. The practice areas are selected and designed to lie at the intersection where the community's unmet legal needs and students' learning needs correspond. The clinic's docket is fundamentally a trial docket. Students have first-chair responsibility for their cases, and perform all of the lawyering tasks necessary to advance their clients' interests, including interviewing, counseling, negotiation, fact investigation, legal research, and representation in the court and agency settings that hear the clients' cases. Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend four or five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, a student may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS website. Students may not enroll in any clinic (full-time or advanced) which would result in them earning more than 27 clinical credits during their law school career. The rules described here do not apply to advanced clinics for students who are continuing with a clinic in which they were previously enrolled. For information about advanced clinics, please see the course descriptions for those courses. For more information about clinic enrollment

LAW 641. Constitutional Litigation. 3 Units.

This is a part doctrinal, part simulation course. The course is sometimes called "constitutional torts" or "civil rights litigation," reflecting its focus on one of the central ways in which constitutional claims are actually litigated: in lawsuits against public officials and local governments. The bulk of the course looks at litigation under 42 U.S.C. sec; 1983. We will consider topics such as what it means to act "under color of state law;" absolute and qualified immunities; government liability for the acts of individual officials; remedies for constitutional violations, including monetary and injunctive relief; and the remedial issue nearest and dearest to many lawyers' hearts: attorney's fees awards. Though we will learn the doctrine, we will do so with a focus on lawyering, both in a litigation context and in counseling clients in the shadow of litigation. A considerable amount of class time will be spent working in small groups on simulation and other exercises. Special Instructions: I ask that you limit laptop use to the classes in which we need them for simulation exercises. Elements used in grading: Class participation, written assignments, and final exam (30% class participation, 30% a 3-5 page memo involving research and due mid-quarter; 40% final exam. One-day take-home and open-book.).

LAW 642. Advanced Community Law Clinic. 2-7 Units.

The Advanced Community Law Clinic offers law students who already have some significant civil clinical experience the opportunity to work under supervision on more advanced projects and cases being handled by the Stanford Community Law Clinic, including litigation and other matters. Advanced Clinic students will also work with Clinical Supervising Attorneys to provide direction and guidance to those enrolled in the Community Law Clinic for the first time, in areas in which Advanced Clinic students have already acquired some expertise. In addition, Advanced Clinic students may function as team leaders on larger projects in which the Clinic is engaged. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Special Instructions: Completion of the Community Law Clinic (Law 640) or its equivalent is a prerequisite for the advanced clinic. Elements used in grading: Participation, reflective paper and project. Writing (W) credit is for 3Ls only.

LAW 643. Medical-Legal Issues in Children's Health. 4 Units.

(Same as PEDS211) This service-learning seminar is open to law and medical students interested in exploring the link between poverty and children's health, and how the professions can work together to improve health outcomes for low-income children. The course consists of four components: (1) weekly class meetings in which we will discuss a series of medical-legal issues (e.g., asthma, immigration, health insurance, etc.) with guest lecturers from the medical and legal fields, selected for their expertise on each topic.; (2) intake interviews with patient families at Lucile Packard Children's Hospital or the Ravenswood Family Health Center in East Palo Alto, and an analysis of their medical-legal issues; (3) a group project focused on a local or state-level medical-legal policy issue (e.g., obesity prevention); and (4) a final paper that law and medical students will co-write in pairs. The course is linked to the Peninsula Family Advocacy Program. You can learn more about it at www.peninsulafap.org.

LAW 644. Disability: Law, Human Rights and Justice. 3 Units.

This is a survey course of disability rights law, with an emphasis on federal and state statutes and case law, and some exposure to international human rights law and the contemporary concept of "disability justice." Areas of concentration are employment, government services, public accommodations, education, housing, mental health treatment and involuntary commitment, and personal autonomy. We will review such statutes as the Americans with Disabilities Act (ADA), Rehabilitation Act (Sec. 504), Individuals with Disabilities Education Act (IDEA), Fair Housing Act Amendments, California Developmental Services ("Lanterman") Act and the UN Convention on the Rights of Persons with Disabilities. The course examines disability from a civil and human rights perspective and has a "cross-disability" orientation insofar as it addresses the legal interests of persons with mobility and communication impairments, as well as intellectual and psycho-social disabilities. Exploration of the legal doctrine will be complemented with practical skills exercises and presentations by guest speakers. Special Instructions: Grades will be based on class participation and (1) short reflection essays on the readings and a short research paper for Writing (W) credit or (2) a long independent research paper for Research (R) credit. The student must consult with the instructor on the paper's topic, scope and format. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation (40%), short reflection essays and short research paper (60%) or a long independent research paper (60%). Writing (W) credit is for students entering prior to Autumn 2012. - - - NOTE: The first class meets on Sept. 24, Erev Rosh Hashonah (Eve of Jewish New Year). If you are unable to attend, the instructor will provide an accommodation to ensure that you are not disadvantaged. Please contact him before Sept. 17 at 510.387.3956.

LAW 645. Reading The Constitution. 2 Units.

This seminar is devoted to a careful reading of the entire text of the U.S. Constitution, from the Preamble to the 27th Amendment. From "We the People," through the structure of government, to the Bill of Rights, the Reconstruction amendments, and Progressive and Modern Era Amendments, the text of the Constitution tells an overall story about America's supreme law that is rich, intricate, and surprising, yet too often neglected, even in law school. In addition to the text itself, we will consult historical materials from the drafting and ratification of the parts under consideration each week. And throughout the seminar, we will occasionally step back to consider and assess various classic statements by scholars, judges, and presidents about how to best read the Constitution. The goal of the course is the title of the course: to read the Constitution with attentive and open eyes; to become familiar with its text, even the parts that are rarely litigated; to learn some of the history of its creation, even the stories that do not fill amicus briefs; to consider how the different clauses and sections may relate to each other; and to examine several different methods of reading the Constitution as a whole. Elements used in grading: Class Participation, Written Assignments, Final Paper.

LAW 649A. Cyberlaw/Fair Use Clinic: Advanced. 4 Units.

This is a hands-on, project-oriented seminar, in which students work on a wide range of cyberlaw projects with lawyers from the Center for Internet and Society's Fair Use Project and with lawyers from the Electronic Frontier Foundation. There are significant faculty-student interactions through meetings to discuss the projects and an associated bi-monthly discussion seminar covering advanced cyberlaw topics. This clinical program provides law students with the opportunity to represent clients in cutting-edge issues of intellectual property and technology law, in the public interest. Through the hands-on experience of representing clients (under the supervision of the faculty) in various fora, students learn professional responsibility and advocacy skills, substantive law and procedural rules related to their projects, and examine the concept of the public interest in intellectual property and technology law. Clients vary widely, and may be individual artists; technologists; non-profit institutions; coalitions; etc. In the past, students have drafted amicus briefs, counseled nonprofits on public-interest initiatives, created a patent licensing scheme, represented independent and documentary filmmakers who are pursuing legislation in Congress, and counseled artists developing new technology-based art forms, among other projects. Thus, the skills each student learns also vary according to project. The classroom component explores public interest practice in tech law in various fora, and spends significant time on student projects.

LAW 649B. Cyberlaw/Fair Use Clinic: Advanced. 3 Units.

This is a hands-on, project-oriented seminar, in which students work on a wide range of cyberlaw projects with lawyers from the Center for Internet and Society's Fair Use Project and with lawyers from the Electronic Frontier Foundation. There are significant faculty-student interactions through meetings to discuss the projects and an associated bi-monthly discussion seminar covering advanced cyberlaw topics. This clinical program provides law students with the opportunity to represent clients in cutting-edge issues of intellectual property and technology law, in the public interest. Through the hands-on experience of representing clients (under the supervision of the faculty) in various fora, students learn professional responsibility and advocacy skills, substantive law and procedural rules related to their projects, and examine the concept of the public interest in intellectual property and technology law. Clients vary widely, and may be individual artists; technologists; non-profit institutions; coalitions; etc. In the past, students have drafted amicus briefs, counseled nonprofits on public-interest initiatives, created a patent licensing scheme, represented independent and documentary filmmakers who are pursuing legislation in Congress, and counseled artists developing new technology-based art forms, among other projects. Thus, the skills each student learns also vary according to project. The classroom component explores public interest practice in tech law in various fora, and spends significant time on student projects. After completing the initial 7-unit Cyberlaw/Fair Use Clinic: Advanced course, students may enroll again for either 3 or 4 credits by consent of the instructor.

LAW 650. Advanced Negotiation: Public Policy. 3 Units.

Advanced Negotiation courses are designed to take students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar, to examine many facets of negotiation complexity, both in terms of the participants and topics. This section of Advanced Negotiation will focus on multi-party negotiations, working in teams, group decision-making, and negotiating on behalf of stakeholder organizations to solve complex problems. We will study negotiations and stakeholder dialogue processes involving a diverse set of public and private actors. In the context of both real and simulated case studies, we will address diverse public policy issues, both domestic (including civil rights, racial justice, economic inequality and natural resources management) and international (negotiating bilateral and multilateral agreements, including global security environmental treaties). The goals of the class are twofold, for students (1) to acquire an added theoretical base beyond what was covered in the Negotiation Seminar through which to analyze, prepare for, participate in and facilitate more complex, multiparty negotiations, and (2) to expand skills through deeper examination of various actual negotiation cases and complex simulations. Special Instructions: Attendance at and participation in the simulations is required. Passing is dependent upon active participation, submission of several assigned short reflection papers, and completion of a substantial group paper and presentation analyzing a selected case (a completed or ongoing multi-party public policy dialogue) and the team's internal negotiation process. Prerequisite: Negotiation Seminar (Law 615) or its substantial equivalent. Advanced degree students (and graduate students in other departments and programs) are encouraged to enroll provided that they have previous negotiation training or equivalent practice experience. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students approved for "R" credit will be graded on the H/P/R/F system. Elements used in grading: Class participation and engagement, including simulations; attendance; preparation for and contributions to discussion; short written assignments; final project involving group and individual components.

LAW 652. Animal Law. 2 Units.

This course presents a survey of the historical and current status of this rapidly developing specialty. In brief, animal law encompasses all areas of the law in which the nature -- legal, social or biological -- of nonhuman animals is an important factor. It is an objective and logical specialization of a challenging area -- one with a growing number of cases and laws, increasing public and practical interest, and significantly different historical, legal and philosophical foundations than most other courses. Topics covered include animal cruelty, animals as property, tort claims regarding animals, farm animals, animals in entertainment, and federal issues regarding animals. The Animal Law course has been described as intellectually stimulating and ethically challenging, and synthesizes a wide range of legal concepts, and the course materials apply traditional ideas to animals in new ways. Students have called it a great bar review class, because concepts from many areas of law are covered with respect to their application to animals and their interests. More and more firms, large and small, are providing pro bono (and paying) work in the animal law area, as the field gains momentum and reputability in the legal community. Mr. Wagman is a partner at Schiff Hardin in San Francisco, with a full-time animal law practice, representing organizations and individuals in a wide range of cases. He is one of the authors of the Animal Law casebook, and has been practicing animal law for most of his 20-year career. His practice includes litigation, consultation, legislative work, and extensive writing and lecturing on various animal law topics. The class includes regular updates on his current cases, as well as real-life experiences from the front lines of the animal law frontier. Special Instructions: Students have the option to write an independent research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final exam or 18 page independent research paper.

LAW 653. Corporate Law: Theory and Practice. 2 Units.

This class will bring leading academics and members of the corporate bar, business and investment communities, judges and regulators to the law school to discuss new research, as well as new practice and regulatory issues. The idea is to engage students in the theoretical and policy debates and to understand how these concerns affect business and the practice of law.

LAW 654. Law and Biosciences Workshop. 1 Unit.

This workshop seminar will provide students with the opportunity to examine and critique cutting-edge research and work in the field of law and the biosciences presented by different speakers from Stanford and elsewhere. Although it is open to all students, the seminar is designed especially for those with an interest in the field who wish to stay abreast of current issues, work, and ideas. In each class, an academic expert, policy maker, or practitioner will present his or her current research or work and engage in a robust discussion. A second version of the class will be held in winter quarter that will also be worth one unit; students may take both the fall and winter classes. This class will meet four times for two hours, 15 minutes during the fall term and the winter term. This class is open to first-year Law School students in the winter term. Elements used in grading: Class participation, attendance, written assignments and final paper.

LAW 656. International Conflict Resolution. 3 Units.

This seminar examines the challenges of managing and resolving violent inter-group and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach focuses on the following questions: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? Among the conceptual issues we will examine include the problem of spoilers who seek to sabotage agreements, the role of mediators, the role international legal rules can play in facilitating or impeding conflict resolution, and the advantages and disadvantages of unilateral versus and reciprocal measures in advancing conflict resolution efforts. Particular conflicts we will explore include the Northern Ireland conflict, the Israeli-Palestinian conflict, and the U.S.-Soviet Cold War rivalry. Special Instructions: Total enrollment in this course will be limited to 20. Initial Law student enrollment will be limited to 10. International Policy Studies students will be given priority to enroll in this course. The remaining spaces will be filled (and the number of Law School students to be admitted will be determined) after the first class. Students may not add this class after the first class without the consent of the instructor. This course is cross-listed with the International Policy Studies and Psychology Departments (Same as IPS 250 and PSYCH 383). Special Instructions: Section 01: Grades will be based on class presentation, short presentation paper, class participation, and final paper. Section 02: Five students will have the option, to write an independent research paper for Research (R) credit, with consent of the instructor, in lieu of the final paper for section 01. Other course requirements -- class presentation, short presentation paper and class participation. Elements used in grading: Class presentation, short presentation paper, class participation, and final paper. This course is open to first-year Law School students.

LAW 658A. International Human Rights and Conflict Resolution Clinic: Clinical Practice. 4 Units.

In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse, if not practice. This course examines the actors and organizations behind this remarkable development, as well as the vast challenges faced by advocates in the recent past and today. Increasingly, human rights as a framework has become essential to a broad range of situations of tension and conflict. This course interrogates the nature of engagement by human rights practitioners, as well as approaches adopted by those focused on the management of violent conflict. What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in rights promotion and defense? How is conflict resolution consistent with human rights advocacy? When and where are these approaches in tension? The course also develops advocacy skills through in-class sessions, role play exercises and engagement in, and critical assessment of clinical projects in human rights. Class sessions introduce students to human rights advocacy and conflict management techniques through discussion of the readings and related issues, as well as through student presentations critiquing their participation in supervised clinical projects. The readings and seminar sessions expose students to some of the practical manifestations of the main debates and dilemmas within the human rights and conflict resolution movement(s). These include several of the ethical and strategic issues that arise in the course of doing fact-finding and advocacy and balancing the often differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the (frequently non-western) developing world. The readings also consider tensions within the field of conflict resolution, as well as between conflict resolution and human rights. Several class sessions will focus on fact-finding and advocacy skills. One or more of these sessions will be full-day, role play exercises. In these full-day sessions, students will engage in human rights research, documentation, negotiation and dispute management exercises, and advocacy role-playing. In some sessions, part of the class will be devoted to presentations by students and clinical 'rounds'. These presentations will consider one or more issues that arise in the course of students' own engagement in advocacy projects through the International Human Rights and Conflict Resolution Clinic. During the course of the quarter, students will also be required to draft several brief fact-finding/advocacy pieces (these will be explained in class), and write short, critical reflection papers (2-4 pages, double-spaced, or 500-1,000 words, thought pieces) on the readings. Special Instructions: - - General Structure of Clinical Courses. The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits.

LAW 658B. International Human Rights and Conflict Resolution Clinic: Clinical Methods. 4 Units.

In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse, if not practice. This course examines the actors and organizations behind this remarkable development, as well as the vast challenges faced by advocates in the recent past and today. Increasingly, human rights as a framework has become essential to a broad range of situations of tension and conflict. This course interrogates the nature of engagement by human rights practitioners, as well as approaches adopted by those focused on the management of violent conflict. What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in rights promotion and defense? How is conflict resolution consistent with human rights advocacy? When and where are these approaches in tension? The course also develops advocacy skills through in-class sessions, role play exercises and engagement in, and critical assessment of clinical projects in human rights. Class sessions introduce students to human rights advocacy and conflict management techniques through discussion of the readings and related issues, as well as through student presentations critiquing their participation in supervised clinical projects. The readings and seminar sessions expose students to some of the practical manifestations of the main debates and dilemmas within the human rights and conflict resolution movement(s). These include several of the ethical and strategic issues that arise in the course of doing fact-finding and advocacy and balancing the often differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the (frequently non-western) developing world. The readings also consider tensions within the field of conflict resolution, as well as between conflict resolution and human rights. Several class sessions will focus on fact-finding and advocacy skills. One or more of these sessions will be full-day, role play exercises. In these full-day sessions, students will engage in human rights research, documentation, negotiation and dispute management exercises, and advocacy role-playing. In some sessions, part of the class will be devoted to presentations by students and clinical 'rounds'. These presentations will consider one or more issues that arise in the course of students' own engagement in advocacy projects through the International Human Rights and Conflict Resolution Clinic. During the course of the quarter, students will also be required to draft several brief fact-finding/advocacy pieces (these will be explained in class), and write short, critical reflection papers (2-4 pages, double-spaced, or 500-1,000 words, thought pieces) on the readings. Special Instructions: - - General Structure of Clinical Courses. The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits.

LAW 658C. International Human Rights and Conflict Resolution Clinic: Clinical Coursework. 4 Units.

In the past half-century, human rights advocates have transformed a marginal utopian ideal into a central element of global discourse, if not practice. This course examines the actors and organizations behind this remarkable development, as well as the vast challenges faced by advocates in the recent past and today. Increasingly, human rights as a framework has become essential to a broad range of situations of tension and conflict. This course interrogates the nature of engagement by human rights practitioners, as well as approaches adopted by those focused on the management of violent conflict. What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in rights promotion and defense? How is conflict resolution consistent with human rights advocacy? When and where are these approaches in tension? The course also develops advocacy skills through in-class sessions, role play exercises and engagement in, and critical assessment of clinical projects in human rights. Class sessions introduce students to human rights advocacy and conflict management techniques through discussion of the readings and related issues, as well as through student presentations critiquing their participation in supervised clinical projects. The readings and seminar sessions expose students to some of the practical manifestations of the main debates and dilemmas within the human rights and conflict resolution movement(s). These include several of the ethical and strategic issues that arise in the course of doing fact-finding and advocacy and balancing the often differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the (frequently non-western) developing world. The readings also consider tensions within the field of conflict resolution, as well as between conflict resolution and human rights. Several class sessions will focus on fact-finding and advocacy skills. One or more of these sessions will be full-day, role play exercises. In these full-day sessions, students will engage in human rights research, documentation, negotiation and dispute management exercises, and advocacy role-playing. In some sessions, part of the class will be devoted to presentations by students and clinical 'rounds'. These presentations will consider one or more issues that arise in the course of students' own engagement in advocacy projects through the International Human Rights and Conflict Resolution Clinic. During the course of the quarter, students will also be required to draft several brief fact-finding/advocacy pieces (these will be explained in class), and write short, critical reflection papers (2-4 pages, double-spaced, or 500-1,000 words, thought pieces) on the readings. Special Instructions: - - General Structure of Clinical Courses. The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. The work during a typical week in a clinic is divided into three components. Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits.

LAW 659. Advanced Negotiation: Transactions. 3 Units.

Complex and multi-party negotiations permeate law practice and life. Advanced Negotiation is designed to take students beyond the two-party, lawyer-client negotiations that were the focus of the Negotiation Seminar, to examine many facets of negotiation complexity, both in terms of the participants and topics. Advanced Negotiation: Transactions will focus on more complex negotiations, as well as multi-party negotiations, working in teams, and negotiating on behalf of complex organizations (e.g., governments, corporations, unions) on diverse issues, including: intellectual property; cross-border and public-private transactions; restructuring agreements. The goals of the class are twofold, for students (1) to acquire an added theoretical base beyond what was covered in the Negotiation Seminar through which to analyze and prepare for negotiations, and (2) to expand their skills through deeper examination of various actual negotiation cases and complex simulations. Special Instructions: Attendance at and participation in the simulations is required. Passing is dependent upon active participation, a series of short papers and in-class presentation. Prerequisite: Negotiation Seminar (Law 615) or its substantial equivalent. Elements used in grading: Attendance, participation, in-class negotiations and out-of-class preparation, and short papers.

LAW 660A. Youth and Education Advocacy Clinic: Clinical Practice. 4 Units.

The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. Students working in this area will interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work will offer students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters will interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. - - Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. - - Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. - - The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Third, over the course of the quarter each clinic student (with the exception of those enrolled in the Criminal Prosecution Clinic) is required to prepare for and attend approximately five inter-clinic group sessions. Students will be awarded three separate grades for their clinical quarter, each reflecting four credits. The three grades are broken into the following categories: clinical practice; clinical methods; and clinical coursework. Grading is pursuant to the H/P system. - - Enrollment in a clinic is binding; once selected into a clinic to which he or she has applied, students may not later drop the course except in limited and exceptional cases. Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS

LAW 660B. Youth and Education Law Project: Clinical Methods. 4 Units.

The Youth and Education Advocacy Clinic offers students the opportunity to participate in a wide variety of educational rights and reform work, including direct representation of youth and families in special education and school discipline matters, community outreach and education, school reform litigation, and/or policy research and advocacy. All students will have an opportunity to represent elementary and high school students with disabilities in special education proceedings, to represent students in school discipline proceedings, or to work with community groups in advocating for the provision of better and more equitable educational opportunities to their children. In addition, the clinic may pursue a specific policy research and advocacy project that will result in a written policy brief and policy proposal. Students working on special education matters will have the opportunity to handle all aspects of their clients' cases. Students working in this area will interview and counsel clients, investigate and develop facts, work with medical and mental health professionals and experts, conduct legal and educational research, create case plans, and represent clients at individual education program (IEP) team meetings, mediation or special education due process hearings. This work will offer students a chance to study the relationship between individual special education advocacy and system-wide reform efforts such as impact litigation. Students working on school discipline matters will interview and counsel clients, investigate and develop facts, interview witnesses, conduct legal and educational research, create case plan, and represent clients at school discipline hearings such as expulsion hearings. Such hearings provide the opportunity to present oral and written argument, examine witnesses, and present evidence before a hearing officer. If appropriate and necessary, such proceedings also present the opportunity to represent students on appeal before the school district board of trustees or the county board of education. The education clinic includes two or three mandatory training sessions to be held at the beginning of the term, a weekly seminar that focuses on legal skills and issues in law and education policy, regular case review, and a one hour weekly meeting with the clinic instructor. Admission is by consent of instructor. Special Instructions: General Structure of Clinical Courses - - The Law School's clinical courses are offered on a full-time basis for 12 credits. This allows students to immerse themselves in the professional experience without the need to balance clinical projects with other classes, exams and papers. - - Students enrolled in a clinic are not permitted to enroll in any other classes, seminars, directed research or other credit-yielding activities within the Law School or University during the quarter in which they are enrolled in a clinic. Nor are they allowed to serve as teaching assistants who are expected to attend a class on a regular basis. There is a limited exception for joint degree students who are required to take specific courses each quarter and who would be foreclosed from ever taking a clinic unless allowed to co-register. These exceptions are approved on a case-by-case basis. - - Clinic students are expected to work in their clinical office during most business hours Monday through Friday. Students are also expected to be available by e-mail or cell phone when elsewhere during those hours. Because students have no other courses (and hence no exams or papers), the clinical quarter begins the first day of classes and runs through the final day of the examination period. Students should not plan personal travel during the Monday to Friday work week without prior authorization from the clinical supervisor. - - The work during a typical week in a clinic is divided into three components. First, as they are for practicing attorneys, most of the hours of any week are taken up by work on client matters or case work (this time includes meetings with instructors to discuss the work). Again, as is the case for practicing lawyers, in some weeks these responsibilities demand time above and beyond "normal business hours." Second, students will spend approximately five-to-seven hours per week preparing for and participating in weekly discussions or other group work in their individual clinic (scheduling varies by clinic). Requests for withdrawal are processed through the formal petition and clinical faculty review process described in the clinic policy document posted on the SLS

LAW 661. Advanced Negotiation: International. 3 Units.

Building on skills developed, tools acquired and theory learned in the Gould Center's basic negotiation course, this advanced seminar explores how lawyers, diplomats, NGOs and citizen advocates can successfully negotiate bilateral agreements and multilateral agreements in the international field. We will study the unique process dynamics of international treaty-making, cross-border agreement negotiations, and multi-party consensus building processes. We will explore the role of power, culture, agency, and strategy in international negotiation, and we will analyze the design and conduct of effective negotiation campaigns. We will examine negotiation processes in the context of geopolitical relations, nuclear arms control, US-Mexico border management, environmental regimes, foreign investment, natural resource development, human rights, commercial disputes, and corporate social responsibility. Our approach will involve analysis of in-depth case studies and participation in complex role-playing exercises (including at one intensive simulation to be negotiated out of class over several weeks). These cases and exercises involve negotiations between state parties as well as negotiations, although our study will also include some attention to negotiations involving non-state actors, including business corporations, NGOs, and indigenous communities. A number of class sessions will include interaction with guest participants including international lawyers, scholarly experts, diplomats, senior corporate officers and NGO leaders. Prerequisite: Negotiation Seminar (LAW 615), its substantial academic equivalent, or substantial experience in the field.

LAW 662. Advanced Youth and Education Advocacy Clinic. 2-7 Units.

The Youth and Education Advocacy Advanced Clinic provides an opportunity for students who have already successfully completed the Education Advocacy Clinic to continue their advocacy work in the Clinic and/or to pursue a discrete project related to educational equity advocacy. Examples of projects include policy research on specific topics (e.g., the provision of mental health services to youth with disabilities in the schools, the impact of school discipline policies on youth of color, or equal educational opportunities for English Language Learners); investigation and preparation for impact litigation; and community education and outreach on a specific education-related issue. All projects will be jointly designed by the instructor and the advanced student. Advanced students will also continue to participate in the Clinic's discussion of cases during case rounds. Special instructions: Admission is by consent of instructor. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Elements used in grading: Projects and class participation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 663. Advanced International Human Rights and Conflict Resolution Clinic. 2-7 Units.

The International Human Rights and Conflict Resolution Advanced Clinic offers the opportunity for students who have already successfully completed an International Human Rights and Development Clinic to pursue one or more specific projects in conjunction with the Clinic, either independently or in collaboration with colleague(s) enrolled in the regular clinic. Any travel will be strictly contingent on the Advanced Clinical student's availability and the needs of the project. Advanced Clinical students are expected to participate in as much of the regular clinical seminar and seminar simulations as possible given pre-existing scheduling constraints. Advanced students may arrange with the instructor to receive between two and seven units. No student may receive more than 27 overall clinical credits, however, during the course of the student's law school career. Elements used in grading: Project work, writing assignments, case preparation, attendance and class participation. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 664. Advanced Legal Writing: Business Transactions. 3 Units.

This course offers students practical preparation in the skills needed to be an effective transactional lawyer. Students will learn to draft clear, effective, plain language contracts and to analyze other transactional writing used to manage complex business transactions. The class will appeal to students interested in working in a law firm and practicing transactional law (of any type) and those interested in business litigation who would like to gain an understanding of contract provisions. The course offers a wide range of realistic drafting problems--completed both inside and outside of class. Students will also (i) develop sensitivity to the expectations of the attorneys and clients with whom they will be working, (ii) learn how to research the applicability of contract provisions, and (iii) sharpen their analytical skills in the context of contracts. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and Degree of Study. Early drop deadline: Students may not drop this course after first week of class. Corporations (Law 242) is a prerequisite for all but LLM (CGP) students. A substantial mark-up of a contract is due on the last day of class. Elements used in grading: Class participation, attendance, written assignments and final paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 665. Advanced Legal Writing: Legislative Drafting and Analysis. 3 Units.

This course is designed to give students practical preparation in how to draft and analyze federal legislation. It should appeal to students interested in interpreting, drafting, or implementing laws. The course offers students realistic legislative drafting problems and an opportunity to research the legislative process of an enacted law of their choosing. Through these drafting assignments and study, students will learn in detail the dynamic and fascinating political process of how laws are enacted in the United States and how to draft effectively within such a process. Students will gain unique, foundational tools and skills necessary to draft effective, clear legislation and to analyze and interpret laws of any kind. Writing (W) credit is for 3Ls only. Elements used in grading: Class participation, attendance, written assignments and final paper.

LAW 668. Legal Technology and Informatics. 2-3 Units.

Legal technology is rapidly transforming both the practice and nature of law. This class seeks to explore both the current trends and the future possibilities of this transformation, as we begin to train the future generation of technology savvy lawyers, and technologists who understand the intricacies and potential of what the law could be. Legal informatics could be defined as a computational perspective of law: where does legal information reside, how is it manipulated, and which algorithms and data structures are used in various legal functions? Note that there are no prerequisites for this class beyond an interest in the subject. There are numerous examples of technologically driven legal transformation. Case law search has moved from hard copy to closed digital systems such as Westlaw and LexisNexis, and into free cloud-based systems such as Google Scholar and Wikipedia. More and more statutes are available online. Changes can be seen in e-discovery, privacy, the delivery of (online) legal services, and the budding legal technology startup community. As a result, questions arise as to the proper statutory and ethical boundaries between humans and machines in implementing legal activities. Beyond the current and near-term technologies, however, are core academic and philosophical questions that will have increasing import as machines gain in sophistication and capability. For example, although the law differentiates between the responsibility assignable to minors compared to adults, we are far from identifying the point at which an agent or robot is morally responsible for its own actions, as opposed to the responsibility being assigned to its creator.

LAW 669. Narrative Skills and the Law. 3 Units.

A lawyer who communicates not only in a cerebrally persuasive way, but also in an emotionally gripping way, has an enormous strategic advantage. Judges, jurors, and clients are all human beings, susceptible to compelling stories like everyone else. This course - conducted by a television and film writer who is also a lawyer with experience in all three branches of government, private practice, political campaigns, and a labor union - teaches how to compose an engaging story and how to apply those skills to a variety of legal situations. The first part of the course will cover the art of storytelling on both a theoretical and a practical track. On the theoretical track, students will study story drive; narrative structure; beginnings, middles, and ends; openings; plot and character; exposition; and transitions. The class will have a healthy amount of assigned reading and viewing that illustrate each of these components in literature, drama, and film. On the practical track, students will undertake writing exercises that parallel the theoretical discussion, to develop a first-hand facility with those facets of storytelling. In the second part of the course, students will apply their storytelling insights and skills to specific legal situations: A criminal case. An appellate case. A legislative proposal. A labor negotiation. A public relations crisis. Students will discuss in depth their narrative approaches to these situations, along with those taken by lawyers in other cases in the respective areas. By the end of the course students will have a powerful tool few of their peers will possess, and be able to approach their day-to-day professional challenges in a more effective and confident way.

LAW 670. White Collar Crime. 3 Units.

This course explores the law of economic and political crimes associated with the rubric "white collar crime." The class is divided thematically between mens rea issues and substantive issues. Among the substantive areas which are covered are: obstruction of justice, perjury, bribery and gratuities, mail and wire fraud, securities fraud, and money laundering. We will study specific federal statutes in considerable detail, while also speculating about the jurisprudence underlying these crimes, and related issues of prosecutorial discretion and attorney ethics. Special instructions: Students may write a paper in lieu of the final exam for Research credit. Elements used in grading: Class participation and final exam or paper. Also, classroom participation may be taken into account to some very small degree. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor.

LAW 671. Critical Theory. 3 Units.

This course will review the most important developments in critical theory as it relates to law and jurisprudence. It will begin with a brief review of the critical tradition in Western philosophy including thinkers such as Friedrich Nietzsche, Karl Marx, Max Weber, Jean Paul Sartre and Michel Foucault. We will then look at the influence of this critical tradition in American legal theory, tracing the critical turn through the American legal realists, Critical Legal Studies and the emergence of identity based critical movements such as Critical Race Theory, Critical Feminist Theory and Critical Approaches to Sexual Orientation. The class will conclude by examining the theories of Giorgio Agamben, Jacques Ranciere, and Niklas Luhmann and considering their possible legal implications. Special Instructions: The paper for this course will satisfy the Writing requirement. Students also have the option to write an independent research paper for Research credit. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation and final paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 673. Advanced Legal Writing: Drafting and Negotiating Sports Law Transactions. 3 Units.

This seminar focuses on the drafting and negotiation of certain sports law transaction documents. Examples of documents to be discussed in the seminar are suite license agreements, sponsorship agreements, naming rights agreements, sports team acquisition agreements and media rights agreements. This seminar is intended to be "hands-on" with all students having the opportunity to experience being a "sports law attorney." The class room environment is intended to simulate the experiences that a junior attorney would encounter in a law firm or corporate legal setting. The major emphasis of this seminar will be on how sports transaction documents are drafted, negotiated, revised and finalized. In addition to a discussion of some of the specific sports transaction documents and the drafting and negotiation techniques related to those documents, there will be general discussions of other sports law related issues. Depending on availability and timing, the seminar may also feature periodic sports practitioners (e.g., general counsel for professional sports teams or organizations) as guest speakers to discuss their sports law experiences and their perspective on some of the documentation covered by this seminar. There will be no exams but instead there will be three independent writing assignments which will require the students to draft transaction documents based on forms from actual sports transactions. The final assignment will be a group assignment consisting of drafting, negotiating and finalizing a sports transaction document. There will also be periodic negotiation sessions. Special Instructions: Attendance at all class sessions is mandatory. Enrolled and waitlisted students must attend the first class meeting to be enrolled in the course and waitlisted students must continue to attend classes until they are either enrolled or until the final determination of their waitlist status is made. Late papers are subject to grading penalties. Elements used in grading: Class participation (quality not quantity), attendance, written drafting assignments, and the final negotiation/drafting assignment. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 674. Advanced Legal Writing: Litigation. 3 Units.

Building on the skills developed in Federal Litigation, this course will give students additional practice with legal analysis, argument structure, and writing in the pre-trial litigation context. Students will draft an office memo, summary judgment brief, and pleadings in an internet school speech case. Students also will complete short writing exercises in and out of class to practice skills such as omitting surplus words, preferring active voice, using concrete words, punctuating carefully, etc. The goals of this class are to help students organize facts and principles in a succinct and logical way and to deepen their understanding of the legal reasoning process. The course should appeal to students interested in litigation practice and those wishing to hone their writing skills. Elements used in grading: Class participation, attendance and written assignments. Writing (W) credit is for students entering prior to Autumn 2012. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 675. Human Trafficking: Historical, Legal, and Medical Perspectives. 3 Units.

Interdisciplinary approach to understanding the extent and complexity of the global phenomenon of human trafficking, especially for forced prostitution and labor exploitation, focusing on human rights violations and remedies. Provides a historical context for the development and spread of human trafficking. Analyzes the current international and domestic legal and policy frameworks to combat trafficking and evaluates their practical implementation. Examines the medical, psychological, and public health issues involved. Uses problem-based learning and offers an optional service-learning component. Elements used in grading: Attendance; participation; written assignments; and final exam. This class is cross-listed with Feminist, Gender and Sexuality Studies (FEMGEN 5C, FEMGEN 105C), History (HISTORY 5C, 105C), Human Biology (HUMBIO 178T), International Relations (INTNLREL 105C) & School of Medicine General (SOMGEN 205).

LAW 676. Rethinking Refugee Communities. 2 Units.

Tens of millions of people have been forcibly uprooted by conflict or persecution worldwide. Although some of these people obtain asylum in advanced industrialized countries, a far larger number remain as refugees and internally-displaced people living in hastily-built refugee communities in the developing world. This project-based, interdisciplinary class is focused on exploring alternatives to improve the planning, design, and governance of refugee communities. It considers some of the legal, design, engineering, and governance challenges associated with communities of refugees and other forced migrants. The goal is to exercise and enhance students' ability to deal with multifaceted complex issues by developing recommendations that can be implemented by the Office of the United Nations High Commissioner for Refugees (UNHCR).

LAW 677. Professional Responsibility. 3 Units.

This course introduces students to the goals, rules and responsibilities of the American legal profession and its members. The course is designed around the premise that the subject of professional responsibility is the single most relevant to students' future careers as members of the bar. These issues come up on a constant basis and it is critical that lawyers be alert to spotting them when they arise and be educated in the methods of resolving them. As such, the course will address many of the most commonly recurring issues that arise, such as confidentiality, conflicts of interest, candor to the courts and others, the role of the attorney as counselor, the structure of the attorney-client relationship, issues around billing, the tension between "cause lawyering" and individual representation, and lawyers' duty to serve the underrepresented. In addition, we will delve into some more personal ethical issues that reflect on why students have chosen law as a profession and how lawyers compose careers that promote or frustrate those goals. Students will be responsible for submitting a reflection paper (three-to-five pages each) after each week of the course. Each memo will be due by the Friday of the following week. Special Instructions: Grades will be based on the papers submitted, with the instructor retaining the right to take class participation into account. Attendance is mandatory and students must seek instructor approval for any absences not due to illness. This course is offered to foreign graduate students. It is taught on an accelerated basis over the course of three weeks between September 2, 2014 and September 19, 2014. Thus, the course meets on average nine hours per week. The exact meeting times will be set once the graduate students' schedules are set. Elements used in grading: Attendance, class participation and written memos. Limited to LLMs, JSMs and exchange students. Required for LLMs.

LAW 678. Introduction to Microeconomics. 3 Units.

COURSE SUBSTANCE: It is no secret that economic ideas are being used increasingly in law school courses, in law practice, and in a wide variety of other fields that a law school graduate might choose to pursue - antitrust, corporate, environmental, tax, labor, and securities are just some of the immediate examples that come to mind. While many Stanford Law School students have already taken courses in economics as undergraduates, or might even have majored in economics, many of you have not. This course is offered to "bring you up to speed" so that you will not be at a disadvantage in other courses at the Law School that draw on economic ideas (or, just as importantly, not be at a disadvantage when you graduate and you encounter economic ideas and arguments on the job or in life.) So, what is economics, exactly? All societies face the problem of scarcity - there are not enough resources to satisfy people's desires for all things. Economics studies how individuals and societies deal with scarcity and the mechanisms for deciding what to produce, how to produce it, and who gets the output. It is as simple and complex as that! As you can imagine, the practical applications are nearly endless. Please note that the course focus will be microeconomics - the branch of economics that focuses on the economic behavior of individual decision-making units, such as households and firms, and how these individual decisions fit together. (I will not discuss macroeconomics in this course - i.e. the behavior of the economy as a whole, particularly inflation, unemployment, and business cycles.) More specifically, I will spend the vast majority of the course taking you through the basic supply and demand model of markets - what it is, where it came from, how and when it works, and when it does not work so well. With that base, I can branch out accordingly to help you apply it to a wide variety of relevant issues. Though I will not focus specifically on how economic ideas have been used in a legal context (there is another course and seminar that does that), I will make some effort to link the economic ideas we discuss directly to legal topics. **COURSE PROCEDURE:** My primary goal is to teach you the fundamental principles of microeconomics by (1) providing you the relevant schema to understand the basic tools of economic analysis; and by (2) drilling you extensively with problems, cases, current events, and other applied materials so as to help you develop the ability to use these tools and truly make them your own. A heavy emphasis will be placed on building a conceptual understanding of some key economic models, looking closely at the underlying assumptions of those models, and engaging in the process of questioning and relaxing those assumptions in the context of actual "real life" issues. Please do not mistake the analytical rigor I will require, to mean that we will use sophisticated mathematics. To the contrary, I believe that most powerful economic principles should be highly intuitive and non-quantitative.

LAW 679. The Rule of Law - The Foundation of Functional Communities. 2 Units.

We will seek to determine a useful meaning of the notion of the rule of law to identify some measurement of adherence and to explore the importance of the rule of law in terms of economic, socio-political and human development. We will focus on accountable government; just laws; open processes for the enactment, administration and enforcement of laws and effective dispute resolution. Readings and discussion will include the works of ancient philosophers, political theorists and jurists from the 17th to the 20th century, modern political economists and contemporary scholars. This seminar will feature several experts in the field as guest lectures and requires three reaction papers from all participants. Special Instructions: Writing (W) credit is for 3Ls only. Elements Used in Grading: Class participation, written assignments and series of short reaction papers.

LAW 680. Pivotal Moments in American Institutions and Public Law, 1791-Present. 3 Units.

(Same as PoliSci 323) American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, institutional changes occurring roughly during 1964-75, and the emergence of the modern administrative state. Although the primarily focus is on the American experience, we place these developments in comparative context as well.

LAW 681A. Better: Improving Decision-Making, Achievement, and Performance. 1 Unit.

This discussion group will explore how recent insights from psychology and related fields can help make us better students, better professionals, better leaders, and better people. We will consider works dealing with happiness, decision-making, learning, persuasion, success, and achievement. The reading list will include some or all of the following: Jonathan Haidt, *The Happiness Hypothesis*; Atul Gawande, *Better: A Surgeon's Notes on Performance*; Paul Tough, *How Children Succeed: Grit, Curiosity, and the Hidden Power of Character*; Richard Thaler & Cass Sunstein, *Nudge: Improving Decisions about Health, Wealth, and Happiness*; Annie Murphy Paul, *Brilliant: The New Science of Smart*; and Adam Grant, *Give and Take*. Begin in Autumn Quarter and run through Winter Quarter. Class meeting dates: Tuesday evenings from 7:30 - 9:30, exact dates TBD. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681B. Can Philosophical Insights or Empirical Knowledge Help Us Make Hard Choices?. 1 Unit.

We will explore both two overarching themes and five specific problems that I hope are intrinsically interesting. The first general question is whether philosophical inquiries on big issues - e.g. what it means to be well-off; what obligations do we have to strangers who are radically worse off than we are; when should we observe rights-based limits on our pursuit of aggregate welfare; what does it mean to coerce another party - help us make choices when it is not obvious what we should do. The second, related question is whether empirical knowledge - e.g. psychological, economic - might help us, in addition, instead, or no more than philosophical insight. The specific questions we will focus on have little in common, other than that they are not easily answered. Some refer to decisions that seem wholly self-regarding, others that seem to refer to obligations to others. Some involve acting in professional role, some out of role. Some seem plainly important, others might seem more trivial. And it is possible, of course, that you will come to believe that philosophers or empiricists may have more to say about some of the issues that we discuss than others. The five questions I tentatively plan on exploring are: (a) how a late adolescent patient (or a doctor advising that patient) ought to choose between an operation that will significantly improve various aspects of her life over the next thirty years but poses a substantial risk of leaving her wheelchair-dependent in middle age and an operation that will lead to impaired functioning for the next few decades but mobile without mechanical aids past the age of 50 (b) how we can evaluate claims that virtually all of us living in economically prosperous countries are obliged to give away a substantial chunk of our income to save the lives of very poor people around the world (c) how we should evaluate the propriety of torture designed to elicit information about planned criminal/terrorist activities that might arguably save those who would be harmed if the plans came to fruition (d) how an attorney in a big law firm ought to determine when and whether it is appropriate to ask an administrative assistant to do work that is not directly related to the production of legal services (e.g. pick up laundry from the cleaners) and whether (and if so, why) the answer to that question is sensitive to the gender of the attorney and the attorney's administrative assistant, and finally, (e) whether existing rules governing the conduct of war that draw significant distinctions between killing soldiers and killing civilians and between killing civilians intentionally rather than knowingly are sensible. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681C. Group Behavior. 1 Unit.

This discussion group will look at how ethical choices are shaped by organizational and group cultures. We'll read about some famous psychological experiments such as the Milgram and Zimbardo experiments; and some studies of decisions made in corporate organizations, government bureaucracies, and a battalion of ordinary middle-class Germans tasked with hunting down Jews; and talk about what insights from this work may be relevant to lawyers' ethics and working lives. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

LAW 681D. How Can You Represent Those People?. 1 Unit.

This discussion group will consider why a lawyer might devote herself or himself to representing people accused of crime. We will explore a range of possible answers, from guaranteeing procedural fairness to appreciating the factual indeterminacy inherent in our world to fighting racial or class-based injustice. Course materials will likely include fiction (such as *Atonement* by Ian McEwan); nonfiction essays; as well as a couple of recent films (*Bernie* and *The House I Live In*). Lisa Douglass, lecturer and staff attorney in the Stanford Community Law Clinic, will help lead the discussions. Class meeting dates: To be determined by instructor. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students). See Ranking Form for instructions and submission deadline.

LAW 681E. Human Rights and Film. 1 Unit.

This 'Discussion' group will focus on the treatment of human rights issues in films. After reviewing brief, selected readings that provide essential background, the group will view a film (one per session, for five sessions) that focuses on issues of social conflict and human rights. The film showings will be held at Prof. Cavallaro's home (near campus). Afterwards, students will consider the human rights matters addressed in the film. Films include 'Battle of Algiers' and 'La Historia Oficial' (The Official Story, Argentina 1985). Winter Quarter. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681F. Law, Narrative, and Boundaries. 1 Unit.

As citizens and as professionals, lawyers work in a world marked and shaped by salient social boundaries. Some kinds of differences - of politics, religion/religiosity, race, ethnicity, language, wealth, gender, sexuality and other attributes - can be profoundly divisive. Broadly speaking, this class is inspired by the complex cultural and political challenge of managing these differences; a challenge that lawyers have a unique opportunity to address. The particular lens through which we will investigate this issue involves those who cross, or reflect upon in novel ways, some of these boundaries. As we read and discuss narrative accounts, we will consider what light they shed on how social and legal boundaries are created, evolve, and take on particular meanings. We will ask how law constructs or enforces lines, and how those practices change when the line itself gets blurry. Materials will include fiction and nonfiction, prose and film, on subjects such as: stories of "passing" (involving race and gender); the Thomas Jefferson-Sally Hemings relationship; attempts by Palestinians and Israelis to live peacefully with one another in the cooperative village of Wahat al-Salam/Neve Shalom; various narratives about life on both sides of the U.S.-Mexican border; and stories about the intersection of religion and sexuality. We will supplement the narratives with some theoretical material that looks at how law can shape, define, and enforce boundaries.

LAW 681G. Searching for Balance. 1 Unit.

This discussion group will explore the topic of work-life balance, in particular how women and men in law and other demanding professions negotiate the demands of work and family. Readings will include a wide range of perspectives - current social science research, contemporary fiction, feminist theory, debate in the popular media, comparative studies of other countries. We will consider the factors that make work-life balance so elusive, including government policies (eg, maternity leave and child care); gender roles in the family; the institutional culture and structure of particular workplaces; differences related to race, ethnicity and economic status; and individual choices that men and women make about how to lead lives that they find meaningful.

LAW 681H. Issues in Philanthropy. 1 Unit.

We will explore selected topics, encompassing some subset of the following: the roles of the philanthropic and nonprofit sectors in society; the justifications for tax-subsidized philanthropy; whether giving to the poor is morally obligatory or discretionary; barriers to the practice of strategic philanthropy; evaluating philanthropic outcomes; impact investing; the role of corporate philanthropy; and whether foundations should be designed and run to exist in perpetuity or to spend down corpus over a finite lifetime. Winter Quarter. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681I. The Sea Around Us: Ethical, Physical, and Emotional Connections Between Humans and the Ocean. 1 Unit.

This colloquium examines current ocean law and policy issues through a series of readings of seminal works about ethical, physical, and emotional relationships of human beings to the marine world. Through the lenses offered by several classic readings, we will examine and reinterpret the challenges of fisheries collapse, climate change, shipping, marine spatial planning, biodiversity conservation, and the management of land-sea interactions. The course is open to all law students and will be particularly interesting for those interested in studying and solving key issues of ocean policy and management, from coastal adaptation to fisheries management to cumulative impacts assessments to the relationship of human beings and the sea. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681J. When Bad Things are Done by Good People. 1 Unit.

Some people live their lives in a manner that would lead few to declare them good people. From Tony Soprano to Saddam Hussein to Bernie Madoff, we are all familiar with individuals who have made crime and violence a constant in their lives. There are far more people, though, who try generally to live good lives, but find themselves having acted or having failed to act in ways that are widely condemned as evil. Over the course of our five meetings, we will be looking (through some books, reports and films) at case studies of such circumstances, ranging from clergy and others in authority who covered up evidence of sexual abuse, prosecutors who ignored evidence of wrongful convictions, lawyers who turned blind eyes to client misconduct, and soldiers who committed acts they would have once found unimaginable. We will also look at a contrasting case study of individuals who resisted great pressure and kept their moral compasses well-calibrated. Throughout our inquiry, we will reflect in particular on the power of institutions and authority in affecting ethical mores. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline. Elements used in grading: Class attendance at all sessions and class participation.

LAW 681K. Confidence, Influence and Leadership. 1 Unit.

For the past two years, the name of this reading group was Why are People So Sure? For this year, we have changed the name--and the emphasis to a degree. As in the past, we will discuss books that address the phenomenon of people having great confidence in their beliefs or opinions, even when there is a reasonable possibility that they are wrong. For example, many arguments about politics or policy involve highly complex factual assumptions and predictions. Despite the difficulty of assessing the validity of factual assumptions and forecasting the consequences of any particular decision, many people maintain great confidence in the correctness of their beliefs. Why is that? In addition, some people are very successful in influencing other people with respect to such beliefs or opinions. How do they do that, and what makes their audience susceptible to being convinced? In the extreme, what allows this sort of person to be a leader or at least a "thought leader" (to use what regrettably seems to be a new entry into our lexicon)? In this discussion group, we will read books that engage these questions in diverse ways. Students that join the group will be expected to be full participants in the discussion. Neither of us is an expert in the topic and neither of us expects to have any more to say than you will. So please join us only if you find this format appealing. Another requirement of the group will be to create a written log, or summary, of what we read and discuss. We will all share responsibility for writing this. Begin in Autumn Quarter and run through Winter Quarter. Class meeting dates: To be determined by instructor. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681L. Constitutional Law and Lawyers in Context. 1 Unit.

In this discussion group, we will go beyond judicial opinions to read books about some of the leading cases in constitutional law and the lawyers who litigated them. In the course of doing so, we will discuss what insights about constitutional law and lawyering can be distilled from exploring the historical context, participants, origins and aftermaths of some major cases and issues. The books will include Gilbert King's *Devil in the Grove* (about Thurgood Marshall's role in defending the "Groveland Boys" against accusations of rape in Florida in the 1940's); Anthony Lewis's *Gideon's Trumpet* (about *Gideon v. Wainwright*), Dale Carpenter's *Flagrant Conduct* (about *Lawrence v. Texas*); David Garrow's *Liberty and Sexuality: The Right to Privacy and the Making of Roe v. Wade* (about *Griswold v. Connecticut* and *Roe v. Wade*) and Victoria Nourse's *In Reckless Hands* (about *Skinner v. Oklahoma*). Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: Wednesday evenings, 7:30-9:30 pm, on Jan. 21, Feb. 18, March 4, April 15, and May 13. Discussions will be held at Professor Schacter's home in Menlo Park. Elements used in grading: Class attendance at all sessions and class participation. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students). See Ranking Form for instructions and submission deadline.

LAW 681M. Legal Fictions. 1 Unit.

This discussion group will look at questions of value and meaning in the lives of lawyers through the window of works of fiction. We will discuss one book each evening. Subject to change, the list includes: Russell Banks, *The Sweet Hereafter*; Albert Camus, *The Fall*; James Gould Cozzens, *The Possessed*; Leo Tolstoy, *The Death of Ivan Ilyich*; and Scott Turow, *Presumed Innocent*. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students). See Ranking Form for instructions and submission deadline.

LAW 681N. Law and Performance. 1 Unit.

From the rhetorical fireworks of the classic American trial scene to the band Pussy Riot's "aesthetic resistance" in Russia, law and performance have been entangled in more and less officially sanctioned ways. This discussion seminar will address questions at the intersection of law and performance, such as: What are the ethical implications of performance in the legal context?; When does or should freedom of performance come into conflict with the norms of a well-ordered society?; Can examining methods of musical interpretation help us to adjudicate between originalism and living constitutionalism?; and; What can drama reveal to us about the law? Among other readings will be included Jack Balkin's work on opera and constitutional interpretation, Kenji Yoshino's "The City and the Poet," Hannah Arendt's *Eichmann in Jerusalem*, and Desmond Manderson's "Making a Point and Making a Noise: A Punk Prayer." Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681O. The Law of Democracy. 1 Unit.

This seminar will cover topics in the general area of law and politics, specifically the law concerning elections. The discussions will focus on the following five case studies: Redistricting; *Bush v. Gore* and the 2000 election; Campaign Finance; Party Primaries and Conventions; and The Voting Rights Act. Although we will discuss court cases, much of the seminar will include "war stories" from those involved in the cases or legislative battles. Students who plan to enroll in "Regulation of the Political Process" are encouraged to take this discussion seminar as well. But that class is not a prerequisite for this seminar. Note: Los Altos location is not walkable. Winter Quarter. Class meeting dates: TBD. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681P. Personal Satisfaction in Legal Practice. 1 Unit.

This discussion group will explore satisfaction in professional practice. Readings will explore the conditions of current practice, with an emphasis on law firms, and what can be learned from research on happiness. Books to be excerpted may include Nancy Levit and Douglas Linder, *The Happy Lawyer*, Steven Harper, *The Lawyer Bubble*, Sonja Lyubomirsky, *The Way of Happiness*, Daniel Gilbert, *Stumbling on Happiness*, Martin Seligman, *Authentic Happiness*, Bryant Garth, *After the JD*, Milton Reagan, *Eat What You Kill*, and Nash and Stevenson, *Just Enough*. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. Elements used in grading: Class attendance at all sessions and class participation. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681Q. Failure. 1 Unit.

Lawyers are charged with prosecuting and defending the civil and criminal failings of others. In client counseling and transactional representation, we are charged with helping our clients avoid failure. And as professionals, we are enjoined to avoid failures ourselves. So we spend our careers in and around failure - anticipating it, reconstructing it, and seeking to prevent and remedy it. This seminar explores the human experience of failure in both legal and non-legal settings. What are the circumstances (structural and cognitive) that appear to lead to personal, professional, legal, political, and moral failures? How does the law shape social understandings of what failure is? What kinds of failures appear to support the belief that failure is (almost always) avoidable, and thus the fault of individuals who experience failure? Why do other failures seem inevitable? What is the narrative structure and allure of representations of failure as a condition of success? How are failure and the harms that flow from the experience of failure remembered or forgotten by individuals and groups who cause failure and those who attempt to redress it? Sources for the seminar will range from cases dealing with professional malpractice and cultural histories of professional ideology to poetry, constitutional history, theories of creative destruction, and responses to mass atrocities. Begins in Winter Quarter and runs through Spring Quarter. Class meeting dates: Five evening sessions to be determined by instructor in coordination with enrolled students. Elements used in grading: Class attendance at all sessions and class participation. To apply for this course, 2L, 3L and Advanced Degree students must complete an application form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See form for instructions and submission deadline.

LAW 681R. The Arrest, Trial, and Execution of Jesus of Nazareth. 1 Unit.

Patterned on a seminar taught by Professor Joseph Weiler at NYU Law School, this discussion seminar will study the most famous criminal case in the history of the world: the arrest, trial, and execution of Jesus of Nazareth. In five two-hour sessions at Professor McConnell's home, we will cover (1) Jesus's arrest in the the Garden of Gethsemane, (2) his trial before Jewish authorities, (3) his trial before Roman authorities, and (4) his execution, with (5) one session left for general considerations. (We will not delve into the reports of his resurrection.) We will focus on the nature of the charges against Jesus, the legal procedures employed, the evidence and the defense, the relation between imperial and local authorities, the relation between religious and secular law, the ethical roles of the individuals involved, and the mode of execution. Our primary text will be Raymond E. Brown, *The Death of the Messiah* (Yale University Press 2004), a scholarly two-volume study drawing on all the extant historical sources. Among the questions we are likely to discuss are: Was the trial fair by the standards of the day? Was Jesus guilty of any of the charges? What were the authorities - and particularly Pilate - trying to accomplish? What was the role of the mob? Was Roman law a constraining influence, or the opposite? What was Jesus's own perspective on the proceedings? How reliable and/or plausible are the sources? Although this subject is of religious and spiritual concern to some, including (in all likelihood) some students taking the seminar, the seminar will not consider the material in a religious way, but instead as a legal event. The instructor hopes that the class will be religiously diverse, and especially encourages non-Christian students to enroll. Discussion will, of course, be conducted in a way that is comfortable for persons of all shades of belief and disbelief. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. Elements use in grading: Class attendance at all sessions and class participation. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681S. Plato's Republic. 1 Unit.

We will discuss Plato's Republic with a focus on its treatment of law, justice, equality, and legal institutions. After the first session, on Book One, students will take turns co-leading the discussions. Limited to eight students, the seminar will meet in the instructor's home. Begin in Winter Quarter and run through Spring Quarter. The class will meet in the evening, on a weekday. Exact meeting time and dates to be determined by consensus of the participants. DISCUSSIONS IN ETHICAL & PROFESSIONAL VALUES COURSES RANKING FORM: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 681T. Law and the Humanities Discussion Seminar. 1 Unit.

There have been a number of efforts to define what "law and the humanities" comprehends, some including history and philosophy as disciplines juxtaposed with law and others insisting on a narrower version of the field. A newer movement led by Chris Tomlins has rejected the "law and" model entirely and insists instead on formulating interdisciplinary work in law as "law as." This discussion seminar will examine inductively what law and the humanities might mean and the significance of its contribution by considering a number of essays and articles that could be thought of as work in law and the humanities. Each session will be devoted to a pair of writings around topics like "Law and Literature," "Legal History," and "Law and Performance." Questions to be considered include the role of law within these projects, the audience being addressed, the larger social significance of the arguments being made, and the extent to which the pieces are grounded in a particular discipline or set of disciplines or float above disciplinary formations. Begin in Winter Quarter and run through Spring Quarter. Class meeting dates: To be determined by instructor. Elements use in grading: Class attendance at all sessions and class participation. Discussions in Ethical and Professional Values Courses Ranking Form: To apply for this course, 2L, 3L and Advanced Degree students must complete and submit a Ranking Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students and then see Consent of Instructor Forms). See Ranking Form for instructions and submission deadline.

LAW 682. Advanced Criminal Law and Public Policy II: A Research Practicum. 3 Units.

Written Work. Students will expand upon the research begun in Petersilia's Fall 2012 class, turning their fall research papers into academic journal articles, ready for submission. This course meets the SLS writing (W) graduation requirement. This course is a follow on to the Fall 2012 course taught by Professor Petersilia. In that course, each student conducted research on an aspect of California sentencing and/or corrections. The Winter 2013 class will be designed for students who wish to expand their research projects with an eye towards journal publication. This class will also devote significant time to developing policy recommendations and delivering formal briefings to high level policymakers.

LAW 683. The Future of Human Rights: Law, Politics, and Social Justice in a Multipolar, Multimedia World. 2 Units.

Human rights law and practice are being transformed by geopolitical, technological and economic forces that unsettle the actors, strategies, and legal standards that dominated the field in the twentieth century. In this seminar, we will take stock of key global developments that underlie such a transformation, and analyze their impact on the future of human rights, as follows:

nn1. The rise of emerging powers (such as Brazil, China and India) and the relative decline of Europe and the U.S. point to a multipolar world order. Together with the proliferation of international regulations (such as transnational corporations' codes of conduct, legal standards advanced by coalitions of NGOs, and decisions of international bodies such as the WTO and UN agencies), this trend results in a legal and political arena that is both broader and more fragmented. In this new context, states and NGOs in the Global North no longer control the creation and implementation of human rights standards, while new actors (from transnational social movements to Global South states and NGOs) emerge as influential voices.

nn2. Information and communication technologies present new challenges and opportunities for human rights. As the mobilizations catalyzed by the Arab Spring have shown, tools such as social networks, video documentaries, digital reporting, online learning and long-distance education can accelerate political change, reduce the informational disadvantages suffered by marginalized groups, and bring together national, regional and global groups capable of making a direct impact on the protection of rights.

nn3. The range of actors and legal and political strategies has been considerably expanded. Time-honored strategies such as naming and shaming recalcitrant states are being complemented with newer strategies for transnational research, information circulation, and training, which involve a host of different actors, including social movements, online media outlets, inter-governmental organizations, universities and virtual activist networks.

The seminar will be divided into three sections, each dealing with one of these transformations. Each section, in turn, will be divided into two discussion sessions and one lecture by a leading scholar and/or practitioner.

The seminar will revolve around the discussion of the assigned readings and materials, as well as presentations by students and guest speakers. Grades will be based on an in-class presentation and a final paper.

LAW 684. Conflicts, Ethics, and the Academy. 3 Units.

(Same as ETHICSOC 301) This experimental course looks at conflicts of interest and ethical issues as they arise within academic work. The participants will be drawn from schools and departments across the University in the hope that they will offer different examples of, and perspectives on, the issues we discuss. Topics will include the conflicts that arise from sponsored research, including choices of topics, shaping of conclusions, and nondisclosure agreements; issues of informed consent with respect to human subjects research, and the special issues raised by research conducted outside the United States; the ethics of the classroom and conflicts of interest implicating professor-student relationships. Representative readings will likely include Marcia Angell's work, *Drug Companies and Doctors: A Story of Corruption*, N.Y. Rev. Books, Jan. 15, 2009, and *Is Academic Medicine for Sale?* 342 N. Engl. J. Med. 1516 (2000) (and responses); William R. Freudenburg, *Seeding Science, Courting Conclusions: Reexamining the Intersection of Science, Corporate Cash, and the Law*, 20 *Sociological Forum* 3 (2005); Max Weber, *Science as a Vocation*; legal cases; the movie "Inside Job"; and conflict of interest policies adopted by various universities and professional organizations.

LAW 685. The American Legal Profession. 3 Units.

This course will deal with selected aspects of the history, organization, economics, ethics, and possible futures of the legal profession in the United States. Likely topics will include, in addition to the ABA's Model Rules of Professional Conduct: demographic changes in the profession, the evolution of law firms, bar associations, and law schools from the early twentieth century to the present; the development of corporate law, personal injury, mass torts, prosecutorial and criminal defense practices, and the "public-interest" bar; the dominant professional ethic of adversary-advocacy, and its critics; the regulation of lawyers; the economics of the market for legal services; the organization and culture of law firm practice; the role of the role of the lawyer as counselor; and the export of American lawyering models abroad. Take-home examination, with option of writing a research paper. Special Instructions: Students have the option to write a long research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class participation, attendance, final paper or final exam.

LAW 686. Advanced Legal Writing: Business Transactions, Technology and Social Enterprise. 3 Units.

This course is designed to give students practical preparation in drafting and analyzing contracts and drafting with an eye toward addressing both client requirements and negotiation concerns. It should especially appeal to students interested in working in house and practicing transactional law (be it in a traditional for-profit or a social enterprise - with a focus on technology, telecom, social enterprise and collaborative arrangements.). The course offers a wide range of realistic legal writing and drafting problems--completed both inside and outside of class. These drafting assignments will help students improve their writing, drafting, and editing skills and develop their sensitivity to the expectations of the attorneys and clients for whom they will be working as well as the impact of their drafting on the other side. Students will also have an opportunity to collectively interview "clients" for the purpose of determining drafting priorities. In the course, students will learn the foundational tools necessary to analyze a variety of business agreements. Students will learn how to write clear, effective, plain language contracts. Special Instructions: Students on the waitlist for the course will be admitted if spots are available on the basis of priority and Degree of Study. Students may not drop this course after the second day of class. Corporations (Law 242) is a prerequisite for all but LLM (CGP) students. A substantial mark-up of a contract is due on the last day of class.

LAW 688. Advanced Religious Liberty Clinic. 2-7 Units.

Advanced clinic allows students who have taken the Religious Liberty Clinic to continue working on cases. Participation in rounds is required. Advanced clinic may be taken for 2-7 units; general rule of thumb is 4 hours of work per week per unit. Students may not enroll in any clinic (basic or advanced) which would result in earning more than 27 clinical credits during their law school enrollment. Elements used in grading: Class participation, written assignments, and case work. Students must have taken Religious Liberty Clinic. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 690. Advanced Topics in Administrative Law. 2 Units.

This seminar will cover advanced topics in administrative law, including the law of government information, the role of cost benefit analysis, and schools of regulatory reform. Students electing "W" credit will write a series of response papers; students electing "R" credit will write a research paper pertaining to administrative law. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Prior course in Administrative Law required. Writing (W) credit is for 3Ls only. Elements used in grading: Class participation, attendance, written assignments and final paper.

LAW 692. Modern Surveillance Law. 2 Units.

This seminar is an in depth look at modern government surveillance policies and practices. Taught by Richard Salgado, director of law enforcement and information security at Google, Inc, and a former prosecutor at the U.S. Department of Justice's Computer Crime and Intellectual Property Section and Todd Hinnen, a partner at Perkins Coie and a former head of U.S. Department of Justice's National Security Division, the course will cover the technology, law and policy of government surveillance of the Internet and other communications technologies. We will focus on U.S. law, but also address the relationship with other jurisdictions. Technologies covered will include wiretapping, stored data collection and mining, location tracking and drones and legal regimes will include the Fourth Amendment, Electronic Communications Privacy Act, the USA Patriot Act, CALEA and the Foreign Intelligence Surveillance Act. Elements used in grading: Class participation, attendance, written assignments and final paper. Writing (W) credit is for students entering prior to Autumn 2012.

LAW 693. Law and Politics Workshop. 2-3 Units.

This workshop will feature guest speakers who are political scientists or law professors specializing in the legal regulation of politics. Students will be responsible for response papers to each scholarly paper presented. On weeks without guest speakers, topics to be covered will include election law, administrative law, legislation, judicial behavior and public opinion, as well as the political science relevant to those areas of law. The final grade will be determined by class participation (10%), response papers (30%) and final research paper (60%). Students can take the course for R credit for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation (10%), Response papers (30%) and final paper of no less than 18 pages for 2 units of credit and 26 pages for 3 units of credit (60%). (Cross-listed as POLISCI 321).

LAW 694. The Law of War. 3 Units.

The course explores the international law regime governing war, including the law that regulates when states may resort to force and the constraints on the conduct of warfare itself. We will begin by considering when states may permissibly use force, and how changing security threats, including terrorism, the proliferation of weapons of mass destruction, and the commission of widespread humanitarian atrocities challenge and are reshaping the legal framework on recourse to force. We will then explore the rules governing the conduct of military operations, including the constraints on the means and methods of war, the rules governing the treatment of detainees, and the protections extended to civilians and noncombatants in armed conflict. A particular focus of the class will be the application of these rules in non-traditional, asymmetric conflicts between states and terrorist and other non-state groups. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements Used in Grading: Class participation, written assignments, research paper or final exam.

LAW 695. International Human Rights: Media and Education. 2 Units.

This course will explore the role of media and communications in the human rights field, and in particular human rights education. The central focus of the course will be the development by the students of an online education program in international human rights law, which will be made available on the Stanford Law School Human Rights Center website. Students will research effective methods of communication and presentation, as well as the applicable law and will work in small groups to develop multimedia online education modules. Enrollment is by consent of the instructor, and some prior coursework or experience in international law is required. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Elements used in grading: Class participation and written assignments.

LAW 696. Computer Security and Privacy. 2 Units.

This seminar surveys the legal environment for technology security and privacy. We will emphasize areas of law that are frequently invoked, hotly contested, or ripe for reform. Specific topics will include trespass offenses (CFAA and DMCA), consumer protection against deficient security, breach notification, privacy policies, communications safeguards (ECPA), and compelled disclosure to law enforcement and intelligence agencies (Title III and FISA). The material will draw upon high profile and challenging cases, including the prosecutions of Aaron Swartz and Bradley Manning, the contempt citation against Lavabit, and class actions against Apple, Facebook, and Google. Students will have the option of completing a series of short written assignments or one research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. A background in computer science is not required for this course. Writing (W) credit is for 3Ls only. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 697. Comparative Law and Society. 2 Units.

By the mid 20th century, the legal map of the world recognized four main traditions: civil law, common law, socialist, and Islamic law. In early 21st century, the main socialist countries have disappeared and globalization has produced a pronounced convergence between common law and civil law. We also became aware that comparative law has to compare more than law and has to include the social and political context of the law. The comparative method is important, but the substance to be compared has changed. This course introduces students to the main historical experiences of law using the comparative method and law and society materials. They will find a new way of looking at Roman, medieval, or 19th century law because its "monuments" are placed in social perspective. The method will be used to reconstruct the contemporary ideas of human rights and rule of law in the context of specific countries. Students will have two writing obligations: (1) brief reflective essays on assigned readings and (2) a research paper. Starting in session 2, students will prepare brief reflective essays on the required reading (or readings) for the session and submit them to the professors and other students 24 hours prior to the beginning of the session. Assigned readings will all be in English. Additional readings may be in other languages. For the research paper the student will, with professorial approval, choose a country and a topic and discuss the work in progress with the professors at least twice during the quarter. It should not exceed 5,000 words. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: The short essays or article presentations will be one leg of the students' evaluation (50%). The other leg will be the final research essay (50%). Writing (W) credit is for students entering prior to Autumn 2012.

LAW 698. Education Law and Policy. 3 Units.

This seminar will explore the current state of education law and policy, with an emphasis on legal environment for charter schools. Students will have an opportunity to discuss cutting edge issues in education reform with leaders and policy-makers from charter school operators, union leaders, researchers, and innovators. Special Instructions: Grades will be based on class participation and (1) weekly reflection papers of 3-5 pages each week for each of our speakers/topics or (2) a long research paper. Writing credit is for 3Ls only. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. The course is open to first-year Law School students. Writing (W) credit is for 3Ls only. Elements used in grading: Weekly Reflection Papers or Research Paper.

LAW 699. Arbitration in America. 3 Units.

Transactional lawyers and litigation counsel alike will face arbitration as a significant option for resolving their clients' legal disputes. This course covers the development of alternative dispute resolution in the U.S., with an emphasis on arbitration under the Federal Arbitration Act (FAA). It describes how the federal and state governments have gradually come to accept and now favor the private settlement of commercial disputes based on consent of parties. It examines the many different contexts and industries in which arbitration is conducted, including government-mandated programs for labor disputes, systems established by specific industries such as the diamond trade and professional sports associations, the construction industry, and commercial disputes in general; more controversial is the use of arbitration for consumer, class action and employment disputes. This historic reversal of power over adjudication from government to the private sector has alleviated the delays and uncertainties of judicial litigation, and has created a huge and growing legal field of attorneys, arbitrators, and service providers fashioning and administering systems ranging in complexity from the most formal mega dispute with full discovery to the resolution of mini disputes through mechanically applied algorithms. Allowing private parties to agree on the law and procedures that govern their disputes has led, moreover, to numerous clashes of interests, including evasion of public policies established by legislation. How to deal with alleged violations of public policy, errors of law, erroneous findings of fact, unfair procedures, unequal negotiating power, and arbitrator bias are among the continuing and complex difficulties currently faced by courts and legislatures. The US Supreme Court's recent attempts to deal with several aspects of these difficulties will be considered. We will also examine the less heralded but highly significant use of mediation as a relatively speedy and inexpensive method for private dispute resolution, and the recent development of hybrid systems and other innovations. Elements used in grading: Class participation, attendance, written assignments and final exam.

LAW 701. SPILS Law and Society Seminar. 3 Units.

This seminar is restricted to students who are in the SPILS program. The seminar deals with the relationship between legal systems and the societies in which they are embedded. The materials are drawn from studies of many different societies. Among the issues dealt with are: What influence does culture have on the operation of legal systems? What are the social forces which produce particular forms of law? What impact do legal interventions have on society and on human behavior? Elements used in grading: Exam. Enrollment is restricted to SPILS program students.

LAW 703. Corporate Governance and Practice Seminar. 2 Units.

The seminar on corporate governance meets in the Autumn and Winter quarters and forms the core of the LL.M. Program in Corporate Governance & Practice. Attendance and active participation are important to the success of the seminar and an important factor in the overall grade. Students are expected to have carefully read and reviewed assigned materials in advance of each session. Students may be also asked to prepare brief presentations to help guide discussions. Students will be required to submit reflection papers (2 to 3 pages in length) that evaluate, critique, and discuss some or all of the key topics reviewed in the previous week's session. Elements used in grading: Class participation, attendance and assignments. This course is required for and limited to students in the Corporate Governance and Practice LL.M. Program.

LAW 704. Law, Science, and Technology Colloquium. 2 Units.

The Law, Science & Technology Colloquium offers students in the Law, Science & Technology LLM Program the opportunity to discuss cutting-edge legal issues at the intersection of law and technology with leading experts in the field, including Stanford faculty, visiting scholars, technology and IP lawyers, entrepreneurs, and executives from Silicon Valley technology companies. During most class meetings, an invited guest lecturer will present research, a paper, or their experiences to the class on a specific topic related to law, science, and technology. Following these presentations, all students will participate with the lecturer in a class discussion based on assigned readings, the presentation, and students' own experience in the area. Attendance and preparation are vital to the success of the Colloquium and, accordingly, will constitute an important factor in the overall grade. Also, each student will individually write weekly commentary papers that evaluate, critique, and/or discuss key issues from the assigned reading. Elements used in grading: Class participation, attendance and weekly commentary papers. Satisfies the colloquium requirement for Law, Science, and Technology LLM (LST) candidates. Open to LLM students.

LAW 705. SPILS Masters Thesis. 4 Units.

The writing of a work of original scholarship in the area of research of the student's choosing is necessary requirement of the JSM degree. During the winter quarter students are expected to submit two draft chapters: 1) any chapter of the fellow's choice by the end of January; and 2) a draft of the empirical research result's chapter by the appropriate date in the winter quarter as determined by the instructor. Elements used in grading: Thesis. This course is exclusive to SPILS students. The thesis is required for JSM graduation.

LAW 706. Environmental Law and Policy Colloquium. 2 Units.

The Environmental Law & Policy Colloquium offers LLM students the opportunity to discuss cutting-edge legal topics related to, among others, the environment, natural resources management, or energy policy. The colloquium meets in all three quarters. During the autumn quarter, students will engage in group policy discussions. During the winter quarter, a leading expert in the field - a faculty member, a lawyer, a public official, a member of an advocacy groups, or an entrepreneur - will present his or her research, a paper, or his or her experiences to the class on a specific topic. Following these presentations, all students will participate with the lecturer in a class discussion based on assigned readings, the presentation, and students' own experience in the area. During the spring quarter, the students will present their research papers focused on the solution of an environmental or energy issue. Attendance and active participation are important to the success of the seminar and an important factor in the overall grade. Students are expected to have carefully read and reviewed assigned materials in advance of each session. During the first quarter, students will work in teams and will have to submit memos in preparation for the policy discussion. During the second quarter, students will individually write weekly commentary papers to be submitted before the lecture evaluating, critiquing, and/or discussing key issues from the assigned reading(s). In the third quarter, students are expected to present their papers and comment on the other students' research. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. This course is required for and limited to students in the Environmental Law & Policy LLM Program.

LAW 707. SPILS Research Methods Workshop. 2 Units.

This is a mandatory course for SPILS Fellows as part of the program's core curriculum. Its main goal is to offer students an interdisciplinary perspective about socio-legal research, and research tools for implementing their individual research projects. This Winter term workshop will complement the Research Design for Empirical Legal Studies Seminar taken in the Autumn by 1) expanding and elaborating on some of the methods analyzed during the seminar; and 2) assisting students in using such methods towards their individual research project. The workshop will consist of specialized sessions, most of them tailored towards the work of empirical research that occurs after the data collection phase. During the quarter the fellows are expected to submit drafts of different chapters of their thesis. If appropriate, the workshop may also include group and/or individual sessions designed to address the very specific needs of the research undertaken by the SPILS Fellows. Elements used in grading: Class participation, attendance and written assignments. Enrollment is restricted to SPILS fellows. The seminar is required for JSM graduation.

LAW 708. Advanced Legal Writing for American Practice. 3 Units.

This course orients LLM and JSM students to a range of legal writing genres used by American lawyers in practice and by law students in papers and exams. At the core of these genres are the techniques of legal research, objective and persuasive legal writing, and related legal analysis, as practiced in American law offices and courts. The course presents students with realistic legal writing scenarios that they address in and out of class. Students prepare an analytical memorandum, advising a hypothetical corporate client, and a short brief for a mediator. The assignments are designed to help students adapt their writing skills by incorporating methods that American lawyers use to analyze typical legal problems and to advocate on behalf of their clients. Special Instructions: Students must participate in one conference with the instructor, outside regular class hours, to be arranged at a mutually convenient time. Only LLM and JSM students may enroll in this class via Axess. If the class is oversubscribed, a lottery system will be used the first week of class to determine the final class list. This course is limited to LLM and advanced degree students only. Elements used in grading: Class participation, attendance, and written and oral assignments.

LAW 709. Introduction to American Law. 3 Units.

This course is designed to introduce international students in the Exchange and Advanced Degree Programs (LL.M. and SPILS) to the key principles of American law. The course provides an overview of distinctive features of the U.S. legal system, including its history, procedures and institutions. Topics include the role of precedent in the common law, due process, trial by jury, equal protection, and federalism. The course is offered in September, before the start of the regular law school quarter. Special Instructions: Required for LL.M. but optional for the SPILS and Exchange Program students. Open to LL.M., SPILS and SLS Exchange Program students only. The class starts on September 2 and runs through September 19. Final exam will be scheduled on Friday, September 19. Elements used in grading: Class attendance, participation, short written assignment and final exam. LLM/SPILS students only.

LAW 712. Research Design for Empirical Legal Studies. 3-4 Units.

Empirical legal studies have become popular in the U.S. and are now spreading to non-U.S. law faculties as well. Usually the term applies to analyses of quantitative data and the researcher relies on data collected by others. But the term "empirical" properly encompasses both qualitative and quantitative data, including interviews, legal documents, survey research and experimental results. Analysts interested in using such data need to understand how they were collected, in order to decide what data can appropriately be used to answer different kinds of questions. Often to answer the questions of interest, a researcher needs to collect new data, which poses challenging questions about how to design an empirical research study. Answering these questions appropriately is important to ensure publication in a peer reviewed journal, which are becoming increasingly important to legal academia. This seminar will introduce students to the wide range of research methods that can be used to answer empirical questions, provide a framework for choosing among methods, and explain how to use the methods. The project for the quarter is to design an empirical research study on a topic of your choice. Special Instructions: JD students can take the class for 3-4 units. SPILS students must take this class for 4 units. Students taking the course for 4 units must attend the additional session on Thursday, which is option for others. After the term begins, JD students accepted into the course can transfer from section (01) into section (02), which can potentially satisfy the R requirement, with consent of the instructor. Consent Application for JD students: To apply for this course, JD students must e-mail Professor Hensler at dhensler@stanford.edu. This course is REQUIRED for all SPILS fellows and BY CONSENT for all other students. Elements used in grading: Class participation, attendance, written assignments and final paper.

LAW 721. Private Equity Investing: Quantitative Skills Seminar. 1 Unit.

This course has been created to supplement Law 522, Private Equity Investing. The focus will be on the quantitative aspects of private equity investing. The primary pedagogical objective is to have students learn the skills required to do financial analysis and spreadsheet modeling. Students will develop a thorough understanding of "the time value of money" and the concepts of present value, internal rates of return, and the discounting of cash flows and annuity streams. The key principles of entrepreneurial finance and deal arithmetic will be presented, including the implied valuation of an investment, blended returns, the math of multitiered capital structures, contingent claims analysis, DCF valuation techniques, investment fund economics, option mechanics and variable pricing mechanisms. Mastery of these fundamentals will allow students to develop and strengthen their ability to prepare forecasts, craft deal structures and run the numbers on real world transactions. Special Instructions: In order to enroll in PEI: Quantitative Skills students must concurrently enroll in Private Equity Investing (LAW 522). In other words, no student may enroll in either Law 522 or Law 721 without also enrolling in the other. Students accepted to enroll in Private Equity Investing (for which a Consent Application Form is required) will automatically be able to enroll in LAW 721. Law 721 will be graded on a Mandatory Pass/Restricted Credit/Fail (MP/R/F) basis. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 722. Contracts: American Law. 4 Units.

This course will provide advanced-degree students with coverage of Contracts law comparable to the fall course offered for first-year JD students. The course will identify the scope and purpose of the legal protection accorded to interests predicated on contract. We will focus on problems of contract formation, enforceability, interpretation, performance and excuses for non-performance, and remedies for breach. The course will cover both the U.S. common law of contracts and the basics of UCC Article 2 (sales of goods). Not open to JD students. Open only to students in the SLS Advanced Degree Programs. Elements used in grading: Class Participation, Attendance, Final Exam.

LAW 724. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 2 Units.

The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government, and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change...), leadership, and the law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: Ebola; Facebook's mood manipulation research and teen suicides from social media bullying; Google's European "right to be forgotten" and China policy and driverless cars; Space X (Elon Musk's voyages to Mars); ISIS' interaction with international NGOs; sexual assault on US University campuses and in the US military; the ethics of corporate social responsibility (through companies such as Loreal, Whole Foods and Walmart); immigration reform; corporate and financial sector scandals; and non-profit sector ethics challenges. Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities beyond speaking in class). Strong emphasis on critical thinking and testing ideas in real world contexts. There will be a limited number of openings above the set enrollment limit of 40 students. If the enrollment limit is reached, students wishing to take the course should contact Dr. Susan Liautaud at susanl1@stanford.edu. The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with Public Policy 103F), and Science, Technology, and Society and satisfies the Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. NOTE: This course does not meet the SLS Ethics requirement. Elements used in grading: Class Participation, Attendance, Written Assignments, and Final Paper. Ethics in Society (ETHICSOC 234R), Public Policy (PUBLPOL 134, PUBLPOL 234).

LAW 726. Negotiation on the Ground: Discussions at the Intersection of Theory and Practice. 1 Unit.

We can read any number of books about negotiation, but how do the concepts and principles play out in the real world? This dinner colloquium will meet with distinguished negotiators working in a variety of fields to reflect on and draw lessons from their deep and diverse experience. Guests for this year will speak on: studio and talent perspectives in entertainment negotiations, business and legal perspectives in biotechnology companies, public/private policy negotiations in natural resource management, criminal justice, and California health policy. Pre-Requisite: Negotiation Seminar or substantial equivalent. Schedule: Wednesday, 5:30-8:00pm. There will be five presentation/dinner discussion sessions during the Winter Quarter, of which students are required to attend four. Elements used in grading: Class Participation and Attendance.

LAW 727. Health Law: Quality and Safety of Care. 3 Units.

Concerns about the quality of health care, along with concerns about its cost and accessibility, are the focal points of American health policy. This course will consider how legislators, courts, and professional groups attempt to safeguard the quality and safety of the health care patients receive. The course approaches "regulation" in a broad sense. We will cover regimes for determining who may deliver health care services (e.g. licensing and accreditation agencies), legal and ethical obligations providers owe to patients (e.g. confidentiality, informed consent), individual and institutional liability for substandard care, and various proposals for reforming the medical malpractice system. We will also discuss the Patient Protection and Affordable Care Act (aka, "Obamacare"), which is launching many new initiatives aimed at assuring or improving health care quality. Special Instructions: Any student may write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Exam or Final Paper. (Cross-listed with School of Medicine - MED 209).

LAW 728. Stolen Art. 2 Units.

Public fascination with stolen art is evident from its almost daily coverage in the media, including the New York Times, the Wall Street Journal, the Art Newspaper, the Art Crime Journal, and numerous online sources. What is less evident is the extent to which apparently disparate art, cultural heritage and law topics share a significant stolen art interest. The course will deal with five currently lively stolen art topics: Imperialism; the Holocaust; Indigenous Art; Collectors and Museums; and the Illicit Trade in Antiquities. Law students and graduate students in other fields at Stanford (Art History, Anthropology, Archaeology, Classics, and others) will be eligible to take the course. Grades will be based on research papers (up to five students may write research papers) or final examinations. Special Instructions: Students have the option to write a research paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Final Exam or Final Research Paper.

LAW 729. Legal Informatics. 2-3 Units.

The legal system is undergoing rapid change due to - among other forces - expanding use of information technology in legal services as well as globalization of the legal industry. This class offers an overview of how technology is used in legal today's legal practice and how it will be changing the landscape of the legal profession and the law more broadly in the foreseeable future. Through this class students gain an understanding of the unique challenges and opportunities the legal system and the legal industry are facing and learn about innovative new systems seeking to address them. Students will be introduced to technologies that are commonly used for legal research, as well matter management and client management by law firms as well as in-house departments. Students will also be familiarized with the next generation of innovative systems and platforms that challenge the way law has been practiced to date, but also promise to increase the efficiency of our legal system. The class modules include: (i) Legal Document Management (including electronic legal research, e-discovery, specialized legal databases), (ii) Legal Infrastructure (including: case management, legal lead generation, managing the firms legal business process and legal process outsourcing), and (iii) Computational Law (including: legal expert systems, computable contracts, and unauthorized practice of law issues). Expert guest-speakers from academia and industry will provide for a diverse and interdisciplinary experience. Successful legal technology entrepreneurs and thought leaders in the legal technology space will provide a practical angle to the discussion. Special Instructions: Grades will be based on class participation including class preparation (25% of grade) and one of the following two options: Option 1 (section 01): Legal Technology Project (individual or group). Students will be presented with a series of research problems posed by industry partners of CodeX - The Stanford Center for Legal Informatics (<http://codex.stanford.edu>). Students can select a project and, individually or as part of a team, address the posed problem in form of a written report or by preparing a technical demonstration project/prototype that aims to solve the problem posed by the industry partner (75% of grade); or Option 2 (section 02): independent research paper (75% of grade). Students shall write an independent research paper on a legal informatics topic. You are invited to propose a topic and a working title and to discuss your topic ideas with us. The topic and the working title of the research paper must be approved by the instructors, before you start your detailed research. Independent research papers require by definition that students include other research materials besides the introductory and advanced readings for class. Students electing option 2 will receive Research (R) credit. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the length of the research paper. If you wish to earn 2 units, the research paper shall be at least 18 pages in length (double-spaced, 12-point font size, 1-inch margins). If you wish to earn 3 units, the research paper shall be at least 26 pages in length (double-spaced, 12-point font size, 1-inch margins). Each student can choose one of the above two options, whichever he/she prefers. After the term begins, students electing option 2 can transfer from section (01) into section (02), with consent of the instructor. There are no prerequisites for this class. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. (Cross-listed with Computer Science - CS 204).

LAW 730. Advanced Legal Writing: Technology Transactions. 3 Units.

This course covers the foundations of drafting contracts in a modern commercial setting, primarily through weekly hands-on writing exercises that illustrate business problems commonly found in today's technology transactions law practice. Topics to be addressed will include basic contract anatomy, common clause ambiguities, structuring for readable "flow", and drafting-for-negotiation techniques. Final examination will involve crafting a full-length technology license agreement from a rough term sheet that appears to have been pecked out on some sort of mobile device. No prior business law coursework, intellectual property background, or martial arts proficiency required. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

LAW 731. Current Issues in Network Neutrality. 2 Units.

Do we need network neutrality rules and, if yes, what should they be? After more than ten years, this question is still hotly debated around the world. Network neutrality rules limit the ability of Internet service providers to interfere with the applications, content and services on their networks; they allow users to decide how they want to use the Internet without interference from Internet service providers. In the US, the recent decision by the Court of Appeals for the DC Circuit in *Verizon v. FCC* has re-opened the debate. In December 2010, the Federal Communications Commission (FCC) adopted the Open Internet Order, which enacted binding network neutrality rules for the first time. In January of this year, the Court of Appeals for the D.C. Circuit struck down the core provisions of the Open Internet Order - the rules against blocking and discrimination. As a result of this ruling, Internet service providers like Verizon, AT&T or Cox Cable that connect users to the Internet are now free to block any content, service or application they want. They can slow down selected applications, speed up others, or ask application or content providers like Netflix or Spotify to pay fees to reach their users. These practices would fundamentally change how we experience the Internet. In the wake of the Court's decision, policy makers, stakeholders and observers in the US are debating how to best ensure that the Internet remains open and free. In February, the Federal Communications Commission opened a new docket to collect public input on the best way to proceed. In Europe, the European Commission, the European Parliament and the member states are currently considering which approach to network neutrality they should take. The Brazilian Parliament is in the process of adopting network neutrality rules. This seminar aims to enable students to participate in the ongoing policy debates over network neutrality in the US and abroad. Class sessions will explore whether there is a need for network neutrality rules and, if yes, what kind of rules a network neutrality regime should include. For example, should network neutrality rules only ban blocking, or also discrimination? And if yes, what kind of differential treatment should be banned? Should Internet service providers be allowed to charge application or content providers for prioritized or otherwise enhanced access to their Internet service customers? How can we find network neutrality rules that allow network providers to manage their networks and that allow innovation in the network, while protecting the interests of users and application developers? Does competition in the market for Internet services remove the need for network neutrality rules? And finally, what is the best way to move forward in the US? Students will work in groups on written assignments that explore specific questions from the perspective of particular Internet companies or interest groups. Students are expected to attend all sessions of the class and participate in the class discussion. Special Instructions: Students may submit consent applications to enroll in the "Current Issues in Network Neutrality" seminar and the "Next Steps in Network Neutrality" policy lab practicum. Students concurrently accepted in the seminar and the policy practicum will research and write parts of white papers and comments to the Federal Communications Commission that will help policy makers assess the available options. Students will be required to attend the seminar and participate in the discussion, but will not do any of the written assignments for the seminar. Students enrolled in the seminar and the practicum will have the option to write papers for W, PW, or R credit in the practicum, with instructor consent. The class is open to law students and students from other parts of the university. It does not require any technical background. Elements used in grading: Class participation, attendance, written assignments. Writing (W) credit is for 3Ls only. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline.

LAW 733. Topics in American Legal Practice. 1 Unit.

This course is designed to introduce international JD students to American legal practice. It will begin in the spring quarter and continue into the fall quarter, and will require the writing of a paper. Elements used in grading: Final Paper.

LAW 735. Cities in Distress. 2-3 Units.

In 2013, the City Detroit became the 28th city to declare municipal bankruptcy or to enter a receivership for fiscal crisis since late 2008, a window of time that has seen five of the six largest municipal bankruptcies in American history. This course will focus on these cities and the legal tools available to facilitate their restructuring and recovery. Subjects will include: (1) the basics of local finance; (2) an introduction to the primary causes of local fiscal distress; and (3) tools for state and federal governance of city finances and financial distress (including audits and other oversight mechanisms, state regulation, municipal bankruptcy, and state receiverships). The course will feature readings focused on law and cities across the country, including in California, Pennsylvania, Michigan, and North Carolina. A special unit in the course will focus squarely on the city of Detroit's bankruptcy. Grades will be based on class participation and (1) weekly reflection papers of 3-5 pages each week for each of our speakers/topics or (2) a long research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Students taking the course for R credit can take the course for either 2 or 3 units, depending on the paper length. Elements Used in Grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 736. Comparative Venture Capital - China. 2 Units.

This course is taught in conjunction with Law 736A. Students may enroll for this course alone or for both this course and Law 736A. Law 736 is intended to introduce students to the legal and financial principles underlying venture capital investment in start-up enterprises and innovative technologies. A special emphasis of this course will be a comparative analysis of the ways in which the various legal and financial structures employed by venture capitalists are replicated in other legal environments, with a focus on the largest venture capital and IPO market in the world - China. The first eight weeks of the course will coincide with the first eight weeks of Winter Quarter, and will be conducted at Stanford Law School. Class sessions will be comprised of lectures regarding the basic concepts and structures, as well as seminar discussions with venture capital industry participants. Elements used in grading: Final exam, attendance and class participation. Special Instructions: Enrollment in the Beijing option is limited to 12 students (See Law 736A for application instructions and deadline).

LAW 736A. Comparative Venture Capital - China: Field Study. 1 Unit.

This is the Stanford Center at Peking University in Beijing component of Comparative Venture Capital - China (Law 736). For details, see course description for Law 736. During spring break 2015, the course will be held at the Stanford Center at Peking University in Beijing, and will consist of meetings and seminars with lawyers, entrepreneurs, and venture capitalists active in the Chinese venture capital market. Students will also tour start-up enterprises made possible with venture investments. Enrollment is limited to 12 students. PLEASE NOTE: Students will need a passport and a visa to travel to Beijing. Elements used in grading: class participation and short writing assignments. APPLICATION: To apply for this course, students must complete and e-mail the Application Form available on the SLS Registrar's Office website (see Registration) to the SLS Registrar's Office. See Application Form for submission deadline.

LAW 738. American Constitutional History from the Civil War to the War on Poverty. 3 Units.

American Constitutional History from the Civil War to the Cold War. This course will address U.S. constitutional history from the post-Civil War Reconstruction period through the mid-20th century. Because of the breadth of the subject matter, the view will necessarily be partial. In particular we will take as our focus the way the Constitution has provided a point of political mobilization for social movements challenging economic and social inequality. Topics covered include: Civil War Reconstruction and restoration; the rise of corporate capitalism and efforts to constrain it; Progressive Era regulation; the New Deal challenge to federalism and the anti-New Deal backlash; government spending; the World Wars and emergency powers; Civil Liberties including speech and privacy; and the beginning of the Civil Rights Era. Readings will include both legal and historical materials with a focus on the relationship between law and society. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Paper extensions will be granted with instructor permission. No automatic grading penalty for late papers. Cross-listed with History (HISTORY 155).

LAW 739. International Deals: The Economic Structure of Business Transactions. 4 Units.

This course applies economic theory to the practice of structuring contracts. In the first part of the course, we read economics articles and case studies, focusing on problems of imperfect information. In the second part, we explore the connection between economic theory and contracting practice by dividing into groups to study a current deal. Groups examine a deal in detail and make a presentation to the class. We then hear from the lawyer or principal who worked on that deal. When it works, the students' and the practitioners' analyses are complimentary and enlightening. This year, we will focus on deals with an international component. In the past, we have examined cross-border joint ventures, movie and television financings, biotech alliances, venture capital financings, private equity investments, and architectural services. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam. Prerequisite: Corporations. If necessary, Corporations can be taken concurrently.

LAW 740. Guns, Drugs, Prisons, and Other Empirical Debates in Law and Policy. 2 Units.

Empirical debates are often crucial to decisions by judges and policymakers. This course will focus on some of these debates with the goal of both informing students on the substantive issues and helping them to develop the ability to understand and evaluate empirical studies by reading major studies on the issues of guns, drugs, prisons and a variety of other hotly contested empirical issues in law and policy. Although we will be reading actual statistical/econometric studies, there is no pre-requisite for the class since it is not a hard-core quantitative empirical methods class, but rather is designed to develop the ability to be a thoughtful consumer of empirical research. The goal is to provide information that judges, litigators, policymakers, and informed citizens would find useful in understanding the strengths and weaknesses of empirical evidence. The final in-class exam will involve a critique of an actual empirical paper. One page comment papers will be written for each class. Depending on the size of the class, we may also have student presentations of certain papers.

LAW 741. Introduction to Law and Economics. 1 Unit.

This course will introduce students to the "law and economics" way of thinking about the legal system. It is designed primarily for students who have little or no prior training in economics and who are unlikely to take more advanced courses in the field (such as the 4 unit Law 528, "Economic Analysis of Law"). This class will meet for six 1.5 hour sessions during the first part of the quarter. We will examine the core bodies of law taught to first-year law students: tort law, contract law, property law, criminal law, and civil procedure. For each of these bodies of law, the economic approach will be described in non-technical terms and then this approach will be used to examine a key case or key issue within that body of law. First-year law students are especially welcome in this course. There are no prerequisites to take this course. Elements used in grading: Final exam (open-book). The open-book exam will be given in class two weeks after the final lecture.

LAW 742. Federalism. 2-3 Units.

This course is an overview of legal and policy issues connected to federalism. We will examine a set of core theoretical questions - the values federalism serves; the relationship of federalism and individual and minority rights; and the role of judges in enforcing federalism through judicial review - across a wide range of contemporary legal debates (e.g., same-sex marriage, medical marijuana, immigration, voting rights). While much of the seminar will focus on the United States, we will also consider federalism in comparative context by examining the constitutions and legal doctrines of other regimes. Special Instructions: After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Students taking the seminar for R credit can take the seminar for either 2 or 3 units, depending on the paper length. Elements used in grading: Class Participation, Written Assignments or Research Paper.

LAW 743. Advanced Legal Writing for American Courts. 3 Units.

This course orients LLM, advanced degree students, and JD students to a range of legal writing genres used by lawyers in practice before American courts and by courts in their decision making. At the core of these genres are the techniques of legal research, objective and persuasive legal writing, and related legal analysis. The course presents students with realistic legal writing scenarios that they address in and out of class. Students perform legal research and prepare an analytical memorandum advising a hypothetical judge and write a short letter brief. These assignments are designed to help students adapt their writing skills by incorporating methods that American lawyers use to analyze typical legal problems and to advocate on behalf of their clients and that American judges use to evaluate the cases before them. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 744. Moral Minds. 2 Units.

Recent psychological advances in our understanding of the cognitive and social origins of morality cast a new light on age-old questions about ethics, such as: How did our moral sense evolve in our species? How does it develop over our lifetime? How much does our culture, religion, or politics determine our moral values? What is the role of intuition and emotion in moral judgment? How "logical" is moral judgment? How do other people's moral choices affect us? Does character matter or is behavior entirely dictated by the situations we find ourselves in? If it is purely situational, are we morally responsible for anything? How far will we go to convince ourselves that we are good and moral? We will review empirical answers to these questions suggested by behavioral research, and explore their implications for ethics. Open to all graduate students, including advanced degree candidates at the professional schools (law, business, medicine, computer science, education, etc.). Enrollment limited to 16 by consent of instructors. Elements used in grading: Class Participation, Attendance, Readings. CONSENT APPLICATION: Students enrolled in the course will be selected through an application process. The application can be found at <http://web.stanford.edu/~arnewman/MoralMinds.fb>, and is due at 11:59 p.m. on November 14, 2014. Cross-listed with Ethics in Society (ETHICSOC 304) and Psychology (PSYCH 264).

LAW 745. Intellectual Property: International and Comparative Copyright. 3 Units.

Music, motion pictures, books and computer programs are protected instantly upon their creation and without further ado under the copyright laws of 159+ countries. One great challenge for lawyers is to determine who owns the rights to these works across countries with differing legal systems. Another challenge is to determine what rights and remedies attach to these works, and what exceptions to rights apply, across countries that assign different policy weights to the interests of creators and users. Few copyright licenses today fail to reach across borders, and copyright litigation increasingly calls for an understanding of foreign law. This course will focus on the counselling considerations that surround the exploitation of foreign and domestic copyrighted works, respectively, in domestic and foreign markets through licensing, litigation, or both. The course will survey the principal legal systems and international treaty arrangements for the protection of copyrighted works as well as questions of jurisdiction, territoriality, national treatment, and choice of law. There will be no exam in the course, but rather four problem sets that will be discussed in separate class sessions. Students may select which three of the problem sets they wish to have graded. Elements used in grading: In-class problem sets.

LAW 746. Climate Change Policy: Economic, Legal, and Political Analysis. 4 Units.

This course will advance students' understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Beyond focusing on economic issues and legal constraints, it will address the political economy of various emissions-reduction strategies. The course will consider policy efforts at the local, national, and international levels. Theoretical contributions as well as empirical analyses will be considered. Specific topics include: interactions among overlapping climate policies and between new policies and pre-existing legal or regulatory frameworks; the role that jurisdictional or geographic scale can play in influencing the performance of climate policy approaches; and numerical modeling and statistical analyses of climate change policies. Elements used in grading: Class Participation, Written Assignments, Final Exam. Cross-listed with Economics (ECON 159).

LAW 747. Law, Slavery and Race. 3 Units.

This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day. All students will be required to read and to participate in classroom discussion (obviously, attendance is required). Students will prepare two questions for discussion for 12 out of 20 class meetings; participation and discussion questions together will count for 25% of the grade. For students taking the exam, there will be a one-day take-home essay exam. Alternatively, students may write a final paper based on original research, of approximately 26 pages in length. A prospectus and rough draft will be required, for 5% and 10% of the grade respectively. The final exam or paper will be worth 75% of the grade (including the prospectus and rough draft). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper or Final Exam. Cross-listed with African & African American Studies (AFRICAAM 254D), Comparative Studies in Race & Ethnicity (CSRE 154D) and History (HISTORY 254D) & (HISTORY 354).

LAW 748. Comparative Class Actions. 1 Unit.

Although many lawyers regard the class action as a quintessential U.S. procedure, more than two dozen countries in North and South America, Northern, Central and Western Europe, Australia, Asia, Africa and the Mid-East have adopted some form of modern representative class action, and the number of jurisdictions with class actions is continuing to increase. Although the U.S. Supreme Court has steadily narrowed the scope for U.S. class actions, other jurisdictions see the procedure as appropriate for resolving securities, antitrust, consumer and personal injury claims. Some jurisdictions have invited business to resolve transnational claims against them in their own domestic courts, and plaintiff attorneys who cannot obtain class certification in U.S. courts coordinate non-class mass actions with class action attorneys outside the U.S. Stanford is collaborating with the University of Windsor (Ontario) and Tilburg University (the Netherlands) law schools to offer a 1-credit seminar on these developments. Using a combination of synchronous and asynchronous on-line communication, faculty and students at the 3 law schools will describe and analyze differences and similarities among the 3 countries (quite different) class action regimes. The class will meet weekly (sometimes separately by school and sometimes with faculty and students from the 3 schools together virtually) and SLS students will work with students at the other 2 institutions to research issues that cut across all three jurisdictions. This is a great opportunity to discover how lawyers in non-U.S. jurisdictions think about problems that arise trans-nationally, and some of the student you encounter in the seminar may be the practitioners you will litigate besides or against in future global litigation. Elements used in grading: Class Participation, Attendance, Written Assignments. CONSENT APPLICATION: Students interested in this course should contact Professor Hensler directly via email at dhensler@stanford.edu.

LAW 749. Global Litigation. 3 Units.

A securities class action is resolved in the NJ federal court for US investors and in the Amsterdam Court of Appeals for all other investors worldwide. Apple sues Samsung for patent infringement in N.D. CA and Samsung counter-sues in Korea, Japan and Germany. Merck is sued for injuries arising from its prescription drug, Vioxx, in the U.S., Canada and Australia, and the Australian lawyers are directed to challenge an otherwise unproblematic judicial ruling because of its possible impact on the U.S. litigation; meanwhile class certification is denied in the U.S. but granted in Canada. Philip Morris' Hong Kong subsidiary files a claim in an international arbitration tribunal charging that Australia's public health protection statute regarding tobacco marketing violates Australia's bilateral investment treaty with Hong Kong. Lawyers who received a \$9 billion judgment from Ecuadorian courts against Chevron for environmental damage fight to enforce it in courts in Argentina, Brazil and Canada while Chevron's lawyers file a RICO suit against the plaintiff lawyer in the federal court for the N.Y.S.D. With the globalization of the economy we are seeing the globalization of litigation and the emergence of a new class of "global lawyers" who advise clients on litigation risks and opportunities in jurisdictions with different substantive law, procedural rules and legal and judicial cultures. This seminar will consider the doctrinal, procedural and practical challenges that arise when litigation goes global. We will consider the high profile cases in which these issues have played out in recent years and meet some of the lawyers who are creating a new virtual international court system for the resolution of global disputes. Special Instructions: Students in this course may if they wish also register for a 1-credit course on comparative class actions (Law 748), which will be taught collaboratively with faculty and students in U. Windsor (Ontario) and Tilburg University (the Netherlands). Elements used in grading: Class Participation, Attendance, Final Paper.

LAW 750. Topics in Complex Litigation. 1 Unit.

This course is an introduction to complex litigation and institutional design in the contemporary American legal system including the general move away from regulation and toward litigation in recent decades, the legal and policy implications of that trend, and contemporary efforts to retrench or remake the system.

LAW 751. Just and Unjust Wars. 2 Units.

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Enrollment will be limited to 20 students -- 10 from SLS who will be selected by lottery and 10 from H&S. Elements used in grading: Class Participation, Written Assignments, Final Exam. Cross-listed with Ethics in Society (ETHICSOC 205R), (ETHICSOC 305R) & Philosophy (PHIL 205R), (PHIL 305R).

LAW 752. International Criminal Justice. 2 Units.

The establishment of a global system of international justice reveals that the promises made during the Nuremberg era are not mere history. Over the past decade, the international community has undertaken a considerable investment in enforcing international criminal law in conflict and post-conflict situations with the establishment of the international criminal tribunals for the former Yugoslavia, Rwanda, Sierra Leone, East Timor, Cambodia, and Lebanon. As these ad hoc institutions wind down, the International Criminal Court (ICC) has become fully functional, although it is plagued by challenges to its legitimacy, erratic state cooperation, and persistent perceptions of inefficacy and inefficiency. Moreover, the global commitment to international justice remains inconsistent as calls for criminal accountability for the situations in Sri Lanka, South Sudan, and Syria-among others-go unanswered. This intensive mini-course in the new September Term will introduce students to the law, institutions, and actors that constitute the system of international criminal justice and to the political environment in which it operates. The classroom component (offered at Stanford during the first week of the course) will offer an elemental analysis of international crimes as they have evolved in international law and focus on the challenges of interpreting these norms in a criminal prosecution. Jurisprudence from the various international tribunals will be scrutinized with an emphasis on understanding the prosecution's burden, available defenses, and sources of proof. The course will culminate in a visit to The Hague in the second week of the course, during which time students will meet with principals from the tribunals, including prosecutors, judges, administrators, and members of the defense bar. In addition to the substance of international criminal law, this course will also serve as an introduction to international legal reasoning, law-making, and institutional design. It will complement existing courses at the Law School covering comparative law, international organizations, international human rights, and public international law. Elements used in grading: The course grade will be based on a series of short papers and active in-class engagement with the assigned materials. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 753. Intellectual Property: Patent and Technology Licensing. 3 Units.

This course covers the fundamentals of the law and practice of licensing of patents and technology. Licensing is the principal means by which rights in patents and technology are shared, exploited and monetized. It is fundamental to business models throughout the technology industry and beyond, including in software, mobile, consumer devices, semiconductors and pharmaceuticals. We cover (1) the business drivers and models for licensing patents and technology, (2) the core concepts and current trends of licensing law (both Federal Circuit and Supreme Court), and (3) key issues in structuring, drafting and negotiating patent and technology licenses. We also cover how the "patent troll" and "patent reform" debates may affect licensing law and practice. We will emphasize the practical aspects of licensing patents and technology, and licensing in its broader context in relation to corporate, litigation, intellectual property and antitrust practices. Elements used in grading: Class Participation, Final Exam.

LAW 754. Current Issues in Corporate Governance. 2 Units.

Corporate governance has become a constant fixture of the legal and policy debates of our time. It not only figured prominently in the Sarbanes-Oxley Act of 2002 and the Dodd-Frank Act of 2010, the sweeping regulatory reforms of the last decade, but its reach has been far broader at both domestic and international levels. For a vast array of economic and social problems - from economic growth and systemic risk to rising inequality - improved corporate governance surfaced as a favored policy response. This seminar explores the central debates in this area with respect to issues such as board independence, shareholder voting and the role of proxy advisors, institutional investor activism, executive compensation, the question of short-termism, and board diversity. We will read works from the legal and economic literature and focus on current controversies. Special Instructions: Students have the option to write a paper in lieu of the final exam with consent of instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), with consent of the instructor. Elements used in grading: Class Participation, Written Assignments and Final Exam or Final Paper.

LAW 755. Deals in Latin America. 2 Units.

This course addresses value creation by business lawyers by examining how private parties structure their business transactions in Latin America, with a special emphasis on Brazil. It will focus, in particular, on the extent to which deal structures that are prevalent in the United States can travel well, or require adjusting, to this particular context. The first part of the course will explore barriers to contracting, such as risk and uncertainty, information problems, contract enforceability, and the Latin American legal and economic environments, as well as the tools available to overcome those barriers. The second part of the course will examine how the patterns of corporate ownership and control prevailing in the region shape the style and structure of business deals. Throughout the course, we will apply these concepts to a series of transactions that reflect the changing economic landscape in Latin America. This course is taught in conjunction with Law 755A. Students may enroll for this course alone or for both this course and Law 755A. As one of the new SLS Overseas Courses, the first eight weeks of the course will coincide with the first eight weeks of the Winter Quarter, and will be conducted at Stanford Law School. Students will have the option of participating in a one-week extension of the course in Satilde;o Paulo during spring break for an additional credit. While in Satilde;o Paulo, the class will meet local lawyers, clients, and regulators to discuss Brazilian deals in joint sessions with students from FGV Law School. The overseas portion of the course will be co-taught with George Triantis. Elements used in grading: Class Participation, Written Assignments, Final Exam. Special instructions: Enrollment in the Satilde;o Paulo option is limited to 12 students (See Law 755A for application instructions and deadline).

LAW 755A. Deals in Latin America: Field Study. 1 Unit.

This is the Satilde;o Paulo component of Deals in Latin America (Law 755). The course will be held at FGV Law School in Satilde;o Paulo (FGV Direto SP), and will consist of meetings with local lawyers, clients, and regulators to discuss Brazilian deals in joint sessions with students from FGV Law School. Enrollment is limited to 12 students, and will be graded on the basis of participation and a short reflection paper. See Law 755 for enrollment instructions. APPLICATION: To apply for this course, students must complete and e-mail the Application Form available on the SLS Registrar's Office website (see Registration) to the SLS Registrar's Office. See Application Form for submission deadline.

LAW 756. Sentencing and Policy. 3 Units.

This introductory course will familiarize students with the history, structure, and performance of America's sentencing system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. The course will examine sentencing from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will also explore sentencing theories and their application (in both federal and state structures), the impact of sentencing policy on mass incarceration, and the relationship between sentencing and crime. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, and offenders. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. NOTE: Students who previously took Sentencing and Corrections (621) should not enroll in this course, as it would be duplicative. Elements used in grading. Students are asked to write two reflection papers (dates specified in the syllabus). Those two reflection papers constitute 50% of the grade; the final one-day take home exam constitutes the other 50%. Class participation will be used as a "tipping factor."

LAW 757. Corrections, Punishment, and Public Policy. 3 Units.

This introductory course will familiarize students with the history, structure, and performance of America's corrections system. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. This course will cover probation, jails, prison, parole, and prisoner reentry. We will also discuss special populations (e.g., mentally ill, sex offenders), mass incarceration, and how the widespread impacts of America's prison expansion. The course will examine corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore correctional theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, what works in rehabilitation, and how to help offenders reintegrate after a prison term. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Students who have previously taken Petersilia's Sentencing and Corrections course (SLS 621-0-01) should not enroll in this class, as it would be duplicative. Students are asked to write two reflection papers (dates will be specified in the syllabus). Those two reflection papers constitute 50% of the grade; the final one-day take home exam constitutes the other 50%. Class participation will be used as a "tipping factor."

LAW 758. Introduction to Financial Institutions. 3 Units.

Introduction to financial institutions reviews a broad range of institutions that accept money from savers and invest that money in stocks, bonds or other assets. The course will explain how each of these institutions provide services to their clients and how each is regulated by government agencies. The course will cover pass-through institutions where the savers receive the return on their investments minus management expenses -- mutual funds, hedge funds and sovereign funds. It also covers institutions offering savers some form of guaranteed returns -- banks, insurance companies and Fannie Mae. Finally, the course will cover pension plans, both defined contribution and defined benefit plans. The course is geared to the non-financial expert with background notes as well as case studies on actual institutions. The course is taught from the viewpoint of someone advising or dealing with these institutions, as well as a public official deciding upon regulatory policy. Elements used in grading: Class Participation, Attendance, Final Exam. The instructor will bring to the course years of experience as head of two global financial companies.

LAW 759. Law, Leadership, and Social Change. 3 Units.

This course will examine the responsibilities and challenges for those who occupy leadership roles and for those seeking to use law as a vehicle for social change. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, conflict management, innovation, diversity, ethical responsibilities, scandal, civil and human rights, and public interest law. Materials will include cutting-edge research, case histories, problems, exercises, and media clips. Class sessions will include visitors who have occupied leadership roles. Requirements will include class participation, and either short written weekly reflection papers (2 to 3 pages) and a short research paper (about 5 pages) or (2) a long paper (approximately 26-30 pages). After the term begins, students can transfer from section (01) into section (02), which meets the R requirement. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 760. Law and Visual Culture. 3 Units.

Why doesn't the Supreme Court allow video cameras in oral argument? Why do jurors find video recordings more believable than live testimony? Is a computer generated re-enactment evidence? This course tracks the legal reception of modern visual representation from the confusion about the admissibility of photographs in the late 19th century (is it like a drawing? is it like eyewitness testimony?) to the debate about cameras in the courtroom in the late 20th century (do judges and jurors decide differently when the proceedings are subject to public scrutiny?) to the frequent and strategic deployment of visual media in pretrial and litigation practice today. We will pursue a variety of approaches to the topic, ranging from the discussion of film theory to guest lectures by practicing attorneys. Elements Used in Grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 761. Introduction to Legal Design. 4 Units.

Intro to Legal Design is a 9-week course for law students & other graduate students to reimagine how legal services are delivered, & learn how to use human-centered design methods to create breakthrough solutions to complex problems. The students will work with project partners - including legal aid groups, courts, and private law firms -- on 2 legal service challenges to help the partners solve real problems they & their users face. For each challenge, students will work on interdisciplinary teams, with close coaching from designers, engineers & lawyers. Students will learn design methods and use their respective expertise to design new innovations that make legal services more accessible & engaging. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 762. Health Law: Improving Public Health. 3 Units.

This course examines how the law can be used to improve the public's health. The major themes explored are, what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? The course investigates these issues as they operate in a range of specific contexts in public health, including the control and prevention of infectious disease; laws aimed at preventing obesity and associated noncommunicable diseases; tobacco regulation; ensuring access to medical care; reproductive health; lawsuits against tobacco, food, and gun companies; and public health emergencies. In these contexts, we will ask and answer questions such as, what do the Constitution and key statutes permit? What makes a good public health law? What does public health evidence tell us about the likely effectiveness of particular legal interventions? What ethical and economic arguments justify government intervention to shape individuals' and companies' health-related behaviors? Instruction is through interactive lectures with a significant amount of class discussion and some group exercises. Class Participation, Written Assignments, Final Exam. Cross-listed with Medicine (MED 237).

LAW 763. International Trade and Development in the Global Economy. 3 Units.

This course focuses on the intersection of two key objectives of the international order and international economic law: the promotion of central rules, regimes and policies for the stabilization and liberalization of international trade; and the encouragement of economic growth and development in poor countries. The course begins with the primary multilateral trade organization, the World Trade Organization (WTO), and its predecessor, the General Agreement on Tariffs and Trade (GATT). The course then proceeds to regional trade and investment regimes: agreements affecting particular areas of the developing world, with special emphasis on U.S. trade law and policy in respect of those regions. Throughout, the course will examine high-profile case studies, as well as consider current events, such as U.S. negotiations on the Trans-Pacific Partnership and the Transatlantic Trade and Investment Partnership. Elements used in grading: Class Participation, Written Assignments, Final Exam.

LAW 764. Current Issues in Insurance Law. 2 Units.

This seminar will consider a range of important issues involving tort and contract aspects of insurance law. Each week will focus on a different topic. Topics may include the application of contra proferentem and reasonable expectations doctrines, bad faith litigation, duty to settle, prominent issues in asbestos litigation, remedies for misrepresentation, limitations on insurability, and the proper role for regulation of insurance policies. Readings will consist of a mix of important cases and academic articles. After the first week, students will take the lead in class discussion of each topic. Grading will be based on a combination of class participation and, at the student's option, (1) weekly response papers or (2) a single longer paper. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. Elements used in grading: Class Participation, Attendance, Written Assignments or Final Paper.

LAW 765. The Welfare State. 3-5 Units.

Much has been written in recent years about the decline of the welfare state. Numerous adjectives have been applied to describe a trend toward austerity -- death, demise, withering, reversal. One writer suggested that the welfare state had not died, it had merely "moved to Asia" along with industrialization. This seminar introduces students to the key literature, questions, and debates about the modern welfare state. We will consider the emergence, growth, and current status of the welfare state, primarily in Western Europe and North America. The course will examine classical theories about markets and the emergence of social provision. We will also consider the leading theoretical and empirical research addressing the emergence of the welfare state, looking at the American case in comparative perspective. Attention will be paid to social and political factors on state development including political parties, labor markets, gender, demographic change, and immigration. We will then turn to the trend toward austerity and retrenchment, and the effect of globalization for the future of the welfare state. Course Requirements. Participation/Discussion (25%). Students are responsible to complete all readings and to come to class prepared to actively participate in discussion. Each student is responsible to lead a portion of the discussion twice per quarter. Short Reaction Papers (25%). All students must complete 5 reaction papers related to the weekly readings of 2 to 3 pages in length. Reaction papers will include a list of questions to be addressed in that week's discussion. All reaction papers must be posted to coursework in advance of class so that the student(s) leading that week's discussion can incorporate the questions into that week's discussion. Final Options (50%). Students have the option of completing one final paper of 20 pages in length OR 4 essays of 5-6 pages each addressing the readings in weeks that the student did NOT complete reaction papers. Topics for 20 page papers must be approved by me in advance, and may be related to a student's dissertation or master's research or may be a stand-alone topic. Papers may take the form of a research proposal and need not contain original empirical research. Shorter papers should engage thoroughly with the literature on the selected topic, and should bring additional sources other than those read for class to bear on the topic of choice. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline. Cross-listed with Sociology (SOC 254 & SOC 354).

LAW 766. Going Global: Advising Clients in a Global Economy. 3 Units.

Lawyers are increasingly asked to advise clients with global operations. This course will provide a foundation for understanding the challenges faced by business entities that operate around the world and that are therefore subject to multiple and sometimes inconsistent national laws. We will review the types of laws that apply to cross-border and multinational transactions, as well as how variations in culture and legal systems affect the substance and application of those laws. We will also examine how treaties, international agreements and informal or political norms can constrain or supplement these laws and review the risks of doing business in communities whose laws are ineffective or unreliable. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

LAW 767. Internet and Society: The Technologies and Politics of Control. 2 Units.

This course offers an intensive introduction to the field of cyberlaw. We will investigate the evolving nature of online architecture and activities, and the ways in which the legal toolbox has been, and will be, leveraged to influence them. Course themes include the complex interaction between Internet governance organizations and sovereign states, the search for balance between the ease of disseminating information online and the interest of copyright holders, privacy advocates, and others in controlling that dissemination, and the roles of intermediaries and platforms in shaping what people can and cannot do online. By application. Please note special compressed meeting times. No prerequisites. Special Instructions: The course will run from Sunday, January 4, 2015 to Friday, January 16, 2015. It will comprise 10 students from Stanford Law School and 10 students from Harvard Law School, including any cross-registrants from other Stanford or Harvard schools. There will be an opening Sunday set of activities; one approximately two-hour session each weekday in that period; and potentially one Saturday session, including field trips. Students enrolled in the course from both schools will be selected through an application process. CONSENT APPLICATION: The application can be found at <http://brk.mn/InternetandSociety>, and is due at 11:59 p.m. on Friday, October 10, 2014. Elements used in grading: Class Participation, Attendance, Final Paper.

LAW 768. Environmental Justice. 3 Units.

This course will introduce environmental justice as a social movement, including its central substantive concerns (the needs of humans in the built environment rather than the need to protect the environment from humans) and its methods (community-based political organizing rather than professionalized judicial or legislative action). The bulk of the course will then pursue a broader conception of environmental justice today by using social science research, theory, and case studies to investigate the civil rights and poverty aspects of environmental safety and natural resources. The course will include units on: (1) toxic exposure and public health disparities stemming from the disproportionate siting of locally-unwanted land uses in poor neighborhoods of color; (2) access to natural resources and basic public services, including clean water, wastewater disposal, and open space; (3) tools in environmental justice advocacy (including community-based lawyering, Title VI of the Civil Rights Act of 1964, the Fair Housing Act, common law nuisance actions, and transactional lawyering); (4) environmental justice issues in Indian Country, and (5) environmental justice issues in climate change policy. Much of the course material, including student presentations, will be grounded in the experiences and advocacy histories of specific communities, both urban and rural, across the country. Grades will be based on class participation and (1) weekly reflection papers of 3-5 pages each week for each of our topics or (2) a long research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the R requirement, with consent of the instructor. Students who opt for a long research paper may, if they so choose, conduct substantial legal research responsive to a non-profit environmental justice organization's legal needs. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 769. Copyright and Content in the Digital Age. 3 Units.

The digital age has brought about unprecedented opportunity and upheaval in the creation and distribution of content. This seminar will examine digital disruptions to the business models of content creators and industries, and the corresponding impact of the Internet on copyright law, largely through the lens of the litigation involving Google Books. That litigation, which has been active in the courts for almost a decade, is a microcosm of the vast issues that have faced content owners and consumers in the digital age: new technologies to reproduce and distribute works, evolving concepts of fair use, changing consumer norms, massive disruptions to economic interests, increased access to information, concerns about piracy, and threats to competition. We will examine issues related to copyright and content in the digital age by focusing not only on legal claims and defenses, but also litigation strategy, business strategy, policy strategy and public relations strategy, all of which play an important part in the art of lawyering today. The seminar will explore in depth the many contours of the Google Books litigation, including transformative fair use, the problem of orphan works, the rise of ebooks, non-display use and the proposed class action settlement of the case, which was rejected by the district court in 2011. We will also examine digital developments in other content industries (movie, music and newspaper) and focus on two related book issues: the ebook antitrust case against both publishers and Apple and the frequent disputes between publishers and Amazon. The seminar will include visitors who have been involved in the issues being studied. Grading will be based upon weekly reflections, class participation and (for those opting for Research credit) a long paper based on independent research. Some copyright experience is recommended. The course is open to graduate students throughout the university, especially the Graduate School of Business, the Department of Communication and the Journalism Program, by consent of the instructor. After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor. CONSENT APPLICATION: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructor. See Consent Application Form for submission deadline. Elements used in grading: Class Participation and Written Assignments or Research paper.

LAW 770. Analyzing Alternative Laws and Policies for Psychoactive Drugs Seminar. 3 Units.

Two states have already legalized marijuana (WA and CO) and several more may do so in the next few years. These state initiatives pose unresolved legal questions (because of the clash with federal law and international treaty obligations), and major undecided design issues about what form a legal market should take. We will examine the topic using many different lenses, including moral philosophy, welfare economics, neuroscience and medicine, criminal justice, and political analysis. We will draw on many analytic methods including epidemiology, econometrics, quasi-experimentation, simulation modeling, case studies, and reasoning by analogy (tobacco, alcohol, prostitution, gambling). Among the policy levers we will consider are education and moral suasion, criminal justice, traditional risk regulation and street-level harm reduction, and taxation. Special Instructions: Students will have the option to combine this seminar with a practicum for two additional units with instructor consent. Students who take the practicum component will work as a team to prepare a written report and briefing for an actual policy client (to be determined). Only students enrolled in the Analyzing Alternative Laws and Policies for Psychoactive Drugs seminar may enroll in the Analyzing Alternative Laws and Policies for Psychoactive Drugs practicum component. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Exam.

LAW 772. Career Development: Alchemy, Law, and Practice. 2 Units.

Career development is embedded in life development. This course offers a space and time for each student to consider both through course materials, class interactions, and a series of reflection papers. The course includes one class facilitated in collaboration with the Office of Career Services focusing on a formal assessment via one or more psychological tests offered to each student. The materials for other class meetings are thought provoking works that have proven to be salient for considering career and life direction. Images and material from alchemy that embody what many consider to be a primary set of symbols for personal transformation provide a backdrop for the course. The course benefits from the collaboration of Michael Guasperini, a mythologist and lawyer whose primary vocation is working intimately with lawyers and firms during periods of personal and institutional transition. Mr. Guasperini has deep experience with the personal lives of hundreds of lawyers at various ages and levels of professional development, providing a valuable and practical perspective for self-reflection. Elements used in grading: Written Assignments (reflection papers).

LAW 773. Law and Society in Late Imperial China. 3 Units.

Our purpose in this colloquium is to understand how law in the Qing dynasty (1644-1912) functioned as an instrument of autocratic power, a field of interaction between state and society, and a vital feature of social life. To this end, we shall survey Qing law "from the top down" (the perspective of the imperial center, its ideology, and its political imperatives), but also "from the bottom up" (the perspective of quotidian practice at the local level). We shall explore the friction between ideology and practice within the dynasty's formal legal system, but also the field of customary practice that flourished outside the formal system, sometimes in conflict with it. Readings have been selected to introduce the work of major historians (in English) and to cover a range of basic concepts and problems in this field. One important theme is how scholarly interpretation and debate have changed over time, especially as a result of the opening of Qing legal archives for research. Another theme is the question of what concepts and vocabulary are most appropriate for this field of study. What are the advantages and disadvantages of analyzing the Chinese legal tradition in comparison to the West? Is it possible to understand it "on its own terms"? Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper. Cross-listed with History (HISTORY 392B) & Chinese Literature (CHINLIT 392B).

LAW 774. Clean Energy Project Development and Finance. 3 Units.

This case study-oriented course will focus on the critical skills needed to evaluate, develop, finance (on a non-recourse basis), and complete standalone energy and infrastructure projects. The primary course materials will be documents from several representative projects - e.g. wind and carbon capture - covering key areas including market and feasibility studies, environmental permitting and regulatory decisions, financial disclosure from bank and bond transactions, and construction, input, and offtake contracts. Documents from executed transactions are highly customized. By taking a forensic approach, looking at several different deals, we can learn how project developers, financiers, and lawyers work to get deals over the finish line that meet the demands of the market, the requirements of the law, and (sometimes) broader societal goals. Elements used in grading: Participation 50% Projects/Papers 50%. Case and Problem Discussion. All + waitlist must attend. Absences impact grade. Cross-listed with Graduate School of Business (GSBGEN 335).

LAW 775. Information Privacy Law. 2 Units.

Today almost all modern businesses need advice about information privacy law. While the roots of privacy law in the US started with a right to be let alone, modern business models, the needs of the administrative state, law enforcement priorities, and our own behavior complicate approaches based solely upon seclusion or secrecy. This course will explore the roots of US privacy law, its evolution in the 20th century, and the challenges of regulating information in the modern era where institutions and individuals need and reveal information constantly, but also seek basic dignity and safety from harm. Privacy law is comprised of torts, contracts, constitutional law, statutory law, soft law norms, and emerging technologies. We will discuss all of these things, as well as incorporate developments in the news. Elements used in grading: Class Participation and Final Exam.

LAW 776. U.S. and International Issues in the Changing Arctic. 3 Units.

This seminar will explore domestic and international issues that are arising in the Arctic, including territorial rights; energy development in the Arctic (including the role of multi-national oil companies, country-specific regulatory standards and response capabilities); the rights of indigenous peoples; mutual aid agreements; and climate change impacts, including the opening of new shipping routes, increased coastal erosion, the loss of permafrost, impacts on traditional subsistence activities, and the like. The seminar is particularly timely, as the U.S. will be taking over Chairmanship of the 8 nation Arctic Council next year and setting a substantive agenda for the international community. Special Instructions: Students in Section (01) will write reflection papers on topics of interest. After the term begins, students accepted into the course can transfer from section (01) into section (02), and have the option to write a longer paper for Research (R) credit with consent of instructor. Elements used in grading: Class Participation and Reflection or Research Papers.

LAW 778. Launching Moonshots: Legal Counseling for New Technologies. 2 Units.

This seminar course will explore some of the most interesting and challenging legal issues involved in launching new and innovative technologies from the perspective of an in-house counsel. These include issues of international law, privacy and security, jurisdiction for cross-border services, and regulation of cutting-edge products such as self-driving cars, wearable computing, a global fleet of balloons, and other "moonshot" technologies. The course will feature guest presentations by practicing lawyers and technologists in the field. Through advanced case studies, students will gain exposure to real-world product counseling in a dynamic sector. Elements used in grading: Class Participation, Attendance, Written Assignments, Final Paper.

LAW 780. Advanced Three Strikes Project: Criminal Justice Reform & Individual Representation. 3 Units.

NOTE: The Three Strikes Project open to new students in the Autumn and Spring Quarters only. Only students who have previously enrolled in the Three Strikes Project may apply to enroll in the Advanced Three Strikes Project in Winter Quarter 2015. Any student may apply to enroll in the course in Autumn Quarter 2014 or Spring Quarter 2015 (no previous enrollment required). This seminar offers a unique opportunity to study criminal justice reform in real time. California's "Three Strikes and You're Out" sentencing law is one of the most infamous criminal laws in America. In 2012, California voters enacted an overhaul of the recidivist sentencing law ("Proposition 36"), which was drafted in part by SLS students enrolled in the Three Strikes Project. This November, a new ballot measure based on Proposition 36 will be voted on by California voters. In this seminar, students will read and discuss a variety of cases and articles, examining the evolution of the Three Strikes statute as a case study in the history, politics, practical considerations and legal regulation of sentencing in the United States. We will also follow the new ballot measure ("Safe Neighborhoods & Schools Act") and its potential changes and impact on California's evolving criminal justice system. In addition to studying the law, students will have an opportunity to test their skills in the field, assisting in the representation of inmates currently serving life sentences under the Three Strikes law. Students will visit the client in prison, conduct factual investigation in the field, and draft petitions on the client's behalf. Students will also contribute to ongoing policy work to ensure the effective implementation of Prop. 36 and related reforms. The Three Strikes Project is an ongoing, fast-paced organization that depends on the hard work and contributions of law students enrolled in the seminar. This course offers the opportunity to both study the theory behind the law, and to hone practical litigation and advocacy skills in and out of the courtroom. In Autumn Quarter, the seminar will meet for 3 hours per week. Students will also meet for 1 hour individually and in teams with Project director Mike Romano each week to discuss their work on their projects. CONSENT APPLICATION: Interested students must apply to enroll in the seminar by sending a one-page statement of interest and resume by email with the subject line "application" to Mike Romano (mromano@stanford.edu). Applications will be considered on a rolling basis. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 781. Philanthropy and Civil Society. 1 Unit.

Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 3 units. Cross-listed with Education (EDUC 374), Political Science (POLISCI 334) and Sociology (SOC 374).

LAW 782. U.S. Human Rights NGOs and International Human Rights. 1 Unit.

Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario. Cross-listed with Ethics in Society (ETHICSOC 15R), International Policy Studies (IPS 271A), Medicine (MED 225) and Political Science (POLISCI 203).

LAW 784. Critical Race Theory. 1 Unit.

This course will consider one of the newest intellectual currents within American Legal Theory -- Critical Race Theory. Emerging during the 1980s, critical race scholars made many controversial claims about law and legal education -- among them that race and racial inequality suffused American law and society, that structural racial subordination remained endemic, and that both liberal and critical legal theories marginalized the voices of racial minorities. Course readings will be taken from both classic works of Critical Race Theory and newer interventions in the field, as well as scholarship criticizing or otherwise engaging with Critical Race Theory from outside or at the margins of the field. The class will meet 7:15PM to 9:15PM on January 5, 6, 7 and 12, 13. Elements used in grading: Class Participation, Written Assignments.

LAW 785. Current Issues in Tax Practice. 2 Units.

This course will introduce students to major issues in tax practice. Each class will be co-taught by one or more leading practitioners in the tax bar, with other members of the bar attending. Subjects include international tax, intellectual property and tax, tax litigation, state and local taxation, working for the government in tax, tax lobbying and working in a corporate tax department. Class will meet at my home (with take-out dinner provided). The class offers students a good opportunity to connect their SLS tax courses to real-world tax issues and practitioners. Elements used in grading: Class Participation, Attendance, Written Assignments.

LAW 786. International Justice. 3 Units.

This course will examine the arc of an atrocity. It begins with an introduction to the interdisciplinary scholarship on the causes and enablers of mass violence-genocide, war crimes, terrorism, and state repression. It then considers political and legal responses ranging from humanitarian intervention (within and without the Responsibility to Protect framework), sanctions, commissions of inquiry, and accountability mechanisms, including criminal trials before international and domestic tribunals. The course will also explore the range of transitional justice mechanisms available to policymakers as societies emerge from periods of violence and repression, including truth commissions, lustrations, and amnesties. Coming full circle, the course will evaluate current efforts aimed at atrocity prevention, rather than response, including President Obama's; atrocities prevention initiative. Readings address the philosophical underpinnings of justice, questions of institutional design, and the way in which different societies have balanced competing policy imperatives. Elements used in grading: Class Participation, Final Paper. Cross-listed with International Policy Studies (IPS 208A).

LAW 787. Reinventing American Criminal Justice Systems. 3 Units.

The scandal of criminal justice in the United States is by now a familiar one, its facts well known. As the late William J. Stuntz wrote in *The Collapse of American Criminal Justice*: "Rule of law has vanished in America's criminal justice system. Prosecutors decide whom to punish; most accused never face a jury; policing is inconsistent; plea bargaining is rampant; and draconian sentencing fills prisons with mostly minority defendants." There is no controversy that change is needed, and many believe we are now at a policy turning point. For the first time in nearly 40 years, prison populations are declining and a variety of forces-fiscal, political, and evidentiary-have finally come together to create broad-based support for reconstituting components of the American criminal justice system. But good intentions are not enough, and a policy opportunity is not the same thing as a policy success. This historic opportunity requires a thoughtfully planned, multidisciplinary effort. This seminar is designed to engage in that effort. Each student will be asked to select a particular area of potential reform (e.g., police, prisons, prosecution, sentencing, plea bargaining, parole release, risk prediction, juvenile justice, mental health, drug policy, racial disparities, parole), and to offer a comprehensive concrete proposal for change. The final paper will offer a ten-point plan for reconstituting that particular component of the criminal justice system. The concrete proposals must be justified in terms of the pertinent legal and empirical research. The goal of each paper is to provide policymakers with a practical blueprint for choosing a different criminal justice future. This course is designed for students who wish to delve deeply into specific areas of criminal justice reform, and have an interest in policy reform, empirical research, and advocacy. Elements used in grading: Final Paper. Automatic grading penalty is waived. **CONSENT APPLICATION:** To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

LAW 788. Race, Policing and Prosecutors: Perspectives, Problems, and Possibilities. 1 Unit.

Prompted by the killings of Tamir Rice in Cleveland, Ohio, Michael Brown in Ferguson, Missouri, and Eric Garner in Staten Island, New York, this 1 unit mini-course will draw on a wide array of materials to examine the challenges and injustices that arise at the intersection of race and policing in the United States. The first part of the course will consider alternative accounts of the central problems at the intersection of race and law enforcement, and will explore the roots of distrust between minority communities and law enforcement agencies. The course will examine the social, psychological, historical and institutional roots of these problems. The second part of the course will survey various reform proposals. What are the possibilities and limits of civil rights actions? Is reform best undertaken by courts or legislatures? By the federal government or by states? Some reforms focus on prosecutors, e.g. limiting prosecutorial discretion, eliminating grand juries. Other reforms focus on policing, e.g. racial sensitivity or procedural justice training, requiring body cameras, creating more racially representative police forces. To what extent should solutions be pursued through new forms of democratic oversight and accountability (such as police civilian review boards) or through community organizing efforts. Does racially just and effective policing require controlling and constraining the police, or working collaboratively with law enforcement agencies? This 1 unit course is Mandatory Pass/Fail, and will meet only three times during the course of the quarter. Attendance and participation at each class session is required. Prior to each class session, each student will post questions, observations or reflections that will provide the basis for class discussion. The class will meet from 2-5 pm the following Fridays: January 16, February 6, and February 27. Elements used in grading: Class Participation, Attendance & Written Assignments.

LAW 789. Transnational Corporations and Human Rights. 2 Units.

Apple's use of child labor; Goldcorp's operations in Guatemala; the complicity of Dow Chemical/Union Carbide in the Bhopal chemical disaster; Shell's involvement in the executions of activists protesting the company's environmental and development policies in Nigeria. These are just a few examples of alleged corporate malfeasance that have emerged on the international stage. The purpose of this seminar is to introduce students to the debate concerning the accountability of transnational corporations that are complicit in rights-violating activities. At the international level, there has been a striking new strategy in the protection of human rights: a transition from focusing solely on rights-violations committed by governments to a detailed examination of transnational corporate conduct. Indeed, it has now become trite to say that particular corporations have directly or indirectly participated in violations of human rights. In order to address the fundamental question of whether corporations should in fact be socially responsible, the seminar will begin with an introduction to corporate theory. Students will then explore some of the key issues in the debate. Namely, whether transnational corporations can properly be included under the international law of state responsibility; mechanisms for self-regulation (e.g. voluntary corporate codes of conduct); the utility of the U.S. Alien Tort Claims Act; the advantages and disadvantages of U.N. initiatives (e.g. the work of the former U.N. Special Representative on Business and Human Rights); and the relevance of domestic corporate and securities law mechanisms (e.g. shareholder proposals and social disclosure). The course will provide a comparative analysis of the U.S. and Canadian experiences, in particular. Special Instructions: The use of laptop computers (or other similar electronic note-taking devices) is not permitted. Elements used in grading: Grading will be based on class participation (including student presentations) and a final research paper.

LAW 790. Separation of Powers and Executive Branch Legal Interpretation. 2 Units.

This course will explore the parameters of the executive-congressional relationship, with a special focus on the mechanisms through which the Executive Branch engages in legal interpretation. We will examine the case law that structures the relationship between the political branches, as well as congressional efforts to constrain executive power, such as through appropriations and oversight. But we will be most concerned with how the Executive conceptualizes and implements its "Take Care" responsibilities and its relationship to Congress, through its own forms of constitutional interpretation and when implementing statutes and exercising enforcement discretion. We will begin with the question-what is executive power? We then will study the work of different interpreters within the Executive Branch, such as the Office of Legal Counsel, the White House Counsel, OIRA, and the agencies, mindful of the fact that the branch is a "they," not an "it." We will conclude by studying various policy dilemmas that have required the Executive to conceptualize and assert a view of its authority within the constitutional system, including its use of prosecutorial discretion and its foreign affairs, war, and Commander-in-Chief powers. Readings will consist of executive branch and congressional documents, case law, and secondary literature. Elements used in grading: Grades will be based on class participation and each student's choice of either (1) series of 3-5 page reflection papers or (2) final research paper of approximately 5000 words for "R" (Research credit). After the term begins, students accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.

LAW 791. Implications of Post-1994 Conflicts in Great Lakes Region of Africa: an American Perspective. 3 Units.

Seminar will explore the post-1994 conflicts in the Great Lakes Region from the perspective of the former US Special Envoy to the region. Particular emphasis will be placed on the intensified regional and international efforts to resolve these conflicts since the M23 rebellion of 2012. It will consider the implications these activities have for the region, legal accountability, international peacekeeping and the conduct of American foreign policy. The seminar will include the following segments: 1) the origins and nature of the post-1994 conflicts and recent efforts to resolve them with particular attention to the relationship between modern Congolese history and the Rwandan genocide and the peace-making efforts initiated by the Peace, Security and Cooperation Framework agreement of February 2013; 2) accountability for conflict-related crimes committed in the region including sex and gender-based crimes and the legal and other regimes established to address conflict minerals; and 3) the broader implications of the conflict for American foreign policy in Africa, in particular, and in general, and lessons learned about the way in which such policy is formulated; as well as the implications of this conflict for international peace-making and peace-keeping efforts. The course is cross-listed for IPS and law school students. Special instructions: The class will be limited to 12 IPS students and five law students. Elements used in grading: Class participation, Attendance, Final Paper. Cross-listed with International Policy Studies (IPS 252).

LAW 792. Advanced Legal Writing: Public Interest Litigation. 3 Units.

Public-interest litigation is often an uphill battle. Civil rights plaintiffs have difficulty prevailing even when their fact-patterns are sympathetic, as can be seen in contexts from sexual harassment lawsuits to wage to hour claims and from police brutality and prison conditions cases to transnational human rights complaints. Yet when public interest impact litigation does succeed it can enable or even galvanize social movements-both domestic and international-and meaningfully change the legal landscape. This class will focus on the skills necessary to litigate public interest lawsuits, and, in particular, public interest impact litigation. We will focus on marrying research and analysis of statutory text and case law and harnessing the creativity necessary to win such lawsuits by using those research and analytical results to write two briefs from the perspective of public interest or pro-bono advocates. Along the way, we will examine some of the most important briefs of the twentieth and twenty-first centuries in various public interest contexts to unpack the rhetorical and analytical skills needed to persuade judges across the ideological spectrum. Grading will be based on a Mandatory P/R/F system, taking into account research and writing as well as class participation. SPECIAL INSTRUCTIONS: Students on the waitlist for the course will be admitted if spots are available on the basis of priority. Early drop deadline: Students may not drop this course after first week of class.

LAW 793. Constitutional Litigation and Public Policy: Race and Criminal Justice. 2 Units.

This course will examine the ways in which race and perceptions of race influence our criminal-justice system, with an emphasis on interactions between individuals and the police. Topics will include racial profiling, stop-and-frisk tactics, police use of force, the over- and under-policing of communities of color, and the impact of the war on drugs on these communities. We will discuss the doctrinal, policy, and practical issues that these topics raise, as well as the question of how to effectively use litigation and other types of advocacy to address problems within the criminal-justice system. My goal is for students in the course not only to gain an understanding of the subject matter but also to develop their litigation, writing, and advocacy skills. Readings will include Michelle Alexander's *The New Jim Crow*, Randall Kennedy's *Race, Crime, and the Law*, as well as cases and articles. Students will be required to write a number of short papers. Grades will be based on those papers and on class participation.

LAW 794. Introduction to Finance. 2 Units.

This course is a basic introduction to the principles of finance and is intended as a primer on principles of valuation that are useful in everything from settlement negotiations to family law. No prior knowledge of finance will be assumed. If you want an introduction to corporate finance and won't take the full 3 credit course, this is for you. The first part of the course (approximately 6 weeks) will consist of on-line modules and problem sets that you will complete on your own and in small groups. We will cover topics such as: earnings, cash flows, income statements, interest rates, time value of money, estimating firm value, risk and return and the cost of capital. We will provide a framework for answering questions such as: how much is this project (or firm) worth? How should the firm raise money for a new investment? There will be weekly problem sets and you will get experience with building a simple model (excel spreadsheet) that will help you estimate the value of a potential new project. The second part of the course will consist of in-class discussions of case studies that apply these valuation principles to particular legal settings: e.g. valuing settlement offers, merger proposals, appraisal proceedings, and the efficient capital markets hypothesis. We hope that this flexible format will allow more students to take finance. If you wish, you can take this course and then later take Corporate Finance 1. The class will meet 2:15PM to 3:45PM on April 2, May 14, May 21, and May 28. Additional small group meetings will be scheduled with the instructor. On-line component. Elements used in grading: Written Assignments, Final Exam.

LAW 802. TGR: Dissertation. 0 Units.

Law, Nonprofessional Courses

LAWGEN 10SC. One in Five: The Law, Policy, and Politics of Campus Sexual Assault. 2 Units.

Trigger Warning: Over the past two years, the issue of campus sexual assault has exploded into the public discourse. While definitive figures are difficult to obtain due to the necessarily private nature of these events, several recent studies estimate that between 20-25% of college women experience sexual assault. Survivors have come forward across the country with harrowing stories of assault followed by an insensitive or indifferent response from college administrators, launching one of the most successful, and surprising, social movements in recent memory. As a result, the federal government has stepped up its civil rights enforcement in this area, with 94 colleges and universities currently under investigation for allegedly mishandling student sexual assault complaints. This courses focuses on the legal, policy, and political issues surrounding sexual assault on college campuses. We will spend the first week of the course learning some background about sexual violence and the efforts to implement legal protections for women. We will study the basic legal frameworks governing campus assault, focusing on the relevant federal laws such as Title IX and the Clery Act. Starting the second week we will travel first to New York City, and then to Washington D.C., where we will meet with journalists, activists, experts, policymakers, elected officials, and others who are actively involved in shaping the national response to this issue. Confirmed guests speakers include New York Times reporter Emily Bazelon; Catherine Lhamon, the Assistant Secretary of Education for Civil Rights; and the Office of Senator Kristin Gillibrand (D.N.Y.). On our return to campus students will create and present final projects. Travel expenses to NYC and DC (except incidentals) are provided by Sophomore College. Students are expected to do all readings, and participate in all class sessions, meals, field trips, films, and discussions. Requirements include three short papers, preparing and helping to lead discussions with outside speakers, and the development and presentation of a final group-designed project which can include a multi-media or artistic component. The subject matter of this course is sensitive and students are expected to treat the material with maturity. Moreover, much of the reading and subject matter may be upsetting and/or triggering for students who identify as survivors. There is no therapeutic component for this course, although supportive campus resources and Title IX staff are available for those who need them. Please consider this prior to enrolling in the course. For more info see: <http://www.nytimes.com/roomfordebate/2014/12/12/justice-and-fairness-in-campus-rape-cases/transparency-and-sensitivity-work-together-to-stop-campus-rape>. Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

LAWGEN 102Q. Pre-field Course for Alternative Spring Break. 1 Unit.

Pre-field course for undergraduates participating in the Alternative Spring Break program.

LAWGEN 105Q. Law and Popular Culture. 3 Units.

(Same as AMSTUD 105Q) This seminar focuses on the interface between two important subjects: law and popular culture. Before class, students will see a series of films or television shows relating to law, lawyers, and the legal system. There is also a weekly homework assignment based on materials in the assigned text and the assigned film or TV show. We will discuss the pop culture treatment of subjects such as the adversary system, good and bad lawyers, female and gay lawyers, the work life of lawyers, legal education, ethical issues, the jury system, and criminal and civil justice. The seminar discussions will draw on film theory and film-making technique to deepen understanding of the interrelationship between law and popular culture. The discussions will illuminate the ways in which pop culture products both reflect and change social views about law and lawyers. The assigned text is Michael Asimow & Shannon Mader, "Law & Popular Culture: A Course Book" (Peter Lang, 2d edition, 2013).

LAWGEN 111Q. Introduction to International Human Rights. 3 Units.

This course will study the main international human rights declarations, treaties, covenants, committees, courts and tribunals. It will look at the effect of nation states, regional bodies, and key economic and military organizations upon human rights. Categories of rights -- civil, political, social, economic and cultural -- will be analyzed, with a particular focus on the rights of women and children, and the right to culture.

LAWGEN 112N. Law and Inequality. 3 Units.

Most Americans know that discrimination on the basis of race, sex and religion is unlawful. Seems simple enough. But advertisements in the back of newspapers still announce: Single White Female Seeks Single White Male? Isn't that discrimination on the basis of race and sex? Most businesses don't consider men for women's locker room or bathroom attendant. And why aren't those men and women's bathrooms and locker rooms illegal segregation? After all we know what would happened if some business set up separate bathrooms for blacks and whites. Isn't it discrimination for an employer to insist that men wear a jacket and tie and women to wear nylons and a skirt? Why are some forms of discrimination unlawful and others not? Why is discrimination against short people, overweight people or people with annoying personalities not against the law? We'll answer these and many other questions by looking court cases, legal theory and philosophy. We may also have conversations with guest lecturers who work in civil rights enforcement and the seminar may include a field trip to visit the offices of civil rights lawyers (lawyers tend to be busy people so these opportunities will depend on their schedules.) No prerequisites other than an open mind and a willingness to delve into unfamiliar material. Evaluation will be based on class participation and a short final paper.

LAWGEN 112Q. Law and Inequality. 3 Units.

Most Americans know that discrimination on the basis of race, sex and religion is unlawful. Seems simple enough. But advertisements in the back of newspapers still announce: Single White Female Seeks Single White Male? Isn't that discrimination on the basis of race and sex? Most businesses don't consider men for women's locker room or bathroom attendant. And why aren't those men and women's bathrooms and locker rooms illegal segregation? After all we know what would happened if some business set up separate bathrooms for blacks and whites. Isn't it discrimination for an employer to insist that men wear a jacket and tie and women to wear nylons and a skirt? Why are some forms of discrimination unlawful and others not? Why is discrimination against short people, overweight people or people with annoying personalities not against the law? We'll answer these and many other questions by looking court cases, legal theory and philosophy. We may also have conversations with guest lecturers who work in civil rights enforcement and the seminar may include a field trip to visit the offices of civil rights lawyers (lawyers tend to be busy people so these opportunities will depend on their schedules.) No prerequisites other than an open mind and a willingness to delve into unfamiliar material. Evaluation will be based on class participation and a short final paper.

LAWGEN 114Q. Dilemmas of Regulating Race and Inequality in American Society. 3 Units.

Is race an irrelevant characteristic to which we should all be blind? Do only racists pay attention to race? Or must we take account of race, as one Supreme Court Justice has urged, in order to get beyond it? Indeed, is race something that we should want to "get beyond"? This seminar will consider the nature and extent of racial inequality, and how we as a society might and should respond to it. We will consider specific dilemmas regarding the propriety of taking account of race, in, for example, placing children with adoptive parents, selecting individuals for police investigation, hiring and college admissions. Readings will be drawn from law, history and social science. The goal of the course is to enable you to think more deeply about the moral, social and practical dimensions of how to regulate race in specific settings.

LAWGEN 115N. Human Rights Advocacy. 3 Units.

What are the origins of the human rights movement and where is it headed? What does it mean to be a human rights activist? What are the main challenges and dilemmas facing those engaged in human rights advocacy? In the space of sixty years, human rights advocates have transformed a marginal utopian ideal into a central element of global discussion, if not practice. In this seminar we will examine the actors and organizations behind this remarkable development as well as the vast challenges faced by advocates in the recent past and today. Together, we will learn to be critical of, as well as to think, and act, like human rights advocates. This seminar will introduce you to some the main debates and dilemmas within the human rights movement. We will consider and understand the differing agendas of western international nongovernmental organizations (INGOs) and their counterparts in the frequently non-western) developing world, as well as tensions between and among rights advocates along other important dimensions (civil and political vs. economic, social and cultural rights; rights promotion through engagement of powerful actors vs. challenging structures of power, etc.). The seminar seeks to develop your ability: 1) to understand human rights and social justice issues as contested political, legal and cultural phenomena; 2) to review advocacy texts, videos and other interventions critically; 3) to appreciate the political dimensions of efforts to promote human rights; 4) to understand how recent history constrains and structures options and possibilities for social intervention to promote rights and justice. During the course of the quarter you will be required to submit several short reflection papers and develop a human rights advocacy campaign.

LAWGEN 120. Ethics, Leadership and Public Policy. 3 Units.

This course is primarily for Stanford undergraduates. This course will explore the ethical challenges facing leaders in business, law, and public policy. Through problems, case histories and background readings, the course will examine the qualities of ethical leadership, the situational pressures that undermine it, and the structural initiatives that can reinforce it. Topics to be considered will include: the nature and styles of leadership; the role of values in leadership; ethical decision making and influence; authority and moral accountability in the war against terror; financial, political and sexual scandals; diversity in leadership and affirmative action; leadership and social change in civil rights and same sex marriage campaigns; global leadership on corporate social responsibility and international human rights; the moral case for philanthropy, and problems of paternalism. Course Requirements; Two short (five) papers on the readings (each 15 percent of grade); consistent and constructive class participation (20 percent of grade) and one final paper (ten pages) on an ethical issue in leadership (50 percent of grade).

LAWGEN 206Q. Thinking Like a Lawyer. 3-4 Units.

(Same as GSBGEN 382.) Open to and limited to non-Law graduate students at the University, this course will provide non-law students an analytical framework for understanding the core concepts of the law and familiarize students with how lawyers analyze and structure their work. This course will be taught by Vice Dean Mark Kelman and Law School faculty in their areas of expertise, with one to two classes devoted to each topic. It will introduce students to some of the foundational principles of law and will review topics such as contracts, litigation, intellectual property, securities and employment law. Students must also attend an additional TA-led discussion section each week. There will be no final exam, but completion of problem sets on various topics as well as class and section participation will be used to determine grading. 3 problem sets are required for all students. For 4 units, an additional assignment must be completed. All readings will be provided on Coursework. TGR students welcome. TGR students welcome. Elements used in grading: Class attendance and written assignments.

LAWGEN 209Q. Community Police Academy. 1 Unit.

Course description: This nine-week course aims to demystify public safety, build trust, and develop partnerships between the police department and the community it serves. Each session is taught by a different deputy and is designed to expand each participant's knowledge of the duties, responsibilities, decisions, and constraints that law enforcement officers face. Topics include laws of arrest, search and seizure, alcohol laws (as seen in a DUI wet lab), patrol procedures, officer safety, vehicle stops, CSI vs. reality, emergency communications, defensive tactics, and deadly force. In addition to the weekly class, participants are invited to attend field trips for more in-depth experiences. Past field trips have included the coroner's office, Palo Alto Communications dispatch center, pursuit driving simulators, and the San Jose Main Jail. The course is open to all Stanford students, staff, and residents over 18 years of age. While this course is open to all students throughout the University, the units will not count toward the requirements for a law degree. Special Instructions: Live Scan Check.

LAWGEN 210Q. International Human Rights: Interdisciplinary Project Work. 3 Units.

Students enrolled in this course will work on international human rights projects relating to water/sanitation from an interdisciplinary perspective. Enrollment in this section is limited to non-law students, who will work with law students on clinical projects.

Linguistics Courses

LINGUIST 1. Introduction to Linguistics. 4 Units.

The cognitive organization of linguistic structure and the social nature of language use. Why language learning is difficult. Why computers have trouble understanding human languages. How languages differ from one another. How and why speakers of the same language speak differently. How language is used strategically. *** Sections are mandatory. Please sign up for one of the sections at enrollment.

LINGUIST 3. Glamour of Grammar. 3-4 Units.

In this course, we will dispel many a mystery of English grammar, often presented as a dull and dreary subject in schools: we will see that the words *quest*; *glamorous*; *quest*; and *quest*; *grammatical*; *quest*; come from the same root meaning *quest*; *mysterious* or *occult*; *quest*; and we will ask: Why is there *quest*; *stupidity*; *quest*; but not *quest*; *smart*; *quest*;? Why can we *quest*; *blacken*; *quest*; fish or *quest*; *whiten*; *quest*; teeth, but not *quest*; *pink*; *quest*; or *quest*; *green*; *quest*; anything? Who makes up new words anyway? How do we put words together into meaningful sentences? And how do we understand the nuances of English without much direct instruction? While the focus of this course is on English grammar, we will also see that other languages possess grammars that are based on the same principles and constraints.

LINGUIST 5N. What's Your Accent? Investigations in Acoustic Phonetics. 3 Units.

Preference to freshmen. Phonetic variation across accents of English; experimental design; practical experience examining accents of seminar participants; acoustic analysis of speech using Praat.

LINGUIST 10N. Experimental Phonetics. 4 Units.

Everyday, we face variation in language. As readers, we see words printed in different fonts, sizes, and typefaces, typically static on a page. As listeners, we hear a speech signal riddled with variation. We are exposed to words, but a single word is produced differently each time it is uttered. These words stream by listeners at a rate of about 5 syllables per second, further complicating the listeners' task. How listeners map a speech signal into meaning despite massive variation is an issue central to linguistic theory. The field of experimental phonetics investigates how listeners take words that often vary drastically and understand them as quickly and adeptly as they do. This class introduces students to acoustic and auditory phonetics. As a class, we will carry out a project in experimental phonetics aimed at understanding how different realizations of words are able to be understood by listeners. Throughout the course, students will read background literature, become familiar with the Stanford Linguistics Lab, and learn to use software integral to the design, data collection, and data analysis of experiments. Each week, we will have two meetings, one in a seminar setting and one in the lab.

LINGUIST 36. The Arabic Language and Culture. 3 Units.

(Formerly AMELANG 36). Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

Same as: LINGUIST 270

LINGUIST 44N. Living with Two Languages. 3 Units.

Preference to freshmen. The nature of bi- and multilingualism with emphasis on the social and educational effects in the U.S. and worldwide, in individual versus society, and in child and adult. The social, cognitive, psycholinguistic, and neurological consequences of bilingualism. Participation in planning and carrying out a research project in language use and bilingualism.

LINGUIST 47N. Languages, Dialects, Speakers. 3 Units.

Preference to freshmen. Variation and change in languages from around the world; the roots, historical development, and linguistic and social structures of variation; how languages differ from one another and how issues in linguistics connect to other social and cultural issues; the systematic study of language.

LINGUIST 52N. Spoken Sexuality: Language and the Social Construction of Sexuality. 3 Units.

The many ways language is used in the construction of sexuality and sexual identity. How language is used as a resource for performing and perceiving sexual identity. Drawing on linguistic analyses of pronunciation, word choice, and grammar, questions such as: Is there a gay accent? Why isn't there a lesbian accent? How do transgendered people modify their linguistic behavior when transitioning? How are unmarked (heterosexual) identities linguistically constructed? Sexuality as an issue of identity, as well as of desire. Iconic relations between elements of language such as breathy voice quality and high pitch, and aspects of desire such as arousal and excitement. How language encodes ideologies about sexuality; how language is used to talk about sexuality in public discourses about gay marriage and bullying, as well as in personal narratives of coming out. How language encodes dominant ideologies about sexuality, evident in labels for sexual minorities as well as terminology for sex acts. Discussions of readings, explorations of how sexuality is portrayed in popular media, and analyses of primary data. Final research paper on a topic of student choice.

Same as: FEMGEN 52N

LINGUIST 63N. The Language of Comics. 3 Units.

This seminar will explore language as represented in cartoons and comics such as Bizarro, Dilbert and Zits, how we interpret it, and why we find comics funny. We will explore and analyze language play, genderspeak and teenspeak; peevish about usage; new and spreading usages.

LINGUIST 65. African American Vernacular English. 3-5 Units.

The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center).

Same as: AFRICAAM 21

LINGUIST 66. Vernacular English and Reading. 4-5 Units.

Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. L65 AAVE recommended, but not required.

Same as: LINGUIST 266

LINGUIST 83Q. Translation. 3 Units.

Preference to sophomores. What is a translation? The increased need for translations in the modern world due to factors such as tourism and terrorism, localization and globalization, diplomacy and treaties, law and religion, and literature and science. How to meet this need; different kinds of translation for different purposes; what makes one translation better than another; why some texts are more difficult to translate than others. Can some of this work be done by machines? Are there things that cannot be said in some languages?.

LINGUIST 90. Teaching Spoken English. 3-4 Units.

Practical approach to teaching English to non-native speakers. Teaching principles and the features of English which present difficulties. Preparation of lessons, practice teaching in class, and tutoring of non-native speaker.

LINGUIST 105. Phonetics. 3-4 Units.

The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor.

Same as: LINGUIST 205A

LINGUIST 106. Introduction to Speech Perception. 4 Units.

Basics of acoustic phonetics and audition. What do listeners perceive when they perceive speech. Examine current research including: the categorical perception of speech, cross-language speech perception, infant speech perception. Theoretical questions of interest to speech perception researchers and experimental methods used in the field.

LINGUIST 110. Introduction to Phonetics and Phonology. 4 Units.

Differences in the sounds of the world's languages and how these sounds are made by the human vocal tract. Theories that account for cross-linguistic similarities in the face of differences.

LINGUIST 112. Seminar in Phonology. 2-4 Units.

Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.

Same as: LINGUIST 212A

LINGUIST 116. Morphology. 4 Units.

A survey of words including their structures, pronunciations, meanings, and syntactic possibilities in a wide sampling of languages to provide a laboratory for investigating the nature of morphology.

LINGUIST 120. Introduction to Syntax. 4 Units.

Grammatical constructions, primarily English, and their consequences for a general theory of language. Practical experience in forming and testing linguistic hypotheses, reading, and constructing rules.

LINGUIST 121. Crosslinguistic Syntax. 4 Units.

A data-driven introduction to the methods of syntactic analysis, and their results. Emphasis is on understanding how languages are systematically alike and different in their basic sentence structure. Focuses on building up syntactic argumentation skills via the collective development of a partial formal theory of sentence structure, which attempts to model native speaker knowledge. Draws on data from a diverse array of the world's languages, including but not limited to English. Enrollment in the discussion section is required. Prerequisites: Linguistics 1, or Linguistics 120, or permission of instructor. Satisfies the WIM requirement for Linguistics majors.

LINGUIST 124. Introduction to Lexical Function Grammar. 2-4 Units.

Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor.

Same as: LINGUIST 224

LINGUIST 130A. Introduction to Semantics and Pragmatics. 4 Units.

Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, 121, consent of instructor, or graduate standing in Linguistics.

Same as: LINGUIST 230A

LINGUIST 130B. Introduction to Lexical Semantics. 3-4 Units.

Introduction to basic concepts and issues in the linguistic study of word meaning. The course focuses on the core semantic properties and internal organization of the four major word classes in natural languages: nouns, adjectives, prepositions, verbs. This course draws on material from English and other languages to illustrate the range of word meanings found across languages and to investigate possible word meanings. Prerequisites: Linguist 1 or equivalent or permission of the instructor. Linguist 130A is not a prerequisite for this course.

LINGUIST 130C. Logic Laboratory. 1 Unit.

Typically taken in conjunction with 130A/230A.

Same as: LINGUIST 230E

LINGUIST 134A. The Structure of Discourse: Theory and Applications. 2-4 Units.

In this course we will address the structure of language above the sentence concentrating initially on: n(1) defining the minimal units of discourse structure n(2) recursive rules of combination of minimal units (i.e. discourse iquest; syntax iquest; n(3) representations of discourse level phenomenon(4) the nature and structure of spoken and written formal and informal discourse genres and Speech events in English and other languages including stories, explanations, literary works etc. on the one hand, and socially constructed occasions of speaking such as classes, doctor patient interactions, and informal conversation on the other.

Same as: LINGUIST 234

LINGUIST 140. Language Acquisition I. 4 Units.

Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection. Satisfies the WIM requirement for Linguistics if requested.

Same as: LINGUIST 240

LINGUIST 141. Language and Gesture. 3 Units.

History of work on gesture, gestural systems associated with particular languages/cultures, and with specific activities - music, sports, traffic management, stock exchanges, etc. Examine gesture developmentally and how gesture is represented in painting and animation.

LINGUIST 142. Heritage Languages. 3-4 Units.

The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom.

Same as: LINGUIST 242

LINGUIST 143. Sign Languages. 4 Units.

The linguistic structure of sign languages. How sign languages from around the world differ, and what properties they share. Accents and dialects in sign languages. How sign languages are similar to and different from spoken languages. How and why sign languages have emerged.

LINGUIST 144. Minds and Machines. 4 Units.

An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Undergraduates considering a major in symbolic systems should take this course as early as possible in their program of study.

Same as: PHIL 99, PSYCH 35, SYMSYS 100

LINGUIST 150. Language in Society. 4-5 Units.

How language and society affect each other. Class, age, ethnic, and gender differences in speech. Prestige and stigma associated with different ways of speaking and the politics of language. The strategic use of language. Stylistic practice; how speakers use language to construct styles and adapt their language to different audiences and social contexts. Satisfies the WIM requirement for Linguistics if taken for 5units.

LINGUIST 152. Sociolinguistics and Pidgin Creole Studies. 2-4 Units.

Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portuguese, Chinook, Motu, and Sango.

Same as: LINGUIST 252

LINGUIST 153. Language, Power & Politics. 3-4 Units.

The integral role language plays in politics; how power operates in linguistic practices and political interaction. Critical examination of how language is used to articulate, maintain and subvert relations of power in society, emphasizing language in the media, the political rhetoric associated with war, and the construction of "truthquest"; in politics. The role of ethnographic analysis in aiding sociolinguistic understandings of how social actors use and (re)interpret political language.

LINGUIST 154. Sociolinguistics of Language Contact. 2-4 Units.

The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

Same as: LINGUIST 254

LINGUIST 155. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X

LINGUIST 155F. Seminar in Sociolinguistics: Language and Social Interaction. 1-4 Unit.

Figures of personhood, personas, character types, and stereotypes in the study of linguistic variation. What are the significant differences among these types? Are these social types merely the vehicles through which social meanings travel or do they constitute the meanings themselves?.

Same as: LINGUIST 255F

LINGUIST 156. Language and Gender. 4 Units.

The role of language in the construction of gender, the maintenance of the gender order, and social change. Field projects explore hypotheses about the interaction of language and gender. No knowledge of linguistics required.

Same as: FEMGEN 156X

LINGUIST 157. Sociophonetics. 1-4 Unit.

The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.

Same as: LINGUIST 257

LINGUIST 159. American Dialects. 2-4 Units.

What is a dialect, and who speaks one? This course will focus on the fundamentals of linguistic study and dialectology through examinations of regional, social and ethnic dialects in the United States. The course will examine dialect variation on many linguistic levels, from variation in individual words (pop v. soda) to variation in how vowels are pronounced. Historical development of U.S. dialects, linguistic change, perceptual dialectology, and prestige and stigma of dialects will be discussed. Students will participate in real variation research to gain experience with quantitative data in examining the influence of social factors on dialect variation.

LINGUIST 160. Introduction to Language Change. 4 Units.

Principles of historical linguistics; the nature of language change. Kinds and causes of change, variation and diffusion of changes through populations, differentiation of dialects and languages, determination and classification of historical relationships among languages, the reconstruction of ancestral languages and intermediate changes, parallels with cultural and genetic evolutionary theory, and implications of variation and change for the description and explanation of language in general. Prerequisite: introductory course in linguistics.

LINGUIST 162. History Through Language. 3-4 Units.

What we can learn about the human past through human language, especially where proper historical records are absent. Studying population migrations through language spread. Different types of change in different social environments: grammatical "simplification" of imperial languages vs. complexity of tribal languages. Effects of contact on languages. Methods for reconstructing linguistic past: comparative method, linguistic paleontology, computational phylogenetic methods.

LINGUIST 163. History of the English Language. 5 Units.

This course traces the history of the English language from its roots through its earliest written records into the present. It will trace the fundamental changes that English has undergone in terms of morphology, phonology, syntax, semantics, and vocabulary. It will also explore some of the social, cultural, and historical forces that affect language. The course emphasizes the pre-modern history of English.

LINGUIST 163A. Endangered Languages and Language Revitalization. 3-4 Units.

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages. Same as: ANTHRO 163A, ANTHRO 263A, LINGUIST 263, NATIVEAM 163

LINGUIST 167. Languages of the World. 3-4 Units.

The diversity of human languages, their sound systems, vocabularies, and grammars. Tracing historical relationships between languages and language families. Parallels with genetic evolutionary theory. Language policy, endangered languages and heritage languages. Classification of sign languages.

LINGUIST 171. Iberian Languages: Structure, Variation & Context. 3 Units.

The course will center on Iberian languages with a special focus on Catalan. We will consider the relation between language structure and other factors, such as language variation in space and time, and sociological and political factors. Topics will include a contrastive analysis of selected features of Iberian languages, a survey of dialectal variation in some of the languages of the area and of their external linguistic history.

LINGUIST 173. The Structure of Russian. 2-4 Units.

A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

Same as: LINGUIST 273

LINGUIST 180. From Languages to Information. 3-4 Units.

Extracting meaning, information, and structure from human language text, speech, web pages, genome sequences, social networks, or any less structured information. Methods include: string algorithms, edit distance, language modeling, naive Bayes, inverted indices, vector semantics. Applications such as question answering, sentiment analysis, information retrieval, text classification, social network models, machine translation, genomic sequence alignment, spell checking, speech processing. Prerequisite: CS103, CS107, CS109.

Same as: CS 124, LINGUIST 280

LINGUIST 181. Grammar Engineering. 1-4 Unit.

Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required. Same as: LINGUIST 281

LINGUIST 182. Computational Theories of Syntax. 3-4 Units.

Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

Same as: LINGUIST 282

LINGUIST 183. Programming and Algorithms for Natural Language Processing. 3-4 Units.

Construction of computer programs for linguistic processes such as string search, morphological, syntactic, and semantic analysis and generation, and simple machine translation. Emphasis is on the algorithms that have proved most useful for solving such problems.

Same as: LINGUIST 283

LINGUIST 185. Writing Systems in a Digital Age. 2-3 Units.

Introduction to the variety of writing systems and their behaviors. Classification of all existing scripts as alphabetic, syllabic, ideographic; unifying and differentiating features within each group. How writing captures human language in various ways. The development of the alphabet, from ancient Semitic scripts to modern times. How writing systems are extended to additional languages. Chinese writing, its characteristics and sphere of influence. Japanese writing as a hybrid system that includes Chinese. Korean writing as an ideally designed script. The Indian system of writing as the foundation of numerous Asian syllabic scripts. Unicode as global standard for encoding text in all languages. Font technology: the emulation of human writing in the digital realm. nBasic knowledge of phonetics recommended. Knowledge of foreign languages helpful.

Same as: LINGUIST 284A

LINGUIST 188. Natural Language Understanding. 3-4 Units.

Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180, CS 124, CS 224N, CS224S, or CS221; and logical/ semantics such as LINGUIST 130A or B, CS 157, or PHIL150.

Same as: CS 224U, LINGUIST 288

LINGUIST 191. Linguistics and the Teaching of English as a Second/ Foreign Language. 4-5 Units.

Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning. Same as: LINGUIST 291

LINGUIST 195A. Undergraduate Research Workshop. 1 Unit.

Designed for undergraduates beginning or working on research projects in linguistics. Participants present and receive feedback on their projects and receive tips on the research and writing process.

LINGUIST 196. Introduction to Research for Undergraduates. 1 Unit.
Research seminar for undergraduate students interested in linguistics. Presentations by Stanford linguistics faculty and graduate students who will discuss their own research projects.

LINGUIST 197A. Undergraduate Research Seminar. 2-3 Units.
May be repeat for credit.

LINGUIST 198. Honors Research. 1-15 Unit.
.

LINGUIST 199. Independent Study. 1-15 Unit.
.

LINGUIST 200. Foundations of Linguistic Theory. 4 Units.
Theories that have shaped contemporary linguistics; recurrent themes and descriptive practice. Strong background in Linguistics or permission of instructor.

LINGUIST 204. Philosophy of Linguistics. 4 Units.
Philosophical issues raised by contemporary work in linguistics. Topics include: the subject matter of linguistics (especially internalism vs. externalism), methodology and data (especially the role of quantitative methods and the reliance on intuitions), the relationship between language and thought (varieties of Whorfianism and anti-Whorfianism), nativist arguments about language acquisition, and language evolution.
Same as: PHIL 369, SYMSYS 204

LINGUIST 205A. Phonetics. 3-4 Units.
The study of speech sounds: how to produce them, how to perceive them, and their acoustic properties. The influence of production and perception systems on sound change and phonological patterns. Acoustic analysis and experimental techniques. Lab exercises. Prerequisite: 110 or equivalent, or consent of instructor.
Same as: LINGUIST 105

LINGUIST 205B. Advanced Phonetics. 2-4 Units.
Prerequisite: LINGUIST 205A.

LINGUIST 207. Seminar in Phonetics: The perception and recognition of clear and casual speech.. 2-4 Units.
Through readings and discussion, we will focus on two questions in this seminar:n(1) Is the balance of top-down versus bottom-up information different when processing careful vs. casual speech?n(2) What provides more information to a listener - Half of a clearly-articulated word, or an entire reduced word?nThis is not a project-based seminar, but the seminar is linked to an ongoing research project, and we will use that project to ground how a researcher might go about addressing the above questions. We will refer to our in-progress project to provide concrete examples of (a) testable, theoretically-grounded hypotheses, (b) appropriately matched methods/design, (c) benefits/costs of different types of statistical methods, and (d) supported vs. speculative accounts. The seminar is heavily based on reading and discussion, but will be supplemented by the practical issues associated with a related project. At the end of the seminar, students will have a basic understanding of the literature related to the topic, what gaps/inconsistencies exist in that work, and how to pursue those gaps, if interested. A research proposal is required at the end of the quarter.

LINGUIST 210A. Phonology. 3-4 Units.
Introduction to phonological theory and analysis based on cross-linguistic evidence. Topics: phonological representations including features, syllables, metrical structure; phonological processes including assimilation and dissimilation; and phonological typology and universals; Optimality Theory.

LINGUIST 210B. Advanced Phonology. 1-4 Unit.
A comparison of Stratal OT, Transderivational OT, and rule-based approaches, primarily on the empirical basis of stress, syllable structure, and prosodic organization. Course may be repeated once.

LINGUIST 211. Metrics. 1-4 Unit.
Principles of versification from a linguistic point of view. Traditional and optimality-theoretic approaches. The canonical system of English metrics, and its varieties and offshoots. The typology of metrical systems and its linguistic basis. The ideology of normative prosodic discourse in relation to changing poetic practice.

LINGUIST 212A. Seminar in Phonology. 2-4 Units.
Topics vary each year. Previous topics include variation in the phonology of words according to their contexts within larger expressions and the place of these phenomena in a theory of grammar. May be repeated for credit.
Same as: LINGUIST 112

LINGUIST 212B. Seminar in Phonology. 1-4 Unit.
May be repeated for credit.

LINGUIST 213. Corpus Phonology. 2-4 Units.
An introduction to constructing and using phonologically annotated corpora to test phonological hypotheses. Hands-on experience in corpus manipulation and phonological modeling.

LINGUIST 214. Phonology Workshop. 1-2 Unit.
May be repeated for credit.

LINGUIST 217. Morphosyntax. 2-4 Units.
The role of morphology in grammar: how word structure serves syntax in the expression of meaning. Lexical semantics, Theta-roles, argument structure, and grammatical relations. Licensing: case, agreement, word order, and their interaction.

LINGUIST 218. Seminar on Morphological Theories. 2-4 Units.
Word formation and the lexicon: empirical generalizations and theoretical approaches. Lexicalist and Distributed Morphology. How words are built and interpreted: constituency and headedness, morpheme order and scope, the mirror principle, bracketing paradoxes, the hierarchy of functional categories. Paradigms, blocking, gaps, periphrasis, syncretism. Locality, head movement vs. selection, constraints on allomorphy, incorporation, polysynthesis, cliticization and prosodic re-ordering phenomena.

LINGUIST 219. Frequency and the Grammar of Alternations. 1-4 Unit.
Variationist, and psycholinguistic studies of how syntactic alternations (for example, the English dative, genitive, and passive) develop in time and space.

LINGUIST 221A. Foundations of English Grammar. 1-4 Unit.
A systematic introduction to the formal analysis of English grammar using the framework of head-driven phrase structure grammar (HPSG). Topics: feature structure modeling, lexical and phrasal organization in terms of type hierarchies and constraint inheritance, clausal types, patterns of complementation, the auxiliary system, extraction dependencies, wh-constructions, and the syntax-semantics interface.

LINGUIST 221B. Studies in Universal Grammar. 1-4 Unit.
Focus is on grammatical analysis of individual languages. Builds directly on the theoretical foundations presented in 221A. Topics vary each year.

LINGUIST 222A. Foundations of Syntactic Theory I. 3-4 Units.
The roles of the verb and the lexicon in the determination of sentence syntax and their treatment in modern grammatical theories. Empirical underpinnings of core phenomena, including the argument/adjunct distinction, argument structure and argument realization, control and raising, operations on argument structure and grammatical function changing rules. Motivations for a lexicalist approach rooted in principles of lexical expression and subcategorization satisfaction. Prerequisite: 120 or permission of instructor.

LINGUIST 222B. Foundations of Syntactic Theory II. 2-4 Units.
The nature of unbounded dependency constructions and their treatment in modern grammatical theories. Filler-gap dependencies, island constraints, and the relation between grammar and processing. Prerequisite: 222A.

LINGUIST 223. Introduction to Minimalist Syntax. 3-4 Units.

Introduces the basics of Minimalist architecture and structure-building operations, with attention to the communication of syntax with the phonological and semantic interfaces. Topics include phrase structure, locality and phases, phrasal and head movement, functional categories, and features. A previous graduate-level syntax course, or permission of the instructor required.

LINGUIST 224. Introduction to Lexical Function Grammar. 2-4 Units.

Presentation of a formal model of grammar designed to allow precise, computationally tractable descriptions of cross-linguistic variation in syntactic structure. Concentration on the formal properties of the model, its flexibility in teasing out language specific and possibly universal characteristics of natural languages and the place of syntax as a component within a larger linguistic architecture. Prerequisite: 120 or consent of instructor.

Same as: LINGUIST 124

LINGUIST 224A. From Text to Natural Reasoning. 1-4 Unit.

To reason about textual information we rely extensively on extra-linguistic information but the syntactic structure and lexical items used also play a role in guiding us to conclusions. In by now traditional semantic practice the contributions of those are treated in model theoretic terms. But formulas of first or higher order logic do not come with effective procedures for the reasoning that is required to draw inferences or answer questions given some natural language input. Natural Reasoning is a cover term we use for a family of proof-theoretic formal approaches that are currently used by computational linguists. The course will give an overview of proof-theoretic logic as applied to natural language, discuss some of the computational systems that incorporate this view (Stanford's NatLog, Bar Ilan's Biutee, Parc's Bridge) and conclude with a critical view of the linguistic generalizations that underlie these approaches and means to improve them or mitigate their shortcomings. The examples of natural reasoning will mainly be in the domain of monotonicity reasoning and reasoning about the factuality of events.

LINGUIST 224B. Advanced Topics in Lexical Functional Grammar. 1-4 Unit.

May be repeated for credit.

LINGUIST 225. Seminar in Syntax: Head Movement. 2-4 Units.

Seminar on advanced topics in syntax. Topics may vary from year to year. May be repeated for credit. May be repeated for credit.

LINGUIST 227C. Projects in Syntax. 2-4 Units.

Group research projects using quantitative syntactic data from texts, recordings, experiments, or historical records. Skills in extracting, graphically exploring, and analyzing naturalistic syntactic data, and in presenting results. May be repeated for credit. Prerequisite: 229A, B, or D, or equivalent.

LINGUIST 229A. Laboratory Syntax I. 1-4 Unit.

Critiques of the empirical foundations of syntax. The roles of introspective, usage-based, experimental, and typological evidence. Modern methods of data collection and analysis used in syntax. Hands-on, practical work with data sets. May be repeated for credit.

LINGUIST 229B. Laboratory Syntax II. 1-4 Unit.

Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.

LINGUIST 229C. Laboratory Syntax III. 1-4 Unit.

Hands-on use of methods for handling syntactic data, including corpus work on ecologically natural data and controlled experimental paradigms. Explanatory models of syntactic processing and their relation to theories of grammar. May be repeated for credit.

LINGUIST 229D. Empirical Syntax Research Seminar. 1-2 Unit.

Recent work in syntax that employs data-rich methods like corpora and laboratory studies, emphasizing research by seminar participants. May be repeated for credit.

LINGUIST 230A. Introduction to Semantics and Pragmatics. 4 Units.

Linguistic meaning and its role in communication. Topics include ambiguity, vagueness, presupposition, intonational meaning, and Grice's theory of conversational implicature. Applications to issues in politics, the law, philosophy, advertising, and natural language processing. Those who have not taken logic, such as PHIL 150 or 151, should also enroll in 130C. Pre- or corequisite: 120, 121, consent of instructor, or graduate standing in Linguistics.

Same as: LINGUIST 130A

LINGUIST 230B. Semantics and Pragmatics I. 2-4 Units.

Expands on 130A/230A. Detailed study of selected topics in formal semantics and pragmatics. Prerequisites: LINGUIST 130A/230A or permission from instructor.

LINGUIST 230C. Semantics and Pragmatics II. 1-4 Unit.**LINGUIST 230D. Semantics Research Seminar. 1 Unit.**

Maybe repeated for credit.

LINGUIST 230E. Logic Laboratory. 1 Unit.

Typically taken in conjunction with 130A/230A.

Same as: LINGUIST 130C

LINGUIST 232A. Lexical Semantics. 2-4 Units.

Introduction to issues in word meaning, focused primarily around verbs. Overview of the core semantic properties of verbs and the organization of the verb lexicon. Approaches to lexical semantic representation, including semantic role lists, proto-roles, and causal and aspectual theories of event conceptualization.

LINGUIST 232B. Seminar in Lexical Semantics: Lexical Categories. 1-4 Unit.

Current topic: A review of recent research into the nature of lexical categories. Topics include languages said to lack lexical category distinctions, languages lacking full lexical category inventories, and methodological issues facing investigations of lexical categories. Data will be drawn from various languages and several semantic domains. May be repeated for credit with different content. May be repeated for credit.

LINGUIST 234. The Structure of Discourse: Theory and Applications. 2-4 Units.

In this course we will address the structure of language above the sentence concentrating initially on: nn(1) defining the minimal units of discourse structure n(2) recursive rules of combination of minimal units (i.e. discourse iquest;syntaxiquest;n(3) representations of discourse level phenomenon(4) the nature and structure of spoken and written formal and informal discourse genres and Speech events in English and other languages including stories, explanations, literary works etc. on the one hand, and socially constructed occasions of speaking such as classes, doctor patient interactions, and informal conversation on the other.

Same as: LINGUIST 134A

LINGUIST 235. Semantic Fieldwork. 2-4 Units.

Techniques for evidence from less well-studied languages within formal semantic theory. Semantic phenomena, and techniques for investigating them, including scope, quantifiers, pronouns, focus, tense, aspect, mood, evidentiality, and information structure. Practical work on a language.

LINGUIST 236. SEM IN SEMANTICS: Reasoning with Quantifiers. 4 Units.

Description: Team project-oriented class exploring linguistic, psychological, and computational models of how people reason about statements involving quantifiers and related devices, including negation and negative polarity items, superlatives, and definite descriptions. One-third of the class time will be devoted to covering core material and recent papers; the remaining two-thirds will be for project development with guidance from the instructors. Prerequisite: LINGUIST 230B or permission from the instructors.

Same as: PSYCH 236C

LINGUIST 237. Seminar in Semantics: Gradation & Modality. 1-4 Unit.

Discussion of major semantic theories of modality and gradation, with special attention to empirical and logical issues that arise from the study of gradable modals.

LINGUIST 239. Semantics and Pragmatics Research Seminar. 1-2 Unit.

Presentation of ongoing research in semantics. May be repeated for credit.

LINGUIST 240. Language Acquisition I. 4 Units.

Processes of language acquisition in early childhood; stages in development; theoretical issues and research questions. Practical experience in data collection. Satisfies the WIM requirement for Linguistics if requested.

Same as: LINGUIST 140

LINGUIST 241. Language Acquisition II. 4 Units.

Pragmatics and acquisition. May be repeated for credit.

LINGUIST 242. Heritage Languages. 3-4 Units.

The linguistic and cultural properties of Heritage languages, which are partially acquired and supplanted by a dominant language in childhood. Topics: Syntactic, phonological and morphological properties of heritage languages, implications from experimental HL research for language universals, cultural vs. linguistic knowledge, the role of schooling in HL competence, influence of the dominant language on the HL, and pedagogical issues for HL learners in the classroom.

Same as: LINGUIST 142

LINGUIST 245. Experimental Design for Linguistics. 4 Units.

Hypothesis formation, confound avoidance, power, general methods, and analysis of results. Students complete a pilot experiment; write-up; peer review; presentation.

LINGUIST 246. Foundations of Psycholinguistics. 4 Units.

Basic readings in language processing and language use, with a historical dimension; discussion each week in class of the relevant papers.

LINGUIST 249. Language Processing. 2-4 Units.

Understanding spoken or written language requires the rapid, incremental processing of novel compositional structures, as well as the integration of the incoming language stream with multiple sources of information, such as the prior discourse, physical context, social information, etc. How are humans able to efficiently accomplish this task? To address this question, this course will consider principles of sentence and discourse processing that guide language understanding and features of sentence & discourse structure that facilitate comprehension. Specific topics are likely to include reference processing, memory & forgetting, individual differences in comprehension ability, the role of context, and computational models of language comprehension.

LINGUIST 250. Sociolinguistic Theory and Analysis. 3-4 Units.

Methods of modeling the patterned variation of language in society. Emphasis is on variation, its relation to social structure and practice, and its role in linguistic change. Intersection between quantitative and qualitative analysis, combining insights of sociology and linguistic anthropology with quantitative linguistic data. Prerequisite: graduate standing in Linguistics or consent of instructor.

LINGUIST 251. Sociolinguistic Field Methods. 3-5 Units.

Strengths and weaknesses of the principal methods of data collection in sociolinguistics.

LINGUIST 252. Sociolinguistics and Pidgin Creole Studies. 2-4 Units.

Introduction to pidgins and creoles, organized around the main stages in the pidgin-creole life cycle: pidginization, creolization, and decreolization. Focus is on transformations in the English language as it was transported from Britain to Africa, Asia, the Caribbean, and the Pacific. Resultant pidginized and creolized varieties such as Nigerian Pidgin English, Chinese Pidgin English, New Guinea Tok Pisin, Suriname Sranan, and the creole continua of Guyana, Jamaica, and Hawaii. Also French, Dutch, Portuguese, Chinook, Motu, and Sango.

Same as: LINGUIST 152

LINGUIST 253. Race, Ethnicity, and Language. 3-4 Units.

This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of "doing race" through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics. Prerequisite: consent of instructor.

Same as: ANTHRO 320A, EDUC 389X

LINGUIST 254. Sociolinguistics of Language Contact. 2-4 Units.

The role of contact between speakers of different languages in processes of language borrowing, convergence, and shift. Attending both to linguistic aspects and social contexts, examine: second-language acquisition, bilingualism, code-switching, lexical and grammatical borrowing, first language attrition, language death, and the creation of new contact varieties such as jargons, mixed languages, pidgins, and creoles. Prerequisite: background in linguistics, at least one course in linguistics.

Same as: LINGUIST 154

LINGUIST 255A. Seminar in Sociolinguistics: California Dialectology. 1-4 Unit.

Topics vary by quarter. Current topic is based on sociolinguistic interviews gathered in the first two field seasons of the Voices of California project. May be repeated for credit.

LINGUIST 255B. Sociolinguistics Classics and Community Studies. 3-5 Units.

This course discusses some of the major community studies in sociolinguistics (e.g. Labov in NYC, Wolfram in Detroit, Trudgill in Norwich, Milroy in Belfast, and a selection of others up to the present) and the work of other classic sociolinguistic figures (e.g. Romaine, Hymes) who contributed in other ways. Our goal is to reach a deep understanding and critique of their methods, findings and ideas, to improve our own research and our responses to new developments in the field.

LINGUIST 255C. Seminar in Sociolinguistics: Sociogrammar. 2-4 Units.

Seminar style course exploring the literature on sociolinguistic variation in morphology and syntax from the 1960s to the present, and its implication for (socio)linguistic theory, especially in relation to (and in contrast with) socio-phonetics.

LINGUIST 255D. Seminar in Sociolinguistics: Character Types in Sociolinguistics. 1-4 Unit.

Figures of personhood, personas, character types, and stereotypes in the study of linguistic variation. What are the significant differences among these types? Are these social types merely the vehicles through which social meanings travel or do they constitute the meanings themselves?.

LINGUIST 255E. Seminar in Sociolinguistics: Complicating Representations. 2-4 Units.

In this seminar, we will explore the interface between social theory and spoken language understanding. In doing so, we expect to complicate simplistic notions of representations and question what language users store and how they link sound patterns with linguistic and social meaning. Through deep readings of the literature and discussions, we hope to arrive at a number of individual project proposals that take what we know about spoken language understanding to inform our understanding of complex representations that integrate language and the social world.

LINGUIST 255F. Seminar in Sociolinguistics: Language and Social Interaction. 1-4 Unit.

Figures of personhood, personas, character types, and stereotypes in the study of linguistic variation. What are the significant differences among these types? Are these social types merely the vehicles through which social meanings travel or do they constitute the meanings themselves?.

Same as: LINGUIST 155F

LINGUIST 256. Language, Gender and Sexuality. 1-4 Unit.

The role of language in constructing gender and sexuality. Historical overview of major theoretical perspectives and debates (difference vs. dominance, identity vs. desire) and discussion of new directions (affect, embodiment, figures of personhood, experimental approaches). Previous coursework in sociolinguistics recommended. Prerequisites: LING 250 and 110 or the equivalent.

LINGUIST 257. Sociophonetics. 1-4 Unit.

The study of phonetic aspects of sociolinguistic variation and the social significance of phonetic variation. Acoustic analysis of vowels, consonants, prosody, and voice quality. Hands-on work on collaborative research project. Prerequisite: 110 or equivalent, or consent of instructor.

Same as: LINGUIST 157

LINGUIST 258. Analysis of Variation. 1-4 Unit.

The quantitative study of linguistic variability in time, space, and society emphasizing social constraints in variation. Hands-on work with variable data. Prerequisites: 105/205 and 250, or consent of instructor.

LINGUIST 259. Topics in Sociolinguistics. 2-4 Units.

Topics vary by quarter. Current topic is Sociophonetics. Repeatable for credit. This seminar explores new methods of collecting and analyzing sociophonetic data in an experimental setting, including electroglottography, aerodynamic measures, speech resynthesis, and perception study tasks. Requirements include both collaborative and individual research projects.

LINGUIST 260A. Historical Morphology and Phonology. 4 Units.

Sound change and analogical change in the perspective of linguistic theory. Internal and comparative reconstruction.

LINGUIST 260B. Historical Morphosyntax. 2-4 Units.

Morphological and syntactic variation and change. Reanalysis, grammaticalization. The use of corpora and quantitative evidence.

LINGUIST 263. Endangered Languages and Language Revitalization. 3-4 Units.

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages. Same as: ANTHRO 163A, ANTHRO 263A, LINGUIST 163A, NATIVEAM 163

LINGUIST 264. English Transplanted, English Transformed: Pidgins and Creoles. 2-4 Units.

English varieties around the world, including white vernacular dialects and creole, pidgin, and indiginized Englishes. Emphasis is on the historical circumstances of origin, linguistic characteristics, and social setting in colonial and postcolonial societies. Theoretical issues pertaining to language contact, language shift, and pidgin and creole formation.

LINGUIST 265. African American Vernacular English. 2-5 Units.

Linguistics 265 is a new, advanced course on African American Vernacular English, intended for graduate students in Linguistics, Education and other fields, and for undergraduate majors in Linguistics. Students who have taken Linguistics 65 or its equivalent, or who have had an undergraduate introduction to linguistics, are also eligible to take this course. The course will discuss in detail some of the descriptive, historical and sociolinguistic literature on AAVE, beginning with the classic book length works on AAVE written by William Labov, Walt Wolfram and Ralph Fasold, but including some of the most recent research-based articles on the subject in current and recent journals. Research interests of students in the course will help to determine the specific foci within these broad parameters.

LINGUIST 266. Vernacular English and Reading. 4-5 Units.

Discusses some of the literature on the relation between use of vernacular English varieties (e.g. African American Vernacular English, Chicano English) and the development of literacy (especially in Standard English). But our primary focus is on improving the reading skills of African American and Latino students in local schools through the Reading Road program developed at the University of Pennsylvania. Students must commit to tutoring one or more elementary students weekly, using the program. L65 AAVE recommended, but not required. Same as: LINGUIST 66

LINGUIST 270. The Arabic Language and Culture. 3 Units.

(Formerly AMELANG 36). Arabic language from historical, social, strategic, and linguistic perspectives. History of the Arabic language and the stability of classical Arabic over the last 15 centuries. Why the functionality of classical Arabic has not changed as Latin, Old English, and Middle English have. Social aspects of the Arabic language, Ferguson's notion of diglossia. The main varieties of Arabic, differences among them, and when and where they are spoken. Role of Arabic and culture in current world politics, culture, and economy. Linguistic properties of Arabic such as root-based morphology, lexical ambiguity, and syntactic structure relating it to current linguistic theories.

Same as: LINGUIST 36

LINGUIST 271. Structure of Basque. 2-4 Units.

Introduction to key topics in Basque morphology, syntax, semantics and how they bear on current theoretical debates. Topics covered may include basic clause structure and word order, case-marking and ergativity, the expression of motion and location.

LINGUIST 272. Structure of Finnish. 2-4 Units.

Central topics in Finnish morphology, syntax, and semantics and how they bear on current theoretical debates. Topics: clause structure; case; aspect; word order.

LINGUIST 273. The Structure of Russian. 2-4 Units.

A synchronic overview of contemporary standard Russian, including its sound system, word formation and grammatical structure. Emphasis is on problems presented by Russian for current linguistic theory. The acquisition of Russian as a first language.

Same as: LINGUIST 173

LINGUIST 274B. Field Methods II. 3-4 Units.

First course in series with 274C, with a focus on phonetic topics in a targeted language. Prerequisite: one quarter of phonology and one quarter of syntax or permission of instructor. Graduate students are heavily encouraged to make a commitment to both 274B and 274C in the same year.

LINGUIST 274C. Linguistic Field Methods: Syntax. 3-4 Units.

Prerequisites include one quarter of phonology and one quarter of syntax or permission of instructor. Graduate students are heavily encouraged to make a commitment to both 274B and 274C in the same year.

LINGUIST 275. Probability and Statistics for linguists. 2-4 Units.

Introduction to probability and statistical inference, with a focus on conceptual and practical issues relevant to theoretical, experimental, and corpus linguistics. Data analysis and modeling using R. Course project will involve reproducing a published modeling result or statistical analysis in full detail.

LINGUIST 276. Quantitative Methods in Linguistics. 2-4 Units.

Introduction to methods for collecting and analyzing quantitative linguistic data, with a primary focus on the use of corpora in exploring theoretical questions in various areas of linguistics. Topics include the access and retrieval of corpus data (including web-based corpora), data annotation, and statistical modeling. Practical experience with R, Python scripting, and setting up online experiments through Amazon Mechanical Turk.

LINGUIST 277. Laboratory Methods in Psycholinguistics. 2-4 Units.

Issues that commonly arise in the design and implementation of linguistic experiments and in the statistical analysis of empirical results. Topics in experimental design include selection of stimuli, blocking, and power analysis and sample size calculation. How to fit and interpret statistical models using the multilevel regression and Bayesian inference, as implemented in software packages R and Bugs. Topics include interpretation of model coefficients for fixed and random effects, collinearity, model criticism, as well as comparison and reporting of models. Theoretical issues worked out at lab sessions using examples from experiments and corpus studies, including those provided by students.

LINGUIST 278. Programming for Linguists. 1-4 Unit.

Computer programming techniques for collecting and analyzing data in linguistic research. Introduction to the UNIX, regular expressions, and Python scripting. Hands-on experience gathering, formatting, and manipulating corpus, field, and experimental data, combining data from multiple sources, and working with existing tools. Knowledge of computer programming not required.

LINGUIST 280. From Languages to Information. 3-4 Units.

Extracting meaning, information, and structure from human language text, speech, web pages, genome sequences, social networks, or any less structured information. Methods include: string algorithms, edit distance, language modeling, naive Bayes, inverted indices, vector semantics. Applications such as question answering, sentiment analysis, information retrieval, text classification, social network models, machine translation, genomic sequence alignment, spell checking, speech processing. Prerequisite: CS103, CS107, CS109.

Same as: CS 124, LINGUIST 180

LINGUIST 281. Grammar Engineering. 1-4 Unit.

Hands-on techniques for implementation of linguistic grammars, drawing on grammatical theory and engineering skills. The implementation of constraints in morphology, syntax, and semantics, working within a unification-based lexicalist framework. Focus is on developing small grammars for English and at least one other language. Prerequisite: basic syntactic theory or 120. No programming skills required.

Same as: LINGUIST 181

LINGUIST 282. Computational Theories of Syntax. 3-4 Units.

Salient features of modern syntactic theories, including HPSG, LFG, and TAG, motivated by computational concerns. Impact of work within these frameworks on the design of algorithms in computational linguistics, and its influence in both linguistics and computer science. Topics include: notions of unification; unification algorithms and their relation to linguistic theory; agenda-driven chart processing for analysis and synthesis; the interface with morphology, the lexicon, and semantics; and applications, notably machine translation.

Same as: LINGUIST 182

LINGUIST 283. Programming and Algorithms for Natural Language Processing. 3-4 Units.

Construction of computer programs for linguistic processes such as string search, morphological, syntactic, and semantic analysis and generation, and simple machine translation. Emphasis is on the algorithms that have proved most useful for solving such problems.

Same as: LINGUIST 183

LINGUIST 284. Natural Language Processing. 3-4 Units.

Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems.

Prerequisites: CS124 or CS121/221.

Same as: CS 224N

LINGUIST 284A. Writing Systems in a Digital Age. 2-3 Units.

Introduction to the variety of writing systems and their behaviors. Classification of all existing scripts as alphabetic, syllabic, ideographic; unifying and differentiating features within each group. How writing captures human language in various ways. The development of the alphabet, from ancient Semitic scripts to modern times. How writing systems are extended to additional languages. Chinese writing, its characteristics and sphere of influence. Japanese writing as a hybrid system that includes Chinese. Korean writing as an ideally designed script. The Indian system of writing as the foundation of numerous Asian syllabic scripts. Unicode as global standard for encoding text in all languages. Font technology: the emulation of human writing in the digital realm. nBasic knowledge of phonetics recommended. Knowledge of foreign languages helpful.

Same as: LINGUIST 185

LINGUIST 286. Information Retrieval and Web Search. 3 Units.

Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

Same as: CS 276

LINGUIST 287. Extracting Social Meaning and Sentiment. 3 Units.

Methods for extracting social meaning (speaker perspectives, emotions and attitudes) from text and speech. Topics include sentiment analysis and summarization, detection of deception, sarcasm, emotion, and personality. nnAnalysis of meaning-bearing characteristics of the speaker and topic, including text, discourse, prosodic and other cues. Prerequisite: CS 124 or 221 or 229 or permission of instructors.

LINGUIST 288. Natural Language Understanding. 3-4 Units.

Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180, CS 124, CS 224N, CS224S, or CS221; and logical/ semantics such as LINGUIST 130A or B, CS 157, or PHIL150. Same as: CS 224U, LINGUIST 188

LINGUIST 289. Topics in Computational Linguistics: History of Computational Linguistics. 3-4 Units.

Intellectual history of computational linguistics and natural language processing, together with related aspects of dialogue and speech processing, using primary sources. Reading of seminal early papers, interviews with historical figures, with the goal of understanding the origins and intellectual development of the field. Prerequisites: at least one of LING 180, 281, 283, 284, 286, or 288.

LINGUIST 291. Linguistics and the Teaching of English as a Second/ Foreign Language. 4-5 Units.

Methodology and techniques for teaching languages, using concepts from linguistics and second language acquisition theory and research. Focus is on teaching English, but most principles and techniques applicable to any language. Optional 1-unit seminar in computer-assisted language learning. Same as: LINGUIST 191

LINGUIST 294. Linguistic Research Discussion Group. 1 Unit.

Restricted to first-year Linguistics Ph.D. students.

LINGUIST 390. M.A. Project. 1-6 Unit.**LINGUIST 391A. Curricular Practical Training. 1 Unit.**

Educational opportunities in research and development labs in industry. Qualified linguistics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 391 A may be taken only once.

LINGUIST 393. Summer Research Activity. 1-8 Unit.

Restricted to Linguistics Ph.D. students. May be repeated for credit.

LINGUIST 393A. Research Activity in Sociolinguistics. 1-2 Unit.

For Linguistics Graduate Students involved in the Voices of CA Project.

LINGUIST 394. TA Training Workshop. 1 Unit.

For second-year graduate students in Linguistics.

LINGUIST 395. Research Workshop. 1-2 Unit.

Restricted to students in the doctoral program. Student presentations of research toward qualifying papers. May be repeated for credit.

LINGUIST 395C. Research Workshop III. 1-2 Unit.

Restricted to students in the doctoral program. Student presentations of ongoing research plus professional development sessions.

LINGUIST 395D. Linguistics Writing Group. 1 Unit.

meets weekly to support student writing projects.

LINGUIST 396. Research Projects in Linguistics. 2-3 Units.

Mentored research project for first-year graduate students in linguistics.

LINGUIST 397. Directed Reading. 1-15 Unit.**LINGUIST 398. Directed Research. 1-15 Unit.****LINGUIST 399. Dissertation Research. 1-15 Unit.**

Management Science Engineering Courses

MSE 20. Discrete Probability Concepts And Models. 4 Units.

Concepts and tools for the analysis of problems under uncertainty, focusing on structuring, model building, and analysis. Examples from legal, social, medical, and physical problems. Topics include axioms of probability, probability trees, belief networks, random variables, conditioning, and expectation.

MSE 22Q. The Flaw of Averages. 3 Units.

Uncertain assumptions in business and public policy are often replaced with single iquest;best guessquest; or average numbers. This leads to a fallacy as fundamental as the belief that the earth is flat, which I call the Flaw of Averages. It states, in effect, that: plans based on average assumptions are wrong on average. This class will discuss mitigations of the flaw of averages using simulation and other methods from probability management.

MSE 41. Financial Literacy. 1 Unit.

Practical knowledge about personal finance and money management including budgeting, pay checks, credit cards, banking, insurance, taxes, and saving. Class especially appropriate for those soon to be self-supporting. Limited enrollment. Admission by order of enrollment in Axxess.

MSE 52. Introduction to Decision Making. 3 Units.

How to sustain focus, discipline, and passion across the Decision Making Spectrum. Comprehensive examples illustrate decision analysis theories and concepts. Consulting case studies highlight practical solutions for real decisions. Student teams present insights from their decision analyses for current organizations. Topics: decision quality, context, processes, framing, structuring, modeling, assessment, judgment under uncertainty, bias reduction, probabilistic inference, robust analysis, sensitivity diagrams, information appraisal, portfolio analysis, risk management, creativity, decision psychology, communication strategies, gaining commitment, decision culture, and decision leadership and management. Not intended for MS&E majors.

MSE 92Q. International Environmental Policy. 3 Units.

Preference to sophomores. Science, economics, and politics of international environmental policy. Current negotiations on global climate change, including actors and potential solutions. Sources include briefing materials used in international negotiations and the U.S. Congress.

MSE 93Q. Nuclear Weapons, Energy, Proliferation, and Terrorism. 3 Units.

Preference to sophomores. At least 20 countries have built or considered building nuclear weapons. However, the paths these countries took in realizing their nuclear ambitions vary immensely. Why is this the case? How do the histories, cultures, national identities, and leadership of these countries affect the trajectory and success of their nuclear programs? This seminar will address these and other questions about nuclear weapons and their proliferation. Students will learn the fundamentals of nuclear technology, including nuclear weapons and nuclear energy, and be expected to use this knowledge in individual research projects on the nuclear weapons programs of individual countries. Case studies will include France, UK, China, India, Israel, Pakistan, North Korea, South Africa, Libya, Iraq, and Iran, among others. Please note any language skills in your application. Recommended: 193 or 193W or 293.

MSE 101. Undergraduate Directed Study. 1-15 Unit.

Subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.

MSE 107. Interactive Management Science. 3 Units.

Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.

Same as: MSE 207

MSE 108. Senior Project. 5 Units.

Restricted to MS&E majors in their senior year. Students carry out a major project in groups of four, applying techniques and concepts learned in the major. Project work includes problem identification and definition, data collection and synthesis, modeling, development of feasible solutions, and presentation of results. Service Learning Course (certified by Haas Center).

MSE 111. Introduction to Optimization. 4 Units.

Formulation and analysis of linear optimization problems. Solution using Excel solver. Polyhedral geometry and duality theory. Applications to contingent claims analysis, production scheduling, pattern recognition, two-player zero-sum games, and network flows. Prerequisite: CME 100 or MATH 51.

Same as: ENGR 62

MSE 120. Probabilistic Analysis. 5 Units.

Concepts and tools for the analysis of problems under uncertainty, focusing on focusing on structuring, model building, and analysis. Examples from legal, social, medical, and physical problems. Topics include axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: CME 100 or MATH 51.

MSE 121. Introduction to Stochastic Modeling. 4 Units.

Stochastic processes and models in operations research. Discrete and continuous time parameter Markov chains. Queuing theory, inventory theory, simulation. Prerequisite: 120 or Statistics 116.

MSE 125. Introduction to Applied Statistics. 4 Units.

An increasing amount of data is now generated in a variety of disciplines, ranging from finance and economics, to the natural and social sciences. Making use of this information, however, requires both statistical tools and an understanding of how the substantive scientific questions should drive the analysis. In this hands-on course, we learn to explore and analyze real-world datasets. We cover techniques for summarizing and describing data, methods for statistical inference, and principles for effectively communicating results. Prerequisite: 120 or equivalent, CS 106A.

MSE 130. Information Networks and Services. 3 Units.

Architecture of the Internet and performance engineering of computer systems and networks. Switching, routing and shortest path algorithms. Congestion management and queuing networks. Peer-to-peer networking. Wireless and mobile networking. Information service engineering and management. Search engines and recommendation systems. Reputation systems and social networking technologies. Security and trust. Information markets. Select special topics and case studies. Prerequisites: 111, 120, and CS 106A.

MSE 140. Accounting for Managers and Entrepreneurs. 3-4 Units.

Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career. Enrollment limited. Admission by order of enrollment.

Same as: MSE 240

MSE 140X. Financial Accounting Concepts and Analysis. 2 Units.

Introductory course in financial accounting. Accounting is referred to as the language of business. Developing students' ability to read, understand, and use business financial statements. Understanding the mapping between the underlying economic events and financial statements, and how this mapping can affect inferences about future firm profitability. Introduction to measuring and reporting of the operating cycle; the process of preparing and presenting primary financial statements; the judgment involved and discretion allowed in making accounting choices; the effects of accounting discretion on the quality of the (reported) financial information; and the fundamentals of financial statement analysis. Class time will be allocated to a combination of lectures, cases and discussions of cases. Capstone project analyzing a company's financials at the end of the quarter.

MSE 145. Introductory Financial Analysis. 3 Units.

Formerly MS&E 142. Evaluation and management of money, complicated by temporary distributions and uncertainty. The "time-value of money" and its impact on economic decisions (both personal and corporate) with the introduction of interest rate (constant or varying over time); several approaches critically examined and made consistent as suitable metrics of comparison. The concept of investment diversification in the presence of uncertainty; portfolio selection and efficient frontier analysis leading to the formulation of the Capital Asset Pricing Model; practical implementation of the concepts, including comparison of loan (e.g., house and auto) terms, credit card financial terms, interest rate term structure and its relationship to rate-of-return analysis, and graphical presentation of uncertain investment alternatives; and current economic news of interest. Critical thinking, discussion, and interaction, using group and computer labs assignments. Prerequisites: differential calculus and probability. Recommended: optimization.

MSE 146. Corporate Financial Management. 4 Units.

Key functions of finance in both large and small companies, and the core concepts and key analytic tools that provide their foundation. Making financing decisions, evaluating investments, and managing cashflow, profitability and risk. Designing performance metrics to effectively measure and align the activities of functional groups and individuals within the firm. Structuring relationships with key customers, partners and suppliers. Prerequisite: 142 or 245G or equivalent.

MSE 152. Introduction to Decision Analysis. 3-4 Units.

How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W.

Same as: MSE 152W

MSE 152W. Introduction to Decision Analysis. 3-4 Units.

How to make good decisions in a complex, dynamic, and uncertain world. People often make decisions that on close examination they regard as wrong. Decision analysis uses a structured conversation based on actional thought to obtain clarity of action in a wide variety of domains. Topics: distinctions, possibilities and probabilities, relevance, value of information and experimentation, relevance and decision diagrams, risk attitude. Students seeking to fulfill the Writing in the Major requirement should register for MS&E 152W.

Same as: MSE 152

MSE 174. Social Entrepreneurship Collaboratory. 4 Units.

Interdisciplinary student teams create and develop U.S. and international social entrepreneurship initiatives. Proposed initiatives may be new entities, or innovative projects, partnerships, and/or strategies impacting existing organizations and social issues in the U.S. and internationally. Focus is on each team's research and on planning documents to further project development. Project development varies with the quarter and the skill set of each team, but should include: issue and needs identification; market research; design and development of an innovative and feasible solution; and drafting of planning documents. In advanced cases, solicitation of funding and implementation of a pilot project. Enrollment limited to 20. May be repeated for credit. Prerequisites: 131 and 132, or consent of instructor.

Same as: URBANST 133

MSE 175. Innovation, Creativity, and Change. 3-4 Units.

Problem solving in organizations; creativity and innovation skills; thinking tools; creative organizations, teams, individuals, and communities. Limited enrollment. (Katila).

MSE 177. Engineering Innovation. 4 Units.

This experiential course explores a wide array of tools that are used to enhance innovation and how those tools are applied across engineering disciplines. Using workshops, demonstrations, and field trips, students will learn how creative problem solving is deployed across engineering fields and, in partnership with the Stanford Virtual Human Interaction Lab, expand their own creative problem solving skills with virtual reality experiences that stretch their imagination. Limited enrollment. Admission by application.

MSE 178. The Spirit of Entrepreneurship. 3 Units.

Is there more to entrepreneurship than inventing the better mouse trap? This course uses the speakers from the Entrepreneurial Thought Leader seminar (MS&E472) to drive research and discussion about what makes an entrepreneur successful. Topics include venture financing, business models, and interpersonal dynamics in the startup environment. Students meet before and after MS&E 472 to prepare for and debrief after the sessions. Enrollment limited to 50 students. Admission by application.

MSE 180. Organizations: Theory and Management. 4 Units.

For undergraduates only; preference to MS&E majors. Classical and contemporary organization theory; the behavior of individuals, groups, and organizations. Limited enrollment. Admission by application. Students must attend first session.

MSE 181. Issues in Technology and Work for a Postindustrial Economy. 3 Units.

How changes in technology and organization are altering work and lives. Approaches to studying and designing work. How understanding work and work practices can assist engineers in designing better technologies and organizations. Topics include job design, distributed and virtual organizations, the blurring of boundaries between work and family life, computer supported cooperative work, trends in skill requirements and occupational structures, monitoring and surveillance in the workplace, downsizing and its effects on work systems, project work and project-based lifestyles, the growth of contingent employment, telecommuting, electronic commerce, and the changing nature of labor relations. Enrollment limited to 50 students. Preference to MS&E, STS, and CEE seniors, followed by MS&E, STS, and CEE juniors.

MSE 185. Global Work. 4 Units.

Issues, challenges, and opportunities facing workers, teams, and organizations working across national boundaries. Topics include geographic distance, time zones, language and cultural differences, technologies to support distant collaboration, team dynamics, and corporate strategy. Limited enrollment. Admission by application. Recommended: 180.

MSE 189. Social Networks - Theory, Methods, and Applications. 3 Units.

Introduces students to the theoretical, substantive, and methodological foundations of social networks. The social network paradigm seeks to explain how social relations facilitate and constrain an actor's opportunities, behaviors, and cognitions. Topics include: network concepts and principles; network data collection, measurement, and analysis; and applications in management, engineering, and related disciplines.

MSE 190. Methods and Models for Policy and Strategy Analysis. 3 Units.

Guest lectures by departmental practitioners. Emphasis is on links among theory, application, and observation. Environmental, national security, and health policy; marketing, new technology, and new business strategy analyses. Comparisons between domains and methods.

MSE 193. Technology and National Security. 3 Units.

The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy.

Same as: MSE 293

MSE 197. Ethics, Technology, and Public Policy. 5 Units.

Ethical issues in science- and technology-related public policy conflicts. Focus is on complex, value-laden policy disputes. Topics: the nature of ethics and morality; rationales for liberty, justice, and human rights; and the use and abuse of these concepts in policy disputes. Case studies from biomedicine, environmental affairs, technical professions, communications, and international relations.

MSE 201. Dynamic Systems. 3-4 Units.

Goal is to think dynamically in decision making, and recognize and analyze dynamic phenomena in diverse situations. Concepts: formulation and analysis; state-space formulation; solutions of linear dynamic systems, equilibria, dynamic diagrams; eigenvalues and eigenvectors of linear systems, the concept of feedback; nonlinear dynamics, phase plane analysis, linearized analysis, Liapunov functions, catastrophe theory. Examples: grabber-holder dynamics, technology innovation dynamics, creation of new game dynamics in business competition, ecosystem dynamics, social dynamics, and stochastic exchange dynamics. Prerequisite: CME 100 or MATH 51 or equivalent.

MSE 207. Interactive Management Science. 3 Units.

Analytical techniques such as linear and integer programming, Monte Carlo simulation, forecasting, decision analysis, and Markov chains in the environment of the spreadsheet. Probability management. Materials include spreadsheet add-ins for implementing these and other techniques. Emphasis is on building intuition through interactive modeling, and extending the applicability of this type of analysis through integration with existing business data structures.

Same as: MSE 107

MSE 208A. Practical Training. 1 Unit.

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Students may take each of A, B, and C once.

MSE 208B. Practical Training. 1 Unit.

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Students may take each of A, B, and C once.

MSE 208C. Practical Training. 1 Unit.

MS&E students obtain employment in a relevant industrial or research activity to enhance professional experience, consistent with the degree program they are pursuing. Students submit a one-page statement showing relevance to degree program along with offer letter before the start of the quarter, and a 2-3 page final report documenting the work done and relevance to degree program at the conclusion of the quarter. Students may take each of A, B, and C once.

MSE 211. Linear and Nonlinear Optimization. 3-4 Units.

Optimization theory and modeling. The role of prices, duality, optimality conditions, and algorithms in finding and recognizing solutions. Perspectives: problem formulation, analytical theory, computational methods, and recent applications in engineering, finance, and economics. Theories: finite dimensional derivatives, convexity, optimality, duality, and sensitivity. Methods: simplex and interior-point, gradient, Newton, and barrier. Prerequisite: CME 100 or MATH 51.

MSE 220. Probabilistic Analysis. 3-4 Units.

Concepts and tools for the analysis of problems under uncertainty, focusing on model building and communication: the structuring, processing, and presentation of probabilistic information. Examples from legal, social, medical, and physical problems. Spreadsheets illustrate and solve problems as a complement to analytical closed-form solutions. Topics: axioms of probability, probability trees, random variables, distributions, conditioning, expectation, change of variables, and limit theorems. Prerequisite: CME 100 or MATH 51. Recommended: knowledge of spreadsheets.

MSE 221. Stochastic Modeling. 3 Units.

Focus is on time-dependent random phenomena. Topics: discrete and continuous time Markov chains, renewal processes, queueing theory, and applications. Emphasis is on building a framework to formulate and analyze probabilistic systems. Prerequisite: 220 or consent of instructor.

MSE 223. Simulation. 3 Units.

Discrete-event systems, generation of uniform and non-uniform random numbers, Monte Carlo methods, programming techniques for simulation, statistical analysis of simulation output, efficiency-improvement techniques, decision making using simulation, applications to systems in computer science, engineering, finance, and operations research. Prerequisites: working knowledge of a programming language such as C, C++, Java, Python, or FORTRAN; calculus-base probability; and basic statistical methods.

MSE 226. "Small" Data. 3 Units.

This course is about understanding "small data": these are datasets that allow interaction, visualization, exploration, and analysis on a local machine. The material provides an introduction to applied data analysis, with an emphasis on providing a conceptual framework for thinking about data from both statistical and machine learning perspectives. Topics will be drawn from the following list, depending on time constraints and class interest: approaches to data analysis: statistics (frequentist, Bayesian) and machine learning; binary classification; regression; bootstrapping; causal inference and experimental design; time series modeling. Class lectures will be supplemented by data-driven problem sets and a project. Prerequisites: CME 100 or MATH 51; 120, 220 or STATS 116; experience with R at the level of CME/STATS 195 or equivalent.

MSE 233. Networked Markets. 3 Units.

An introduction to economic analysis for modern online services and systems. Topics include: Examples of networked markets. Online advertising. Recommendation and reputation systems. Pricing digital media. Network effects and network externalities. Social learning and herd behavior. Markets and information. Prerequisites: CME 100 or Math 51, and probability at the level of MS&E 220 or equivalent. No prior economics background will be assumed; requisite concepts will be introduced as needed.

MSE 238. Leading Trends in Information Technology. 3 Units.

Focuses on new trends and disruptive technologies in IT. Emphasis on the way technologies create a competitive edge and generate business value. Broad range of views presented by guest speakers, including top level executives of technology companies, and IT executives (e.g. CIOs) of Fortune 1000 companies. Special emphasis in technologies such as Virtualization, Cloud Computing, Security, Mobility and Unified Communications.

MSE 238A. Leading Trends in Information Technology. 1 Unit.

Focuses on new trends and disruptive technologies in IT. Emphasis on the way technologies create a competitive edge and generate business value. Broad range of views presented by guest speakers, including top level executives of technology companies, and IT executives (e.g. CIOs) of Fortune 1000 companies. Special emphasis in technologies such as Virtualization, Cloud Computing, Security, Mobility and Unified Communications.

MSE 240. Accounting for Managers and Entrepreneurs. 3-4 Units.

Non-majors and minors who have taken or are taking elementary accounting should not enroll. Introduction to accounting concepts and the operating characteristics of accounting systems. The principles of financial and cost accounting, design of accounting systems, techniques of analysis, and cost control. Interpretation and use of accounting information for decision making. Designed for the user of accounting information and not as an introduction to a professional accounting career. Enrollment limited. Admission by order of enrollment. Same as: MSE 140

MSE 241. Economic Analysis. 3-4 Units.

Principal methods of economic analysis of the production activities of firms, including production technologies, cost and profit, and perfect and imperfect competition; individual choice, including preferences and demand; and the market-based system, including price formation, efficiency, and welfare. Practical applications of the methods presented. See 341 for continuation of 241. Recommended: 211, ECON 50.

MSE 243. Energy and Environmental Policy Analysis. 3 Units.

Concepts, methods, and applications. Energy/environmental policy issues such as automobile fuel economy regulation, global climate change, research and development policy, and environmental benefit assessment. Group project. Prerequisite: MS&E 241 or ECON 50, 51.

MSE 244. Economic Growth and Development. 3 Units.

Formerly 249. What generates economic growth. Emphasis is on theory accompanied by intuition, illustrated with country cases. Topics: the equation of motion of an economy; optimal growth theory; calculus of variations and optimal control approaches; deriving the Euler and Pontraguine equations from economic reasoning. Applications: former planned economies in Russia and E. Europe; the present global crisis: causes and consequences; a comparative study of India and China. The links between economic growth and civilization; the causes of the rise and decline of civilizations; lessons for the future. Intended for graduate students. Prerequisite: multivariate calculus and permission of instructor. To receive permission, submit an application at <http://web.stanford.edu/~lcottle/forms/244app.fb>.

MSE 245A. Investment Science. 3 Units.

Formerly MS&E 242. Introduction to the basic concepts of modern quantitative finance and investments. Focus is on basic principles and how they are applied in practice. Topics: basic interest rates; evaluating investments: present value and internal rate of return; fixed-income markets: bonds, yield, duration, portfolio immunization; term structure of interest rates; measuring risk: volatility and value at risk; designing optimal security portfolios; the capital asset pricing model. Group projects involving financial market data. No prior knowledge of finance required. Appropriate for engineering or science students wishing to apply their quantitative skills to develop a basic understanding of financial modeling and markets. Prerequisite: basic preparation in probability, statistics, and optimization.

MSE 245B. Advanced Investment Science. 3 Units.

Formerly MS&E 342. Topics: forwards and futures contracts, continuous and discrete time models of stock price behavior, geometric Brownian motion, Ito's lemma, basic options theory, Black-Scholes equation, advanced options techniques, models and applications of stochastic interest rate processes, and optimal portfolio growth. Computational issues and general theory. Teams work on independent projects. Prerequisite: 242.

MSE 245G. Finance for Non-MBAs. 3 Units.

For graduate students and advanced undergraduates. The foundations of finance; applications in corporate finance and investment management. Financial decisions made by corporate managers and investors with focus on process valuation. Topics include criteria for investment decisions, valuation of financial assets and liabilities, relationships between risk and return, market efficiency, and the valuation of derivative securities. Corporate financial instruments including debt, equity, and convertible securities. Equivalent to core MBA finance course, FINANCE 220. Prerequisites: ECON 51, or ENGR 60, or equivalent; ability to use spreadsheets, and basic probability and statistics concepts including random variables, expected value, variance, covariance, and simple estimation and regression.

Same as: ECON 135

MSE 246. Financial Risk Management. 3 Units.

This course provides an introduction to the measurement and management of financial risk. Topics include risk classification, regulatory framework, risk measures, estimation, capital allocation, derivatives hedging, credit portfolio risk, factor models, risk analysis of mortgages and mortgage backed securities, peer-to-peer lending risk. Data-driven group projects. Prerequisite: 245A or similar.

MSE 250A. Engineering Risk Analysis. 3 Units.

The techniques of analysis of engineering systems for risk management decisions involving trade-offs (technical, human, environmental aspects). Elements of decision analysis; probabilistic risk analysis (fault trees, event trees, systems dynamics); economic analysis of failure consequences (human safety and long-term economic discounting); and case studies such as space systems, nuclear power plants, and medical systems. Public and private sectors. Prerequisites: probability, decision analysis, stochastic processes, and convex optimization.

MSE 250B. Project Course in Engineering Risk Analysis. 3 Units.

Students, individually or in groups, choose, define, formulate, and resolve a real risk management problem, preferably from a local firm or institution. Oral presentation and report required. Scope of the project is adapted to the number of students involved. Three phases: risk assessment, communication, and management. Emphasis is on the use of probability for the treatment of uncertainties and sensitivity to problem boundaries. Limited enrollment. Prerequisites: MS&E 250A and consent of instructor.

MSE 251. Stochastic Control. 3 Units.

Introduction to stochastic control, with applications taken from a variety of areas including supply-chain optimization, advertising, finance, dynamic resource allocation, caching, and traditional automatic control. Markov decision processes, optimal policy with full state information for finite-horizon case, infinite-horizon discounted, and average stage cost problems. Bellman value function, value iteration, and policy iteration. Approximate dynamic programming. Linear quadratic stochastic control. Formerly EE365. Prerequisites: EE 263, EE 178 or equivalent. Same as: EE 266

MSE 252. Decision Analysis I: Foundations of Decision Analysis. 3-4 Units.

Coherent approach to decision making, using the metaphor of developing a structured conversation having desirable properties, and producing actional thought that leads to clarity of action. Socratic instruction; computational problem sessions. Emphasis is on creation of distinctions, representation of uncertainty by probability, development of alternatives, specification of preference, and the role of these elements in creating a normative approach to decisions. Information gathering opportunities in terms of a value measure. Relevance and decision diagrams to represent inference and decision. Principles are applied to decisions in business, technology, law, and medicine. See 352 for continuation.

MSE 254. The Ethical Analyst. 1-3 Unit.

The ethical responsibility for consequences of professional analysts who use technical knowledge in support of any individual, organization, or government. The means to form ethical judgments; questioning the desirability of physical coercion and deception as a means to reach any end. Human action and relations in society in the light of previous thought, and research on the desired form of social interactions. Attitudes toward ethical dilemmas through an explicit personal code.

MSE 256. Technology Assessment and Regulation of Medical Devices. 3 Units.

(Formerly 475.) Regulatory approval and reimbursement for new medical technologies as a key component of product commercialization. The regulatory and payer environment in the U.S. and abroad, and common methods of health technology assessment. Framework to identify factors relevant to adoption of new medical devices, and the management of those factors in the design and development phases. Case studies; guest speakers from government (FDA) and industry.

MSE 256A. Technology Assessment and Regulation of Medical Devices. 1 Unit.

Regulatory approval and reimbursement for new medical technologies as a key component of product commercialization. The regulatory and payer environment in the U.S. and abroad, and common methods of health technology assessment. Framework to identify factors relevant to adoption of new medical devices, and the management of those factors in the design and development phases. Case studies; guest speakers from government (FDA) and industry.

MSE 257. Healthcare Reforms and Value-Based Biomedical Technology Innovation. 3 Units.

A fundamental transformation of the healthcare system is underway in which policymakers, payers and administrators are intensely focused on new policy mechanisms designed to constrain healthcare costs while promoting quality, outcomes and value. This class evaluates healthcare reforms in the U.S. and abroad with specific focus on examining their impact on the biomedical technology innovation process. Lectures and case studies, guest speakers from health plans, providers, and the medical technology industry perspectives. Students investigate real-world technology innovations in projects.

MSE 257A. Healthcare Reforms and Value-Based Biomedical Technology Innovation. 1 Unit.

A fundamental transformation of the healthcare system is underway in which policymakers, payers and administrators are intensely focused on new policy mechanisms designed to constrain healthcare costs while promoting quality, outcomes and value. This class evaluates healthcare reforms in the U.S. and abroad with specific focus on examining their impact on the biomedical technology innovation process. Lectures and case studies, guest speakers from health plans, providers, and the medical technology industry perspectives. Students investigate real-world technology innovations in projects.

MSE 260. Introduction to Operations Management. 3 Units.

Operations management focuses on the effective planning, scheduling, and control of manufacturing and service entities. This course introduces students to a broad range of key issues in operations management. Topics include determination of optimal facility location, production planning, optimal timing and sizing of capacity expansion, and inventory control. Prerequisites: basic knowledge of Excel spreadsheets, probability, and optimization.

MSE 261. Inventory Control and Production Systems. 3 Units.

Topics in the planning and control of manufacturing systems. The functions of inventory, determination of order quantities and safety stocks, alternative inventory replenishment systems, item forecasting, production-inventory systems, materials requirements planning (MRP), just-in-time systems, master and operations scheduling, supply chain management, and service operations. Limited enrollment. Prerequisite: 120, or STATS 116, or equivalent.

MSE 262. Supply Chain Management. 3 Units.

Definition of a supply chain; coordination difficulties; pitfalls and opportunities in supply chain management; inventory/service tradeoffs; performance measurement and incentives. Global supply chain management; mass customization; supplier management. Design and redesign of products and processes for supply chain management; tools for analysis; industrial applications; current industry initiatives. Enrollment limited to 50. Admission determined in the first class meeting. Prerequisite: 260 or 261.

MSE 263. Healthcare Operations Management. 3 Units.

With healthcare spending in the US exceeding 17% of GDP and growing, improvements in the quality and efficiency of healthcare services are urgently needed. This class focuses on the use of analytical tools to support efficient and effective delivery of health care. Topics include quality control and management, capacity planning, resource allocation, management of patient flows, and scheduling. Prerequisites: basic knowledge of Excel spreadsheets, probability, and optimization.

MSE 264. Sustainable Product Development and Manufacturing. 3-4 Units.

For SCPD students only in 2014; not offered on-campus. Strategies and techniques for development of sustainable products and manufacturing processes. Topics: strategic decisions in new product development when environmental and resource externalities are accounted for; effect of regulatory requirements on ability of a firm to achieve its business objectives; contributions of sustainable products/processes to the firm's competitive advantage and operational efficiency and to enabling entrepreneurial opportunities; industrial ecology and life cycle analysis techniques in integrating traditional product development requirements with those of the environment and society. May be repeatable for credit once.

MSE 268. Operations Strategy. 3 Units.

The development and implementation of the operations functional strategy. The integration of operations strategy with business and corporate strategies of a manufacturing-based firm. Topics: types and characteristics of manufacturing technologies, quality management, capacity planning and facilities choice, organization and control of operations, and operations' role in corporate strategy. Prerequisites: 260 or 261, or equivalent experience.

MSE 270. Strategy in Technology-Based Companies. 3-4 Units.

For graduate students only. Introduction to the basic concepts of strategy, with emphasis on high technology firms. Topics: competitive positioning, resource-based perspectives, co-opetition and standards setting, and complexity/evolutionary perspectives. Limited enrollment.

MSE 271. Global Entrepreneurial Marketing. 3-4 Units.

Skills needed to market new technology-based products to customers around the world. Case method discussions. Cases include startups and global high tech firms. Course themes: marketing toolkit, targeting markets and customers, product marketing and management, partners and distribution, sales and negotiation, and outbound marketing. Team-based take-home final exam. Limited enrollment. Admission by application.

MSE 272. Startup Boards. 3 Units.

Accelerate your startup through hands-on guidance from your own "board of directors" comprised of venture capitalists and experienced entrepreneurs. Like real startup boards, your board will help your team identify critical milestones, assist in achieving them, and hold your team accountable through regular board meetings. Learn how to avoid common mistakes that lead to ineffective board meetings, fired CEOs, and startup failures. Experience the other side of the table as a board member for another startup and learn the principles of effective board services. Topics include building boards, managing board meetings, making strategic decisions, executing board responsibilities, and replacing CEOs. Limited enrollment. Admission by application. Preference given to teams with demonstrated commitment to a viable startup business.

MSE 273. Technology Venture Formation. 3-4 Units.

Open to graduate students interested in technology driven start-ups. Provides the experience of an early-stage entrepreneur seeking initial investment, including: team building, opportunity assessment, customer development, go-to-market strategy, and IP. Teaching team includes serial entrepreneurs and venture capitalists. Student teams validate the business model using R&D plans and financial projections, and define milestones for raising and using venture capital. Final exam is an investment pitch delivered to a panel of top tier VC partners. In addition to lectures, teams interact with mentors and teaching team weekly. Enrollment by application: <http://www.stanford.edu/class/msande273>. Recommended: 270, 271, or equivalent.

MSE 274. Dynamic Entrepreneurial Strategy. 3 Units.

Primarily for graduate students. How entrepreneurial strategy focuses on creating structural change or responding to change induced externally. Grabber-holder dynamics as an analytical framework for developing entrepreneurial strategy to increase success in creating and shaping the diffusion of new technology or product innovation dynamics. Topics: First mover versus follower advantage in an emerging market; latecomer advantage and strategy in a mature market; strategy to break through stagnation; and strategy to turn danger into opportunity. Modeling, case studies, and term project.

MSE 276. Entrepreneurial Management and Finance. 3 Units.

For graduate students only, with a preference for engineering and science majors. Emphasis on managing high-growth, early-stage enterprises, especially those with innovation-based products and services. Students work in teams to develop skills and approaches necessary to becoming effective entrepreneurial leaders and managers. Topics include assessing risk, understanding business models, analyzing key operational metrics, modeling cash flow and capital requirements, evaluating sources of financing, structuring and negotiating investments, managing organizational culture and incentives, managing the interplay between ownership and growth, and handling adversity and failure. Limited enrollment. Admission by application. Recommended: basic accounting.

MSE 277. Creativity and Innovation. 3-4 Units.

Experiential course explores factors that promote and inhibit creativity and innovation in individuals, teams, and organizations. Teaches creativity tools using workshops, case studies, field trips, expert guests, and team design challenges. Enrollment limited to 40. Admission by application. See <http://dschool.stanford.edu/classes>.

MSE 278. Patent Law and Strategy for Innovators and Entrepreneurs. 2-3 Units.

Inventors and entrepreneurs have four concerns related to patent law: protecting their inventions in the very early stages of product development, determining the patentability of their invention, avoiding infringement of a competitor's patent, and leveraging their patent as a business asset. This course will address each of these concerns through the application of law cases and business cases to an invention of the Student's choice. Although listed as a ME/MSE course, the course is not specific to any discipline or technology.

Same as: ME 208

MSE 279A. Entrepreneurial Leadership. 1 Unit.

This seminar explores a wide range of topics related to entrepreneurial leadership through class discussions, case studies, field trips, and guest speakers. It is part of the DFJ Entrepreneurial Leaders Fellowship, which requires an application during Fall quarter. Details can be found at: <http://stvp.stanford.edu/dfj/>.

MSE 279B. Entrepreneurial Leadership. 1 Unit.

This seminar explores a wide range of topics related to entrepreneurial leadership through class discussions, case studies, field trips, and guest speakers. It is part of the DFJ Entrepreneurial Leaders Fellowship, which requires an application during Fall quarter. Details can be found at: <http://stvp.stanford.edu/dfj/>.

MSE 280. Organizational Behavior: Evidence in Action. 3-4 Units.

Organization theory; concepts and functions of management; behavior of the individual, work group, and organization. Emphasis is on cases and related discussion. Enrollment limited; priority to MS&E students. Autumn Quarter section is restricted to SCPD students; the class will not be available to on-campus students in the Autumn Quarter.

MSE 282. Transformational Leadership. 3 Units.

The personal, team-based and organizational skills needed to become a transformative leader. Case method discussions and lectures. Themes include: personal transformation; the inside-out effect, group transformation; cross-functional teams; re-engineering; rapid - non-profit and for profit - organizational transformation; and social transformation. Course includes a group project that is defined and approved during the first two weeks of class. Limited enrollment. Graduate students only. Admission by application. Prerequisite: 180 or 280.

MSE 283. Scaling up Excellence in Organizations. 4 Units.

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.

MSE 284. Designing Modern Work Organizations. 3 Units.

This practice-based experiential lab course is geared toward MS&E masters students. Students will master the concepts of organizational design, with an emphasis on applying them to modern challenges (technology, growth, globalization, and the modern workforce). Students will also gain mastery of skills necessary for success in today's workplace (working in teams, communicating verbally, presenting project work). Guest speakers from industry will present real-world challenges related to class concepts. Students will complete a quarter-long project designing and managing an actual online organization. Limited to 25. Admission by application.

MSE 292. Health Policy Modeling. 3 Units.

Primarily for master's students; also open to undergraduates and doctoral students. The application of mathematical, statistical, economic, and systems models to problems in health policy. Areas include: disease screening, prevention, and treatment; assessment of new technologies; bioterrorism response; and drug control policies.

MSE 293. Technology and National Security. 3 Units.

The interaction of technology and national security policy from the perspective of history to implications for the new security imperative, homeland defense. Key technologies in nuclear and biological weapons, military platforms, and intelligence gathering. Policy issues from the point of view of U.S. and other nations. The impact of terrorist threat. Guest lecturers include key participants in the development of technology and/or policy.

Same as: MSE 193

MSE 294. Climate Policy Analysis. 3 Units.

Design and application of formal analytical methods in climate policy development. Issues include instrument design, technology development, resource management, multiparty negotiation, and dealing with complexity and uncertainty. Links among art, theory, and practice. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy making application. Prerequisites: ECON 50, MS&E 211, MS&E 252, or equivalents, or permission of instructor.

MSE 295. Energy Policy Analysis. 3 Units.

Design and application of formal analytical methods for policy and technology assessments of energy efficiency and renewable energy options. Emphasis is on integrated use of modeling tools from diverse methodologies and requirements for policy and corporate strategy development. Prerequisites: ECON 50, MS&E 211, MS&E 252, or equivalents, or permission of instructor.

MSE 299. Voluntary Social Systems. 1-3 Unit.

Ethical theory, feasibility, and desirability of a social order in which coercion by individuals and government is minimized and people pursue ends on a voluntary basis. Topics: efficacy and ethics; use rights for property; contracts and torts; spontaneous order and free markets; crime and punishment based on restitution; guardian-ward theory for dealing with incompetents; the effects of state action-hypothesis of reverse results; applications to help the needy, armed intervention, victimless crimes, and environmental protection; transition strategies to a voluntary society.

MSE 300. Ph.D. Qualifying Tutorial or Paper. 1-3 Unit.

Restricted to Ph.D. students assigned tutorials as part of the MS&E Ph.D. qualifying process. Enrollment optional.

MSE 301. Dissertation Research. 1-15 Unit.

Prerequisite: doctoral candidacy.

MSE 310. Linear Programming. 3 Units.

Formulation of standard linear programming models. Theory of polyhedral convex sets, linear inequalities, alternative theorems, and duality. Variants of the simplex method and the state of art interior-point algorithms. Sensitivity analyses, economic interpretations, and primal-dual methods. Relaxations of harder optimization problems and recent convex conic linear programs. Applications include game equilibrium facility location. Prerequisite: MATH 113 or consent of instructor.

MSE 311. Optimization. 3 Units.

Applications, theories, and algorithms for finite-dimensional linear and nonlinear optimization problems with continuous variables. Elements of convex analysis, first- and second-order optimality conditions, sensitivity and duality. Algorithms for unconstrained optimization, and linearly and nonlinearly constrained problems. Modern applications in communication, game theory, auction, and economics. Prerequisites: MATH 113, 115, or equivalent.

MSE 312. Advanced Methods in Numerical Optimization. 3 Units.

Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.

Same as: CME 334

MSE 314. Linear and Conic Optimization with Applications. 3 Units.

Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

Same as: CME 336

MSE 315. Numerical Optimization. 3 Units.

Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

Same as: CME 304

MSE 316. Discrete Mathematics and Algorithms. 3 Units.

Topics: Basic Algebraic Graph Theory, Matroids and Minimum Spanning Trees, Submodularity and Maximum Flow, NP-Hardness, Approximation Algorithms, Randomized Algorithms, The Probabilistic Method, and Spectral Sparsification using Effective Resistances. Topics will be illustrated with applications from Distributed Computing, Machine Learning, and large-scale Optimization. Prerequisites: CS 261 is highly recommended, although not required.

Same as: CME 305

MSE 317. Algorithms for Modern Data Models. 3 Units.

We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models.

Prerequisite: Algorithms at the level of CS 261.

Same as: CS 263

MSE 318. Large-Scale Numerical Optimization. 3 Units.

The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basis factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods.

Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335.

Same as: CME 338

MSE 319. Approximation Algorithms. 3 Units.

Combinatorial and mathematical programming techniques to derive approximation algorithms for NP-hard optimization problems. Possible topics include: greedy algorithms for vertex/set cover; rounding LP relaxations of integer programs; primal-dual algorithms; semidefinite relaxations. May be repeated for credit. Prerequisites: 112 or CS 161.

MSE 321. Stochastic Systems. 3 Units.

Topics in stochastic processes, emphasizing applications. Markov chains in discrete and continuous time; Markov processes in general state space; Lyapunov functions; regenerative process theory; renewal theory; martingales, Brownian motion, and diffusion processes. Application to queueing theory, storage theory, reliability, and finance. Prerequisites: 221 or STATS 217; MATH 113, 115. (Glynn).

MSE 322. Stochastic Calculus and Control. 3 Units.

Integral, existence and uniqueness of solutions of stochastic differential equations (SDEs), diffusion approximations, numerical solutions of SDEs, controlled diffusions and the Hamilton-Jacobi-Bellman equation, and statistical inference of SDEs. Applications to finance and queueing theory. Prerequisites: 221 or STATS 217; MATH 113, 115.

MSE 331. Introduction to Computational Social Science. 3 Units.

With a vast amount of data now collected on our online and offline actions -- from what we buy, to where we travel, to who we interact with -- we have an unprecedented opportunity to study complex social systems. This opportunity, however, comes with scientific, engineering, and ethical challenges. In this hands-on course, we develop ideas from computer science and statistics to address problems in sociology, economics, political science, and beyond. We cover techniques for collecting and parsing data, methods for large-scale machine learning, and principles for effectively communicating results. To see how these techniques are applied in practice, we discuss recent research findings in a variety of areas.

MSE 333. Social Algorithms. 1 Unit.

This seminar will introduce students to research in the field of social algorithms, including networked markets, collective decision making, recommendation and reputation systems, prediction markets, social choice theory, and models of influence and contagion.

MSE 335. Queueing and Scheduling in Processing Networks. 3 Units.

Advanced stochastic modeling and control of systems involving queueing and scheduling operations. Stability analysis of queueing systems. Key results on single queues and queueing networks. Controlled queueing systems. Dynamic routing and scheduling in processing networks. Applications to modeling, analysis and performance engineering of computing systems, communication networks, flexible manufacturing, and service systems. Prerequisite: 221 or equivalent.

MSE 336. Platform and Marketplace Design. 3 Units.

The last decade has witnessed a meteoric rise in the number of online markets and platforms competing with traditional mechanisms of trade. Examples of such markets include online marketplaces for goods, such as eBay; online dating markets; markets for shared resources, such as Lyft, Uber, and Airbnb; and online labor markets. We will review recent research that aims to both understand and design such markets. Emphasis on mathematical modeling and methodology, with a view towards preparing Ph.D. students for research in this area. Prerequisites: Mathematical maturity; 300-level background in optimization and probability; prior exposure to game theory.

MSE 337. Spectral Graph Theory and Algorithmic Applications. 3 Units.

Brings students to the forefront of a very active area of research. Reviews classic results relating graph expansion and spectra, random walks, random spanning trees, and their electrical network representation. Covers recent progress on graph sparsification, Kadison-Singer problem and approximation algorithms for traveling salesman problems.

Same as: CME 337

MSE 338. Advanced Topics in Information Science and Technology. 3 Units.

Advanced material in this area is sometimes taught for the first time as a topics course. Prerequisite: consent of instructor.

MSE 347. Credit Risk: Modeling and Management. 3 Units.

Credit risk modeling, valuation, and hedging emphasizing underlying economic, probabilistic, and statistical concepts. Point processes and their compensators. Structural, incomplete information and reduced form approaches. Single name products: corporate bonds, equity, equity options, credit and equity default swaps, forwards and swaptions. Multiname modeling: index and tranche swaps and options, collateralized debt obligations. Implementation, calibration and testing of models. Industry and market practice. Data and implementation driven group projects that focus on problems in the financial industry.

MSE 348. Optimization of Uncertainty and Applications in Finance. 3 Units.

How to make optimal decisions in the presence of uncertainty, solution techniques for large-scale systems resulting from decision problems under uncertainty, and applications in finance. Decision trees, utility, two-stage and multi-stage decision problems, approaches to stochastic programming, model formulation; large-scale systems, Benders and Dantzig-Wolfe decomposition, Monte Carlo sampling and variance reduction techniques, risk management, portfolio optimization, asset-liability management, mortgage finance. Projects involving the practical application of optimization under uncertainty to financial planning.

MSE 351. Dynamic Programming and Stochastic Control. 3 Units.

Markov population decision chains in discrete and continuous time. Risk posture. Present value and Cesaro overtaking optimality. Optimal stopping. Successive approximation, policy improvement, and linear programming methods. Team decisions and stochastic programs; quadratic costs and certainty equivalents. Maximum principle. Controlled diffusions. Examples from inventory, overbooking, options, investment, queues, reliability, quality, capacity, transportation. MATLAB. Prerequisites: MATH 113, 115; Markov chains; linear programming.

MSE 352. Decision Analysis II: Professional Decision Analysis. 3-4 Units.

How to organize the decision conversation, the role of the decision analysis cycle and the model sequence, assessing the quality of decisions, framing decisions, the decision hierarchy, strategy tables for alternative development, creating spare and effective decision diagrams, biases in assessment, knowledge maps, uncertainty about probability. Sensitivity analysis, approximations, value of revelation, joint information, options, flexibility, bidding, assessing and using corporate risk attitude, risk sharing and scaling, and decisions involving health and safety. See 353 for continuation. Prerequisite: 252.

MSE 353. Decision Analysis III: Frontiers of Decision Analysis. 3 Units.

The concept of decision composite; probabilistic insurance and other challenges to the normative approach; the relationship of decision analysis to classical inference and data analysis procedures; the likelihood and exchangeability principles; inference, decision, and experimentation using conjugate distributions; developing a risk attitude based on general properties; alternative decision aiding practices such as analytic hierarchy and fuzzy approaches. Student presentations on current research. Goal is to prepare doctoral students for research. Prerequisite: 352.

MSE 355. Influence Diagrams and Probabilistic Networks. 3 Units.

Network representations for reasoning under uncertainty: influence diagrams, belief networks, and Markov networks. Structuring and assessment of decision problems under uncertainty. Learning from evidence. Conditional independence and requisite information. Node reductions. Belief propagation and revision. Simulation. Linear-quadratic-Gaussian decision models and Kalman filters. Dynamic processes. Bayesian meta-analysis. Prerequisites: 220, 252, or equivalents, or consent of instructor.

MSE 365. Advanced Models in Operations Management. 3 Units.

Primarily for doctoral students. Focus on quantitative models dealing with sustainability and related to operations management. Prerequisite: consent of instructor. May be repeated for credit.

MSE 371. Innovation and Strategic Change. 2-3 Units.

Doctoral research seminar, limited to Ph.D. students. Current research on innovation strategy. Topics: scientific discovery, innovation search, organizational learning, evolutionary approaches, and incremental and radical change. Topics change yearly. Recommended: course in statistics or research methods.

MSE 372. Entrepreneurship Doctoral Research Seminar. 1-3 Unit.

Classic and current research on entrepreneurship. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor.

MSE 374. Dynamic Corporate Strategy. 3 Units.

Restricted to Ph.D. students. Research on the creation and shaping of disruptive industry dynamics and how companies can formulate and implement strategies to excel in such changing environments. Dynamic system model approach; case studies. Prerequisites: 201 or equivalent, 274.

MSE 375. Research on Entrepreneurship. 3 Units.

Restricted to Ph.D. students. Organization theory, economics, and strategy perspectives. Limited enrollment. Prerequisites: SOC 360 or equivalent, and consent of instructor.

MSE 376. Strategy Doctoral Research Seminar. 3 Units.

Classic and current research on business and corporate strategy. Limited enrollment, restricted to PhD students. Prerequisites: SOC 363 or equivalent, and permission of instructor. Course may be repeated for credit.

MSE 380. Doctoral Research Seminar in Organizations. 3 Units.

Limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

MSE 381. Doctoral Research Seminar in Work, Technology, and Organization. 2-3 Units.

Enrollment limited to Ph.D. students. Topics from current published literature and working papers. Content varies. Prerequisite: consent of instructor.

MSE 383. Doctoral Seminar on Ethnographic Research. 3 Units.

For graduate students; upper-level undergraduates with consent of instructor. Ethnosemantic interviewing and participant observation. Techniques for taking, managing, and analyzing field notes and other qualitative data. 15 hours per week outside class collecting and analyzing own data. Methods texts and ethnographies offer examples of how to analyze and communicate ethnographic data. Prerequisite: consent of instructor. (Barley).

MSE 384. Groups and Teams. 3 Units.

Research on groups and teams in organizations from the perspective of organizational behavior and social psychology. Topics include group effectiveness, norms, group composition, diversity, conflict, group dynamics, temporal issues in groups, geographically distributed teams, and intergroup relations.

MSE 388. Themes in Contemporary Meso-level Field Research. 3 Units.

Doctoral research seminar, limited to Ph.D. students. Current meso-level field research on organizational behavior, especially work and coordination. Topics: work design, job design, roles, teams, organizational change and learning, knowledge management, performance. Focus on understanding theory development and research design in contemporary field research. Topics change yearly. Recommended: course in statistics or research methods.

MSE 389. Seminar on Organizational Theory. 5 Units.

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

Same as: EDUC 375A, SOC 363A

MSE 390. Doctoral Research Seminar in Health Systems Modeling. 1-3 Unit.

Restricted to PhD students, or by consent of instructor. Doctoral research seminar covering current topics in health policy, health systems modeling, and health innovation. May be repeated for credit.

MSE 391. Doctoral Research Seminar in Energy-Environmental Systems Modeling and Analysis. 1-3 Unit.

Restricted to PhD students, or by consent of instructor. Doctoral research seminar covering current topics in energy and environmental modeling and analysis. Current emphasis on approaches to incorporation of uncertainty and technology dynamics into complex systems models. May be repeated for credit.

MSE 401. Data Science Consulting Workshop. 1 Unit.

Students participate as consultants in the Data Science Drop-in, the department's free consulting service for members of the Stanford community. Participants learn to work with clients, help analyze data, and prepare formal written reports. May be repeated for credit. Prerequisites: course work in applied statistics or data analysis, and consent of instructor.

MSE 403. Integrative Modeling. 3 Units.

Modeling approaches for examining real life problems: how to get started. Critical thinking in framing and problem formulation leading to actionable solutions and communication of results to decision makers. Models to identify and evaluate multiple objectives/metrics. Models examined include both deterministic and probabilistic components. Overview of optimization and probability, decomposition principles to model large scale problems, appropriate integration of uncertainties into model formulations. Primarily team-project based assignments, with three to four group projects. Project topics drawn from applications with real data. Sample project topics include: optimizing group phone plans for large corporations, life insurance business models, making sense of the health care debate, logistic decision problems. Project teams will critically grade other teams' projects; project reports using provided guidelines. Project presentations throughout the quarter. Prerequisites: 211, 220.

MSE 408. Directed Reading and Research. 1-15 Unit.

Directed study and research on a subject of mutual interest to student and faculty member. Prerequisite: faculty sponsor.nn (Staff).

MSE 441. Policy and Economics Research Roundtable. 1 Unit.

Research in progress or contemplated in policy and economics areas. Emphasis depends on research interests of participants, but is likely to include energy, environment, transportation, or technology policy and analysis. May be repeated for credit.
Same as: PERR

MSE 445. Projects in Wealth Management. 3-4 Units.

Recent theory and standard practice in portfolio design for institutions, individuals, and funds. Student projects and case studies derived from the financial industry.

MSE 447. Systemic and Market Risk : Notes on Recent History, Practice, and Policy. 3 Units.

The global financial crisis of 2007-8 threw into sharp relief the ongoing challenges of understanding risk, the financial system, links with the global economy, and interactions with policy. We will explore elements of the crisis, a few other key events, and ongoing debates about systemic risk. Group projects will explore in more detail past events and current topics in systemic risk. Supplements a rigorous technical curriculum in modern finance with select aspects relevant to understanding the practice and broader context of modern financial activities such as derivatives, financial engineering, and risk management.

MSE 448. Big Financial Data and Algorithmic Trading. 3 Units.

Project course emphasizing the connection between data, models, and reality. Vast amounts of high volume, high frequency observations of financial quotes, orders and transactions are now available, and poses a unique set of challenges. This type of data will be used as the empirical basis for modeling and testing various ideas within the umbrella of algorithmic trading and quantitative modeling related to the dynamics and micro-structure of financial markets. Due to the fact that it is near impossible to perform experiments in finance, there is a need for empirical inference and intuition, any model should also be justified in terms of plausibility that goes beyond pure econometric and data mining approaches. Introductory lectures, followed by real-world type projects to get a hands-on experience with realistic challenges and hone skills needed in the work place. Work in groups on selected projects that will entail obtaining and cleaning the raw data and becoming familiar with techniques and challenges in handling big data sets. Develop a framework for modeling and testing (in computer languages such as Python, C++ , Matlab and R) and prepare presentations to present to the class. Example projects include optimal order execution, developing a market making algorithm, design of an intra-day trading strategy, and modeling the dynamics of the bid and ask. Prerequisites: MS&E 211, 242, 342, or equivalents, some exposure to statistics and programming. Enrollment limited. Admission by application; details at first class.

MSE 450. Lessons in Decision Making. 1 Unit.

Entrepreneurs, senior management consultants, and executives from Fortune 500 companies share real-world stories and insights from their experience in decision making.

MSE 452. Decision Analysis Projects: Helping Real Leaders Make Real Decisions. 3 Units.

A virtual consulting firm directed by professional decision analysts who offer advice and guidance as student teams help local organizations make a current business strategy or public policy decision. Projects for businesses, governments, or other institutions typically include start-up venture funding, R&D portfolio planning, new product or market entry, acquisition or partnering, cost reduction, program design, or regulatory policy decisions. Emphasis is on developing clarity of action and delivering insights to clients. Satisfies MS&E project course requirement. Prerequisite: 252. Recommended: 352.

MSE 453. Decision Analysis Applications: Business Strategy and Public Policy. 2-3 Units.

What are the most essential, efficient, and effective ways that important decisions are being made in the real world? Experienced practitioners provide insights from technically challenging and organizationally complex decisions that they helped analyze for decision makers in businesses, nonprofits, and governments. Both the process and content of such decisions are discussed. Process includes disciplined qualitative and quantitative approaches for framing, structuring, modeling, assessing, evaluating, appraising, and communicating decisions. Content broadly covers business and corporate strategy, venture capital investing, financial derivatives and hedging, R&D portfolio management, new product design, technology manufacturing alternatives, business renewal, real estate investment and development, intellectual property litigation risk, interplanetary contamination risk, energy economics and policies, electric power production, nuclear waste disposal, environmental cleanup of mines, marine fisheries and resource protection, medical diagnosis and treatment options, health insurance plans, hospital risk management, pharmaceutical drug trials and backups, behavioral economics lessons, effective interaction techniques, and implications of social psychology for improved organizational decision making. Prerequisite: 252.

MSE 454. Decision Analysis Seminar. 1 Unit.

Current research and related topics presented by doctoral students and invited speakers. May be repeated for credit. Prerequisite: 252.

MSE 464. Global Project Coordination. 3-4 Units.

Students engage in projects that are global in nature and related to the planning, design, and operations of supply chains, marketing, manufacturing, and product development processes. Stanford students work with students from an overseas university in teams of 6-8, using email, teleconferencing, and videoconferencing to meet on a regular basis. As part of the course, students travel to Hong Kong during Stanford's spring break. Applications due by November 15. Information session on October 29. Please see https://stanford.qualtrics.com/SE/?SID=SV_3a8ZBx2NWB8p73T for more information.

MSE 467. Strategic Operations Consulting. 3 Units.

Restricted to MS&E masters students. Guided by industry practitioners, students work in teams to conduct an in-depth consulting project for a sponsoring company, assessing operational challenges and developing effective solutions. Projects range from the planning, design, and operation of supply chains to manufacturing to new product introduction. Emphasis is on developing diagnostic skills and designing effective and actionable solutions that provide new insights to clients. Students will be taught and coached on business writing and presentation skills. Projects culminate with a comprehensive presentation of findings and recommended actions to the sponsor. Satisfies MS&E project course requirement. Prerequisites: 260 or 261. Admission by application, limited enrollment.

MSE 472. Entrepreneurial Thought Leaders' Seminar. 1 Unit.

Entrepreneurial leaders share lessons from real-world experiences across entrepreneurial settings. ETL speakers include entrepreneurs, leaders from global technology companies, venture capitalists, and best-selling authors. Half-hour talks followed by half hour of class interaction. Required web discussion. May be repeated for credit.

MSE 476. Entrepreneurship Through the Lens of Venture Capital: Venture Capital From Past to Present. 2 Units.

Explores changes in the venture capital industry: rise of Silicon Valley and Sand Hill Road, investing in the dot-com bubble, incubators and accelerators, equity crowd funding platform, and different models of venture capital. Explores how companies are funded, grown, and scale by meeting with individuals who have been at the forefront of this change. See www.lensofvc.com.

MSE 478. The Spirit of Entrepreneurship. 2 Units.

This course uses the speakers from the Entrepreneurial Thought Leader seminar (MS&E472) to drive research and discussion about what makes an entrepreneur successful. Students meet before and after MS&E 472 to prepare for and debrief after the sessions. It is part of the DFJ Entrepreneurial Leaders Fellowship, which requires an application during Fall quarter. Details can be found at: <http://stvp.stanford.edu/dfj/>.

MSE 487. D.ORG: PROTOTYPING ORGANIZATIONAL CHANGE. 2-4 Units.

d.org will send outstanding, proven design thinkers into organizations to jump-start organizational R&D; experiments. Students will work directly with senior leaders to prototype ways to reinforce culture through policies, rituals, and behavioral norms.

MSE 488. Prototyping and Rapid Experiment Lab. 4 Units.

Gain a deeper understanding of the prototyping and user feedback parts of the design thinking process with a focus on rapid experimentation. Explore prototyping and user feedback that happens in later stages of iteration when design ideas are somewhat gelled, but designers are still uncertain about whether the design will meet the need and evoke the response intended. Introduce and generate creative ways to discover what users will do in the real world with the designs we envision. For seasoned students who thoroughly understand the design thinking process or, more broadly, human-centered design and now want to focus on one later stage aspect of it in more depth. An application process will happen in Fall Quarter. Please contact the d.school for more details.

MSE 489. d.Leadership: Design Leadership in Context. 1-3 Unit.

d.Leadership is a course that teaches the coaching and leadership skills needed to drive good design process in groups. d.Leaders will work on real projects driving design projects within organizations, and gain real world skills as they experiment with their leadership style while coaching innovation projects. Take this course if you are inspired by past design classes and want skills to lead design projects beyond Stanford. Preference given to students who have taken other Design Group or d.school classes. Admission by application. See dschool.stanford.edu/classes for more information.

Same as: ME 368

MSE 490. Health Operations and Policy: Thought Leaders Seminar. 1 Unit.

Thought leaders in healthcare policy and healthcare design and delivery share ideas about how to improve our healthcare system. Speakers include individuals from government, industry, and academia with a broad range of experience and perspective.

MSE 802. TGR Dissertation. 0 Units.

Marketing Courses

MKTG 240. Marketing Management. 3 Units.

The objectives of this course are to introduce students to the substantive and procedural aspects of marketing management and to sharpen skills for critical analytical thinking and effective communication. Specifically, the goals are to introduce students to marketing strategy and to the elements of marketing analysis: customer analysis, competitor analysis, and company analysis; to familiarize students with the elements of the marketing mix (product strategy, pricing, advertising and promotion, and distribution), and to enhance problem solving and decision-making abilities in these operational areas of marketing; and to provide students with a forum (both written and verbal) for presenting and defending their own recommendations, and for critically examining and discussing the recommendations of others.

MKTG 249. MSx: Marketing. 3 Units.

Every business has two kinds of problems: 1) Not having customers and 2) everything else. Marketing addresses the first problem. With increased access to information and fast-changing technology the role of marketing has broadened significantly. To attract and retain profitable customers, managers must identify and measure consumers' needs and wants, assess the competitive environment, select the most appropriate customer targets, and then develop multi-faceted marketing programs that satisfy consumers' needs better than the competition. The objective of this class is to provide you with perspectives on classical and modern day marketing, and to teach you how to take a high level strategic approach towards contemporary marketing challenges.

MKTG 335. Product Launch. 3 Units.

Our focus is on the question, "When launching a product, what are the framing issues that will help determine success?" In particular, we will provide you with tools to analyze market situations and determine whether it makes sense to launch a product or engage in a marketing-related investment. The course is not designed to cover issues such as execution of a strategy (although we will touch on this a bit), but on whether to enter a market to begin with. Thus, the course is decision oriented; we want you to think about market entry decisions and how you would make them. The tools that you will be provided won't consist of equations; instead, we'll arm you with a set of questions to ask, whose answers will help you make better decisions. This course is an advanced applications marketing course. Unlike the base core course that is designed to cover every basic topic in marketing, here we focus on a number of basic questions and explore them in depth. Although we will have some lectures for background, the bulk of this endeavor will be accomplished through case discussions. In other words, we can't and won't cover everything, as this course is not designed to be comprehensive. We are going to rely on your academic background in marketing to cover the basics; here and there, it is possible that some material will be a review of what you've done before (there's nothing wrong with a little *de ja vu*). Unfortunately, due to the tight schedule we will not be able to cover any of the basics that are not already included in the course material. The course includes, cases, lectures, and guest lectures.

MKTG 344. Marketing Research. 3 Units.

Market intelligence is of value to firms. To understand their markets, firms need to answer questions such as: How large is the market for a product, what is important for the target segment? How does change in the product design affect profits? This course aims to help students ask relevant questions and find data-driven answers to them. The main objectives are to equip students with: 1) an understanding of the value of data - what intelligence it can and cannot provide, 2) exposure to state-of-the-art quantitative tools such as conjoint analysis and cluster analysis to analyze the data, and 3) sufficient hands-on experience with these tools for answering students' own marketing research questions from the perspective of an entrepreneur, marketer or a consultant. The course is designed to address substantive marketing problems such as: market segmentation, targeting, forecasting demand, pricing, and developing new products. We will use a mix of lectures, exercises, cases and a project to learn the material.

MKTG 353. Social Brands. 4 Units.

As savvy consumers are increasingly participating in brands rather than merely receiving their messages, how do leading organizations stoke conversations, co-create experiences and stories, and build engaging relationships with consumers? Moreover, how do they harness social media to build a brand, and empower employees and consumers to share these brand stories with others? Social Brands is a hands-on, project-based course that will draw brain power from the GSB, School of Engineering, and other Stanford graduate programs to collaboratively and creatively explore these questions. While we examine various inspiring examples of social brands, we will find that the rules are yet to be written. This emerging genre of social commerce and marketing is the "Wild West" and students working in mixed teams will be challenged to design and launch their own social experiments to form their own hypotheses. Assignments will push student teams to audit a brand, focus on a strategic goal, and design a social interaction that invites people on campus to participate in an extraordinary personal experience with that brand. Teams will then capture this experience in short videos and compile them into a story -- one that highlights the brand experience they orchestrated, its impact, and their key learnings. This course will integrate approaches from the d.school and marketing curriculum - including brand strategy, storytelling fundamentals, human-centered methods, rapid prototyping, and a bias toward action. This is a class for those that want to learn by doing and creating. MKTG 353 - Social Brands class website: <http://www.stanford.edu/class/mktg353/>.

MKTG 355. Designing for Happiness. 4 Units.

We assume happiness is stable, an endpoint to achieve or goal to chase. It's not. What we think drives our happiness often doesn't. So what does? And how can knowing this help us create strong companies and brands? Understanding happiness is crucial to building successful relationships, products, and organizations. Yet recent research suggests that our definition of happiness is often confused and misguided. In this class, we explore new data on happiness, focusing on: re-thinking happiness (a happy you) designing happiness (a happy company) spreading happiness (a happy brand) Students will work together to use an iterative design-thinking approach to understand our own definitions of happiness, uncover what really makes us happy (vs. what we think makes us happy), prototype solutions/products to increase our happiness, and design happy companies and brands. The class will be data-driven, drawing on multiple methodologies both quantitative and ethnographic. Throughout the quarter, students will build a class-wide database to investigate real-world happiness data via an *Designing Happiness* app, and test hypotheses about what truly makes them, their teams and their customers happy. This class is recommended for students who plan to be a future entrepreneur building a strong brand, an employee who finds meaning in their work, or someone who wants to understand happiness.

MKTG 365. Marketing Analytics. 4 Units.

Firms operate in an increasingly challenging business environment, with greater competition, more informed customers and rapidly changing market trends. Simultaneously, they also have access to more information about their customers, the marketplace and their competitors than ever before. In this environment, knowing how to use this information to make optimal business decisions is a crucial competitive advantage. Firms often have access to data that they do not know how to use. The objectives of this course are to introduce students to state-of-the-art marketing analytics and to teach them how to practically apply these analytics to real-world business decisions. The following are examples of the types of questions that the course will address: How should a firm determine the prices for its products and services? What is the effect of television advertising on a brand's sales and how should advertising be optimized? What can a firm learn about its customers from online browsing behavior and how can this knowledge be used for targeted advertising and promotions? How should a firm allocate its sales force? How should a firm manage the allocation of its promotional budget in order to maximize its returns? How should the mailing of catalogs or direct mail be targeted to increase response rates? The course will use a mix of lectures, cases, homework assignments and a course project to learn the material. Students do not need to have an advanced statistical background to take this course. Familiarity with the material in an introductory marketing course and an introductory statistics course will be assumed, but necessary material will be reviewed during the course of the quarter as necessary.

MKTG 373. Monetization - Choosing a Business Model. 4 Units.

This course examines the fundamental issues of creating a strategy for monetization and revenue growth within an organization. Students learn about setting an organization's business model design, aligning various functional areas within the company to implement a monetization strategy, and the tradeoffs that occur when choosing amongst profitable monetization policies for the firm. They master concepts, frameworks, and tools to assess an industry and a firm's pricing strategy and business models, and to craft alternatives. They also study the interplay between marketing, salesforces, HR incentives and human capital management, advertising and data and analytics in shaping a winning monetization policy. Topics we will cover include monetizing online content and strategies in ad-driven industries, understanding freemium models and installed-base competition, monetization of consumer data, privacy considerations and the privacy economy, business models from the perspective of investors and venture capitalists, regulatory considerations, and linking monetization to the ability to measure and capture value. We will use a mix of cases and lectures along with extensive participation from industry leaders to bring to light the various issues in class.

MKTG 375. Consumer Behavior. 4 Units.

Contemporary approaches to marketing emphasize the importance of adopting a consumer focus, from determining consumers' wants and needs to shaping their attitudes and ensuring their loyalty. This course provides insight into consumer psychology and the means by which consumer behavior can be influenced or altered. The course has both theoretical and practical objectives in that it will: (1) explore theory and research that is relevant to understanding consumer psychology and behavior, and (2) apply these theories and findings to generate ideas for developing effective marketing techniques and tactics. By shedding light on the psychological underpinnings of consumers' thoughts, attitudes, preferences, needs, and decision-making styles, this course will help students make more insightful and effective marketing decisions. Moreover, because this course takes a broad psychological perspective, it highlights novel ideas for grabbing attention, shaping behavior, and changing people's minds both within and outside of traditional marketing contexts.

MKTG 526. Customer Acquisition for New Ventures. 2 Units.

The focus of this course is on the strategies and methods used by early-stage companies to acquire customers (through outbound or inbound marketing) and to activate them (i.e., to encourage repeat behavior and/or increase the frequency of interaction). Throughout the course, we will examine topics such as search engine marketing (SEM), content marketing, affiliate marketing, social media campaigns, mobile applications, freemium strategies, and the use of web analytics for tracking customer acquisition and conversion. The focus will be mainly on digital marketing channels, and the emphasis will be more B2C than B2B. Instruction will consist of case discussion and guest lectures, with students working in groups to apply their learning to improve the process of customer acquisition.

MKTG 532. Persuasion. 2 Units.

The aim of this course is to provide insight into the psychology of persuasion. We will explore research and theory in this domain and discuss and develop potentially powerful techniques for changing people's attitudes and behaviors. We will apply our insights broadly to examine the features that make for an effective persuasive appeal in a wide range of settings (e.g., an ad, a pitch to investors, etc.), and students will practice designing and implementing persuasive appeals.

MKTG 534. The Travel and Airline Industry. 2 Units.

This class will provide an overview of the travel and hospitality industry focusing on strategy, business models, institutions and innovations. Issues we will cover include pricing and yield management, service quality assessment and loyalty and reward program management within verticals such as airlines, hotels and cruise lines. We will also discuss new innovations such as shared consumption models and the role of online reviews and user generated content in facilitating travel. The class will involve a mix of cases and lectures; a site visit to a Bay Area hotel for a tour of operations and discussion of strategy; and interactions with several industry leaders in the travel space.

MKTG 536. Entrepreneurial Ventures in Luxury Markets. 2 Units.

The broad goal of this Bass Seminar is to apply the key concepts covered in *The Frinky Science of the Human Mind* (GSBGEN 520)* for identifying and proposing new ventures in the "luxury" space. For this course, "luxury" will be viewed in a broader than usual fashion, namely creating distinctive differences to fundamentally change an otherwise mundane product category. An example of such a view will be the venture, Mr., an upscale barbershop in San Francisco, started by two GSB alums, Kumi Walker and Sean Heywood. Another example will be Voss, an upscale brand in the bottled water category. Students in this course will work in groups to identify promising opportunities in the "luxury" space early in the quarter. The groups will then hone their new venture ideas through meetings with entrepreneurs, experts in private equity, product design, etc., who will serve as guest speakers in this course. In this regard, each session will be structured to begin with a guest speaker followed by a brainstorming/ discussion session. The final deliverable will be a business plan that is put together by each group for a new venture in the "luxury" space. nnn*Students who could not take GSBGEN 520 are strongly encouraged to attend preparatory sessions that will be scheduled in the first week of December. Such students may also contact the instructor (shiv_baba@gsb.stanford.edu) to see if they can sit in on some of the GSBGEN 520 sessions that will be relevant for this Bass Seminar.

MKTG 541. Social Brands. 2 Units.

A hands-on two-week survey of Marketing's cutting edge, where bold brands are becoming ever more open, participatory, experiential & experimental. nnnInspired by a smattering of provocative real-world examples and mind-blowing guests, diverse student teams will employ design methods to conceive of and visualize their own creative proposals for how the Stanford GSB itself might engage with the world in radical new ways. Teams will ultimately pitch their final concepts to the GSB's Chief Marketing Officer for consideration, feedback and potential real-world implementation. nnn.

MKTG 542. Designing Story in a Digital World. 1 Unit.

Our world is changing at an incredible pace. We're in the middle of a commerce revolution that is consumer-driven and technology-enabled. Consumer expectations have risen. They want to be inspired by engaging, meaningful experiences, and they want to engage with people and brands that have compelling, data-driven, and authentic stories to share. But how do you develop that story? n nStorytelling has always been a significant part of history, but the means through which the stories have been told has evolved with each civilization. From the oral histories, to the works of scribes, to newspapers, television, and now the Internet, personal narrative has been used to communicate the events of the past. Digital media now combines tradition with technology and allows us to tell stories through voice, text, images, audio, and video. The immersive workshop is structured around three key principles: (1) know your goal, (2) craft your story, and (3) prototype to learn. You will be a part of an ultra-paced design sprint to come up with a compelling story about a brand or person of your choosing, and design the story to be leveraged across digital media.

MKTG 547. Strategic Marketing Communication - Compressed. 2 Units.

The course is designed to sharpen students' grasp of the strategic and tactical aspects of Marketing Communications that lead to competitive advantages in the marketplace. The course will begin a focus on strategy and introduce students to frameworks that address two broad goals of any firm: (1) Establish a competitive advantage by offering a superior customer value proposition and (2) Generate sustainable organic growth. The course will then segue into marketing communication tactics that will enable the firm effectively accomplish its strategic objectives. Here, the concepts and frameworks will only be applicable to traditional approaches (such as the use of television, print, and point-of-purchase promotions) but also to emergent approaches (such as the use of the internet, mobile media, etc.). Designed from the perspective of executives who are often involved in making strategic as well as tactical marketing decisions to solve contemporary business problems, this course is intended for students whose career plans include consulting and entrepreneurial ventures, apart from those thinking of careers in marketing.

MKTG 552. Building Innovative Brands. 2 Units.

Building Innovative Brands is a hands-on two-week dive into how leading brands may leverage a Design Thinking approach to become ever more participatory, experiential and experimental. Together, we will explore how leading organizations stoke conversations, co-create experiences, spark stories and build engaging relationships with consumers. Inspired by provocative real-world examples and industry guests, diverse student teams will employ human-centered design methods to conceive of and visualize their own creative proposals for how a brand could engage in innovative, brand-enhancing new ways. Teams will ultimately pitch their experience design concepts to the program leadership for feedback, consideration and potential real-world implementation.

MKTG 555. Designing Happiness. 2 Units.

We assume happiness is stable, an endpoint to achieve or a goal to "chase." It's not. Recent research suggests that the meaning of happiness changes every 3-4 years. Understanding happiness is crucial to building successful products, organizations and relationships. In this MBA seminar, we explore the data-driven research on happiness, revealing insights about (a) anticipating, (b) understanding, (c) visualizing, (d) spreading, (e) remembering, and (f) creating happiness. Students will work together to use an iterative design-thinking approach to understand our own current definition of happiness, uncover what really makes us happy (vs. what we think makes us happy), prototype solutions/products to increase our present happiness, and develop tools to continually understand and foster happiness as our lives change. The seminar will be data-driven, drawing on multiple methodologies including blogs (<http://www.wefeelfine.org/>), experiments and surveys.

MKTG 575. Consumer Behavior. 2 Units.

Contemporary approaches to marketing emphasize the importance of adopting a consumer focus, from determining consumers' wants and needs, understanding their motivation, to shaping their attitudes and ensuring their loyalty. This course provides insight into consumer psychology and the means by which consumer behavior can be influenced or altered. The course has both theoretical and practical objectives in that we will: (1) explore theory and research that is relevant to understanding consumer psychology, (2) apply these theories and findings to generate novel ideas for effective marketing techniques. By shedding light on the psychological underpinnings of consumers' motivation, attitudes, preferences, and decision-making styles, this course will help students make more insightful and effective marketing decisions, as well as developing novel ideas for grabbing attention, shaping behavior, and changing consumers' minds.

MKTG 622. Behavioral Research in Marketing III: Consumer Behavior Classics. 3 Units.

The purpose of this seminar is to provide PhD level coverage of the major research work carried out in consumer behavior. For each topic considered, a selection of articles with a specific focus on "early classics" will be distributed and discussed. For each topic, our goals will be to determine the main ideas and research questions driving work in each topic area, how these authors positioned their work and tested their ideas, what made these papers "classics," where the gaps are, and what ideas for new research those gaps imply.

MKTG 641. Behavioral Research in Marketing I. 3 Units.

This course prepares the student to do empirical behavioral research. It will cover all aspects of the research process, from hypothesis generation to experimental design to data analysis to writing up your results.

MKTG 642. Behavioral Research in Marketing II: Consumer Behavior. 3 Units.

This PhD seminar provides coverage of the major research carried out in consumer research both in marketing and psychology. A vast set of topics will be covered including conscious and non-conscious consumer goals, motivations, emotions, attention and perception, and consumer decision processes. The course will help students hone their ability to conceptualize, operationalize, and develop research ideas and will provide a grasp of what it takes to be a successful academic in the field of consumer behavior.

MKTG 644. Quantitative Research in Marketing. 4 Units.

The goal of this seminar is to familiarize students with the quantitative marketing literature and develop the process of generating research ideas and topics. Sessions will involve a mix of: (i) a discussion of papers in a particular area in quantitative marketing; and/or (ii) a discussion of students' research ideas with respect to topics. The format will mix student presentations of papers with lectures by the instructor(s). When discussing papers in the literature, the focus will be on the topic and research question and not the methodological approach. When discussing research ideas, students should be able to articulate why their question is interesting, where it fits in the literature and how they would address their question.

MKTG 645. Empirical Analysis of Dynamic Decision Contexts. 3 Units.

This course will focus on empirical tools for analyzing dynamic decision contexts, wherein current actions of firms or consumers have effects on future payoffs, profits and/or competitive conduct. The course will build the relevant material generally, but our applications will be mostly focused on empirical marketing, operations and industrial organization problems. We will have an applied focus overall, emphasizing the practical aspects of implementation, especially programming. The overall aim of the class is to help students obtain the skills to implement these methods in their research. By the end of the class, students are expected to be able to formulate a dynamic decision problem, program it in a language such as Matlab or C, and to estimate the model from data. The course starts with an overview of consumer theory and static models of consumer choice. We build on this material and introduce discrete choice markovian decision problems, and continuous markovian decision problems, and focus on building the computational toolkit for the numerical analysis of these problems. We then move on to specific applications, and discuss multi-agent dynamic equilibrium models. Finally, we discuss recently proposed advanced methods for alleviating computational burden in dynamic models.

MKTG 646. Bayesian Inference: Methods and Applications. 3 Units.

The course aims to develop a thorough understanding of Bayesian inference, with a special focus on empirical applications in marketing. The course will start with a brief theoretical foundation to Bayesian inference and will subsequently focus on empirical methods. Initial topics would include Bayesian linear regression, multivariate regression, importance sampling and its applications. Subsequently, the course will focus on Markov Chain Monte Carlo (MCMC) methods including the Gibbs Sampler and the Metropolis-Hastings algorithm and their applications. The overall focus of the course will be on applying these methods for empirical research using a programming language such as R.

MKTG 661. Attitudes and Persuasion. 3 Units.

This course will provide an overview of recent research on attitudes and persuasion. Content will include broad coverage of the issues of major importance to attitude theory, but will focus on more recent issues and controversies that have captured the interest of researchers in the field. The class will cover research areas such as attitude change, persuasion, and resistance processes; implicit versus explicit attitudes; attitude certainty; cognitive versus affective influences; dissonance and attitudinal ambivalence; selective exposure and biased processing; metacognition; and others. Students who take this course will become familiar with research methods and major issues in attitudes research and will have a better understanding of how individuals form, maintain, and change their evaluations. Throughout the course, students will be encouraged to critique existing research and formulate new research ideas.

MKTG 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

MKTG 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

MKTG 695. Directed Research. 0 Units.

This course is designed to prepare new marketing PhD students for conducting rigorous, independent research. In this course, the student will work closely with a faculty member in collaborative research activities and will become familiar with various aspects of the research process, including developing hypotheses, designing and conducting experiments and/or analyses, and reporting results.

MKTG 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

Materials Science Engineer Courses

MATSCI 10SC. Diamonds from Peanut Butter: Material Technologies and Human History. 2 Units.

Technological importance of materials in history is captured in names: the Stone Age, Bronze Age, Iron Age, and now the Information Age or the Silicon Age. How materials have played, and continue to play, pivotal roles in the development of new technologies.

MATSCI 11SC. Energy Technologies for a Sustainable Future. 2 Units.

Wondering what the buzz is about sustainability, renewable energy, and clean fuels? Meeting the world's growing energy needs in a sustainable fashion is one of the most pressing problems of our time. This class will introduce the scope of the energy problem and define some of the options for sustainable energy. We will look into the scientific basis of sustainable energy technologies, such as solar cells, which convert the energy of the sun directly into electricity, and fuel cells, which convert chemical energy directly into electricity. Other topics will include biofuels, i.e., fuel derived from plant matter, and clean fuels such as hydrogen. The course will emphasize the fundamental science behind the devices and highlight some of the cutting-edge technological issues that are currently being explored. Assigned reading will include books on global energy issues as well as technical reading on the science and engineering of sustainable energy technologies. We will visit several local energy-technology companies, and students will have hands-on lab experience with solar cells, fuel cells, and generators. Students are expected to participate in classroom discussions, attend field trips, carry out laboratory experiments, and complete homework assignments, including a term paper.

MATSCI 81N. Bioengineering Materials to Heal the Body. 3 Units.

Preference to freshmen. How scientists and engineers are designing new materials for surgeon to use in replacing body parts such as heart tissue or the spinal cord. How cells, in the body and transplanted stem cells, communicate with implanted materials. Real-world examples of materials developed for tissue engineering and regenerative medicine therapies. Students identify a clinically important disease or injury that requires a better material, research approaches to the problem, and debate possible engineering solutions.

MATSCI 82N. Science of the Impossible. 3 Units.

Imagine a world where cancer is cured with light, objects can be made invisible, and teleportation is allowed through space and time. The future once envisioned by science fiction writers is now becoming a reality, thanks to advances in materials science and engineering. This seminar will explore 'impossible' technologies - those that have shaped our past and those that promise to revolutionize the future. Attention will be given to both the science and the societal impact of these technologies. We will begin by investigating breakthroughs from the 20th century that seemed impossible in the early 1900s, such as the invention of integrated circuits and the discovery of chemotherapy. We will then discuss the scientific breakthroughs that enabled modern 'impossible' science, such as photodynamic cancer therapeutics, invisibility, and psychokinesis through advanced mind-machine interfaces. Lastly, we will explore technologies currently perceived as completely impossible and brainstorm the breakthroughs needed to make such science fiction a reality. The course will include introductory lectures and in-depth conversations based on readings. Students will also be given the opportunity to lead class discussions on a relevant 'impossible science' topic of their choosing.

MATSCI 100. Undergraduate Independent Study. 1-3 Unit.

Independent study in materials science under supervision of a faculty member.

MATSCI 150. Undergraduate Research. 3-6 Units.

Participation in a research project.

MATSCI 151. Microstructure and Mechanical Properties. 3-4 Units.

Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: MATSCI 163. Undergraduates register in 151 for 4 units; graduates register for 251 in 3 units.

Same as: MATSCI 251

MATSCI 152. Electronic Materials Engineering. 4 Units.

Materials science and engineering for electronic device applications. Kinetic molecular theory and thermally activated processes; band structure; electrical conductivity of metals and semiconductors; intrinsic and extrinsic semiconductors; elementary p-n junction theory; operating principles of light emitting diodes, solar cells, thermoelectric coolers, and transistors. Semiconductor processing including crystal growth, ion implantation, thin film deposition, etching, lithography, and nanomaterials synthesis.

MATSCI 153. Nanostructure and Characterization. 4 Units.

The structure of materials at the nanoscale is in most cases the same crystalline form as the natural phase. Structures of materials such as semiconductors, ceramics, metals, and nanotubes; classification of these materials according to the principles of crystallography. Primary methods of structural characterization, X-ray diffraction, and electron microscopy; their applications to study such nanostructures.

MATSCI 154. Thermodynamic Evaluation of Green Energy Technologies. 4 Units.

Understand the thermodynamics and efficiency limits of modern green technologies such as carbon dioxide capture from air, fuel cells, batteries, and solar-thermal power.

MATSCI 155. Nanomaterials Synthesis. 4 Units.

The science of synthesis of nanometer scale materials. Examples including solution phase synthesis of nanoparticles, the vapor-liquid-solid approach to growing nanowires, formation of mesoporous materials from block-copolymer solutions, and formation of photonic crystals. Relationship of the synthesis phenomena to the materials science driving forces and kinetic mechanisms. Materials science concepts including capillarity, Gibbs free energy, phase diagrams, and driving forces.

MATSCI 156. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units. Same as: EE 293A, ENERGY 293A, MATSCI 256

MATSCI 157. Quantum Mechanics of Nanoscale Materials. 4 Units.

Introduction to quantum mechanics and its application to the properties of materials. No prior background beyond a working knowledge of calculus and high school physics is presumed. Topics include: The Schrodinger equation and applications to understanding of the properties of quantum dots, semiconductor heterostructures, nanowires, and bulk solids. Tunneling processes and applications to nanoscale devices; the scanning tunneling microscope, and quantum cascade lasers. Simple models for the electronic properties and band structure of materials including semiconductors, insulators and metals and applications to semiconductor devices. Time-dependent perturbation theory and interaction of light with materials with applications to laser technology.

MATSCI 159Q. Japanese Companies and Japanese Society. 3 Units.

Preference to sophomores. The structure of a Japanese company from the point of view of Japanese society. Visiting researchers from Japanese companies give presentations on their research enterprise. The Japanese research ethic. The home campus equivalent of a Kyoto SCTI course. Same as: ENGR 159Q

MATSCI 160. Nanomaterials Laboratory. 4 Units.

Preference to sophomores and juniors. Hands-on approach to synthesis and characterization of nanoscale materials. How to make, pattern, and analyze the latest nanotech materials, including nanoparticles, nanowires, and self-assembled monolayers. Techniques such as soft lithography, self-assembly, and surface functionalization. The VLS mechanism of nanowire growth, nanoparticle size control, self-assembly mechanisms, and surface energy considerations. Laboratory projects. Enrollment limited to 24.

MATSCI 161. Nanocharacterization Laboratory. 3-4 Units.

Students use optical microscopy, x-ray diffraction, scanning electron microscopy, x-ray photoelectron spectroscopy, atomic force microscopy and other techniques to characterize recently discovered perovskite semiconductors that can be used to make highly efficient solar cells. This course fulfills the Writing in the Major Requirement for MSE undergrads. Instruction on writing, statistics, generating effective plots with curve fits, using databases to find information and giving oral scientific presentations is given. Instruction on characterization techniques is provided, but it is expected that the students will have already taken a course like MATSCI 153 that covers the fundamentals of the techniques. The emphasis on this course is on doing nanocharacterization experiments and writing up the results. Undergraduates register for 161 for 4 units; graduates register for 171 for 3 units.

Same as: MATSCI 171

MATSCI 162. X-Ray Diffraction Laboratory. 3-4 Units.

Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. Undergraduates register for 162 for 4 units; graduates register for 172 for 3 units.

Same as: MATSCI 172, PHOTON 172

MATSCI 163. Mechanical Behavior Laboratory. 3-4 Units.

Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50. Undergraduates register for 163 in 4 units; graduates register in 173 for 3 units.

Same as: MATSCI 173

MATSCI 164. Electronic and Photonic Materials and Devices Laboratory. 3-4 Units.

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: 152 or 199 or consent of instructor. Undergraduates register in 164 for 4 units; graduates register in 174 for 3 units.

Same as: MATSCI 174

MATSCI 165. Nanoscale Materials Physics Computation Laboratory. 3-4 Units.

Computational exploration of fundamental topics in materials science using Java-based computation and visualization tools. Emphasis is on the atomic-scale origins of macroscopic materials phenomena. Simulation methods include molecular dynamics and Monte Carlo with applications in thermodynamics, kinetics, and topics in statistical mechanics. Required prerequisites: Freshman-level physics, undergraduate thermodynamics. Undergraduates register for 165 for 4 units; graduates register for 175 for 3 units.

Same as: MATSCI 175

MATSCI 171. Nanocharacterization Laboratory. 3-4 Units.

Students use optical microscopy, x-ray diffraction, scanning electron microscopy, x-ray photoelectron spectroscopy, atomic force microscopy and other techniques to characterize recently discovered perovskite semiconductors that can be used to make highly efficient solar cells. This course fulfills the Writing in the Major Requirement for MSE undergrads. Instruction on writing, statistics, generating effective plots with curve fits, using databases to find information and giving oral scientific presentations is given. Instruction on characterization techniques is provided, but it is expected that the students will have already taken a course like MATSCI 153 that covers the fundamentals of the techniques. The emphasis on this course is on doing nanocharacterization experiments and writing up the results. Undergraduates register for 161 for 4 units; graduates register for 171 for 3 units.

Same as: MATSCI 161

MATSCI 172. X-Ray Diffraction Laboratory. 3-4 Units.

Experimental x-ray diffraction techniques for microstructural analysis of materials, emphasizing powder and single-crystal techniques. Diffraction from epitaxial and polycrystalline thin films, multilayers, and amorphous materials using medium and high resolution configurations. Determination of phase purity, crystallinity, relaxation, stress, and texture in the materials. Advanced experimental x-ray diffraction techniques: reciprocal lattice mapping, reflectivity, and grazing incidence diffraction. Enrollment limited to 20. Undergraduates register for 162 for 4 units; graduates register for 172 for 3 units.

Same as: MATSCI 162, PHOTON 172

MATSCI 173. Mechanical Behavior Laboratory. 3-4 Units.

Experimental techniques for the study of the mechanical behavior of engineering materials in bulk and thin film form, including tension testing, nanoindentation, and wafer curvature stress analysis. Metallic and polymeric systems. Prerequisite: ENGR 50. Undergraduates register for 163 in 4 units; graduates register in 173 for 3 units.

Same as: MATSCI 163

MATSCI 174. Electronic and Photonic Materials and Devices Laboratory. 3-4 Units.

Lab course. Current electronic and photonic materials and devices. Device physics and micro-fabrication techniques. Students design, fabricate, and perform physical characterization on the devices they have fabricated. Established techniques and materials such as photolithography, metal evaporation, and Si technology; and novel ones such as soft lithography and organic semiconductors. Prerequisite: 152 or 199 or consent of instructor. Undergraduates register in 164 for 4 units; graduates register in 174 for 3 units.

Same as: MATSCI 164

MATSCI 175. Nanoscale Materials Physics Computation Laboratory. 3-4 Units.

Computational exploration of fundamental topics in materials science using Java-based computation and visualization tools. Emphasis is on the atomic-scale origins of macroscopic materials phenomena. Simulation methods include molecular dynamics and Monte Carlo with applications in thermodynamics, kinetics, and topics in statistical mechanics. Required prerequisites: Freshman-level physics, undergraduate thermodynamics. Undergraduates register for 165 for 4 units; graduates register for 175 for 3 units.

Same as: MATSCI 165

MATSCI 190. Organic and Biological Materials. 3-4 Units.

Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. Undergraduates register for 190 for 4 units; graduates register for 210 for 3 units.

Same as: MATSCI 210

MATSCI 192. Materials Chemistry. 3-4 Units.

An introduction to the fundamental physical chemical principles underlying materials properties. Beginning from basic quantum chemistry, students will learn how the electronic configuration of molecules and solids impacts their structure, stability/reactivity, and spectra. Topics for the course include molecular symmetry, molecular orbital theory, solid-state chemistry, coordination compounds, and nanomaterials chemistry. Using both classroom lectures and journal discussions, students will gain an understanding of and be well-positioned to contribute to the frontiers of materials chemistry, ranging from solar-fuel generation to next-generation cancer treatments. Undergraduates register in 192 for 4 units; graduates register in 202 for 3 units.

Same as: MATSCI 202

MATSCI 193. Atomic Arrangements in Solids. 3-4 Units.

Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. Undergraduates register in 193 for 4 units; graduates register in 203 for 3 units.

Same as: MATSCI 203

MATSCI 194. Thermodynamics and Phase Equilibria. 3-4 Units.

The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. Undergraduates register for 194 for 4 units; graduates register for 204 for 3 units.

Same as: MATSCI 204

MATSCI 195. Waves and Diffraction in Solids. 3-4 Units.

The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor. Undergraduates register for 195 for 4 units; graduates register for 205 for 3 units.

Same as: MATSCI 205, PHOTON 205

MATSCI 196. Defects in Crystalline Solids. 3-4 Units.

Thermodynamic and kinetic behaviors of 0-D (point), 1-D (line), and 2-D (interface and surface) defects in crystalline solids. Influences of these defects on the macroscopic ionic, electronic, and catalytic properties of materials, such as batteries, fuel cells, catalysts, and memory-storage devices. Prerequisite: 193/203. Undergraduates register for 196 for 4 units; graduates register for 206 for 3 units.

Same as: MATSCI 206

MATSCI 197. Rate Processes in Materials. 3-4 Units.

Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: 194/204. Undergraduates register for 197 for 4 units; graduates register for 207 for 3 units.

Same as: MATSCI 207

MATSCI 198. Mechanical Properties of Materials. 3-4 Units.

Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203. Undergraduates register for 198 for 4 units; graduates register for 208 for 3 units.

Same as: MATSCI 208

MATSCI 199. Electronic and Optical Properties of Solids. 3-4 Units.

The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent. Undergraduates register for 199 for 4 units; graduates register for 209 for 3 units.

Same as: MATSCI 209

MATSCI 200. Master's Research. 1-15 Unit.

Participation in a research project.

MATSCI 202. Materials Chemistry. 3-4 Units.

An introduction to the fundamental physical chemical principles underlying materials properties. Beginning from basic quantum chemistry, students will learn how the electronic configuration of molecules and solids impacts their structure, stability/reactivity, and spectra. Topics for the course include molecular symmetry, molecular orbital theory, solid-state chemistry, coordination compounds, and nanomaterials chemistry. Using both classroom lectures and journal discussions, students will gain an understanding of and be well-positioned to contribute to the frontiers of materials chemistry, ranging from solar-fuel generation to next-generation cancer treatments. Undergraduates register in 192 for 4 units; graduates register in 202 for 3 units.

Same as: MATSCI 192

MATSCI 203. Atomic Arrangements in Solids. 3-4 Units.

Atomic arrangements in perfect and imperfect solids, especially important metals, ceramics, and semiconductors. Elements of formal crystallography, including development of point groups and space groups. Undergraduates register in 193 for 4 units; graduates register in 203 for 3 units.

Same as: MATSCI 193

MATSCI 204. Thermodynamics and Phase Equilibria. 3-4 Units.

The principles of heterogeneous equilibria and their application to phase diagrams. Thermodynamics of solutions; chemical reactions; non-stoichiometry in compounds; first order phase transitions and metastability; thermodynamics of surfaces, elastic solids, dielectrics, and magnetic solids. Undergraduates register for 194 for 4 units; graduates register for 204 for 3 units.

Same as: MATSCI 194

MATSCI 205. Waves and Diffraction in Solids. 3-4 Units.

The elementary principals of x-ray, vibrational, and electron waves in solids. Basic wave behavior including Fourier analysis, interference, diffraction, and polarization. Examples of wave systems, including electromagnetic waves from Maxwell's equations. Diffracted intensity in reciprocal space and experimental techniques such as electron and x-ray diffraction. Lattice vibrations in solids, including vibrational modes, dispersion relationship, density of states, and thermal properties. Free electron model. Basic quantum mechanics and statistical mechanics including Fermi-Dirac and Bose-Einstein statistics. Prerequisite: 193/203 or consent of instructor. Undergraduates register for 195 for 4 units; graduates register for 205 for 3 units.

Same as: MATSCI 195, PHOTON 205

MATSCI 206. Defects in Crystalline Solids. 3-4 Units.

Thermodynamic and kinetic behaviors of 0-D (point), 1-D (line), and 2-D (interface and surface) defects in crystalline solids. Influences of these defects on the macroscopic ionic, electronic, and catalytic properties of materials, such as batteries, fuel cells, catalysts, and memory-storage devices. Prerequisite: 193/203. Undergraduates register for 196 for 4 units; graduates register for 206 for 3 units.

Same as: MATSCI 196

MATSCI 207. Rate Processes in Materials. 3-4 Units.

Diffusion and phase transformations in solids. Diffusion topics: Fick's laws, atomic theory of diffusion, and diffusion in alloys. Phase transformation topics: nucleation, growth, diffusional transformations, spinodal decomposition, and interface phenomena. Material builds on the mathematical, thermodynamic, and statistical mechanical foundations in the prerequisites. Prerequisites: 194/204. Undergraduates register for 197 for 4 units; graduates register for 207 for 3 units.

Same as: MATSCI 197

MATSCI 208. Mechanical Properties of Materials. 3-4 Units.

Introduction to the mechanical behavior of solids, emphasizing the relationships between microstructure and mechanical properties. Elastic, anelastic, and plastic properties of materials. The relations between stress, strain, strain rate, and temperature for plastically deformable solids. Application of dislocation theory to strengthening mechanisms in crystalline solids. The phenomena of creep, fracture, and fatigue and their controlling mechanisms. Prerequisites: 193/203. Undergraduates register for 198 for 4 units; graduates register for 208 for 3 units.

Same as: MATSCI 198

MATSCI 209. Electronic and Optical Properties of Solids. 3-4 Units.

The concepts of electronic energy bands and transports applied to metals, semiconductors, and insulators. The behavior of electronic and optical devices including p-n junctions, MOS-capacitors, MOSFETs, optical waveguides, quantum-well lasers, light amplifiers, and metallo-dielectric light guides. Emphasis is on relationships between structure and physical properties. Elementary quantum and statistical mechanics concepts are used. Prerequisite: 195/205 or equivalent. Undergraduates register for 199 for 4 units; graduates register for 209 for 3 units.

Same as: MATSCI 199

MATSCI 210. Organic and Biological Materials. 3-4 Units.

Unique physical and chemical properties of organic materials and their uses. The relationship between structure and physical properties, and techniques to determine chemical structure and molecular ordering. Examples include liquid crystals, dendrimers, carbon nanotubes, hydrogels, and biopolymers such as lipids, protein, and DNA. Prerequisite: Thermodynamics and ENGR 50 or equivalent. Undergraduates register for 190 for 4 units; graduates register for 210 for 3 units.

Same as: MATSCI 190

MATSCI 230. Materials Science Colloquium. 1 Unit.

May be repeated for credit.

MATSCI 251. Microstructure and Mechanical Properties. 3-4 Units.

Primarily for students without a materials background. Mechanical properties and their dependence on microstructure in a range of engineering materials. Elementary deformation and fracture concepts, strengthening and toughening strategies in metals and ceramics. Topics: dislocation theory, mechanisms of hardening and toughening, fracture, fatigue, and high-temperature creep. Prerequisite: MATSCI 163. Undergraduates register in 151 for 4 units; graduates register for 251 in 3 units.

Same as: MATSCI 151

MATSCI 256. Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution. 3-4 Units.

Operating principles and applications of emerging technological solutions to the energy demands of the world. The scale of global energy usage and requirements for possible solutions. Basic physics and chemistry of solar cells, fuel cells, and batteries. Performance issues, including economics, from the ideal device to the installed system. The promise of materials research for providing next generation solutions. Undergraduates register in 156 for 4 units; graduates register in 256 for 3 units.

Same as: EE 293A, ENERGY 293A, MATSCI 156

MATSCI 299. Practical Training. 1 Unit.

Educational opportunities in high-technology research and development labs in industry. Qualified graduate students engage in internship work and integrate that work into their academic program. Following the internship, students complete a research report outlining their work activity, problems investigated, key results, and any follow-on projects they expect to perform. Student is responsible for arranging own employment. See department student services manager before enrolling.

MATSCI 300. Ph.D. Research. 1-15 Unit.

Participation in a research project.

MATSCI 302. Solar Cells. 3 Units.

This course takes a comprehensive view of solar cells and what will need to be done to enable them to substantially change how the world obtains its electricity. After covering the fundamentals (light trapping, current flow in pn junctions, recombination) that are important for almost all photovoltaic technologies, the course will address technologies based on highly crystalline forms of silicon and gallium arsenide. The device simulator PC1D will be used to model solar cells. The course will then go through multijunctions cells with concentrators, low-cost thin-film solar cells, organic semiconductors, hybrid perovskites and nanowires. There will be discussions of module design and the economics of the solar industry. There will be a tour of a company that makes solar cells and guest lectures.

MATSCI 303. Principles, Materials and Devices of Batteries. 3 Units.

Thermodynamics and electrochemistry for batteries. Emphasis on lithium ion batteries, but also different types including lead acid, nickel metal hydride, metal air, sodium sulfur and redox flow. Battery electrode materials, electrolytes, separators, additives and electrode-electrolyte interface. Electrochemical techniques; advanced battery materials with nanotechnology; battery device structure. Prerequisites: undergraduate chemistry.

MATSCI 311. Lasers in Materials Processing. 3 Units.

Principles of laser operation. Optically and electrically pumped lasers. Materials for solid-state lasers. Fundamentals of laser/materials interactions. Applications in thin film technology and microfabrication; laser annealing of defects and crystallization of amorphous films. Laser-induced shock waves. Extreme non-equilibrium laser processing; ultra-fast (femtosecond) lasers and their novel uses; micro- and nanofabrication of fluidic and photonic devices; intracellular nano-surgery.

MATSCI 312. New Methods in Thin Film Synthesis. 3 Units.

Materials base for engineering new classes of coatings and devices. Techniques to grow thin films at atomic scale and to fabricate multilayers/superlattices at nanoscale. Vacuum growth techniques including evaporation, molecular beam epitaxy (MBE), sputtering, ion beam assisted deposition, laser ablation, chemical vapor deposition (CVD), and electroplating. Future direction of material synthesis such as nanocluster deposition and nanoparticles self-assembly. Relationships between deposition parameters and film properties. Applications of thin film synthesis in microelectronics, nanotechnology, and biology. SCPD offering.

MATSCI 316. Nanoscale Science, Engineering, and Technology. 3 Units.

This course covers important aspects of nanotechnology in nanomaterials synthesis and fabrication, novel property at the nanoscale, tools and applications: a variety of nanostructures including nanocrystal, nanowire, carbon nanotube, graphene, nanoporous material, block copolymer, and self-assembled monolayer; nanofabrication techniques developed over the past 20 years; thermodynamic, electronic and optical property; applications in solar cells, batteries, biosensors and electronics. Other nanotechnology topics may be explored through a group project. SCPD offering.

MATSCI 320. Nanocharacterization of Materials. 3 Units.

Current methods of directly examining the microstructure of materials. Topics: optical microscopy, scanning electron and focused ion beam microscopy, field ion microscopy, transmission electron microscopy, scanning probe microscopy, and microanalytical surface science methods. Emphasis is on the electron-optical techniques. Recommended: 193/203.

MATSCI 321. Transmission Electron Microscopy. 3 Units.

Image formation and interpretation. The contrast phenomena associated with perfect and imperfect crystals from a physical point of view and from a formal treatment of electron diffraction theory. The importance of electron diffraction to systematic analysis and recent imaging developments. Recommended: 193/203, 195/205, or equivalent.

MATSCI 322. Transmission Electron Microscopy Laboratory. 3 Units.

Practical techniques in transmission electron microscopy (TEM): topics include microscope operation and alignment, diffraction modes and analysis, bright-field/dark-field imaging, high resolution and aberration corrected imaging, scanning TEM (STEM) imaging, x-ray energy dispersive spectrometry (EDS) and electron energy loss spectrometry (EELS) for compositional analysis and mapping. Prerequisite: 321, consent of instructor. Enrollment limited to 12.

MATSCI 323. Thin Film and Interface Microanalysis. 3 Units.

The science and technology of microanalytical techniques, including Auger electron spectroscopy (AES), Rutherford backscattering spectroscopy (RBS), secondary ion mass spectroscopy (SIMS), ion scattering spectroscopy (ISS), and x-ray photoelectron spectroscopy (XPS or ESCA). Generic processes such as sputtering and high-vacuum generation. Prerequisite: some prior exposure to atomic and electronic structure of solids. SCPD offering.

MATSCI 326. X-Ray Science and Techniques. 3 Units.

X-ray interaction with matter; diffraction from ordered and disordered materials; x-ray absorption, photoemission, and coherent scattering; x-ray microscopy. Sources including synchrotrons, high harmonic generation, x-ray lasers. Time-resolved techniques and detector technology. Same as: PHOTON 326

MATSCI 331. Atom-based computational methods for materials. 3 Units.

Introduction to atom-based computational methods for materials with emphasis on quantum methods. Topics include density functional theory, tight-binding and empirical approaches. Computation of optical, electronic, phonon properties. Bulk materials, interfaces, nanostructures. Molecular dynamics. Prerequisites - undergraduate quantum mechanics.

MATSCI 343. Organic Semiconductors for Electronics and Photonics. 3 Units.

The science of organic semiconductors and their use in electronic and photonic devices. Topics: methods for fabricating thin films and devices; relationship between chemical structure and molecular packing on properties such as band gap, charge carrier mobility and luminescence efficiency; doping; field-effect transistors; light-emitting diodes; lasers; biosensors; photodetectors and photovoltaic cells.

MATSCI 346. Nanophotonics. 3 Units.

Recent developments in micro- and nanophotonic materials and devices. Basic concepts of photonic crystals. Integrated photonic circuits. Photonic crystal fibers. Superprism effects. Optical properties of metallic nanostructures. Sub-wavelength phenomena and plasmonic excitations. Meta-materials. Prerequisite: Electromagnetic theory at the level of 242. Same as: EE 336

MATSCI 347. Introduction to Magnetism and Magnetic Nanostructures. 3 Units.

Atomic origins of magnetic moments, magnetic exchange and ferromagnetism, types of magnetic order, magnetic anisotropy, domains, domain walls, hysteresis loops, hard and soft magnetic materials, demagnetization factors, and applications of magnetic materials, especially magnetic nanostructures and nanotechnology. Tools include finite-element and micromagnetic modeling. Design topics include electromagnet and permanent magnet, electronic article surveillance, magnetic inductors, bio-magnetic sensors, and magnetic drug delivery. Design projects, team work, and computer-aided design. Prerequisites: PHYSICS 29 and 43, or college-level electricity and magnetism.

MATSCI 353. Mechanical Properties of Thin Films. 3 Units.

The mechanical properties of thin films on substrates. The mechanics of thin films and of the atomic processes which cause stresses to develop during thin film growth. Experimental techniques for studying stresses in and mechanical properties of thin films. Elastic, plastic, and diffusional deformation of thin films on substrates as a function of temperature and microstructure. Effects of deformation and fracture on the processing of thin film materials. Prerequisite: 198/208.

MATSCI 358. Fracture and Fatigue of Materials and Thin Film Structures. 3 Units.

Linear-elastic and elastic-plastic fracture mechanics from a materials science perspective, emphasizing microstructure and the micromechanisms of fracture. Plane strain fracture toughness and resistance curve behavior. Mechanisms of failure associated with cohesion and adhesion in bulk materials, composites, and thin film structures. Fracture mechanics approaches to toughening and subcritical crack-growth processes, with examples and applications involving cyclic fatigue and environmentally assisted subcritical crack growth. Prerequisite: 151/251, 198/208, or equivalent. SCPD offering.

MATSCI 359. Crystalline Anisotropy. 3 Units.

Matrix and tensor analysis with applications to the effects of crystal symmetry on elastic deformation, thermal expansion, diffusion, piezoelectricity, magnetism, thermodynamics, and optical properties of solids, on the level of J. F. Nye's *Physical Properties of Crystals*. Homework sets use *Mathematica*.

MATSCI 380. Nano-Biotechnology. 3 Units.

Literature based. Principles that make nanoscale materials unique, applications to biology, and how biological systems can create nanomaterials. Molecular sensing, drug delivery, bio-inspired synthesis, self-assembling systems, and nanomaterial based therapies. Interactions at the nanoscale. Applications and opportunities for new technology.

MATSCI 381. Biomaterials in Regenerative Medicine. 3 Units.

Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry. Same as: BIOE 361

MATSCI 382. Biochips and Medical Imaging. 3 Units.

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: EE 225, SBIO 225

MATSCI 399. Graduate Independent Study. 1-10 Unit.

Under supervision of a faculty member.

MATSCI 400. Participation in Materials Science Teaching. 1-3 Unit.

May be repeated for credit.

MATSCI 801. TGR Project for MS Students. 0 Units.

.

MATSCI 802. TGR Dissertation for Ph.D Students. 0 Units.

.

Mathematical Computational Science Courses

MCS 100. Mathematics of Sports. 3 Units.

The use of mathematics, statistics, and probability in the analysis of sports performance, sports records, and strategy. Topics include mathematical analysis of the physics of sports and the determinations of optimal strategies. New diagnostic statistics and strategies for each sport. Corequisite: STATS 60, 110 or 116.

Same as: STATS 50

Mathematics Courses

MATH 16. Mathematics in the Real World. 3 Units.

Introduction to non-calculus applications of mathematical ideas and principles in real-world problems. Topics include probability and counting, basic statistical concepts, geometric series. Applications include insurance, gambler's ruin, false positives in disease testing, present value of money, and mortgages. No knowledge of calculus required. Enrollment limited to students who do not have Stanford credit for a high school or college course in calculus or statistics.

Same as: STATS 90

MATH 19. Calculus. 3 Units.

Introduction to differential calculus of functions of one variable. Topics: review of elementary functions including exponentials and logarithms, limits, rates of change, the derivative, and applications. Math 19, 20, and 21 cover the same material as Math 41 and 42, but in three quarters rather than two. Prerequisites: precalculus, including trigonometry, advanced algebra, and analysis of elementary functions.

MATH 20. Calculus. 3 Units.

Continuation of 19. Applications of differential calculus; introduction to integral calculus of functions of one variable, including: the definite integral, methods of symbolic and numerical integration, applications of the definite integral. Prerequisites: 19 or equivalent.

MATH 21. Calculus. 4 Units.

Continuation of 20. Applications of integral calculus, introduction to differential equations, infinite series. Prerequisite: 20 or equivalent.

MATH 41. Calculus. 5 Units.

Introduction to differential and integral calculus of functions of one variable. Topics: limits, rates of change, the derivative and applications, introduction to the definite integral and integration. Math 41 and 42 cover the same material as Math 19-20-21, but in two quarters rather than three. Prerequisites: trigonometry, advanced algebra, and analysis of elementary functions, including exponentials and logarithms.
Same as: accelerated

MATH 41A. Calculus ACE. 6 Units.

Students attend MATH 41 lectures with different recitation sessions, four hours instead of two, emphasizing engineering applications. Prerequisite: application; see <http://soe.stanford.edu/edp/programs/ace.html>.

MATH 42. Calculus. 5 Units.

Continuation of 41. Methods of symbolic and numerical integration, applications of the definite integral, introduction to differential equations, infinite series. Prerequisite: 41 or equivalent.
Same as: Accelerated

MATH 42A. Calculus ACE. 6 Units.

Students attend MATH 42 lectures with different recitation sessions, four hours instead of two, emphasizing engineering applications. Prerequisite: application; see <http://soe.stanford.edu/edp/programs/ace.html>.

MATH 51. Linear Algebra and Differential Calculus of Several Variables. 5 Units.

Geometry and algebra of vectors, systems of linear equations, matrices and linear transformations, diagonalization and eigenvectors, vector valued functions and functions of several variables, parametric curves, partial derivatives and gradients, the derivative as a matrix, chain rule in several variables, constrained and unconstrained optimization. Prerequisite: 21, or 42, or a score of 4 on the BC Advanced Placement exam or 5 on the AB Advanced Placement exam, or consent of instructor.

MATH 51A. Linear Algebra and Differential Calculus of Several Variables, ACE. 6 Units.

Students attend MATH 51 lectures with different recitation sessions: four hours per week instead of two, emphasizing engineering applications. Prerequisite: application; see <http://soe.stanford.edu/edp/programs/ace.html>.

MATH 51H. Honors Multivariable Mathematics. 5 Units.

For prospective Mathematics majors in the honors program and students from other areas of science or engineering who have a strong mathematics background. Three quarter sequence covers the material of 51, 52, 53, and additional advanced calculus and ordinary and partial differential equations. Unified treatment of multivariable calculus, linear algebra, and differential equations with a different order of topics and emphasis from standard courses. Students should know one-variable calculus and have an interest in a theoretical approach to the subject. Prerequisite: score of 5 on BC Advanced Placement exam, or consent of instructor.

MATH 51M. Introduction to MATLAB for Multivariable Mathematics. 1 Unit.

Corequisite: MATH 51.

MATH 52. Integral Calculus of Several Variables. 5 Units.

Iterated integrals, line and surface integrals, vector analysis with applications to vector potentials and conservative vector fields, physical interpretations. Divergence theorem and the theorems of Green, Gauss, and Stokes. Prerequisite: 51 and 42 or equivalents.

MATH 52H. Honors Multivariable Mathematics. 5 Units.

Continuation of 51H. Prerequisite: 51H.

MATH 53. Ordinary Differential Equations with Linear Algebra. 5 Units.

Ordinary differential equations and initial value problems, systems of linear differential equations with constant coefficients, applications of second-order equations to oscillations, matrix exponentials, Laplace transforms, stability of non-linear systems and phase plane analysis, numerical methods. Prerequisite: 51 and 42 or equivalents.

MATH 53H. Honors Multivariable Mathematics. 5 Units.

Continuation of 52H. Prerequisite: 52H.

MATH 70SI. The Game of Go: Strategy, Theory, and History. 1 Unit.

Strategy and mathematical theories of the game of Go, with guest appearance by a professional Go player.

MATH 78SI. Speedcubing: History, Theory, and Practice. 1 Unit.

History of the Rubik's cube; the current cubing community; basic mathematical theory; concepts to improve speed solving skill. Prior ability to solve cube not required.

MATH 80Q. Capillary Surfaces: Explored and Unexplored Territory. 3 Units.

Preference to sophomores. Capillary surfaces: the interfaces between fluids that are adjacent to each other and do not mix. Recently discovered phenomena, predicted mathematically and subsequently confirmed by experiments, some done in space shuttles. Interested students may participate in ongoing investigations with affinity between mathematics and physics.

MATH 87Q. Mathematics of Knots, Braids, Links, and Tangles. 3 Units.

Preference to sophomores. Types of knots and how knots can be distinguished from one another by means of numerical or polynomial invariants. The geometry and algebra of braids, including their relationships to knots. Topology of surfaces. Brief summary of applications to biology, chemistry, and physics.

MATH 88Q. The Mathematics of the Rubik's Cube. 3 Units.

Preference to sophomores. Group theory through topics that can be illustrated with the Rubik's cube: subgroups, homomorphisms and quotient groups, the symmetric and alternating groups, conjugation, commutators, and Sylow subgroups.

MATH 101. Math Discovery Lab. 3 Units.

MDL is a discovery-based project course in mathematics. Students work independently in small groups to explore open-ended mathematical problems and discover original mathematics. Students formulate conjectures and hypotheses; test predictions by computation, simulation, or pure thought; and present their results to classmates. No lecture component; in-class meetings reserved for student presentations, attendance mandatory. Admission is by application: <http://math101.stanford.edu>. Motivated students with any level of mathematical background are encouraged to apply.

MATH 104. Applied Matrix Theory. 3 Units.

Linear algebra for applications in science and engineering: orthogonality, projections, the four fundamental subspaces of a matrix, spectral theory for symmetric matrices, the singular value decomposition, the QR decomposition, least-squares, the condition number of a matrix, algorithms for solving linear systems. (Math 113 offers a more theoretical treatment.) Prerequisites: MATH 51 and MATH 52 or 53.

MATH 106. Functions of a Complex Variable. 3 Units.

Complex numbers, analytic functions, Cauchy-Riemann equations, complex integration, Cauchy integral formula, residues, elementary conformal mappings. (Math 116 offers a more theoretical treatment.) Prerequisite: 52.

MATH 108. Introduction to Combinatorics and Its Applications. 3 Units.

Topics: graphs, trees (Cayley's Theorem, application to phylogeny), eigenvalues, basic enumeration (permutations, Stirling and Bell numbers), recurrences, generating functions, basic asymptotics. Prerequisites: 51 or equivalent.

MATH 109. Applied Group Theory. 3 Units.

Applications of the theory of groups. Topics: elements of group theory, groups of symmetries, matrix groups, group actions, and applications to combinatorics and computing. Applications: rotational symmetry groups, the study of the Platonic solids, crystallographic groups and their applications in chemistry and physics. Honors math majors and students who intend to do graduate work in mathematics should take 120. WIM.

MATH 110. Applied Number Theory and Field Theory. 3 Units.

Number theory and its applications to modern cryptography. Topics: congruences, finite fields, primality testing and factorization, public key cryptography, error correcting codes, and elliptic curves, emphasizing algorithms. WIM.

MATH 111. Computational Commutative Algebra. 3 Units.

Introduction to the theory of commutative rings, ideals, and modules. Systems of polynomial equations in several variables from the algorithmic viewpoint. Groebner bases, Buchberger's algorithm, elimination theory. Applications to algebraic geometry and to geometric problems.

MATH 113. Linear Algebra and Matrix Theory. 3 Units.

Algebraic properties of matrices and their interpretation in geometric terms. The relationship between the algebraic and geometric points of view and matters fundamental to the study and solution of linear equations. Topics: linear equations, vector spaces, linear dependence, bases and coordinate systems; linear transformations and matrices; similarity; eigenvectors and eigenvalues; diagonalization. (Math 104 offers a more application-oriented treatment.)

MATH 114. Introduction to Scientific Computing. 3-4 Units.

Introduction to Scientific Computing Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, unconstrained optimization, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Implementation of numerical methods in MATLAB programming assignments. Prerequisites: MATH 51, 52, 53; prior programming experience (MATLAB or other language at level of CS 106A or higher). Graduate students should take it for 3 units and undergraduate students should take it for 4 units.

Same as: CME 108

MATH 115. Functions of a Real Variable. 3 Units.

The development of real analysis in Euclidean space: sequences and series, limits, continuous functions, derivatives, integrals. Basic point set topology. Honors math majors and students who intend to do graduate work in mathematics should take 171. Prerequisite: 51.

MATH 116. Complex Analysis. 3 Units.

Analytic functions, Cauchy integral formula, power series and Laurent series, calculus of residues and applications, conformal mapping, analytic continuation, introduction to Riemann surfaces, Fourier series and integrals. (Math 106 offers a less theoretical treatment.) Prerequisites: 52, and 115 or 171.

MATH 118. Mathematics of Computation. 3 Units.

Notions of analysis and algorithms central to modern scientific computing: continuous and discrete Fourier expansions, the fast Fourier transform, orthogonal polynomials, interpolation, quadrature, numerical differentiation, analysis and discretization of initial-value and boundary-value ODE, finite and spectral elements. Prerequisites: MATH 51 and 53.

MATH 120. Groups and Rings. 3 Units.

Recommended for Mathematics majors and required of honors Mathematics majors. Similar to 109 but altered content and more theoretical orientation. Groups acting on sets, examples of finite groups, Sylow theorems, solvable and simple groups. Fields, rings, and ideals; polynomial rings over a field; PID and non-PID. Unique factorization domains. WIM.

MATH 121. Galois Theory. 3 Units.

Field of fractions, splitting fields, separability, finite fields. Galois groups, Galois correspondence, examples and applications. Prerequisite: Math 120 and (also recommended) 113.

MATH 122. Modules and Group Representations. 3 Units.

Modules over PID. Tensor algebra. Group representations and group rings. Maschke's theorem and character theory. Character tables, construction of representations. Prerequisite: Math 120. Also recommended: 113.

MATH 131P. Partial Differential Equations I. 3 Units.

An introduction to PDE; particularly suitable for non-Math majors. Topics include physical examples of PDE's, method of characteristics, D'Alembert's formula, maximum principles, heat kernel, Duhamel's principle, separation of variables, Fourier series, Harmonic functions, Bessel functions, spherical harmonics. Students who have taken MATH 171 should consider taking MATH 173 rather than 131p. Prerequisite: 53.

MATH 132. Partial Differential Equations II. 3 Units.

Laplace's equation and properties of harmonic functions. Green's functions. Distributions and Fourier transforms. Eigenvalue problems and generalized Fourier series. Numerical solutions. Prerequisite: 131P.

MATH 136. Stochastic Processes. 3 Units.

Introduction to measure theory, L_p spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and L_p convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent. Same as: STATS 219

MATH 137. Mathematical Methods of Classical Mechanics. 3 Units.

Newtonian mechanics. Lagrangian formalism. E. Noether's theorem. Oscillations. Rigid bodies. Introduction to symplectic geometry. Hamiltonian formalism. Legendre transform. Variational principles. Geometric optics. Introduction to the theory of integrable systems. Prerequisites: 51, 52, 53, or 51H, 52H, 53H.

MATH 138. Celestial Mechanics. 3 Units.

Mathematically rigorous introduction to the classical N-body problem: the motion of N particles evolving according to Newton's law. Topics include: the Kepler problem and its symmetries; other central force problems; conservation theorems; variational methods; Hamilton-Jacobi theory; the role of equilibrium points and stability; and symplectic methods. Prerequisites: 53, and 115 or 171.

MATH 143. Differential Geometry. 3 Units.

Geometry of curves and surfaces in three-space and higher dimensional manifolds. Parallel transport, curvature, and geodesics. Surfaces with constant curvature. Minimal surfaces.

MATH 144. Riemannian Geometry. 3 Units.

Smooth manifolds, tensor fields, geometry of Riemannian and Lorentz metrics, the Levi-Civita connection and curvature tensor, Ricci curvature, scalar curvature, and Einstein manifolds, spaces of constant curvature. Prerequisites: Math 51, 52, and 53.

MATH 145. Algebraic Geometry. 3 Units.

Hilbert's nullstellensatz, complex affine and projective curves, Bezout's theorem, the degree/genus formula, blow-up, Riemann-Roch theorem. Prerequisites: 120, and 121 or knowledge of fraction fields. Recommended: familiarity with surfaces equivalent to 143, 146, 147, or 148.

MATH 146. Analysis on Manifolds. 3 Units.

Differentiable manifolds, tangent space, submanifolds, implicit function theorem, differential forms, vector and tensor fields. Frobenius' theorem, DeRham theory. Prerequisite: 52 or 52H.

MATH 147. Differential Topology. 3 Units.

Smooth manifolds, transversality, Sard's theorem, embeddings, degree of a map, Borsuk-Ulam theorem, Hopf degree theorem, Jordan curve theorem. Prerequisite: 115 or 171.

MATH 148. Algebraic Topology. 3 Units.

Fundamental group, covering spaces, Euler characteristic, homology, classification of surfaces, knots. Prerequisite: 109 or 120.

MATH 149. Applied Algebraic Topology. 3 Units.

Introduction to algebraic topology and its applications, in particular persistent homology as a tool for shape and pattern recognition from high dimensional data sets, with examples analyzed using state-of-the-art software. Prerequisite: linear algebra.

MATH 151. Introduction to Probability Theory. 3 Units.

Counting; axioms of probability; conditioning and independence; expectation and variance; discrete and continuous random variables and distributions; joint distributions and dependence; central limit theorem and laws of large numbers. Prerequisite: 52 or consent of instructor.

MATH 152. Elementary Theory of Numbers. 3 Units.

Euclid's algorithm, fundamental theorems on divisibility; prime numbers; congruence of numbers; theorems of Fermat, Euler, Wilson; congruences of first and higher degrees; quadratic residues; introduction to the theory of binary quadratic forms; quadratic reciprocity; partitions.

MATH 154. Algebraic Number Theory. 3 Units.

Properties of number fields and Dedekind domains, quadratic and cyclotomic fields, applications to some classical Diophantine equations; introduction to elliptic curves. Prerequisites: 120 and 121, especially modules over principal ideal domains and Galois theory of finite fields.

MATH 155. Analytic Number Theory. 3 Units.

Topics in analytic number theory such as the distribution of prime numbers, the prime number theorem, twin primes and Goldbach's conjecture, the theory of quadratic forms, Dirichlet's class number formula, Dirichlet's theorem on primes in arithmetic progressions, and the fifteen theorem. Prerequisite: 152, or familiarity with the Euclidean algorithm, congruences, residue classes and reduced residue classes, primitive roots, and quadratic reciprocity.

MATH 159. Discrete Probabilistic Methods. 3 Units.

Modern discrete probabilistic methods suitable for analyzing discrete structures of the type arising in number theory, graph theory, combinatorics, computer science, information theory and molecular sequence analysis. Prerequisite: STATS 116/MATH 151 or equivalent.

MATH 161. Set Theory. 3 Units.

Informal and axiomatic set theory: sets, relations, functions, and set-theoretical operations. The Zermelo-Fraenkel axiom system and the special role of the axiom of choice and its various equivalents. Well-orderings and ordinal numbers; transfinite induction and transfinite recursion. Equinumerosity and cardinal numbers; Cantor's Alephs and cardinal arithmetic. Open problems in set theory. Prerequisite: students should be comfortable doing proofs.

MATH 162. Philosophy of Mathematics. 4 Units.

(Graduate students register for PHIL 262.) General survey of the philosophy of mathematics, focusing on epistemological issues. Includes survey of some basic concepts (proof, axiom, definition, number, set); mind-bending theorems about the limits of our current mathematical knowledge, such as Gödel's Incompleteness Theorems, and the independence of the continuum hypothesis from the current axioms of set theory; major philosophical accounts of mathematics: Logicism, Intuitionism, Hilbert's program, Quine's empiricism, Field's program, Structuralism; concluding with a discussion of Eugene Wigner's 'The Unreasonable Effectiveness of Mathematics in the Natural Sciences'. Students won't be expected to prove theorems or complete mathematical exercises. However, includes some material of a technical nature. Prerequisite: PHIL 150 or consent of instructor.

Same as: PHIL 162, PHIL 262

MATH 163. The Greek Invention of Mathematics. 3-5 Units.

(Formerly CLASSGEN 103.) How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.

Same as: CLASSICS 136

MATH 171. Fundamental Concepts of Analysis. 3 Units.

Recommended for Mathematics majors and required of honors Mathematics majors. Similar to 115 but altered content and more theoretical orientation. Properties of Riemann integrals, continuous functions and convergence in metric spaces; compact metric spaces, basic point set topology. Prerequisite: 51H or 115 or consent of the instructor. WIM.

MATH 172. Lebesgue Integration and Fourier Analysis. 3 Units.

Similar to 205A, but for undergraduate Math majors and graduate students in other disciplines. Topics include Lebesgue measure on Euclidean space, Lebesgue integration, L^p spaces, the Fourier transform, the Hardy-Littlewood maximal function and Lebesgue differentiation. Prerequisite: 171 or consent of instructor.

MATH 173. Theory of Partial Differential Equations. 3 Units.

A rigorous introduction to PDE accessible to advanced undergraduates. Elliptic, parabolic, and hyperbolic equations in many space dimensions including basic properties of solutions such as maximum principles, causality, and conservation laws. Methods include the Fourier transform as well as more classical methods. The Lebesgue integral will be used throughout, but a summary of its properties will be provided to make the course accessible to students who have not had 172 or 205A. Prerequisite: 171 or equivalent.

MATH 174. Calculus of Variations. 3 Units.

An introductory course emphasizing the historical development of the theory, its connections to physics and mechanics, its independent mathematical interest, and its contacts with daily life experience. Applications to minimal surfaces and to capillary surface interfaces. Prerequisites: Math 171 or equivalent.

MATH 175. Elementary Functional Analysis. 3 Units.

Linear operators on Hilbert space. Spectral theory of compact operators; applications to integral equations. Elements of Banach space theory. Prerequisite: 115 or 171.

MATH 177. Geometric Methods in the Theory of Ordinary Differential Equations. 3 Units.

Hamiltonian systems and their geometry. First order PDE and Hamilton-Jacobi equation. Structural stability and hyperbolic dynamical systems. Completely integrable systems. Perturbation theory.

MATH 180. Introduction to Financial Mathematics. 3 Units.

Financial derivatives: contracts and options. Hedging and risk management. Arbitrage, interest rate, and discounted value. Geometric random walk and Brownian motion as models of risky assets. Initial boundary value problems for the heat and related partial differential equations. Self-financing replicating portfolio. Black-Scholes pricing of European options. Dividends. Implied volatility. Optimal stopping and American options. Prerequisite: 53. Corequisites: 131, 151 or STATS 116.

MATH 191. Research Project. 1-10 Unit.

Undergraduates pursue an individual or group research project under Math department faculty supervision. Math Department approval is required prior to enrolling. A maximum of 5 units of credit can be used towards the Math course requirement for the Math major. May be repeated for credit for up to 10 units per academic year.

MATH 193. Polya Problem Solving Seminar. 1 Unit.

Topics in mathematics and problem solving strategies with an eye towards the Putnam Competition. Topics may include parity, the pigeonhole principle, number theory, recurrence, generating functions, and probability. Students present solutions to the class. Open to anyone with an interest in mathematics.

MATH 196. Undergraduate Colloquium. 1 Unit.

Weekly lectures by different experts on topics in pure and applied mathematics that go beyond the standard curriculum. May be repeated for credit for up to 3 units. Does not count toward the math major or minor.

MATH 197. Senior Honors Thesis. 1-6 Unit.

Honors math major working on senior honors thesis under an approved advisor carries out research and reading. Satisfactory written account of progress achieved during term must be submitted to advisor before term ends. May be repeated 3 times for a max of 9 units. Contact department student services specialist to enroll.

MATH 198. Practical Training. 1 Unit.

Only for students majoring in mathematics. Students obtain employment in a relevant industrial or research activity to enhance their professional experience. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit up to 3 units. Prerequisite: qualified offer of employment and consent of department. Prior approval by Math Department is required; you must contact the Math Department's Student Services staff for instructions before being granted permission to enroll.

MATH 199. Independent Work. 1-3 Unit.

For math majors only. Undergraduates pursue a reading program; topics limited to those not in regular department course offerings. Credit can fulfill the elective requirement for math majors. Approval of Undergraduate Affairs Committee is required to use credit for honors majors area requirement. Contact department student services specialist to enroll.

MATH 205A. Real Analysis. 3 Units.

Basic measure theory and the theory of Lebesgue integration. Prerequisite: 171 or equivalent.

MATH 205B. Real Analysis. 3 Units.

Point set topology, basic functional analysis, Fourier series, and Fourier transform. Prerequisites: 171 and 205A or equivalent.

MATH 210A. Modern Algebra I. 3 Units.

Basic commutative ring and module theory, tensor algebra, homological constructions, linear and multilinear algebra, introduction to representation theory. Prerequisite: 122 or equivalent.

MATH 210B. Modern Algebra II. 3 Units.

Continuation of 210A. Topics in Galois theory, commutative algebra, and algebraic geometry. Prerequisites: 210A, and 121 or equivalent.

MATH 210C. Lie Theory. 3 Units.

Topics in Lie groups, Lie algebras, and/or representation theory. Prerequisite: math 210B. May be repeated for credit.

MATH 215A. Complex Analysis, Geometry, and Topology. 3 Units.

Analytic functions, complex integration, Cauchy's theorem, residue theorem, argument principle, conformal mappings, Riemann mapping theorem, Picard's theorem, elliptic functions, analytic continuation and Riemann surfaces.

MATH 215B. Complex Analysis, Geometry, and Topology. 3 Units.

Topics: fundamental group and covering spaces, homology, cohomology, products, basic homotopy theory, and applications. Prerequisites: 113, 120, and 171, or equivalent; 215A is not a prerequisite for 215B.

MATH 215C. Complex Analysis, Geometry, and Topology. 3 Units.

Differentiable manifolds, transversality, degree of a mapping, vector fields, intersection theory, and Poincare duality. Differential forms and the DeRham theorem. Prerequisite: 215B or equivalent.

MATH 216A. Introduction to Algebraic Geometry. 3 Units.

Algebraic curves, algebraic varieties, sheaves, cohomology, Riemann-Roch theorem. Classification of algebraic surfaces, moduli spaces, deformation theory and obstruction theory, the notion of schemes. May be repeated for credit. Prerequisites: 210ABC or equivalent.

MATH 216B. Introduction to Algebraic Geometry. 3 Units.

Continuation of 216A. May be repeated for credit.

MATH 216C. Introduction to Algebraic Geometry. 3 Units.

Continuation of 216B. May be repeated for credit.

MATH 217A. Differential Geometry. 3 Units.

Smooth manifolds and submanifolds, tensors and forms, Lie and exterior derivative, DeRham cohomology, distributions and the Frobenius theorem, vector bundles, connection theory, parallel transport and curvature, affine connections, geodesics and the exponential map, connections on the principal frame bundle. Prerequisite: 215C or equivalent.

MATH 217C. Complex Differential Geometry. 3 Units.

Complex structures, almost complex manifolds and integrability, Hermitian and Kahler metrics, connections on complex vector bundles, Chern classes and Chern-Weil theory, Hodge and Dolbeault theory, vanishing theorems, Calabi-Yau manifolds, deformation theory.

MATH 220. Partial Differential Equations of Applied Mathematics. 3 Units.

First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations. Same as: CME 303

MATH 221A. Mathematical Methods of Imaging. 3 Units.

Image denoising and deblurring with optimization and partial differential equations methods. Imaging functionals based on total variation and l-1 minimization. Fast algorithms and their implementation. Same as: CME 321A

MATH 221B. Mathematical Methods of Imaging. 3 Units.

Array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of array imaging algorithms. Same as: CME 321B

MATH 222. Computational Methods for Fronts, Interfaces, and Waves. 3 Units.

High-order methods for multidimensional systems of conservation laws and Hamilton-Jacobi equations (central schemes, discontinuous Galerkin methods, relaxation methods). Level set methods and fast marching methods. Computation of multi-valued solutions. Multi-scale analysis, including wavelet-based methods. Boundary schemes (perfectly matched layers). Examples from (but not limited to) geometrical optics, transport equations, reaction-diffusion equations, imaging, and signal processing.

MATH 224. Topics in Mathematical Biology. 3 Units.

Mathematical models for biological processes based on ordinary and partial differential equations. Topics: population and infectious diseases dynamics, biological oscillators, reaction diffusion models, biological waves, and pattern formation. Prerequisites: 53 and 131, or equivalents.

MATH 226. Numerical Solution of Partial Differential Equations. 3 Units.

Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302. Same as: CME 306

MATH 227. Partial Differential Equations and Diffusion Processes. 3 Units.

Parabolic and elliptic partial differential equations and their relation to diffusion processes. First order equations and optimal control. Emphasis is on applications to mathematical finance. Prerequisites: MATH 131 and MATH 136/STATS 219, or equivalents.

MATH 228. Stochastic Methods in Engineering. 3 Units.

Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis. Same as: CME 308

MATH 230A. Theory of Probability. 2-4 Units.

Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and L_p convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: 116, MATH 171. Same as: STATS 310A

MATH 230B. Theory of Probability. 2-3 Units.

Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A. Same as: STATS 310B

MATH 230C. Theory of Probability. 2-4 Units.

Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B. Same as: STATS 310C

MATH 231. Orthogonal Polynomials and the Moment Problem. 3 Units.

Orthogonal polynomials in one variable (three term recurrence, Favard's theorem, distribution of zeros Verblunsky coefficients). Classical examples (Hermite, Chebychev, Jacobi, Meixner, Askey-Wilson). Applications in probability (Markov chains), Statistics (multivariate distributions with given margins), Numerical analysis (Gaussian Quadrature), Combinatorics (combinatorial interpretation of the classical orthogonal polynomials). The moment problem on \mathbb{R} (when is a measure determined by its moments, what happens if not?). Multivariate orthogonal polynomials (with an introduction to symmetric function theory). Connections to group representations.

MATH 231A. An Introduction to Random Matrix Theory. 3 Units.

Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinantal point processes. Same as: STATS 351A

MATH 231C. Free Probability. 3 Units.

Background from operator theory, addition and multiplication theorems for operators, spectral properties of infinite-dimensional operators, the free additive and multiplicative convolutions of probability measures and their classical counterparts, asymptotic freeness of large random matrices, and free entropy and free dimension. Prerequisite: STATS 310B or equivalent.

MATH 232. Topics in Probability: Percolation Theory. 3 Units.

An introduction to some of the most important theorems and open problems in percolation theory. Topics include some of the difficult early breakthroughs of Kesten, Menshikov, Aizenman and others, and recent fields-medal winning works of Schramm, Lawler, Werner and Smirnov. Prerequisites: graduate-level probability. Offered every 1-2 years.

MATH 234. Large Deviations Theory. 3 Units.

Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310. Offered every 2-3 years. Same as: STATS 374

MATH 236. Introduction to Stochastic Differential Equations. 3 Units.

Brownian motion, stochastic integrals, and diffusions as solutions of stochastic differential equations. Functionals of diffusions and their connection with partial differential equations. Random walk approximation of diffusions. Prerequisite: 136 or equivalent and differential equations.

MATH 237. Default and Systemic Risk. 3 Units.

Introduction to mathematical models of complex static and dynamic stochastic systems that undergo sudden regime change in response to small changes in parameters. Examples from materials science (phase transitions), power grid models, financial and banking systems. Special emphasis on mean field models and their large deviations, including computational issues. Dynamic network models of financial systems and their stability.

MATH 238. Mathematical Finance. 3 Units.

Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent. Same as: STATS 250

MATH 239. Computation and Simulation in Finance. 3 Units.

Monte Carlo, finite difference, tree, and transform methods for the numerical solution of partial differential equations in finance. Emphasis is on derivative security pricing. Prerequisite: 238 or equivalent.

MATH 243. Functions of Several Complex Variables. 3 Units.

.

MATH 244. Riemann Surfaces. 3 Units.

Compact Riemann surfaces and algebraic curves; cohomology of sheaves; Serre duality; Riemann-Roch theorem and application; Jacobians; Abel's theorem. May be repeated for credit.

MATH 245A. Topics in Algebraic Geometry: Moduli Theory. 3 Units.

Topics in the study of moduli spaces: Basic of algebraic surfaces, Hodge structure of surfaces, moduli of K3 surfaces, cycles and rational curves in K3 surfaces, Torelli for K3 surfaces.

MATH 245B. Topics in Algebraic Geometry. 3 Units.

May be repeated for credit.

MATH 245C. Topics in Algebraic Geometry. 3 Units.

.

MATH 247. Topics in Group Theory. 3 Units.

Topics include the Burnside basis theorem, classification of p -groups, regular and powerful groups, Sylow theorems, the Frattini argument, nilpotent groups, solvable groups, theorems of P. Hall, group cohomology, and the Schur-Zassenhaus theorem. The classical groups and introduction to the classification of finite simple groups and its applications. May be repeated for credit.

MATH 248. Introduction to Ergodic Theory. 3 Units.

Topics may include 1) subadditive and multiplicative ergodic theorems, 2) notions of mixing, weak mixing, spectral theory, 3) metric and topological entropy of dynamical systems, 4) measures of maximal entropy. Prerequisites: Solid background in "Measure and Integration" (Math 205A) and some functional analysis, including Riesz representation theorem and Hahn-Banach theorem (Math 205B).

MATH 248A. Algebraic Number Theory. 3 Units.

Structure theory and Galois theory of local and global fields, finiteness theorems for class numbers and units, adelic techniques. Prerequisites: MATH 210A,B.

MATH 249A. Topics in number theory. 3 Units.

.

MATH 249B. Topics in Number Theory. 3 Units.

.

MATH 249C. Topics in Number Theory. 3 Units.

.

MATH 256A. Partial Differential Equations. 3 Units.

The theory of linear and nonlinear partial differential equations, beginning with linear theory involving use of Fourier transform and Sobolev spaces. Topics: Schauder and L2 estimates for elliptic and parabolic equations; De Giorgi-Nash-Moser theory for elliptic equations; nonlinear equations such as the minimal surface equation, geometric flow problems, and nonlinear hyperbolic equations.

MATH 256B. Partial Differential Equations. 3 Units.

Continuation of 256A.

MATH 257A. Symplectic Geometry and Topology. 3 Units.

Linear symplectic geometry and linear Hamiltonian systems. Symplectic manifolds and their Lagrangian submanifolds, local properties. Symplectic geometry and mechanics. Contact geometry and contact manifolds. Relations between symplectic and contact manifolds. Hamiltonian systems with symmetries. Momentum map and its properties. May be repeated for credit.

MATH 257B. Symplectic Geometry and Topology. 3 Units.

Continuation of 257A. May be repeated for credit.

MATH 257C. Symplectic Geometry and Topology. 3 Units.

Continuation of 257B. May be repeated for credit.

MATH 258. Topics in Geometric Analysis. 3 Units.

May be repeated for credit.

MATH 259. mirror symmetry. 3 Units.

.

MATH 261A. Functional Analysis. 3 Units.

Geometry of linear topological spaces. Linear operators and functionals. Spectral theory. Calculus for vector-valued functions. Operational calculus. Banach algebras. Special topics in functional analysis. May be repeated for credit.

MATH 262. Applied Fourier Analysis and Elements of Modern Signal Processing. 3 Units.

Introduction to the mathematics of the Fourier transform and how it arises in a number of imaging problems. Mathematical topics include the Fourier transform, the Plancherel theorem, Fourier series, the Shannon sampling theorem, the discrete Fourier transform, and the spectral representation of stationary stochastic processes. Computational topics include fast Fourier transforms (FFT) and nonuniform FFTs. Applications include Fourier imaging (the theory of diffraction, computed tomography, and magnetic resonance imaging) and the theory of compressive sensing. Same as: CME 372

MATH 263A. Infinite-dimensional Lie Algebras. 3 Units.

Basics of Kac-Moody Lie algebras, which include both finite dimensional semisimple Lie algebras and their infinite-dimensional analogs, up to the Kac-Weyl character formula and Macdonald identities, and the Boson-Fermion correspondence. May be repeated for credit. Prerequisite: 210 or equivalent.

MATH 263B. Modular Representation Theory. 3 Units.

Modular representation theory, a field largely created by Brauer, is the representation theory of finite groups over a field of characteristic p . It was a key tool in the classification of finite simple groups. Key features are the important roles played by projective modules, and the subtle relationship with the characteristic zero theory. Modular representation theory has strong similarities to the theory of groups of Lie type, with normalizers of p -subgroups playing the role of parabolics. Brauer and Green found deep relationships between the modular representation theory of the group and the simpler representation theory of such subgroups. In addition to such classical topics, we will look at some more recent developments.

MATH 263C. Topics in Representation Theory. 3 Units.

.

MATH 264. Infinite Dimensional Lie Algebra. 3 Units.

.

MATH 266. Computational Signal Processing and Wavelets. 3 Units.

Theoretical and computational aspects of signal processing. Topics: time-frequency transforms; wavelet bases and wavelet packets; linear and nonlinear multiresolution approximations; estimation and restoration of signals; signal compression. May be repeated for credit.

MATH 269. Topics in symplectic geometry. 3 Units.

May be repeated for credit.

MATH 270. Geometry and Topology of Complex Manifolds. 3 Units.

Complex manifolds, Kahler manifolds, curvature, Hodge theory, Lefschetz theorem, Kahler-Einstein equation, Hermitian-Einstein equations, deformation of complex structures. May be repeated for credit.

MATH 271. The H-Principle. 3 Units.

The language of jets. Thom transversality theorem. Holonomic approximation theorem. Applications: immersion theory and its generalizations. Differential relations and Gromov's h-principle for open manifolds. Applications to symplectic geometry. Microflexibility. Mappings with simple singularities and their applications. Method of convex integration. Nash-Kuiper C^1 -isometric embedding theorem.

MATH 272. Topics in Partial Differential Equations. 3 Units.

.

MATH 273A. Quantum Mechanics I. 3 Units.

.

MATH 273B. QUANTUM MECHANICS II. 3 Units.

.

MATH 280. Evolution Equations in Differential Geometry. 3 Units.

.

MATH 282A. Low Dimensional Topology. 3 Units.

The theory of surfaces and 3-manifolds. Curves on surfaces, the classification of diffeomorphisms of surfaces, and Teichmüller space. The mapping class group and the braid group. Knot theory, including knot invariants. Decomposition of 3-manifolds: triangulations, Heegaard splittings, Dehn surgery. Loop theorem, sphere theorem, incompressible surfaces. Geometric structures, particularly hyperbolic structures on surfaces and 3-manifolds. May be repeated for credit up to 6 total units.

MATH 282B. Homotopy Theory. 3 Units.

Homotopy groups, fibrations, spectral sequences, simplicial methods, Dold-Thom theorem, models for loop spaces, homotopy limits and colimits, stable homotopy theory. May be repeated for credit up to 6 total units.

MATH 282C. Fiber Bundles and Cobordism. 3 Units.

Possible topics: principal bundles, vector bundles, classifying spaces. Connections on bundles, curvature. Topology of gauge groups and gauge equivalence classes of connections. Characteristic classes and K-theory, including Bott periodicity, algebraic K-theory, and indices of elliptic operators. Spectral sequences of Atiyah-Hirzebruch, Serre, and Adams. Cobordism theory, Pontryagin-Thom theorem, calculation of unoriented and complex cobordism. May be repeated for credit up to 6 total units.

MATH 283. Topics in Algebraic and Geometric Topology. 3 Units.

May be repeated for credit.

MATH 283A. Topics in Topology. 3 Units.**MATH 284. Topics in Geometric Topology. 3 Units.**

Incompressible surfaces, irreducible manifolds, prime decomposition, Morse theory, Heegaard diagrams, Heegaard splittings, the Thurston norm, sutured manifold theory, Heegaard Floer homology, sutured Floer homology.

MATH 284A. Geometry and Topology in Dimension 3. 3 Units.

The Poincaré conjecture and the uniformization of 3-manifolds. May be repeated for credit.

MATH 284B. Geometry and Topology in Dimension 3. 3 Units.

The Poincaré conjecture and the uniformization of 3-manifolds. May be repeated for credit.

MATH 285. Geometric Measure Theory. 3 Units.

Hausdorff measures and dimensions, area and co-area formulas for Lipschitz maps, integral currents and flat chains, minimal surfaces and their singular sets.

MATH 286. Topics in Differential Geometry. 3 Units.

May be repeated for credit.

MATH 287. Introduction to optimal transportation. 3 Units.

This will be an introductory course on Optimal Transportation theory. We will study Monge's problem, Kantorovich's problem, c -concave functions (also in the Riemannian setting), Wasserstein distance and geodesics (including a PDE formulation), applications to inequalities in convex analysis, as well as other topics, time permitting.

MATH 290B. Model Theory B. 1-3 Unit.

Decidable theories. Model-theoretic background. Dense linear orders, arithmetic of addition, real closed and algebraically closed fields, ω -minimal theories.

Same as: PHIL 350B

MATH 292A. Set Theory. 3 Units.

The basics of axiomatic set theory; the systems of Zermelo-Fraenkel and Bernays-Gödel. Topics: cardinal and ordinal numbers, the cumulative hierarchy and the role of the axiom of choice. Models of set theory, including the constructible sets and models constructed by the method of forcing. Consistency and independence results for the axiom of choice, the continuum hypothesis, and other unsettled mathematical and set-theoretical problems. Prerequisites: PHIL151 and MATH 161, or equivalents.

Same as: PHIL 352A

MATH 293A. Proof Theory. 3 Units.

Gentzen's natural deduction and sequential calculi for first-order propositional and predicate logics. Normalization and cut-elimination procedures. Relationships with computational lambda calculi and automated deduction. Prerequisites: 151, 152, and 161, or equivalents.

Same as: PHIL 353A

MATH 295. Computation and Algorithms in Mathematics. 3 Units.

Use of computer and algorithmic techniques in various areas of mathematics. Computational experiments. Topics may include polynomial manipulation, Groebner bases, computational geometry, and randomness. May be repeated for credit.

MATH 301. Advanced Topics in Convex Optimization. 3 Units.

Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.

Same as: CME 375

MATH 310. Top Ten Algorithms of the 20th Century. 3 Units.

A high-level survey course covering one algorithm per week: metropolis, simplex method, conjugate gradient, QR, quicksort, fast fourier transform, maxcut, fast multipole method, integer relation detection, and convex/semi-definite programming.

Same as: CME 329

MATH 355. Graduate Teaching Seminar. 1 Unit.

Required of and limited to first-year Mathematics graduate students.

MATH 360. Advanced Reading and Research. 1-10 Unit.**MATH 361. Research Seminar Participation. 1-3 Unit.**

Participation in a faculty-led seminar which has no specific course number.

MATH 381. Seminar in Analysis. 1-3 Unit.**MATH 382. Qualifying Examination Seminar. 1-3 Unit.****MATH 384. Seminar in Geometry. 1 Unit.****MATH 385. Seminar in Topology. 1-3 Unit.****MATH 388. Seminar in Probability and Stochastic Processes. 1-3 Unit.****MATH 389. Seminar in Mathematical Biology. 1-3 Unit.****MATH 391. Research Seminar in Logic and the Foundations of Mathematics. 1-3 Unit.**

Contemporary work. May be repeated a total of three times for credit. Math 391 students attend the logic colloquium in 380-381T.

Same as: PHIL 391

MATH 394. Classics in Analysis. 3 Units.

Original papers in analysis.

MATH 395. Classics in Geometry and Topology. 3 Units.

Original papers in geometry and in algebraic and geometric topology. May be repeated for credit.

MATH 396. Graduate Progress. 1 Unit.

Results and current research of graduate and postdoctoral students. May be repeated for credit.

MATH 802. TGR Dissertation. 0 Units.

Mechanical Engineering Courses

ME 10AX. Design Thinking and the Art of Innovation. 2 Units.

Design Thinking and the Art of Innovation is a hands-on seminar that introduces students to the multi-disciplinary practice of product, service, and experience design through the lenses of both art and engineering. A project-based, studio-driven class promises a deep dive into Design Thinking, Stanford's unique approach to problem finding and problem solving. Along with a survey of tools such as need finding and ethnography, structured brainstorming, rapid prototyping, visual communication, and story-telling, the class will include thought provoking and inspirational field trips to San Francisco's MOMA and other Bay Area museums, The San Francisco Ferry Building, and IDEO, the internationally renowned design and innovation firm headquartered in Palo Alto. This course is designed to introduce students to cutting edge techniques and processes used in the field of design. Through emphasis on design problems where aesthetics, technology, human behavior, and business needs overlap, students will both increase visual literacy and develop creative competence. The course provides an overview of contemporary professional design practice and exposes students to the world of design and the "wicked problems" that are the grist for the mill of design work.

ME 10N. Form and Function of Animal Skeletons. 3 Units.

Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology. Field trips to labs.

Same as: BIOE 10N

ME 11AX. The Art of Product Branding. 2 Units.

This onsite course will present a comprehensive approach to Corporate Product Branding. Students will experience firsthand the development of a product brand from naming and developing positioning to the creation of a logo, website, and collateral. As a final project, students will present their overall brands to corporate executives. This project will include field trips to the client site and workshops with naming, positioning, and design professionals each day.

ME 11SC. The Art and Science of Measuring Fluid Flows. 2 Units.

The roles of fluid flows in natural systems such as swimming protozoa and planet-forming nebulae, and technologies such as biomolecular assay devices and jet engines. The analytical background for fluid sciences. Phenomena such as shock waves and vortex formation that create flow patterns while challenging engineers. Visualization and measurement techniques to obtain full-field flow pattern information. The physics behind these technologies. Field trips; lab work. (Eaton).

ME 12N. The Jet Engine. 3 Units.

Preference to freshmen. How a jet engine works; the technologies and analytical techniques required to understand them. Dynamics, thermodynamics, turbomachinery, combustion, advanced materials, cooling technologies, and control systems. Visits to research laboratories, examination of a partially disassembled engine, and probable operation of a small jet engine. Prerequisites: high school physics.

ME 12SC. Hands-on Jet Engines. 2 Units.

How jet engines transformed the world through intercontinental travel causing internationalization in daily life. Competition driving improvements in fuel economy, engine lifetime, noise, and emissions.

ME 13N. The Great Principle of Similitude. 3 Units.

The rules of dimensional analysis were formulated by Isaac Newton, who called it The Great Principle of Similitude. On its surface, it is a look at the relationships between physical quantities by exploring their basic units. In fact, it is a powerful and formalized method to analyze complex physical phenomena, including those for which we cannot pose, much less solve, governing equations. Valuable to engineers and scientists as it helps perform back-of-the-envelope estimates and derive scaling laws for the design of machines and processes, the principle has been applied to the study of complex phenomena in biology, aerodynamics, chemistry, social science, astrophysics, and economics. Focus is on tools to perform such analyses. Examples include estimating the running speed of a hungry velociraptor, the probability of serious injury in a car accident, the cost of submarines, and the energy released by an atomic weapon. Students identify problems in everyday life and/or current world events to analyze with this tool.

ME 14N. How Stuff Is Made. 3 Units.

The design and engineering of products and processes, such as machining, fabric, food, and electrical goods. Tradeoffs in choice of materials, features, and process selection. Final project: students research and redesign the engineering and manufacturing aspects of a product and its processes with an eye toward sustainability. Includes several field trips to manufacturing facilities.

ME 15. Pre-field Course for Alternative Spring Break: Design for a Sustainable World. 1 Unit.

Preparation for Alternative Spring Break trip Design for a Sustainable World: Using the design method to create human-centered solutions to address the challenges of global poverty and sustainability. Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more information.

ME 16. Alternative Spring Break - From Classroom to Community: Science Education and Environmental Literacy. 1 Unit.

This Alternative Spring Break course and trip will examine K-12 science education in California. Though centered in the San Francisco Bay Area, we will be exploring different institutions throughout the state - schools, science museums, non-profit organizations - and their current contributions to the education of California's youth in STEM (Science, Technology, Engineering, Mathematics) fields. These institutions will help us explore the interaction between in-school and out-of-school learning, and the benefits of each. We will particularly focus on disparities (socioeconomic, regional, etc.) present in Californian science education, discussing their effects and how they can be remedied. The trip will involve conversations with teachers, students, and other professional educators centered around improvement to the current science education system in California. All told, we hope to explore the best methods for developing lasting interest and aptitude for science in California students to promote a brighter future.

ME 16N. Energy & The Industrial Revolution - Past, Present & Future. 3 Units.

When you flip a light switch, or drive to your neighborhood grocery store or do a Google search, it is easy to forget that we receive the benefit of 250 years of industrial revolution, which has been arguably the most remarkable period of human history. This revolution has resulted in exponential growth in the world's economy as well as unprecedented prosperity and improvements in our quality of life. The industrial revolution has been largely about how we sourced, distributed and used energy. It was and continues to be predominantly based on fossil energy. But the impact of our traditional energy sources on climate change is one of the most daunting issues of the 21st century because it will affect the world as a whole - the 7-10 billion people, businesses, nations, ecosystems. The choice that our society is asked to make is often posed as follows: Should we continue our exponential economic growth based on fossil fuels and ignore the environment, or should we reduce our greenhouse gas emissions at the cost of our economic growth? This is a false choice because it is based on extrapolating the past. It does not account for the capacity for innovations in technology, finance and business to create sustainable energy future, one that allows the economy and our environment to be mutually inclusive. In short, we need a new industrial revolution. This seminar course will: (a) provide a view of the current energy landscape and the magnitude of the challenge; (b) discuss some techno-economic trends that we are currently witnessing; and (c) identify opportunities to innovate in technology, finance and business that could create the foundations for a new industrial revolution.

ME 17N. Robotics Imitating Nature. 3 Units.

Preference to freshmen. The dream of constructing robots that duplicate the functional abilities of humans and/or other animals has been promulgated primarily by science fiction writers. But biological systems provide models for the designers of robots. Building electromechanical devices that perform locomotory and sensing functions similar to those of an animal as a way of learning about how biological systems function. Walking and running machines, and the problem of giving a robot the capability to respond to its environment.

ME 18Q. Teamology: Creative Teams and Individual Development. 3 Units.

Preference to sophomores. Roles on a problem solving team that best suit individual creative characteristics. Two teams are formed for teaching experientially how to develop less conscious abilities from teammates creative in those roles. Reinforcement teams have members with similar personalities; problem solving teams are composed of people with maximally different personalities.

ME 19. Pre-field Course for Alternative Spring Break: Design for Social Change. 1 Unit.

Focus is on applying design, technology and innovation to catalyze social change. Topics include identifying social needs, learning different brainstorming methods, developing an applicable service model or product, prototyping, implementation, and reiteration. Reading and service components, followed by week-long Alternative Spring Break trip. See <http://d4sc.blogspot.com>. Enrollment limited to 12. May be repeated for credit.

ME 20N. Haptics: Engineering Touch. 3 Units.

Students in this class will learn how to build, program, and control haptic devices, which are mechatronic devices that allow users to feel virtual or remote environments. In the process, students will gain an appreciation for the capabilities and limitations of human touch, develop an intuitive connection between equations that describe physical interactions and how they feel, and gain practical interdisciplinary engineering skills related to robotics, mechanical engineering, electrical engineering, bioengineering, and computer science. In-class laboratories will give students hands-on experience in assembling mechanical systems, making circuits, programming Arduino microcontrollers, testing their haptic creations, and using Stanford's student prototyping facilities. The final project for this class will involve creating a novel haptic device that could be used to enhance human interaction with computers, mobile devices, or remote-controlled robots.

ME 21N. Renaissance Machine Design. 3 Units.

Preference to freshmen. Technological innovations of the 1400s that accompanied the proliferation of monumental art and architecture by Brunelleschi, da Vinci, and others who designed machines and invented novel construction, fresco, and bronze-casting techniques. The social and political climate, from the perspective of a machine designer, that made possible and demanded engineering expertise from prominent artists. Hands-on projects to provide a physical understanding of Renaissance-era engineering challenges and introduce the pleasure of creative engineering design. Technical background not required.

ME 23Q. The Worldly Engineer. 3 Units.

Preference given to sophomores. Engineering, its practice and products placed in multi-disciplinary context. Topics include the history of the engineering profession and engineering education; cultural influences on design; the role of national and international public policy and economics; dependence on natural resources; environmental impact; contemporary workforce development. Emphasis is on cultivating an appreciation of these issues to enrich the educational and professional pursuit of engineering.

ME 24N. Designing the Car of the Future. 3 Units.

Preference to freshmen. Automotive design drawing from all areas of mechanical engineering. The state of the art in automotive design and the engineering principles to understand vehicle performance. Future technologies for vehicles. Topics include vehicle emissions and fuel consumption, possibilities of hydrogen, drive-by-wire systems, active safety and collision avoidance, and human-machine interface issues.

ME 25N. Energy Sustainability and Climate Change. 3 Units.

One of the primary global challenges of the 21st century is providing the energy required to meet increasing demands due to population growth and economic development. A related challenge is mitigation of the effect of this energy growth on climate. This seminar will examine various scenarios for the energy resources required to meet future demand and the potential consequences on climate. The scientific issues underlying climate change and the coupling of energy use with changes in the global atmosphere that impact climate will be discussed.

ME 26N. Think Like a Designer. 3 Units.

Introduces students to techniques designers use to create highly innovative solutions across domains. The project-based class will emphasize approaches to problem identification and problem solving. Topics include need-finding, structured brainstorming, synthesis, rapid prototyping, and visual communication; field trips to a local design firm, a robotics lab, and a machining lab. A secondary goal of the seminar is to introduce students to the pleasures of creative design and hands-on development of tangible solutions.

ME 27SI. Needfinding for Underserved Populations. 2 Units.

The heart of any design process resides in empathy with users and their needs. Working in the realm of public service may engage a population to which the designer might not have been exposed. How different needfinding techniques can help designers to understand users from underserved populations and inspire them to create products and services that serve user needs.

ME 28SI. Professional Design Practices. 1 Unit.

Lab. Professional skills are developed through web-based portfolio and resume building. Additionally, visits to local design consulting firms and in house design groups will help solidify students understanding of the designer in the professional workplace. May be repeated for credit.

ME 29D. Design for Diversity: Collaboration by difference in digital age. 2 Units.

The focus of this course is on applying design, technology, and social innovation to create an environment that fosters collaboration by difference. Students will learn how in a digital age their identities amplify and create unique opportunities for them to bring about social change. They will learn resocializing skills through somatic literacy to understand the other's point of view. By the end of the quarter they will demonstrate literacy in collaboration by difference and use design thinking tools to prototype a collaboratorium, a portable structure and process to create an appreciation of voice and value to be effective global leaders.

ME 29SI. Cars: A Crash Course. 1 Unit.

Focus is on the basic mechanics and significance of cars. Topics include a basic, real-world understanding of automobile workings, histories, industries, cultural impact, and related media. Field trips to Tesla Motors and Go-Kart Racer will be organized, and there will be guest appearances by local automotive historians and enthusiasts. Students will get hands on experience with maintaining real cars, see high performance engines run, and have the opportunity to learn how to drive a manual transmission.

ME 52SI. Scan, Model, Print! Designing with 3D Technology. 2 Units.

Think 3D scanning, modeling, and printing technology is just about plastic widgets? Think again! Immerse yourself in a world of custom prosthetics, manufacturing in space, autonomous cars, and much more. This hands-on engineering design course teaches advanced 3D imaging and computational modeling skills in order to leverage the unique benefits of additive manufacturing to solve complex problems. Students will connect the theory behind these tools to direct experience with the equipment and software. Short assignments at the start of the quarter will build students' core competencies and prepare them for a team-based, open-ended project. Class time will be a mixture of lecture, lab, guest speakers, and field trips. Recommended: basic CAD, fabrication, and programming experience (e.g. ME103D, 203, CS106A or equivalents).

ME 70. Introductory Fluids Engineering. 4 Units.

Elements of fluid mechanics as applied to engineering problems. Equations of motion for incompressible ideal flow. Hydrostatics. Control volume laws for mass, momentum, and energy. Bernoulli equation. Dimensional analysis and similarity. Flow in ducts. Boundary layer flows. Lift and drag. Lab experiment demonstrations. Prerequisites: ENGR 14 and 30.

ME 80. Mechanics of Materials. 4 Units.

Mechanics of materials and deformation of structural members. Topics include stress and deformation analysis under axial loading, torsion and bending, column buckling and pressure vessels. Introduction to stress transformation and multiaxial loading. Prerequisite: ENGR 14.

ME 101. Visual Thinking. 4 Units.

Lecture/lab. Visual thinking and language skills are developed and exercised in the context of solving design problems. Exercises for the mind's eye. Rapid visualization and prototyping with emphasis on fluent and flexible idea production. The relationship between visual thinking and the creative process. Freshmen and Sophomores are recommended to take this section of ME101. Limited enrollment. Attend the first day of class.

ME 103D. Engineering Drawing and Design. 1 Unit.

Designed to accompany 203. The fundamentals of engineering drawing including orthographic projection, dimensioning, sectioning, exploded and auxiliary views, assembly drawings, and SolidWorks. Homework drawings are of parts fabricated by the student in the lab. Assignments in 203 supported by material in 103D and sequenced on the assumption that the student is enrolled in both courses simultaneously.

ME 103Q. Product Realization: Making is Thinking. 3 Units.

Product Realization encompasses those processes required to transform a concept into the creation of a functional, useful, and beautiful product. In this project-based seminar, students develop product realization confidence and intuition using the rich array of tools available in the Product Realization Lab as well as industry-standard design engineering software programs and course readings in design/realization philosophy. Interactions with the Stanford design engineering community as well as field trips to iconic Bay area design engineering firms round out students' experience. Learning Goals: Build confidence in transforming concepts into products through foundational texts and rigorous exercises, master integrated design/realization software and tools through hands-on learning and practice, and engage with the Stanford design engineering community on campus and well beyond.

ME 104. The Designer's Voice. 1 Unit.

Course helps students develop a point of view about their design career that will enable them to articulate their design vision, inspire a design studio, or infect a business with a culture of design-thinking. Focus on the integration of work and worldview, professional values, design language, and the development of the designer's voice. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching. Participants will be required to keep a journal.

ME 104B. Designing Your Life. 2 Units.

The course employs a design thinking approach to help students develop a point of view about their career. The course focuses on an introduction to design thinking, the integration of work and worldview, and practices that support vocation formation. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching. Open to juniors and seniors of all majors. Admission to be confirmed by email to Axxess registered students prior to first class session. More information at <http://www.designingyourlife.org>. Effective Autumn 2012, course is no longer repeatable for credit.

ME 104S. Designing Your Stanford. 2 Units.

DYS uses a Design Thinking approach to help Freshmen and Sophomores learn practical tools and ideas to make the most of their Stanford experience. Topics include the purpose of college, major selection, educational wayfinding, and innovating college outcomes - all applied through an introduction to Design Thinking. This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching. Admission to be confirmed by email to Axxess registered students prior to first class session. More information at www.designingyourstanford.org. Same as: EDUC 118S

ME 110. Design Sketching. 2 Units.

Freehand sketching, rendering, and design development. Students develop a design sketching portfolio for review by program faculty. May be repeated for credit.

ME 112. Mechanical Systems Design. 4 Units.

Lecture/lab. Characteristics of machine elements including gears, bearings, and shafts. Design for fatigue life. Electric motor fundamentals. Transmission design for maximizing output power or efficiency. Mechanism types, linkage analysis and kinematic synthesis. Team-based design projects emphasizing the balance of physical with virtual prototyping based on engineering analysis. Lab for dissection of mechanical systems and project design reviews. Prerequisites: 80, 101. Recommended: 203, ENGR 15.

ME 113. Mechanical Engineering Design. 4 Units.

Capstone course. Mechanical engineering design is experienced by students as they work on team projects. Prerequisites: 80, 101, 112, 131 a,b, 203. Enrollment limited to ME majors.

ME 114. Consumer Analytical Product Design. 4 Units.

Holistic design experience for consumer product. Integration of models of engineering function, environmental impact, manufacturing costs, and market conditions. Introduction to life-cycle-analysis to capture environmental impact. Introduction to modeling micro economics, market models, and consumer surveying as applied in product design. Introduction to consumer product cost modeling. Draw from past coursework to build engineering function model. Student teams build and link these models in an optimization framework to maximize profitability and minimize environmental impact. Build prototypes for engineering function and form expression. ME Design Capstone Experience option. Same as: CAPD

ME 115A. Introduction to Human Values in Design. 3 Units.

Lecture/lab. Introduces the central philosophy of the product design program, emphasizing the relation between technical and human values, the innovation process, and design methodology. Lab exercises include development of simple product concepts visualized in rapidly executed three-dimensional mockups. Prerequisite: 101.

ME 115B. Product Design Methods. 3 Units.

Problem-finding, problem-solving, intermediate creativity methods and effective techniques for researching and presenting product concepts. Individual- and team-based design projects emphasizing advanced visual thinking and prototyping skills. Prerequisite: ME115A.

ME 115C. Design and Business Factors. 3 Units.

Design and Business Factors: Introduces business concepts critical to determining the success of new products and services. Students will learn to estimate the cost of R&D for new product development. Using financial analysis, ROI, and tollgates to reduce development risk will be explored using case studies and simulations. Students will develop a bill of materials and a profit and loss statement for a sample product concept, prototype a design consultancy, and create a business proposal for a proposed new product company.

ME 120. History and Philosophy of Design. 3 Units.

Major schools of 19th- and 20th-century design (Arts and Crafts movement, Bauhaus, Industrial Design, and postmodernism) are analyzed in terms of their continuing cultural relevance. The relation of design to art, technology, and politics; readings from principal theorists, practitioners, and critics; recent controversies in industrial and graphic design, architecture, and urbanism. Enrollment limited to 65.

ME 131A. Heat Transfer. 3-5 Units.

The principles of heat transfer by conduction, convection, and radiation with examples from the engineering of practical devices and systems. Topics include transient and steady conduction, conduction by extended surfaces, boundary layer theory for forced and natural convection, boiling, heat exchangers, and graybody radiative exchange. Prerequisites: 70, ENGR 30. Recommended: intermediate calculus, ordinary differential equations.

ME 131B. Fluid Mechanics: Compressible Flow and Turbomachinery. 4 Units.

Engineering applications involving compressible flow: aircraft and rocket propulsion, power generation; application of mass, momentum, energy and entropy balance to compressible flows; variable area isentropic flow, normal shock waves, adiabatic flow with friction, flow with heat addition. Operation of flow systems: the propulsion system. Turbomachinery: pumps, compressors, turbines. Angular momentum analysis of turbomachine performance, centrifugal and axial flow machines, effect of blade geometry, dimensionless performance of turbomachines; hydraulic turbines; steam turbines; wind turbines. Compressible flow turbomachinery: the aircraft engine. Prerequisites: 70, ENGR 30.

ME 139. Educating Young STEM Thinkers. 3-5 Units.

The course will introduce students to the design thinking process, the national conversations about the future of STEM careers, and provide opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course will be both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139X, EDUC 239X, ME 231

ME 140. Advanced Thermal Systems. 5 Units.

Capstone course. Thermal analysis and engineering emphasizing integrating heat transfer, fluid mechanics, and thermodynamics into a unified approach to treating complex systems. Mixtures, humidity, chemical and phase equilibrium, and availability. Labs apply principles through hands-on experience with a turbojet engine, PEM fuel cell, and hybrid solid/oxygen rocket motor. Use of MATLAB as a computational tool. Prerequisites: ENGR 30, ME 70, and 131A,B.

ME 161. Dynamic Systems, Vibrations and Control. 3-4 Units.

(Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: Calculus (differentiation and integration), ordinary differential equations (e.g., CME 102 or MATH53), basic linear algebra (determinants and solving linear equations), and familiarity with basic dynamics ($F=m*a$) and electronics ($v=i*R$). ME undergraduates must enroll for 4 units with lab. All others should enroll for 3 units without lab.

Same as: ME 261

ME 166. Introduction to Physiology and Biomechanics of Hearing. 3 Units.

Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therapies.

Same as: BIOE 287, ME 266

ME 177. Global Engineers' Education. 3 Units.

A project based course for those who would like to use their engineering backgrounds to address real world challenges faced by underserved communities globally. In direct collaboration with an underserved community from a rural village in India, students will develop engineering solutions to the challenge of sanitation and hygiene. Focus will be on working with the community rather than for them. Concepts covered will include designing with what designers care about at the center, articulating and realizing individual and community aspirations, ethics of engaging with underserved communities, and methodology of working sustainably with an underserved community.

ME 181. Deliverables: A Mechanical Engineering Design Practicum. 3 Units.

The goal of this course is to enable students to solve industry design challenges using modern mechanical design methods. Each week a new practical skill is introduced. These skills have been identified by recently graduated Stanford engineers as being critical to their work. Students then build their command of each skill by completing a simplified yet representative project and submitting deliverables similar to those required in industry. For example, students will learn about how to properly design parts with O-rings and then will be required to design a water-tight enclosure and submit CAD, mechanical drawings, and a bill of materials. Several of the classes feature recent Stanford graduates as guest lecturers. In addition to teaching applicable skills from their job and providing examples from industry, these engineers will also expose students to the range of responsibilities and daily activities that makeup professional mechanical design work. Prerequisites: ME203, ME103d and ME112 OR consent of instructor. Enrollment limited, students complete application on first day of class.

ME 185. Electric Vehicle Design. 3 Units.

This project based class focuses on the design and prototyping of electric vehicles. Students learn the fundamentals of vehicle design in class and apply the knowledge as they form teams and work on projects involving concept, specifications, structure, systems, integration, assembly, testing, etc. The class meets once a week to learn about the fundamentals, exchange their experiences, and coordinate between projects. The teams of 3-5 will work on their projects independently.

ME 190. Ethical Issues in Mechanical Engineering. 4 Units.

Moral rights and responsibilities of engineers in relation to society, employers, colleagues, and clients; cost-benefit-risk analysis, safety, and informed consent; whistle blowing; engineers as expert witnesses, consultants, and managers; ethical issues in engineering design, manufacturing, and operations, and engineering work in foreign countries; and ethical implications of the social and environmental contexts of contemporary engineering. Case studies and field research. Enrollment limited to 25 Mechanical Engineering majors.

ME 191. Engineering Problems and Experimental Investigation. 1-5 Unit.

Directed study and research for undergraduates on a subject of mutual interest to student and staff member. Student must find faculty sponsor and have approval of adviser.

ME 191H. Honors Research. 1-5 Unit.

Student must find faculty honors adviser and apply for admission to the honors program.nn (Staff).

ME 196. Design and Manufacturing Forum. 1 Unit.

Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Laboratory at Stanford.

Same as: ME 396

ME 199A. Practical Training. 1 Unit.

For undergraduate students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

ME 200. Judging Historical Significance Through the Automobile. 1 Unit.

This seminar is for students to learn how to assess the impact of historical importance through the lens of the automobile. Students will participate in discussions about measuring and judging historical importance from a number of perspectives - engineering, aesthetic, historical, etc. They will then decide on criteria and use these to be a part of a judging team at the Pebble Beach Concours d'Elegance. The Pebble Beach event is the leading concours for automobiles in the United States. Using the criteria established by the students, the judging team, including the students, will decide the recipient of the Stanford/Revs Automotive History Trophy for 2015 and have the opportunity to present it on the lawn at Pebble Beach Lodge on August 16th. Must apply using this application: <http://revs.stanford.edu/course/703>. Must attend first class to be considered for acceptance, no exceptions.

ME 201. Dim Sum of Mechanical Engineering. 1 Unit.

Introduction to research in mechanical engineering for M.S. students and upper-division undergraduates. Weekly presentations by current ME Ph.D. and second-year fellowship students to show research opportunities across the department. Strategies for getting involved in a research project.

ME 202. Mechaphonics: Smart Phone-Enabled Mechatronic Systems. 3 Units.

Explore the use of smartphones and tablets as enabling components within modern mechatronic systems. Emphasis on leveraging Android resources (user interface, communications, sensors) in combination with the Arduino microcontroller platform to design and build complex mechatronic devices. Topics include: basic Android application development, Android communications, sensors, Arduino, Arduino peripherals. Large, open-ended team project. Android device and programming hardware required. Limited enrollment. Prerequisites: ME210, ME218, or permission of instructor.

ME 203. Design and Manufacturing. 4 Units.

Integrated experience involving need finding, product definition, conceptual design, detail design, prototype manufacture, public presentation of outcomes, archiving and interpreting the product realization process and its results. Presents an overview of manufacturing processes crucial to the practice of design. Corequisite: 103D or CAD experience. Recommended: 101.

ME 203X. Prototyping and Process Capture. 1 Unit.

Concepts and methods for low resolution prototyping as an integral activity in engineering design process. Class meetings include presentations by faculty and design oriented exercises by students. Assignments will be Blog Posts. ME203X is designed to work in phase with ME203 and offers greater depth in prototyping strategy, technique, and resultant insights. Concurrent enrollment in ME203 is required. Enrollment is optional and capped at 6 students.

ME 204A. Bicycle Design and Frame-Building. 1 Unit.

Lecture/lab. The engineering and artistic execution of designing and building a bicycle frame. Fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes. Films, guest lecturers, field trips. Each student designs and fabricates a custom bicycle frame. This course is now a two part course series ME204A&B. Limited enrollment. Prerequisite: 203 or equivalent.

ME 204B. Bicycle Design and Frame-Building. 3 Units.

The engineering and artistic execution of designing and building a bicycle frame. The fundamentals of bicycle dynamics, handling, and sizing. Manufacturing processes. Films, guest lecturers, field trips. Each student designs a custom bicycle frame that they continue from ME204A in winter quarter. Limited enrollment, admission by consent of instructors. Attendance at first lecture is required. Both ME204A and ME204B must be taken. Prerequisite: 203 or equivalent.

ME 205. Flexible Part Design. 3 Units.

Project based course. Students design and fabricate tooling to create and refine elastomeric parts using RTV silicone rubber. Focus is on the development of elastomeric part design intuition through iteration. Fabrication techniques include manual/CNC machining and additive manufacturing, and molding liquid silicone. Prerequisites: ME203 or instructor consent. Recommended: ME318. Admission is by consent of the instructor. Class size limited to 10, must attend first lecture.

ME 206A. Entrepreneurial Design for Extreme Affordability. 4 Units.

Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product prototypes, distribution systems, and business plans for entrepreneurial ventures in developing countries for a specified challenge faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see extreme.stanford.edu.

ME 206B. Entrepreneurial Design for Extreme Affordability. 4 Units.

Part two of two-quarter project course jointly offered by School of Engineering and Graduate School of Business. Second quarter emphasizes prototyping and implementation of specific projects identified in first quarter. Students work in cross-disciplinary project teams. Industry and adviser interaction, weekly design reviews; final course presentation. Prerequisite: 206A.n (Jointly offered as GSB OIT333B) Design Institute class; see <http://dschool.stanford.edu>.

ME 207. Movie Design. 1 Unit.

Apply design techniques to movie-making. Learn the ins and outs of high-speed filmmaking in the digital age, from writing & casting to directing, shooting, & editing. These techniques are useful whether you plan to move to Hollywood or create a video for the web. Project-based: students design, write, shoot, edit, and screen a short film in the span of one week. Students should be prepared to spend significant amount of out of class work-time creating movies: especially during the week of Oct 26 and the weekend of Nov 1-2.

ME 208. Patent Law and Strategy for Innovators and Entrepreneurs. 2-3 Units.

Inventors and entrepreneurs have four concerns related to patent law: protecting their inventions in the very early stages of product development, determining the patentability of their invention, avoiding infringement of a competitor's patent, and leveraging their patent as a business asset. This course will address each of these concerns through the application of law cases and business cases to an invention of the Student's choice. Although listed as a ME/MSE course, the course is not specific to any discipline or technology. Same as: MSE 278

ME 209. Imperfections in Crystalline Solids. 3 Units.

To develop a basic quantitative understanding of the behavior of point, line and planar defects in crystalline solids. Particular attention is focused on those defects that control the thermodynamic, structural and mechanical properties of crystalline materials.

ME 210. Introduction to Mechatronics. 4 Units.

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mecatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: EE 118

ME 211. ReMake: Design Lessons from Restoration. 1 Unit.

Focus is on the restoration of the 1962 Cadillac DeVille project car as a design investigation. Topics include: What makes a car a classic? How does this car express luxury, and how is that different from contemporary luxury products? What does the car say about the American identity, and how has that changed over the past half-century? Every student can expect to get their hands dirty; prior automotive experience is not required. Goal is to have the car operational again by the end of Autumn Quarter. Preference to early graduate and advanced undergraduate students. Enrollment limited to 15.

ME 212. Calibrating the Instrument. 1 Unit.

For first-year graduate students in the Joint Program in Design. Means for calibrating the designer's mind/body instrument through tools including improvisation, brainstorming, creative imaging, educational kinesiology, and Brain Gym. Current design issues; guest speakers; shared stories; and goal setting.

ME 213. Design for Exploration. 3-4 Units.

A collaboration with the Exploratorium in San Francisco. Students investigate and experiment with all aspects of the creation of interactive museum exhibits. On-site exhibit floor sessions and prototyping workshops. Lectures from museum staff on exhibit design. Students design and construct exhibits for temporary placement on the floor of the Exploratorium. To be considered for admission to the course, student must fill out an application form at <http://stanford.edu/~edmark/application.htm> no later than Nov 30th, 2013. Same as: ARTSTUDI 265

ME 214. Good Products, Bad Products. 3-4 Units.

The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips. Same as: ME 314

ME 215. From Maps to Meaning. 3 Units.

One of the oldest visual tools created by humans to make sense of the complexities of our world, maps are unique in their ability to synthesize data, convey meaning through spatial logic, and deliver information at high resolution. They are also incredible tools for communication, data sorting, and insight finding. This is a hands-on, project-centered course where students will create maps to synthesize complex information and also use maps as a tool for working on design problems. Students will tackle three main projects and several shorter assignments.

ME 216A. Advanced Product Design: Needfinding. 3-4 Units.

Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisites for undergraduates: ME115A, ME115B and ME203, or consent of the instructor.

ME 216B. Advanced Product Design: Implementation 1. 4 Units.

Summary project using knowledge, methodology, and skills obtained in Product Design major. Students implement an original design concept and present it to a professional jury. Prerequisite: 216A.

ME 216C. Advanced Product Design: Implementation 2. 4 Units.

ME216C: Implementation II is a continuation of ME216B. Students would develop project from ME216B to a further state of completion. Design will be completed, details about manufacturing, cost and production will be developed. Students will validate their projects by making them real in the world. Prerequisites for class are ME216A and ME216B. Prerequisite: 216A and 216B.

ME 217. Design & Construction in Wood. 1-3 Unit.

Explore the design and construction of objects using wood. Taught in the Product Realization Lab. Enrollment by consent of instructor.

ME 218A. Smart Product Design Fundamentals. 4-5 Units.

Lecture/Lab. Team design project series on programmable electromechanical systems design. Topics: transistors as switches, basic digital and analog circuits, operational amplifiers, comparators, software design, state machines, programming in C. Lab fee. Limited enrollment.

ME 218B. Smart Product Design Applications. 4-5 Units.

Lecture/lab. Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, statecharts, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.

ME 218C. Smart Product Design Practice. 4-5 Units.

Lecture/lab. Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Team project. Lab fee. Limited enrollment. Prerequisite: 218B.

ME 218D. Smart Product Design: Projects. 3-4 Units.

Lecture/lab. Industrially sponsored project is the culmination of the Smart Product Design sequence. Student teams take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures extend the students' knowledge of electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication. Prerequisite: 218C.

ME 219. The Magic of Materials and Manufacturing. 3 Units.

Intended for design-oriented students who anticipate imagining and then creating new products with a focus on materiality and brand or design and business. Assumes basic knowledge of materials and manufacturing processes which results from taking ENGR 50, ME 203, or equivalent course/life experience. Goal is to acquire professional foundation information about materials and materiality from a product design point-of-view, manufacturing processes and business systems inside a factory, and story-telling by book authorship, essay writing, and multimedia presentation. Goal is for students to exhibit a deep and life-long love of materials and manufacturing in order to make great products and tell a good story about each one.

ME 220. Introduction to Sensors. 3-4 Units.

Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.

ME 221. Green Design Strategies and Metrics. 2 Units.

Foundation in sustainable product design principles, reinforced by conceptual design projects. Discuss what aspects of sustainability matter most for different products. Application of dozens of strategies to improve product sustainability. Frameworks, measurements, and decision-making tools to navigate the complexities of designing greener products. Life-cycle analysis, materials, energy use, biomimicry, product-service systems, persuasive design, design for end-of-life, and systems thinking.

ME 222. Design for Sustainability. 2-3 Units.

Lecture/lab. Role of design in building a sustainable world. How to include sustainability in the design process considering environmental, cultural, and social impacts. Focus is on a proactive design approach, and the tools and techniques needed to translate theory into artifact.

ME 223. Innovating Water Solutions for Developing Countries. 2-3 Units.

Primarily for graduate students and seniors with strong design and mechanical engineering backgrounds. Currently 1.1 billion people lack safe drinking water and 2.6 billion people lack adequate sanitation. The FAO states that by 2025 1.9 billion people will be living in countries or regions with absolute water scarcity, and two-thirds of the world population could be under stress conditions. The Stanford ChangeLabs has initiated a project called the 100 Liter Water project, designed to form strategies to deliver a minimum of 100 liters of water per day per family to the poorest communities in the world. This is a self-directed project class restricted to 15 students selected through an application process. Students work individually and in teams on water related technologies such as solar based low flow pumping systems, rainwater catchment systems, and storage systems. The studio class entails working on the design of solar powered low flow pumps, rainwater catchment systems, and very low cost storage systems designed for sparsely distributed communities in water stressed regions of the world. Students expected to work with autonomy and self-direction, going through multiple rounds of prototyping to generate breakthrough technologies designed to make deep impact.

ME 225. Mystery of Manufacturing. 3 Units.

Mystery of Manufacturing is intended for design- and engineering-oriented students who anticipate or have an interest in launching products. Where the cousin of this class, ME219, is an overview of fabrication and factory systems, this course will look at manufacturing systems more holistically: what does it take to get a product from your idea into peoples' hands? We'll look at factors that drive location, distribution, and supply chain decisions, and we'll look closely at the inner workings of factories. This course assumes basic knowledge of materials and manufacturing processes resulting from ENGR 50, ME 203, ME 219 or equivalent course/life experience. The goal is to acquire a professional foundation in factory manufacturing systems and the business of manufacturing through story-telling, essay writing, and multimedia presentation. We hope students will exhibit a deep and life-long love of the complexity and flexibility of manufacturing systems in order to launch great products into the world.

ME 226. Designing Sustainable Behavior. 1 Unit.

How do you design a product so people will use it in the most sustainable way? Through practical design exercises you experience how selected design tools can help you affect the behavior of your target group. The course consists of an 8-hour workshop on Saturday April 6th in Studio2 at the d.school, followed by a group project finishing April 24th. Students may request to only audit the workshop by emailing jdaae@stanford.edu. The course builds upon and contributes to an ongoing research project. Prerequisite: training in product design.

ME 227. Vehicle Dynamics and Control. 3 Units.

The application of dynamics, kinematics, and control theory to the analysis and design of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and limitations in engineering design. Suspension design fundamentals. Performance and safety enhancement through automatic control systems. In-car laboratory assignments for model validation and kinesthetic understanding of dynamics. Limited enrollment. Prerequisites: ENGR 105, consent of instructor.

ME 229. Design Evangelism. 1-2 Unit.

Students work with Ambidextrous staff and magazine professionals to edit and produce Ambidextrous, Stanford University's Journal of Design. Topics include design processes and innovation, storytelling, writing and editing for an audience, magazine production and project leadership. Hands-on projects, in-class exercises, and guest lectures.

ME 231. Educating Young STEM Thinkers. 3-5 Units.

The course will introduce students to the design thinking process, the national conversations about the future of STEM careers, and provide opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course will be both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139X, EDUC 239X, ME 139

ME 233. Making it Big: Crossing the Entrepreneur's Gap. 3 Units.

Students learn to take novel designs into entrepreneurial production and prepare for market production. Education, resources, and community are provided to help students cross the gap, founding ideas and making them real, in volume. Topics include entrepreneurial production methods and initiation, vendor selection and engagement, cost, design transfer, quality and testing, manufacturing planning and execution. Course prepares students for leadership roles in entrepreneurial as well as large production-oriented companies. Case studies, regular project reviews, final presentation, industry interaction.

ME 235. Understanding Superfans and their Heroes. 2-3 Units.

Harness the power of the hero coefficient through a radical team-based, hands-on, multidisciplinary class. Students will learn and utilize the principles of Empathy-Define-Ideate-Prototype-Test components of the d.thinking process. Why do superfans love their heroes? You'll get to prototype and explore how superfans connect with their heroes, understanding this connective tissue works will give your own ideas a boost. We'll be studying heroes the likes of Dale Earnhardt, Michael Jordan and Stephen Colbert. Expect to leave this class ready to spread the word about heroes and superfans and make everyone at your company or on your team feel like one. You will hear from special guests and take a field trip to a racetrack. Sponsored by the Revs Program. Limited enrollment. FAQ and apply here: <http://revs.stanford.edu/course/693>.

ME 236. Tales to Design Cars By. 1-3 Unit.

Students learn to tell personal narratives and make connections between popular and historic media using the automobile. Explores the meaning and impact of personal and preserved car histories. Storytelling techniques serve to make sense of car experiences; replay memories; examine engagement; understand user interviews. This course celebrates car fascination, and leads the student through finding and telling a car story through the REVS photographic archives, ethnographic research, interviews, and diverse individual and collaborative narrative methods-verbal, non-verbal, and film. Methods draw from socio-cognitive psychology, design thinking, and fine art request; and are applied to car storytelling. Course culminates in a final story presentation and showcase. Restricted to co-term and graduate students. Class Size limited to 18.

ME 238. Patent Prosecution. 2 Units.

The course follows the patent application process through the important stages: inventor interviews, patentability analysis, drafting claims, drafting a specification, filing a patent application, and responding to an office action. The subject matter and practical instruction relevant to each stage are addressed in the context of current rules and case law. The course includes four written assignments: an invention capture, a claim set, a full patent application, and an Office Action response. Pre-requisites: Law 326 (IP:Patents), Law 409 (Intro IP), or ME 208.

ME 239. Mechanics of the Cell. 3 Units.

Kinematical description of basic structural elements used to model parts of the cell: rods, ropes, membranes, and shells. Formulation of constitutive equations: nonlinear elasticity and entropic contributions. Elasticity of polymeric networks. Applications to model basic filaments of the cytoskeleton: actin, microtubules, intermediate filaments, and complete networks. Applications to biological membranes.

ME 240. Introduction to Nanotechnology. 3 Units.

Nanotechnology as multidisciplinary with contributions from physical sciences, engineering, and industry. Current topics in nanotechnology research; developments in nanomaterials, mechanics, electronics, and sensors; and applications. Nanoscale materials building blocks, fabrication and assembly processes, characterization and properties, and novel system architectures. Implications for future development.

ME 242B. Mechanical Vibrations. 3 Units.

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed. Same as: AA 242B

ME 243. Designing Emotion-Reactive Car Interfaces. 3 Units.

How to design in car interfaces that take into account the emotional state of the driver in the moment of driving? Participants will be prototyping and testing interfaces for an industry partner. The challenge is to take real time physiological data to infer the emotional state of a driver and to lever these to improve the driving experience. We will cover topics on design methodology, psychology of emotions, and human machine interaction. The class meets at VAIL, the Stanford automotive innovation facility, for prototyping, discussions and presentations. Participants will have access to tools, prototyping materials, physiological sensors, and a car. Students from all ENG majors but also beyond are encouraged to join, bring your drivers license.

ME 244. Mechanotransduction in Cells and Tissues. 3 Units.

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted. Same as: BIOE 283

ME 247A. @Stanford Studio. 4 Units.

The d.school is working with the University to re-invent the on-campus experience. Huge shifts are disrupting education in unprecedented ways, questioning what it means to learn and live on campus. It's time to harness those changes and re-invent what it means to be a student right here at Stanford. You will delve into design, dig into the most adventurous educational experiments happening around the country, immerse yourself in mind-blowing experiences both on- and off-campus, and create short films and wild prototypes that demonstrate the future of campus life. Your work may be seen or experienced by faculty, deans, and the Stanford community at-large; the opportunity for impact is very real.

ME 247B. @Stanford Studio. 4 Units.

Re-imagine the Stanford experience for the year 2020. Fall quarter the d.school's @Stanford Project will mount @Stanford Studio, an opportunity for students to design, develop, execute, and iterate immersive prototypes that allow experimentation into many facets of the future student experience. Because of the nature of prototypes and the subject matter, significant time outside of scheduled class meetings will be required. Students will work closely with design mentors, campus stakeholders, and inspiration partners (innovative educators, artists, museums, companies and/or topical experts from beyond Stanford) to create live, testable, learning experiences. Course will involve fast-paced team work and rely on strong, consistent participation and perfect attendance. Admission by application. Please see dschool.stanford.edu for application information.

ME 247C. @Stanford Studio. 4 Units.

Re-imagine the future Stanford experience. @Stanford Studio is an opportunity for students to design, develop, execute, and iterate immersive prototypes that allow experimentation into many facets of the future student experience. Students enrolled in @Stanford Studio in winter quarter will be responsible for running quarter-long independent experiments. This is an advanced studio for continuing students only. Admission by application.

ME 250. Internal Combustion Engines. 1-5 Unit.

Internal combustion engines including conventional and turbocharged spark ignition, and diesel engines. Lectures: basic engine cycles, engine components, methods of analysis of engine performance, pollutant emissions, and methods of engine testing. Lab involves hands-on experience with engines and test hardware. Limited enrollment. Prerequisites: 140.

ME 257. Turbine and Internal Combustion Engines. 3 Units.

Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow. Same as: ME 357

ME 260. Fuel Cell Science and Technology. 3 Units.

Emphasis on proton exchange membrane (PEM) and solid oxide fuel cells (SOFC), and principles of electrochemical energy conversion. Topics in materials science, thermodynamics, and fluid mechanics. Prerequisites: MATH 43, PHYSICS 55, and ENGR 30 or ME 140, or equivalents.

ME 261. Dynamic Systems, Vibrations and Control. 3-4 Units.

(Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: Calculus (differentiation and integration), ordinary differential equations (e.g., CME 102 or MATH53), basic linear algebra (determinants and solving linear equations), and familiarity with basic dynamics ($F=m*a$) and electronics ($v=i*R$). ME undergraduates must enroll for 4 units with lab. All others should enroll for 3 units without lab.

Same as: ME 161

ME 264. d.science: Design for Science. 3-4 Units.

Where does design fit into scientific research? In this class, we will design for how data are collected, how data are communicated, and how to apply scientific insights to community-based projects. This year's projects are inspired by the Citizen Science movement and The Year of the Bay. We will use human-centered design methods to understand the needs of bay area citizens through hands-on data collection, public data exploration and collaboration with local industry, government and research partners. With guest lectures from the design and science community, research mentors, and skills workshops, you will develop an actionable understanding of the challenges of collecting good data, the complexities of creating engaging stories with quantitative data, and the challenges of balancing insights from both human-centered design research and scientific research. One of the three class projects will involve visualizing and mapping big data. No prior programming or statistics experience required. Enrollment limited to 24. This course is open to graduate students from all schools and departments. Apply the first day of class.

ME 265. Technology Licencing and Commercialization. 3 Units.

How to profit from technology; processes and strategies to commercialize functional or artistic inventions and creations (not limited to mechanical engineering). Business and legal aspects of determining what can be owned and licensed, how to determine commercial value, and what agreements are necessary. Contract and intellectual property law; focus is on provisions of license agreements and their negotiation.

ME 266. Introduction to Physiology and Biomechanics of Hearing. 3 Units.

Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therapies.

Same as: BIOE 287, ME 166

ME 271. Aerodynamic Drone Design. 3 Units.

An introduction to the aerodynamic design of rotor-based drones, for students with a background in robotics, aerospace, or fluids. Focus is on rotor-based drones operating at low Reynolds numbers, but material is applicable to drones, aviation and wind energy in general. Topics include: airfoil simulation, fundamentals of rotor aerodynamics, blade element analysis, rotor simulation and performance (e.g. mission duration, distance, maneuverability, and reliability). Midterm is the design of an airfoil for a drone, final is the aerodynamic design of a rotor for a drone; these projects will be peer-reviewed by students in the class. Prereqs: background in fluid mechanics or aerodynamics; fluency with MATLAB. Recommended: take ME202 or AA241X before or after ME271, for practical applications in drone prototyping and control theory.

ME 277. Graduate Design Research Techniques. 3-4 Units.

Students from different backgrounds work on real-world design challenges. The Design Thinking process with emphasis on: ethnographic techniques, need finding, framing and concept generation. The Design Thinking process as a lens to explore ways to better understand people and their culture. Cultural differences as a source of design inspiration, with the understanding that design itself is a culturally embedded practice.

ME 280. Skeletal Development and Evolution. 3 Units.

The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.

Same as: BIOE 280

ME 281. Biomechanics of Movement. 3 Units.

Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

Same as: BIOE 281

ME 283. Tissue Mechanics and Mechanobiology. 3 Units.

Introduction to the application of mechanical engineering analysis to understand human physiology and disease. Topics include basics of musculoskeletal force analysis, cell mechanics, blood flow, and mechanical behaviors of tissues. Undergraduates should have taken ME 70 and ME 80 or equivalents.

ME 284B. Cardiovascular Bioengineering. 3 Units.

Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.

Same as: BIOE 284B

ME 287. Mechanics of Biological Tissues. 3 Units.

Introduction to the mechanical behaviors of biological tissues in health and disease. Overview of experimental approaches to evaluating tissue properties and mathematical constitutive models. Elastic behaviors of hard tissues, nonlinear elastic and viscoelastic models for soft tissues.

ME 287L. Mechanics of Biological Tissues Lab. 1 Unit.

The Mechanics of Biological Tissues Lab is the optional lab component for students taking ME287 Mechanics of Biological Tissues.

ME 288. ReDesigning Theater: Live & Digital Performance. 3 Units.

This quarter's version of ReDesigning Theater looks at Live and Digital Performance. We will examine the use of digital technology in collaboration with live performance. Students will learn and employ the design thinking process as well as improv and theatrical techniques. We aim to create user-centric, interactive experiences where technology enables the audience to become part of and/or influence the outcome of the story or its presentation. Student projects will begin with the concepts enabled by personal technology such as smart phones and expand to animation, video projection, and other media. Students will work in small groups to investigate and experiment with formats that blur the lines between live and digital, performer and audience, and physical and virtual platforms. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the frontiers of technology, art, and live performance.

Same as: TAPS 130

ME 289A. Interactive Art / Performance Design. 2 Units.

This class is for those who want the experience of designing and creating interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. This is a two-quarter long commitment during which students will first learn the design, planning, story boarding, budgeting, engineering, proposal creation and concept pitching of projects for applying for grants and presenting to funders. The second quarter will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part one of a two course series: ME 289A&B.

Same as: TAPS 289A

ME 289B. Interactive Art / Performance Creation. 3-4 Units.

This class is the continuation of ME289A where students experience the designing and creating of interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. During this second quarter students will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part two of a two course series : ME 289A&B.

Same as: TAPS 289B

ME 290. GIVE BIG OR GO HOME. 3-4 Units.

When individuals or organizations attempt to solve social problems by giving money, they often overlook the people at the center of the situation. The bigger the problem, the more removed the donors or funding institutions become from the human experience. You will learn how to use human centered design to shape your giving, while also considering the roles of larger systems. Students will learn design thinking methods, how to conceptualize a system in which you want to make a difference, and creative ways to think about financing change.

ME 292. Humanize My Ride: Investigations in User-Centric Vehicle Design. 3 Units.

Humanize My Ride is vehicle design for the extreme user. We will explore the relationship between specialized vehicles and their user's needs to inform a deep dive into designing and prototyping a unique purpose modified ride for a new type of user. Utilizing the designing thinking approach and emerging technology such as Google GLASS, student teams will interview drivers and users of specific purpose cars and trucks and then choose a new user to design and build for. Teams will work collectively on different elements of one vehicle to test with their user's needs. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the intersection of user-centric design, automotive technology, creative customization and hands-on building.

ME 294. Medical Device Design. 3 Units.

In collaboration with the School of Medicine. Introduction to medical device design for undergraduate and graduate engineering students.

ME 294L. Medical Device Design Lab. 3 Units.

In collaboration with the School of Medicine. This is the lab portion of ME294, which must be taken concurrently. Introduction to medical device design for undergraduate and graduate engineering students. Design, prototyping and labs. Medical device environments may include hands-on device testing; and field trips to operating rooms and local device companies. Prerequisite: 203.

ME 297. Forecasting for Innovators: Technology, Tools & Social Change. 3 Units.

Technologies from the steam engine to the microprocessor have been mixed gifts, at once benefitting humankind and creating many of the problems facing humanity today. This class will explore how innovators can use forecasting methods to identify new challenges, develop responsive innovations and anticipate unintended consequences. Students will produce a long-range forecast project, applying a variety of methodologies including research, expert interviews and graphical exploration.

ME 298. Silversmithing and Design. 3-4 Units.

Skills involved in working with precious metals at a small scale. Investment casting and fabrication techniques such as reticulation, granulations, filigree, and mokume gane.

ME 299A. Practical Training. 1 Unit.

For master's students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

ME 299B. Practical Training. 1 Unit.

For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

ME 300A. Linear Algebra with Application to Engineering Computations. 3 Units.

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51.

Same as: CME 200

ME 300B. Partial Differential Equations in Engineering. 3 Units.

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.

Same as: CME 204

ME 300C. Introduction to Numerical Methods for Engineering. 3 Units.

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.

Same as: AA 214A, CME 206

ME 301. LaunchPad:Design and Launch your Product or Service. 4 Units.

This is an intense course in product design and development offered to graduate students only (no exceptions). In just ten weeks, we will apply principles of design thinking to the real-life challenge of imagining, prototyping, testing and iterating, building, pricing, marketing, distributing and selling your product or service. You will work hard on both sides of your brain. You will experience the joy of success and the (passing) pain of failure along the way. This course is an excellent chance to practice design thinking in a demanding, fast-paced, results-oriented group with support from faculty and industry leaders. This course may change your life. We will treat each team and idea as a real start-up, so the work will be intense. If you do not have a passionate and overwhelming urge to start a business or launch a product or service, this class will not be a fit.

ME 302. The Future of the Automobile. 1 Unit.

This quarter, the seminar will take a specific focus on "Advanced Driver Assistance Systems", which help drivers to maneuver their vehicles through traffic. Those systems range from navigation systems, adaptive cruise control, night vision, lane departure warning over automated parking, traffic jam assistance, to self-driving cars. With this breadth of applications, advanced driver assistance systems play an important role in making traffic safer, more efficient, and more enjoyable. This course, lectured by an industry expert, will introduce students to technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. At the end of the quarter, students will have developed a technical understanding as well as an understanding for the interactions of the technology, business, and society with a specific automotive focus.

ME 302A. The Future of the Automobile- Trends and Challenges in Personal Mobility. 1 Unit.

The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is the first part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will discuss general aspects of the automobile and personal mobility. In the first half of the quarter, students will learn about different aspects of the automobile and understand key characteristics and conflicts. Primary trends such as electrification, automation, communication, and commoditization will be discussed. In the second half of the quarter, guest speakers from academia and industry will share their vision regarding the future of the automobile and how design challenges are addressed within their respective organizations. At the end of the quarter, students will have developed a broader understanding of the intertwined technology - environmental - human - business - legal aspects that will shape the future of the automobile.

ME 302B. The Future of the Automobile- Driver Assistance and Automated Driving. 1 Unit.

The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is the second part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will discuss how various vehicle systems help drivers to maneuver their vehicles through traffic. Advanced driver assistance systems range from navigation, adaptive cruise control, night vision, and lane departure warning to automated parking, traffic jam assistance, and eventually self-driving cars. These systems play an important role in making traffic safer, more efficient, and more enjoyable. This course, lectured by an industry expert, will introduce students to the technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. Students will develop an understanding for the interactions of the technology, business, and society with a specific automotive focus.

ME 302C. The Future of the Automobile- Vehicle Communication Systems. 1 Unit.

ME302C-The Future of the Automobile - Vehicle Communication Systems
The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is the third part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will discuss how vehicles communicate with one another and beyond. Respective in-vehicle concepts include online media services, connections to a centralized traffic management infrastructure, communication among vehicles to avoid collisions and improve traffic flow. This class consists in the first half of lectures by an industry expert introducing technical and regulatory aspects of connected vehicles. In the second half, students will team up in groups and conceptualize scenarios for vehicle communication systems. Students will develop an understanding for the interactions of the technology, business, and society with a specific automotive focus.

ME 303. Biomechanics of Flight. 3 Units.

Study of biological flight as an inspiration for designing robots. The goal is to give students a broad understanding of the biomechanics of natural flight, and an in-depth understanding of bird flight. This course elucidates how students can pick and choose exciting biological questions, use biological and engineering techniques to answer them, and use the results to identify bio-inspired design applications. Prerequisites: Fluid mechanics OR Aerodynamics AND Fluent Matlab skills. Course website URL: http://lentinklab.stanford.edu/impact/stanford_teaching.

ME 304. The Designer's Voice. 1 Unit.

This course for Masters students in the Stanford Design Program helps students develop a point of view about their design career that will enable them to articulate their design vision, inspire a design studio, or infect a business with a culture of design-thinking. This class focuses on the integration of work and worldview, professional values, design language, and the development of the designer's voice. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching.

ME 305. Statistics for Design Researchers. 1-2 Unit.

Comprehensive yet friendly introduction to the fundamental concepts of inferential statistics, primarily used in survey research. Course content delivered via online video lectures, with group classroom time dedicated to completing the lab assignment. All examples and assignments involve writing code in R, interpreting R output and creating visual output with ggplot2. Two-unit credit requires completion of an analysis project using data collected as part of an NSF-funded engineering education research project. Auditors welcome.

ME 308. Spatial Motion. 3 Units.

The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing the positions of spatial systems of rigid bodies with their inter-relationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.

ME 309. Finite Element Analysis in Mechanical Design. 3 Units.

Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations emphasized; nonlinear and dynamic formulations introduced. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques, features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisites: Math 51, or equivalent. Recommended: ME80 or CEE101A, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.

ME 310A. Product-Based Engineering Design, Innovation, and Development. 4 Units.

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

ME 310B. Product-Based Engineering Design, Innovation, and Development. 4 Units.

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

ME 310C. Project-Based Engineering Design, Innovation, and Development. 4 Units.

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

ME 310X. New Product Management. 1 Unit.

Restricted to graduate students. Focus is on the role of the product manager in industry. Topics include product management skills, leadership and team management, getting a product management job, corporate and project finance for engineers, sales and marketing for engineers and business strategy. Seminar with in-class exercises and guest speakers from industry. Limited to 50. Prerequisite: Enrolled ME310 students only.

ME 312. Advanced Product Design: Formgiving. 3 Units.

Lecture/lab. Small- and medium- scale design projects carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making.

ME 313. Human Values and Innovation in Design. 3 Units.

Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design.

ME 314. Good Products, Bad Products. 3-4 Units.

The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips. Same as: ME 214

ME 315. The Designer in Society. 3 Units.

For graduate students. Career objectives and psychological orientation compared with existing social values and conditions. Emphasis is on assisting individuals in assessing their roles in society. Readings on political, social, and humanistic thought are related to technology and design. Experiential, in-class exercises, and term project. Enrollment limited to 24. Admission by application. See dschool.stanford.edu/classes for more information and attend the first day of class.

ME 316A. Product Design Master's Project. 2-6 Units.

For graduate Product Design or Design (Art) majors only. Student teams, under the supervision of the design faculty, spend the quarter researching master's project topics. Students are expected to demonstrate mastery of design thinking methods including; needfinding, brainstorming, field interviews and synthesis during this investigation. Masters projects are selected that involve the synthesis of aesthetics and technological concerns in the service of human need. Design Institute class; see <http://dschool.stanford.edu>. Prereq: ME277, ME312, ME313.

ME 316B. Product Design Master's Project. 2-4 Units.

Design Garage is a Winter/Spring class (a two quarter commitment is required). The class is a deep dive in design thinking that uses student-led projects to teach design process and methods. The projects come from investigations conducted during the Fall quarter where the preliminary need finding, customer research, and product or service ideas have been developed to provide the seed projects for the student design teams. Students will learn the methodologies of design thinking by bringing a product, service, or experience to market. Students apply to Design Garage in the Fall, and teams are formed after interviews and applications are reviewed. Prerequisite: graduate student standing.

ME 316C. Product Design Master's Project. 2-4 Units.

This is the second half of the two quarter Design Garage sequence. Students will complete projects begun in ME316B the prior quarter. Prerequisite: ME316B and graduate student standing. Design Institute class; see <http://dschool.stanford.edu>.

ME 317A. Design Methods: Product Definition. 4 Units.

Systematic methodologies to define, develop, and produce world-class products. Student team projects to identify opportunities for improvement and develop a comprehensive product definition. Topics include value engineering, quality function deployment, FMEA and risk analysis, robustness, design for variety, design for life-cycle quality, financial analysis and Monte Carlo simulation. Students must take 317B to complete the project and obtain a letter grade. On-campus enrollment limited to 25; SCPD class size is limited to 75.

ME 317B. Design Methods: Quality By Design. 4 Units.

Building on 317A, focus is on the implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for its manufacture, testing, and service. The project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh's Method), Poka Yoke, design for robustness, Monte Carlo and Design for Six Sigma, process capability analysis, financial analysis, and prototyping. On-campus class limited to 25. For SCPD students, limit is 75. Prerequisite: 317A.

ME 318. Computer-Aided Product Creation. 4 Units.

Design course focusing on an integrated suite of computer tools: rapid prototyping, solid modeling, computer-aided machining, and computer numerical control manufacturing. Students choose, design, and manufacture individual products, emphasizing individual design process and computer design tools. Field trips demonstrate Stanford Product Realization Lab's relationship to the outside world. Structured lab experiences build a basic CAD/CAM/CNC proficiency. Limited enrollment. Prerequisite: consent of instructor.

ME 319. Fundamentals of Design for Design Thinkers. 2-4 Units.

This course is an introduction to the fundamental principles of Design, geared toward graduate students involved and invested in innovation and design thinking. Core concepts include Contrast, Color, Materiality, Form, Proportion, Transitions, and more. Students will be introduced to the major philosophical concepts of design in readings and in class, and will practice techniques in class and via weekly hands-on projects out of class, culminating in a final personal project. Students will also be introduced to many hands-on prototyping and making skills via access to the Product Realization Lab and Room 36 (webshop.stanford.edu).

ME 320. Introduction to Robotics. 3 Units.

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra. Same as: CS 223A

ME 321. Optofluidics: Interplay of Light and Fluids at the Micro and Nanoscale. 3 Units.

Many optical systems in biology have sophisticated designs with functions that conventional optics cannot achieve: no synthetic materials, for example, can provide the camouflage capability exhibited by some animals. This course overviews recent efforts--some inspired by examples in biology--in using fluids, soft materials and nanostructures to create new functions in optics. Topics include electrowetting lenses, electronic inks, colloidal photonic crystals, bioinspired optical nanostructures, nanophotonic biosensors, lens-less optofluidic microscopes. The use of optics to control fluids is also discussed: optoelectronic tweezers, particle trapping and transport, microrheology, optofluidic sorters, fabrication and self-assembly of novel micro and nanostructures.

ME 322. Kinematic Synthesis of Mechanisms. 3 Units.

The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

ME 323. Modeling and Identification of Mechanical Systems for Control. 3 Units.

Lecture/Lab. The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analytical work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

ME 324. Precision Engineering. 4 Units.

Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

ME 325. Making Multiples: Scaled Manufacturing Tooling. 3 Units.

Design course focusing on the process of injection molding as a prototyping and manufacturing tool. Coursework will include creating and evaluating initial design concepts, detailed part design, mold design, mold manufacturing, molding parts, and testing and evaluating the results. Students will work primarily on individually selected projects, using each project as a tool to continue developing and exercising individual design process. Lectures and field trips will provide students with context for their work in the Stanford Product Realization Lab. Prerequisite: ME318 or consent of instructors.

ME 326. Telerobotics and Human-Robot Interactions. 3 Units.

Focus is on dynamics and controls. Evaluation and implementation of required control systems. Topics include master-slave systems, kinematic and dynamic similarity; control architecture, force feedback, haptics, sensory substitutions; stability, passivity, sensor resolution, servo rates; time delays, prediction, wave variables. Hardware-based projects encouraged, which may complement ongoing research or inspire new developments. Limited enrollment. Prerequisites: ENGR 205, 320 or CS 223A, or consent of instructor. (Niemeier).

ME 327. Design and Control of Haptic Systems. 3 Units.

Study of the design and control of haptic systems, which provide touch feedback to human users interacting with virtual environments and teleoperated robots. Focus is on device modeling (kinematics and dynamics), synthesis and analysis of control systems, design and implementation, and human interaction with haptic systems. Coursework includes homework/laboratory assignments and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with C/C++ programming and feedback control design.

ME 328. Medical Robotics. 3 Units.

Study of the design and control of robots for medical applications. Focus is on robotics in surgery and interventional radiology, with introduction to other healthcare robots. Delivery is through instructor lectures and weekly guest speakers. Coursework includes homework and laboratory assignments, an exam, and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science; no medical background required. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with C/C++ programming, feedback control design, and linear systems. Cannot be taken concurrently with CS 571.

ME 330. Advanced Kinematics. 3 Units.

Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

ME 331A. Advanced Dynamics & Computation. 3 Units.

Newton, Euler, momentum, and road-map methods and computational tools for 3-D force and motion analysis of multibody systems. Power, work, and energy. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the static and dynamic behavior of multiple degree of freedom systems.

ME 331B. Advanced Dynamics, Simulation & Control. 3 Units.

Advanced methods and computational tools for the efficient formulation of equations of motion for multibody systems. D'Alembert principle. Power, work, and energy. Kane's and Lagrange's method. Computed torque control. Systems with constraints. Quaternions. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Team-based computational multi-body lab project (inclusion of feed-forward control optional).

ME 332. Introduction to Computational Mechanics. 3 Units.

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches; providing an important connection between mechanics and computational methods.

Same as: CME 232

ME 333. Mechanics. 3 Units.

Goal is a common basis for advanced mechanics courses. Introduction to variational calculus. Formulation of the governing equations from a Lagrangian perspective for finite and infinite dimensional mechanical systems. Examples include systems of particles and linear elastic solids. Introduction to tensors. Definition and interpretation of Cauchy stress tensor.

ME 333A. Mechanics - Fundamentals and Lagrangian Mechanics. 3 Units.

Goal is a common basis for advanced mechanics courses. Introduction to variational calculus. Formulation of the governing equations from a Lagrangian perspective for finite and infinite dimensional mechanical systems. Examples include systems of particles and linear elastic solids. Introduction to tensors. Definition and interpretation of Cauchy stress tensor.

ME 333B. Mechanics - Elasticity and Inelasticity. 3 Units.

Introduction to the theories of elasticity, plasticity and fracture and their applications. Elasticity: Definition of stress, strain, and elastic energy; equilibrium and compatibility conditions; and formulation of boundary value problems. Stress function approach to solve 2D elasticity problems and Greenacirc;##s function approach in 3D. Applications to contact and crack. Plasticity: Yield surface, associative flow rule, strain hardening models, crystal plasticity models. Applications to plastic bending, torsion and pressure vessels. Fracture: Linear elastic fracture mechanics, J-integral, Dugdale-Barrenblatt crack model. Applications to brittle fracture and fatigue crack growth. Computer programming in Matlab is used to aid analytic derivation and numerical solutions.

ME 333C. Mechanics - Continuum Mechanics. 3 Units.

Introduction to linear and nonlinear continuum mechanics of solids. Introduction to tensor algebra and tensor analysis. Kinematics of motion. Balance equations of mass, linear and angular momentum, energy, and entropy. Constitutive equations of isotropic and anisotropic hyperelastic solids. Introduction to numerical solution techniques.

ME 334. MECHANICS OF THE BRAIN. 3 Units.

Understanding the role of mechanics in brain development, physiology, and pathology. Mechanics of brain cells: neurons, mechanobiology, mechanotransduction. Mechanics of brain tissue: experimental testing, constitutive modeling, computational modeling. Mechanics of brain development: gyrification, cortical folding, axon elongation, lissencephaly, polymicrogyria. Mechanics of traumatic brain injury: high impact loading, neural injury. Mechanics of brain tumors, brain cancer, tumor growth, altered cytoskeletal mechanics. Mechanics of neurological disorders: autism, dementia, schizophrenia. Mechanics of brain surgery.

ME 335A. Finite Element Analysis. 3 Units.

Fundamental concepts and techniques of primal finite element methods. Method of weighted residuals, Galerkin's method and variational equations. Linear elliptic boundary value problems in one, two and three space dimensions; applications in structural, solid and fluid mechanics and heat transfer. Properties of standard element families and numerically integrated elements. Implementation of the finite element method using Matlab, assembly of equations, and element routines. Lagrange multiplier and penalty methods for treatment of constraints. The mathematical theory of finite elements.

ME 335B. Finite Element Analysis. 3 Units.

Finite element methods for linear dynamic analysis. Eigenvalue, parabolic, and hyperbolic problems. Mathematical properties of semi-discrete (t-continuous) Galerkin approximations. Modal decomposition and direct spectral truncation techniques. Stability, consistency, convergence, and accuracy of ordinary differential equation solvers. Asymptotic stability, over-shoot, and conservation laws for discrete algorithms. Mass reduction. Applications in heat conduction, structural vibrations, and elastic wave propagation. Computer implementation of finite element methods in linear dynamics. Implicit, explicit, and implicit-explicit algorithms and code architectures.

ME 335C. Finite Element Analysis. 3 Units.

Newton's method for nonlinear problems; convergence, limit points and bifurcation; consistent linearization of nonlinear variational forms by directional derivative; tangent operator and residual vector; variational formulation and finite element discretization of nonlinear boundary value problems (e.g. nonlinear heat equation, nonlinear elasticity); enhancements of Newton's method: line-search techniques, quasi-Newton and arc-length methods.

ME 337. Mechanics of Growth. 3 Units.

Introduction to continuum theory and computational simulation of living matter. Kinematics of finite growth. Balance equations in open system thermodynamics. Constitutive equations for living systems. Custom-designed finite element solution strategies. Analytical solutions for simple model problems. Numerical solutions for clinically relevant problems such as: bone remodeling; wound healing; tumor growth; atherosclerosis; heart failure; tissue expansion; and high performance training.

ME 338. Continuum Mechanics. 3 Units.

Linear and nonlinear continuum mechanics for solids. Introduction to tensor algebra and tensor analysis. Kinematics of motion. Balance equations of mass, linear and angular momentum, energy, and entropy. Constitutive equations of isotropic and anisotropic hyperelasticity. Recommended as prerequisite for Finite Element Methods.

ME 338B. Continuum Mechanics. 3 Units.

Constitutive theory; equilibrium constitutive relations; material frame indifference and material symmetry; finite elasticity; formulation of the boundary value problem; linearization and well-posedness; symmetries and configurational forces; numerical considerations.

ME 339. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms). Same as: CME 213

ME 340. Theory and Applications of Elasticity. 3 Units.

This course provides an introduction to the elasticity theory and its application to material structures at microscale. The basic theory includes the definition of stress, strain and elastic energy; equilibrium and compatibility conditions; and the formulation of boundary value problems. We will mainly discuss the stress function method to solve 2D problems and will briefly discuss the Green's function approach for 3D problems. The theory and solution methods are then applied to contact problems as well as microscopic defects in solids, such as voids, inclusions, cracks, and dislocations. Computer programming in Matlab is used to aid analytic derivation and numerical solutions of elasticity problems.

ME 342. Theory and Application of Inelasticity. 3 Units.

Theories of plasticity and fracture phenomena from both phenomenological and micromechanical viewpoints. Yield surface, flow rules, strain hardening models, and applications to creep. Plastic zone near crack tip. Linear fracture mechanics and other criteria for crack initiation and growth. Application to fatigue. Classical analytic solutions will be discussed together with numerical solutions of plane elastoplastic problems by Matlab.

ME 342A. Mechanobiology and Biofabrication Methods. 3 Units.

Review of current cell mechanobiology topics and methods for controlling and assessing the biomechanics of living systems. Practice and theory of design and fabrication of devices for cell mechanobiology. Limited enrollment. NOTE: Compressed schedule starts 7/21 with Tu/Th lecture 10-12 in Weeks 1 and 3, and labs 9-5 (with lunch break) in Weeks 2 and 4.

ME 342D. MEMS Fabrication/Projects. 1-3 Unit.

Emphasis is on process planning, in process testing, nanofabrication training, exposure to MEMS industry applications. Prerequisite: ENGR 341.

ME 345. Fatigue Design and Analysis. 3 Units.

The mechanism and occurrences of fatigue in service. Methods for predicting fatigue life and for protecting against premature fatigue failure. Use of elastic stress and inelastic strain analyses to predict crack initiation life. Use of linear elastic fracture mechanics to predict crack propagation life. Effects of stress concentrations, manufacturing processes, load sequence, irregular loading, multi-axial loading. Subject is treated from the viewpoints of the engineer seeking up-to-date methods of life prediction and the researcher interested in improving understanding of fatigue behavior. Prerequisite: undergraduate mechanics of materials.

ME 346A. Introduction to Statistical Mechanics. 3 Units.

The main purpose of this course is to provide students with enough statistical mechanics background to the Molecular Simulations classes (ME 346B,C), including the fundamental concepts such as ensemble, entropy, and free energy, etc. The main theme of this course is how the laws at the macroscale (thermodynamics) can be obtained by analyzing the spontaneous fluctuations at the microscale (dynamics of molecules). Topics include thermodynamics, probability theory, information entropy, statistical ensembles, phase transition and phase equilibrium. Recommended: PHYSICS 110 or equivalent.

ME 346B. Introduction to Molecular Simulations. 3 Units.

Algorithms of molecular simulations and underlying theories. Molecular dynamics, time integrators, modeling thermodynamic ensembles (NPT, NVT), free energy, constraints. Monte Carlo simulations, parallel tempering. Stochastic equations, Langevin and Brownian dynamics. Applications in solids, liquids, and biomolecules (proteins). Programming in Matlab.

ME 346C. Advanced Techniques for Molecular Simulations. 3 Units.

Advanced methods for computer simulations of solids and molecules. Methods for long-range force calculation, including Ewald methods and fast multipole method. Methods for free energy calculation, such as thermodynamic integration. Methods for predicting rates of rare events (e.g. nucleation), including nudged elastic band method and umbrella sampling method. Students will work on projects in teams.

ME 347. Mathematical Theory of Dislocations. 3 Units.

The mathematical theory of straight and curvilinear dislocations in linear elastic solids. Stress fields, energies, and Peach-Koehler forces associated with these line imperfections. Anisotropic effects, Green's function methods, and the geometrical techniques of Brown and Indenbom-Orlov for computing dislocation fields and for studying dislocation interactions. Continuously distributed dislocations and cracks and inclusions.

ME 348. Experimental Stress Analysis. 3 Units.

Theory and applications of photoelasticity, strain gages, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Discussion of other methods of stress and strain determination (optical fiber strain sensors, acoustoelasticity, thermoelasticity, brittle coating, Moire interferometry, residual stress determination). Six labs plus mini-project. Limited enrollment. Lab fee.

ME 349. Variational Methods in Elasticity and Plate Theory. 3 Units.

An introduction to variational calculus methods and their applications to the theories of elasticity and plates.

ME 350A. Design @ the Intersection of Science, Technology, and Entrepreneurship. 1 Unit.

This 1 credit class is for graduate students who are passionate about turning their research into a product or service. This is a chance to explore the potential impact of your work beyond your lab or research group. We are looking for students from the sciences, engineering, or mathematics, or students who have business acumen or start-up experience focused on technology driven companies. If you want to get out of your lab, away from your machine, and start to design your future come join us. The class will begin your journey from research to product conceptualization and user centered design through exercises and group activities. We meet once a week over the quarter in 10 self-contained 2 hour workshops where students will focus on their own work as well as explore the practical applications of fellow students' ideas, experience team formation and collaboration, and begin to explore product and service design. Aside from class time you will need to commit up to one hour per week outside the class on customer and market exploration. Advisors from industry and academia will mentor student teams. The class will be structured for individuals with team formation optional.

ME 351A. Fluid Mechanics. 3 Units.

Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler's equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

ME 351B. Fluid Mechanics. 3 Units.

Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

ME 352A. Radiative Heat Transfer. 3 Units.

The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

ME 352B. Fundamentals of Heat Conduction. 3 Units.

Physical description of heat conduction in solids, liquids, and gases. The heat diffusion equation and its solution using analytical and numerical techniques. Data and microscopic models for the thermal conductivity of solids, liquids, and gases, and for the thermal resistance at solid-solid and solid-liquid boundaries. Introduction to the kinetic theory of heat transport, focusing on applications for composite materials, semiconductor devices, micromachined sensors and actuators, and rarefied gases. Prerequisite: consent of instructor.

ME 352C. Convective Heat Transfer. 3 Units.

Prediction of heat and mass transfer rates based on analytical and numerical solutions of the governing partial differential equations. Heat transfer in fully developed pipe and channel flow, pipe entrance flow, laminar boundary layers, and turbulent boundary layers. Superposition methods for handling non-uniform wall boundary conditions. Approximate models for turbulent flows. Comparison of exact and approximate analyses to modern experimental results. General introduction to heat transfer in complex flows. Prerequisite: 351B or equivalent.

ME 354. Experimental Methods in Fluid Mechanics. 4 Units.

Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisites: previous experience with computer programming and consent of instructor. Limited enrollment.

ME 355. Compressible Flow. 3 Units.

Topics include quasi-one-dimensional isentropic flow in variable area ducts, normal shock waves, oblique shock and expansion waves, flow in ducts with friction and heat transfer, unsteady one-dimensional flow, and steady two-dimensional supersonic flow.

ME 357. Turbine and Internal Combustion Engines. 3 Units.

Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow. Same as: ME 257

ME 358. Heat Transfer in Microdevices. 3 Units.

Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

ME 359. ReDesigning the Neonatal ICU. 3 Units.

ReDesigning the Neonatal ICU will inform students about current challenges in the NICU environment through expert speakers, literature, CAPE simulations and field trips. Simultaneously, we will be studying the users: their environment, their behavior, and their emotions. Our goal is to identify needs that will lead to product, system or service innovation that will improve safety and quality of care. Student groups will have structured access to NICU clinicians at Lucile Packard Children's Hospital, as well as parents of preterm infants for conducting ethnography. Opportunities for direct observation in the hospital will be planned as well. Physical prototypes and/or scenarios can be tested and presented at CAPE's simulation lab in order to give students a realistic environment in which to evaluate and present their ideas. For more information, and to see a confirmed list of guest speakers for this class, please visit our class website: <http://www.redesignhealthcare.org/redesigning-the-neonatal-icu/>.

ME 359A. Advanced Design and Engineering of Space Systems I. 4 Units.

The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

ME 359B. Advanced Design and Engineering of Space Systems II. 4 Units.

Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor.

ME 361. Turbulence. 3 Units.

The nature of turbulent flows, statistical and spectral description of turbulence, coherent structures, spatial and temporal scales of turbulent flows. Averaging, two-point correlations and governing equations. Reynolds averaged equations and stresses. Free shear flows, turbulent jet, turbulent kinetic energy and kinetic energy dissipation, and kinetic energy budget. Kolmogorov's hypothesis and energy spectrum. Wall bounded flows, viscous scales, and law of the wall. Turbulence closure modeling for Reynolds averaged Navier Stokes equations. Direct and large eddy simulation of turbulent flows. Subgrid scale modeling.

ME 362A. Physical Gas Dynamics. 3 Units.

Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing.

ME 362B. Nonequilibrium Processes in High-Temperature Gases. 3 Units.

Chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Prerequisite: 362A or consent of instructor.

ME 363. Partially Ionized Plasmas and Gas Discharges. 3 Units.

Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor.

ME 364. Optical Diagnostics and Spectroscopy. 3 Units.

The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent.

ME 366. Creative Gym: A Design Thinking Skills Studio. 1 Unit.

Build your creative confidence and sharpen your design thinking skills. Train your intuition and expand the design context from which you operate every day. This experimental studio will introduce d.school students to fast-paced experiential exercises that lay the mental and physical foundation for a potent bias toward action, and a wider knowledge of the personal skills that expert design thinkers utilize in all phases of their process. Recent research based on this course curriculum show that performing these class activities will expand your creative capacity in statistically significant ways.

ME 367. Optical Diagnostics and Spectroscopy Laboratory. 4 Units.

Principles, procedures, and instrumentation associated with optical measurements in gases and plasmas. Absorption, fluorescence and emission, and light-scattering methods. Measurements of temperature, species concentration, and molecular properties. Lab. Enrollment limited to 16. Prerequisite: 362A or 364.

ME 368. d.Leadership: Design Leadership in Context. 1-3 Unit.

d.Leadership is a course that teaches the coaching and leadership skills needed to drive good design process in groups. d.leaders will work on real projects driving design projects within organizations, and gain real world skills as they experiment with their leadership style while coaching innovation projects. Take this course if you are inspired by past design classes and want skills to lead design projects beyond Stanford. Preference given to students who have taken other Design Group or d.school classes. Admission by application. See dschool.stanford.edu/classes for more information. Same as: MSE 489

ME 368A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions, and interactive team meetings (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 300,000 patients have been treated to date with technologies developed as part of this program and more than thirty venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.

Same as: BIOE 374A, MED 272A

ME 368B. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two-quarter sequence (see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to a medical need forward into development and potential commercialization. Continuing work in teams with engineering and medical colleagues, students will learn the fundamentals of medical device prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing a commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of developing a business or research plan/canvas; and strategies for assembling a development team. Final project presentations are made to a panel of prominent venture and corporate investors. New students (i.e. students who did not take OIT384 in the winter quarter) may be admitted, depending on team needs. Candidates need to submit an application at <http://biodesign.stanford.edu/bdn/courses/bioe374app.jsp> by March 1.

Same as: BIOE 374B, MED 272B

ME 369. Cracks, Dislocations, and Waves. 3 Units.

The 6-dimensional formalism of A. N. Stroh will be developed to treat two-dimensional problems in elastically anisotropic media. Stress fields of straight dislocations will be developed, from which the elastic fields of line cracks (treated as continuous distributions of straight dislocations) will be obtained along with stress intensity factors and energy release rates. Steady waves including plane waves, Rayleigh waves, and Stoneley waves will be treated along with problems of reflection and refraction of incident plane waves in joined anisotropic half-spaces. Anisotropic boundary element methods will be discussed. Assignments will include both analytical and semi-analytical work as well as simple numerical methods to implement Stroh's formalism. Class notes and readings will be provided.

ME 370A. Energy Systems I: Thermodynamics. 3 Units.

Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Exergy, mixtures, reacting systems, phase equilibrium, chemical exergy, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab.

ME 370B. Energy Systems II: Modeling and Advanced Concepts. 4 Units.

Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A.

ME 370C. Energy Systems III: Projects. 3-5 Units.

Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor.

ME 371. Combustion Fundamentals. 3 Units.

Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor.

ME 372. Combustion Applications. 3 Units.

The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371.

ME 373. Nanomaterials Synthesis and Applications for Mechanical Engineers. 3 Units.

This course provides an introduction to both combustion synthesis of functional nanomaterials and nanotechnology. The first part of the course will introduce basic principles, synthesis/fabrication techniques and application of nanoscience and nanotechnology. The second part of the course will discuss combustion synthesis of nanostructures in zero-, one- two- and three- dimensions, their characterization methods, physical and chemical properties, and applications in energy conversion systems.

ME 374. Dynamics and Kinetics of Nanoparticles. 3 Units.

Part 1: Thermodynamics, transport theories and properties, aerosol dynamics and reaction kinetics of nanoparticles in fluids. Nucleation, gas kinetic theory of nanoparticles, the Smoluchowski equation, gas-surface reactions, diffusion, thermophoresis, conservation equations and useful solutions. Part 2: Introduction to soot formation, nanoparticles in reacting flows, particle transport and kinetics in flames, atmospheric heterogeneous reactions, and nanocatalysis.

ME 375A. StoryViz: COMMUNICATION REDESIGNED. 2-3 Units.

StoryViz is about creating authentic & compelling communication in many media: this year's topics include sketching, video, visual design & performance. Fantastic guests and a bevy of assignments will prepare students to communicate their work and ideas genuinely, concisely, and with a keen sense of wit. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>. Please see notes.

ME 375B. Institute of Design Project 2. 1-6 Unit.

Hands-on, project-based series for d.school students emphasizing innovation and design thinking. Resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects in areas such as K-12 education, social entrepreneurship, business prototyping, sustainability, and health and wellness. Design reviews and final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

ME 375C. Institute of Design Project 3. 1-6 Unit.

Hands-on, project-based series for d.school students emphasizing innovation and design thinking. Resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects in areas such as K-12 education, social entrepreneurship, business prototyping, sustainability, and health and wellness. Design reviews and final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

ME 376A. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at www.sparktruck.org/apply. Same as: EDUC 333B

ME 376C. Institute of Design Project 2. 1-6 Unit.

Hands-on, project-based series for d.school students. Design thinking, design processes, innovation methodologies, need finding, human factors, rapid prototyping, team dynamics, negotiation, and project management. Focus is on resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects. Weekly design reviews, final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

ME 377. Design Thinking Studio: Experiences in Innovation and Design. 3-4 Units.

Design Thinking Studio is an immersive introduction to design thinking. You will engage in the real world, with your eyes, with your mind, with your hands, and with classmates to learn, practice, and use the tools and attitudes of design. The fundamental goal of the class is to cultivate the creative, synthetic, and divergent thinking of students. This is a project-based class, asking students to take on new behaviors of work: collaboration, experimentation, empathizing, visualization, craft and inference. Field work and collaboration with teammates are required and critical for student success. Admission by application. See dschool.stanford.edu/classes for more information.

ME 378. Tell, Make, Engage: Action Stories for Entrepreneurship. 1-3 Unit.

Individual storytelling action and reflective observations gives the course an evolving framework of evaluative methods, formed and reformed by collaborative development within the class. Stories attached to an idea or a discovery, are considered through iterative narrative work and small group research projects. This course will use qualitative and quantitative methods for story engagement, assessment, and class determined research projects with practice exercises, artifacts, short papers and presentations.

ME 379. Fail Faster. 1 Unit.

Fail Faster will dive deeply into one of design thinking's key tenets: Fail early, fail often. Students will explore ways to: [1] become comfortable with uncertainty, [2] develop tools to navigate situations of failure, and [3] learn to turn failures into opportunities. This exercised-based workshop will examine the physiological impact of failure and practice the psychological traits and the power of resilience through hands-on activities. Participants will acquire techniques to help them navigate, bounce back, grow and even flourish in the face of their failures.

ME 381. Orthopaedic Bioengineering. 3 Units.

Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.
Same as: BIOE 381

ME 385. Tissue Engineering Lab. 1-2 Unit.

Hands-on experience in the fabrication of living engineered tissues. Techniques include sterile technique, culture of mammalian cells, creation of cell-seeded scaffolds, and the effects of mechanical loading on the metabolism of living engineered tissues. Theory, background, and practical demonstration for each technique. Lab.

ME 386. Neuromuscular Biomechanics. 3 Units.

The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.
Same as: BIOE 386

ME 387. Soft Tissue Mechanics. 3 Units.

Structure/function relationships and mechanical properties of soft tissues, including nonlinear elasticity, viscoelasticity, and poroelasticity.

ME 388. Transport Modeling for Biological Systems. 3 Units.

Introduction to electric fields, fluid flows, transport phenomena and their application to biological systems. Maxwell's equations, electrostatics, electro-chemical-mechanical driving forces in physiological systems. Ionic diffusion in electrolytes and membrane transport. Fluid and solid continua theory for porous, hydrated biological tissues. Applications include ionic and molecular transport in tissues and cells, electrophoresis, electromechanical and physicochemical interactions in cells and the extracellular matrix of connective tissue.

ME 389. Biomechanical Research Symposium. 1 Unit.

Guest speakers present contemporary research on experimental and theoretical aspects of biomechanical engineering and bioengineering. May be repeated for credit.

ME 390. Thermosciences Research Project Seminar. 1 Unit.

Review of work in a particular research program and presentations of other related work.

ME 390A. High Temperature Gasdynamics Laboratory Research Project Seminar. 1 Unit.

Review of work in a particular research program and presentations of other related work.

ME 391. Engineering Problems. 1-10 Unit.

Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

ME 392. Experimental Investigation of Engineering Problems. 1-10 Unit.

Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

ME 393. Topics in Biologically Inspired or Human Interactive Robotics. 1 Unit.

Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit. (Cutkosky, Waldron, Niemeyer).

ME 395. Seminar in Solid Mechanics. 1 Unit.

Required of Ph.D. candidates in solid mechanics. Guest speakers present research topics related to mechanics theory, computational methods, and applications in science and engineering. May be repeated for credit. See <http://mc.stanford.edu>.

ME 396. Design and Manufacturing Forum. 1 Unit.

Invited speakers address issues of interest to design and manufacturing engineering and business students. Sponsored by the Product Realization Laboratory at Stanford.
Same as: ME 196

ME 397. Design Theory and Methodology Seminar. 1-3 Unit.

What do designers do when they do design? How can their performance be improved? Topics change each quarter. May be repeated for credit.

ME 399. Fuel Cell Seminar. 1 Unit.

Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

ME 400. Thesis. 2-15 Units.

Investigation of some engineering problems. Required of Engineer degree candidates.
Same as: Engineer Degree

ME 405. Asymptotic Methods in Computational Engineering. 3 Units.
This course is not a standard teaching of asymptotic methods as thought in the applied math programs. Nor does it involve such elaborate algebra and analytical derivations. Instead, the class relies on students' numerical programming skills and introduces improvements on numerical methods using standard asymptotic and scaling ideas. The main objective of the course is to bring physical insight into numerical programming. Majority of the problems to be explored involve one- and two-dimensional transient partial differential equations. Topics include: 1-Review of numerical discretization and numerical stability, 2-Implicit versus explicit methods, 3-Introduction to regular and singular perturbation problems, 4-Method of matched asymptotic expansions, 5-Stationary thin interfaces: boundary layers, Debye layers, 6-Moving thin interfaces: shocks, phase interfaces, 7-Reaction-diffusion problems, 8-Directional equilibrium and lubrication theory.

ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data. 2 Units.
Prerequisite: consent of instructor.

ME 408. Spectral Methods in Computational Physics. 3 Units.
Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.
Same as: CME 322

ME 409. Advanced Design Studies in Product Realization. 3-5 Units.
Advanced Design Studies in Product Realization provides advanced engineering design graduate students with the technical and intellectual resources necessary to produce an unambiguously professional-quality project in an area of individual specialization. Emphasis is on integrated design and manufacture of a project in a diverse range of processes and materials. Students will meet bi-weekly to receive collegial support and critique from the instructor, interdisciplinary faculty mentor team, practitioners in the field, and students enrolled in the course. Prerequisites: Students will be accepted into the program on the basis of a portfolio review and a brief essay describing the proposed project. Students will be asked to name a faculty member who can provide a reference upon request. Instructor consent required.

ME 410A. Introduction Foresight and Innovation. 3 Units.
Learn how to develop inventions built on emerging cognitive technologies, with a long-range vision (10+ years). This course provides an intensive and hands-on approach to multiple engineering foresight strategies and tools that show you how to plan and develop radical innovations. Students build a cognitive technology prototype and business case. Three quarter sequence. Prerequisite: consent of instructor.

ME 410B. Advanced Foresight and Innovation. 3 Units.
Continuation of ME410A. Students will continue developing their invention, integrate additional engineering foresight tools and theories, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events demonstrate foresight principals and engineering leadership in action. Prerequisite: consent of instructor.

ME 410C. Advanced Foresight and Innovation. 1 Unit.
Continuation of ME410B. Students will continue developing their invention, integrate additional engineering foresight tools and theories, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events that demonstrate foresight principles and engineering leadership in action. Prerequisite: consent of instructor.

ME 410X. Advanced Engineering Foresight- Projects. 1 Unit.
Participate in foresight engineering research project focused on the development of "cognitive" products. Offered through Stanford's Foresight Thinking approach. Hands-on engineering foresight and technology leadership become part of the student's portfolio. May be repeated for credit. Limited enrollment. Prerequisite: consent of instructor.

ME 411. Advanced Topics in Computational Solid Mechanics. 3 Units.
Discussion of the use of computational simulation methods for analyzing and optimizing production processes and for developing new products, based on real industrial applications in the metal forming industry. Brief review of linear and nonlinear continuum mechanics and the use of finite element methods to model solid mechanics problems, constitutive relations for metals, coupled thermo-elasto-plastic (viscoplastic) problems, modeling metal production processes: bulk metal forming processes using rigid/viscoplastic material models, application examples: hot rolling of plates and the Mannesmann piercing processes and modeling the service behavior of steel pipes. Prerequisites: ME 338A, ME 335A,B,C, or consent of instructor.

ME 412. Engineering Functional Analysis and Finite Elements. 3 Units.
Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171. Same as: CME 356

ME 413. Quantum Confinement Structures: Physics and Fabrication. 3 Units.
Quantum mechanics principles and the thermodynamics of confinement structures. Focus is on potential applications such as solar cells and catalysis. Student presentations. Lab demonstrations. Prerequisite: background in quantum mechanics and statistical thermodynamics.

ME 414. Solid State Physics for Mechanical Engineering Experiments. 3 Units.
Introductory overview of principles of statistical mechanics, quantum mechanics and solid-state physics. Provides graduate Mechanical Engineering students with the understanding needed to work on devices or technologies which rely on solid-state physics. (Alternate years, not offered summer 2012).

ME 417. Total Product Integration Engineering. 4 Units.
For students aspiring to be product development executives and leaders in research and education. Advanced methods and tools beyond the material covered in ME 317: quality design across global supply chain, design for robustness, product development risk management, Monte Carlo simulation and product financial analysis, and decision analysis. Small teams or individuals conduct a practical project that produces a case study or enhancement to existing development methods and tools. Enrollment limited to 12. Prerequisites: 317A, B.

ME 420. Applied Electrochemistry at Micro- and Nanoscale. 3 Units.
This class is built around applied electrochemistry with focus on energy conversion and storage. Basic concepts of thermodynamics, electrochemistry, and first principal calculations are presented. Conventional as well as advanced Li battery concepts/systems and their applications will be a main subject area this year. Here intercalation and conversion cathode and anode material families will be introduced. Further conventional electrolyte materials such as carbonate based liquid electrolyte system and advanced solid-state material will be a topic in class. First principle calculations using Vienna Ab-initio Simulation Package (VASP) of some example will be done in class in order to gain fundamental understanding of these materials.

ME 421. European Entrepreneurship and Innovation Thought Leaders Seminar. 1 Unit.

Lessons from real-world experiences and challenges in European startups, corporations, universities, non-profit research institutes and venture finance organizations. Speakers include entrepreneurs, leaders from global technology companies, university researchers, venture capitalists, legal experts, senior policy makers and other guests from selected European countries and regions. Geographic scope encompasses Ireland to Russia, and Scandinavia to the Mediterranean region. Enrollment open to undergraduates and graduates in any school or department at Stanford.

ME 423. D.HEALTH: Design Thinking for Better Health. 3 Units.

In the U.S., 75% of medical expenditures are for illnesses that are predominantly lifestyle related such as type 2 diabetes, arthritis and heart disease. It has been shown as people modify their lifestyles with healthier habits, medical problems can be reduced or avoided and a healthier and happier life achieved. The class employs design thinking in teams while working directly with volunteers in the community to help them achieve their health goals. There is an individual project and a team project each with multiple milestones. Admission by application. See dschool.stanford.edu/classes for more information.

ME 429. COMMERCIAL MEMS DESIGN. 3 Units.

This course, taught by Dr. Gary O'Brien of the Bosch RTC, will provide insight into the issues and challenges in designing MEMS device for commercial and automotive applications. Topics to be covered in the class will include device simulation and design, design of experiments, compensation for cross-wafer and wafer-to-wafer fabrication variations, design for extreme environments, analysis and management of reliability issues including package stress, shock, drift, cost analysis of manufacturing processes, and some discussion of the unique challenges for consumer and automotive customers and markets. Student teams will develop a device design, fabrication process, and manufacturing analysis in response to a specification.

ME 440. Electronic States and Transitions In Quantum Confined Structures. 3 Units.

Summary of selected quantum mechanical concepts with focus on phenomena related to charge separation and transfer. The physics and thermodynamics of excitons described and related to experimental observations. The energy state of electrons as function of confinement size and strength. Presentations include on electron tunneling, measuring the density of electronic states, dielectric behavior of materials, Bose Einstein condensation of quasi particles, and excitons in quantum wells and dots.

ME 450. Advances in Biotechnology. 3 Units.

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

ME 451A. Advanced Fluid Mechanics Multiphase Flows. 3 Units.

Single particle and multi-particle fluid flow phenomena, mass, momentum and heat transfer, characteristic time and length scales, non-dimensional groups; collection of dispersed-phase elements: instantaneous and averaged descriptions for multiphase flow, Eulerian-Eulerian and Lagrangian-Eulerian statistical representations, mixture theories; models for drag, heat and mass transfer; dilute to dense two-phase flow, granular flows; computer simulation approaches for multiphase flows, emerging research topics. Prerequisites: graduate level fluid mechanics and engineering mathematics, and undergraduate engineering mechanics and thermodynamics.

ME 451B. Advanced Fluid Mechanics Flow Instability. 3 Units.

Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Instability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Benard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor, convective and absolute instability. Focus is on flow instabilities. Prerequisites: graduate courses in compressible and viscous flow.

ME 451C. Advanced Fluid Mechanics. 3 Units.

Compressible flow: governing equations, Crocco-Vazsonyi equation; equations, creation and destruction of vorticity by compressibility effects, shock waves. Modal decomposition of compressible flow, linear and nonlinear modal interactions, interaction of turbulence with shock waves. Energetics of compressible turbulence, effects of compressibility on free-shear flows, turbulent boundary layers, Van Driest transformation, recovery temperature, and shock/boundary layer interaction. Strong Reynolds analogy, modeling compressible turbulent flows. Prerequisites: 355, 361A, or equivalents.

ME 451D. Microhydrodynamics. 3 Units.

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

Same as: CHEMENG 310

ME 453A. Finite Element-Based Modeling and Simulation of Linear Fluid/Structure Interaction Problems. 3 Units.

Basic physics behind many fluid/structure interaction phenomena. Finite element-based computational approaches for linear modeling and simulation in the frequency domain. Vibrations of elastic structures. Linearized equations of small movements of inviscid fluids. Sloshing modes. Hydroelastic vibrations. Acoustic cavity modes. Structural-acoustic vibrations. Applications to liquid containers and underwater signatures. Prerequisite: graduate course in the finite element method or consent of instructor.

ME 453B. Computational Fluid Dynamics Based Modeling of Nonlinear Fluid/Structure Interaction Problems. 3 Units.

Basic physics behind many high-speed flow/structure interaction phenomena. Modern computational approaches for nonlinear modeling and simulation in the time domain. Dynamic equilibrium of restrained and unrestrained elastic structures. Corotational formulation for large structural displacements and rotations. Arbitrary Lagrangian-Eulerian description of inviscid and viscous flows. Time-accurate CFD on moving and deforming grids. Discrete geometric conservation laws. Discretization of transmission conditions on non-matching discrete fluid/structure interfaces. Coupled fluid/mesh-motion/structure time integration schemes. Application to divergence, flutter, and buffeting. Prerequisites: graduate course in the finite element method, and in computational fluid dynamics.

ME 455. Complex Fluids and Non-Newtonian Flows. 3 Units.

Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

Same as: CHEMENG 462

ME 457. Fluid Flow in Microdevices. 3 Units.

Physico-chemical hydrodynamics. Creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispensation, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and diffusion are important. Prerequisite: consent of instructor.

ME 458. Advanced Topics in Electrokinetics. 3-5 Units.

Electrokinetic theory and electrokinetic separation assays. Electroneutrality approximation and weak electrolyte electrophoresis theory. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and isotachopheresis. Introduction to general electrohydrodynamics (EHD) theory including the leaky dielectric concept, the Ohmic model formulation, and electrokinetic flow instabilities. Prerequisite: ME 457.

ME 461. Advanced Topics in Turbulence. 3 Units.

Turbulence phenomenology; statistical description and the equations governing the mean flow; fluctuations and their energetics; turbulence closure problem, two-equation turbulence models, and second moment closures; non-local effect of pressure; rapid distortion analysis and effect of shear and compression on turbulence; effect of body forces on turbulent flows; buoyancy-generated turbulence; suppression of turbulence by stratification; turbulent flows of variable density; effect of rotation on homogeneous turbulence; turbulent flows with strong vortices. Prerequisites: 351B and 361A, or consent of instructor.

ME 463. Advanced Topics in Plasma Science and Engineering. 3 Units.

Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

ME 468. Experimental Research in Advanced User Interfaces. 1-5 Unit.

Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

Same as: COMM 168, COMM 268, COMM 368

ME 469. Computational Methods in Fluid Mechanics. 3 Units.

The last two decades have seen the widespread use of Computational Fluid Dynamics (CFD) for analysis and design of thermal-fluids systems in a wide variety of engineering fields. Numerical methods used in CFD have reached a high degree of sophistication and accuracy. The objective of this course is to introduce classical approaches and algorithms used for the numerical simulations of incompressible flows. In addition, some of the more recent developments are described, in particular as they pertain to unstructured meshes and parallel computers. An in-depth analysis of the procedures required to certify numerical codes and results will conclude the course.

ME 469B. Computational Methods in Fluid Mechanics. 3 Units.

Advanced CFD codes. Geometry modeling, CAD-CFD conversion. Structured and unstructured mesh generation. Solution methods for steady and unsteady incompressible Navier-Stokes equations. Turbulence modeling. Conjugate (solid/fluid) heat transfer problems. Development of customized physical models. Batch execution for parametric studies. Final project involving solution of a problem of student's choosing. Prerequisite: ME 300C/CME 206.

ME 470. Uncertainty Quantification. 3 Units.

Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent.

ME 471. Turbulent Combustion. 3 Units.

Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NOx formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

ME 484. Computational Methods in Cardiovascular Bioengineering. 3 Units.

Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning. Same as: BIOE 484

ME 485. Modeling and Simulation of Human Movement. 3 Units.

Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent. Same as: BIOE 485

ME 491. Ph.D. Teaching Experience. 3 Units.

Required of Ph.D. students. May be repeated for credit.

ME 492. Mechanical Engineering Teaching Assistance Training. 1 Unit.

.

ME 495A. ME Seminar Series: Product Design. 1 Unit.

Seminars will feature accomplished product designers and product design researchers. Guest speakers will come from the U.S. and internationally, and will present on topics of current interest to the Product Design Community.

ME 495B. ME Seminar Series: At the Interface between Mechanical Engineering and Biology. 1 Unit.

Seminars will feature early career mechanical engineers working on leading edge problems in biomechanical engineering. Topics include mechanobiology, cell mechanics, transport phenomena in biological systems, bio-inspired design, design and analysis of biodevices or bioinstrumentation, biomaterials, and modeling of physiological systems. Guest speakers will come from top universities within the U.S. and internationally, and will discuss both their past research and plans for building a research program in the future.

ME 500. Thesis. 1-15 Unit.

.

Same as: Ph.D.

ME 571. Surgical Robotics Seminar. 1 Unit.

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit. Same as: CS 571

ME 801. TGR Project. 0 Units.

.

ME 802. TGR Dissertation. 0 Units.

.

Medicine Courses

MED 1A. Leadership in Multicultural Health. 2 Units.

Designed for undergraduates serving as staff for the Stanford Medical Youth Science Summer Residential Program (SRP). Structured opportunities to learn, observe, participate in, and evaluate leadership development, multicultural health theories and practices, and social advocacy. Utilizes service learning as a pedagogical approach to developing an understanding of the intersections between identity, power and privilege and disparities (health, education, environment), fostering knowledge and skills to become social advocates to address forms of inequities. Students explore approaches for identifying and tackling issues of equity (health and education) as well as learn fundamental skills necessary to implement activities for the Summer Residential Program.

MED 1B. Identity, Power and Privilege in Multicultural Health. 1 Unit.

An independent study service learning course designed to develop students' understanding of the intersection between identity, power, privilege, and disparities (health, education, environment). Students submit a written reflective term paper based on their experience as staff for the Summer Residential Program as well as their understanding of how constructs of identity, power and privilege impact low-income and underrepresented students in their pursuit of higher education. Prerequisite MED 1A.

MED 10SC. Responses to the AIDS Epidemic. 2 Units.

This course focuses on the HIV epidemic, contrasting the origin and spread of HIV and AIDS in Africa and the emergence of HIV in the U.S., in particular the history of HIV in San Francisco and the Bay Area. We will meet the people and visit the institutions which played key roles in the Public Health prevention, care, and treatment of HIV in San Francisco and consider the impact of HIV globally in our thinking about epidemic disease and the international responses to HIV. This will include key locations in the City, including the AIDS Grove, San Francisco General Hospital, the San Francisco Department of Public Health, the Castro, and local AIDS service organizations. Students will also hear from patients, physicians, and activists who are living with AIDS. We will also meet with scientists at UCSF, Stanford, and local pharmaceutical companies who are at the forefront of new prevention, therapeutic, and diagnostic research. By examining the relationship between the emergence of Gay activism and AIDS in California and New York and the pandemic in Southern Africa, the course will emphasize the multi-disciplinary and multi-sector approach to epidemic infectious disease. How do physicians, patients, epidemiologists, pharmaceutical companies, and policymakers develop effective responses to the AIDS epidemic? What are we learning from Africa and what can Africa learn from us about how communities react to deadly threats from infectious disease. AIDS experts from the Stanford community and Africa are invited to share their perspectives with us. In preparation for the seminar, you will be required to read *And the Band Played On* and *Barnett and Whiteside's AIDS in the Twenty-First Century* and selected scientific articles. As part of a group, you will also develop an AIDS-related project of your choice which you will present on the last day of class.

MED 27SI. Alternative Spring Break: Healthcare of Underserved Communities in Central California. 1 Unit.

Pre-field group directed reading for Alternative Spring Break: Healthcare of Underserved Communities in Central California.

MED 28SI. Alternative Spring Break: Health Accessibility. 1 Unit.

Alternative Spring Break class. Pre-field course for students participating in the Health Accessibility Alternative Spring Break trip. Focuses on the Bay Area and the current state of the U.S. healthcare system, how it has developed, and how it can be transformed to ensure greater accessibility for all.

MED 50Q. Respiration. 3 Units.

Preference to sophomores. Topics include: the biological basis for use of oxygen for aerobic metabolism in animals, human lung physiology and pathophysiology, comparative physiology of respiration in fish, birds and mammals, new insights into mammalian lung development, current challenges in human respiratory health including air pollution and lung cancer. Student presentations on specific topics based on literature research developed in consultation with the instructor. Application required.

MED 51Q. Palliative Medicine, Hospice and End of Life Care for Diverse Americans. 3 Units.

Introduces students to changing demographics of the aging and dying population in the United States. Topics include current issues in palliative medicine, hospice and end-of-life care for an increasingly diverse population. Includes simulated video case studies, real patient case discussions and collaborative field project. Application required.

MED 70Q. Cancer and the Immune System. 2 Units.

Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.

MED 71N. Hormones in a Performance-Enhanced Society. 3 Units.

(Formerly 117Q) Preference to freshmen. Explores how the availability of hormone therapy has affected various aspects of daily lives. Topics include the controversies concerning menopause and its treatment; use of hormones in athletics; cosmetic use of hormones to enhance growth, strength, and libido; use of hormones as anti-aging drugs; and how the hormone system has influenced our notions of gender. Includes the biochemistry and physiology of the human endocrine system; how hormones influence behavior, and how to read a scientific paper.

MED 86Q. Seeing the Heart. 2 Units.

Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people; imaging technologies such as ultrasound, CT, MRI, PET, and optical; a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.

MED 87Q. Women and Aging. 5 Units.

Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center).

Same as: HUMBIO 87Q

MED 88Q. Dilemmas in Current Medical Practice. 3 Units.

Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.

MED 94Q. Hormones, Health, and Disease. 2 Units.

Preference to sophomores. The role of hormones in maintaining health; how abnormalities in hormones cause disease. Topics include: the pituitary, the master gland; thyroid hormones and metabolism; insulin and diabetes; adrenal steroids and hypertension; vitamin D, parathyroid hormone, and osteoporosis; sex hormones, birth control, pregnancy, and menopause; androgens, erectile dysfunction, and athletic performance; cholesterol, obesity, and cardiovascular risk. Recommended: background in human biology and physiology.

MED 108Q. Human Rights and Health. 3 Units.

Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.

MED 120N. Pathophysiology of Diseases of the Heart. 3 Units.

Preference to freshmen. Introduces students to the anatomy, physiology, pathology and clinical aspects that comprise the discipline of cardiovascular medicine. Topics will include explanations of such pathologic states as heart attack, stroke, congestive heart failure, cardiac rhythm disturbances, and sudden cardiac death. Introduction to the underlying principles of diagnosis and treatment of heart disease are included in the syllabus.

MED 130. The Practice of Happiness. 1 Unit.

The Practice of Happiness is a 1-unit credit course that provides students with tools and strategies to develop a sustainable approach to their happiness and well-being. Students will learn breathwork- and meditation-based processes to decrease stress and increase happiness and peace. In addition, students will also engage in community-building group discussions, interactive processes, and study happiness-based research to discover for themselves what happiness is, and how it can be sustained as a personal practice. In addition to weekly sessions, there are 3 mandatory back-to-back sessions over a weekend in the quarter- hours will be Friday: 6:30pm - 10pm; Saturday/Sunday: 1pm - 5pm (exact dates TBD). See yesplus.stanford.edu for further insight into the program. Enrollment limited; priority to residents of Castano Hall; others selected by application.

MED 135. Community Leadership. 2 Units.

Offered through Residential Education to residents of Castano House, Manzanita Park. Topics include: emotional intelligence, leadership styles, listening, facilitating meetings, group dynamics and motivation, finding purpose, fostering resilience. Students will lead discussions on personal development, relationships, risky behaviors, race, ethnicity, spirituality, integrity.

MED 143A. Patient Health Education in Community Clinics. 2 Units.

Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required. Contact jdeluna@stanford.edu.

Same as: MED 243A

MED 143B. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Prerequisite: successful completion of MED 143A/243A.

Same as: MED 243B

MED 143C. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 243C

MED 145. Alternative Spring Break: Confronting HIV/AIDS in San Francisco. 2 Units.

Preparation for the Alternative Spring Break trip. Current issues regarding HIV/AIDS worldwide and in the United States, with a specific focus on San Francisco. Topics include biology, transmission, prevention, pharmaceutical development, discrimination, stigma, access to health care, and perspectives of affected communities. See asb.stanford.edu for more information.

MED 147. Methods in Community Assessment, Evaluation, and Research. 3 Units.

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: MED 247

MED 149. Medical Interpreting at the Cardinal Free Clinics: The Qualified Bilingual Student Program. 2 Units.

The quality of health care often depends as much on the interpreter as the provider. This foundation courses prepares bilingual students to work as medical interpreters in hospital and clinic settings. Students learn basic interpreting skills; ethics; communication techniques; medical vocabulary; key healthcare information; communication skills for advocacy; how to draft practical, working solutions, and professional development. By application only; must be an accepted Cardinal Free Clinic (CFC) interpreter volunteer. Applications accepted in Fall for Winter quarter and in Winter for Spring quarter. Students registering for this 2-unit course are required to interpret at the clinic a minimum of 2 weekend sessions; upon completion of this course, students can continue to volunteer at CFC for academic credit.

MED 150SI. Clinical Foundations for Patient Navigators at Arbor Free Clinic. 1 Unit.

Addresses key areas of learning for patient navigator volunteers at Arbor Free Clinic. Prepares patient navigators for their clinical role. Enrollment limited to current, active patient navigator volunteers.

MED 157. Foundations for Community Health Engagement. 3 Units.

Open to undergraduate, graduate, and MD students. Examination and exploration of community health principles and their application at the local level. Designed to prepare students to make substantive contributions in a variety of community health settings (e.g. clinics, government agencies, non-profit organization, advocacy groups). Topics include community health assessment; health disparities; health promotion and disease prevention; strategies for working with diverse, low-income, and underserved populations; and principles of ethical and effective community engagement.

MED 158A. From Foodies to Freegans: Food Popular Topics in the Silicon Valley. 1 Unit.

This is a discussion-based survey course to introduce the complexities of many "pop topics" in food, such as obesity, sustainability, and local vs. organic food. Course offered over two quarters; second part is MED 158B. The course focuses on Silicon Valley and is taught through a food justice lens. The goal is to provide knowledge and new frameworks for conceptualizing food that transform the way students think about, eat, and purchase food. Furthermore, course content is aligned with Community Engaged Learning (CEL) so that students have the opportunity to collaborate with local partners to complete community-based projects relevant to course topics. Coursework involves class participation, critical reflection, and three papers written for different audiences in the food space.

MED 158B. From Foodies to Freegans Practicum. 2 Units.

Students work toward making change in the food system. This course matches students with a community partner in the local area who is working to address food issues, broadly defined. There are many ways to make meaningful impact, including working at Second Harvest Food Bank as a Health Ambassador, or to assist with the Healthy Cornerstore initiatives or Garden to Table with the Hispanic Chamber of Commerce. Provides students with the opportunity to apply their academic area of concentration within a community-based context that fits their interests. Med 158A highly recommended but not required as a prerequisite.

MED 159A. Service-Learning in Migrant Health. 2 Units.

Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisite: intermediate/advanced level of Spanish language proficiency.

MED 159B. Service-Learning in Migrant Health. 2 Units.

Second quarter of two-quarter series. Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisites: intermediate/advanced level of Spanish language proficiency, MED 159A.

MED 160. Physician Shadowing: Stanford Immersion in Medicine Series. 1 Unit.

Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program.

Same as: SIMS

MED 176. Impact of Infectious Diseases on Human History. 3 Units.

Impact of infectious diseases on human society. Some topics include: Plague of Justinian and 14th century; impact on exploration, trade and conquest; how slavery, malaria and yellow fever conspired to alter the New World; Microbes and war; diseases of poverty, tuberculosis and others; Cholera and public health; pandemic influenza; diseases of human progress. Students give a 30 minute presentation on a topic of their choosing that exemplifies an aspect of the impact of politics, societal influences, religion or other forces on infectious diseases.

Same as: HUMBIO 176

MED 182. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.

Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. One unit of credit for students who volunteer a minimum of twice per month. Two units of credit for students whose volunteer commitment is greater than twice per quarter. By application only. Visit <http://cfc.stanford.edu> for more information. Same as: MED 282

MED 184. Team Leadership in the Cardinal Free Clinics. 1 Unit.

Open to Steering Committee and Managers of Cardinal Free Clinics. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Same as: MED 284

MED 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MED 200. The Medical Device Entrepreneur's Course Primer. 1 Unit.

This course provides students and entrepreneurs a solid understanding of the complex US regulatory framework governing medical devices, in vitro diagnostics and drug-device combination products. Through class lectures, research and team assignments, class participants learn the key regulatory, clinical and ethical issues in biomedical product innovation. Focuses specifically on US investigational and marketing submission types and preparation of submission outlines, key steps to develop a product that will meet US regulatory requirements and development of regulatory strategy for a novel product. While there are no technical prerequisites, the course projects are challenging, and thus are more suitable for graduate and advanced undergraduate students.

MED 200A. Practical Applications for Qualitative Data Analysis. 2 Units.

(Same as PEDS 202A) First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent MED 202B required.

MED 200B. Practical Applications for Qualitative Data Analysis. 2 Units.

(Same as PEDS 202B) Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of MED 202A.

MED 200SI. Primary Care Presentations. 1 Unit.

This course is a lecture series offered during the winter quarter. The aim of this seminar is to allow medical students to experience the mindset of primary care physicians in real time. Classes feature presentations of patient cases submitted by Stanford faculty. Faculty presenters are provided with the diagnostic information for the cases in a sequential manner during and not in advance of each class, allowing students to learn from the thought process of physicians in real time as they put together the differential diagnosis, interpret diagnostic information, deliberate treatment and management options, and discuss other thoughts about the cases.

MED 201. Internal Medicine: Body as Text. 1 Unit.

Body as Text refers to the idea that every patient's body tells a story. The narrative includes the past and present of a person's social and medical condition; it is a demonstration of the phenotype. The art of reading the body as text was at its peak in the first half of the 20th century, but as technology has become ascendant, bedside skills and the ability to read the text have faded. Beyond scientific knowledge and medical facts, it is this often forgotten craft which is at the heart of the excitement of being an internist. This course introduces students to the art of the clinical exam, to developing a clinical eye, and learning to see the body in a completely different way.

MED 202. Alternative Spring Break: Rural and American Indian Health Disparities. 3 Units.

Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research. Culminates in formulation of a plan for communicating with and engaging community partners in South Dakota: Indian Health Services, Habitat for Humanity, Porcupine Clinic, Teach for America, and Sinte Gleska University.

MED 203SI. Patient Partner Skills: in Care Transitions. 1 Unit.

Teaches medical students to support patients as their care transitions out of the hospital and into the home. Students participate in hands-on sessions developing skills in patient education, motivational interviewing, and home safety evaluation. Students meet patients individually in the wards before patients are discharged, and follow-up by home visit to continue support of patients' long-term health. Patient Partners aims to help medical students better understand and respond to the challenges that chronically ill patients face while also better supporting patients discharged from Stanford Hospital.

MED 204. Access and Delivery of Essential Medicines to Poor and Underserved Communities. 1 Unit.

Student initiated lecture series. Guest speakers. Topics include: neglected diseases, underserved and impoverished markets, disease profiles of lower and middle income countries, pricing and distribution of biomedical end products, intellectual property in medicine and its effect on delivery of healthcare.

MED 205. Health and Human Rights Speaker Series. 1 Unit.

Focuses on the relationship between global health and human rights. The course will feature leading human rights scholars and practitioners from around the world. Examines conceptual linkages between global health and human rights and explores both the promise of the field and challenges inherent in implementing its norms on the ground. Topics include: the interrelation of health and human rights; how health policies can enhance or hinder human rights; the relationship between health outcomes and fulfilling the full range of human rights.

MED 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.

Same as: HRP 206, STATS 211

MED 207. History of Medicine. 1 Unit.

Begins with studying Shamanistic medicine, practiced by humans throughout the globe, for millennia. Covers magico-religious medicine developed in ancient Egypt, Mesopotamia and Greece; the 4th Century BC with Hippocrates beginning to separate medicine from religion and magic; the slow progress in ancient Rome, the medieval period, and during the Renaissance; and the acceleration in the pace of discoveries in the last few centuries, as medicine became more scientific, complex, and specialized as Pasteur developed the germ theory of disease, Darwin and Mendel publications begin the development of Evolution and of Genetics, Watson and Crick solved the mystery of DNA structure, organ transplants began, and imaging procedures such as CT and MRI came into being. Lectures are profusely illustrated, and, for the sake of comparison, two equally ancient systems of medicine, the traditional Chinese and the Vedic, are briefly reviewed.

MED 208. The Future of Primary Care. 1 Unit.

Introduces the latest thinking and innovations in Primary Care, both at Stanford and nationally. Topics include the role of primary care in patient-centered care, team-based care, care coordination, patient tracking and monitoring, preventive care, and payment reform. Speakers include leading local and national figures in primary care innovation representing the private sector, academia, safety net systems, think tanks, and individuals working on the ground to implement change. Preference to medical students. May be repeated for credit.

MED 209. Health Law: Quality and Safety of Care. 3 Units.

(Same as LAW 727) Concerns about the quality of health care, along with concerns about its cost and accessibility, are the focal points of American health policy. Considers how legislators, courts, and professional groups attempt to safeguard the quality and safety of the health care patients receive. The course approaches "regulation" in a broad sense. Focuses on regimes for determining who may deliver health care services (e.g. licensing and accreditation agencies), legal and ethical obligations providers owe to patients (e.g. confidentiality, informed consent), individual and institutional liability for substandard care, and various proposals for reforming the medical malpractice system. Includes discussion of the Patient Protection and Affordable Care Act (aka, "Obamacare"), which is launching many new initiatives aimed at assuring or improving health care quality.

MED 213. Compassion Cultivation for the Physician-in-Training. 1 Unit.

Provides mentored practice and growth in students' knowledge, skills and attitudes in compassion cultivation for one's self and others. Integrates traditional contemplative practices with contemporary psychology and scientific research on compassion.

MED 220. Literature and Human Experimentation. 3-5 Units.

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, COMPLIT 223, CSRE 123B, HUMBIO 175H

MED 222. The Medical Malpractice System. 2 Units.

Focus is on policy and law pertaining to the medical malpractice system in the U.S. Readings include a mix of articles from the medical, law and health policy literatures, as well as some legal cases. Includes problem-based learning and small group work.

MED 223. Cardiovascular and Pulmonary Sciences Seminar. 2 Units.

Weekly modified journal club primarily for CVP Scholarly Application students, Cardiovascular Institute graduate students, clinical and research fellows, and faculty. Open to other graduate students and medical students (Advanced undergraduate students with permission of instructor). Each meeting begins with an overview of a particular area by a faculty member, followed by presentation of a seminal paper in that area by a postdoctoral fellow or a graduate student. Discussion follows the presentation, after which the faculty moderator meets separately with the students for further questions and discussion.

MED 225. U.S. Human Rights NGOs and International Human Rights. 1 Unit.

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario. Same as: ETHICSOC 15R, IPS 271A, POLISCI 203

MED 226. Practical Approaches to Global Health Research. 3 Units.

Enrollment limited to graduate students; undergraduates in their junior or senior year may enroll with consent of instructor only. Introduces research methods for conducting studies involving health in low-income context. Focuses on developing a concept note to support a funding proposal. addressing research question of student's interest. Skills developed include developing a compelling research question; synthesizing a focused literature review; selecting and adapting appropriate study design, target population, sampling methods, data collection and analysis; addressing human subject issues; developing productive cross-collaboration.

Same as: HRP 237, IPS 290

MED 227. Bedside Ultrasound. 1-2 Unit.

For preclinical or clinical medical students, and others with permission. Introduces students to diagnostic ultrasound at the bedside. The normal anatomy of the heart, abdomen, and pelvis pertinent to ultrasound is taught. Some pathology involving these areas is also introduced. As the students' proficiency increases, those electing to can visit the Pacific Free Clinic to be introduced to scanning patients. 1 unit for class attendance only 2 units for class attendance and participation in the Pacific Free Clinic.

MED 228. Physicians and Social Responsibility. 1 Unit.

Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the effects of poverty on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

MED 229. Introduction to Global Health. 1 Unit.

Provides an overview of global health and how it is similar to and different from public health and tropical medicine. Topics include the evolution, economics, politics of global health, major players in global health, and issues of geography, politics, humanitarianism, human rights, science, research, culture and disease.

MED 231. Measuring Global Health. 4 Units.

Open to MD, graduate, and undergraduate students. Assessing the global burden of disease, its distribution among and within countries, its causes, and appropriate interventions requires rigorous quantitative approaches. This course develops skills in these areas by critically examining questions like: How do we know who is sick and where? How are risk factors incorporated into our projections of future disease trends? How do we combine mortality and morbidity in a meaningful way? What works for improving health efficiently? Workshops build familiarity with relevant data and their analysis. Prerequisite: coursework in statistics, biostatistics, quantitative epidemiology, econometrics, or equivalent. Same as: HRP 241, HUMBIO 129M

MED 232. Discussions in Global Health. 2 Units.

The goal of this interactive series is to encourage students to think broadly about the variety of activities encompassed within global health and the roles of various entities, including NGOs, governments, and healthcare providers, in responding to large-scale health crises, building health systems, and caring for patients in developing countries. Examines challenges in global health such as organizing medical responses to natural disasters, providing healthcare to societies in conflict, and integrating traditional and modern approaches to healing. Case studies are used to critique strategies employed by organizations that work to improve medical care in poor settings.

MED 233. Global Health: Beyond Diseases and International Organizations. 3 Units.

Enrollment limited to clinical MD students. Provides multidisciplinary trainees insight into over-arching themes of global health. Topics include systemic issues affecting healthcare progress globally, ethical and thoughtful approaches to solving these issues, as well as economics, public health, organizations in global health, human rights, involvement in NGOs, ethics of overseas work, and other non-medical aspects of this subject. Includes significant clinical, laboratory and diagnostic components.

MED 234. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L

MED 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, AFRICAST 235, EDUC 135X, EDUC 335X, HUMBIO 26

MED 236. Economics of Infectious Disease and Global Health. 3 Units.

Introduction to global health topics such as childhood health, hygiene, drug resistance, and pharmaceutical industries from an economic development perspective. Introduces economic concepts including decision-making over time, externalities, and incentives as they relate to health.

Same as: HUMBIO 124E

MED 237. Health Law: Improving Public Health. 3 Units.

(Same as Law 762) Examines how the law can be used to improve the public's health. Major themes explored include: what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? Investigates these issues in several contexts, including the control and prevention of infectious disease, laws aimed at preventing obesity and associated noncommunicable diseases, tobacco regulation, ensuring access to medical care, reproductive health, lawsuits against tobacco, food and gun companies, and public health emergencies.

MED 240. Sex and Gender in Human Physiology and Disease. 2-3 Units.

Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers.

Prerequisite: Human Biology core or equivalent, or consent of instructor. Undergraduate students must enroll for 3 units.

Same as: FEMGEN 241, HUMBIO 140

MED 241. Clinical Skills for Patient Care in Free Clinics. 1 Unit.

Enrollment in this course is by application only for advanced volunteers at the Cardinal Free Clinics. Focus is on preparing students to gain early clinical experience by teaching basic skills such as taking patient histories, working with interpreters, providing motivational interviewing, and presenting cases to medical students or physicians. Students learn through classroom lectures and practice sessions. Upon successful completion of a competency assessment, students are able to serve in a clinic role in the Cardinal Free Clinics. Prerequisite: Advanced standing as a volunteer at the Cardinal Free Clinics.

MED 242. Physicians and Human Rights. 1 Unit.

Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

MED 243A. Patient Health Education in Community Clinics. 2 Units.

Open to undergraduate, graduate, and medical students. Principles of health education, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required. Contact jdelluna@stanford.edu.

Same as: MED 143A

MED 243B. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Prerequisite: successful completion of MED 143A/243A.

Same as: MED 143B

MED 243C. Patient Health Education in Community Clinics - Practicum. 2 Units.

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 143C

MED 246. The Medical Interview for Spanish Speakers. 1 Unit.

Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

MED 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: MED 147

MED 248. Student Rounds. 1 Unit.

Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

MED 252. Outcomes Analysis. 4 Units.

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

Same as: BIOMEDIN 251, HRP 252

MED 253. Applied Grant-Writing Skills for Community and Clinical Research. 2 Units.

Skill-building in writing scientific research proposals. Topics include: grant proposal preparation; scientific literature review; developing research aims; decision-making on study design & methodology; planning statistical analyses; determining research compliances, timelines and resources. Students develop drafts of potential projects, peer-review and critique writing samples, and receive detailed feedback from instructor on all aspects of research projects.

MED 255. The Responsible Conduct of Research. 1 Unit.

Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended.

MED 255C. The Responsible Conduct of Research for Clinical Researchers. 1 Unit.

Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prerequisite: research experience recommended.

MED 257A. Community Health Advocacy. 2 Units.

First of a three-quarter course series providing students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Fellows engage in structured activities centered around supporting the mission of placement organizations. Students must apply and be accepted into the program the winter preceding enrollment; application information at och.stanford.edu. Additional prerequisites: Med 157 or equivalent coursework. Spanish language proficiency required for most placements.

MED 257B. Community Health Advocacy. 2 Units.

Second of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, student will broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student will engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly Monday evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A.

MED 257C. Community Health Advocacy. 2 Units.

Third of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A/B.

MED 258A. Policy Advocacy in Community Health. 2 Units.

In order to affect broad-based change in the health of populations, advocates must look upstream to the social and economic factors that impact health. Most powerful among these factors are the policies that shape our lives and the context in which we make individual and collective decisions. This course gives students the skills and tools to influence the policy process through various avenues, including legislative and media advocacy. Students select a current community health issue of interest and track relevant policy initiatives and media coverage of the issue to serve as the foundation for the application of real-time advocacy strategies. Prerequisites: MED 257A or consent of instructor.

MED 259. Oaxacan Health on Both Sides of the Border. 2 Units.

Required for students participating in the Community Health in Oaxaca summer program. Introduction to the health literacy and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (<http://och.stanford.edu/oaxaca.html>).

MED 260. HIV: The Virus, the Disease, the Research. 3-4 Units.

Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest. Same as: IMMUNOL 260

MED 262. Economics of Health Improvement in Developing Countries. 5 Units.

Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B. Same as: ECON 127

MED 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.

Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

Same as: HRP 263

MED 271. Global Biodesign: Medical Technology in an International Context. 1-3 Unit.

(Same as OIT 587) This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, United States and Latin America. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics. The class will utilize real-world case studies and class projects (for 3-unit students) to promote engagement and provide a hands-on learning experience. There is no 2 unit option for this course.

Same as: BIOE 371

MED 272A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions, and interactive team meetings (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 300,000 patients have been treated to date with technologies developed as part of this program and more than thirty venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.

Same as: BIOE 374A, ME 368A

MED 272B. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two-quarter sequence (see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to a medical need forward into development and potential commercialization. Continuing work in teams with engineering and medical colleagues, students will learn the fundamentals of medical device prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing a commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of developing a business or research plan/canvas; and strategies for assembling a development team. Final project presentations are made to a panel of prominent venture and corporate investors. New students (i.e. students who did not take OIT384 in the winter quarter) may be admitted, depending on team needs. Candidates need to submit an application at <http://biodesign.stanford.edu/bdn/courses/bioe374app.jsp> by March 1.

Same as: BIOE 374B, ME 368B

MED 273. BIODESIGN FOR MOBILE HEALTH. 1-2 Unit.

This seminar examines the emerging Mobile Health industry. Mobile Health is the provision of health services and information via mobile technologies such as mobile phones and wearable sensors. Faculty from Stanford University and other Academic Institutions and guest lecturers from the Mobile Health industry discuss the driving needs, opportunities and challenges that characterize the emerging Mobile Health innovation landscape, and present an overview of the technologies, initiatives and companies that are transforming the way we access health care today.

Same as: BIOE 273

MED 274. Design for Service Innovation. 4 Units.

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011. Same as: BIOE 372, HRP 274

MED 275B. Biomedical Innovation Incubator. 2-5 Units.

Introduction to medical device design and prototyping. Regulatory aspects, marketing, venture capital. 2 unit option: weekly seminar series and assignments; open to all. 5 unit option: weekly seminar series, hands-on medical device prototyping project in conjunction with Stanford Medical Faculty. 5 unit option by application only. Graduate students may take project option for 3 units. Project application and more information at bit.ly/ssbincubator.

MED 276. Careers in Medical Technology. 2-3 Units.

Career tracks in biomedical technology for medical, life science, engineering, business, and law students of all levels. Industry professionals describe career tracks, current roles, and industry perspectives. 2-unit option, lectures and weekly assignments, MED or S/NC grading only. 3-unit option, including a group project and final presentation, may be taken for a letter grade. May be repeated for credit.

MED 282. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.

Students provide health care in a student-run clinic for the homeless and uninsured. Student volunteers are guided in the practice of medical interviews, history-taking and physical examinations as appropriate. Clinical students and attending physicians provide support and guidance as the team arrives at a diagnosis and management plan. One unit of credit for students who volunteer a minimum of twice per month. Two units of credit for students whose volunteer commitment is greater than twice per quarter. By application only. Visit <http://cfc.stanford.edu> for more information. Same as: MED 182

MED 284. Team Leadership in the Cardinal Free Clinics. 1 Unit.

Open to Steering Committee and Managers of Cardinal Free Clinics. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Same as: MED 184

MED 289. Introduction to Bioengineering Research. 1-2 Unit.

Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material. Same as: BIOE 390

MED 295. Advanced Cardiac Life Support. 2 Units.

(For clinical MD students only) Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically ill patients. Clinical scenarios and small group discussions address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrhythmias and defibrillation, and acute ischemic stroke. Requires pre-course preparation and an intensive two-day session on a Friday and Saturday. Students should get the approval of their Clerkship Coordinator before registering for the course. Recommended prerequisites: Medicine 300A, Pediatrics 300A, or Surgery 300A.

MED 297A. MD Capstone Experience: Preparation for Residency. 1 Unit.

For senior medical students. Review of wide variety of skills essential to working effectively as interns. Curricular topics fall into three larger themes: communication, clinical skills and knowledge. Includes significant amount of time in Immersive Learning Center with simulation exercises as a key component.

MED 299. Directed Reading in Medicine. 1-18 Unit.

Prerequisite: consent of instructor.

MED 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MED 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Medicine Interdisciplinary Courses

INDE 200. The Future of Academic Medicine. 1 Unit.

Required for and limited to first-year MSTP students. Presentations of research directions and opportunities by chairs of basic science, clinical departments, and PhD programs. Prerequisite: instructor consent.

INDE 201. Practice of Medicine I. 11 Units.

Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters, in which students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epidemiology students learn the taxonomy of epidemiological studies, how to critically read a journal article, and how to recognize and understand the concepts behind different clinical study designs. Topics include bias, confounding, diagnostic testing and screening, and "how statistics can lie." Psychiatry introduces students to the unique role of medical students in talking with patients, the difference between process and content in patient communication, how to respond to breaks in the patient-physician relationship, and the relationship between the quality of the patient-physician interaction and health outcomes. Health care policy covers such topics as health insurance, physician payment, health care costs, access, measurement and improvement of quality, regulation and health care reform. Biomedical ethics includes important ethical issues in medical practice, such as confidentiality, privacy, and ethical issues relating to medical students. The population health curriculum exposes students to concepts of public health, community action, and advocacy, and includes a year-long, community-based project. At the end of this quarter students participate in a performance-based assessment of the medical interview skills.

INDE 202. Practice of Medicine II. 8 Units.

Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

INDE 203. Practice of Medicine III. 8 Units.

Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice mental health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

INDE 204. Practice of Medicine IV. 10 Units.

The second year of the Practice of Medicine series (INDE 204 and 205) emphasizes clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. The Clinical Procedures segment introduces common and important procedures in clinical practice, including phlebotomy, intravenous line insertion, and electrocardiography.

INDE 205. Practice of Medicine V. 8 Units.

Continued emphasis on clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. For the Clinical Procedures segment, students will have an opportunity in the Emergency Department to practice performing procedures learned in the previous quarter. At the end of this quarter, students participate in a comprehensive four-station objective structured clinical examination (OSCE) performance-based assessment of their medical interview, physical examination, and clinical problem-solving skills.

INDE 206. Practice of Medicine VI. 9 Units.

This last segment of the Practice of Medicine series is an intensive, four-week learning experience to consolidate clinical skills from prior quarters, and a final preparation for transition to clerkships. An extensive series of workshops covers topics such as dermatology, ophthalmology, advanced clinical reasoning, advanced presentations, bedside skills, ethics, palliative medicine, advanced sexual history, electronic medical record, ekg interpretation, intravenous fluid and electrolyte management. Students practice clinical procedures with task trainers and on a cadaver. This quarter also includes a professionalism series to prepare students for entry into clinical practice. Special clinical practice sessions are held as a capstone to clinical skills preparation.

INDE 207A. Medical Mandarin I: Beginning. 2-3 Units.

Develops conversational communication skills and essential medical vocabularies. Teaches in pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions) as well as daily survival conversations. Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care as well as daily life. Students registering for 3 units participate in clinic visits and field activities.

INDE 207B. Medical Mandarin II: Intermediate. 2-3 Units.

For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and different tasks such as giving medical instructions and doing labs and tests. Builds working vocabulary for organ system, disease assessment to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students registering for 3 units participate in clinic visits and field activities. Prerequisite: one year of college-level Chinese or instructor assessment of fluency.

INDE 207C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Students registering for 3 units participate in clinic visits, field activities or projects. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.

INDE 207D. Professional Mandarin I. 2-3 Units.

Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: sound preparation in Mandarin as assessed by the instructor.

INDE 208A. Medical Mandarin I: Beginning. 2-3 Units.

Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208B. Medical Mandarin II: Intermediate. 2-3 Units.

Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 208C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.

INDE 208D. Professional Mandarin II. 2-3 Units.

Continuation of INDE 207D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 207D.

INDE 209A. Medical Mandarin III: Beginning. 2-3 Units.

Continuation of 207A/208A. See description for 207A. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209B. Medical Mandarin III: Intermediate. 2-3 Units.

Continuation of 207B/208B. See description for 207B. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

INDE 209C. Medical Mandarin III: Advanced. 2-3 Units.

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.

INDE 209D. Professional Mandarin III. 2-3 Units.

Continuation of INDE 208D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 208D.

INDE 211. Creative Writing. 1 Unit.

For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.

INDE 212. Medical Humanities and the Arts. 2 Units.

The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.

INDE 214. Stanford Medical Student Journal. 1 Unit.

Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Journal. Students enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The Journal is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

INDE 215. Queer Health and Medicine. 1 Unit.

Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. May be repeated for credit.

INDE 216. Cells to Tissues. 3 Units.

Focuses on the cell biology and structural organization of human tissues as self-renewing systems. Topics include identification and differentiation of stem cells, regulation of the cell cycle and apoptosis in normal and cancerous cells, cell adhesion and polarity in epithelial tissues, intracellular transport, and cell migration. Histology laboratory sessions examine normal and abnormal samples of blood, epithelia, connective tissue, muscle, bone and cartilage. Patient presentations and small group discussions of current medical literature illustrate how cell biology influences medical practice.

INDE 217. Physician Scientist Hour. 1 Unit.

Enrollment is limited to MD, PhD, or MD-PhD students interested in careers as physician scientists. Focus is on aspects of developing careers in biomedical research through a mix of research lectures, clinical case presentations, and physician-scientist guest speakers.

INDE 220. Human Health and Disease I. 3 Units.

Establishes the foundation for the Human Health and Disease block which spans Q3 (Spring quarter Year One) through Q5 (Winter quarter Year Two). The Human Health and Disease block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

INDE 221. Human Health and Disease II. 12 Units.

Structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. See INDE 220 for a description of the Human Health and Disease block .

INDE 222. Human Health and Disease III. 15 Units.

Structure, function, disease, and therapeutics of the renal/genito-urinary system, the gastrointestinal system, the endocrine system, male and female reproductive systems, and women's health. See INDE 220 for a description of the Human Health and Disease block .

INDE 223. Human Health and Disease IV. 11 Units.

Structure, function, disease, and therapeutics of the central nervous system, hematologic system and multi-systemic diseases. See INDE 220 for a description of the Human Health and Disease block .

INDE 225. Popular and Clinical Nutrition: Food Facts, Fads, and Pharmacology. 1 Unit.

Designed for medical students and other health care professionals. Lunchtime lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with caloric restriction, toxins in foods and the action of phytonutrients. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

INDE 226. History of Medicine Online. 1 Unit.

Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axxess, then ask cwpsupport to be added to the course site as a student.

INDE 227. Careers in Medicine: Pathways in the Medical Sciences. 1 Unit.

Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life balance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow. 1 Unit.

Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective job search campaign. Topics: translating scientific and clinical training into a variety of workplace environments, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

INDE 229. Managing Difficult Conversations. 2 Units.

(Same as GSBGEN 568) Dealing effectively with difficult interpersonal situations in medical contexts. Focus is on improving students' judgment as to how to prepare for and confront difficult discussions in medical situations. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Case-based; student-to-student and student-to-instructor role-playing in actual medical situations. Patient and physician-expert participation as class guests. Enrollment limited to 20 medical students (2nd year and beyond) and 15 2nd year MBA students.

INDE 230. Topics in Scientific Management. 1 Unit.

Designed for postdocs and advanced graduate students. Reviews management skills necessary for successfully assuming leadership roles in scientific research. Addresses some of the most difficult aspects of developing, directing, and managing people and projects and running a research group, especially issues that new faculty have traditionally learned by trial and error over a number of years. Topics include: the faculty job search process and strategies, key elements in starting a lab, basic principles regarding legal dimensions of scientific activity (intellectual property, royalties, links with industry), team science, research ethics, communication and negotiation skills, and writing and securing grants.

INDE 231A. Career Transitions: Academia. 1 Unit.

Preference to PhD students in their fourth year or beyond and postdocs/fellows in their intended final year. Restricted to students in Biosciences and the School of Medicine. Focus is on practical, hands-on preparation of application materials (including interview and job talk) for academic positions. Topics include an overview of the academic hiring process, critiques of CVs, cover letters, teaching and research statements, interviews and job talks. Includes panel discussion of academic hiring processes by experienced committee members and job talk critiques by communication coaches. Class information available at web.stanford.edu/class/inde231a.

INDE 231B. Career Prep and Practice: Academia. 1 Unit.

Open to all Biosciences PhD students, postdocs/fellows and medical students/residents/fellows planning to pursue academic careers. Focus is on gaining a deeper understanding of faculty roles and responsibilities. Topics include how to balance teaching, research, service, lab set-up, grantwriting and publishing at different types of institutions. Features panels of experienced faculty members from different academic environments. More information available on course website: web.stanford.edu/class/inde231b.

INDE 232. Introduction to Academic Medicine for Physician-Scientists. 3 Units.

Open only to accepted MSTP students. Presentations by Stanford faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

INDE 233. Medical Education Seminar Series. 1 Unit.

For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education journal club; education works-in-progress; topics in medical education design, implementation, and evaluation; teaching M&M; hot topics and controversies in medical education. May be repeated for credit.

INDE 234. Introduction to Writing Research Proposals. 3 Units.

Practical instruction in research proposal writing. Suitable for advanced graduate students. Substantial writing component. Enrollment by instructor approval only.

INDE 235. Wilderness Leadership and Mentorship Skills for Medical Students. 2 Units.

For MD/Master of Medicine wilderness pre-orientation trip (SWEAT) leaders. Training to engage with and prepare incoming first-year medical students for the rigors of medical school. Topics include: fundamentals of wilderness survival, wilderness equipment use, wilderness first aid, camping, outdoor leadership, mentorship, team building, improvisation, risk management, cultural competency, professionalism as a physician, reflection and resiliency, first-year curriculum, stress management and coping. Guest lectures from Stanford faculty, emergency medicine physicians, National Outdoor Leadership School wilderness instructors, learning strategy specialists, and mentorship development specialists.

INDE 236. Introduction to Teaching and Mentoring. 1 Unit.

Enrollment limited to medical students. An introduction to medical education teaching principles and skills. Topics include assessment of current teaching skills, reviews of performance, giving appropriate learner feedback, and best practices for interactive teaching. Also introduces the literature around the value of peer mentoring in the medical setting and how to apply this information. Recommended for medical students interested in or currently serving as teaching assistants or interested in future academic positions.

INDE 239. Preparation and Practice for Biotechnology Business and Finance. 2 Units.

Open to School of Medicine graduate students, medical students, residents and fellows. Focus on the process of new company development and skills for success in biotechnology business, entrepreneurship and finance, including management/leadership skill development, awareness of business terminology and theory. Topics include: financial analysis, feasibility, IP, case practice.

INDE 255A. Health Policy, Finance and Economics I. 1 Unit.

Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.

INDE 255B. Health Policy, Finance and Economics II. 1 Unit.

Continuation of INDE 255A. Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. For medical students 255A is not prerequisite to 255B. Prerequisite: instructor consent.

INDE 260. Journeys in Women's Health and Sex and Gender in Medicine. 1 Unit.

Sponsored by the Stanford WSDM Center. Course focuses on health research on women and sex differences in medicine, acknowledges the "wisdom" of research and education on sex (e.g. chromosomes, gonads, gonadal hormones) and gender (sociocultural) factors influencing health. Brings alumni to share their professional journeys in the world of Women and Sex Differences in Medicine. Meets Women's Health Scholarly Concentration Requirement.
Same as: FEMGEN 260X

INDE 295. Bioethics and Anthropology Interdisciplinary Directed Individual Study. 3-5 Units.

Supervised individualized study in bioethics and anthropology for a qualifying paper, research proposal, or project with an individual faculty member. May be repeated for credit.

INDE 297. Reflections, Research, and Advances in Patient Care. 4 Units.

Required for all MD students enrolled in clerkships at Stanford affiliated sites. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clinical environment. Goals are: to discuss and reflect upon critical experiences in clerkships; to provide continuity of instruction in translational science topics across the curriculum; to reinforce and extend the study of behavioral, cultural, ethical, social and socioeconomic topics introduced in the Practice of Medicine course sequence; to expose students to recent advances in medical discoveries, emphasizing their application to clinical practice (translational medicine); and to develop research and critical thinking skills, acquiring new information in areas related to the Scholarly Concentrations. Components of this curriculum include Doctoring with CARE small groups, the Advances and Reflections in Medicine lecture/seminar series, and Scholarly Concentration breakout groups. The Friday afternoon lecture/seminars explore advances in biomedical sciences with applications to medical practice (translational medicine) as well as faculty career pathways, reflections on doctoring, and the context of medicine in society. All students in clinical clerkships must participate in all aspects of RRAP Days. Prerequisite: Concurrent enrollment in clinical clerkships.

INDE 298. Women's Health Independent Project. 1 Unit.

Required for Women's Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.

Medieval Studies Courses

Microbiology Immunology Courses

MI 18SC. The Coming Influenza Pandemic. 2 Units.

Examines the H1N1 influenza virus from molecular, clinical, societal, historical, demographic, economic, and political perspectives. Examines the unique genetic, epidemiological, virologic, and pathogenic features of the influenza virus that allow it to continue to reinvent itself and re-emerge on an annual basis. Discusses past successes and failures, the current status of influenza, and the critical factors to consider to avert the coming influenza pandemic. Explores whether or not the lessons learned from influenza can be applied to other diseases. Includes guest lectures, field trips, student presentations.

MI 19SC. Measles and Sneezles and Things That Go Mumps in the Night. 2 Units.

A study of measles (until recently one of the leading causes of death in the world and the most contagious disease agent ever studied) and its relatives in the paramyxovirus family, including mumps, respiratory syncytial virus, hendra, and nipah, as well as a number of important animal pathogens. Investigates the nature of viruses using the paramyxoviruses as a paradigm. Topics include: the history of this devastating group of pathogens; basic aspects of paramyxovirus taxonomy and molecular virology; viral epidemiology, emergence, and eradication, including the pioneering studies of Peter Panum; the use, misuse, and abuse of science; the interactions between pathogen and host and how this interplay leads to disease, including the appearance of a bizarre brain complication with 100% mortality; the politics and economics of infection; how a putative link between the measles vaccine and autism entered the public eye, and how it refuses to disappear despite overwhelming evidence to the contrary. Field trips, guest speakers, student presentations. No science background necessary.

MI 70Q. Photographing Nature. 3 Units.

Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Eadweard J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.

MI 104. Innate Immunology. 3 Units.

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

Same as: IMMUNOL 204, MI 204

MI 115B. The Vaccine Revolution. 6 Units.

Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 8. Prerequisite: prior enrollment in HumBio 155H Humans and Viruses or MI 116, The Human Virosphere. Same as: HUMBIO 155B

MI 115C. Human Virology Inquiry Project I. 1-3 Unit.

Advanced topics in human virology focuses on current issues in the field. Topics will include: clinical features of infection, epidemiology, molecular virology, drug development and policy, vaccinology, pathogenesis, host modulation, and media representations of viral infection. Student presentations and discussion in a small group setting.

MI 116. The Human Virosphere. 5 Units.

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor.

Same as: MI 216

MI 120. Bacteria in Health and Disease. 3 Units.

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught.

Same as: BIO 120

MI 155H. Humans and Viruses I. 6 Units.

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response.

Same as: HUMBIO 155H

MI 155V. Humans and Viruses II. 6 Units.

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer -causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatment, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: MI155H.

MI 185. Topics in Microbiology. 3 Units.

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. Same as: MI 285

MI 198. Directed Reading in Microbiology and Immunology. 1-15 Unit.

Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.

MI 199. Undergraduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunology, virology, and molecular parasitology. Prerequisite: consent of instructor.

MI 204. Innate Immunology. 3 Units.

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

Same as: IMMUNOL 204, MI 104

MI 209. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites: Part I. 4 Units.

For graduate students and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. Emphasis is on mechanisms to establish infection in the host and responses of the host to infection. Current literature. Prerequisite: background in biochemistry and molecular biology.

MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. 4 Units.

For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature. Undergraduate students interested in taking this class must meet with the instructor to obtain approval before enrolling.

MI 211. Advanced Immunology I. 3 Units.

For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology. Same as: IMMUNOL 201

MI 215. Principles of Biological Technologies. 3 Units.

The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program. Same as: IMMUNOL 215

MI 216. The Human Virophere. 5 Units.

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor. Same as: MI 116

MI 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience. Same as: GENE 218, PATH 218

MI 233. The Biology of Small Modulatory RNAs. 2 Units.

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal. Same as: GENE 233, PATH 233

MI 234. Fundamentals of RNA Biology. 2 Units.

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students. Same as: GENE 234, PATH 234

MI 245. Computational Modeling of Microbial Communities. 4 Units.

Provides biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students learn basic programming skills focused on Matlab, but also are introduced to Perl and Python. Topics include: image analysis, bioinformatics algorithms, reaction diffusion modeling, Monte Carlo algorithms, and population dynamics. Students apply computational skills to a miniature research project studying the human gut microbiota. Same as: BIOE 115

MI 250. Frontiers in Microbiology and Immunology. 1 Unit.

Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.

MI 285. Topics in Microbiology. 3 Units.

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. Same as: MI 185

MI 299. Directed Reading in Microbiology and Immunology. 1-18 Unit.

Prerequisite: consent of instructor.

MI 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MI 399. Graduate Research. 1-18 Unit.

Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.

MI 801. TGR Master's Project. 0 Units.

.

MI 802. TGR PhD Dissertation. 0 Units.

.

Modern Thought Literature Courses

MTL 299. Edgework: New Directions in the Study of Culture. 1-3 Unit.

Workshop. Required of first-year students in the doctoral program. Methodologies of different disciplines, the possibility and difficulty of interdisciplinary work within these disciplines, and their connection with the individual projects of students in Modern Thought and Literature. May be repeated for credit.

MTL 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students. Same as: ENGLISH 334A, GERMAN 300

MTL 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood. Same as: COMPLIT 334B, ENGLISH 334B

MTL 390. Qualifying Paper. 1-5 Unit.

Preparation and writing of the qualifying paper for the Ph.D. in Modern Thought and Literature. nn (Staff).

MTL 398. Graduate Independent Study. 1-15 Unit.

Students pursue a special subject of investigation under supervision of a member of the committee or another faculty member. May be repeated for credit.

MTL 399. Reading for Orals. 1-15 Unit.

Reading in preparation for the University Oral Examination. May be repeated for credit.

MTL 802. TGR Dissertation. 0 Units.

Molecular Cellular Physiology Courses

MCP 126. Neurons and Disease. 4 Units.

Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). Prerequisite: Biology or Human Biology core.

MCP 156. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations. Same as: MCP 256

MCP 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

MCP 202. Advanced Immunology II. 3 Units.

Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211. Same as: IMMUNOL 202

MCP 216. Genetic Analysis of Behavior. 3 Units.

Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation. Same as: NBIO 216

MCP 221. Advanced Cell Biology. 4 Units.

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor. Same as: BIO 214, BIOC 224

MCP 222. Imaging: Biological Light Microscopy. 3 Units.

Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core. Same as: BIO 152

MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations. Same as: MCP 156

MCP 287. Connectomes. 1-3 Unit.

(Same as PSYCH 287) Neural circuitry can be measured over a huge range of spatial scales, from sub-synaptic to whole brain connectomes. The methods used to measure these scales differ enormously, and scientists working at one scale should be able to understand and communicate with those measuring at other scales. Reviews methods, principal results, and ideas for integrating findings across scales by large-scale computation modeling.

MCP 299. Directed Reading in Molecular and Cellular Physiology. 1-18 Unit.

Prerequisite: consent of instructor.

MCP 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

MCP 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff).

MCP 801. TGR Project. 0 Units.**MCP 802. TGR Dissertation. 0 Units.**

Music Courses

MUSIC 1A. Music, Mind, and Human Behavior. 3 Units.

An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations.

MUSIC 1SL. Introduction to Indian Classical Music. 1 Unit.

This is an introductory course in the classical music of India, with emphasis on learning to listen to and appreciate Indian classical music concerts. It will cover a broad overview of the two main genres of Indian classical music - Carnatic and Hindustani. We will have several in-class demonstrations of instruments unique to the Indian classical music tradition. Class meetings will include discussions of landmark performances and artists as well as fundamentals of this music style, such as Raaga (melody), Taala (rhythm), song structure, and improvisation.

MUSIC 2C. An Introduction to Opera. 3 Units.

The lasting appeal of opera as a lavishly hybrid genre from the 1600s to the present. How and why does opera set its stories to music? What is operatic singing? Who is the audience? How do words, music, voices, movement, and staging collaborate in different operatic eras and cultures? Principal works by Monteverdi, Handel, Mozart, Verdi, Wagner, Strauss, Britten, and Adams. Class studies and attends two works performed by the San Francisco Opera.

MUSIC 4SI. Interactive Introduction to North American Taiko. 1 Unit.

Taught by Stanford Taiko members. Techniques and history. No experience necessary. May be repeated for credit. This course was initiated by Mitchell Fukumoto and Stanford Taiko.

MUSIC 5G. Introduction to Gu-Zheng. 1 Unit.

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 5GZ. Introduction to Gu-Zheng. 0 Units.

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 6F. Art is My Occupation: Professional Development in Music. 1-2 Unit.

Open to majors and non-majors. This course is designed to empower music students to explore their personal and artistic identity. One-unit option (recommended for freshmen and sophomore) is for students who wish to explore various music related occupations through research, discussion and interview with invited speakers. Two-unit option (recommended for junior and seniors) has an additional part that students prepare resumes and biography or cover letter, and create other materials that will assist in the process of job or graduate school applications through on-line resources.

MUSIC 7B. Musical Cultures of the World. 3 Units.

An overview of selected musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience is necessary. Class format: Lecture, discussion, listening, guest performances, musical participation, and a concert analysis.

MUSIC 8A. Rock, Sex, and Rebellion. 3 Units.

Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. Attendance at all lectures is required.

MUSIC 10AX. Science of Sound. 2 Units.

Science of Sound will explore sound and sound-related technology from the perspectives of mathematics, physics, and acoustics. Scientists and engineers will have a chance to apply their technical knowledge to the field of music while musicians will learn how sound behaves physically and how it can be recorded, processed, and reproduced. Using the newly opened Bing Concert Hall as a focal point, we will study the science of sound recording, room acoustics, and multi-channel mixing and playback. Students will use what they learn to create short multi-channel compositions using special techniques to place sounds spatially. These pieces will be performed during the annual outdoor Summer CCRMA Transitions concert and again during the Fall 2014 CCRMA concert at Bing Concert Hall. We will use the textbook by Jay Kadis entitled *Science of Sound Recording* as our primary text and incorporate plenty of hands-on experience with sound equipment and electronics.

MUSIC 11A. Orchestral Repertoire and Technique for Violin. 1 Unit.

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 11AZ. Orchestral Repertoire and Technique for Violin. 0 Units.

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 11N. A View from the Podium: The Art of Conducting. 3 Units.

How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor.

MUSIC 11Q. Art in the Metropolis. 3 Units.

This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and the SAI programming director. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see <http://artsinstitute.stanford.edu>.

Same as: ARTSINST 11Q

MUSIC 12A. Introductory Piano Class. 1 Unit.

"(A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 12AZ. Introductory Piano Class. 0 Units.

"(A=level 1; B=level 2; C=level 3) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeat for credit for 0 unit and total completion allowed 99.

MUSIC 12B. Introductory Piano Class. 1 Unit.

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 12BZ. Introductory Piano Class. 0 Units.

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 12C. Introductory Piano Class. 1 Unit.

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.) May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 12CZ. Introductory Piano Class. 0 Units.

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.) There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 12SC. Musical Collisions and Radical Creativity. 2 Units.

The margins of musical culture; nonconformist, maverick, and eccentric creative impulses that expand the definition of art. Laboratory atmosphere and daily rehearsals in which students create collaborative works with a final public concert involving collaborations with local musicians and presentations of student-composed works created during the course.

MUSIC 13Q. Classical Music and Politics: Western Music in Modern China. 3 Units.

Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians.

MUSIC 13SC. Performing America: The Broadway Musical. 2 Units.

This seminar explores how the themes, characters, stories, and, above all, the songs of the Broadway musical have played a key role in forming ideas of American identity from the early 20th century to the present. Musical theater is a perennial site for negotiating social themes of race, class, gender roles, and sexual identity. The American musical has been in constant dialogue with vernacular song and dance idioms, from ragtime and early jazz to rock, pop, disco, hip-hop, and electronic dance music. Jazz musicians have regularly looked to musical theater for their iquest;standards,iquest; as have talent shows from the vaudeville era to American Idol. Disney musicals, the television series Glee and Smash, and the High School Musical franchise all illustrate how iquest;musicals,iquest; serve as a medium for negotiating personal identity from childhood through early adulthood, staging the conflicts and attachments that define our everyday lives while connecting these with the culture we live in through the collective medium of song. nWe will look at a variety of influential historical musicals (Oklahoma, Guys and Dolls, Gypsy, The Music Man, West Side Story) and a few recent shows such as Wicked, Hairspray, Bloody Bloody Andrew Jackson, American Idiot, and The Book of Mormon, asking what the relation is between individual numbers and the overall themes and structures of the shows. How do lyrics and music combine in a successful song, and how does a song contribute to shape of the show? How do the dynamics of live theater relate to the presentation of musicals in the mediums of film and television? In addition to working on selected songs and scenes with the help of Stanford voice and drama faculty, students will attend, discuss, and review Bay area productions (San Jose, San Francisco), including the Broadway by the Bay (Redwood City) production of Cabaret opening on September 13, 2013. Grading will be based on class discussion, production analysis and reviews, and a choice between a final creative project and a short research paper.

MUSIC 14N. Women Making Music. 3 Units.

Preference to freshmen. Women's musical activities across times and cultures; how ideas about gender influence the creation, performance, and perception of music.

MUSIC 15N. The Aesthetics of Data. 3 Units.

Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression.

MUSIC 17N. The Operas of Mozart. 3 Units.

Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present.

MUSIC 17Q. Perspectives in North American Taiko. 4 Units.

Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity.

MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.

From the beginning of jazz to the war years.
Same as: AFRICAAM 18A

MUSIC 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style.
Same as: AFRICAAM 18B

MUSIC 19A. Introduction to Music Theory. 3 Units.

For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony; melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills.

MUSIC 19B. Intermediate Music Theory. 3 Units.

This course is an introduction to music theory geared toward students who have basic literacy skills (i.e. fundamental notation, identifying major and minor scales, keys, etc). Using musical materials from repertoire selected from campus and area concerts, and incorporating the opportunity to attend these concerts, the course will introduce elements of harmony, melody, form, orchestration and arrangement. The course is an appropriate successor to Music 19A. Students who successfully complete Music 19B can go on directly to Music 21.

MUSIC 20A. Jazz Theory. 3 Units.

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. Same as: AFRICAAM 20A

MUSIC 20B. Advanced Jazz Theory. 3 Units.

Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor.

MUSIC 20C. Jazz Arranging and Composition. 3 Units.

Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor.

MUSIC 21. Elements of Music I. 3 Units.

Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19.

MUSIC 22. Elements of Music II. 3 Units.

Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently).

MUSIC 23. Elements of Music III. 3 Units.

Preference to majors. Continuation of chromatic harmony and complex forms of late Romantic period. Satisfactory passage of ear-training proficiency exam, part of the course's final, is a requirement for course completion and for continuation in the major sequence. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently).

MUSIC 24A. Ear Training I. 1-2 Unit.

.

MUSIC 24B. Ear Training II. 1-2 Unit.

.

MUSIC 24C. Ear Training III. 1-2 Unit.

.

MUSIC 24K. Keyboard Harmony. 1 Unit.

In this practical introduction to keyboard harmony, students learn to play, analyze and improvise chord progressions at the keyboard. The course covers reading figured bass, playing chord progressions in all major and minor keys, and score reading. Students also analyze and perform solo repertoire that progresses through the semester from simple pieces to the level of a Bach invention and chorale. Preference given to majors. Keyboard harmony supports material learned in MUSIC 24B and 24C and counts as an ear training course. Prerequisites: (1) Piano Proficiency Exam, (2) MUSIC 24A.

MUSIC 30N. A Stranger in a Strange Land: Jewish Musics in Translation. 3 Units.

What does it mean to be a stranger in a strange land? For centuries Jewish people have struggled to shape their identities in unfamiliar surroundings, using music to remember the past and generate new, hybrid identities. In this class we adopt the metaphor of translation to think about how minority Jewish communities bridge distinct languages, musical idioms, and cultural practices. Our theme will take us on a journey across time and space; from Italy to India, New York, Syria, Russia, and Israel. We consider the case of Salomone Rossi, a 17th-century Italian Jewish composer who moved uneasily between dual careers in the synagogue and a secular/Christian court. We also explore a group of Indian Jews (Bene Israel) who combine idioms learned from Jewish and Christian missionaries with local Hindu musical traditions. In all our examples musicians translate languages, musical styles, and cultures to unite memories of a Jewish past with the realities of minority status in the present. The class format includes listening, discussion, some singing, student presentations, and guest lectures.

MUSIC 32N. Sculpting with Sounds, Images, and Words. 3 Units.

Preference to freshmen. Contemporary culture abounds in multimedia forms, in which sounds, images and words are interwoven in unique ways. What are their individual and combined powers? How would you harness them? Participants face these questions in creative projects as well as through in-class viewing, analysis and debates, readings, guest lectures and student presentations. The seminar is taught at the Center for Computer Research in Music and Acoustics where students have access to new media technologies.

MUSIC 34N. Performing America: The Broadway Musical. 3 Units.

Musical theater as a site for the construction of American identity in the twentieth century to the present. Issues of class, race, gender, and sexuality; intersections with jazz, rock, and pop; roles of lyricist, composer, director, choreographer, producer, performers. Individual shows (Showboat, Oklahoma, South Pacific, Guys and Dolls, West Side Story, Wicked, Bloody Bloody Andrew Jackson, Book of Mormon), show tunes in jazz performance, film musicals, and television. Opportunities for performance and attendance at local productions.

MUSIC 36N. Humor in Music. 3 Units.

Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor.

MUSIC 38N. Singing Early Music. 3 Units.

Preference to freshmen. 15th- and 16th-century musical repertoires and their contexts; performance practice.

MUSIC 39A. Music, Health, and Medicine. 3 Units.

Explore how music relates to health and medicine surveying recent medical literature. Review different techniques in music therapy, music-related health problems, and issues related to educational and medical applications. Course materials are chosen to clearly identify music as a component of health related activity or occupation, to describe responses to music in our mind and body, and to think about the roles of music in our health. The seminars also discuss related basics in psychology and neurology. Students learn how to do literature search and write essays about relevant topics.

MUSIC 39N. The Classical String Quartet: Haydn, Mozart, Beethoven & Schubert. 3 Units.

This seminar, an in-depth historical survey of canonic works from the string quartet repertory, is intended for performers and non-performers alike. Topics to be explored include the origins of the genre in the pre-classical period; the establishment of enduring conventions in the early quartets of Haydn; aesthetic criteria that distinguish the approaches of Haydn and Mozart; the epoch-defining shifts in musical composition that are reflected in Beethoven's works for the medium; the tension between classicism and romanticism in the chamber music of Schubert; and issues of historical performance practice. Field trips will include a visit to the Beethoven Center in San Jose and attending chamber music concerts on campus. The St. Lawrence String Quartet (Stanford's ensemble-in-residence) will be joining the seminar on a regular basis to provide live demonstrations and coaching. Students who are string players are strongly encouraged to bring their instruments to class. Class activities will cover history, criticism, analysis, and performance (usually in combination). Informed listening is a primary goal of the seminar. Assignments will be tailored to student interests and abilities.

MUSIC 40. Music History to 1600. 4 Units.

Pre- or corequisite: 21.

MUSIC 41. Music History 1600-1830. 4 Units.

Pre- or corequisite: 22.

MUSIC 42. Music History Since 1830. 4 Units.

Pre- or corequisite: 23.

MUSIC 65A. Voice Class I. 1 Unit.

Group (7 students to a section) beginning voice (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 65AZ. Voice Class I. 0 Units.

Group (7 students to a section) beginning voice (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit and total completion allowed 99.

MUSIC 65B. Voice Class II. 1 Unit.

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 65BZ. Voice Class II. 0 Units.

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 units and total completion of 99.

MUSIC 72A. Intermediate Piano Class. 1 Unit.

For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 72AZ. Intermediate Piano Class. 0 Units.

For intermediate students. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 72C. Harpsichord Class. 1 Unit.

For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 72CZ. Harpsichord Class. 0 Units.

For beginning harpsichord students who have keyboard skills. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 72D. Jazz Piano Class. 1 Unit.

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 72DZ. Jazz Piano Class. 0 Units.

By invitation only; priority to majors and jazz-ensemble participants. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 73. Intermediate Voice Class. 1 Unit.

For intermediate students. Admission by audition. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 73Z. Intermediate Voice Class. 0 Units.

For intermediate students. Admission by audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment.

MUSIC 74A. Introductory Violin Class. 1 Unit.

(74A.1=Level 1 beginners; 74A.2=Level 2 continuing) Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 74AZ. Introductory Violin Class. 0 Units.

(74A.1=Level 1 beginners; 74A.2=Level 2 continuing) Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 74C. Classical Guitar Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 74CZ. Classical Guitar Class. 0 Units.

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 74D. Harp Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 74DZ. Harp Class. 0 Units.

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 75B. Renaissance Wind Instruments Class. 1 Unit.

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 75BZ. Renaissance Wind Instruments Class. 0 Units.

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 76. Brass Instruments Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 76A. Tuba Class. 1 Unit.

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit.

MUSIC 76AZ. Tuba Class. 0 Units.

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. This course includes a fee of \$175 for Music majors and minors, and \$200 for non Music majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit.

MUSIC 76Z. Brass Instruments Class. 0 Units.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 77. Percussion Class. 1 Unit.

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 77Z. Percussion Class. 0 Units.

There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 80T. Jewish Music in the Lands of Islam. 4 Units.

An Interdisciplinary study of Music, Society, and Culture in communities of the Jewish Diaspora in Islamic countries. The course examines the diverse and rich musical traditions of the Jews in North Africa and the Middle East. Based on the "Maqamat" system, the Arabic musical modes, Jewish music flourished under Islamic rule, encompassing the fields of sacred music, popular songs, and art music. Using musicological, historical, and anthropological tools, the course compares and contrasts these traditions from their original roots through their adaptation, appropriation, and re-synthesis in contemporary art music and popular songs.

Same as: JEWISHST 80T

MUSIC 102. Picturing Performance, Re-Envisioning the Arts. 2-4 Units.

Critical and creative exploration of the performing body as captured on film. Viewing/listening includes musicals, dance and opera on film, music video, experimental film and video, and moments of heightened musicality in feature film. Weiqest;ll focus on examples of moving media that possess a kinship with music;quest;through gesture, rhythm or affect and through visual parameters like deacute;cor, lighting, texture, camera movement and editing. Requirements include choosing and documenting a live performance, producing a short audiovisual work involving post-production, and weekly reading and viewing/listening assignments. No previous videomaking experience required.

Same as: MUSIC 202

MUSIC 112. Creative Expression: Musical Theater. 4 Units.

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as *Phantom of the Opera*, *Rent*, *Wicked*, *Jesus Christ Superstar*. Although excellent pieces of art in their own way, both dramatically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

Same as: TAPS 112

MUSIC 122A. Counterpoint. 4 Units.

Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: 23 and piano-proficiency examinations.

MUSIC 122B. Analysis of Tonal Music. 4 Units.

Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: Music 23 and 24C or consent of instructor.

MUSIC 122C. Introduction to 20th-Century Composition. 4 Units.

Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: 23 or consent of instructor; and successful completion of the piano-proficiency examination.

MUSIC 123. Undergraduate Seminar in Composition. 3 Units.

Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor.

MUSIC 124A. Songwriters Workshop. 1-3 Unit.

Laboratory for composers of any kind of vernacular music: singer-songwriters; folk singers; laptop dance music composers; rock and pop bands; rappers; writers of instrumentals or music with lyrics; solo artists and collaborators; etc. Compositional strategies for songwriting, overview of exemplars, discussion of aesthetic issues, and development of artistic personae. Weekly critique session for students and faculty to share work and offer feedback. Music theory and literacy not required. Aimed, however, at those with at least some experience as writers, whether casual or extensive. For bands at least half of members must be enrolled. Additional units invite lessons with instructor.

MUSIC 125. Individual Undergraduate Projects in Composition. 1-3 Unit.

May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.

MUSIC 126. Introduction to Thoroughbass. 1-3 Unit.

The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.

MUSIC 127. Instrumentation and Orchestration. 3 Units.

Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23.

MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.

Same as: CS 170

MUSIC 129. Advanced Ear-Training/Musicianship. 1-2 Unit.

A course in advanced aural analysis and musicianship skills for students who have completed the Music 24 series. Topics of study include analysis by ear of large scale forms, chromatic or extended-tertian harmony, modulations to distantly related keys, chromatic or atonal melodies, modal harmony and melody, as well as alternative forms of aural analysis.

MUSIC 130A. Introduction to Conducting. 3 Units.

Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 122B and diagnostic musicianship exam given first day of class.

MUSIC 130B. Elementary Orchestral Conducting. 3 Units.

Prerequisites: 127 or previous orchestral performance experience, 130A.

MUSIC 130C. Elementary Choral Conducting. 3 Units.

Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works. Prerequisite: 130A.

MUSIC 140J. Studies in Music of the Middle Ages: Music and Memory. 3-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 240J

MUSIC 141. Studies in Music of the Renaissance. 2-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 241

MUSIC 142. Studies in Music of the Baroque. 3-4 Units.

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 242

MUSIC 143J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 243J

MUSIC 144J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.). Same as: MUSIC 244J

MUSIC 145J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.). Same as: MUSIC 245J

MUSIC 146J. Studies in Ethnomusicology: Music Ethnography of the Bay Area. 3-5 Units.

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: MUSIC 246J

MUSIC 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 247J

MUSIC 147K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.).

Same as: MUSIC 247K

MUSIC 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: MUSIC 247L

MUSIC 148J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Departmentquest;s May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.).

Same as: MUSIC 248J

MUSIC 150. Musical Acoustics. 3 Units.

The physics of vibrating systems, waves, and wave motion. Time- and frequency-domain analysis of sound. Room acoustics, reverberation, and spatialization. The acoustics of musical instruments: voice, strings, and winds. Emphasis is on the practical aspects of acoustics in making music. Hands-on and computer-based lab. See <http://ccrma.stanford.edu/courses/150/>.

MUSIC 150D. The Paradigm Shift. 1 Unit.

Examination of the idea of 'paradigm shift' by considering paradigm shifts in different academic fields of inquiry. Serial accumulation of guest lectures by distinguished faculty representing the University's many and varied departments, each asking and answering the question 'What is the most important paradigm shift in the history of my field? Are paradigm shifts revolution or evolution? Do they move us closer to truth? How frequently do they occur? Can humans plan for, cause, or resist them?.'

Same as: POLISCI 133D

MUSIC 154. History of Electronic Music. 1-5 Unit.

What is electronic music? Acousmatic, computer music, algorithmic composition, tape music, glitch, electronic, musique concrègrave;te, noise, laptop music, DJ'ing, organized sound...what do these labels mean? This course will provide a brief historical survey of electroacoustic music and discuss some of the most salient questions associated with it, from both a compositional and musicological point of view. Topics to be covered include: definitions of musical sounds; Schaefferian theory and musique concrègrave;te; serialism and elektronische Musik; tape music and computer music in the USA; analysis of electroacoustic music; sampling and intellectual property; algorithmic and computer-assisted composition; live-electronics and improvisation. The course does not require previous experience in the field. Classes will be based on discussion of selected listening and reading materials, as well as hands-on digital experimentation with sounds.

MUSIC 154A. Sound Art I. 4 Units.

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level).

Same as: ARTSTUDI 131

MUSIC 154B. Aesthetics of Experimental Electronic Music, 1980 to Today. 3-5 Units.

In this course, students will listen to, analyze, and interpret experimental electronic music since 1980. We will explore how technologies influence music making, audiencesquest; experiences, distribution outlets and performance contexts for electronic music. How do artists generate meaning and expressivity when using experimental tools and styles? Emphasis on developing vocabulary and frameworks for informed discourse surrounding electronic music, drawing from both academic and journalistic traditions. Topics include electronic dance music, dubstep, hip hop, internet music culture, drone, noise, microsound, electroacoustic, and sound art. Highly recommended for music majors taking the MST specialization. For upper-level undergraduates and graduate students.

MUSIC 154C. Real Industry: Inside the audio and music technology industry. 1 Unit.

Real Industry explores how leading audio and music technology companies, such as Pandora, Adobe, Smule, Dolby, iZotope, Line 6, and Avid, bring products from idea to market. We examine best practices, roles, day-to-day responsibilities, desired skillsets, and department/team function. This seminar is intended for all students considering full-time positions or internships in audio industry. No prior engineering background required.nTopics include: software development in large organizations, UX/UI design, marketing, hardware development, product management, advanced technology and research, project management, sales, data and analytics, executive teams, and operations (HR, IP/patents). nOnline lectures available. Class time includes discussion and meetings with industry professionals.

MUSIC 154D. Symposium on Manufacturing Techniques for Music and Art. 1-3 Unit.

A guided symposium on the many techniques for making music and art objects. The course will be tailored to student interest and needs as it covers computer controlled machining, traditional techniques, and innovative methods of creating physical objects for music and art.

MUSIC 155. Intermedia Workshop. 3-4 Units.

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.
Same as: ARTSTUDI 239, MUSIC 255

MUSIC 156. "sic": Improvisation Collective. 1 Unit.

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

MUSIC 158. Stanford Community Chorus. 1 Unit.

Chorus members explore many different types of music and singing in a fun and supportive environment, including folk, spirituals, popular songs, and traditional choral music. The course culminates in an informal performance. No audition is required to join; experienced music readers and non-readers alike are welcome. The ensemble is open to both Stanford students and community members. There is a \$25 fee for music. Offered in collaboration with Stanford Continuing Studies. Enrollment limited to 15 students and 30 community members.

MUSIC 159. Early Music Singers. 1 Unit.

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 159Z. Early Music Singers. 0 Units.

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times for 0 unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160. Stanford Symphony Orchestra. 1 Unit.

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160A. Stanford Philharmonia Orchestra. 1 Unit.

Prerequisite: audition, one year of 160, or consent of instructor. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160AZ. Stanford Philharmonia Orchestra. 0 Units.

Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160B. Stanford New Ensemble. 1 Unit.

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160BZ. Stanford New Ensemble. 0 Units.

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160C. Stanford Baroque Soloists. 1 Unit.

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Contact instructor for audition and enrollment information: <mailto:1martinagel@earthlink.net> May be repeated for credit for total completion of 15 and total 15 units. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 160CZ. Stanford Baroque Soloists. 0 Units.

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161A. Stanford Wind Ensemble. 1 Unit.

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161AZ. Stanford Wind Ensemble. 0 Units.

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161B. Jazz Orchestra. 1 Unit.

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total of 15 times. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161BZ. Jazz Orchestra. 0 Units.

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total completion of 15 and 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161C. Red Vest Band. 1 Unit.

A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men's and women's home basketball games and travel to some away and post-season games. Twice-weekly rehearsals focus on introduction of new student arrangements and the LSJUMB's repertoire of rock, funk, and traditional styles. May be repeated for credit a total of 7 times. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161D. Stanford Brass Ensemble. 1 Unit.

Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161DZ. Stanford Brass Ensemble. 0 Units.

Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161E. Stanford Afro-Latin Jazz Orchestra. 1 Unit.

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Regular openings for brass/wind players, drummers, percussionists, pianists, bassists, and vocalists. Guest openings on violin, guitar and vibraphone. Inclusion of other instruments at the discretion of the director. Members should have basic reading ability and some related ensemble experience (e.g. jazz band). Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161EZ. Stanford Afro-Latin Jazz Orchestra. 0 Units.

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit for total of 0 (zero) unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 162. Symphonic Chorus. 1 Unit.

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 162Z. Symphonic Chorus. 0 Units.

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 163. Memorial Church Choir. 1 Unit.

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 163Z. Memorial Church Choir. 0 Units.

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 165. Chamber Chorale. 1 Unit.

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 165Z. Chamber Chorale. 0 Units.

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 167. University Singers. 1 Unit.

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 167S. Summer Chorus. 1 Unit.

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. Concert July 31, 2015 in Memorial Church. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0(zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 167SZ. Summer Chorus. 0 Units.

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. Concert July 31, 2015 in Memorial Church. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 167Z. University Singers. 0 Units.

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 169. Stanford Taiko. 1 Unit.

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 169Z. Stanford Taiko. 0 Units.

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 170. Collaborative Piano. 1 Unit.

Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.

MUSIC 171. Chamber Music. 1 Unit.

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition sign up: <http://music.stanford.edu/> By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 171Z. Chamber Music. 0 Units.

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition sign up: <http://music.stanford.edu/> By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 172A. Piano. 1-3 Unit.

Private lessons and group master class weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 172B. Organ. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 172C. Harpsichord. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 172D. Jazz Piano. 1-3 Unit.

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 172E. Fortepiano. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 175F. Saxophone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 175G. Baroque Flute. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 175H. Jazz Saxophone. 1-3 Unit.

May be repeated for credit a total of 15 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 176A. French Horn. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 176B. Trumpet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 176C. Trombone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 176D. Tuba. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 176E. Jazz Trumpet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 177. Percussion. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 177A. Drum Set Lessons. 1-3 Unit.

These lessons will be geared toward the individual student's desires and needs. All levels are welcome, but students should contact instructor to set up initial meeting, prior to enrolling in the course. Students will explore drumset technique, coordination, reading and a study various styles including, Jazz, Rock, R&B, Blues, Latin and Brazilian music. Students will use different texts as needed. These texts may include: Syncopation by Ted Reed, Modern Reading Text in 4/4 by Louis Bellson, A Funky Primer by Charles Dowd, Advanced Techniques for the Modern Drummer by Jim Chapin, and others. Students will also use material created by David for his classes "Around the World on a Drumset" and "Chart Reading Demystified." These lessons are designed to be both fun and challenging. Students will play along with recordings and are encouraged to bring in recordings of music that they enjoy. May be repeated for credit a total of 15 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 179Z. Applied Music Private Lessons. 0 Units.

Students enroll in appropriate instructor section for private instrumental/vocal lessons using this zero unit enrollment option. Available only with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

MUSIC 182. Diction for Singers. 1 Unit.

The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.

MUSIC 183A. German Art Song Interpretation. 1 Unit.

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 183B. French Art Song Interpretation. 1 Unit.

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Faureacute;, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 184A. Editing and Performing Early Music. 1-3 Unit.

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184AZ. Editing and Performing Early Music. 0 Units.

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. All participants must enroll. May be repeated for a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184B. Topics in Opera Stagecraft. 1-3 Unit.

This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184BZ. Topics in Opera Stagecraft. 0 Units.

This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184C. Dramatic Vocal Arts: Songs and Scenes Onstage. 1-2 Unit.

Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Audition or consent of instructor required.

MUSIC 185. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 385

MUSIC 186. Religion and Music in South Asia. 4-5 Units.

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as iquest;ecstasyquest;-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 286, RELIGST 259

MUSIC 186A. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 286A, RELIGST 156, RELIGST 256

MUSIC 186B. American Song in the 20th Century and after. 3-4 Units.

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva cancioacute;n and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: AMSTUD 186B, MUSIC 286B

MUSIC 186C. Music and the Postcolonial World. 3-4 Units.

Explores the creation and dissemination of music in postcolonial settings. Focus is on the relationships between music, nationalism, and globalization and the ways in which postcolonial music confounds and exceeds territorial boundaries: through colonial travel, postcolonial diaspora, technologies of radio and sound recording, and the global capitalist commodification of world music. Specific topics on these themes include studies of Algeria, India, West Africa, and South Africa.

Same as: MUSIC 286C

MUSIC 186D. Hearing and Seeing in the Long Nineteenth Century. 3-4 Units.

Ideas about vision and hearing in science and culture from 1790 through 1910. The development of sensory physiology in the wake of Kant's *Critique of Pure Reason*, including Maine de Biran, Goethe, Helmholtz. Treatments of the senses in different spheres of culture and the arts: Baudelaire's *flacirc;neur*, Impressionist painting, sound-reproduction technologies, the musical avant-garde, early cinema. Case studies include Ceacute;zanne, Debussy, and Russolo. Focus is on the complex relationships between science and culture and the role of the senses in the formation of the 'modern' subject. HISTORY241E/341E must be taken for 4 units.

Same as: HISTORY 241E, HISTORY 341E, MUSIC 286D

MUSIC 187. Music and Culture from the Land of Fire: Introduction to Azerbaijani Mugham. 1-5 Unit.

Nestled in the Caucasus, Azerbaijan is a crossroads between East and West; its rich musical heritage contains threads of Turkish, Central Asian, Persian, Caucasian, Russian, and Arabic traditions. In this course, master-musician Imamyar Hasanov teaches students to perform and appreciate Azeri music. Content includes classical mugham, Eastern theory, improvisation and microtonality. We will discuss Azeri music culture, supplemented by guest lecturers and Skype interviews with musicians in Azerbaijan. Open to students with any experience playing a musical instrument (including voice). No previous experience with Azeri music necessary. Supported by the SF World Music Festival. Questions? Email schultz@stanford.edu.

MUSIC 192A. Foundations of Sound-Recording Technology. 3 Units.

For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: MUSIC 150, algebra, physics basics, and consent of instructor.

MUSIC 192B. Advanced Sound Recording Technology. 3 Units.

Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See <http://ccrma.stanford.edu/courses/>. Prerequisite: 192A.

MUSIC 192C. Session Recording. 1-2 Unit.

Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A,B.

MUSIC 197. Undergraduate Teaching Apprenticeship. 1-2 Unit.

Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff).

MUSIC 198. Concentrations Project. 4 Units.

For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.

MUSIC 199. Independent Study. 1-5 Unit.

For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

MUSIC 200A. Proseminar in Musicology and Music Bibliography. 3-4 Units.

Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.

MUSIC 200B. Proseminar in Ethnomusicology. 3-5 Units.

A graduate-level introduction to the field of ethnomusicology. Issues and debates are traced through the history of the discipline, with emphasis on influences from anthropology, performance studies, linguistics, and cultural studies. Topics include music and: social organization, "culture," structure, practice, comparison, representation, globalization, identity, transcription, and embodiment.

MUSIC 201. CCRMA Colloquium. 1 Unit.

Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.

MUSIC 202. Picturing Performance, Re-Envisioning the Arts. 2-4 Units.

Critical and creative exploration of the performing body as captured on film. Viewing/listening includes musicals, dance and opera on film, music video, experimental film and video, and moments of heightened musicality in feature film. We will focus on examples of moving media that possess a kinship with music; through gesture, rhythm or affect and through visual parameters like color, lighting, texture, camera movement and editing. Requirements include choosing and documenting a live performance, producing a short audiovisual work involving post-production, and weekly reading and viewing/listening assignments. No previous videomaking experience required. Same as: MUSIC 102

MUSIC 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field. Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

MUSIC 220A. Fundamentals of Computer-Generated Sound. 2-4 Units.

Techniques for digital sound synthesis, effects, and reverberation. Topics: summary of digital synthesis techniques (additive, subtractive, nonlinear, wavetable, spectral-modeling, and physical-modeling); digital effects algorithms (phasing, flanging, chorus, pitch-shifting, and vocoding); and techniques for digital reverberation. Majors (undergraduate or graduate) must take for 4 units. See <http://ccrma.stanford.edu/>.

MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music. 2-4 Units.

The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. See <http://ccrma.stanford.edu/>. Prerequisite: 220A.

MUSIC 220C. Research Seminar in Computer-Generated Music. 2-4 Units.

Individual projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu. May be repeated for credit. Prerequisite: 220B.

MUSIC 220D. Research in Computer-Generated Music. 1-10 Unit.

Independent research projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220C.

MUSIC 221. Topics in the History of Theory. 3-5 Units.

The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

MUSIC 222. Sound in Space. 1-4 Unit.

Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.

MUSIC 223. Composition for Electronic Musicians. 1-4 Unit.
Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

MUSIC 223T. Computer Music Improvisation and Algorithmic Performance. 2-4 Units.

This seminar will investigate how to approach configuring a set of composition tools for real time composition. Composition programming, ensemble rehearsal, and performance. Determining algorithmic composition beginning by imagining a process or a structure, applying a mapping process to transform that structure (which resides in the conceptual domain), into sound (which may reveal the original conception). Investigation of gestural mapping that occurs when a sonic result is achieved by an act of interpretation, whether it be reading a score and/or improvising.

MUSIC 230. Advanced Orchestral Conducting. 2-4 Units.

May be repeated for credit a total of 8 times. Prerequisite: 130B.

MUSIC 231. Advanced Choral Conducting. 2-4 Units.

Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

MUSIC 236. Future Media, Media Archaeologies. 3-4 Units.

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate. Same as: ARTSTUDI 236

MUSIC 240J. Studies in Music of the Middle Ages: Music and Memory. 3-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 140J

MUSIC 241. Studies in Music of the Renaissance. 2-4 Units.

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 141

MUSIC 242. Studies in Music of the Baroque. 3-4 Units.

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 142

MUSIC 243J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 143J

MUSIC 244J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.). Same as: MUSIC 144J

MUSIC 245J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.). Same as: MUSIC 145J

MUSIC 246J. Studies in Ethnomusicology: Music Ethnography of the Bay Area. 3-5 Units.

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: MUSIC 146J

MUSIC 247J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 147J

MUSIC 247K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.).

Same as: MUSIC 147K

MUSIC 247L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: MUSIC 147L

MUSIC 248J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.). Same as: MUSIC 148J

MUSIC 250A. Physical Interaction Design for Music. 3-4 Units.

This lab and project-based course explores how we can physically interact with real-time electronic sound. Students learn to use and design sensors, circuits, embedded computers, communication protocols and sound synthesis. Advanced topics include real-time media, haptics, sound synthesis using physical model analogs, and human-computer interaction theory and practice. Course culminates in musical performance with or exhibition of completed design projects. See <http://ccrma.stanford.edu/>.

MUSIC 250B. Interactive Sound Art. 1-4 Unit.

A project based course where students will create Interactive Sound Art Installations focusing on the acoustical properties of reverberation. See <http://ccrma.stanford.edu/courses/250b/>.

MUSIC 251. Psychophysics and Music Cognition. 1-5 Unit.

Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.)

MUSIC 252. Introduction to Music Notation Software. 1-2 Unit.

Learn to use music notation programs Finalereg; Sibeliusreg; and open-source alternatives.

MUSIC 253. Symbolic Musical Information. 2-4 Units.

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

Same as: CS 275A

MUSIC 254. Music Query, Analysis, and Style Simulation. 2-4 Units.

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: CS 275B

MUSIC 255. Intermedia Workshop. 3-4 Units.

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: ARTSTUDI 239, MUSIC 155

MUSIC 256A. Music, Computing, and Design I: Software Paradigms for Computer Music. 1-4 Unit.

Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.

Same as: CS 476A

MUSIC 256B. Music, Computing, Design II: Mobile Music. 1-4 Unit.

Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.

Same as: CS 476B

MUSIC 257. Neuroplasticity and Musical Gaming. 3-5 Units.

What changes in a musician's brain after hours and years of daily practice? How do skills that make a great violinist transfer to other abilities? Can directed neuroplasticity be used to target skill learning? This course will include fundamentals of psychoacoustics and auditory neuroscience. Focus will be development of video games that use perceptually motivated tasks to drive neural change. Emphasis will be on music, linguistic, and acoustic based skills. Programming experience is highly recommended, but not required.

MUSIC 260. Music of South Asia. 3-4 Units.

Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Afghanistan. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis.

MUSIC 269. Research in Performance Practices. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 5 times.

MUSIC 272A. Advanced Piano. 1-3 Unit.

Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 272B. Advanced Organ. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 272C. Advanced Harpsichord. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 272D. Advanced Jazz Piano. 1-3 Unit.

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 272E. Advanced Fortepiano. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 272F. Advanced Carillon. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 275G. Advanced Baroque Flute. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 275H. Advanced Jazz Saxophone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 276A. Advanced French Horn. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 276B. Advanced Trumpet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 276C. Advanced Trombone. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 276D. Advanced Tuba. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 276E. Advanced Jazz Trumpet. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 277. Advanced Percussion. 1-3 Unit.

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 277A. Advanced Drum Set. 1-3 Unit.

May be repeated for credit a total of 15 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

MUSIC 280. TA Training Course. 1 Unit.

Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.

MUSIC 286. Religion and Music in South Asia. 4-5 Units.

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as iquest;ecstasyquest;-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, RELIGST 259

MUSIC 286A. Music and Religious Experience in the Contemporary World. 3-5 Units.

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, RELIGST 156, RELIGST 256

MUSIC 286B. American Song in the 20th Century and after. 3-4 Units.

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva cancioacute;n and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: AMSTUD 186B, MUSIC 186B

MUSIC 286C. Music and the Postcolonial World. 3-4 Units.

Explores the creation and dissemination of music in postcolonial settings. Focus is on the relationships between music, nationalism, and globalization and the ways in which postcolonial music confounds and exceeds territorial boundaries: through colonial travel, postcolonial diaspora, technologies of radio and sound recording, and the global capitalist commodification of world music. Specific topics on these themes include studies of Algeria, India, West Africa, and South Africa.

Same as: MUSIC 186C

MUSIC 286D. Hearing and Seeing in the Long Nineteenth Century. 3-4 Units.

Ideas about vision and hearing in science and culture from 1790 through 1910. The development of sensory physiology in the wake of Kant's *Critique of Pure Reason*, including Maine de Biran, Goethe, Helmholtz. Treatments of the senses in different spheres of culture and the arts: Baudelaire's *flacirc;neur*, Impressionist painting, sound-reproduction technologies, the musical avant-garde, early cinema. Case studies include Ceacute;zanne, Debussy, and Russolo. Focus is on the complex relationships between science and culture and the role of the senses in the formation of the 'modern' subject. HISTORY241E/341E must be taken for 4 units.

Same as: HISTORY 241E, HISTORY 341E, MUSIC 186D

MUSIC 300A. Medieval Notation. 3-4 Units.

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300B. Renaissance Notation. 4 Units.

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300C. Medieval Methodologies. 3 Units.

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaography will offer elementary training in these fundamental skills.

Same as: DLCL 300

MUSIC 302. Research in Musicology. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 14 times.

MUSIC 305A. Analysis and Repertoire: Medieval and Renaissance. 4 Units.

Analytical approaches to genres, styles, forms, and techniques of Western music from [chant and early polyphony through the sixteenth century]. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 305B. Analysis and Repertoire: Baroque to Early Romantic. 4 Units.

Analytical approaches to genres, styles, forms, and techniques of Western music from the seventeenth through the mid-nineteenth centuries. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 305C. Analysis and Repertoire: Late-Romantic to Contemporary. 4 Units.

Analytical approaches to genres, styles, materials and techniques of Western music from the mid-nineteenth century through the present. Questions of aesthetics, history and performance explored through musical analysis. Representative repertoire and readings, and a range of analytical methods.

MUSIC 310. Research Seminar in Musicology. 3-5 Units.

For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.

MUSIC 310A. Music and Critical Theory. 3-5 Units.

The seminar provides an opportunity to study some of the seminal texts of Critical Theory dealing with music. Concentrating on Theodor Adorno's writings on music, we will also include key philosophers who informed Adorno's thinking (in particular Kant, Hegel and Nietzsche), influential nineteenth-century aesthetics of music (Hoffmann, Schopenhauer and Hanslick), other contemporaries of Adorno (for example, Ernst Bloch), and some later authors whose work was influenced by the Frankfurt School (such as Carl Dahlhaus). We will also consider the impact of Critical Theory on recent scholarship. Weekly meetings will be organized around various topics, ranging from central concepts such as "Enlightenment" and "musical material" to individual composers. Music by Wagner, Mahler, Schoenberg, Stravinsky and Weill will feature prominently on the syllabus. Same as: GERMAN 310A

MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche. 4 Units.

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today. 4 Units.

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 318. Advanced Acoustics. 1-5 Unit.

Current topics. May be repeated for credit.

MUSIC 319. Research Seminar on Computational Models of Sound Perception. 1-3 Unit.

All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See <http://ccrma.stanford.edu/courses/>. May be repeated for credit a total of 14 times.

MUSIC 320A. Introduction to Audio Signal Processing Part I: Spectrum Analysis. 3-4 Units.

Digital signal representations and transforms for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, the Discrete Fourier Transform (DFT), Fourier theorems, z transform, Laplace transform, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

MUSIC 320B. Introduction to Audio Signal Processing Part II: Digital Filters. 3-4 Units.

Digital filters for music and audio research. Topics: digital filter structures, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

MUSIC 321. Readings in Music Theory. 1-5 Unit.

Directed reading and research. May be repeated for credit a total of 15 times.

MUSIC 323. Doctoral Seminar in Composition. 3-4 Units.

Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.

MUSIC 324. Graduate Composition Forum. 1 Unit.

Community forum for all graduate student composers. Discussion of completed and in-progress work by students, faculty, and visiting composers. Repertoire listening sessions. Planning of upcoming Department events. Special area exam topic presentations, final doctoral project presentations, and review of portfolios. Many sessions are open to the public. May be repeated for credit.

MUSIC 325. Individual Graduate Projects in Composition. 1-5 Unit.

May be repeated for credit.

MUSIC 330. Musicology Dissertation Colloquium. 1-4 Unit.

Weekly meetings for all musicology students 4th year and beyond to discuss research and writing strategies, share and critique work in progress, and discuss issues in professional development (preparing abstracts, conference papers, C.V. and job interviews, book reviews, submitting articles for publication). Open to 3rd-year students.

MUSIC 341. Ph.D Dissertation. 1-10 Unit.

May be repeated for credit a total of 5 times.

MUSIC 351. Seminar in Music Perception and Cognition. 1-3 Unit.

A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.

MUSIC 385. Music Across Media: Music Video to Postclassical Cinema. 4 Units.

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices.

Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 185

MUSIC 390. Practicum Internship. 1 Unit.

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

MUSIC 399. D.M.A. Final Project. 1-10 Unit.

May be repeated for credit a total of 5 times.

MUSIC 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

MUSIC 420A. Signal Processing Models in Musical Acoustics. 3-4 Units.

Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: acoustic simulation with delay lines, digital filters, and nonlinear elements; comb filters; allpass filters; artificial reverberation; delay-line interpolation and sampling-rate conversion; phasing, flanging, and chorus effects; efficient computational models of strings, woodwinds, brasses, and other musical instruments. See <http://ccrma.stanford.edu/courses/420/>. Prerequisites: MUSIC 320A and MUSIC 320B or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.

MUSIC 421A. Audio Applications of the Fast Fourier Transform. 3-4 Units.

Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See <http://ccrma.stanford.edu/courses/421/>. Prerequisite: Music 320 or equivalent background in spectrum analysis and linear systems.

Same as: FFT

MUSIC 421B. Projects in Spectral Audio Signal Processing. 1-10 Unit.

Frequency-domain methods for analysis and/or synthesis of sound. The principal activity is a software project. Continuing 421A, additional frequency-domain techniques for analysis, modification, and/or synthesis of audio signals will be discussed.

MUSIC 422. Perceptual Audio Coding. 3 Units.

History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such as AC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See <http://ccrma.stanford.edu/>.

MUSIC 423. Graduate Research in Music Technology. 1-10 Unit.

Research discussion, development, and presentation by graduate students, visiting scholars, and CCRMA faculty in the areas of music and/or audio technology. See <http://ccrma.stanford.edu/courses/423/> for latest information. May be repeated for credit.

MUSIC 424. Signal Processing Techniques for Digital Audio Effects. 3-4 Units.

Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.

MUSIC 451A. Basics in Auditory and Music Neuroscience. 2-5 Units.

Understanding basic concepts and techniques in cognitive neuroscience using electroencephalography (EEG) specific to auditory perception and music cognition via seminar and laboratory exercise work. Acquiring and practicing skills in experimental design, data analysis, and interpretation, writing for scientific reports and research proposals, and giving a critical review of others' scientific work. Seminar discusses related literature in neuroanatomy, neurophysiology, psychology, and neuroimaging. Laboratory focuses on electroencephalography (EEG) techniques, classic paradigms for recording evoked response, and associated data analysis methods.

MUSIC 451B. Advanced Research in Auditory and Music Neuroscience. 2-5 Units.

Advancing research skills in cognitive neuroscience specific to auditory perception and music cognition by doing individual research project. Activities include surveying literature, designing own study, discussing others' research and giving constructive criticisms, writing research proposals, reports and critical reviews. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques. Seminar discusses related literature in basic and clinical research in neurophysiology and neuropsychology. Final project is aimed at producing presentable data based on hypothesis-driven experiment. Prerequisite: Music 451A.

MUSIC 801. TGR Project. 0 Units.

.

MUSIC 802. TGR Dissertation. 0 Units.

.

Native American Studies Courses

NATIVEAM 102. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3-5 Units.

This interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples. Using an innovative combination of online lectures by Stanford faculty and students, and recorded interviews with Indigenous leaders, artists, performers, scholars and museum professionals, the seminar will explore and problematize: historic and contemporary understandings of "Indigenous cultural heritage" and the impact of colonialism, urbanization and other forces on Indigenous identity and cultural heritage; current and potential domestic and international legal and non-legal frameworks for Indigenous cultural heritage protection and repatriation; past and present museum approaches to Indigenous peoples and their cultural material; and optimal methods of resolving repatriation disputes. While the seminar will cover primarily the situation of Indigenous peoples in North America, comparisons will be drawn with other regions of the globe. The on-campus component of the seminar will involve directed discussions of the online content, the online forum, assigned readings and short writing assignments. Students can choose between a final exam, paper or video project. Lunch is provided. Same as: ANTHRO 102C, ARCHLGY 101, ARCHLGY 202, CSRE 102

NATIVEAM 103S. Native American Women, Gender Roles, and Status. 5 Units.

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures. Same as: CSRE 103S, FEMGEN 103S

NATIVEAM 108S. American Indian Religious Freedom. 5 Units.

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom. Same as: CSRE 108S

NATIVEAM 109A. Federal Indian Law. 5 Units.

Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country. Same as: CSRE 109A

NATIVEAM 111B. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.

Same as: ANTHRO 111B, ARCHLGY 111B

NATIVEAM 115. Introduction to Native American History. 5 Units.

This course surveys Native American history beginning with the forced removal of the Cherokee and other tribes from their eastern homelands to the geographic area of what is now the state of Oklahoma. This course will examine key issues including specific cases, i.e. the Marshall trilogy through a historic lens. The course material will cover Native American history to events leading up to the era of the civil rights movement in the twentieth century. The subject of sovereignty and self-determination will be discussed as part of the historic experience of Native Americans through assigned readings, short films, and other media.

NATIVEAM 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout.

Same as: CSRE 121

NATIVEAM 123A. American Indians and the Cinema. 5 Units.

Hollywood and the film industry have had a major influence on American society for nearly a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood's Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. This course looks chronologically at cinematic interpretations and critically examines accurate portrayals of American Indians and of American history. Same as: CSRE 123A

NATIVEAM 134. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black boxiquest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum culturesiquest;; representations of iquest;selfiquest; and iquest;otheriquest;; within museums and institutional cultures of the museum world itself.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214

NATIVEAM 138. American Indians in Comparative Historical Perspective. 4 Units.

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.

Same as: SOC 138, SOC 238

NATIVEAM 139. American Indians in Contemporary Society. 4 Units.

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.

Same as: SOC 139, SOC 239

NATIVEAM 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: ENGLISH 43A, ENGLISH 143A

NATIVEAM 163. Endangered Languages and Language Revitalization. 3-4 Units.

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.

Same as: ANTHRO 163A, ANTHRO 263A, LINGUIST 163A, LINGUIST 263

NATIVEAM 167. Performing Indigeneity on Global Stage. 4 Units.

Explores how indigeneity is expressed and embodied through performance on the global stage.

Same as: DANCE 167

NATIVEAM 200R. Directed Research. 1-5 Unit.

.

NATIVEAM 200W. Directed Reading. 1-5 Unit.

.

NATIVEAM 240. Psychology and American Indian Mental Health. 3-5 Units.

Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

Same as: EDUC 340

NATIVEAM 255. Native American Identity in the American Imagination: 19th Century to Present. 5 Units.

Because cultural identity is similar to and overlaps with identity politics, this course will examine Native American identity in current culture through American imagination and perspective as to what it is to be Native American today. Historic perspectives from the 19th century to the present will be covered as well.

Neurobiology Courses

NBIO 101. Social and Ethical Issues in the Neurosciences. 2-4 Units.

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 201

NBIO 198. Directed Reading in Neurobiology. 1-18 Unit.

Prerequisite: consent of instructor. (Staff).

NBIO 199. Undergraduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NBIO 201. Social and Ethical Issues in the Neurosciences. 2-4 Units.

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 101

NBIO 206. The Nervous System. 7-8 Units.

Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.

NBIO 216. Genetic Analysis of Behavior. 3 Units.

Advanced seminar. Findings and implications of behavioral genetics as applied to invertebrate and vertebrate model systems. Topics include biological clocks, and sensation and central pattern generators. Relevant genetic techniques and historical perspective. Student presentation.

Same as: MCP 216

NBIO 218. Neural Basis of Behavior. 5 Units.

Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

NBIO 220. Central Mechanisms in Vision-based Cognition. 2-4 Units.

Contemporary cognitive neuroscience, emphasizing the use of the primate visual and oculomotor systems to explore neural mechanisms underlying perception, attention, learning, and decision-making. Eight foundational topics in cognitive neuroscience; intensive study and critical discussion of selected papers from the contemporary literature. Student presentations, seminar-style discussions. Class enrollment is limited to 12 students. First priority will be given to students from the neurosciences graduate program.

NBIO 221. Frontiers in Translational Medicine. 1 Unit.

Small group course for first year MSTP and Master's in Medicine students only. Focus is on pathways for combining science and medicine during graduate and postdoctoral training and in one's career, and practical aspects of translational medicine. Guest lecturers are physician-scientists who have advanced the frontiers of translational medicine. Previous lecturers have included Drs. Gilbert Chu, Jamie Topper, Irv Weissman, Beverly Mitchell, Geoff Duyk, William Mobley, Judy Shizuru, Carla Shatz, Linda Boxer and David Cox. Prerequisite: consent of instructor.

NBIO 227. Understanding Techniques in Neuroscience. 2 Units.

Topics include molecular, genetic, behavioral, electrophysiological, imaging, and computational approaches used in the field of neuroscience. Presentations and discussions led by senior graduate students, assigned readings from the primary neuroscience literature, and optional laboratory demonstrations. Intended for graduate students from any discipline and for advanced undergraduates in the biosciences, engineering, or medicine.

NBIO 228. Mathematical Tools for Neuroscience. 2 Units.

Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.

NBIO 254. Molecular and Cellular Neurobiology. 3-5 Units.

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Same as: BIO 254

NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits. 4 Units.

How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

NBIO 299. Directed Reading in Neurobiology. 1-18 Unit.

Prerequisite: consent of instructor.

NBIO 300. Professional Development and Integrity in Neuroscience. 1-2 Unit.

Required of Neurosciences Ph.D. students every quarter. Develops professional skills in critical assessment and oral presentation of findings from current neuroscience literature in the visual presentation of quantitative data and writing research grants. The role of animals in lab research, fraud in science, the responsibility of authors and reviewers, science in a multicultural environment, and the relationship between student and mentor. Student and faculty presentations and discussions.

NBIO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NBIO 399. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Neurology Neurological Sciences Courses

NENS 67N. Intracellular Trafficking and Neurodegeneration. 3 Units.

Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

NENS 199. Undergraduate Research. 1-18 Unit.

Students undertake research sponsored by an individual faculty member. Prerequisite: consent of instructor.

NENS 202. Longevity. 4 Units.

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: HUMBIO 149L, PSYCH 102

NENS 204. Stroke Seminar. 1 Unit.

Standing at the intersection of many fields of medicine, including neurology, internal medicine, cerebrovascular surgery, diagnostic and interventional radiology, and emergency medicine, as the third leading cause of death and the leading cause of disability, stroke is a critical topic for all practitioners of medicine. This seminar draws upon Stanford's leaders in stroke research to present and discuss the causes, presentation, treatment, and imaging characteristics of the disease.

NENS 205. Neurobiology of Disease Seminar. 3 Units.

Case demonstrations of selected disorders, discussion of the pathophysiological basis of the disorder, presentation of the basic principles underlying modern diagnostic and therapeutic management, and a discussion of recent research advances for each disease entity. Prerequisite: Neurobiology 206 or consent of instructor.

NENS 206. Introduction to Neurology Seminar. 1 Unit.

Exploration of aspects of neurology, including subspecialties. Current issues, clinical cases, and opportunities in the field.

NENS 207. Neuroscience Core Curriculum: Translational Neuroscience. 1 Unit.

Emphasis on basic and preclinical research in selected categories of neurological disease, and understanding how these discoveries are being translated into therapies. Readings include primary scientific literature in mechanisms of disease and translational approaches and selected current reviews. Enrollment limited to 20 students. For first year Neuroscience graduate students, open to other graduate students as space permits with preference given to Neurosciences students .

NENS 220. Computational Neuroscience. 4 Units.

Computational approaches to neuroscience applied at levels ranging from neurons to networks. Addresses two central questions of neural computation: How do neurons compute; and how do networks of neurons encode/decode and store information? Focus is on biophysical (Hodgkin-Huxley) models of neurons and circuits, with emphasis on application of commonly available modeling tools (NEURON, MATLAB) to issues of neuronal and network excitability. Issues relevant to neural encoding and decoding, information theory, plasticity, and learning. Fundamental concepts of neuronal computation; discussion focus is on relevant literature examples of proper application of these techniques. Final project. Recommended for Neuroscience Program graduate students; open to graduate, medical, and advanced undergraduate students with consent of instructor. Prerequisite: NBIO 206. Recommended: facility with linear algebra and calculus.

NENS 230. Analysis Techniques for the Biosciences Using MATLAB. 2 Units.

Data analysis and visualization techniques commonly encountered in biosciences research. Fundamentals of the MATLAB computing environment, programming and debugging, data import/export, data structures, plotting, image analysis, introduction to statistical tools. Examples and assignments draw from a range of topics applicable to bioscience research: frequency analysis, genetic data mining, ion channel kinetics, neural spike rasters and spike-triggered averages, cell counting in fluorescence images, regression, PCA, and stochastic simulation. Assignments are practical in nature and demonstrate how to implement specific analyses that a biosciences student is likely to encounter.

NENS 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

Same as: BIO 267

NENS 299. Directed Reading in Neurology and Neurological Science. 1-18 Unit.

Prerequisite: consent of instructor.

NENS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NENS 399. Graduate Research. 1-18 Unit.

Students undertake research sponsored by individual faculty members. Includes laboratory work in neurophysiology and neurochemistry.

Neurosciences Program Courses

NEPR 299. Directed Reading in Neurosciences. 1-18 Unit.

Prerequisite: consent of instructor.

NEPR 399. Graduate Research. 1-18 Unit.

Student Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NEPR 801. TGR Project. 0 Units.

.

NEPR 802. TGR Dissertation. 0 Units.

.

Neurosurgery Courses

NSUR 70Q. Experimental Stroke. 2 Units.

Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

NSUR 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

NSUR 200SI. Narratives in Neurosurgery. 1 Unit.

Introduces medical, non-medical graduate and undergraduate students to careers in neurosurgery. Focuses on a progressive walk through the educational milestones of a neurosurgical career, starting with perspectives of 4th year medical students and working up to day-to-day functions and lifestyles of senior neurosurgical faculty. Additional topics covered include: global health neurosurgery, private practice neurosurgery, and academic neurosurgery.

NSUR 261. Principles and Practice of Stem Cell Engineering. 3 Units.

Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.

Same as: BIOE 261

NSUR 280. Early Clinical Experience in Neurosurgery. 1-2 Unit.

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

NSUR 287. Brain Machine Interfaces - Theory and Technology Course Information. 1-3 Unit.

(Same as MCP 287) There is a growing number of methods to interact with the living nervous system. This seminar will review methods, principal results, and ideas for designing devices that either act on or read out data from the nervous system. A principal objective of designing these devices is to use them for sensory prosthetics (retinal implants and motor control units), and also for reducing the symptoms of different diseases (Parkinsons, Depression, Epilepsy). We will consider a wide variety of applications, but our emphasis will be on electronic devices that either stimulate or read-out from the human brain.

Same as: PSYCH 287

NSUR 299. Directed Reading in Neurosurgery. 1-18 Unit.

Prerequisite: consent of instructor.

NSUR 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

NSUR 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Obstetrics Gynecology Courses

OBGYN 81Q. Perspectives on the Abortion Experience in Western Fiction. 3 Units.

Explores the role of media in delivering abortion-related messages as well as the broader questions of how abortion and related issues are fundamentally integrated into the social fabric of US and global societies. Abortion remains one of the most controversial and polarizing challenges of our time. Yet, it has been a clinical, social, political, and cultural fact in a broad swath of societies for centuries. As is common for such lightning rod issues, the topic of abortion has featured prominently in novels and films. Each treatment provides a unique perspective on at least one aspect of abortion, whether it be clinical, social, political or cultural. How abortion is portrayed in novels and films provides the student of history, anthropology, and biology with insights into the author's or director's perspectives, and into societal attitudes and mores.

OBGYN 199. Undergraduate Research in Reproductive Biology. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OBGYN 202. Assisted Reproductive Technologies. 1-3 Unit.

Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors. Same as: HUMBIO 150A

OBGYN 216. Current Issues in Reproductive Health. 1 Unit.

Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. Course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access.

OBGYN 256. Current Controversies in Women's Health. 2-3 Units.

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. Undergraduates must enroll in HumBio 125 for 3 units. PhD minor in FGSS, enroll in FEMGEN 256 for 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Spring.

Same as: FEMGEN 256, HUMBIO 125

OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

OBGYN 282. Pregnancy, Birth, and Infancy. 3 Units.

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: PEDS 282

OBGYN 299. Directed Reading in Obstetrics and Gynecology. 1-18 Unit.

Prerequisite: consent of instructor.

OBGYN 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OBGYN 399. Graduate Research in Reproductive Biology. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Operations Information Technology Courses

OIT 245. Optimization and Simulation Modeling. 2 Units.

This course provides basic skills in quantitative modeling. The objective is to familiarize students with the main steps in an analytical approach to business decision making: constructing an abstract model for a relevant business problem, formulating it in a spreadsheet environment such as Microsoft Excel, and using the tools of optimization, Monte Carlo simulation and sensitivity analysis to generate and interpret recommendations. The class will be taught in a lab style, with short in-class exercises done in small teams, focusing on a variety of applications drawn from advertising, healthcare, finance, supply chain management, revenue and yield optimization.

OIT 247. Optimization and Simulation Modeling - Accelerated. 2 Units.

The course is similar in content and emphasis to OIT 245, but is aimed at students who already have background or demonstrated aptitude for quantitative analysis, and thus are comfortable with a more rapid coverage of the topics, in more depth and breadth.

OIT 249. MSx: Data and Decisions. 2 Units.

Data and Decisions an introductory course in probability, statistics and decision analysis. Our goal is to teach you how to evaluate quantitative information and to make sound decisions in complex situations. 'D&D' combines two areas of management science: The first area, probability, provides a foundation for modeling uncertainties, such as the uncertainties faced by financial investors or insurers. We will study the mechanics of probability (manipulating some probabilities to get others) and the use of probability to make judgments about uncertain events. The second area, statistics, provides techniques for interpreting data, such as the data a marketing department might have on consumer purchases. Statistical methods permit managers to use small amounts of information (such as the number of people switching from Verizon to AT&T in an iPhone test marketing program) to answer larger questions (what would AT&T's new market share be if the iPhone is launched nationally?).

OIT 256. Electronic Business. 2 Units.

This course focuses on the intersection of strategy and information technology. It considers how you can take advantage of new technology opportunities and how they change the structure of firms, industries and value chains, with an emphasis on business issues. Classes combine lecture and case study discussions and the workload is above the GSB average. Same as: Accelerated

OIT 258. Incentive Mechanisms for Societal Networks. 2 Units.

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks--transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants.

OIT 262. Operations. 3 Units.

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

OIT 265. Data and Decisions. 4 Units.

This is the base version of D&D. This course introduces the fundamental concepts and techniques for analyzing risk and formulating sound decisions in uncertain environments. Approximately half of the course focuses on probability and its application. The remainder of the course examines statistical methods for interpreting and analyzing data including sampling concepts, regression analysis, and hypothesis testing. Applications include inventory management, demand analysis, portfolio analysis, surveys and opinion polls, A/B testing, environmental contamination, online advertising and the role of analytics in business settings more generally. The course emphasizes analytical techniques and concepts that are broadly applicable to business problems.

OIT 267. Data and Decisions - Accelerated. 4 Units.

Data and Decisions - Accelerated is a first-year MBA course in probability, statistics, multiple regression analysis, and decision trees for students with strong quantitative backgrounds. Probability provides the foundation for modeling uncertainties. Statistics provides techniques for interpreting data, permitting managers to use small amounts of information to answer larger questions. Regression analysis provides a method for determining the relationship between a dependent variable and predictor variables. Decision tree analysis consists of quantitative approaches to decision making under uncertainty. Students taking this course need to be comfortable with mathematical notation, algebra, and some calculus. If you are not confident with your quantitative abilities, then you should enroll in OIT 265. Accelerated D&D will cover material covered in OIT 265 plus some additional topics such as discrete dependent variable models. While OIT 267 focuses on real world applicability, we will explore the mathematical underpinnings of these topics in more depth than OIT 265 as an avenue for deeper understanding. The group regression project is a key component of the course.

OIT 268. Making Data Relevant. 4 Units.

Data is everywhere. Firms collect it. Data on customers' preferences are collected through websites or loyalty programs or cash registers. Data on employees' traits are collected through in-house databanks or social networking sites. All of us are used to thinking about data. How can you make data relevant to doing your job? How can data analysis serve to increase your competitive advantage over that of others? This class goes beyond graphing data in bar charts or time trends. It makes you think about causal relationships. The examples we use are primarily taken from talent management, because it's easy to think about our own careers or those of our employees. But the tools covered extend to all contexts, and your project is on an idea of your choosing. The class focuses on the use of regressions to think experimentally. To take the class, you should have covered regression analysis in a former class (such as an econometrics course for economics majors) or be comfortable with learning basic math concepts quickly. You also should understand distributions of data (such as the Bell curve, or normal distribution), but this topic is not covered. There are no required proofs or derivations; you've done that as undergraduates. This is about using data: we use cases, examples, Notes written for the class, and a quiz, final exam, and several assignments in which you play with data sets to answer questions. Note that this 4-unit course, if successfully completed, counts for the Data Analysis foundations requirement.

OIT 269. MSx: Operations. 3 Units.

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

OIT 273. Value Chain Innovations in Developing Economies. 2 Units.

This course is about how to use entrepreneurship and innovations in the value chains to create values in developing economies. The course will cover important principles and ways in which the value chains can be re-engineered or new business models can be designed to create values. In addition to materials covering a diversity of industries and geographical regions, the course will also enable students to be exposed to some of the interventions that the Stanford Institute of Innovation in Developing Economies (SEED) is working on in West Africa. Work and exam requirements: Students are expected to develop a project report on either portfolio companies related to SEED or other enterprises to show how value chain innovations can be advanced.

OIT 333. Design for Extreme Affordability. 4 Units.

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

OIT 334. Design for Extreme Affordability. 4 Units.

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

OIT 343. D-Lab: Design for Service Innovation. 4 Units.

Students in multidisciplinary teams work with a partner organization to design new services that address the needs of an underserved population of users. Teams identify an unmet customer needs, develop and prototype new service designs (e.g. web services, services with a product component, educational campaigns), test these services with real customers and develop an implementation plan. Fundraising strategies are also explored and tested. We will offer two sections: financial services (MW: 1:15 pm - 3:00 pm); health services (MW: 4:15 pm - 6:00 pm). The specific domains for the two sections will be announced in the fall based on the needs of partner organizations. Possible domains for financial services: financial literacy for young adults, planning for major expenses at retirement, financial services for the underserved. For health services: transition to adulthood of pediatric patients with chronic conditions, transitions to nursing care for elderly patients. See <http://designforservice.stanford.edu/>.

OIT 344. Design for Service Innovation. 4 Units.

Design for service innovation is an experiential course in which students work in multidisciplinary teams to design new services (including but not limited to web services) that will address the needs of an underserved population of users. Through a small number of lectures and guided exercises, but mostly in the context of specific team projects, students will learn to identify the key needs of the target population and to design services that address these needs. Our projects this year will focus on services for young adult survivors of severe childhood diseases. For the first time ever, children who have cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and several forms of cancer are surviving. The first wave of these survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and then entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in high school or college sports, driving, drinking, drugs, and more. Our aspiration is to develop services to improve these young adults' options for a fulfilling and satisfying life. The course is open to graduate students from all schools and departments: business (MBA1, MBA2, PhD, Sloan), Medicine (medical students, residents, fellows and postdocs), engineering (MS and PhD), humanities, sociology, psychology, education, and law. Students can find out more about this course at: <http://DesignForService.stanford.edu>; GSB Winter Elective BBL Jan 10th, 12 noon - 1 pm; D-School Course Exposition Feb 3rd, time TBA. Admission into the course by application only. Applications will be available at <http://DesignForService.stanford.edu> on Jan 13th. Applications must be submitted by Feb 4th midnight. Students will be notified about acceptance to the course by Feb 7th. Accepted students will need to reserve their slot in the course by completing an online privacy training course. Details about online training will be provided to accepted students. The training is related to the protection of our partners' privacy. Application Deadline: Noon, Feb 4th.

OIT 356. Electronic Business. 2 Units.

This course focuses on the intersection of strategy and information technology. It considers how you can take advantage of new technology opportunities and how they change the structure of firms, industries and value chains, with an emphasis on business issues. Classes combine lecture and case study discussions and the workload is above the GSB average. While the advanced course will generally cover the same topics as OIT 256, it will go into more advanced techniques in a number of areas.

OIT 361. Technology Concepts for Managers. 4 Units.

Electronics, computing, networks and software applications have become an integral part of business. The course is aimed at the student who wishes to learn those electronic and computer science concepts needed to understand how computers, networks, and the software that runs them operate, but who lacks background in engineering or computer science. The premise of the course is that adequate knowledge of technology is now a prerequisite for a successful manager, but that knowledge does not have to be at the level of rigor required in the practice of engineering or computer science. This course is intended to provide a basic literacy in these areas, with an emphasis on implications for managers and organizations. A meaningful course that focuses on particular technologies is difficult because rapid changes in any technology can quickly render today's lessons obsolete. Therefore, this course will stress fundamentals and trends, rather than a snapshot of the current status of different technologies. As a result, classroom coverage of current "hot" topics in technology is subordinate to giving the technology concepts necessary for one to learn such current (and future) topics on their own. Investigation of technology will be facilitated by lectures readings and homework assignments. Students will have an opportunity to investigate and learn more about a particular technology in more depth as part of a term project. The general flow of the course will focus upon four areas approximately as follows: Part I Electronic Systems: Fundamental Electronics (2 sessions), Digital and Microelectronics (2 sessions), Computer Hardware and Systems (2 sessions), Technology Trends (1 session), Communications including wireless (2 sessions); Part II Networks: Networked Computing (1 session), the Internet (2 sessions); Part III Software: Software and software development (3 sessions), Data Base Technology (1 session); and Part IV The Web: Clients and Servers (1 session), Case study of a web site (1 session), Video/Multimedia (1 session). The course is specifically designed for students with liberal arts or soft science backgrounds who have career ambitions in high-tech or who wish to be more technically aware as managers. Students with hard science, engineering or computer science backgrounds are welcome but must avoid redirecting the class discussion into narrow or advanced material that causes dysfunction to less technical colleagues. Students may elect either to take a final exam or do a term project. Students electing to do a term project will create it as a Web page. Separate training for building a Web page will be offered.

OIT 364. Global Operations. 3 Units.

Globalization of businesses has resulted in companies having to manage global networks of suppliers, integrators, contract manufacturers, logistics service providers, distributors, and service support operators in geographically dispersed locations. The customer network is also globally distributed. This course will focus on (1) how global and international companies can overcome the geographical, cultural, and organizational barriers, and leverage the strengths of the network to create values, and (2) how these companies may use different ways to manage operations in different regions to take full advantage of the local strengths and limitations. The course will be based on cases on innovative strategies and tactics used by global and international companies.

OIT 367. Business Intelligence from Big Data. 4 Units.

The objective of this course is to analyze real-world situations where significant competitive advantage can be obtained through large-scale data analysis, with special attention to what can be done with the data and where the potential pitfalls lie. Students will be challenged to develop business-relevant questions and then solve for them by manipulating large data sets. Problems from advertising, eCommerce, finance, healthcare, marketing, and revenue management are presented. Students learn to apply software (such as R and SQL) to data sets to create knowledge that will inform decisions. The course covers fundamentals of statistical modeling, machine learning, and data-driven decision making. Students are expected to layer these topics over an existing facility with mathematical notation, algebra, calculus, probability, and basic statistics.

OIT 384. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions, and interactive team meetings (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 300,000 patients have been treated to date with technologies developed as part of this program and more than thirty venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.

OIT 385. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two-quarter sequence (see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to a medical need forward into development and potential commercialization. Continuing work in teams with engineering and medical colleagues, students will learn the fundamentals of medical device prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing a commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of developing a business or research plan/canvas; and strategies for assembling a development team. Final project presentations are made to a panel of prominent venture and corporate investors. New students (i.e. students who did not take OIT384 in the winter quarter) may be admitted, depending on team needs. Candidates need to submit an application at <http://biodesign.stanford.edu/bdn/courses/bioe374app.jsp> by March 1.

OIT 522. Field Trips to Grassroots Innovators in Health Care: Improving Access & Outcomes for the Underserved. 2 Units.

Some of the most impressive innovations in health care are developed at hospitals and other non-profit organizations by dedicated health care professionals (drs, nurses, administrators) who are not afraid to roll up their sleeves and work hard to solve an important health care problem they face in their everyday patient encounters. Because of limited financial resources and because they often target underserved market segments, these innovations lack a validated business model and commercialization pathway. In this seminar we will gain hands-on experience of some of these grassroots innovations through field trips to a local public hospital (a candidate hospital is San Francisco General Hospital) and a non-profit product incubator (hopelab.org). We will then work in teams to identify and address the main barriers to commercialization for two specific innovations presented in these field trips: An electronic referral system to promote access to specialist care in underserved communities; A video game to promote healthy lifestyles in at-risk youth. We will learn and apply the brainstorming approach to come up with innovative solutions to overcome these barriers. On the last day we will meet key executives in both organizations to present our recommendations.

OIT 530. Advanced Modeling Seminar. 2 Units.

Modern spreadsheet and simulation software now makes it possible for general managers themselves to model complex and uncertain business situations on their personal computers. This seminar will consist of hands-on experience with advanced applications for modeling situations that include both uncertainty and discontinuous change. These situations often are called "ill-behaved" because they defeat the traditional tools of analysis covered in the Foundations Modeling courses. For example, financial spreadsheet models involving discontinuous change, such as winning an auction or unexpectedly altering a production process or marketing campaign (so-called "black swan" events), may arise in business projections, but actual models of such events are rarely, if ever, considered for optimization under uncertainty. As another example, the Operations formulas used to estimate throughput times in models involving congestion and delay often cannot be applied to systems that include unexpected service interruptions or complex routing of items (e.g., modern hospitals). The mission of this seminar is to utilize recent advances in software and the speed of modern multi-core PC's that have produced easy-to-use tools for interactively building and analyzing such models. Each day, students will build models of these more-realistic situations, using the software tools "hands-on" and working with the instructors as coaches in a laboratory setting. We will use a more advanced version of the Excel Solver add-in, called Risk Solver, which combines optimization with Monte Carlo simulation, as well as ExtendSim, a graphical tool for constructing and analyzing discrete event simulation models. Exercises will include optimization under uncertainty such as Value at Risk in financial statement projections, capacity expansion plans involving Real Options, customer service and manufacturing workflow systems, courtroom scheduling, and airport security policies. The first 2.5 sessions of the course will focus on learning and using Risk Solver to analyze risk-based spreadsheet models with an emphasis on interpreting Value at Risk and Conditional Value at Risk constraints in such models. The second 2.5 sessions will focus on learning and using ExtendSim to model operational situations in services and manufacturing, with an emphasis on dealing with congestion and delay in complex settings. Who should take this seminar? Our intended audience consists of students who: nna. Want to develop a deeper appreciation for how discontinuous change, risk, and uncertainty affect decision-making in financial and operational settings, and nnb. Want to learn how advanced optimization and simulation software allows you to examine easily the effects of such events directly, rather than through complex and unwieldy mathematical approximations. nnnHow much computer background is necessary? We want the seminar to be illuminating, fun, and easy to master. The seminar is designed specifically for both non-technical ("poet") and technical ("quant") students who have completed the introductory concepts of optimization with Excel Solver, as covered in Foundations Modeling (either basic or advanced), and are comfortable building Excel spreadsheets. We will assume that students have no prior experience with optimization of risk-based models or with discrete event simulation software, and would like to gain that experience now in a hands-on, build-your-own-model setting. Students will use the software both for individual preparation via tutorial documents and for classroom exercises. Each session will be team-taught by Professors Moore and Patell and will be a combination of lectures, demonstration, and coaching to help you experiment with the tools.

OIT 536. Data for Action: From Insights to Applications. 2 Units.

Data for Action is an MBA compressed course dedicated to identifying value in and creating value from data. It deals with the technical, legal, regulatory and business strategic decisions that must be considered when delivering solutions to customers.

OIT 537. Introduction to Programming for Data Analysis. 2 Units.

Many post-MBA jobs require the ability to analyze very large data sets and proficiency with Microsoft Excel is no longer sufficient. MBA graduates frequently shy away from more advanced analysis tools because of the need to write computer code to manipulate data. The course will seek to break that mental barrier by introducing students to the basic programming skills that would allow them to be productive later on. The focus of the course will be on SQL and R. This course assumes no prior programming experience.

OIT 538. Environmental Science for Managers - Accelerated. 3 Units.

This course satisfies the MBA distribution requirement in Optimization and Simulation Modeling (OSM). It is challenging but doable for students without an undergraduate degree in science or engineering; it does not assume experience in environmental science or quantitative analysis beyond admission requirements for the MBA program. Students will learn fundamental science of ecosystems, climate and energy systems, by building decision-support models for managing these systems. In so doing, students will develop widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. Students are strongly encouraged to take the follow-on course on renewable energy, OIT 540 Environmental Science for Managers II. For the joint MBA-MS in Environment and Resources degree, students are required to take OIT 540, and either OIT 538 or OIT 539.

OIT 539. Environmental Science for Managers - Advanced. 3 Units.

Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Similar to OIT 338, but allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation.

OIT 540. Environmental Science for Managers II. 1 Unit.

This course provides an introduction to renewable sources of electricity and fuel, and is required for the joint MBA-MS in Environment and Resources degree. Students are strongly encouraged, but not required, to take OIT 538 or OIT 539 prior to taking this course.

OIT 542. Price and Revenue Optimization. 2 Units.

This is the Advanced Application option in the menu of courses that satisfy the Management Foundations requirement in Optimization and Simulation Modeling (OSM). Three core modeling topics are covered in rapid-review fashion - model representation in a spreadsheet environment, optimization theory, and stochastic models - but primary emphasis is on the application domain described immediately below. OIT 542 is a two-unit course, with nine class sessions plus a final exam. Systems for price and revenue optimization - also called yield management, dynamic pricing, or revenue management - combine the use of information technology, statistical forecasting, and mathematical optimization to make tactical decisions about pricing and product availability. A familiar example is the passenger airline industry, where a carrier may sell seats on the same flight at many different fares, with fare availability changing as time advances and uncommitted capacity declines. Over the last 30-35 years, revenue optimization practices have transformed the transportation and hospitality industries, where fixed capacity and advance reservations by customers are important structural factors. But model-based, data-driven pricing systems are increasingly common in other industries that have different structures, such as financial services and retail clothing. In this course students learn about the model structures and modelling techniques that underlie systems for price and revenue optimization. Two topics are given roughly equal emphasis: model-based tactical pricing, including customized pricing and retail markdown management; and classical revenue management, where automated logic is used for booking control (that is, to make yes-or-no decisions in response to booking requests from customers), rather than to set prices explicitly. OIT 542 is tailored to students who already have command of basic modelling techniques and wish to learn about their application in an important business context. To be specific, a prior college course on optimization modelling is assumed as background. (Typically, such courses focus on linear programming, or linear optimization, with secondary coverage of non-linear programming and discrete optimization.) Various aspects of optimization theory will be covered in quick-review format, along with the basics of spreadsheet model representation and stochastic modelling, in order to standardize terminology and establish certain conventions that facilitate grading. In exceptional cases, for students who have strong math background and high mathematical aptitude but no prior coursework on optimization, the background knowledge assumed in OIT 542 may be acquired through self-study; appropriate study materials will be suggested by the instructor upon request. The course is entirely appropriate for second-year MBA students who have completed either base or accelerated MODS in their first year. OIT 542 draws on knowledge acquired and skills developed in two other Management Foundations courses that are taken simultaneously: Data and Decisions (OIT 265) and Microeconomics (MGTECON 200 or 203). Students are required to construct and analyze at least one model for every class session.

OIT 556. Electronic Business and Commerce. 2 Units.

Beyond the hype surrounding the rise and fall of "dot-com" businesses, Information Technology has fundamentally changed the costs of transactions and communications, affecting the ways firms are internally managed and the ways they deal with customers and business partners. This course focuses on approaches to value creation using Information Technology and their application to a variety of business settings. It explores ways in which firms can use electronic business to create value, and strategies for capturing a portion of that value. The course will examine such issues as: how Information Technology affects information flows within the firm; electronic commerce applications and pitfalls; how electronic business is likely to change traditional supply chains, logistics and payment systems; and the impact of electronic business on established industries and companies.

OIT 558. Designing Large-Scale Nudge Engines. 1 Unit.

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks--transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants. This course significantly overlaps with OIT 258 - Incentive Mechanisms for Societal Networks. If you took this class last year, you may not take OIT 558.

OIT 562. Supply Chain Management & Technology. 2 Units.

This course offers an overview of eight technologies for enterprise computing. They are: ERP (Enterprise Resource Planning), EAI (Enterprise Application Interface), data mining, cloud computing, eCommerce, RFID/NFC, mobile technologies, and social network data analytics. On each topic, we discuss underlying technologies and applications using a variety of business cases.

OIT 563. Advanced Topics in Supply Chain Management and Technologies. 2 Units.

In this course we will have a series of guest speakers who will discuss real businesses applying various technologies. Students come to class prepared by reading the assigned material and discuss the topic with the speakers in class. The course will provide opportunities to learn how different technologies are integrated to create values to end users. Students are expected to have some basic understanding of technologies and review them with readings on their own, so we will not discuss the technology per se in class.

OIT 565. The Role of Information Technology in the New Energy Economy. 2 Units.

One of the most interesting and underexplored areas in modern technology is, as Dan Reicher at Stanford has put it, "where energy technology (ET) meets information technology (IT)". The main driver of widespread use of computing in the modern age is the rapid reduction in the cost of computing services caused by Moore's law. At the same time, a substantial increase in the energy efficiency of computing (doubling every year and a half for more than six decades) has led to a proliferation of mobile computers, sensors, and controls, with implications that have only recently begun to be understood. This class will explore the direct and indirect implications of applying information technology to the production, delivery, and use of energy and associated services. It will first review current knowledge about the direct energy use associated with information technology, including data centers, personal computers, cellular telephones, mobile sensors, and other IT equipment. It will also summarize the state of knowledge about the types, amount, and growth rates of energy services delivered in the US and globally. Finally, it will explore the applications to which information technologies have been put in the energy industry, ranging from the use of visualization and analysis techniques to improve the results of oil and gas exploration, to the computer-aided design of wind turbines and automobiles, to the implications of wireless sensors and controls for the more efficient and effective use of energy. The class will culminate in student projects, typically business plans for new ventures using IT to radically transform how we understand and respond to the world around us.

OIT 571. Homeland Security: Operations, Strategy and Implementation. 2 Units.

This course is a Bass Seminar. This course covers a variety of topics in homeland security: bioterrorism (attacks with contagious agents such as smallpox or non-contagious agents such as anthrax, and attacks on the food supply), pandemic influenza, nuclear security at ports and around cities, the biometric aspects of the US-VISIT Program, the intersection of homeland security and immigration, and suicide bombings. For each of these topics, students will typically read one academic paper that focuses on the operations aspects of the problem, and one reading about the strategic aspects of the problem. For each topic, the professor will spend part of the class lecturing on the problem (including how the results of the academic paper were implemented), and a student will be assigned as a discussant (in addition to a classwide discussion).

OIT 581. Biodesign Innovation: Needs Finding and Concept Creation. 2 Units.

OIT581 is a two-unit version of the Biodesign Innovation course (OIT384). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. In OIT581, students learn the basic principles of biodesign innovation: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; early market analysis; design principles; brainstorming and early prototyping; university licensing. Course format includes expert guest lecturers and faculty-led practical demonstrations. Students apply the concepts learned by serving as "commercialization and marketing consultants" to multidisciplinary teams of students in the four-unit course (OIT 384). Consultants interact with their teams on a regular basis and provide a consulting report on market analysis and competitive dynamics. Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive procedures to perform bariatric surgery; low cost healing devices for diabetic ulcers; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,000 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://www.stanford.edu/group/biodesign/courseapplication.html>, and the application deadline is November 20, 2010. Students must indicate whether they are applying for the four-unit version (OIT384) or two-unit version (OIT581).

OIT 582. Biodesign Innovation, Project A. 2 Units.

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to develop a comprehensive solution to an important medical need of their choice. With coaching from faculty and real-world experts, the teams identify an important medical need and through brainstorming they develop several potential conceptual approaches to solving the need and pursue initial prototyping, along with planning for regulatory and reimbursement pathways. The project culminates with a presentation to a panel of venture investors and entrepreneurs. In previous years, student teams examine needs in emergency and acute care, orthopedics, cardiovascular, wound closure etc. Concurrent registration at OIT581 is required. An application needs to be submitted online.

OIT 583. Biodesign Innovation Core, Spring. 2 Units.

Two quarter sequence (continuation of OIT581 -- see OIT 581 for a general description of the Biodesign Innovation course and OT384/385 for a description of the four unit option). The second quarter focuses on how to take a conceptual solution to an important medical need forward from early concept to technology translation, development and possible commercialization. Students expand on the topics they learned in OIT581 to learn about prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation and commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of writing a business or research plan; strategies for assembling a development team. Students serve as "commercialization consultants" to a multidisciplinary team in OIT385. Students interact regularly with their team and prepare a consulting report that outlines a funding strategy and validates the financial model developed by the team. (OIT581 or OIT384 are a pre-requisite). New students (i.e. students who did not take OIT581/OIT384) in the winter quarter will need to submit an application at <http://www.stanford.edu/group/biodesign/courseapplication.html> by February 19, 2011. In the application they should indicate whether they are applying for the 2-unit or 4-unit version. Students who took OIT581/OIT384 in the winter quarter are automatically accepted into the spring quarter and they can choose the version they want: 2 unit or 4 unit.

OIT 584. Biodesign Innovation Project, Spring. 2 Units.

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to further develop and refine the solutions they identified in OIT 582. The focus this quarter is on implementation. The teams select the most promising solution from the concepts of the first term and move forward into prototyping and project planning. Teams develop specific strategies for patenting, FDA submission, commercialization and third-party reimbursement, along with funding strategies (e.g. licensing agreement or launching a start-up). The project culminates with a presentation to a panel of venture investors. OIT 583 should be taken concurrently. Permission of instructor needed if student has not taken OIT 582.

OIT 587. Global Biodesign. 1 Unit.

This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, United States and Latin America. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics.

OIT 601. Fundamentals of OIT. 3 Units.

The goal of this course is to provide first-year Ph.D. students in OIT with sufficient fundamentals to subsequently take advanced research seminars. The course covers the very basics of six topics: queueing theory, inventory theory, multi-echelon inventory theory, game theory, stochastic dynamic programming and econometrics. Lectures will be given by advanced Ph.D. students in OIT.

OIT 602. Dynamic Pricing and Revenue Management I. 2 Units.

In tandem with OIT 603, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially in the realm of airline revenue management.

OIT 603. Dynamic Pricing and Revenue Management II. 2 Units.

In tandem with OIT 602, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially involving customized pricing of financial services. OIT 602 is not a prerequisite for OIT 603 but is highly recommended.

OIT 624. Models and Applications of Inventory Management. 3 Units.

The first part of the course reviews fundamental models in inventory management. Topics include deterministic models (EOQ, power-of-two policies, ELS, serial and assembly networks), Newsvendor, multi-period stochastic models under backlogging and lost-sales, multi-echelon and supply chain models, and infinite-horizon formulations. In the process, the course also reviews several fundamental mathematical concepts in inventory theory, including convexity, duality, finite / infinite state Markov decision processes, and comparative statics. The second part discusses advanced modeling concepts, and several new application areas. Topics include distribution-free and robust models, supply uncertainty and disruptions, flexibility and supply chain design, joint pricing and inventory, and problems at the interface of supply chains and finance.

OIT 643. Special Topics in Supply Chain Management. 3 Units.

To compete successfully in today's market place, companies need to manage effectively the efficiency of activities to design, manufacture, distribute, service and recycle their products or services to their customers. Supply chain management deals with the management of materials, information and financial flows in a network consisting of suppliers, manufacturers, distributors, and customers. The coordination and integration of these flows within and across companies are critical in effective supply chain management. In parallel to the development of new practices and concepts in industry, there have been emerging research that are based on (1) structuring new processes and supply chain networks with the new technologies; (2) exploring ways to do planning and make decisions consequently; (3) quantifying the benefits as a result; and (4) aligning the incentives of multiple players in a supply chain when the costs and benefits to these players are different. This course will examine evolutionary research that focuses on the above themes. We will explore how such problems can be formulated, models can be structured, and analysis can be performed to address information-based supply chain management issues. You are all challenged to think, discuss, share, and debate on the issues brought up. The end result of this course is, hopefully, that we can start defining new, interesting and exciting research paths, and maybe even beginning to pursue some of the research ideas generated.

OIT 655. Foundations of Supply Chain Management. 3 Units.

This course provides an overview of research in supply chain management (SCM). It has three parts. The first part reviews basic tools of SCM research through selected readings in economics, IT and operations research. The second part reviews the literature in SCM, covering topics such as inventory models, information sharing, information distortion, contract design, value of integration, performance measurement, risk management, and the use of markets for procurement. The last part is devoted to recent advances in SCM research.

OIT 660. Applied OIT. 4 Units.

Description is currently unavailable because of ongoing review of the OIT PhD program by OIT faculty. Description will become available when the review is completed at the end of the Summer.

OIT 663. Methods of Operations/Information Systems. 4 Units.

This course covers basic analytical tools and methods that can be used in research in operations and information systems. The emphasis is on foundations of stochastic inventory theory. Basic topics include convexity, duality, induced preference theory, and structured probability distributions. Much of the course is devoted to Markov decision processes, covering finite and infinite horizon models, proving the optimality of simple policies, bounds and computations, and myopic policies.

OIT 664. Stochastic Networks. 3 Units.

Processing network models may be used to represent service delivery systems, multi-stage manufacturing processes, or data processing networks. The first half of this two-unit course consists of lectures on performance analysis (e.g., estimating congestion and delay) for classical product-form networks and for Brownian networks. The second half consists of student presentations of recent papers on managing processing networks, typically with game-theoretic aspects. Prerequisites: Statistics 217 and 218, or consent of instructor; some prior exposure to stochastic models in general, and queueing theory in particular, is useful but not essential.

OIT 665. Seminar on Information-Based Supply Chain Management. 4 Units.

This seminar will highlight the research evolution and advances on the smart use of information in supply chain management. Such usage has helped companies sharing information to coordinate their supply chain and to realign their incentives. It has also helped reduce the so-called bullwhip effect. Latest information technology like RFID (radio-frequency identification) has also enabled visibility and structural changes that result in significant supply chain performance enhancements. This seminar will focus on the modeling approaches used by researchers that tried to capture the values and potentials of such applications.

OIT 668. Dynamic Pricing and Revenue Management. 3 Units.

The goal of this course is to provide a comprehensive introduction to the theory and practice of revenue management. It will comprise of a set of lectures that will cover the theoretical fundamentals of the area as well as an overview of current research developments through the presentation and discussion of recent papers. Topics include capacity control (single-resource and network), consumer behavior and market response models, dynamic pricing, procurement auctions, price experimentation, supply chain management and pricing.

OIT 672. Stochastic Control in Operations and Economics. 3 Units.

The first half of this course will cover (i) the basic theory of Brownian motion, (ii) Ito stochastic calculus, and (iii) the rudiments of continuous-time stochastic control, all undertaken at a brisk pace, aimed at students who already know the basics or else have a strong enough math background to learn them quickly. The text for this part of the course will be *Brownian Models of Performance and Control*, by J. Michael Harrison, Cambridge University Press, 2013, which can be ordered from Amazon: http://www.amazon.com/Brownian-Performance-Control-Michael-Harrison/dp/1107018390/ref=sr_1_1?ie=UTF8&qid=1395420072&sr=8-1&keywords=Brownian+Models+of+Performance+and+Control. The second half of the course will explore in depth some models arising in operations research, finance and economic theory, such as the McDonald-Siegel investment model (an optimal stopping problem, treated in Chapter 5 of the textbook), Brownian versions of the classic cash balance problem (a family of stochastic control problems, treated in Chapter 7 of the textbook), and Yuliy Sannikov's continuous-time principal-agent model (*Review of Economic Studies*, 2008). The course will be rather informally organized, more of a collaboration between students and instructor than a top-down lecture format, with at least half of the class time devoted to presentation of problems by students and auditors.

OIT 673. Data-driven Decision Making and Applications in Healthcare. 4 Units.

This course aims to introduce students to research topics in data-driven decision making with specific attention to healthcare applications. However, most concepts are applicable in areas beyond healthcare as well. Examples of topics are: prediction and risk adjustment, computational and statistical challenges associated with large-scale data, and dynamic decision making under uncertainty.

OIT 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, POLECON 691, STRAMGT 691

OIT 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, POLECON 692, STRAMGT 692

OIT 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, POLECON 802, STRAMGT 802

Ophthalmology Courses

OPHT 199. Undergraduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OPHT 201. Clinical Topics in Ophthalmology. 1 Unit.

Introduction to the professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

OPHT 202. Clinical Topics in Ophthalmology. 1 Unit.

(Continuation of 201) Professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

OPHT 203. Introduction to Ophthalmology. 1 Unit.

(Continuation of 202) Introduction to the practical skills used within the field of ophthalmology. Diagnostic tools and instruments; applications of these tools; practice using instruments under the guidance of faculty and residents; practice in microsurgical techniques with one-on-one guidance.

OPHT 280. Early Clinical Experience in Ophthalmology. 1-2 Unit.

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

OPHT 299. Directed Reading in Ophthalmology. 1-18 Unit.

Prerequisite: consent of instructor.

OPHT 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OPHT 399. Graduate Research. 1-18 Unit.

Students to undertake investigations sponsored by individual faculty members. Opportunities are available at both predoctoral and postdoctoral levels. Prerequisite: consent of instructor.

Oral Communications Courses

ORALCOMM 10C. Debate Club. 1 Unit.

Enrollment in this course is limited to students selected as members of Stanford Debate Club. All enrollees must complete at least 30 hours of participation evidenced by traveling to at least one competition during the quarter and attending regular practices. Participation must be verified by the Debate Club leadership in order to receive credit.

ORALCOMM 91. The Mythic Life. 3 Units.

Why in the twenty-first century do many of our most acclaimed and popular stories carry narrative forms that are thousands of years old? Star Wars, The Lord of the Rings, Titanic, Batmanquest;all are deeply informed by ancient myth, folklore, and oral traditions. One reason is that the deep stories of myth and folklore act as a bridge between our personal lives and the profoundest aspects of the human condition;they offer a way to understand our lives and how to live them. n nThis course offers an in-depth study and experience of myth and folklore, the roots of modern story and the roots of our own stories. You will hear these myths live, as people have for thousands of years;quest;from Trickster folk tales to the medieval Arthurian grail epic Parzival. You will also draw from these epics to create and tell a mythic story of your own. This will give you an appreciation for myth as a living principle, not just something from a long time ago. It will also help you become a good storyteller by developing your memory, improvisation, and image-based thinking. This ability to tell a story well is at the root of authentic leadership and helps us bring a powerful, embodied perspective to championing a cause or just debating over coffee.

ORALCOMM 105. Voice and Articulation Intensive for Non-Native English Speakers. 1-2 Unit.

Workshop focusing on exercises designed to help foreign students improve their articulation and delivery in English. Work includes breath, sound, enunciation, melody, and colloquialism. Course was previously offered as CTL 105.

ORALCOMM 115. Voice Workshop. 1-2 Unit.

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215.

Same as: ORALCOMM 215

ORALCOMM 117. The Art of Effective Speaking. 3 Units.

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217. Same as: ORALCOMM 217

ORALCOMM 118. Public Speaking: Romancing the Room. 3 Units.

A practical approach to the art of public speaking. Emphasis is on developing skills in speech types including impromptu, personal experience, interviewing, demonstration, persuasive, and special occasion. Materials include videotape, texts of famous speeches, and a final dinner program of speeches. Students evaluate presentations by others. \$55 materials fee. Course was previously offered as CTL 118.

ORALCOMM 119. Oral Communication Tutor Teaching Practicum. 2 Units.

Seminar. For students with a strong background in public speaking who wish to train as public speaking tutors for the Oral Communication Program. Readings, exercises, and supervised teaching refine speaking skills. Preparation to serve as a peer tutor in a variety of academic disciplines. Prerequisite: application and consent of instructor. Course was previously offered as CTL 119.

ORALCOMM 121. STEM Speak: Oral Communication for Technical Fields. 3 Units.

This course addresses the principles and practices of effective oral communication and is tailored specifically to those students coming from STEM (science, technology, engineering and math) fields. Students will learn to speak about technical topics to a variety of audiences, will develop their own visual aids, will participate in multiple in-class presentations and will receive both group and one-on-one feedback throughout this course. Special attention will be paid to the effective presentation of data as part of an oral presentation.

Same as: ORALCOMM 221

ORALCOMM 122. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies shy;- both traditional and innovative shy;- for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222.

Same as: ORALCOMM 222

ORALCOMM 177. Performance of Power: Oratory and Authority from the Ancient World to the Postmodern. 4 Units.

Speech as action has long been seen as essential to leadership. Theories and examples of oratory, from Aristotle to Barack Obama, assessing each as model of voice-activated authority. The impact of mass media technologies as they transform the public space of oratory. Course was previously offered as CTL 177.

ORALCOMM 215. Voice Workshop. 1-2 Unit.

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215.

Same as: ORALCOMM 115

ORALCOMM 217. The Art of Effective Speaking. 3 Units.

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217.

Same as: ORALCOMM 117

ORALCOMM 219. Oral Communication for Graduate Students. 1-2 Unit.

(Formerly CTL 219.) Graduate student speaking activities such as teaching (delivering lectures, guiding discussion, and facilitating small groups), professional presentations and conference papers, and preparing for oral exams and defenses. In-class projects, discussion, and individual evaluation assist students in developing effective techniques for improving oral communication skills.

ORALCOMM 221. STEM Speak: Oral Communication for Technical Fields. 3 Units.

This course addresses the principles and practices of effective oral communication and is tailored specifically to those students coming from STEM (science, technology, engineering and math) fields. Students will learn to speak about technical topics to a variety of audiences, will develop their own visual aids, will participate in multiple in-class presentations and will receive both group and one-on-one feedback throughout this course. Special attention will be paid to the effective presentation of data as part of an oral presentation.

Same as: ORALCOMM 121

ORALCOMM 222. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies shy;- both traditional and innovative shy;- for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222.

Same as: ORALCOMM 122

Organizational Behavior Courses

OB 205. Managing Groups and Teams. 1 Unit.

This course introduces you to the structures and processes that affect group performance and highlights some of the common pitfalls associated with working in teams. Topics include team culture, fostering creativity and coordination, making group decisions, and dealing with a variety of personalities. You will participate in a number of group exercises to illustrate principles of teamwork and to give you practice not only diagnosing team problems but also taking action to improve total team performance.

OB 206. Organizational Behavior. 2 Units.

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

OB 209. Leadership Laboratory. 2 Units.

In the Leadership Labs class we ask you to consider the question, "Why would someone follow YOU?" This is a course in which you consider what kind of leader you want to be, what kind of leader you are, and how to align your leadership behavior with your leadership goals. In this class you will have an opportunity to lead your squad and in doing so to discover your strengths and challenges as a leader. You will receive feedback about your approach to leadership and you will have the opportunity to try out new skills and tools. Students will be placed into 5-6 person "squads" and the majority of class time will be spent in these squads. Your squad will meet to work on basic leadership challenges (e.g. managing conflict, assessing a team's progress). There will be the opportunity for a lot of feedback so you can achieve a deeper understanding of the impact of your behavior on others. The squads will do role-play cases and group exercises designed to help you think more deeply about the dynamics in your workgroup and to allow you to practice and experiment with new ways of leading. Each session will be divided into two segments, and one squad member will be the leader for each segment. MBA1 squad members will rotate through the segment leader position. Your squad will have an MBA2 Leadership Fellow assigned to it and he or she will also be present for these meetings in order to provide coaching to the leader and to the squad as whole. Over the course of the quarter your squad will work together on the group project for your Strategy Class. While the deliverable on this project is for your Strategy class, the experience of working together as a team provides a rich opportunity for learning about peer leadership. A number of activities in the weekly Lab will be focused on assessing and reflecting on how you are working together in both the Labs and on your Strategy project. Finally, the quarter culminates with the Executive Challenge. The Executive Challenge will be an opportunity for you to further refine your leadership skills by engaging with alumni judges in role plays that test your ability to lead effectively. The alumni will provide you feedback and evaluate your performance.

OB 219. MSx: Organizational Design. 2 Units.

This course examines fundamental issues of general management and leadership within an organization. You will learn about setting an organization's strategic direction, aligning structure to implement strategy, and leading individuals within the firm. You will study the interplay among formal structure, routines, informal networks, and culture in shaping organizational performance.

OB 259. Sloan: High Performance Leadership. 4 Units.

This course asks the question: What does it take to build a high-performance unit? The focus is on middle and upper-middle management in contemporary complex organizations. These are organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a high-performing department, and what members can do to support the leader who wants to initiate such changes. The first two classes are required. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 259 and OB 374 and these two classes are highly complimentary, both require Journals and an evening group. We therefore recommend against taking both classes in the same quarter for workload reasons.)

OB 278. MSx: Organizational Behavior. 2 Units.

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

OB 289. MSx: Negotiations. 2 Units.

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multi-party settings, buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and the management of integrative and distributive aspects of the negotiation process. This course is based on a series of simulated negotiations in a variety of contexts, including one-on-one, multiparty, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real negotiation. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone those skills, and to become more adept in choosing strategies and tactics that are appropriate for a particular negotiation situation. This course is an intense, more compact version to the elective OB381 and is almost identical to the OB581 immersion course. Thus, students should not take either of these courses as there is considerable overlap among the three. Attendance and participation in the negotiation exercises are mandatory.

OB 322. Networks. 4 Units.

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

OB 324. The Psychology of Startup Teams. 3 Units.

The psychology of startup teams is a major determinant of their ultimate success. In this course, we explore the psychological dynamics specific to startup teams and identify ways to effectively lead startup teams to their optimal performance. We will discuss topics such as creating the 'dream team', leadership in start-ups, the art of vision in startups, managing a startup's culture and climate, navigating virtual interactions, and solving common interpersonal problems in startup teams. To address these topics, the course will use a mix of experiential exercises, cases, and exciting guest speakers (including well-known CEOs, venture capitalists, and speciality start-up consultants from Silicon Valley).

OB 330. Leadership Fellows I. 4 Units.

The Arbuckle Leadership Fellows Program plays an integral role in the GSB leadership curriculum by bringing together a group of talented second years to support the leadership development of the first-year class. OB330, an 8 unit two-quarter MBA2 elective course (in combination with OB331), is the academic component of this program and runs the entirety of both Autumn and Winter Quarters. Both quarters must be completed to receive any units of credit. The course is open only to those students who have applied and been accepted into the Leadership Fellows Program. Interested students apply at the start of Winter Quarter of their first year and undergo a competitive application process, after which successful applicants are invited to take part in the program. Informational meetings are held late in Autumn Quarter and during the first week of Winter Quarter and Fellows are selected from the first year class in mid-Winter Quarter. Knowing how to develop others is a crucial leadership competency. In this class, Fellows develop the advanced leadership skills of leading leaders and developing others through coaching and mentoring. Among the competencies developed in this class are: 1) Team Coaching Skills (e.g. facilitating a group, diagnosing group dynamics, debriefing, coaching without undermining the leader), 2) Individual Coaching Skills (e.g. effective inquiry, asking powerful questions, balancing support and challenge, providing effective feedback, holding others accountable, utilizing, valuing and connecting across differences and power differentials, using oneself in service of another's development) and 3) Personal Development Skills (e.g. self-reflection and self-awareness, leveraging strengths, stretching outside one's comfort zone.) In the Autumn Quarter Fellows are assigned to a squad of six MBA1s in Leadership Labs. Fellows guide their MBA1 squad through the learning process in the Labs and provide both individual and team coaching to their MBA1 squad members. In addition to the work with their MBA 1 squad, Fellows provide in-depth 1:1 coaching to three additional MBA1 students who are not members of their squad. This 1:1 coaching begins after Autumn midterms and continues through the end of Winter Quarter. Fellows classes meet twice a week for 105 minutes. There will be a reading list of conceptual material which will be supplemented during class with lectures discussions and activities. Students will apply concepts through role-playing and experiential exercises during class time as well as in their coaching and mentoring of their MBA1 coachees. Additionally, Fellows will attend weekly Leadership Labs with the first year squad to which they have been assigned and meet 1:1 with MBA1 coachees. Fellows meet regularly with five of their peers in "clinics," standing groups led by Leadership Labs Instructors who are also GSB Leadership Coaches. Fellows meet with their Leadership Coach and clinic approximately every other week during regular class time to discuss specific strategies for working with their first year students. Fellows also periodically meet with their Leadership Coach one-on-one to hone their skills and explore their areas for specific improvement. Note: OB374, Interpersonal Dynamics, is a PRE-REQUISITE for this course; students who want to be Fellows are advised to assess whether that is a class they want to take in the spring quarter of their first year. Additionally, signing up for 1:1 coaching by a Fellow as an admit strengthens a MBA1 student's application to the Arbuckle Leadership Fellows program.

OB 331. Leadership Fellows II. 4 Units.

This course is the continuation of Leadership Fellows I, an 8-unit course that begins in Autumn Quarter. During this quarter Fellows will continue to deepen their coaching and mentoring skills, and will focus exclusively on in-depth 1:1 coaching with three MBA1 coachees (who were not members of their MBA1 squad.) Classes and clinics continue as in Autumn Quarter.

OB 333. Acting with Power. 3 Units.

The ability to function effectively within a hierarchy is a crucial determinant of managerial success, yet many people struggle with "authority issues" that make certain hierarchical roles and positions difficult for them. This course draws on the craft of acting and the science of psychology to help students learn to use themselves to develop the characters that can play these roles effectively. This class is designed specifically for students who have trouble "playing" authoritative roles: those who find it difficult to act with power, status, and authority. It will also be useful for students who find it difficult to share power and authority, which involves accepting and deferring to the power and authority of others. Participants will be asked to read, think deeply about, and share some of their own feelings about power and authority, and the origins of those feelings. They will also be asked to prepare for and present a series of in-class performances that involve playing characters with and without power, in scenes that highlight the interactions and relationships between high and low power characters. These performances will take up much of our time during class. Out-of-class assignments will include reading important works on psychology, and on the theory and practice of acting, as well as writing short essays analyzing their own and others' performances.

OB 336. Insight to Outcome. 4 Units.

Getting from "strategic insight" to "desired outcome" (achieving the right result) continues to be a core challenge for many organizations and leaders. In this course, we develop a framework and approach for the "insight to outcome" sequence, study some of the key levers available to managers, and learn from some common pitfalls. The bulk of the course will be devoted to the practical application of the approach to a number of important business processes, such as merger integration, corporate and business unit transformation, and strategy development. Some class sessions will involve class visits by topical experts in these applications. The course is designed for second-year MBAs. It will appeal to students interested in an exploratory course - more of a "how to think about it" course than a "toolkit" course. Grades will be based on class participation and a group project. Class size is limited to 30.

OB 343. Scaling up Excellence in Organizations. 4 Units.

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers. We will be require a project that may involve design thinking - so we encourage those who have not had exposure to design thinking to apply.

OB 345. Leadership Coaching. 3 Units.

The ability to coach others is an often over-looked core competency for leaders. This course will give second year MBA students an opportunity to learn the fundamental skills of coaching, so they can become coaching managers. This course is designed to be very experiential. While conceptual frameworks will be introduced through readings, lectures, demonstrations and discussions, the only real way to learn coaching skills is to both practice coaching, and to be coached. Every class session will provide opportunities to do both:## coach and be coached. Because the in-class coaching practice will not be role plays but will actually be real coaching sessions between students, this course will demand a high level of engagement and participation from each student. While OB374 is not required, we highly recommend students take OB374 either previously or concurrently with taking this course in order to maximize your learning.

OB 362. Leadership Coaching and Mentoring. 3 Units.

This two-quarter course is offered for 6 units and runs for the Winter and Spring Quarters. Both quarters must be completed to receive any units of credit. THERE IS BOTH A PREQUALIFICATION AND A PRE/CO-REQUISITE for this course. It is open to a maximum of 24 MBA2s who have passed an assessment of their potential to coach effectively, though they need not have been coached as first years. (The number of students may be increased to 36 if sufficient first-year coachees are identified.) The pre/co-requisite is OB 374-Interpersonal Dynamics. (If taken as a co-requisite, OB 374 must be taken in the winter quarter.)nn nnThere will be a reading list of conceptual material which will be supplemented during class with lectures and discussions. Students will have the opportunity to apply those concepts through role-playing and exercises during class time. Each MBA2 will be assigned three MBA1s to coach. The MBA2 coaches will meet with their MBA1s five times each quarter (i.e. a total of 10 coaching sessions) in a series of semi-structured coaching activities. In addition, the MBA2 students will meet, in groups of 6, with a Master Coach for a two-hour clinic approximately every other Friday during the Winter Quarter during class time. During Spring Quarter, students will meet every Monday (only) from 3:15 to 5:00 pm (alternating between class and clinics) with two additional Friday classes to be held on Friday, April 1, and Friday, April, 15 from 3:15 to 5:00 pm. nnnNote: Students MUST attend the first class (including waitlisted) or they will be dropped. The drop deadline for this course is Friday, January 7, at 11:59 p.m. (i.e. earlier than standard GSB add/drop deadline).

OB 363. Leadership Perspectives. 4 Units.

What does it mean to be a principled leader? What role do values play in an organization, and how do successful leaders apply their values in their daily business lives? This course examines the concept of principled leadership and the various ways that leaders try to institutionalize particular values within the organizations they lead. Equally important, it explores the difficult challenges that leaders sometimes face when trying to apply their principles in a tough, fast-paced business environment, where others may not share the same expectations. Through assigned readings, interactive lectures with visiting executives, and weekly small group discussions, students will learn how practicing leaders implement their principles, while reflecting the realities of different cultural expectations and meeting business demands. The course will provide a forum for students to learn directly from practicing leaders and to think introspectively about their own personal values, leadership styles, and long-term aspirations.

OB 368. How to Make Ideas Stick. 4 Units.

Having a good idea is not enough, we must also be able to convey our ideas in a way that people can understand and act on them. But often our messages don't persuade or persist. This course assumes that we can craft more effective messages by understanding the principles that make certain ideas stick in the natural social environment: Urban legends survive in the social marketplace without advertising dollars to support them or PR professionals to spin them. How could we make true or useful information survive as well as bogus rumors? We will use research in sociology, folklore, and psychology to analyze what kinds of ideas survive the selection process in the marketplace of ideas and to develop a set of strategic tools to craft ideas that are more likely to survive. Topics covered include crafting messages for complex information that don't exceed the capacity of human attention and memory, using emotional appeals that inspire people and motivate action, acquiring attention in a crowded environment, and gaining legitimacy for new ideas, approaches, and technologies.

OB 372. High-Performance Leadership. 4 Units.

This course asks the question: "What does it take to build high-performance?" The focus is on middle and upper-middle management in contemporary organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a compelling vision, strong team, and mutual influence sideways and upwards as well as with direct reports. Also, what members can do to support the leader who wants to initiate such changes. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 372 and OB 374 and these two classes are highly complementary, both require Journals and an evening group. We recommend against taking both classes in the same quarter for workload reasons.) Students will have a choice as to when their SDG will meet. The expectation is full attendance at all SDG meetings. Only one excused class absence. Class on 2/23/15 is required.

OB 374. Interpersonal Dynamics. 5 Units.

PRE-QUALIFICATION IS REQUIRED BY THE DEADLINE (APPROXIMATELY FIVE WEEKS BEFORE THE QUARTER BEGINS). The focus of this course is to increase one's competencies in building more effective relationships. Learning is primarily through feedback from other group members. This course is very involving and, at times, can be quite emotional. However, this course is not a substitute for therapy; we deal more with inter-personal issues than with intra-personal ones. If you are in therapy, please talk this over with your therapist and get their advice before enrolling in this course. The students are divided into three 12-person T-groups that meet the same evening of the class. It is very important to note that when you decide to take this course, you make an explicit contract to be actively involved. Attendance to the first class is required for the 1-day/week sections of this class. Attendance to the first two classes is required for the 2-day/week sections of this class. Failure to attend the first class will result in an automatic drop. Students who are waitlisted must attend the first meeting of each section they are waitlisted for in order to secure a place in the course should space open up. It is the student's responsibility to notify respective OB 374 faculty of your attendance and wish to fulfill your waitlist requirement. T-group meetings for all sections will meet for 3 hours the same evening as 1-day/week class and the same evening of the first day of the 2-day/week section. The class has a weekend retreat the seventh or eighth week (check your specific section) of the course. Because of the highly interactive nature of this course, it is very important that all students attend all sessions. Missing class, class T-group, evening T-group, or any portion of the weekend will negatively influence your grade and may result in a student's grade being dropped one grade level (for each absence). Arriving late on Friday to the weekend will negatively influence your grade level - missing any more of the weekend beyond that will result in a U. Students must pre-qualify before taking this course. Qualification assignments are due approximately five weeks prior to the quarter. For exact due dates and complete assignment details, see: <https://sites.google.com/a/stanford.edu/ob374-prequalification/>.

OB 377. The Paths to Power. 4 Units.

Power and influence processes are ubiquitous and important in organizations, so leaders need to be able both to understand power and to act on that knowledge. This course has three objectives: 1) increasing students' ability to diagnose and analyze power and politics in organizational situations; 2) increase students' skills in exercising power effectively; and 3) helping students come to terms with the inherent dilemmas and choices, and their own ambivalence, involved in developing and exercising influence. Topics covered include: the sources of power, including individual attributes and structural position; dealing with resistance and conflict; obtaining allies and supporters; maintaining power; how and why power is lost; living in the limelight--the price of having power; preparing oneself to obtain power; and the use of language and symbolism in exercising power. The class involves a reasonably large number of written, self-reflective assignments as well as two individual projects (doing a power diagnosis on an external organization that is important to the person) and a doing-power project (using the class material during the quarter to gain power in some group or organization). The class emphasis is on both learning the conceptual material and also incorporating it into one's own strategies and behaviors.

OB 381. Conflict Management and Negotiation. 3 Units.

Conflict is unavoidable in every organization. The key question is how it will be handled: will it escalate to dysfunctional levels or will it be effectively managed? Hence, a first aim of the course is to develop your ability to analyze conflicts, to look beneath the surface rhetoric of a conflict, to isolate the important underlying interests, and to determine what sort of agreement (if any) is feasible. We'll analyze which negotiation strategies are effective in different conflicts. We'll also examine psychological and structural factors that create conflict and often pose a barrier to its resolution. But understanding how to analyze a conflict is not enough. To manage conflict effectively, you need a broad repertoire of behavioral skills. Developing these is the second aim of the course. To achieve this, negotiation exercises are used in every session. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of skills, to hone your skills, and to become more adept in choosing when to apply each skill.

OB 383. Lives of Consequence: How Individuals Discover Paths to Meaningful Engagement. 3 Units.

This Bass Seminar will examine the lives of extra-ordinary individuals who have made exceptional contributions to society, either through their impact on business, politics, science, social activism, or the arts. We will take a close look, for example, at creative individuals such as Steve Jobs, George Lucas, and Pixar's Brad Bird; political achievers such as Robert F. Kennedy, Martin Luther King and Margaret Thatcher; business leaders such as Bill and Melinda Gates, Whole Foods CEO John Mackey, and Starbuck's Howard Schultz (to name just a few). We will use these examples to develop useful ideas about the narrative unfolding of creative and extra-ordinary lives. In addition, using theories and evidence from the social and behavioral sciences, we will develop a conceptual framework for thinking about individuals' "paths to extra-ordinary achievement." Drawing on psychological and philosophical theory and research, we will also examine how human achievement relates to happiness and the perception of meaning in one's life. You will have a chance to work in small groups to study individuals or domains of special interest. Students will also have an opportunity to apply the framework to their own lives using a series of enjoyable reflective exercises, including writing and public speaking exercises. The seminar will be very discussion oriented and quite lively. The goal of the seminar is to change how you think about your self and your life!

OB 385. Leading Social Change: Educational and Social Entrepreneurship. 4 Units.

(Same as OB 385) The course provides an overview of different approaches to leading change in the social sector, drawing primarily, but not exclusively, on case examples in education. While there is a substantial need for innovation and visionary leadership in sectors such as education, social entrepreneurs who want to drive change must appreciate the significant barriers and unique opportunities presented by non-market forces in these sectors. The course will equip students with an appreciation for different mechanisms of change and theories of action as well as some of the challenges of initiating and sustaining meaningful change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact in the world, it is particularly (although not exclusively) appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship.

Same as: EDUC 321X

OB 387. Redesigning Work for 21st Century Men and Women. 4 Units.

Research on the Millennial Generation (i.e., those born between 1980-2000) shows that millennials, as compared to earlier generations, have quite different values and priorities when it comes to work. For instance, millennials report that they place a high value on autonomy and creativity at work, and prefer to self-manage their personal productivity. They also report that they value being a good parent and having a good marriage over having a high-paying career. Despite this research, our organizations have been slow to respond to a new generation of workers. This has led to high levels of disengagement, and lower levels of productivity in many organizations. This class will explore the gap between how our organizations are designed, and what a new generation of workers desire in terms of work. Students will work in teams to design a new workplace that is reflective of what workers want in terms of their work. The first part of the course will focus on what the issues and problems are in how organizations are designed for an earlier generation of workers, while the second part of the course will be set aside for team-based project work and presentations.

OB 388. Leadership in the Entertainment Industry. 3 Units.

The entertainment industry is one of the largest and most important industries in the world. It is an industry characterized by tremendous opportunities and great uncertainties. The industry is currently undergoing tremendous change as new technologies transform the way entertainment is produced and disseminated throughout the world. For all of these reasons, the dynamic industry creates tremendous challenges for entrepreneurial students interested in leaving an artistic or creative imprint on the world. This course is designed to help prepare students for careers in the media industries, and to explore leadership within them. The industry is truly an intersection of art and commerce, and a major portion of the course will involve bringing to the class leaders who represent key areas of the entertainment industry, both on the business and creative sides. As with any business, the entertainment industry is driven by the vision of its leaders. These leaders daily make financial and artistic decisions, and manage staff and productions with the goal of producing entertainment product meant to be seen as widely as possible, and meant to make a profit. It is hoped that through interaction with these speakers, students taking this course will gain a greater understanding of the industry and what it takes to succeed in it. Further, the students will see the potential of strong leadership and how it works to advance entertainment companies and the films and TV programming they produce. Topics to be examined include the process of project development, production, and marketing; emerging technologies and their impact on the industry; the roles studio and network executives, directors, film and television producers, writers, actors, agents, and others play in the making and distribution of film and television productions.

OB 392. Leadership Coaching and Mentoring II. 3 Units.

This course is the continuation of a 6 unit course that runs for the Winter and Spring Quarters. Classes/clinics meet 10 times in the spring. It is open to up to 24 MBA2 students who have been selected on the basis of their having passed a screening to assess their potential to coach effectively. They also need to have taken OB 374 - Interpersonal Dynamics or will take OB 374 in the Autumn or Winter. There will be a reading list. That conceptual material will be supplemented during class time with lectures and discussions. Students will have the opportunity to apply those concepts through role-plays and exercises during class time. Each second-year student will be assigned three first-year students. The second-year coaches will meet with their coaches 5 times each quarter in a series of semi-structured coaching activities. In the spring there will be two mandatory Friday sessions, on April 1 and April 15 in addition to Monday afternoon classes.

OB 393. Leadership in Diverse Organizations. 4 Units.

How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

OB 503. Games and Decisions. 1 Unit.

This course is intended for individuals who are interested in how decisions happen in organizations, and wish to expand their knowledge about the interactive processes involved in strategic decision-making. The course will draw on behavioral game theory to analyze and make sense of individual and group decision-making. To understand how decisions happen, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings on cognitive and emotional aspects of decision making (e.g., what does "bounded-rationality" really mean? how do our emotions influence our decisions? What is unconscious thought and how can it be used to improve decisions? What drives erroneous market-entry decisions?). We will play strategic games in all our meetings to understand how various conditions (e.g., time pressure, uncertainty, information complexity, accountability) influence our decisions, but we will also read and discuss theory and research on bargaining and interdependent decision-making. So, if you enjoy in-class exercises, you will enjoy our simulations. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. After taking this course, you will: (a) be better able to identify and avoid common traps in strategic decision making; (b) be able to draw on a diverse "tool-box" of skills and techniques to make you a more effective decision maker; and (c) have a deeper understanding of other people's thinking and decision making processes.

OB 504. Culture & Organizations. 1 Unit.

This course is designed for individuals who are interested in learning about the multitude of ways by which culture influences core organizational processes, including leader emergence and effectiveness, communication and social influence, decision making and negotiation. The course will also address the challenges associated with cross-cultural business interactions. To dig deep into culture's consequences, we will use analyses of real-world cases, in-class exercises, and in-depth discussions of new and exciting research findings. For example, we will discuss why some cross-cultural joint ventures succeed while others fail; engage in exercises that illustrate the challenges of working across cultural boundaries; review common pitfalls in cross-cultural interactions; and discuss when cultural variation within the organization can be an advantage, as well as how leaders can effectively manage it. Thus, class experience will include a balanced mix of hands-on exercises aimed at illustrating what culture is, and discussions aimed at analyzing its implications. After taking this course, you will: (a) be better able to identify, understand, and avoid common traps in cross-cultural business interactions; (b) learn how culture can affect and be used to enhance organizational performance; (c) possess a larger repertoire of behavioral skills to apply in various cross- and intra-cultural interactions; and (d) understand why culture can be sticky, and how to leverage it for the purpose of organizational change.

OB 522. Managing Social Networks in Organizations. 2 Units.

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

OB 527. The Art of Self-Coaching. 2 Units.

In 2009 a graduating student said to me, "A number of coaching resources here at the GSB have helped me develop as a person over the last two years. But after I leave school and no longer have access to those resources, how will I continue to coach myself?" This course is an attempt to help you answer that question. I define "self-coaching" as the process of guiding our own growth and development, particularly through periods of transition, in both the professional and personal realms. In this course you'll explore a range of practices and disciplines intended to help you build on what you've learned about yourself over the last two years and continue that process after graduation. While this is a self-directed process, it's not a solitary one, and you'll work with classmates in a variety of configurations (pairs, trios, small groups), so be prepared to discuss meaningful personal issues with your fellow students.

OB 537. Advanced Topics in Teams. 2 Units.

This course offers a deeper examination of team dynamics than was provided in Groups and Teams. The course goal is to provide you with tips and tools to maximize the performance of your teams at work. Topics include forming start-up teams, capitalizing on diversity in teams, managing virtual teamwork, facilitating effective discussion and debate in creative teams, and navigating informal leadership processes within top management teams. Group exercises and cases will help you learn how to create and maintain highly effective teams.

OB 541. How to Change Things When Change is Hard. 2 Units.

This course will explore case studies and research about how to create behavior change from a position without much formal authority or power: e.g., a middle manager trying to change a failing unit of a big firm or a social entrepreneur trying to influence the behavior of a community. We'll use principles from social psychology, clinical psychology, and behavioral economics to analyze cases like the following: How a new head of the equities research department at Lehman Brothers changed his group's ranking in the Institutional Investor polls from #15 to #1 over a four year period. How Teach for America teachers take unmotivated kids in neglected schools and manage on standardized tests to gain more than two year's progress in one year of schooling. How a clever application of behavioral economics managed to triple employee savings rates.

OB 543. Scaling Change. 2 Units.

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.

OB 547. Entrepreneurial Leadership: The Six Essential Skills of Extraordinary Entrepreneurs. 2 Units.

How do some people turn ideas into enterprises that endure? Why do some people succeed why so many others fail? Based on more than 200 interviews with leading entrepreneurs conducted over the past five years by Amy Wilkinson, this course will focus on the six skills of successful entrepreneurs. The class will include brief lectures and class discussions with a set of the successful entrepreneurs featured in a recent book authored by the instructor, "The Creator's Code." The class is designed to help students integrate these skills into their own future ventures.

OB 552. The Quest for Happiness: Exploring the Psychology of Human Fulfillment. 2 Units.

In this seminar, we will explore the nature of human happiness. We will examine recent theories and new evidence from psychological research indicating who among us is likely to achieve deep and enduring happiness—and why. We also will review what we know about the determinants of happiness throughout the lifespan. We will discuss how happiness is created and sustained, even in the face of adversity and tragedy. We will describe the "geography" of happiness, examining different cultural conceptions of happiness and variations in the distribution of happiness around the globe. We will also discuss some prevalent misconceptions regarding the antecedents of human happiness—why so many people, in short, stumble in their quest for happiness. We will explore how leaders can use happiness research to create more satisfying work places. To illustrate these ideas, we will examine in detail a number of fascinating individuals, including Bill Gates, Warren Buffet, Oprah Winfrey, venture capitalist Tom Perkins, Steven Spielberg, Martha Stewart, and the Nobel physicist Richard Feynman. Students will also work, either individually or in small self-selected teams, on a case study of an individual or organization they find interesting. There will also be several reflective exercises designed to probe students' self-conceptions regarding their own happiness. This seminar will be very discussion-oriented and our time will be spent engaging in lively, provocative debate of controversial ideas and evidence about happiness.

OB 555. Mastering Life's Moments: The Challenge of Optimizing your Experience. 2 Units.

Our personal and professional lives are made up of a series of moments. Some of these moments present great opportunity, with the prospect of personal change and even transformative growth. Other moments contain the seeds of setback and even derailment of our most coveted plans. Some of life's moments are planned, while others catch us completely by surprise. Whatever moments we are afforded, we must make the most of them. This new seminar will explore what we know about the psychology of "optimal experience." We will examine how and why some individuals harvest so much joy, zest and sense of attainment from their moments, while others squander their moments or dig themselves into deeper holes when trying to respond to them. We will also examine how and why some people respond brilliantly to adversity, mastering even the most tragic moments that life presents, while others flounder and fold. To inform our thinking on this vital topic, the seminar will include a series of rich and provocative readings from psychology, behavioral economics, organizational theory and philosophy. Additionally, the seminar will include a series of compelling video cases illustrating both optimal and suboptimal responses to experience. To make the seminar more personally involving and useful to you, you will also engage in a series of reflective writing and experiential exercises. Whenever I offer a new course, I make a promise to the students who take it. For this course I promise you an intellectually deep and personally meaningful exploration of what it means to "use up" your life well. Put another way, I promise you some great educational moments in your GSB life!

OB 568. How to Make Ideas Stick. 2 Units.

This class will explore the properties shared by ideas that stick with people and change the way they think and act. The course is based on the framework in the book *Made to Stick* and focuses on hands-on exercises that will teach you how to transform your messages to make them stick: How do you get attention for your idea in a crowded marketplace of ideas? How can you convey complex information quickly? How do you make a broad, abstract idea concrete and tangible enough for people to understand? How do you provide credibility for your idea without resorting to dry statistics? Although the exercises in this course are fun and generally short, students in the past have said that they do require a lot of thinking time outside of class in order to apply the course principles to a specific message. This is particularly true of the final project which involves improving the message of a specific live client (e.g., a friend with a start-up business, the recruiting materials of a former employer). This course will be especially useful for entrepreneurs who must pitch their ideas to customers, investors, and potential employees and for students in the nonprofit sector where resources for spreading ideas are often thin.

OB 569. Strategy and Management in Developing Economies. 2 Units.

This course will explore the strategic and managerial challenges involved in running for-profit companies in developing economies. Particular emphasis will be given to understanding the challenges of running enterprises that touch the lives of the poor or the extreme poor, either by employing them or producing goods and services that improve their lives. A central theme will be the ways in which features of these economies shape the ability of firms to thrive and grow. Among the issues that may be considered are how the economic and social context affects the ability of firms to formulate successful strategies for creating and capturing value and how the context impacts the process of management within the organization.

OB 571. Diversity, Dynamics, and Influence. 2 Units.

The course is based on the premise that diversity can present unique challenges and opportunities thereby compelling students to expand their sensitivity and develop a wider repertoire of skills, many of which are relevant across a variety of situations. The course is intended for students who plan to work in culturally diverse groups or organizations and will be equally relevant to those who work in the not-for-profit, public, and for-profit sectors. Through the presentation of new concepts, participation in experiential group activities, and faculty facilitated debriefing, students are expected to improve their ability to better assess group level diversity dynamics and in turn both intentionally influence and to be influenced inclusive of three fundamental differences presented by peers - values, gender, and group identity. Students will be taught how to practice 'authentic discourse' during regular faculty facilitated small task group debriefings. 'Authentic discourse' is a skill stressed in Interpersonal Dynamics (OB374).

OB 572. High Performance Leadership for Family Business Leaders. 2 Units.

This course examines the unique leadership problems faced in family businesses. What is unique is that there are two over-lapping systems; the family system and the business system. These can be congruent or at cross-purposes. For example, the latter might stress promotion on merit while the other values family ties. There also can be difference in purpose. Is the organization to maximize shareholder value or to provide employment for family members? These and other related issues impact the communication process, how decisions are made and how power is distributed. The course will be case based. The content will overlap that of OB372 so it is not advised to take both courses. Because of the shortened nature of 572, there would be minimal overlap with OB374 Interpersonal Dynamics. In addition to class, students will meet for 1 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development.

OB 574. Interpersonal Dynamics at Work. 2 Units.

This course is open to students who have taken OB 374 Interpersonal Dynamics or GSBGEN 374 Interpersonal Influence and Leadership. The objectives of OB 574 is to take what was learned in the introductory Interpersonal Dynamics course further with a specific emphasis on how those approaches are applicable in a work setting. Specifically how issues of fuller self-expression/disclosure, feedback, resolution of interpersonal difficulties and building effective relationships can apply to working with peers and one's manager as well as in a team setting. The course will meet Thursdays 3:15-5:00 for five sessions starting April 2nd and running until April 30th. The T-groups will meet that evening, 7:00-9:30. In addition, there will be one all-day meeting (instead of a weekend), Saturday, April 4th running from 9:00 a.m. to 9:30 p.m. Attendance in all class sessions, evening meetings, and the Saturday retreat is required. Any absence will result in lowering of the grade. In addition to a modest amount of reading, students will keep an on-going self-diagnostic log. One-third of the grade will be on the log and the remaining 2/3 on the extent of participation in class, risk-taking in the group, and helping building learning conditions for self and others.

OB 581. Negotiations. 2 Units.

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. You will have an opportunity to reflect on your experience in your negotiation paper. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone your skills, and to become more adept in choosing when to apply each skill. This course represents a shorter, more intense version of OB 381-Conflict Management and Negotiations. Students should not take both courses, as there is considerable overlap in course content. Attendance and participation in the negotiation exercises is mandatory.

OB 582. Leading Social Change: Educational and Social Entrepreneurship. 2 Units.

The course provides an overview of different approaches to change, drawing primarily on entrepreneurial initiatives in education. The course will equip students with an appreciation for different mechanisms of change as well as some of the challenges of initiating and sustaining change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact, it is particularly appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship.

OB 586. Organizational Learning. 2 Units.

This is a course about how firms learn from their experiences and the opportunities created by flawed learning. It will explore common mistakes in learning and barriers to the adoption of effective practices. Understanding learning problems will help future managers avoid common mistakes and build organizations that learn more effectively; learning is particularly important for entrepreneurs who are trying out new ideas and so must adapt correctly to feedback from the environment. But understanding common mistakes is also useful for identifying possible opportunities in markets; opportunities exist when firms make mistakes and when they fail to learn effective practices. The course will introduce concepts and findings from organization theory, psychology, decision theory, and statistics. A variety of exercises, cases, and readings will be used to illustrate barriers to learning and the opportunities they create, including the book "Moneyball" by Michael Lewis which discusses market-level mistakes in professional baseball.

OB 591. Advanced Negotiation. 1 Unit.

This course is designed for individuals who have taken one of the basic negotiation courses (OB 381 or OB 581) and are interested in honing their negotiation and conflict management skills and expanding their knowledge about bargaining and dispute resolution. To dig deeper into the minds of negotiators, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings. Thus, we will play strategic games and negotiate in all our meetings, but we will also read and discuss theory and research on bargaining. So, if you enjoy negotiating, you will enjoy the classes. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. We will start off the class by launching a week-long entrepreneurial negotiation assignment that will allow you to test your bargaining skills outside of class. Our in-class exercises and in-depth discussions will subsequently tackle critical issues in negotiation, including the role of power and norms in negotiation; cross-cultural negotiations; accountability, emotions, and information processing in negotiation; and creativity in negotiation. After taking this course, you will: (a) be better able to identify and avoid common traps in negotiation; (b) have a larger repertoire of behavioral skills to apply in various negotiations; and (c) have a deeper understanding of other people's behavior in negotiation.

OB 593. Leadership in Diverse Organizations. 2 Units.

This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people's ability to work effectively across identity-based differences? 2) What can you do to create contexts that enable differences to be used as a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to explore a variety of other dimensions of identity and difference in organizations, including (but not limited to) sexual orientation, nationality, class, and religion. The course is intended for students who expect to work in culturally diverse groups or organizations and will be equally relevant to those who plan to work in the not-for-profit, public, and for-profit sectors. The course is cross listed in the School of Education.

OB 601. Organizational Ecology. 3 Units.

This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.

Same as: SOC 366A

OB 622. Topics in Social Network Analysis: Structure and Dynamics. 2 Units.

This course provides coverage of both introductory and intermediate topics in social network analysis with a primary focus on recent developments in theory, methods and substantive applications. We will begin the course with a brief overview of introductory themes and concepts from various disciplines that have contributed to social network theory, including sociology, anthropology, social psychology, and organizations. Introductory topics to be included: centrality, cliques, structural and regular equivalence and cognitive social structures. The primary topics to be covered in this course include the application of network theory to the study of careers, competition, innovation, inequality/stratification, and recent research on IT mediated networks, as well as an examination of network formation and dynamics. The course will also provide hands-on experience applying social network methods in empirical research. Students will have an opportunity to learn some modern network analysis methods and apply them to network data using the R programming language. No prior experience with social network analysis or software is required.

OB 623. Stratification in Organizations. 2 Units.

Racial and sexual segregation within firms and other organizations is persistently decried as a social problem. Yet there is persistent scholarly debate about the causes, effects, and remedies for such segregation. Over five weeks this course will review several dominant economic, psychological and sociological theories of organizational stratification. We will explore how organizational scholars identify stratification as arising both from individual-level biases and from organizational policies that enable and reinforce actions stemming from those biases. The focus will be on research that has tried to identify policy interventions to reduce such stratification. nn

OB 625. Economic Development and Economic Sociology. 4 Units.

As a field, economic sociology has had little to say about economic development. Much of this quietude stems from the latter's identification with "backward," "poor" or "developing" economies, and the former's interest in many of the advanced features of the richer economies. This state of affairs not only sets up a false dichotomy but also makes it difficult by construction to theorize or research the issue of economic decline, seemingly a necessary piece of any coherent theory of development.nnnThe (admittedly ambitious) goal of this seminar is to move toward a better theory of economic development. We will review several of the more common strands of thought on development in related literatures and then consider some alternative perspectives that might bridge this research and contemporary sociology. No guarantees are made that we will have a full-fledged theory by the end of the quarter, but with luck we will have breathed some new life into an often marginalized but critically important strain of social thought and research.nnnThe class will be a seminar based around the readings. Grading will be a combination of class participation, a take-home midterm and a final paper.

OB 626. Strategy and Organizations. 2 Units.

Why are some organizations more competitive than others? This is one of the defining questions of the interdisciplinary research field known as acirc;## strategic management.acirc;## In this seminar, we will survey the field of strategic management, touching on the four main theoretical approaches that have developed there. Note that I take a very broad view of the field of strategic management, reflecting the diversity of perspectives that are seen in this field worldwide. The reading list here is a small subset of a larger reading list that would occupy a 30-session course. I will make that longer version of the course available to you, although in this short course we will only skim the surface of this deeper reading list.nnnMost work in strategic management pays little attention to particular theoretical perspectives, and is organized more by the topic acirc;## the phenomenon being studied acirc;## such as market exit, growth, performance, mergers and acquisitions, innovation, and the like. I have catalogued the research in strategic management both according to theoretical perspective and topic, and that structure can be seen in this syllabus. I encourage you to use a similar structure as you try to understand the strategy field.

OB 630. Social Norms. 3 Units.

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.

Same as: PSYCH 223

OB 632. Social Movements. 3 Units.

Social movement actors have helped initiate some of the major social, cultural, and political changes of the modern era. It is hard to imagine a major political or social reform that did not find its origins in a social movement or collective action. Social movement scholarship has flourished in political sociology and has recently gained a foothold in organizational theory as an explanation for innovation and organizational change. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.nOrganizations and industries are frequent targets of collective action. Social movement activists frequently target organizations (e.g., corporations, universities) in order to bring about political and social change. Because most organizations are not democracies, movements must find ways to penetrate their closed boundaries if they are to have an influence inside organizations. At the same time, social movements make good use of organizations to carry out their own goals, creating structures that help them carry out their goals, reproduce their missions and tactics, and effectively generate collective action. Social movement organizations develop as vehicles for social change. One purpose of this course is to examine the complex relationship between social movements and organizations. nIn order to understand the empirical link between movements and organizations, we will rely on social movement and organizational theory. Like the phenomena they seek to explain, these theories are strongly intertwined. Since the 1970s, organizational theory has strongly influenced social movement theory. Mayer Zald, John McCarthy, and others imported ideas from the burgeoning field of organizational theory to move social movement scholarship beyond naiuml;ve conceptions of collective action and crowd behavior. Under the umbrella of resource mobilization and political process theory, organizational theory strongly influenced our understanding of the structural underpinnings of collective action. In recent years, social movement scholars have also begun examining the culture and social psychological dimensions of social movement organizations. nDuring most of the 1980s and 1990s, the link between social movement theory and organizational theory was a one-way road. Social movement scholars did most of the conceptual borrowing and organizational theorists, for the most part, ignored political sociology. However, in the last decade the opposing lane has been opened. The rise of economic sociology acirc;## a large theoretical domain interested in the overlap between market, political, and social processes acirc;## and a growing demand among organizational theorists (especially in institutional theory) for mechanisms that explain purposeful, strategic action (i.e., agency) created fertile grounds for social movement theory. In the first part of the 2000s, leading scholars from both fields began holding conferences and workshops and a few articles were published seeking to show the value of social movement concepts to organizational theory. This effort to link the two literatures has been well received. As more scholars began importing social movement concepts to explain organizational phenomena, organizational scholarship turned its attention (again) to issues related to power, politics, and contestation. The convergence of the two research streams has also begun to spur theoretical innovation, especially in bridging structural and cultural explanations for organizational change.nIn this course we will cover topics that explore how movements use organizations to propel change and that examine how movements help generate social change by targeting organizations. We will also evaluate the theoretical developments at the nexus of these two literatures, identifying the major innovations as well as looking for new research opportunities.

OB 635. Social Movements and Organizations. 4 Units.

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

OB 652. Statistical Methods for Behavioral and Social Sciences. 5 Units.

For students who seek experience and advanced training in empirical research methods. Analysis of experimental data with methods ranging from simple chi-square to multiple regression models, including an introduction to mixed models. Uses the free statistical computing package R. Prerequisite: An intro stats class (Same as Psych 252 -- Co-taught with Ewart Thomas).

OB 653. Categories in Markets. 4 Units.

This seminar investigates the ways in which categories emerge in markets and shape market behavior. It covers recent theoretical and empirical work on the sociology of categories and its foundations in cognitive science. Particular attention is given to formalization.

OB 670. Designing Social Research. 3 Units.

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

OB 671. Social Psychology of Organizations. 3 Units.

This seminar focuses on social psychological theories and research relevant to organizational behavior. It reviews the current research topics in micro-organizational behavior, linking these to foundations in cognitive and social psychology and sociology. Topics include models of attribution, decision making, emotion, coordination, influence and persuasion, and the psychology of power and culture. Prerequisites: Enrollment in a PhD program, and a graduate-level social psychology course. Also listed as Sociology 361.

OB 672. Organization and Environment. 3 Units.

This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program. Also listed as Sociology 362.

OB 673. Perspectives on the Social Psychology of Organizations. 3 Units.

This seminar focuses on topics relevant to organizational behavior, drawing primarily on social psychological and some sociological research. Topics vary from year to year. In Fall 2014 the seminar will focus on group and team dynamics. Topics will include diversity, power and status dynamics in teams, expertise and knowledge utilization, information processing, trust and respect in teams, team leadership, and multi-level perspectives on team and group dynamics, among others. Prerequisites: Enrollment in a PhD Program. Cannot be audited or taken pass/fail.

OB 674. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.

This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13: This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

OB 675. Micro Research Methods. 3 Units.

The purpose of this course is to develop students' skill at designing, executing, interpreting, and describing micro-organizational and social psychological research. The course will have a practical focus and will focus on questions such as how to identify and formulate a tractable research question, how to decide on an appropriate research design and strategy; how to operationalize independent and dependent variables, and how to build a research paper.

OB 676. Social and Political Processes in Organizations. 4 Units.

Social psychological and sociological research at the meso, or intermediate between micro and macro, level of analysis. Topics vary from year to year, but usually include organizational routines and learning; mobility and attainment processes; gender and race inequality and discrimination; social networks; cultural perspectives on organizations, and related topics. Prerequisite: Ph.D. student.

OB 678. The Design and Process of Experimental Research. 2 Units.

This year-long course takes a hands-on approach to learning about experimental research. It will cover the entire process of experimental research from idea and hypothesis generation to study design, analysis, and publication. The topical content will be customized to the specific interests of the enrolled students, but generally will be concerned with questions about behavioral phenomena in organizational contexts.

OB 679. Work and Employment in Organizations. 2 Units.

Most macro-organizational theories draw on assumptions about how work is performed within organizations; yet organizational scholarship has for a generation been filled with descriptions of how work and the employment relationship have been transformed. This course will review current scholarship on trends in employment with organizations. The focus will be on trying to trace how changes at the level of work and the job aggregate to changes in macro-level outcomes such as the distribution of wages, career opportunities and other outcomes.

OB 683. Models of Social Dynamics. 4 Units.

This seminar provides an introduction to several important theoretical and formal models in sociology, psychology, and organization theory. The purpose is, in part, to provide an overview of commonly used models. More important, participants will learn to read, criticize, and formulate models for their own research questions. The focus is on model development, deriving implications from models, comparing models, but also on how models can be and have been tested. Topics include models of size distributions, network evolution, contagion, group formation, conceptual structures, decision making, and learning.

OB 690. Organizations in Competition. 3 Units.

When organizations compete, why do some fail while others succeed? This is one of the defining questions of the interdisciplinary research field known as "strategic management." In this seminar, we will address this question from a sociological perspective. Seen from this vantage point, the field of strategic management can be understood as the study of organizations in competition. Over the past 30 years, a considerable amount of research in organizational sociology has addressed this topic, only some of which has been explicitly framed as being aimed at the field of strategic management. This course studies the central themes that have emerged from this sociological research on organizations in competition.

OB 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OIT 691, POLECON 691, STRAMGT 691

OB 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OIT 692, POLECON 692, STRAMGT 692

OB 802. TGR Dissertation. 0 Units.

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OIT 802, POLECON 802, STRAMGT 802

Orthopedic Surgery Courses

ORTHO 10SC. Prevention by Design: Innovation for Chronic Disease Prevention. 2 Units.

Focuses on applying design-thinking methodology to identify barriers that limit compliance with evidence-based recommendations for disease prevention, and create a new process in which health workers and patients employ a disease iquest;prevention by designiquest; approach that more effectively reduces risk-behaviors and promotes adoption of a healthy lifestyle. Students learn about the nature of chronic disease, discuss the challenges of prevention given the complexity of chronic disease, and use case studies to empirically investigate the very people who will use the prevention programs. Students create a Human-Centered Design Program that complements approaches currently being used for disease prevention and makes a critically important addition by focusing on the unique needs, context, goals, desires, strengths and limitations of the end-user. Class structure includes presentations, guest speakers, discussion, and design sessions. Includes field trips for application of knowledge. The final week focuses on an integrated plan for iquest;prevention by designiquest;.

ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine. 3 Units.

Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

Same as: HUMBIO 97Q

ORTHO 102. Orthopaedic Surgical Anatomy. 2 Units.

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 202

ORTHO 110. Practical Sports Medicine and Orthopaedic Exam. 2 Units.

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Course requires an in-class presentation or short review paper.

Same as: ORTHO 210

ORTHO 120. Introduction to Lifestyle Medicine. 1 Unit.

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture.

Same as: ORTHO 220

ORTHO 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

ORTHO 201. Musculoskeletal Exam Practicum. 1 Unit.

Student initiated course. Opportunity to enhance knowledge and skills for conducting musculoskeletal exams. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic introductions followed by hands-on practice of specific aspects of the musculoskeletal exam.

ORTHO 202. Orthopaedic Surgical Anatomy. 2 Units.

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 102

ORTHO 210. Practical Sports Medicine and Orthopaedic Exam. 2 Units.

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Course requires an in-class presentation or short review paper.

Same as: ORTHO 110

ORTHO 220. Introduction to Lifestyle Medicine. 1 Unit.

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture.

Same as: ORTHO 120

ORTHO 260. Tissue Engineering. 3 Units.

Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.

Same as: BIOE 260

ORTHO 270. Orthopaedic Tissue Engineering. 3 Units.

Biological principles underlying the use of engineering strategies and biocompatible materials for tissue repair and regeneration. Structure, physiology, and mechanics of articular cartilage, bone, and dense soft connective tissues. Current ideas, approaches, and applications being implemented as therapeutic regimens for arthritis, spinal deformities, and limb salvage. Multidisciplinary constraints on the design and creation of tissue constructs. Prerequisite: familiarity with basic cell and molecular mechanisms underlying tissue differentiation.

ORTHO 280. Early Clinical Experience in Orthopedic Surgery. 1-2 Unit.

Provides an observational experience in a surgical specialty. Prerequisite: consent of instructor.

ORTHO 290. Introductory Clinical Mentorship. 1 Unit.

Preclinical elective designed to increase early clinical exposure to Orthopaedic Surgery for medical students. The elective provides opportunities for students to participate in the operating room, on surgery rounds and in surgical clinics. It will also include mentoring from attendings, residents and fellows. Prerequisite: consent of instructor.

ORTHO 299. Directed Reading in Orthopedic Surgery. 1-18 Unit.

Consists of studies in progress including circulatory problems; hemostatic disorders; homotransplantation; orthopedic pathology; bone growth; radiation injury; immunology; bacteriology; nasal function; muscular and nerve disorders and their effect on function, hand kinetics and hand function. Prerequisite: consent of instructor.

ORTHO 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

ORTHO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Otolaryngology Courses

OTOHNS 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

OTOHNS 200. Introduction to Otolaryngology-Head and Neck Surgery. 1 Unit.

Seminar series designed to expose students to the field, including its subspecialties and commonly performed procedures. Goals: supplement anatomical knowledge with clinical correlates; understand basic diagnosis, pathophysiology, and management of ENT problems commonly seen in primary care practice; how to perform a thorough head and neck examination. Seminars, given by faculty experts, cover major topics relating to each of the subdivisions within ENT. May be repeated for credit.

OTOHNS 299. Directed Reading in Otolaryngology. 1-18 Unit.

Prerequisite: consent of instructor.

OTOHNS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

OTOHNS 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Outdoor Education Courses

OUTDOOR 300. Survey of Adventure Experiences. 3 Units.

An examination of the historical, psychological, social, and philosophical foundations of adventure experiences in American culture and folklore. Experience outdoor living and adventure skills in a variety of contexts.

OUTDOOR 330. Climbing Wall Experiences. 1-2 Unit.

Instructional experiences include introductory through advanced skills and concepts of rock climbing, technique, safety, equipment and climbing vernacular. Rock 1 (beginning), Rock 2 (intermediate technique), Rock 3 (lead & sport), Strength and Conditioning, Route Setting, Bouldering for Fitness, and Climbing Wall Instructorship. Requires enrollment in Stanford Recreation section at <http://apps.ideal-logic.com/stanfordoutdoor>.

OUTDOOR 400. Fundamentals of Leadership. 3 Units.

Examination of sources required for authentic leadership: connections, identity, integrity and personal power. Analysis of effective leadership practices and the application to collaborative environments.

OUTDOOR 401. Outdoor Living Skills. 1 Unit.

Introduction to essential skills for individual and group sustainability in a backcountry setting.

OUTDOOR 405. Outdoor Living and Leadership. 1-2 Unit.

Develop leadership skills necessary to lead multi-day outdoor experiences for the inexperienced participant. Topics include: outdoor living, group dynamics, outdoor risk management, situational leadership, and facilitation.

OUTDOOR 406A. Outdoor Leadership Practicum- Backpacking. 1 Unit.

Outdoor, educational & leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with a critical self-assessment process to better understand their own levels of competence. Prerequisites: OUTDOOR 400 and OUTDOOR 401 OR OUTDOOR 405.

OUTDOOR 406B. Outdoor Leader Practicum - Winter Travel. 1 Unit.

Outdoor, education & leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with a critical self-assessment process to better understand their own levels of competence. Prerequisites: OUTDOOR 400 and OUTDOOR 401 OR OUTDOOR 405.

OUTDOOR 406C. Outdoor Leader Practicum - Rock Climbing. 1 Unit.

Outdoor educational & leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with a critical self-assessment process to better understand their own levels of competence. Prerequisites: OUTDOOR 400 and OUTDOOR 401 OR OUTDOOR 405.

OUTDOOR 406D. Outdoor Leader Practicum - Whitewater. 1 Unit.

Outdoor, educational & leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with a critical self-assessment process to better understand their own levels of competence. Prerequisites: OUTDOOR 400 and OUTDOOR 401 OR OUTDOOR 405.

OUTDOOR 410. Initiative Development Practicum. 1 Unit.

This experiential education style course covers development of group facilitation skills. Students will experience and deliver group initiatives surrounding popular leadership topics and learn how to help their group take away valuable learning from an educational experience. Topics include: safety, assessing the physical, human and social environment to improve group effectiveness. Prerequisites: None.

OUTDOOR 411. Service Leadership Practicum. 1 Unit.

A practical application of essential leadership skills for students holding campus and/or community leadership positions. Includes an extensive exploration of leadership issues and skills required in both professional and volunteer settings with a focus on conflict resolution, mediation, program planning, effective communication, and mentorship. Prerequisites: OUTDOOR 400; OUTDOOR 410.

OUTDOOR 415. Adventure Experience Management. 1 Unit.

This course covers the effective design and delivery of courses and multi-day outdoor experiences. Students will learn the fundamentals of: emergency action plans; how to manage local operating procedures (LOP); standard operating procedures; Instructional design and delivery. Prerequisite: OUTDOOR 406A, OUTDOOR 406B, OUTDOOR 406C, OUTDOOR 406D or Instructor Permission.

OUTDOOR 416. Outdoor Educator Apprenticeship. 1-2 Unit.

This course provides the student an opportunity to lead a multi-day outdoor experiences in an official capacity. Experience includes: outdoor living skills, planning and logistics, leadership, risk management, environmental integration, and education. Students will plan and co-lead field outings. Prerequisites: OUTDOOR 405; OUTDOOR 406; OUTDOOR 415.

OUTDOOR 495. Outdoor Education: Assistant Instructor. 1-2 Unit.

Assist Instructor Outdoor Leadership Courses. Instructor Approval and Defined Student Goals/Benchmarks Required Prior to instructing.

Overseas Studies General Courses

OSPGEN 32. The Copenhagen-Stockholm Trans-Idiomatic Arts Practicum. 2 Units.

Reflection on the difference between "home" and "away" through the prism of art. Review arts events throughout Copenhagen and Stockholm in varying media and create similarly varied original art projects in response. Lectures, discussion, "atelier laboratories," walking tours, and regional field trips. Location: Copenhagen, Denmark and Stockholm, Sweden.

OSPGEN 37. Brazil Technology and Engineering. 2 Units.

Two-week study trip to Brazil accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in Brazil. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in Brazil in order to maximize the learning experience students will have on the ground.

OSPGEN 39. India Technology and Engineering. 2 Units.

Two-week study trip to India accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in India. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in India in order to maximize the learning experience students will have on the ground.

OSPGEN 49. Conservation Photography. 2 Units.

Introduction to conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Basic digital photography and the theory and application of photographic techniques. Case studies of conservation issues examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and field trips culminating in individual and group projects. Location: Costa Rica.

OSPGEN 53. Corals of Palau: Ecology, the Physical Environment, and Reefs at Risk. 2 Units.

Science-based understanding of modern threats to coral reefs through coral reef ecology, biogeochemistry, and physics. Field-based understanding of the complex array of organisms, structures, and physical and biological processes that constitute a healthy coral reef system. Skills for measuring biological, physical, and chemical time series changes on a coral reef. Proposed policy and management solutions as an entry into systems analysis and Earth Systems type thinking. Extensive field work components on small boats and/or in the water. Location: Republic of Palau.

OSPGEN 55. Island Biogeography and History of Tasmania. 2 Units.**OSPGEN 56. Food, Water and War: Life in the Mekong. 2 Units.****OSPGEN 57. History, Arts and Culture of Southeastern Europe. 2 Units.****OSPGEN 58. Magna Carta 1215 and 2015: Land, Law, Liberty. 2 Units.****OSPGEN 59. Going Medieval: Freiburg im Breisgau. 2 Units.****OSPGEN 62. St. Petersburg: Crucible of Russian History and Culture. 2 Units.****OSPGEN 63. Bio-Cultural Diversity and Community-Based Conservation in Oaxaca. 2 Units.**

Examine the conservation and use of natural resources by indigenous communities through the disciplines of ecology and indigenous culture. Test if/how academic institutions and rural indigenous institutions can jointly undertake the challenge of sustainably managing biological resources. Two complementary experiences: i) short components at the beginning and end, visiting Mexico City; National Commission of Biodiversity and UNAM in Mexico City; and ii) work in the City of Oaxaca and two indigenous communities, Ixtla and San Juan Jayatlán, which are regarded as exemplary in sustainable use of biodiversity.

OSPGEN 137. Brazil Technology and Engineering. 2 Units.

Two-week study trip to Brazil accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in Brazil. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in Brazil in order to maximize the learning experience students will have on the ground.

OSPGEN 139. India Technology and Engineering. 2 Units.

Two-week study trip to India accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in India. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in India in order to maximize the learning experience students will have on the ground.

OSPGEN 259. Community Health in Oaxaca. 2 Units.

Continuation of MED 259. Close observation of clinicians at work in community health settings in Oaxaca and service with local community health organizations. Combination of classroom study and discussion with cultural immersion, language training, clinical shadowing, and community service. Topics include: Mexican healthcare system; cultural, socioeconomic and educational factors impacting health of Mexicans and Mexican immigrants to U.S.; Mexican cultural and health beliefs; Mexican migration as a multi-ethnic process. Prerequisite: Acceptance into program and successful completion of MED 259 (Spring quarter 2015).

Overseas Studies in Australia Courses

OSPAUSTL 10. Coral Reef Ecosystems. 3 Units.

Key organisms and processes, and the complexity of coral reef ecosystems. Students explore the Great Barrier Reef from the southern end which demonstrates the physical factors that limit coral reefs, to the northern reef systems which demonstrate key aspects of these high biodiversity ecosystems. Human-related changes. Emphasis is on research experiences and development of analytical skills. Two units only counted for the Biology major.

OSPAUSTL 25. Freshwater Systems. 3 Units.

Integrated water resource management and how this applies across the globe, comparing strategies and results in the developing and more developed world. Ethics, values and politics of water and the management of extremes such as drought and flood. Ecology and hydrology in an urban context, along with important current issues such as stormwater and water sensitive urban design. Construction of a well, a water tank, and a pit latrine. Community service working with a local catchment management group on riparian and wetland restoration work. Field work complements lectures.

OSPAUSTL 30. Coastal Forest Ecosystems. 3 Units.

Prehistory of Australian rainforest and how rainforest structure and biodiversity change with altitude, latitude, and geology. Tropical coastal marine wetlands, mangrove forests, and the relationship between land- and sea-based biota. Biology and ecology of marine plants, mangroves, and tropical salt marsh. Introduction to specialized fields of marine plant biology and ecology including biogeography and evolution, aquatic plant ecophysiology, water quality and bioindicator techniques, pollution and eutrophication, and environmental control of marine plant distribution and productivity. Two units only counted for the Biology major.

OSPAUSTL 40. Australian Studies. 3 Units.

Introduction to Australian society, history, culture, politics, and identity. Social and cultural framework and working understanding of Australia in relationship to the focus on coastal environment in other program courses. Field trips.

OSPAUSTL 50. Targeted Research Project. 4 Units.

Prior to arriving in Australia, students establish a link with University of Queensland faculty to develop project ideas that combine personal interests and career goals with opportunities presented by the Australian Coastal Studies program, such as how mangrove roots find sediment rich zones of the shore, or the dynamics of ecotourism in southern and northern coastal Queensland. Project report and presentation in Australia.

Overseas Studies in Barcelona Courses

OSPBARCL 101. Language and Culture in Catalonia. 4 Units.

Preparation for students to function in the academic and social environment of Barcelona. Basic listening, reading, and comprehension in Catalan; review of Spanish with focus on writing academic papers and listening to lectures. Introduction to Barcelona with emphasis on contemporary history, culture, and politics. Bilingualism; multiculturalism; varieties of nationalism and globalization in context of Barcelona.

OSPBARCL 114. The Spanish Civil War and Historical Memory. 5 Units.

The Spanish Civil War's memory and legacy as seen in today's society, culture and politics in the context of Western Europe. Current reality of Spain and Catalonia and the value of history and its construction in the formation of the political culture of a country. Two thematic blocks: historical evolution of Spain from the Second Republic until the end of Franco and the transition to democracy; relationship between history and memory focusing on the Catalan-Spanish case.

OSPBARCL 125. 21st Century Transatlantic Literature. 5 Units.

Transatlantic narrative of XXI century in Catalonia, Spain and Latin America, based around authors of each cultural area and their essays, stories or poem in Spanish. Texts studied in their contemporary settings: migration and borders, the new internationalism, youth and citizen protest movements, communication and digital technology, citizenship and ethical solidarity. Analysis of the forms of futurity being debated today in both Spanish literature and ideas.

OSPBARCL 126. Modern Art in Barcelona: From Gaudí to Tàpies. 5 Units.

Introduction to modern art based on the city of Barcelona: from the architecture of Modernism and the painters of the "4Gats" tavern, to Picasso, Miróacute; and Dalíacute; and the post-war avant-garde. Emphasis on the relationship between different artistic disciplines as well as between these and the literature and economic and political situation of the time, all placed in the international art context.

OSPBARCL 127. Technology, Digital Cities and the Urban Experience: Barcelona "Smart City". 5 Units.**OSPBARCL 140A. Universitat de Barcelona: Humanities 1. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

OSPBARCL 170C. Universitat Politècnica de Catalunya: Engineering 3. 5 Units.

Student selection from course catalog of Universitat Politegrave;cnica de Catalunya.

Overseas Studies in Beijing Courses

OSPBEIJ 1C. First-Year Modern Chinese, First Quarter. 5 Units.

Conversation, grammar, reading, elementary composition.

OSPBEIJ 3C. First-Year Modern Chinese, Third Quarter. 5 Units.**OSPBEIJ 6C. Beginning Conversational Chinese, First Quarter. 2 Units.**

Three quarter sequence. Basic language skills in Mandarin to function abroad.

OSPBEIJ 8C. Beginning Conversational Chinese, Third Quarter. 2 Units.

Continuation of CHINLANG 7. Basic language skill in Mandarin to function abroad. Prerequisite: CHINLANG 7 or consent of instructor.

OSPBEIJ 9. Chinese Language Tutorial. 2 Units.**OSPBEIJ 11. Computers, Ethics, and Public Policy. 4 Units.**

Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: intellectual property, security, privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106A.

OSPBEIJ 17. Chinese Film Studies. 4 Units.

Stages of Chinese cinema from the establishment of P.R. China in 1949 to the present. State policies, filmmaking trends, representative filmmakers and films, and the state of the industry in the different periods, with close readings of some important films. Historical perspective and broad knowledge of Chinese cinema; academic approaches to film studies.

OSPBEIJ 20. Communication, Culture, and Society: The Chinese Way. 4 Units.

How people communicate, what they achieve through their communications, and the social and cultural consequences of these communicative behaviors. Focus on the interactive relationship between communication, culture and society in China. How communication habits are influenced by the individual's culture and how communication acts help to change and transform the society in which we live.

OSPBEIJ 21C. Second-Year Modern Chinese. 5 Units.**OSPBEIJ 23C. Second-Year Modern Chinese. 5 Units.****OSPBEIJ 24. China's Economic Development. 5 Units.**

Historical stages, economic and political rationale, and effectiveness of the economic policies and institutional changes that have shaped China's economic emergence. China as case study for understanding how institutions and institutional change affect economic and social development. Guest speakers; field study; trip to rural areas.

OSPBEIJ 34. Urban Studies in Contemporary China. 4 Units.

Urban development in developing countries with a focus on urban issues in contemporary China urban issues in the contemporary China. Urbanization in the global context, which serves the context for further study of urban China. Trend and the uniqueness of urbanization in China since 1949., looking at issues such as the socialist ideology and institutions, the Household Registration (hukou) system, rural to urban migration and globalization will be studied. Urban transformation, with particular focus on urban restructuring, urban land and housing reform, urban infrastructure, and urban sustainability. Urban planning, urban management and governance in China.

OSPBEIJ 35. Toward a Sustainable Future: China's Environmental Challenges. 4 Units.**OSPBEIJ 42. Chinese Media Studies. 4 Units.**

Fundamental changes in Chinese media. Issues such as: how Chinese media emerge and evolve against the background of modern Chinese history; how they interact with government, sponsors, receivers, and other social institutions; and implications for Chinese social development.

OSPBEIJ 48. Chinese Literature: Tradition in Transformation. 4 Units.

Classical Chinese literature from the beginning (ca. 1000 BC) to the 14th century. Primary texts in translation with attention to the poetic works that feature Chinese literary tradition. Understanding of past experience of Chinese people living in another cultural space through observation, analysis, and reconstruction.

OSPBEIJ 60. Chinese Philosophies and Modern China. 4 Units.

Introduction to Chinese philosophy. Daoism, Confucianism, the Confucian development in the Song and Ming periods, the "liberal" and Legal school of thought, Buddhism, the Confucian thinkers of the Modern period, and "Dialectical Materialism." Chinese form of "liberalism" since the 1980s and the future of Confucian scholarship in the postmodern era. How central questions of Western philosophy pertain to the Chinese tradition, and how relevant Chinese philosophy is to the differences in approaches taken to such issues as truth, good, beauty, mind, body, spirit, being, cosmology, ontology, and epistemology.

OSPBEIJ 67. China-Africa and Middle East Relations. 4 Units.

China's relations with the outside world, with a focus on Africa and the Middle East. Historically contextualized relations; evolution of relations within the international climate during different periods, especially in the present; impact of geopolitical and geoeconomic relations on the existing international order.

OSPBEIJ 101C. Third-Year Modern Chinese. 5 Units.**OSPBEIJ 103C. Third-Year Modern Chinese. 5 Units.****OSPBEIJ 199A. Directed Reading A. 1-4 Unit.**

Course may be repeated for credit.

OSPBEIJ 199B. Directed Reading B. 1-4 Unit.

Course may be repeated for credit.

OSPBEIJ 211C. Fourth-Year Modern Chinese. 5 Units.**OSPBEIJ 213C. Fourth-Year Modern Chinese. 5 Units.**

Discussions based on short stories, essays and newspaper articles, and academic journal articles. Emphasis on social and cultural issues in contemporary China. Speed-reading techniques and subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language.

Overseas Studies in Berlin Courses

OSPBER 1Z. Accelerated German: First and Second Quarters. 8 Units.

A jump start to the German language, enabling students with no prior German to study at the Berlin Center. Covers GERLANG 1 and 2 in one quarter.

OSPBER 2Z. Accelerated German, Second and Third Quarters. 8 Units.

Qualifies students for participation in an internship following the study quarter. Emphasis is on communicative patterns in everyday life and in the German work environment, including preparation for interviews.

OSPBER 3B. German Language and Culture. 5 Units.

Grammar, composition, and conversation. Increases fluency in German as rapidly as possible to help students take advantage of the many opportunities in Berlin. Corequisite: GERLANG 100B.

OSPBER 15. Shifting Alliances? The European Union and the U.S.. 4-5 Units.

The development of European integration, a model for global security and peace, and a possible replacement for the U.S. position as unilateral superpower. Competing arguments about the state of transatlantic relations.

OSPBER 17. Split Images: A Century of Cinema. 3-4 Units.

20th-century German culture through film. The silent era, Weimar, and the instrumentalization of film in the Third Reich. The postwar era: ideological and aesthetic codes of DEFA, new German cinema, and post-Wende filmmaking including *Run Lola Run* and *Goodbye Lenin*. Aesthetic aspects of the films including image composition, camera and editing techniques, and relation between sound and image.

OSPBER 21B. Intermediate German. 5 Units.

Grammar review, vocabulary building, writing, and discussion of German culture, literature, and film. Corequisite: OSPBER 100B.

OSPBER 24B. Advanced German Grammar. 2 Units.

Syntax and organizational patterns (connectors, structuring and cohesive devices) for various types of texts and arguments, contrastive vocabulary practice, and reading strategies. Skills for writing well-structured critical essays, giving effective presentations, and reading extensively as well as intensively.

OSPBER 25. Architecture, Memory, Commemoration. 5 Units.

Exploration of questions about architectural form together with a sense of place in Berlin and surrounding regional cities. Interdisciplinary approach to the study of urbanism and memory through the concerns of cultural geography, anthropology, history, fiction and films. Trips to sites to explore how memory is visualized in the built environment. Themes of the course include: "About Form," "Mapping the City," and "Heritage and Commemoration."

OSPBER 30. Berlin vor Ort: A Field Trip Module. 1 Unit.

The cultures of Berlin as preserved in museums, monuments, and architecture. Berlin's cityscape as a narrative of its history from baroque palaces to vestiges of E. German communism, from 19th-century industrialism to grim edifices of the Sachsenhausen concentration camp.

OSPBER 37. Leading from Behind? Germany in the International Arena since 1945. 4-5 Units.

Germany's changing role in European and world politics. Have old principles based on lessons from World War II become obsolete? Can Germany be a leading power in global affairs?.

OSPBER 39. Globalization and the Fate of Western Art Music. 2 Units.

An activity based directed group. Attendance of several concert performances required.

OSPBER 40. Global Trends: Anticipating the Future in Order to Shape It. 4-5 Units.

Examination of megatrends such as globalization and interdependence, demographic change, the rise of new powers, increasing prosperity and inequality, demand for limited resources, diffusion of power, and demands on governments everywhere; how they interact, and possible implications for the international system. Also examination of potential game changers such as climate change, new technologies, the global economy, and what the United States does/does not do. Goal is enhanced understanding of the challenges, how they interact, and what can or must be done to preserve peace and prosperity, maximize benefits, and minimize risks.

OSPBER 40B. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPBER 41. Directed Reading on Global Issues/International Relations. 3 Units.

Directed reading/tutorial on a wide range of international relations topics including China's rise, grand strategy, nuclear proliferation, and climate change. Students will be expected to demonstrate understanding of key ideas, core issues, and possible implications of alternative hypotheses. Choice of topic will determine whether a paper is required or mastery of subject can be demonstrated through discussion alone.

OSPBER 43. Culture Clashes: Race, Ethnicity and Migration in Germany and the U.S.. 3 Units.

This course interrogates cultural products from Germany and the U.S. (novels, graphic narratives, tv and film, advertising images) to explore the cultural imaginaries through which people understand themselves, their compatriots, and the incoming migrants to the geopolitical regions in which they live. In asking what it might take to create racial and ethnic justice in our time, we look at the diversity of group formation, attend to conflicting claims to national belonging, and debate theoretical perspectives on race and ethnicity.

OSPBER 44. Berlin and its Artists. 4 Units.

Visual environment of Berlin, shaped and reshaped by artists who in turn were transformed by the city. Links between their biographies and Berlin. Retracing artists' lives to unveil contemporary background and characteristic circumstances under which their work was created. Images of Berlin through the eyes of those who contributed to shaping it: from Schluuml;ter to Liebermann to Eliacut;esson. Visits to museums and locations related to the life and work of the artists complement the theoretical discussions. Introduction to the art of drawing, using sketchbooks as a tool for exploring the artworks in Berlin and for understanding what moved the artist to create them.

OSPBER 46. Gardens of Earthly Delight: Berlin's Culture of Landscape and Public Space. 1-2 Unit.

This course examines the cultural geography of Germany; its social spaces as sites for the development of the personal, social, and political experiences of a German cultural identity. Focusing on literary forms, landscape art, and garden history in Berlin and its environs, we consider the roles of landscape and garden design and how they represent the cultural and social ideology of their times. Activities include readings and field trips. Additional writing for students who choose the 2 unit option.

OSPBER 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPBER 66. Theory from the Bleachers: Reading German Sports and Culture. 3 Units.

German culture past and present through the lens of sports. Intellectual, societal, and historical-political contexts. Comparisons to Britain, France, and the U.S. The concepts of *Kouml;rperkultur*, *Leistung*, *Show*, *Verein*, and *Haltung*. Fair play, the relation of team and individual, production and deconstruction of sports heroes and heroines, and sports nationalism. Sources include sports narrations and images, attendance at sports events, and English and German texts. Taught in German.

OSPBER 68. Protestant Reformation. 4 Units.

New forms of Christian religious thought and practice that emerged in Western Europe in the early to mid-sixteenth century and decisively shaped the course of Western history. Religious status quo and other forms of religious dissent that challenged late medieval Christendom; proposals for reform exemplified by Martin Luther, Andreas Karlstadt, Thomas Muuml;ntzer; impact of the changes in religion and the conflicts over religion for society more broadly.

OSPBER 70. The Long Way to the West: German History from the 18th Century to the Present. 4-5 Units.

Battles still current within Germany;quest;s collective memory. Sources include the narrative resources of museums, and experts on the German history in Berlin and Potsdam. Field trips.

OSPBER 100B. Berlin Heute. 2 Units.

Required for students enrolled in OSPBER 21B; open to students in other German language classes. Active use of German, including vocabulary from a variety of fields and disciplines, and discussion of current issues.

OSPBER 101A. Contemporary Theater. 5 Units.

Texts of plays supplemented by theoretical texts or reviews. Weekly theater visits, a tour of backstage facilities, and discussions with actors, directors, or other theater professionals. In German. Prerequisite: completion of GERLANG 3 or equivalent.

OSPBER 101B. Advanced German. 5 Units.

For intermediate and advanced students. Focus is on Berlin through film, literature, music, live performance, news media, and field trips. Essay writing, vocabulary building, and in-class presentations. Reading literature and news stories, essay writing, vocabulary building, and in-class presentations.

OSPBER 115X. The German Economy: Past and Present. 4-5 Units.

The unsteady history of the German economy in the Wilhelmine Empire, the Weimar Republic, the Third Reich, the post WWII divided and united Germany. Special attention on the economic policy of the Third Reich and the present role of Germany in the world economy.

OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU. 4-5 Units.

The institutional architecture of the EU and its current agenda. Weaknesses, strengths, and relations with partners and neighbors. Discussions with European students. Field trips; guest speakers.

OSPBER 161X. The German Economy in the Age of Globalization. 4-5 Units.

Germany's role in the world economy: trade, international financial markets, position within the European Union; economic relations with Eastern Europe, Russia, the Third World, and the U.S. International aspects of German economic and environmental policies. The globalization of the world's economy and Germany's competitiveness as a location for production, services, and R&D, focusing on the German car industry.

OSPBER 174. Sports, Culture, and Gender in Comparative Perspective. 5 Units.

Theory and history of mass spectator sports and their role in modern societies. Comparisons with U.S., Britain, and France; the peculiarities of sports in German culture. Body and competition cultures, with emphasis on the entry of women into sports, the modification of body ideals, and the formation and negotiation of gender identities in and through sports. The relationship between sports and politics, including the 1936 Berlin Olympic Games.

OSPBER 198D. Humboldt Universitat: Humanities 2. 1-3 Unit.

Course may be repeated for credit.

OSPBER 198F. Humboldt Universitat: Social Sciences 2. 1-3 Unit.

.

OSPBER 198H. Freie Universitat: Humanities 3. 1-5 Unit.

Course may be repeated for credit.

OSPBER 198K. Weissensee Art University 1. 1-4 Unit.

Course may be repeated for credit.

OSPBER 198L. Weissensee Art University 2. 1-4 Unit.

Course may be repeated for credit.

OSPBER 198M. Weissensee Art University 3. 1-4 Unit.

Course may be repeated for credit.

OSPBER 199A. Directed Reading A. 2-4 Units.

Course may be repeated for credit.

OSPBER 199B. Directed Reading B. 2-3 Units.

Course may be repeated for credit.

OSPBER 199C. Directed Reading C. 1-3 Unit.

.

OSPBER 199D. Humboldt Universitat: Humanities. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199F. Humboldt Universitat: Social Sciences. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199G. Freie Universitat: Social Sciences 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199H. Freie Universitat: Humanities 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199J. Freie Universitat: Natural Sciences 1. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199K. Freie Universitat: Social Sciences 2. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199L. Freie Universitat: Humanities 2. 1-3 Unit.

Course may be repeated for credit.

OSPBER 199M. Freie Universitat: Natural Sciences 2. 1-3 Unit.

Course may be repeated for credit.

Overseas Studies in Cape Town Courses

OSPAPTWN 16. South Africa Sites of Memory. 2 Units.

Required Course. Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.

OSPCPTWN 18. Xhosa Language and Culture. 2 Units.

History of the Xhosa language; understanding Xhosa culture and way of life. Listening, speaking, reading and writing, combined with the social uses of the language in everyday conversations and interactions. Intercultural communication. Content drawn from the students' experiences; experiences in local communities through their service learning/volunteer activities to support the building of the relationships in these communities. How language shapes communication and interaction strategies. Course may be repeated for credit.

OSPCPTWN 24A. Targeted Research Project in Community Health and Development. 3 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community based research. Introduction to approaches, methods and critical issues of partnership-based, community-engaged research and to the community-based research partners. Qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Preparation of research proposals and plans for research carried out during the second quarter through OSPCPTWN 24B.

OSPCPTWN 24B. Targeted Research Project in Community Health and Development. 5 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community-based research. Substantive community health or development investigations in collaboration with the Stanford Centre's community partners: Western Cape NGOs or government agencies, or community-based organizations or groups. Students' research supported through methods workshops, sharing of progress and problems, and data and findings presentations. Prerequisite: OSPCPTWN 24A.

OSPCPTWN 31. Political Economy of Foreign Aid. 3 Units.

Political economy approach to foreign aid. Context of debate on development: differences between developed and less developed countries, concept of poverty, how to measure development. History of foreign aid; main actors and characteristics of official development assistance. Theoretical and empirical impact of aid with regard to economic growth and governance. Benefits and problems associated with aid.

OSPCPTWN 33. Southern Africa: from Liberation Struggles to Region-Building. 4 Units.

Process by which the region moved from colonialism/apartheid to majority rule through a series of liberation struggles, and the outcomes of those struggles. Cases of Angola and Mozambique, Zimbabwe, Namibia and South Africa. Transitions from apartheid to democracy in Namibia and South Africa through negotiated settlements. Topics include: Truth and Reconciliation Commission; role of the Southern African Development Community; challenges in region today; influence of violent past and legacies of struggle against colonialism and apartheid on present situation.

OSPCPTWN 36. The Archaeology of Southern African Hunter Gatherers. 4 Units.

Archaeology, history and ethnography of the aboriginal hunter gatherers of southern Africa, the San people. Formative development of early modern humans and prehistory of hunters in southern Africa before the advent of herding societies; rock paintings and engravings of the subcontinent as situated in this history. Spread of pastoralism throughout Africa. Problems facing the descendants of recent hunter gatherers and herders in southern Africa, the Khoisan people.

OSPCPTWN 38. Genocide: African Experiences in Comparative Perspective. 3-5 Units.

Genocide as a major social and historical phenomenon, contextualized within African history. Time frame ranging from the extermination of indigenous Canary Islanders in the fourteenth and fifteenth centuries to more recent mass killings in Rwanda and Darfur. Emphasis on southern African case studies such as Cape San communities and the Herero people in Namibia. Themes include: roles of racism, colonialism and nationalism in the making of African genocides. Relevance of other social phenomena such as modernity, Social Darwinism, ethnicity, warfare and revolution. Comparative perspective to elucidate global dimensions.

OSPCPTWN 43. Public and Community Health in Sub-Saharan Africa. 4 Units.

Introduction to concept of public health as compared with clinical medicine. Within a public health context, the broad distribution of health problems in sub-Saharan Africa as compared with U.S. and Europe. In light of South Africa's status as a new democracy, changes that have occurred in health legislation, policy, and service arenas in past 16 years. Topics include: sector health care delivery, current distribution of infectious and chronic diseases, and issues related to sexual and reproductive health in South Africa. Site visits to public sector health services and health related NGOs.

OSPCPTWN 44. South African Urban Challenges in Comparative Context. 4 Units.

Material and socio-cultural dimensions of the multiple spaces making up South African cities. The gendered, placed, sexual, and racial character of homes, neighborhoods, and cities. Ways in which crises such as housing shortages and tenure insecurity are materially and socially embodied in economically impoverished families and communities; lives. Interplay of this body politic with economic and political contexts in which the meaning of citizenship is crafted. Urban fieldwork with the Valhalla Park United Civic Front, a community-based organization in Cape Town.

OSPCPTWN 47. South Africa's Role as an Emerging Power: Global and Regional Dimensions. 3 Units.

Emerging role of middle income countries like China, India and Brazil with South Africa being the only African country belonging to this new cluster. This dynamic country group is regarded as a distinct feature of a new global landscape. Topics include: Academic and policy debate on emerging countries; South Africa's role on the continent and on the global level (historical background: before / after 1994, South Africa as an 'emerging power', South Africa's regional role in different areas, security South Africa's role on a global level, intellectual and political capacity to be an emerging country, other regional powers in Africa); South Africa and other emerging powers.

OSPCPTWN 49. Water in South Africa: Human Right, Public Trust, or Market Commodity?. 4 Units.

History of South Africa's current water policies and its approach to the management of its water resources, guaranteeing all citizens a "minimum basic quantity of water" - a human right to water - as well as providing for "ecological water reserves" to meet environmental needs. Market concepts to help meet its water goals. How is South Africa doing in meeting its water goals and what policy measures might better realize those goals? Meetings with local and national water officials, non-profit leaders, and water users to discuss the water challenges that the nation faces.

OSPCPTWN 50. [Independent Study] Conservation & Resources in Sub-Saharan Africa. 2-3 Units.

Independent research and writing on topics related to conservation and resources in Sub-Saharan Africa. Potential topics include climate change and adaptation to South Africa, community-based conservation in Sub-Saharan Africa (examining conservation experiments such as the Lewa Conservancy and the Northern Rangeland Trust in Kenya), the provision of energy in South Africa, and citizen rights to healthy environment in African nations.

OSPCPTWN 51. Urban Design and Development: Opportunities and Limitations of WDCCT 2014. 4 Units.

Examination of the arguments that urban design has the capacity to change the way people live and think about community using opportunities presented through Cape Townquest's role as World Design Capital (WDC) for 2014. WDC projects to focus on reconnecting the city and reconciling communities. Student service learning in locations where World Design Capital projects will likely be implemented; analysis of objectives, the intended and unintended consequences; impact of the project on people living in its vicinity.

OSPCPTWN 54. Monuments and Memory. 3 Units.

Required course. How do particular Eastern Cape historical sites reflect the history of South Africa? How have the objects of public memory changed over time? In what ways, and to what ends are people and events remembered today? What kinds of personal identities are involved? Critical engagement with the concept of heritage and its institutions, private and public (incl. National Heritage Council, SA Heritage Resource Agency, and various museums). Focus on Eastern Cape sites, via week-long field trip, which will include Qunu; Albany; Port Elizabeth; King Williams Town; and Alice.

OSPCPTWN 55. Arts of Change. 2-4 Units.

Required course. What role have the creative arts played in South African society? Using a wide variety of artistic media (literature, the visual and performing arts) study cultural productions that reflect South Africa's social dynamic and that, in some cases, have affected the course of history. Historical perspective (e.g. Soweto 1976) combined with a contemporary one in the week-long National Arts Festival in Grahamstown. Service-learning component in Cape Town.

OSPCPTWN 56. HIV Policy Issues and Models. 3 Units.

Application of mathematical, statistical, economic, and systems models to problems in HIV policy. Areas covered include: biology, epidemiology and economics of HIV disease; role of policy modeling in informing policy decisions; HIV screening; HIV treatment; HIV prevention among various at-risk groups; potential effect of HIV vaccines and drugs that act as vaccines; effects of co-infections; and analysis of potential portfolios of investment in HIV prevention and treatment programs. Analyses includes modeling techniques such as simple cost analysis; cost-effectiveness analysis; statistical and probabilistic analysis; simulation; Markov models; epidemic modeling; and simulation, analysis, and control of dynamic systems. Local field trips to better understand the local healthcare system and politics, and the spread and impact of HIV and relative diseases.

OSPCPTWN 57. Directed Study in Health Systems and Policy. 1-3 Unit.

Directed study projects focusing on some aspect of health systems and policy in the Southern African context. Example topics include analysis of: local HIV control policies; the South African health care system; health care delivery patterns; investments in health infrastructure as an enabler of health care delivery; health systems strengthening and concomitant improvements in population health; and social networks and influences in disease risk. Students will be expected to write an in-depth term paper that carefully analyzes the problem under consideration. Analyses that include the development of mathematical or analytical models are encouraged.

OSPCPTWN 58. Racism, Colonialism and Genocide. 3-5 Units.

Introduction to the social and historical phenomenon of genocide, contextualized within the contours of world history as well as the histories of European colonialism and Western racist thought from the start of European colonial expansion in the fifteenth century to the twentieth century. Global comparative perspective focusing on southern African, North American and Australian case studies. Theoretical engagement with the concept of genocide and approaches to the subject. In addition to racism and colonialism, themes include: roles of settler regimes; development of the global economy; nationalism in the making of these genocides.

OSPCPTWN 68. Cities in the 21st Century: Urbanization, Globalization and Security. 4 Units.

Cities in a globalizing world. Themes: challenges posed by globalization; general and specific responses of cities to these challenges; security issues created by globalization and urbanization. Concerns related to food security, resource availability, and threat of political instability. Policies recommended by World Bank. Case study method.

OSPCPTWN 70. Youth Citizenship and Community Engagement. 5 Units.

Critical thinking about core concepts in community engagement such as community, self, and identity. The course aims to cultivate a critical consciousness about the meaning of charity, caring, social justice and the aims of engagement with communities to enhance self awareness, awareness of others who are different, awareness of social issues, and an ethic of care where students can be change agents. The meaning of youth citizenship as it relates to engagement with communities will be explored.

OSPCPTWN 71. Power and Performance in Community Practice. 4 Units.

Critical consideration of core concepts in community engagement. Community engagement as a practice, varying subject positions that are given or performed upon and by the community members and those engaging with the community. Dominant models of community engagement: how each model positions students and how the model positions the community members. Seminar topics include issues of biopower, performance of identity (particularly racial identities) and practices of knowledge/power. Critical and reflexive application of these concepts related to community-engaged practice. Guidance in application of critical reflexive thought in practice. Particular attention to the ethics of North-South community engagements.

OSPCPTWN 199A. Directed Reading A. 2-4 Units.

Course may be repeated for credit.

OSPCPTWN 199B. Directed Reading B. 1-5 Unit.

Course may be repeated for credit.

Overseas Studies in Florence Courses

OSPFLOR 1A. Accelerated First-Year Italian, Part 1. 5 Units.

Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language Prerequisite: Placement .

OSPFLOR 1F. First-Year Italian, First Quarter. 5 Units.

All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities.

OSPFLOR 2A. Accelerated First-Year Italian, Part 2. 5 Units.

Continuation of ITALLANG 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: Placement Test, ITALLANG 1A or consent of instructor. Fulfills the University language requirement.

OSPFLOR 2F. First-Year Italian, Second Quarter. 5 Units.

Continuation of ITALLANG 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2.

OSPFLOR 3F. First-Year Italian, Third Quarter. 5 Units.

Continuation of ITALLANG 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2 or consent of instructor. Fulfills the University language requirement.

OSPFLOR 11. Film, Food and the Italian Identity. 5 Units.

Food in Italian cinema staged as an allegory of Italy; social, political and cultural milieu. Intersections between food, history and culture as they are reflected in and shaped by Italian cinema from the early 1900s until today. Topics include: farmer's tradition during Fascism; lack of food during WWII and its aftermath; the Economic Miracle; food and the Americanization of Italy; La Dolce Vita; the Italian family; ethnicity, globalization and the re-discovery of regional culinary identity in contemporary Italy. Impact of cinema in both reflecting and defining the relationship between food and culture.

OSPFLOR 17. The Evolution of Modern Italian Design. 5 Units.

Cultural context that gave rise to the globally recognized phenomenon of "Italian Design" in the 20th century. Historical complexity of Italian design through an analysis of selected case studies. Several on-site visits to important areas of design innovation and production offer students hands-on opportunities.

OSPFLOR 19. Florence for Foodies: Discovering the Italian Culinary Tradition. 1 Unit.

Factors that shape modern Italian cuisine such as historical heritage, foreign influences, and the "Mediterranean diet." Explore the Italian culinary tradition as well as its more modern face, open to innovation and to technology. Four cooking classes, tastings, on-site visits, and meetings with guest speakers who are experts in their fields.

OSPFLOR 20. Design Driven Innovation: Italian Excellence. 5 Units.

Focus on fashion, furniture and food, the three Fiquets; of Italian style. Historical knowledge combined with contemporary analysis; tools to understand the role of Italian design and its contribution to the innovation process. Masters and masterpieces of each discipline starting from the point of view of design itself with case studies specifically dedicated to each of the three Fiquets;. On-site classes complement lectures.

OSPFLOR 21F. Accelerated Second-Year Italian, Part A. 5 Units.

Review of grammatical structures; grammar in its communicative context. Listening, speaking, reading, and writing skills practiced and developed through authentic material such as songs, newspaper articles, video clips, and literature. Insight into the Italian culture and crosscultural understanding. Prerequisite: one year of college Italian if completed within two quarters of arriving in Florence, or ITALLANG 21.

OSPFLOR 22. The Italian Way to Car Design. 5 Units.

The history of car design, analysis of the most famous Italian car companies: Alfa Romeo, Lamborghini, Maserati. Car body designers such as Pininfarina, Touring, Castagna and Zagato as well as individual designers. On site visits to relevant historical collections and museums.

OSPFLOR 22F. Accelerated Second-Year Italian Part B. 5 Units.

Grammatical structures, listening, reading, writing, speaking skills, and insight into the Italian culture through authentic materials. Intermediate to advanced grammar. Content-based course, using songs, video, and literature, to provide cultural background for academic courses. Prerequisite: ITALLANG 21 within two quarters of arriving in Florence or ITALLANG 21A or OSPFLOR 21F.

OSPFLOR 25. Italian Food: A Cultural History. 5 Units.

Why is Italian cooking so popular? And why does it play such a key role in the national identity? Observing a meal, we can explain everything, or almost, about people. Eating is a universal experience. However, not only we do not eat the same things but also the ways, places and times we eat change according to traditions and habits. The culture of food is deeply embedded in history. This course will use documentary sources as well as art, literature, cultural studies, statistical data, and movies to describe how meals can paint a fresco of the history of Italians and their food. Economy, culture, class, gender, race, geography, international relations: all have a part in depicting the outline of this history of Italian food in the last 150 years. And all raise questions: how can food mark social differences, set cultural boundaries, raise ethical and religious controversies, involve agribusiness and politics, question our own identities? A tasty travel to the very roots of our human sociality.

OSPFLOR 29. Topics in Medicine and Ethics. 2-4 Units.

Independent study with weekly meetings. Topics: a) Comparative analysis of legislation of human fertilization and embryology in the U.S. and UK; b) History and structure of the health care systems in Italy, Canada, and the U.S.; c) Herbicides, Fungicides, Pesticides in soil and water: a comparative analysis of the State of California and the Toscana. d). Lives of admirable precepts but dubious practice such as Seneca, the Stoics, and Rousseau; e) Promise and pitfalls of genetically modified plant and animal food. Primarily in English, but some topics might require Italian.

OSPFLOR 30. Independent Studies on the European Financial Crisis. 1-3 Unit.

Research the distinctive aspects of the European Financial crisis on an EU member country of choice. Particularly interesting cases include Greece, Spain, Ireland, Italy, France, Germany. Research the effects on and contributions to the European financial crisis made by accession countries.

OSPFLOR 31F. Advanced Oral Communication: Italian. 3 Units.

Refine language skills and develop insight into Italian culture using authentic materials. Group work and individual meetings with instructor. Minimum enrollment required. Prerequisite: ITALLANG 22A, 23 or placement.

OSPFLOR 34. The Virgin Mother, Goddess of Beauty, Grand Duchess, and the Lady: Women in Florentine Art. 4 Units.

Influence and position of women in the history of Florence as revealed in its art. Sculptural, pictorial, and architectural sources from a social, historical, and art historical point of view. Themes: the virgin mother (middle ages); the goddess of beauty (Botticelli to mannerism); the grand duchess (late Renaissance, Baroque); the lady, the woman (19th-20th centuries).

OSPFLOR 41. The Florentine Sketchbook: A Visual Arts Practicum. 3-5 Units.

The ever-changing and multifaceted scene of contemporary art through visual and sensorial stimulation. How art is thought of and produced in Italy today. Hands-on experience. Sketching and exercises on-site at museums and exhibits, plus workshops on techniques. Limited enrollment.

OSPFLOR 42. Academic Internship. 1-5 Unit.

Mentored internships in banking, education, the fine arts, health, media, not-for-profit organizations, publishing, and retail. May be repeated for credit.

OSPFLOR 44. Galileo: Genius, Innovation and the Scientific Revolution. 5 Units.

Galileo's life and scientific progress starting from his student years at the University of Pisa. Departure from traditional natural philosophy leading to radical reformation of cosmology and physics, emphasizing the science of motion. His innovative use of observation and measurement instruments, emphasizing the telescope. Cultural and social context.

OSPFLOR 46. Images of Evil in Criminal Law: Icons and the Visual Representation on Wrongdoing. 5 Units.

Iconographic component of criminal law; reasons and functions of the visual representation of criminal wrongdoing. Historical roots of "evil typecasting;" consideration of its variations with respect to common law and civil law systems. Fundamental features of the two legal systems. Sources, actors, enforcement mechanisms of the criminal law compared; study of cases in the area of murder, sex offences, organized crime and terrorism. Different techniques of image typecasting highlighted and discussed. International criminal law, which takes the burden to describe, typecast and punish forms of "enormous, disproportionate evil," such as genocide and other mass atrocities.

OSPFLOR 47. Independent Study in Geological and Environmental Sciences. 1-3 Unit.

Potential independent study topics include: Are we living through a mass extinction? What controls the distribution of seismic and volcanic hazard and risk in Italy? Why does Mount Etna contribute 10% of the global volcanic carbon dioxide flux to the atmosphere? How does Italian geology and climate influence the production of Italian wines? Was the collapse of the Roman Empire influenced by long-term soil degradation? Weekly meeting to review progress.

OSPFLOR 48. Sharing Beauty in Florence: Collectors, Collections and the Shaping of the Western Museum Tradition. 4 Units.

The city's art and theories of how art should be presented. The history and typology of world-class collections. Social, economic, political, and aesthetic issues in museum planning and management. Collections include the Medici, English and American collectors of the Victorian era, and modern corporate and public patrons.

OSPFLOR 49. On-Screen Battles: Filmic Portrayals of Fascism and World War II. 5 Units.

Structural and ideological attributes of narrative cinema, and theories of visual and cinematic representation. How film directors have translated history into stories, and war journals into visual images. Topics: the role of fascism in the development of Italian cinema and its phenomenology in film texts; cinema as a way of producing and reproducing constructions of history; film narratives as fictive metaphors of Italian cultural identity; film image, ideology, and politics of style.

OSPFLOR 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPFLOR 52. Mass Extinctions and the Geology of Italy. 4 Units.

Understanding of Earth processes and Earth history as a basis for informed citizen decisions regarding public policies and private actions. How the Earth works; perspective on modern global change through detailed examination of comparable events in Earth's past. Insights focused through the geology of Italy, which provides exceptional exposures of rocks recording ancient mass extinction events as well as opportunities to examine current volcanic and tectonic activities and their impact on nearby human populations. Designed to be open to all undergraduate students.

OSPFLOR 54. High Renaissance and Mannerism: the Great Italian Masters of the 15th and 16th Centuries. 5 Units.

The development of 15th- and early 16th-century art in Florence and Rome. Epochal changes in the art of Michelangelo and Raphael in the service of Pope Julius II. The impact of Roman High Renaissance art on masters such as Fra' Bartolomeo and Andrea del Sarto. The tragic circumstances surrounding the early *maniera*: Pontorno and Rosso Fiorentino and the transformation of early Mannerism into the elegant style of the Medicean court. Contemporary developments in Venice.

OSPFLOR 55. Academy of Fine Arts: Studio Art. 1-5 Unit.

Courses through the *Accademia delle Belle Arti*. Details upon arrival. Minimum Autumn and Winter Quarter enrollment required; 1-3 units in Autumn. May be repeated for credit.

OSPFLOR 56. University of Florence Courses. 1-5 Unit.

May be repeated for credit.

OSPFLOR 58. Space as History: Social Vision and Urban Change. 4 Units.

A thousand years of intentional change in Florence. Phases include programmatic enlargement of ecclesiastical structures begun in the 11th century; aggressive expansion of religious and civic space in the 13th and 14th centuries; aggrandizement of private and public buildings in the 15th century; transformation of Florence into a princely capital from the 16th through the 18th centuries; traumatic remaking of the city's historic core in the 19th century; and development of new residential areas on the outskirts and in neighboring towns in the 20th and 21st centuries.

OSPFLOR 67. The Celluloid Gaze: Gender, Identity and Sexuality in Cinema. 4 Units.

Film in the social construction of gender through the representation of the feminine, the female, and women. Female subjects, gaze, and identity through a historical, technical, and narrative frame. Emphasis is on gender, identity, and sexuality with references to feminist film theory from the early 70s to current methodologies based on semiotics, psychoanalysis, and cultural studies. Advantages and limitations of methods for textual analysis and the theories which inform them. Primarily in Italian.

OSPFLOR 69. Abstract Art: Creativity, Self-Expression and Depicting the Unimaginable. 4 Units.

Overview of the birth and evolution of abstract art with visual background necessary to produce works of art free of a realistic representation. Movements and trends in abstract art; experimentation with different media and techniques.

OSPFLOR 71. A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence. 4 Units.

Recent trends in art, current Italian artistic production, differences and the dialogue among visual arts. Events, schools, and movements of the 20th century. Theoretical background and practical training in various media. Work at the Stanford Center and on site at museums, exhibits, and out in the city armed with a sketchbook and camera. Emphasis is on drawing as the key to the visual arts. Workshops to master the techniques introduced. Limited enrollment.

OSPFLOR 75. Florence in the Renaissance: Family, Youth and Marriage in the Fourteenth and Fifteenth Centuries. 5 Units.

Using a series of texts written by 14th and 15th century Florentines, look at the urban values of the city's citizens. Topics include: thinking about urban space; social relations; the values attached to politics, money, family, religion. How meanings of words such as "state", "government", and "family" might have changed over time.

OSPFLOR 78. The Impossible Experiment: Politics and Policies of the New European Union. 5 Units.

Institutional design of EU, forthcoming changes, and comparison of the old and new designs. Interactions between the EU, member states, organized interests, and public opinion. Major policies of the EU that affect economics such as competition or cohesion policies, market deregulation, and single currency. Consequences of the expansion eastwards. The role of institutions as a set of constraints and opportunities for the economic actors; relationships between political developments and economic change in the context of regional integration; lessons for other parts of the world.

OSPFLOR 84. Life in the Balance: Knowing how nutrient intake can match energy expenditure. 4 Units.

Review of the anatomy and cellular structure of taste, food absorption and digestion, using the anatomical wax models of the "La Specola" Museum of Zoology and Natural History of the University of Florence. Conditions of anorexia nervosa and obesity as illustrations of imbalances in energy intake and output. Genetic contributions to regulating the physiologic and endocrine adaptations to food restriction or overconsumption. Religious fasting practices in Judaism, Christianity and Islam as examples of fine-tuning the energy equilibrium based on cultural traditions. Nutrient imbalances and links to increased rates of metabolic syndrome and cardiac disease. New research findings related to nutrigenetics and the composition of foods beneficial to health and suitable for modulating the balance between food intake and energy expenditure.

OSPFLOR 85. Bioethics: the Biotechnological Revolution, Human Rights and Politics in the Global Era. 4 Units.

Birth and development of the philosophical field of bioethics based on advances in several fundamental fields of science and technology, including molecular and cell biology, information technology, neurosciences and converging technologies. Challenges for society and ethical and political issues created by new advances and opportunities for individuals and populations. Philosophical approaches developed in the Italian as well as in the European debate; special attention to controversy about the freedom of scientific research, new conditions of procreation, birth, cures, and death. Complexity of the challenges posed by the 'biotechnological revolution' quest;.

OSPFLOR 86. Stem Cells in Human Development and Regenerative Medicine. 4-5 Units.

Principles and practice of regenerative medicine. Molecular and developmental biology relevant to the understanding of differentiation and development at the molecular, cellular and organismal levels. Production of lines of multipotent and pluripotent stem cells, the conditions necessary to induce their differentiation into specific lineages and cell types, and their clinical applications. State of the art on the development of regenerative therapies for cartilage injury. Aspects of inherited or acquired diseases that could be potentially treated by stem cell therapies. Quality control and quality assurance necessary for the adequate delivery of stem cell based therapies within current legislative frameworks.

OSPFLOR 98. Origins and Consequences of the European Financial Crisis. 5 Units.

Three aspects of the European financial crisis: 1. What are the roots of the European crisis, in particular of its distinctive aspects? What does economics tell us about currency unions, and were economic prescriptions followed? 2. How did the crisis unfold and was it really unstoppable? Economic and policy events that led to, and sometimes exacerbated, the European crisis. 3. What are the consequences of the crisis for Europe itself and for its main trading partners, including the US? Tools that may help forecast the future path(s) of the crisis. Analysis at both macro and micro level.

OSPFLOR 111Y. From Giotto to Michelangelo: The Birth and Flowering of Renaissance Art in Florence. 4 Units.

Lectures, site visits, and readings reconstruct the circumstances that favored the flowering of architecture, sculpture, and painting in Florence and Italy, late 13th to early 16th century. Emphasis is on the classical roots; the particular relationship with nature; the commitment to human expressiveness; and rootedness in the real-world experience, translated in sculpture and painting as powerful plasticity, perspective space, and interest in movement and emotion.

OSPFLOR 115Y. Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization. 4 Units.

The history, history of art, and symbolism of the two principal monuments of Florence: the cathedral and the town hall. Common meaning and ideological differences between the religious and civic symbols of Florence's history from the time of Giotto and the first Guelf republic to Bronzino and Giovanni da Bologna and the Grand Duchy.

OSPFLOR 199A. Directed Reading A. 1-4 Unit.

Course may be repeated for credit.

OSPFLOR 199B. Directed Reading B. 1-4 Unit.

Course may be repeated for credit.

OSPFLOR 199C. Directed Reading C. 1-5 Unit.

Overseas Studies in Istanbul Courses

OSPISTAN 10. Beginning Turkish. 3 Units.

Alphabet and sound systems of Turkish. Basic numbers, colors and days of the week; simple sentence forms; locative form; present continuous tense and past tense; simple adjectives, possessive pronouns, compound nouns, and case endings.

OSPISTAN 20. Intermediate Turkish. 3 Units.

General present tense; conditionals; imperative; while and when as prepositions; relative clauses.

OSPISTAN 30. Advanced Turkish. 3 Units.

Focus on reading and listening using authentic materials; work on grammar, speaking and vocabulary to support readings and listenings. Past perfect tense; DIS as emphatic or terminator participle; obligation forms; conjunctions; conditionals: past and hypotheticals; causative form.

OSPISTAN 61. State and Society in the Middle East. 4 Units.

Introduction to the politics and history of the Modern Middle. Involvement of western "Great Powers" in the region as well as internal political, social and economic dynamics of the Middle Eastern societies. Major social and political issues transforming the lives of people in the region in a radical fashion including: Ottoman and Qajar modernization efforts in the 19th century; World War I; the rise of colonial regimes; authoritarian reforms of local elites; increasing involvement of Cold War- era superpowers in numerous conflict areas; Palestine-Israeli conflict; the Islamic Revolution in Iran; the Gulf Crisis and the American occupation of Iraq; and 'Arab Spring'.

OSPISTAN 62. Business Policy and Strategy in a Global Environment. 4 Units.

Management problems from the perspective of the entire enterprise in a domestic and international setting; strategy formulation, environmental analysis and strategy implementation applied to actual companies. Course relies heavily on cases and on presentations to business leaders.

OSPISTAN 63. Soundscape Studies: Listening to Istanbul. 4 Units.

Introduction to the field of soundscape studies: physical underpinnings; wider context of sensory studies; relevant terminology, concepts and methodology; practical aspects of sound recording, storing and editing. Particular emphasis on how historians and art historians have used this field to open new paths of inquiry in their respective disciplines. The city of Istanbul will serve as a case study for a more in-depth examination of different elements of the urban soundscape, past and present, and the transformations it has experienced over the centuries. Hands-on experience through guided research projects on Istanbul's historical and/or contemporary soundscape.

OSPISTAN 64. Travels in the Ottoman History with Evliya Çelebi. 4 Units.

Studies by modern historians related to Ottoman history compared to writings of Evliya Ccedil;elebi.

OSPISTAN 65. Comparative Political Economy of Emerging Powers. 4 Units.

Political economy account of the rise of emerging powers. Topics include: contemporary debates on political economy of the late industrialization; relationship between development and democracy; relationship between state and the economy; importance of institutions in the development process; rise of BRICS and near-BRICS in the changing global order. Theoretical themes are applied to the case studies of China, India, Russia, Brazil, Mexico, Argentina, Indonesia, Malaysia and Poland; the political economy of Turkey in comparative perspective.

OSPISTAN 67. Istanbul, the Fabric of its "Cities". 4 Units.

Long lasting stories that have preceded and shaped the contemporary city of Istanbul. Urban histories: fragments and insights within the locality that makes the urban and suburban spaces of Istanbul. Chronological progression with general approaches paralleled by plunges in specific themes, peoples and spaces. Long processes of transformations with subtle meanings that historians, archaeologists, art historians and others try capturing through research and on-site work. Field work in Istanbul to uncover some of the more subtle and hidden sides of the city's histories.

OSPISTAN 68. Istanbul: Space, Memory, and Protest. 5 Units.

City of Istanbul as a dynamic social and historical space. How people live in socially cosmopolitan, historically contested, and politically vibrant cities in a global context. Topics include: the complex history of urban development in the city; the cultural and religious orientations of its neighborhoods; competing memories of violence and belonging; and the enduring culture of protests, which have oriented political activity in Istanbul since its foundation. Field research projects in the city.

Overseas Studies in KCJS Kyoto Courses

OSPKYOC 103A. Third-Year Japanese I. 12 Units.

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

OSPKYOC 103B. Third-Year Japanese II. 12 Units.

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

OSPKYOC 104A. Fourth-Year Japanese I. 12 Units.

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

OSPKYOC 104B. Fourth-Year Japanese II. 12 Units.

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

OSPKYOC 105A. Fifth-Year Japanese I. 12 Units.

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

OSPKYOC 105B. Fifth-Year Japanese II. 12 Units.

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

OSPKYOC 118. Political Economy of Japan. 6 Units.

Introduction to contemporary Japanese political economy. In a comparative framework, discuss and debate issues such as government role in economic growth, political participation, and party politics.

OSPKYOC 128. Families and Work in Post-war Japan. 6 Units.

Factors that promoted both change and continuity in the social division of labor between the interdependent spheres of work and family. How cultural strategies for organizing contemporary Japanese social life were conditioned 1) by rapid industrialization and growth and 2) by later economic stasis. Class, gender, and regional variations; role of social psychology in Japanese responses to work-family conflicts.

OSPKYOC 131. International Business Strategies in Japan and Asia. 6 Units.

Regional as opposed to national approaches for business strategies. Interconnectedness of the region's economies and businesses. International business strategies with particular relevance to Japan and Asia; key players in Asian business; how to utilize knowledge of Japan in greater Asian international business context.

OSPKYOC 146. Postwar Japanese Cinema and Visual Culture. 6 Units.

Films of Japanese directors Ozu Yasujiro, Mizoguchi Kenji and Kurosawa Akira from the late 1940s and 1950s and their focus on the human condition and the perception of truth, history, beauty, death in the postwar period. Connections to other visual media such as painting, photography, and printmaking.

OSPKYOC 179. Kyoto Artisans and their Worlds. 6 Units.

Textile workshops of Nishijin in the northwest of the city; ceramic workshops in the southeast around Gojozaka; and web of artisans supporting traditional artist guilds such as pigment producers, papermakers, stencil cutters, gold and silver foil craftsmen, carvers and printers. Historical, cultural, and technological background for each topic. Visits to studios and museums for first-hand experience of not only the crafts, but also their changing role in supporting the lifeblood of Kyoto as a city.

OSPKYOC 180. The Arts of Japan. 6 Units.

Introduction to the major artistic traditions of Japan, from the Neolithic period to the present. How arts developed in and through history and how art and architecture were used for philosophical, religious and material ends. Topics include: places of Shinto and impact of Buddhism; narrative illustration; changing roles of aristocratic, monastic, shogunal and merchant patronage.

OSPKYOC 197. Independent Studies. 6 Units.

Focused research using the Japanese language and taking advantage of local Kyoto resources. Directed reading and research, weekly meetings with professor, and final research paper. For full-year students with language skills adequate for the proposed research.

Overseas Studies in Kyoto Courses

OSPKYOTO 2K. First-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

Continuation of JAPANLNG 1. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: JAPANLNG 1 if taken 2012-13 of later (JAPANLNG 7 if taken 2011-12 or earlier).

OSPKYOTO 3K. First-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly OSPKYOTO 9K). Continuation of 2K. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: JAPANLNG 2 or OSPKYOTO 2K if taken 2012-13 or later (JAPANLNG 8 if taken 2011-13 or earlier).

OSPKYOTO 10. Gamelan to Kabuki: Musical Traditions of Far East Asia. 4 Units.

Introduction to traditional musical cultures of the Far East with an emphasis on Japan. Listening, viewing and study of prominent musical examples. Survey of unique traditional instruments and ensembles in a range of performance contexts, from sacred rituals to secular dance and theater. Traditional genres and their impact on local and global musical culture of today. Development of critical listening skills. Live performances and encounters with local masters; early morning monastery chanting; visits to Bunraku and Kabuki theaters.

OSPKYOTO 11. Experiencing Ma: Time & Space in Japanese Arts. 4 Units.

The study, experience, and expression of Ma, a key concept in Japanese art, through field trips, meetings with artists, empirical research, presentations, and creative projects. Exploration and comparative examination of landscape gardens, architecture, calligraphy, ikebana, tea ceremony, poetry, theater, classical music, media art, installation art, dance, and cuisine. Visits to gardens, temples, museums, concerts, and events in Kyoto and nearby cities as catalysts for discussion of Japanese cultural identity and its distinctiveness within the global community.

OSPKYOTO 13. Contemporary Japanese Religion. 4-5 Units.

Japanese attitudes to religion and popular forms of religiosity. Syncretic nature of beliefs and practices drawn on a variety of interwoven concepts, beliefs, customs and religious activities of native Japanese, Korean, Chinese, and Indian origins as background. Topics include: pursuit of worldly benefits, religion and healing, fortune-telling, ascetic practices, pilgrimage, festivals (matsuri), new religions and their image, impact of the internet, response of religion in times of crisis.

OSPKYOTO 17R. Religion and Japanese Culture. 4-5 Units.

Major religious traditions of Japan. Topics include: relation between religion and culture; ancient Japanese religion and Shinto; Buddhist schools of Heian Japan; Zen Buddhism as it flourished in the Kamakura period; Confucianism, as originally conceived in ancient China and as transmitted to Japan in the Edo period in its neo-Confucian form; characteristic modern practices. Field trips to religious centers to observe current religious practices.

OSPKYOTO 21K. Second-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.

(Formerly OSPKYOTO 17K.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 3 if taken 2012-13 or later (JAPANLNG 7 if taken 2011-12 or earlier).

OSPKYOTO 22K. Second-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

(Formerly OSPKYOTO 18K). Continuation of JAPANLNG 21. Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 21 if taken 2012-13 or later (JAPANLNG 17 if taken 2011-12 or earlier).

OSPKYOTO 23K. Second-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

Formerly OSPKYOTO 19K). Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 22 or OSPKYOTO 22K if taken 2012-13 or later (JAPANLNG 18 if taken 2011-12 or earlier).

OSPKYOTO 27. Japanese Popular Culture. 4-5 Units.

Introduction to forms and categories of Japanese popular culture including: Japanese movies and television, animation and manga, magazines, newspapers and other printed materials, characters and product brands, sports and other entertainment industries, music and idols, fashion, food and drink, consumer goods, shopping malls and other places for consumption. Using a cultural studies framework, analyze these various forms of popular culture considering the following: different groups in society; historical variability; industry, government and media interests; and advertising policies.

OSPKYOTO 40K. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPKYOTO 45. Japan's Energy-Environment Conundrum. 4-5 Units.

Japan's energy-environment challenges and their consequences for Japan; wider society and economy. Question of how Japan's policy makers will balance energy and environmental needs and how the answers will affect the country's future as a leading regional power. Students will gain a sound understanding of the structure of Japan's energy-environment challenges and a practical analytical framework by which they can evaluate these challenges and develop their own balanced assessments.

OSPKYOTO 54. Escaping Galapagos: Japan's New Innovation Boom. 5 Units.

Changing paradigms in Japan's patterns of innovation. Key factors driving Japan's recent innovation boom; 'wisdom innovation' model, retaining Japan's traditional emphasis on quality, craftsmanship and service while adding a new focus on wider applicability to the globalized economy. Industries leading this change, including telecommunications, e-commerce, finance, energy, media, tourism and retail. Insights into Japanese business culture.

OSPKYOTO 61. The Fourier Transform and its Applications. 3 Units.

The Fourier transform as a tool for solving physical problems. Fourier series, the Fourier transform of continuous and discrete signals and its properties. The Dirac delta, distributions, and generalized transforms. Convolutions and correlations and applications; probability distributions, sampling theory, filters, and analysis of linear systems. The discrete Fourier transform and the FFT algorithm. Multidimensional Fourier transform and use in imaging. Further applications to optics, crystallography. Emphasis on relating the theoretical principles to solving practical engineering and science problems. Prerequisites: Math through ODEs, Fourier series at the level of 102A, and linear algebra. Same as EE 261.

OSPKYOTO 64. Japanese Popular Culture. 4-5 Units.

Origin, history and production of genres of Japanese popular culture such as manga, anime, popular music, television drama, film and new media, and their link to current phenomena. Themed units: disaster anime; politics of shojo; otakuology; keitai studies. Analysis of media texts and how age, gender, race, ethnicity and socio-economic class are represented. Social context in which popular culture is produced and consumed. Local field trips.

OSPKYOTO 67. Kyoto in the Literature of Japan. 4-5 Units.

Overview of Japanese literature from the earliest times to the present, with an emphasis on works set in or around Kyoto. Examine the texts in relation to their historical context generally, with a secondary emphasis on how the backdrop of Kyoto plays a role in different historical works and different historical periods. In addition, touch on issues relevant to the texts and to Japanese history and culture, including nature, community, religion, nationalism, individualism, gender, family, and moral values.

OSPKYOTO 68. Independent Study in Japanese Culture. 1-3 Unit.

Examination of any of the following topics, according to student interest: Japanese Poetry of any genre or period; Haiku in Japanese and/or English; Dramatic Manga; Travel Writing.

OSPKYOTO 102K. Third-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.

Continuation of JAPANLNG 101. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 101 if taken 2012-13 or later (JAPANLNG 117 if taken 2011-12 or earlier).

OSPKYOTO 103K. Third-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.

(Formerly OSPKYOTO 119K). Continuation of 118K. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 102 or OSPKYOTO 102K if taken 2012-13 or later (JAPANLNG 118 if taken 2011-12 or earlier).

OSPKYOTO 199A. Directed Reading A. 1-4 Unit.

May be repeated for credit.

OSPKYOTO 199B. Directed Reading B. 1-4 Unit.

May be repeated for credit.

OSPKYOTO 210K. Advanced Japanese. 5 Units.

Overseas Studies in Madrid Courses

OSPMADR 8A. Architecture, Culture and Nature in Madrid: Towards a Sustainable City. 2 Units.

Architecture and the city, with a focus on recent currents in the progress of both, such as sustainability, environmentalism and the relationship with nature. Topics underpinned by discussion of theory, and illustrated by a study of the city of Madrid: an example of a hybrid architectural/planning experiential environment that looks to the future with an ambition for modernization.

OSPMADR 8B. Debating Design: Spanish and International Fashion. 2 Units.

Culture and society in Spain as viewed through the lens of the fashion industry. Social changes, trends, and the evolution of life styles. Industrial, commercial and media involvement in the internationalization of the industry.

OSPMADR 8C. Appreciating Spanish Music. 2 Units.

Unique aspects of Spanish art music. Participation in concert outings and field trips for live performances of studied repertoire. No previous knowledge of music required.

OSPMADR 8D. Spanish Chorus. 2 Units.

Through the study of both popular and classic Hispanic songs, the course will exercise memory, phonetic pronunciation and cultural immersion while also developing a sense of rhythm, melodic intonation, and a love of music and singing. Open to all students; no previous musical experience required, only a willingness to learn and enjoy singing. Choral exchange with a local choir and a final performance. Repertoire focus on learning and interpreting Hispanic folklore, and may include compositions in Castilian, Catalan, Galician, or Basque, and possibly Latin, Quechua or Aymara.

OSPMADR 12M. Accelerated Second-Year Spanish I. 5 Units.

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish or 11 or 21B more than two quarters (six months) prior to arriving in Madrid.

OSPMADR 13M. Accelerated Second-Year Spanish II. 5 Units.

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters (six months) of arriving in Madrid or 12 or 22B.

OSPMADR 14. Introduction to Spanish Culture. 1 Unit.

Required for Madrid students. Spain's historical, physical, and sociocultural diversity. Includes a weekend study trip and other cultural encounters. Linguistic skills and cultural knowledge through museum visits, readings, and writing a paper in Spanish. Study trips: Autumn Quarter to Cantabria-Lea; Winter Quarter to Andalusia and Extremadura; Spring Quarter to Catalonia and Galicia.

OSPMADR 15. Flamenco Dance. 1 Unit.

Practical instruction. The rhythms and styles of flamenco and the expression of feelings proper to this art form which synthesizes song, music, and dance. *Zapateado* (footwork), *braceo* (arm positions and movement technique), and choreographies, including Rumba flamenca and Sevillanas. Enrollment limited. May be repeated for credit.

OSPMADR 22. Spain on Stage: La cartela de 2014. 5 Units.

Students attend theater and analyze works currently in performance in Madrid, including canonical plays, and performances at smaller historical and alternative theaters. History of Spanish theater; background on the plays. Skills and strategies for reading dramatic works as literature and analyzing scenic languages of performance.

OSPMADR 25. Politics of "Culture/s" in the Iberian's World: the Multicultural Debate. 4 Units.

Exploration of the category of "culture" as an arena of political debate and social imaginary across history in the Iberian Peninsula. Use of history of this part of the world, where the Mediterranean and Atlantic worlds have historically converged, to better understand and deal with contemporary debates of multiculturalism. Multidisciplinary approach, bringing political philosophy, history, anthropology and comparative cultural studies into a dialog. Continuities and major changes in the Iberian ethnoscapes. Debate on European contemporary backlash against multiculturalism.

OSPMADR 28. Independent Study: Topics in European Survey Research and Public Opinion. 2-4 Units.

Exploration of social questions using public opinion data for the European Union, including the EuroBarometer and the European Social Survey. Research paper on a question students develop, either focusing on Spain or comparing Spain with other EU nations, using their own data analysis.

OSPMADR 30. Instituto de Empresa Universidad: Social Science. 3 Units.

Attend class with students in a Spanish university. Introduction to basic economic thinking as a tool for future professions.

OSPMADRD 33. Spanish Language Tutorial. 2 Units.

May be repeated for credit. Prerequisite: three years of Spanish at Stanford or placement.

OSPMADRD 41. Dissidence and Continuity: Spanish Theater, 1907 to the Present. 4-5 Units.

Tradition, transformation, experimentation, rupture, renovation, and innovation in the theater in Spain as a reflection of the artistic, social and historical commotion that led to the Spanish Civil War, Franco, and the present democratic monarchy. Ortega y Gasset, Benavente, Grau, Valle-Inclán, Garcilaso de la Vega, Buero Vallejo, Sastre, Arrabal, Fernán Caballero, Goethe, Paloma Pedrero, Yolanda Pallares, and other playwrights who may be staged in Madrid theaters.

OSPMADRD 42. A European Model of Democracy: The Case of Spain. 4 Units.

Current Spanish political system, its main judicial and political institutions, outstanding actors' and the political process of the last decade. Historic antecedents; immediate precedents; and the current political system and life. Relation between the elements that constitute a political system; results of the process of democratization; integration to the EU.

OSPMADRD 43. The Jacobean Star Way and Europe: Society, Politics and Culture. 5 Units.

The Saint James' Way as a tool to understand historic dynamics from a global perspective. Its effect on the structures that form a political and institutional system, and its society, economy, and ideology.

OSPMADRD 45. Women in Art: Case Study in the Madrid Museums. 4 Units.

Viewing the collections at the Prado Museum through study and analysis of the representations of women. Contemporary literary texts and images that situate paintings in the historical, social, and political conditions that produced the works.

OSPMADRD 46. Drawing with Four Spanish Masters: Goya, Velázquez, Picasso and Dali. 3 Units.

Approaches, techniques, and processes in drawing. Visits to Madrid museums to study paintings and drawings by Goya, Velázquez, Picasso, and Dalí; and to explore the experience of drawing. Subject matter: the figure, still life, interiors, landscape, and non-representational drawing. No previous experience required. Enrollment limited.

OSPMADRD 50. Flirting with Spanish Metafiction: Cervantes, Velázquez, Fuentes, Almodóvar. 4-5 Units.

Literary theory and critical analysis of peninsular and Latin American texts. Emphasis is on the origins and development of self-conscious fiction (metafiction). Works by Cervantes, Velázquez, Unamuno, Borges, Fuentes, Torrente Ballester, and Almodóvar. Attendance at music, art, cinema, and Spanish novelist events. In Spanish.

OSPMADRD 52. Revolution and Reconciliation in Film. 4 Units.

Using the Spanish political experience in the 20th Century as a starting point, focus on the human and social effects of the numerous political upheavals in the transitions from democracy to authoritarianism and back again. Films about revolutionary change in several different societies treated as the 'texts' to motivate thinking; examination of both the process of social breakdown during periods of civil strife and the role of reconciliation in the reconstruction of societies. Multiple elements of social consequences in political transitions, including gender, children, non-violent resistance, racism, social class, and the role of the United States.

OSPMADRD 57. Health Care: A Contrastive Analysis between Spain and the U.S.. 4 Units.

History of health care and evolution of the concept of universal health care based on need not wealth. Contrast with system in U.S. Is there a right to health care and if so, what does it encompass? The Spanish health care system; its major successes and shortcomings. Issues and challenges from an interdisciplinary perspective combining scientific facts with moral, political, and legal philosophy.

OSPMADRD 60. Integration into Spanish Society: Service Learning and Professional Opportunities. 5 Units.

Engagement with the real world of Madrid through public service work with NGOs and public service professions such as teaching. Depending on availability, topics relevant to present-day Spain may include: the national health plan, educational system, immigration, prostitution, refugees, youth, and fair trade. Fieldwork, lectures, and research paper. Limited enrollment. May be repeated for credit. Prerequisite: two years of college level Spanish or equivalent.

OSPMADRD 61. Society and Cultural Change: The Case of Spain. 4 Units.

Complexity of socio-cultural change in Spain during the last three decades. Topics include: cultural diversity in Iberian world; social structure; family in Mediterranean cultures; ages and generations; political parties and ideologies; communication and consumption; religion; and leisure activities.

OSPMADRD 62. Spanish California: Historical Issues. 4 Units.

Spanish exploration and colonization of California from the 16th century to the end of the Spanish colonial period in 1821. Themes include: geographical explorations in the context of European colonial expansion; demographic evolution of Native American inhabitants and immigrant population; general social and economic development of the colony; controversies surrounding the mission system; role of the Pacific coasts of North America in the Spanish enlightenment and in strategies for imperial defense and development in the revolutionary era of the late 18th and early 19th centuries.

OSPMADRD 71. Sociology of Communication. 5 Units.

Understanding the sociocultural diversity of communication in Spain with the help of theoretical and practical tools. How communication happens through language and other means; significance of images in today's world; vision of the world produced by media; problems of social communication from perspective of reception. Offered at the Universidad Complutense with an additional tutorial for Stanford students.

OSPMADRD 72. Issues in Bioethics Across Cultures. 4 Units.

Ethical dilemmas concerning the autonomy and dignity of human beings and other living creatures; principles of justice that rule different realms of private and public life. Interdisciplinary approach to assessing these challenges, combining scientific facts, health care issues, and moral philosophy. Sources include landmark bioethics papers.

OSPMADRD 73. The Neuroscience of Language Learning. 3 Units.

How the brain implements fundamental functions such as sensory information processing, motor coordination, learning, and memory through the study of language learning. Topics introduced with a brief lecture and discussion of assigned reading followed by work in small teams to identify outstanding questions in the topic area and to design experiments to address those questions.

OSPMADRD 74. Islam in Spain and Europe: 1300 Years of Contact. 4 Units.

Primary problems and conflicts in the contemporary Islamic world and its relations with the West, as well as the relationship between Spain and Islam throughout history. Special attention to the history of al-Andalus, an Islamic state in the Iberian Peninsula during the Middle Ages, evaluating the importance of its legacy in Europe and in contemporary Spain. Spain's leading role in relations between Europe and the Mediterranean Islamic states from the Modern Era to the present day.

OSPMADRD 75. Sefarad: The Jewish Community in Spain. 4 Units.

The legacy of Sefarad, the Jewish community in Spain. Historical evolution of the Sephardic community, under both Muslim and Christian rule, including the culmination of Anti-Semitism in 1492 with the expulsion of the Jews. Cultural contribution of the Hebrew communities in their condition as a social minority, both in al-Andalus, the peninsular Islamic State, and in the peninsular Christian kingdoms.

OSPMADR 76. Independent Study: Gender Disparities in Science and Science Education. 2-4 Units.

Independent study with weekly meetings. May include trips to local schools and research institutes to explore the perspective of Spanish teachers, students and scientists on the underrepresentation of women in science and other gender disparities in science and science education.

OSPMADR 77. Independent Study Topics in Systems Neuroscience. 2-4 Units.

Independent study with weekly meetings. Potential topics include: neural coding of information, the neural mechanisms of learning and memory, the neural control of movement, and neural mechanisms of timing.

OSPMADR 78. Topics in Spanish Literature and History. 1-3 Unit.

Independent study offered on topics in Spanish literature or modern history. Students propose a topic to the instructor who will help craft a reading list and appropriate on-site field trips or archives. Student and instructor will meet weekly; outside work will be tailored to student interest.

OSPMADR 79. Earth and Water Resources' Sustainability in Spain. 4 Units.

Interdisciplinary focus on the relationship between earth systems and human activities. Nature and distribution of natural resources, their uses and exploitation, environmental impacts associated with exploitation, and sustainable development initiatives, including the restoration and rehabilitation of the land affected by extraction activities. Water management: understanding of the resource and its location; the development of efficient tools; an associated regulatory apparatus; and economics.

OSPMADR 80. Word, Image and Power. 4 Units.

Relationships and uses of oral discourse, art, and iconography in politics in different countries through history. Case studies from ancient Egypt, the Greek Paideia, Cesar Augustus, medieval Europe, Spanish modern empire, French revolutionary discourse, and proletarian national identity in Russia and China.

OSPMADR 81. From Altamira to Picasso: Artistic and Literary Representation from Realism to Metafiction. 4-5 Units.

Texts in fine and literary arts with emphasis on the origins and development of Spain; art history between realistic and fictional stages from Altamira to Picasso, through Romanesque, Gothic, Renaissance, Baroque, Modern and Post-modern times in El Greco, Velázquez, Cervantes, Goya, Gaudí, Dalí, Picasso, Borges, Almodóvar and other authors. Emphasis on fine arts with a historical approach. Occasional attendance to fine art (El Prado, Reina Sofía, Thyssen Museums), cinema, and literary events (El Quijote public reading), besides regular classes at the Stanford Center. Taught in Spanish.

OSPMADR 102M. Composition and Writing Workshop for Students in Madrid. 3-5 Units.

Advanced. Writing as craft and process, emphasizing brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Students choose topics related to their studies. Prerequisite: 13, 23B, or equivalent placement.

OSPMADR 199A. Directed Reading. 1-5 Unit.

Overseas Studies in Moscow Courses

Overseas Studies in Oxford Courses

OSPOXFRD 22. British Politics Past and Present. 4-5 Units.

The political system of the United Kingdom; contemporary scholarly debates about UK politics and the UK constitution; and critical analysis of these debates and of current issues in UK politics (including constitutional reform), using contemporary political science and political theory.

OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective. 4-5 Units.

Introduction to the study of constitutions and constitutional systems of government. The workings of the British and American systems of government. Comparative study of the most important constitutional issues facing Britain and the U.S. such as how suspected terrorists should be treated in a time of war. How to think about fundamental constitutional questions.

OSPOXFRD 45. British Economic Policy since World War II. 5 Units.

Development of British economic policy making from 1945, focusing on political economy including: ideological motives of governments; political business cycle; and the influence of changing intellectual fashions. Policy areas: attitude to the pound; control of the business cycle; and the role of the state in the economy. Prerequisite: ECON 50.

OSPOXFRD 50. Approaches to Shakespeare. 5 Units.

Different ways in which we might approach Shakespeare, and to what ends. Consideration of Shakespeare's own historical context, his changing reputation, alongside modern critical readings. Read several of the works and use film and theatrical productions to discuss the differences between page and stage. Intended to serve both as an introduction for those who have not studied Shakespeare before and an exploration of different critical approaches for those who are already familiar with his work.

OSPOXFRD 57. The Rise of the Woman Writer 1660-1860. 5 Units.

Emergence and rise of the professional woman writer from playwright and Royalist spy Aphra Behn (1640-89) to novelist and proto-feminist Charlotte Brontë (1816-55). How women writers dealt with criticism for writing publicly, placing each author and text in its historical and literary context. Range of poets, playwrights, and novelists including Eliza Haywood, Frances Burney, and Mary Elizabeth Braddon. Topics: gender roles and proto-feminism, the public versus the private sphere, sexuality, courtship and marriage.

OSPOXFRD 70. The History of London. 5 Units.

London's physical growth, emphasizing characteristics which set it apart from other capitals, and its economic, social and political development, including the problems of poverty and the inner city, the provision of public services, and the growth of suburbs and public transport. Challenges facing London in modern times. Walking tours, especially less frequented areas.

OSPOXFRD 87. The Archaeology of Britain. 5 Units.

Introduction to the archaeology of the of the British Isles, with particular attention to prehistory, Roman Britain and early medieval period. Themes: peopling of Britain and emergence of hunter-gatherer society; spread of farmers into Britain and role of ritual and community; growth of social hierarchies associated with the first metallurgy; growth of settled farming and layout of fields; growth of Iron Age tribes with their regional centers; arrival of Roman legions and transformation of the British landscape; Anglo-Saxon and Viking invasions and their response to them. Field trips to sites in southern England as well as hands-on lab sessions in the Ashmolean and Pitt-Rivers Museums in Oxford.

OSPOXFRD 89. Archaeology: Independent Study. 5 Units.

Independent study offerings in one of the following topics:n1. The spread of farmers through Europe.n2. Museums and society.n3. General Pitt-Rivers and the history of archaeology in Britain.n4. The Romans in Britain.nnStudents will be facilitated to work in libraries, museums and in the Oxford Archaeology Unit archives in order to collect information on the Roman presence in Oxfordshire and the long-term impact on the Oxfordshire landscape. Students will also be facilitated to work with the team in Reading publishing the long-term research of Professor Mike Fulford on the Roman town of Silchester.

OSPOXFRD 90. Economic Policy in Advanced Economies. 5 Units.

Major challenges for economic policy in developed economies. Topics include: policies to foster growth and combat recessions; social insurance; the re-distributional role of the tax and welfare system; and government policies in key sectors such as health care, financial services, education and energy. Weekly short papers and presentations.

OSPOXFRD 91. Independent Study Projects or Directed Reading. 3-5 Units.

Independent study projects on current topics in economic policy. Possible topics to include: government policy to foster economic growth and fight recessions, inequality and the role of the tax system in redistributing income, social insurance,.

OSPOXFRD 93. Collecting the World. 4 Units.

The art, science, and culture of the creation, transmission and collection of valuable, useful and informative objects and texts before the twentieth century, and the associated theories, purposes, and methods for collecting 'worldly' goods and other valuables. Means by which local academic practices engaged with global developments in the arts and sciences through examination of primarily early modern material and intellectual culture in and around Oxfordshire. Assessments of quality, meaning, usage, cultural significance and the reception of material objects; treasures; in the storage rooms, vaults, and on display in museums, galleries, and libraries.

OSPOXFRD 117W. Gender and Social Change in Modern Britain. 4-5 Units.

Changes in the social institutions, attitudes, and values in Britain over the past 20 years with specific reference to shifts in gender relations. Demographic, economic and social factors; review of theoretical ideas. Men's and women's shifting roles in a fast-moving society.

OSPOXFRD 221Y. Art and Society in Britain. 4-5 Units.

Themes in 18th-, 19th-, and 20th-century British art. Painting, sculpture, and design. Comparisons between the British experience and that of continental Europe and the U.S. Readings address questions related to the role of art in modern society. Limited Enrollment.

Overseas Studies in Paris Courses

OSPPARIS 10A. Engineering Research Internship. 6 Units.

For Paris Program students with academic experience in electronics, telecommunications or signal and image processing. Under direct guidance of researchers at Institut Supérieur d'Électronique de Paris (ISEP), and where applicable, in collaboration with other French and international graduate students, contribute to the ISEP's ongoing research projects.

OSPPARIS 10B. Biology and Bio-Engineering Research Internship. 6 Units.

Laboratory of the National Museum of Natural History. Work with international research team on project elucidating the origin of the diversity of animal form. Modern techniques in functional genomics. Applied questions on human development in an environment where embryology, paleontology and medicine converge. Two days a week commitment required.

OSPPARIS 10D. Climate Change Research Internship. 6 Units.

Work with the CDC Climat center (a subsidiary of the French financial organization Caisse de Dépôts et Consignations), which serves as an important Paris-based think tank devoted to innovative scientific investigation and publication. Carbon offsetting; bio-economy and climate mitigation policies and projects. Work three days a week for six months; produce and post a research report on one aspect of climate and energy policy.

OSPPARIS 11. Special Internship. 1-6 Unit.

Often initiated by special contacts between students and professionals in France. Involvement may be based more on field work, and activity, rather than on fulfilling traditional academic requirements. Prerequisites: Written permission from the program director.

OSPPARIS 12. Paris Photography Workshop. 3 Units.

Exploration of Paris through camera and lab techniques. Both theoretical and practical aspects of creative photography. Extensive field work. Enrollment limited.

OSPPARIS 12C. French Through Songs Workshop. 3 Units.

French culture and language through songs. Classics of French songs as well as their composers and singers. Working in teams, learn lyrics through games, quizzes and riddles. Phonetics, vocalization and breathing exercises in preparation for final production. Enrollment limited; minimum of five for the course to be offered.

OSPPARIS 12D. Public Speaking in French Workshop: Phonetics, Rhythm and Confidence. 3 Units.

Reading texts such as poems, theater scenes and speeches aloud in French. Analysis of ideas, words, punctuation and rhythm of texts. Importance of gestures and body language while speaking. Optional public presentation at end of quarter. Enrollment limited, but minimum enrollment of five for course to be offered.

OSPPARIS 14. Media Internship. 3 Units.

Case studies and independent research as groundwork for comparative analysis of media on both sides of the Atlantic. Nature of media in the U.S. and in France. Media as a means for understanding culture.

OSPPARIS 15. Hospital Internship. 3 Units.

Observation of medical services in Paris hospitals. How hospital teams work in France; how medical decisions are made; how patients are treated by nurses and doctors.

OSPPARIS 16. Independent Study: Women Writers in Paris. 5 Units.

Expatriate women writers - American and British - who lived and wrote in Paris between the wars. Among them: Edith Wharton, Gertrude Stein and Alice B. Toklas, H.D., Djuna Barnes, Margaret Anderson, Janet Flanner, Natalie Barney, Kay Boyle, Mina Loy, Romaine Brooks, Mary Butts, Radclyffe Hall, Colette, and Jean Rhys. A central theme will be Paris as a lure and inspiration for bohemian female modernists -- especially the so-called 'Sapphic modernists' (Stein, Barnes, Barney, Flanner et al) -- and the various alternative and emancipatory literary communities they created.

OSPPARIS 16A. French Schooling Internship. 2-3 Units.

Working with French schoolchildren in one of three settings: a neighborhood support association in the outskirts of Paris; or two after-school support association in the city. Commitment for a minimum of three hours a week on site plus meetings with internship instructor and a final paper. Number of placements depends on the needs of the sponsoring institutions. Previous work with children advised.

OSPPARIS 17. Engaged Intellectual. 5 Units.

Laboratory format to create works of art inspired by the local urban environment. Projects include: sonic scavenger hunts to record Paris' sound ecology as basis for electronic music works; solo and group performance art, and public poetry readings related to and staged throughout the city at idiosyncratic locations; temporary public visual art such as chalk art; bricolage art projects that result in sculpture and two-dimensional visual art constituted by found objects salvaged from the Parisian cityscape. No experience required.

OSPPARIS 19. Arranged Internship 1. 3-6 Units.

Two-quarter stay required. Internships can be arranged in a number of areas including the arts, architecture, politics, engineering, marketing and PR, media and journalism, health and psychological services, IT, NGO's, research, and hospitality administration.

OSPPARIS 22P. Intermediate French I. 5 Units.

Prerequisite: one year of college French if completed within two quarters of arriving in Paris, or FRENLANG 21C.

OSPPARIS 23P. Intermediate French II. 5 Units.

Prerequisite: FRENLANG 21C within two quarters of arriving in Paris, or FRENLANG 22C or OSPPARIS 22P.

OSPPARIS 24. Introduction to French Society. 1 Unit.

Required of Paris program participants. Engagement with French society through language immersion, lectures, projects with French students, encounters with prominent figures, and visits to French political and cultural institutions. May be repeated for credit.

OSPPARIS 26. France: Present and Future. 2 Units.

Students read and discuss lead articles and associated issues in a daily French newspaper, usually *Le Monde*. Additional articles from past newspapers and scholarly essays to provide context.

OSPPARIS 27. Paris and Politics. 5 Units.

Development of Paris as a capital city over the past four centuries, emphasizing how political entities and ideals and sociopolitical challenges have shaped its physical setting and urban culture. Field trips.

OSPPARIS 30. The Avant Garde in France through Literature, Art, and Theater. 4 Units.

Multiple artistic trends and esthetic theories from Baudelaire to the Nouveau Roman, from the Surrealists to Oulipo, from the theater of cruelty to the theater of the absurd, from the Impressionists to Yves Klein. Interdisciplinary approach to reflect on the meaning of avant garde and modernity in general, and on the question of why revolutionary artists in France remained in search of institutional recognition, nonetheless.

OSPPARIS 32. French Politics in Cross-National Perspective. 5 Units.

Key aspects of French politics including the constitutional framework, institutions, political parties and ideology, elections, political cultures, religion and politics, political elites and public policy-making, grass-root citizen participation, decentralization and local politics, and the major issues that structure and inform public debate, including attitudes and policies vis-à-vis the US.

OSPPARIS 34. Franco-American Encounters: Paris-New York in the 20th Century. 4 Units.

Double vision of American artists and intellectuals of Paris, as well as their French counterparts of New York, throughout the 20th century. Exploration of Franco-American relations through two very problematic itineraries. Superposing the two will create a rich and complex image of the interaction between the two cultures. Migration of American artists and intellectuals to Paris in the 1920s and of French artists and intellectuals to New York during the Second World War. Through study of films, texts and images, view the two cities through eyes of immigrants, both temporary and permanent. Major figures such as Hemingway, Josephine Baker, and Louis-Ferdinand Céline.

OSPPARIS 36. French Writing Workshop. 3 Units.

Offered upon request for students who have completed an Advanced French course. Focus on French writing style, enabling students to understand and master the subtleties of French writing.

OSPPARIS 40P. Introductory Electronics. 5 Units.

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

OSPPARIS 41. EAP: Perspective, Volume, and Design. 2 Units.

Mastering the techniques of spatial representation and developing a good visualization of volume. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 41E. EAP: Sculpture. 2 Units.

Control of volume through use of materials such as clay or plaster in order to master three dimensioned representations. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 42. EAP: Drawing with Live Models. 2 Units.

Solid foundation in drawing; concepts of proportions, composition and analysis through observation. Perception of space, movement and forms. Techniques include: graphite, charcoal, chalk, pastel, watercolor, monotype, markers. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 43. EAP: Painting and Use of Color. 2 Units.

Different painting techniques for pictorial representation through various themes supporting the development of creativity. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 44. EAP: Analytical Drawing and Graphic Art. 2 Units.

Focus on observation of a model to be copied. Analysis of one aspect of a general structure while using various materials and techniques in a limited amount of time. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 44E. EAP: Computer Art. 2 Units.

Learn and develop efficient technique of modern graphic design. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

OSPPARIS 50M. Introductory Science of Materials. 4 Units.

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

OSPPARIS 54. The Artist's World: The Workshop, Patronage and Public in 19th and 20th Century France. 4 Units.

Synergy between artists, their workshops, patrons, models and the public in 19th and 20th century France. Weekly sessions in museums, artists' studios, and special venues within and around Paris, attempting to understand the world of the artist, and how, in many cases, this world became not only a place of refuge, but a metaphor of the artistic creation itself.

OSPPARIS 60. Representations of Women in Christian Art: Boldness and Virtue. 4 Units.

Representation of women as biblical heroes and saints in Christian art. Codes of iconography and the attributes of women saints from the Renaissance to the 19th century; underlying social and moral force of these women figures throughout history. Class sessions in Paris museums.

OSPPARIS 61A. SAP: Overview of Modern French Art. 1 Unit.

One-week intensive course for Stanford Paris Program students who want to explore or enhance their knowledge of French art, including art of the 19th-20th century and the contemporary art scene. Held after the end of Spring Quarter, in-class sessions offered each morning with special visits and case studies each afternoon, including private visits to the Centre Pompidou and other major art galleries in Paris. Prerequisite: enrollment in a BOSP Paris art course during autumn, winter or spring quarter.

OSPPARIS 61B. SAP: Overview of Studio Art. 1 Unit.

One-week intensive course intended for Stanford in Paris students who want to explore or enhance their knowledge of studio art. Each day of the week is devoted to a different aspect of artistic expression including painting, drawing with live model, perspective, graphic and computer art. Held after the end of Spring Quarter. French and International art students also enroll in this course. Prerequisite: enrollment in a BOSP Paris art course during autumn, winter or spring quarter.

OSPPARIS 61C. SAP: Overview of Computer Art. 1 Unit.

One-week intensive course intended for Stanford in Paris students who want to explore or enhance their knowledge of computer art. Each day of the week is devoted to a different aspect of artistic expression, using software such as Photoshop and Blender, to explore techniques of colorisation, 3D animation, shading, lighting, etc. Held after the end of Spring Quarter. Prerequisite: enrollment in a BOSP Paris art course during autumn, winter or spring quarter.

OSPPARIS 72. The Ceilings of Paris. 4 Units.

Seventeenth century transformation of the ceilings of Paris, religious, private and public. Itinerary of this transformation from artists' quest; initial drawings to their finished work. In conjunction with an exhibition in the Louvre on this topic, study the original drawings as well as the venues in and around Paris. Sites vary from the most illustrious (Versailles) to the lesser known (Hocir;tel Lauzun). Reflection on the changing religious, social and political aspirations as represented in these new artistic forms.

OSPPARIS 79. Film and Immigration in Contemporary French Cinema. 3 Units.

Current debates in France regarding immigration, national identity, and the integration of immigrants and their descendants, notably from the former colonies (Maghreb, Africa, Vietnam), as reflected in the political sphere and in cinema from the 1990's to the present. Visual and discursive rhetorical strategies used in films and other media to represent ethnic, cultural, and religious minorities, discrimination, inter-racial marriages, or women rights. Representation of space and the movement between physical and symbolic spaces and the diverse groups that inhabit in or transit through these spaces. Discussions with French film directors and critics; visit to the Cinéacutemgrave;que francceuil;aise and the Citeacutemgrave; nationale de l'histoire de l'Immigration.

OSPPARIS 81. France During the Second World War: Between History and Memory. 5 Units.

French politics and society from the causes of the collapse of the French Third Republic and the emergence of the French State at Vichy. The political and cultural measures of this regime in the shadow of Nazi Germany. Anti-Jewish laws and action; deportations by Vichy, the Germans, the French Fascists, and reactions to the fate of the Jews. Visions of the Resistance, the combat for liberation, and WW II in the collective memory of France.

OSPPARIS 82. Independent Studies. 2-3 Units.

Topics in French Literature and Culture: Possible topics include: French Renaissance Literature (Rabelais, Montaigne); American Writers in Paris in the 20th century; images and Realities of Islam in Contemporary France; Women and Politics.

OSPPARIS 91. Globalization and Its Effect on France and the European Union. 5 Units.

Economic and political impact of globalization on France and the EU and influence of France and the EU on the process of globalization. Issues of sovereignty and national identity for France; protection from versus integration into the network of globalization.

OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design. 4 Units.

The development of Parisian building and architecture from the 17th century to the present. Interaction of tradition and innovation in its transformation and its historical, political, and cultural underpinnings. Visits and case studies throughout Paris illustrate the formation of the city landscape and its culture.

OSPPARIS 103A. French Lecture Series 1. 1 Unit.

May be repeated for credit.

OSPPARIS 104A. French Lecture Series 2. 1 Unit.

May be repeated for credit.

OSPPARIS 105A. French Lecture Series 3. 1 Unit.

May be repeated for credit.

OSPPARIS 122X. Challenges of Integration in the European Union. 4-5 Units.

European integration is now an economic, social, and political reality. This integration has a history of mutation and a transformation of its very foundation. Topics: the evolution of welfare states, elites, political parties, and systems in Europe; lobbies, trade unions, voluntary associations, social movements, popular protest, citizenship, democracy.

OSPPARIS 124P. Advanced French I. 5 Units.

Complexities of French grammar and precise use of syntactic structures. Introduction to French essay-writing. Intensive Language course is included. Intensive component required of all Paris students; Advanced French I is optional. Prerequisite: FRENLANG 23C or OSPPARIS 23P or equivalent placement.

OSPPARIS 124X. Building the European Economy: Economic Policies and Challenges Ahead. 5 Units.

Issues and challenges of European economic construction. The European Economic Union at the end of the 50s; European industrial, agricultural, social, and monetary economic policies. Topics: wider definitions of Europe, its relations with industrial and developing countries, and its challenges in confronting global economic crises.

OSPPARIS 125P. Advanced French II. 5 Units.

Prerequisite: FRENLANG 23C, or OSPPARIS 23P or equivalent placement.

OSPPARIS 153X. Health Systems and Health Insurance: France and the U.S., a Comparison across Space and Time. 5 Units.

Should health systems be organized or left to the free market? What is the role of the state in the delivery of health care? The evolution of the health profession, health policy, and reform in France and the U.S.; measures restraining professional autonomy such as prescription guidelines in the French Medical Convention. Is the solution to the increase of health expenditures and reduced access to health care the end of autonomy for the medical profession?.

OSPPARIS 180. Paris Special Topics. 1-6 Unit.

May be repeated for credit.

OSPPARIS 186F. Contemporary African Literature in French. 4 Units.

Focus is on African writers and those of the diaspora, bound together by a common history of slave trade, bondage, colonization, and racism. Their works belong to the past, seeking to save an oral heritage of proverbs, story tales, and epics, but they are also contemporary.

OSPPARIS 195C. Paris University: Health and Science 1. 1-6 Unit.

May be repeated for credit.

OSPPARIS 195D. Paris University: Health and Science 2. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196C. Paris University: Humanities 1. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196D. Paris University: Humanities 2. 1-6 Unit.

May be repeated for credit.

OSPPARIS 196E. Paris University: Humanities 3. 1-6 Unit.

May be repeated for credit.

OSPPARIS 197C. Paris University: Social Science 1. 1-6 Unit.

.

OSPPARIS 197D. Paris University: Social Science 2. 1-6 Unit.

.

OSPPARIS 198A. International Design and Construction Project. 1-6 Unit.

Working as part of a French team of designers and engineers, invent a new product and present it to a jury of professors from French Institutes. While engineers insure the product functions and designers insure ease of use, Stanford students additionally help assess whether product will be used locally or globally. Winter and Spring enrollment required.

OSPPARIS 198C. Paris University: Engineering 1. 1-6 Unit.

.

OSPPARIS 198D. Paris University: Engineering 2. 1-6 Unit.

.

OSPPARIS 199A. Directed Reading A. 1-6 Unit.

.

OSPPARIS 199B. Directed Reading B. 1-6 Unit.

.

OSPPARIS 199C. Directed Reading: C. 1-6 Unit.

.

Overseas Studies in Santiago Courses

OSPSANTG 12S. Accelerated Second-Year Spanish, Part I: Chilean Emphasis. 5 Units.

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish, or 11 or 21B if taken more than two quarters prior to arriving in Santiago.

OSPSANTG 13S. Accelerated Second-Year Spanish, Part II: Chilean Emphasis. 5 Units.

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters of arriving in Santiago, or 12 or 22B.

OSPSANTG 14. Women Writers of Latin America in the 20th Century. 4-5 Units.

Key figures in poetry, narrative fiction, theater, and testimonio, such as Mistral, Garro, Lispector, Poniatowska, Valenzuela, Eltit and Menchuaacute;. Close reading technique. Issues raised in literary texts that reflect the evolution of the condition of women in Latin America during the period. Topics include gender differences and relationships, tradition versus transgression, relationship between changes in the status of women and other egalitarian transformations, and women writers and the configuration of literary canons.

OSPSANTG 29. Sustainable Cities: Comparative Transportation Systems in Latin America. 4-5 Units.

Energy and environmental challenges resulting from the growing size and complexity in Latin American cities. Key issues: way in which public authorities deal with the dynamics of urban growth and complexity; related environmental and energy issues, particularly related to different public transportation models. Systemic approach as seen in Curitiba, Bogota, Santiago, and Medellin. Analysis centering on different approaches used to tackle these related issues; different institutional strategies.

OSPSANTG 30. Short Latin American Fiction of the 20th Century. 4-5 Units.

Introduction to short narrative fiction produced in Latin America during the 20th Century. Key features of the short story genre, as defined by Chekhov in the 19th Century and redefined by Kafka and Borges in the 20th Century. Main literary movements of the period in Latin America, including Regionalism, Social Realism, the Avant-Garde, the Boom of the 1960s and Magical Realism, the Post-Boom, etc. Close reading course with strong emphasis on analysis and discussion of the required texts. Readings placed in the context of the main developments in Latin American history and culture in the period.

OSPSANTG 31. The Chilean Energy System: 30 Years of Market Reforms. 4-5 Units.

Design and evaluation of energy policies in Chile, a developing country facing a growing public concern for energy and environmental issues. Market reforms pioneered by Chile in the 1980s and subsequently followed in other Latin American countries. Analysis of reforms in three parts: 1) through questions on how to develop and power system, 2) by looking at the reforms themselves and their implementation, and 3) by reviewing the local and global environmental costs associated with electric power generation.

OSPSANTG 32. Global Work. 4 Units.

History and challenges of global work as well as on the technologies that support it. Topics include strategic reasons for distributing work, challenges associated with geographic distance, time zone differences, language and cultural differences, and the implications of using various collaboration technologies to work together across national boundaries. Examination of group dynamics, interpersonal relationships, how to structure distributed work, how to work more effectively as a global team member, and how to lead more effectively in these situations. Guest speakers from and/or visits to international firms located in and around Santiago for discussions about experiences in managing and working on global teams.

OSPSANTG 33. Spanish Language Tutorial. 2 Units.

Prerequisite: two years of college Spanish or equivalent placement. May be repeated for credit.

OSPSANTG 34. Independent Study Topics. 5 Units.

Range of topics related to history, economics and sociology. Historical projects examining politics of inequality in Chile over time; micro-level evidence evaluating plausibility of either economic resource curse or political resource curse. Other possible topics include Politics of Globalization, International Political Economy, Comparative Political Behavior, and Political Economy of Taxation, each with a focus on Chile or Latin America. Other areas to be discussed with instructor.

OSPSANTG 35. Independent Study in Organizational Behavior. 2-4 Units.

Focus on one of the following topics based on the interest of the student: 1) Team Dynamics; 2) Technology & Work; 3) Topics in Organizational Behavior. Students conduct review of relevant research on the topic selected and, for 4 units, conduct original empirical research of their own (such as interviews with relevant people).

OSPSANTG 39. INDEPENDENT STUDY OPTIONS. 1-2 Unit.

.

OSPSANTG 40. Academic Internship. 2-3 Units.

May be repeated for credit.

OSPSANTG 41. Political Economy: Chile in Comparative Perspective. 5 Units.

Why are some countries rich while others are poor? Why do some countries regularly adopt bad economic policies? What is the impact of political institutions on the policies countries implement? Why do some countries have institutions associated with policies that promote development and human welfare? Examine determinants of economic and political development with a focus on the historical experience of Chile and Latin America more generally. Factors influencing choices in a variety of policy areas including international trade, foreign direct investment, fiscal and monetary policy, education, and social insurance.

OSPSANTG 58. Living Chile: A Land of Extremes. 5 Units.

Physical, ecological, and human geography of Chile. Perceptions of the Chilean territory and technologies of study. Flora, fauna, and human adaptations to regional environments. Guest lectures; field trips; workshops.

OSPSANTG 62. Topics in Chilean History. 4-5 Units.

Independent study topics concerning any aspect of Chilean history such as independence and nation building, social and economic development, ideas and culture, dictatorship and democracy. Research paper based on primary and secondary sources.

OSPSANTG 68. The Emergence of Nations in Latin America. 4-5 Units.

Major themes of 19th-century Latin American history, including independence from Spain, the emergence of nation states, and the development of a new social, political, and economic order.

OSPSANTG 71. Santiago: Urban Planning, Public Policy, and the Built Environment. 4-5 Units.

Santiago's growth and development over time and in comparison to other mega cities in the world; impact of urban highways on the built environment; shopping malls and the development of new urban sub-centers. Topics: brief history of the city, from 1541 to 1940; urban development since 1940; the 1960 Inter-communal Urban Plan; planning and the configuration of modern Santiago; housing policy as an instrument to combat poverty; social housing policy and Santiago's built environment.

OSPSANTG 85. Marine Ecology of Chile and the South Pacific. 5 Units.

Relationships among physical processes in the ocean, biological productivity, and the exploitation of resources by high-trophic-level predators including human beings. Characterization of ecological patterns; identification of processes operating on marine systems. Open ocean ecosystems, intertidal and benthic regions of the world's oceans, and ecological research developed along coastal regions, focusing on Chile's 4,000 km coastline.

OSPSANTG 102S. Composition and Writing Workshop for Students in Santiago. 3-5 Units.

Advanced. Writing as craft and process: brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: SPANLANG 13C, 13R, 13S, 23B, or equivalent.

OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century. 5 Units.

Chile's strides towards becoming a developed country have engendered high levels of alienation and disaffection among significant sectors of the population. The roots of this apparent paradox of modernization, focusing on newly emerging actors in the Chilean political scene: Mapuche organizations, women's groups, the environmental movement, and new features of the established ones like trade unions and human rights activists.

OSPSANTG 118X. Artistic Expression in Latin America. 5 Units.

Elite, mass-media, and popular cultural changes in Chile under conditions of economic and political liberalization. The reception of cultural meanings from the center of the world social system (U.S., EU, and Japan), reformulation to respond to local conditions, and export in the shape of cultural artifacts. Innovative elements rooted in the regional and local culture.

OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies. 5 Units.

The Chilean economy in five stages, taking into account: the international economic position of Chile; internal economic structures closely related to the inherited historical conditions and to the changing international economic position of the country; and the economic strategies prevalent during the period and the concrete development policies conducted by government authorities.

OSPSANTG 129X. Latin America in the International System. 4-5 Units.

Latin America's role in world politics, with emphasis on the history of and models for explaining U.S.-Latin American relations. Latin America's evolving relationship in the international system.

OSPSANTG 130X. The Chilean Economy in Comparative Perspective. 5 Units.

Introduction to the main debates and approaches developed to understand and analyze the economies of Latin America. Recent processes of transition to market economies. Common characteristics among countries of the region; the differences and special traits of individual countries. Historical, analytical, and empirical perspectives on topics at the center of controversies and specific policy problems over several decades. Recommended: ECON 1, 51, and 52.

Pathology Courses

PATH 101. Cancer Biology. 4 Units.

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor. Same as: CBIO 101

PATH 103Q. Lymphocyte Migration. 1 Unit.

Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

PATH 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

PATH 204SI. Medical Etymology. 1 Unit.

A survey of medical etymology and terminology that parallels preclinical medical education. Topics focus on Greek and Latin roots and their appearances in the medical lexicon.

PATH 210. Stem Cells in Development and Disease. 1-2 Unit.

Molecular and cellular mechanisms underlying the basic self-renewal and differentiation properties of stem cells in multiple tissues and organisms. How abnormal stem cell behavior may contribute to diseases such as cancer. How to manipulate stem cell behavior in vitro or in vivo for therapeutic purposes. Classical papers and recent literatures in the field of stem cell biology. Open to graduate, medical, and advanced undergraduate students. Prerequisite: consent of instructor.

PATH 213. Gross Autopsy Pathology Laboratory. 2-3 Units.

Examine/discuss unfixed dissected organs from current autopsies and correlate morphologic findings with the clinical history. Students view postmortem examinations and may participate (in a small group) in one postmortem examination with the assistance of residents and staff, and present the case to the class. Class scheduling is flexible. Additional unit for participation in a postmortem examination. Class may not be repeated. Prerequisite: HHD220.

PATH 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.

Same as: GENE 218, MI 218

PATH 233. The Biology of Small Modulatory RNAs. 2 Units.

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: GENE 233, MI 233

PATH 234. Fundamentals of RNA Biology. 2 Units.

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: GENE 234, MI 234

PATH 240. Clinical Studies in Pathology I. 3-9 Units.

A broad exposure to the practice of pathology in an academic medical center. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosecutions and formulate final anatomic diagnoses under the supervision of faculty. This course must be combined with Clinical Studies in Pathology II, and two additional quarters of PATH 399, Directed Research, to fulfill a 12 month Post-Sophomore year Fellowship in Pathology. Prerequisite: MD candidate; instructor consent.

PATH 241. Clinical Studies in Pathology II. 3-9 Units.

An in-depth exposure to the practice of pathology for students who have completed Clinical Studies in Pathology I. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in sub-specialty areas of pathology that include dermatopathology, neuropathology, renal pathology, lymph node pathology or cytology. This course must be combined with Clinical Studies in Pathology I and two additional quarters of PATH 399, Directed Research, to fulfill a 12-month Post-Sophomore year Fellowship in Pathology. Prerequisite: consent of instructor and successful completion of Clinical Studies in Pathology I (PATH 240).

PATH 280. Early Clinical Experience in Pathology. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

PATH 290. Pediatric Nonmalignant Hematology and Stem Cell Biology. 2 Units.

Pediatric hematologic disorders provide an important paradigm to study other developmental systems. Subjects covered include hematopoiesis, basic stem cell biology, endothelial cell development, alternative models to study nonmalignant hematology and stem cell biology (zebrafish and drosophila), defects in white cell function, basic research in stem cell transplantation, state of the art methods in nonmalignant hematology and stem cell biology (genomics, proteomics, and gene therapy), and bioinformatics. The course is also open to graduate students and junior and senior undergraduate students who are pre-med.

PATH 299. Directed Reading in Pathology. 1-18 Unit.

Prerequisite: consent of instructor.

PATH 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PATH 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Opportunities at the molecular, cellular, and clinicopathologic levels.

Prerequisite: consent of instructor.

Pediatrics Courses

PEDS 50N. Translating Science to Disease Treatment. 3 Units.

Investigates how scientific research informs how physicians take care of patients and how clinical research informs how scientific experiments are conducted. Topics include how these two processes have improved health and have resulted in innovation and scientific progress; specific human disease areas in allergy and immunology that affect all ages of patients globally, including food allergy; scientific concepts of research that helped in discovery of novel diagnostics and treatment of disease; ethical roles of physicians and scientists in conducting translational research in human disease.

PEDS 51N. How Discovery and Innovation Have Transformed Medicine. 3 Units.

Topics include the science behind vaccines and why some refuse vaccination, how antibiotics are discovered and what can be done about increasing resistance to antibiotics, stem cells and their potential use, the role of genomics in modern medicine, development of drugs to treat HIV/AIDS, discovery of surfactant, personal responsibility in health and wellness and how technology relates to the "cost conundrum" of healthcare in the U.S. Appreciate important connections between science, discovery and human health and think critically about the potential impact of new discoveries on life and death, and their ethical and spiritual boundaries.

PEDS 60Q. Famine in the Modern World. 3 Units.

This seminar is devoted to an investigation of famine uest; mass starvation uest; which throughout recorded history has been more lethal than war. Students will assess the relative weight of natural, economic, and political factors as causes of famine over the past two centuries. Students will acquire a background into the central facts about and controversies surrounding the major famines of modern history. Case studies include the Great Irish Famine of the 1840s, the Bengal famine of 1943-44, the Soviet famines of 1921-22 and 1932-33, the Great Famine in China in 1959-61, and the famines in Ethiopia and Somalia since the 1970s.

PEDS 65N. Understanding Children's Health Disparities. 3 Units.

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children.

PEDS 65Q. Understanding Children's Health Disparities. 3 Units.

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children. Includes instruction addressing written assignments and required oral presentations.

PEDS 105. Health Promotion and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

Same as: PEDS 215

PEDS 106. Pursuit of Happiness and Health. 3 Units.

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults.

Same as: PEDS 206

PEDS 116. Alcohol Issues and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health, health psychology, and sociology. The prevalence and scope of alcohol-related problems; challenges of risk reduction and intervention strategies. Students apply theoretical frameworks to alcohol-related research topics and projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

PEDS 130. Pediatrics Journal Club. 1 Unit.

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice.

Same as: PEDS 230

PEDS 150. Social and Environmental Determinants of Health. 3 Units.

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media).

Same as: PEDS 250

PEDS 159A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required.

Same as: PEDS 259A

PEDS 159B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A.

Same as: PEDS 259B

PEDS 159C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B.

Same as: PEDS 259C

PEDS 199. Undergraduate Directed Reading/Research. 1-18 Unit.

Prerequisite: consent of instructor.

PEDS 202A. Practical Applications for Qualitative Data Analysis. 3 Units.

(Same as MED 200A) First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent PEDS 202B required.

PEDS 202B. Practical Applications for Qualitative Data Analysis. 3 Units.

(Same as MED 200B) Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of PEDS 202A.

PEDS 202C. Qualitative Research Methods and Study Design. 3 Units.

Introduction to qualitative research methods and study design. Students gain practical experience designing a qualitative study. Explore qualitative methods through class lectures, foundational readings and hands-on learning. Core topics include: theoretical frameworks, research questions, methodological approaches (i.e. interviews, focus groups, participant observation, photovoice), data collection, sampling, reliability and validity, and IRB protocols. This course is designed for students needing support to plan and design an independent research project (i.e. Med Scholars, Honors Thesis). Prerequisite: Consent from instructor for undergraduates.

PEDS 203SI. Flu Crew: Advanced Vaccinator Education. 1 Unit.

Students receive clinically relevant advanced training as preparation for Flu Crew clinic shifts both on- and off-campus during Autumn Quarter. Course includes informational sessions, speakers, and hands-on workshops focusing on the most clinically relevant influenza knowledge and skills. Topics covered include influenza epidemiology, misconceptions, patient education, vaccine selection, vaccinator Spanish, and advanced vaccination technique. Students required to attend three clinics.

PEDS 206. Pursuit of Happiness and Health. 3 Units.

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults.

Same as: PEDS 106

PEDS 211. Medical-Legal Issues in Children's Health. 2-4 Units.

(Same as LAW 643) Explores the link between poverty and children's health and how the medical and legal fields can work together to improve health outcomes for low income children. Weekly class meetings covering medical legal issues such as asthma immigration, health insurance; intake interviews with patient families and analysis of their medical legal issues; group project focused on a medical legal policy issue; final paper cowritten by law and medical students. May be taken for 2 units (weekly 2.5 hour seminar meetings only), 3 units (participation in either intake interviews or policy work) or 4 units (full participation in all course components). Prerequisite: instructor consent. Preference to students committed to full participation.

PEDS 212. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations. 3 Units.

An emerging area of inquiry. Topics include: global migration trends, health Issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

Same as: HUMBIO 122M

PEDS 213. Critical Issues in Child Health. 2 Units.

Develop an integrated understanding of the physical and psychosocial health factors from birth through adolescence that result in a healthy child. Uses a multidisciplinary perspective to review the basic physiology and pathophysiology associated with common childhood illnesses and integratenthis with socio-environmental factors that influence child health. Students gain perspective on child health challenges around the world and develop a broad understanding of how the cultural context influences and defines the individual living therein.

PEDS 214. Introduction to Pediatrics Lecture Series. 1 Unit.

Introduction to the various aspects of pediatrics, directed at pre-clinical MD students, undergraduates, or graduate students. Course composed of interactive lectures conducted by pediatric faculty on subjects ranging from normal development to topics in different pediatric subspecialties. current issues in the field, and opportunities for students considering this specialty. Speakers also touch on their career paths and choices and are available to answer questions about their areas of interest. By special arrangement students may have the opportunity to shadow general pediatricians or pediatric specialists. Intended to stimulate interest in pediatrics and to inform students about the breadth of the field.

PEDS 215. Health Promotion and the Campus Culture. 4 Units.

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

Same as: PEDS 105

PEDS 222. Beyond Health Care: Seeking Health in Society. 3 Units.

Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HUMBIO 4B or equivalent, and background in research methods and statistics.

Same as: HUMBIO 122

PEDS 223. Human Rights and Global Health. 3 Units.

Open to medical students, graduate students, and advanced undergraduates. Examines the newly emerging field of human rights and global health, beginning with the essential background into the field of human rights, and the recent emergence of health as a human right. Emphasis is on the pioneering work of Dr. Paul Farmer and Partners in Health and the challenge he and his organization have posed to the conventional wisdom about approaches to combating poor health and disease worldwide. Topics include the "big three" infectious diseases -- tuberculosis, malaria, and HIV/AIDS -- as well as emerging infectious diseases, clean water and sanitation, and malnutrition and famine.

PEDS 224. Genocide and Humanitarian Intervention. 3 Units.

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan. Same as: HISTORY 224C, HISTORY 324C, JEWISHST 284C, JEWISHST 384C

PEDS 225. Humanitarian Aid and Politics. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the moral dilemmas and political realities that complicate the delivery of humanitarian aid, especially when undertaken by the United Nations and non-governmental organizations (NGOs). Emphasis is on what humanitarians call "complex humanitarian emergencies": crises often characterized by famine and/or epidemic disease and typically the result of war and/or civil war. Provides background into the history of humanitarian aid, though focus is on the post-Cold War era, up to the recent crises in Libya and Syria.

PEDS 226. Famine in the Modern World. 3 Units.

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011.

Same as: HISTORY 226E, HISTORY 326E

PEDS 230. Pediatrics Journal Club. 1 Unit.

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice.

Same as: PEDS 130

PEDS 231. Medicine for Innovators and Entrepreneurs. 3-4 Units.

Interdisciplinary, project-based course in which bioscience, bioinformatics, biodesign, bioengineering students learn concepts and principles to understand human disease and work together to propose solutions to medical problems. Diabetes mellitus is used as a paradigm for understanding human disease. Guest medical school and outside faculty. Field trips to Stanford clinics and biotechnology companies. Prerequisite: college level biology.

Same as: IMMUNOL 231

PEDS 246. Developmental Disabilities: From Biology to Policy. 3 Units.

Fifteen percent of US children have disabilities. While advances in medicine and technology have increased life expectancy for these children, health care delivery, education, and public attitudes have not kept pace. Students in this course will learn the possibilities and limitations of new biomedical treatments of Down syndrome, cerebral palsy, and autism. Students will also evaluate the impact of public policy initiatives, such as the Individuals with Disabilities Education Act and Americans with Disabilities Act on inclusion and participation in society.

Same as: HUMBIO 146D

PEDS 250. Social and Environmental Determinants of Health. 3 Units.

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media).

Same as: PEDS 150

PEDS 251A. Medical Ethics I. 2 Units.

Required for Scholarly Concentration in Biomedical Ethics and Medical Humanities. The field of bioethics, including theoretical approaches to bioethical problems. Contemporary controversies and clinical cases. Values that arise in different situations and clinical encounters. Issues include: genetics and stem cell research, rationing, ethical issues in care at the end of life, organ transplantation issues.

PEDS 251B. Medical Ethics II. 2 Units.

The integration of ethical theory with applications of theory or conceptual issues in medicine, health care, and the life and social sciences. Topic varies by year. Possible topics include: ethical issues in stem cell research; death and dying; genetics and ethics; concepts of health and disease; the ethics of international research; and ethical implications of new reproductive technology.

PEDS 254. Pediatric Physical Findings Rounds. 1 Unit.

Pediatric patients with specific physical findings and hospitalized at LPCH are identified and introduced to students. Students in small groups examine patients at the bedside to note the physical finding and discuss it within the context of the patient's clinical problem. Emphasis is on basic science discussion to understand the cause of the finding.

PEDS 258. Developing and Defining Strong Community-Academic Partnerships. 2 Units.

Applying the principles of community-based participatory research to medical scholars research projects. Strategies for developing strong, equitable and sustainable community-academic partnerships. Identify and assess proposed faculty mentors and community partners, and establish proposed goals and objectives for med scholars research.

PEDS 259A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required.

Same as: PEDS 159A

PEDS 259B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A.

Same as: PEDS 159B

PEDS 259C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B.

Same as: PEDS 159C

PEDS 280. Early Clinical Experience. 2-4 Units.

Provides students an opportunity to see patients and correlate clinical findings with preclinical coursework. Students spend a half day or a full day in a pediatric subspecialty clinic (e.g., infectious diseases, endocrine, gastroenterology), participate in conferences and accompany attending physicians. Students have directed reading and meet with faculty for one hour per week to discuss their reading.

PEDS 281. Childhood Chronic Illness: Impact on Family Development. 1 Unit.

The Pals Program is a volunteer activity serving Lucile Packard Children's Hospital chronically ill patients and their siblings. Modeled after the Big Brother/Big Sister Program, Pals matches first- and second-year medical students with pediatric patients or their siblings. The patients and/or their siblings enjoy the support and companionship of their Pals, and the medical students learn firsthand about the emotional and social aspects of chronic illness during childhood. Pals meet regularly throughout the year to participate in fun activities such as movies, ball games, museums, and picnics. The activities and personal relationships are overseen by the LPCH Pals social worker. Bimonthly class meetings introduce the students to pediatric chronic diseases such as leukemia, cystic fibrosis and pulmonary hypertension. The class brings in physicians to give the medical perspective as well as patients and families to get their perspective. Prerequisite: approval of the LPCH social worker for Pals.

PEDS 282. Pregnancy, Birth, and Infancy. 3 Units.

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: OBGYN 282

PEDS 299. Directed Reading in Pediatrics. 1-18 Unit.

Prerequisite: consent of instructor.

PEDS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

PEDS 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members.

Philosophy Courses

PHIL 1. Introduction to Philosophy. 5 Units.

Is there one truth or many? Does science tell us everything there is to know? Can our minds be purely physical? Do we have free will? Is faith rational? Should we always be rational? What is the meaning of life? Are there moral truths? What are truth, reality, rationality, and knowledge? How can such questions be answered? Intensive introduction to theories and techniques in philosophy from various contemporary traditions. Students must enroll in lecture AND one of the 4 discussion sections listed.

PHIL 2. Introduction to Moral Philosophy. 5 Units.

A survey of moral philosophy in the Western tradition. What makes right actions right and wrong actions wrong? What is it to have a virtuous rather than a vicious character? What is the basis of these distinctions? Why should we care about morality at all? Our aim is to understand how some of the most influential philosophers (including Aristotle, Kant, and Mill) have addressed these questions, and by so doing, to better formulate our own views. No prior familiarity with philosophy required.

Same as: ETHICSOC 20

PHIL 5N. The Art of Living. 4 Units.

Whether we realize it or not, all of us are forced to make a fundamental choice: by deciding what is most valuable to us, we decide how we are going to live our life. We may opt for a life of reason and knowledge; one of faith and discipline; one of nature and freedom; one of community and altruism; or one of originality and style. We may even choose to live our lives as though they were works of art. In every case, hard work is required: our lives are not just given to us, but need to be made. To live well is, in fact, to practice an art of living. Where, however, do such ideals come from? How do we adopt and defend them? What is required to put them into practice? What do we do when they come into conflict with one another? And what role do great works of art play in all this? "The Art of Living" will explore the various ways in which it is possible to live well and beautifully, what it takes to implement them, and what happens when they come under pressure from inside and out.

PHIL 6N. Pictures and the Imagination. 3 Units.

Paintings, drawings, and photographs often function as pictures or images of the preexisting things they take as subjects. They represent these subjects from specific spatial vantage points in ways that may be more or less definite, more or less detailed, and more or less faithful to what the subjects are actually like. One longs to know how this works: how vision, imagination, and background knowledge come together when we experience a picture as a picture. Certain forms of imagining and remembering involve mental picturing, mental imagery. Sometimes we imagine or remember things in visual terms from a specific spatial vantage point, with the result that we feel brought face to face with the things imagined or remembered, however far away they may actually be. How is the physical picturing that goes on in paintings, drawings, and photographs both like and unlike the mental picturing that goes on when things swim before the mind's eye? What role does mental picturing play in physical picturing? What kinds of artistic value and interest attach to paintings, drawings, and photographs in virtue of what they picture and how they picture it?

PHIL 7Q. What is Truth. 3 Units.

This question can be answered precisely in some important cases. We begin with the language of propositional logic where truth is defined by simple tables. This is already sufficient for description of many important problems and leads to a famous (\$1 000 000) problem $P=NP$. We use Sudoku puzzles for illustration. Close connection between propositional truth and proof is established by the resolution method forming a basis of most automated theorem provers. The language of predicate logic covers much more and illustrates the notion of completeness. Register machines provide connection with computations and lead to a fundamental classification of problems of truth with respect to decidability. The language of arithmetic exhibits a new phenomenon of incompleteness that changed significant part of philosophy in 20-th century.

PHIL 8N. Free Will and Responsibility. 4 Units.

In what sense are we, or might we be free agents? Is our freedom compatible with our being fully a part of the same natural, causal order that includes other physical and biological systems? What assumptions about freedom do we make when we hold people accountable morally and/or legally? When we hold people accountable, and so responsible, can we also see them as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about our freedom do we make when we deliberate about what to do? Are these assumptions in conflict with seeing ourselves as part of the natural, causal order? We will explore these and related questions primarily by way of careful study of recent and contemporary philosophical research on these matters.

PHIL 9N. Philosophical Classics of the 20th Century. 4 Units.

Last century's best and most influential philosophical writings. Topics include ethics (what is the nature of right and wrong?), language (how do meaning, reference, and truth arise in the natural world?), science (can science claim objectively accurate descriptions of reality?), existence (are there things that don't exist?), and the mind (could robots ever be conscious?). Authors include Bertrand Russell, Ludwig Wittgenstein, Rudolf Carnap, Willard Quine, Thomas Kuhn, John Rawls, and Saul Kripke. The lay of the land in contemporary philosophy.

PHIL 10N. Bounded Rationality. 3 Units.

This course takes a philosophical approach to a cutting edge debate in psychology. Readings include texts in contemporary cognitive science as well as in philosophy of mind.

PHIL 11N. Skepticism. 3 Units.

Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. Skepticism regarding religious beliefs.

PHIL 12N. Paradoxes. 3 Units.

In this course, we will use paradoxes like these as foci for discussions of some of the deepest issues in philosophy and mathematics. No prior knowledge of logic, philosophy or mathematics will be assumed and there will be minimal use of symbolism. Students will be expected to complete problem sheets, and to write a very short final paper. The seminars will be discussion-based.

PHIL 14N. Belief and the Will. 3 Units.

Preference to freshmen. Is there anything wrong with believing something without evidence? Is it possible? The nature and ethics of belief, and belief's relation to evidence and truth. How much control do believers have over their belief?

PHIL 15N. Freedom, Community, and Morality. 3 Units.

Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant.

PHIL 20S. Introduction to Moral Philosophy. 3 Units.

What makes right actions right and wrong actions wrong? Must right actions promote some further good? What is the role of consequences in the evaluation of actions as right or good? Focus is on traditional attempts to account for what determines which actions are right, what is worth promoting, and what kind of person one ought to be. Readings from primarily historical figures such as Aristotle, Hume, Kant, Mill, and others.

PHIL 23A. The Cognitive Science of Mathematics. 2 Units.

Mathematics has two features which, taken together, are quite puzzling: (i) its objects (numbers, functions, derivatives, manifolds, and the like) are very unlike everyday concrete material objects, yet (ii) it seems to be the source of our most certain knowledge. In this course, we will examine the role in which findings from empirical theories of mathematical cognition can help address and possibly dissolve this puzzle. The course will be broken up into three units: Philosophical Foundations, Numerical Cognition, and Metaphor and Higher Mathematical Thought.

PHIL 23B. Truth and Paradox. 2 Units.

Philosophical investigation of the concept of truth is often divided along two dimensions: investigation of the nature of truth and investigation of the semantics of truth claims. This tutorial will focus on the second kind of concern. One key impetus for a philosophical interest in the semantics and definability of truth is the challenge posed by semantic paradoxes such as the Liar paradox and Curry's paradox. Despite each having the initial appearance of a parlor trick, philosophers and logicians have come to appreciate the deep implications of these paradoxes. The main goal of this tutorial is to gain an appreciation of the philosophical issues - why, both with respect to formal and natural languages, which arise from consideration of the paradoxes. To this end, we will study some of the classic contributions to this area including Tarski's famous result that, in an important sense, the semantic paradoxes render truth indefinable, and Kripke's much later attempt to provide a definition of truth in the face of Tarski's limitative result. Further topics include the debate between paraconsistent and paraconsistent solutions to the semantic paradoxes (notably defended by, respectively, Field and Priest); the relationship between deflationism about truth and the paradoxes; and the notion of revenge problems (roughly, the claim that any solution to the paradoxes can be used to construct a further paradox). The tutorial will avoid excessive technical discussions, but will aim to engender appreciation for some philosophically interesting technical points and will assume a logic background of PHIL 150 level.

PHIL 23C. Counterfactuals. 2 Units.

Reasoning about counterfactual conditionals plays an important role in contemporary philosophy. Not only have counterfactual analyses been proposed for central philosophical notions, including causation, laws of nature, free will, and knowledge, but also counterfactuals have become objects of interest in their own right, both in the philosophy of language and in logic. This tutorial will introduce the standard approaches to the semantics of counterfactuals, focusing on the work of David Lewis and Robert Stalnaker. Prerequisite: one logic course (e.g., 50, 150, or 151) or consent of instructor.

PHIL 23D. Principia as Paradigm: Mechanics After Newton. 2 Units.

Newton's Principia is widely and rightly acknowledged as a landmark achievement in physics that has had a profound impact on the subsequent development of science. This tutorial will focus on what sorts of influence the Principia had on the development of mechanics in roughly the first century following its publication. The work of Euler, Lagrange, and Laplace will serve as the primary examples of this development. Kuhn's description of paradigms in *The Structure of Scientific Revolutions* provides a starting point for understanding some of these forms of influence. In particular, this tutorial will try to explore two central areas of influence. The first is Newton's conceptual framework and how it was modified in the further development of mechanics during this period. The second is how projects suggested by residual problems within the Principia shaped ongoing study.

PHIL 23E. Embodied Cognition. 2 Units.

Where does the mind stop and the world begin? A standard assumption is that thinking is somehow local to the central nervous system; that is, cognition just amounts to brain activity. A wave of recent work in philosophy and cognitive science has questioned this assumption, insisting that the mind cannot be understood outside the context of a living body interacting dynamically with an environment. To put it more dramatically, the mind extends out into the world. We shall read some of the main proponents of this move toward embodied and embedded cognition, and try to assess the extent to which it seriously calls into question more traditional views about how mind, brain, body, and world fit together.

PHIL 23F. Forgive and Punish. 2 Units.

Are we ever justified in forgiving those who wrong us? Do we have more reason to seek revenge and/or punishment than we do to forgive? Does it matter if wrongdoers apologize and repent for their offenses? Are there some acts and/or persons that should not be forgiven? This tutorial will take up these questions by examining (mostly recent) philosophical writings about: forgiveness, retribution, the question of reactive attitudes (such as resentment and hatred), and, more generally, how humans should (and should not) respond to wrongdoing.

PHIL 23G. Pessimism, Philosophy, and Human Nature. 2 Units.

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of humankind that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. But for these thinkers pessimism represents a sort of intellectual honesty about human nature, and these insights invariably underscore a profound optimism, in spite of their pessimism, with respect to what they view as the more pressing question concerning what humankind can make itself to be. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

PHIL 23H. Perfectionism: The Idea of the Perfect in Nature, Ethics, and Politics. 2 Units.

Perfection is the full realization of what is best or most excellent. In this tutorial course we will explore philosophical thought on perfection in three different contexts: natural teleology, individual ethical life, and utopian and anti-utopian social thought. Throughout the course, we will ask the following questions: What is a perfect being? Why is perfection per se good or desirable? Do evaluative comparisons presuppose some absolute standard of perfection? Does it make sense to aim at perfection in ethical and political life? What are the virtues of imperfection? What are the hazards of pursuing perfection in the political realm? Is perfectionism compatible with pluralism about values? Is perfectionism compatible with government based on popular will? The primary emphasis is on close reading and discussion of classic texts in ethical theory, including selections from Plato, Aristotle, Aquinas, Rousseau, Kant, and Tocqueville, accompanied by contemporary selections.

PHIL 23J. On the Notion of Respect: Politics, Deliberation and Disagreements. 2 Units.

The notion of respect plays a crucial role in a variety of human contexts. We respect many different things and we respect them in many different ways: from parents and elders, to public institutions and the law, and other people's dignity, feelings and rights. Many, in fact, claim that all people deserve respect; some way or another. Public conversations lately have been plagued with calls to respect the environment, life in all of its forms, citizenship; sexual orientation, etc. Additionally, it is also urged that public debates should take place under conditions of mutual respect: that above and beyond our differences and our interests, we should respect each other as persons. In particular, philosophers working in moral and political theory focus on what respect for persons might mean; including oneself and possibly other entities. Such a notion is frequently issued *inter alia* in discussions about justice and legitimacy, equality and exploitation, multiculturalism and pluralism, toleration and recognition. The main concern here centers on the ways in which citizens should respect one another in plural democracies. Explore whether or not the assumption that in order to properly respect each other as free and equal citizens we are obligated to satisfy certain requirements of justification (*viz.*, public reason) by seeking appropriate political justifications and sometimes exercising restraint in appealing to individual points of views (*viz.*, comprehensive doctrines) in political discourse.

PHIL 23K. Gender, Sexuality, and Equality. 2 Units.

We will focus on if/how social norms concerning gender and sexuality shape practical deliberation -- what options we take ourselves to have, what options we find desirable, and how we view ourselves as agents. It is from this angle that we will explore the notion of gender equality. Among the topics to be covered in the course are social and political equality, gender expectations, expression and commodification of sexuality, and adaptive preference. Readings will include: Ann Cudd, Alison Jagger, Rae Langton, Debra Satz, Susan Okin, Martha Nussbaum, John Rawls, John Stuart Mill, Catharine MacKinnon.

PHIL 23L. Love and Friendship. 2 Units.

People as different as Jesus Christ and Justin Timberlake think that love is crucial to living the good life. But what is love? What part should it play in our lives? Is it just one value among many? This course will consider questions about the nature of love, the role it plays in moral philosophy, and its effect on individual autonomy. Readings will be from both contemporary and historical sources.

PHIL 23M. Justice and Climate Change. 2 Units.

Does the current generation have a duty of justice to bear the brunt of the burden of combating climate change for the sake of future generations? If so, who should pay the costs of adapting to climate change and reducing greenhouse gas emissions? Should the costs of combating climate change be distributed according to historical emissions, to wealth, or to an equal per capita emissions principle? We will explore these questions through readings at the intersection of political philosophy and climate change. The course includes readings on the following topics: global distributive justice, human rights, historical responsibility, economic efficiency, environmental justice, sustainability, and catastrophe. Throughout the course we will reflect upon what role considerations of justice should play in seeking solutions to climate change.

PHIL 23N. Neuroscience and the Self. 2 Units.

The Self: Fiction or reality? Bundle of perceptions? Pragmatic role-concept? Fleeting moment of consciousness? Social invention? Narrative construct? Various philosophical conceptions of the self will be explored with a particular focus on the notion of the 'narrative self.' Literature from neuroscience, psychology and philosophy will be considered.

PHIL 23P. Personal Responsibility: Moral and Civic. 2 Units.

What do we as individuals owe to other people? Should we be spending our free time toiling in local politics and volunteering in soup kitchens? Should we be sending every extra penny (goodbye new shoes) to people who barely eek out a living on less than a dollar a day? Maybe we ought to spend tons of our time fighting to protect future generations from the predicted devastating effects of climate change. In this course we will explore how local, distant, and future circumstances affect our responsibilities as individuals. We'll discuss questions about what and how much we owe to others, and whether our responsibilities are part and parcel of being a morally good person, or whether they are things we owe others as good citizens of the community (and for that matter, which community do we owe them to--local, national, or global?).

PHIL 23R. What's in an essay?. 2 Units.

This course is about two questions: The first question: what is an essay? In other words, what is it that we mean when we talk about an essay instead of a precat; cis, a paper, a report, a chronicle, a scientific paper, an opinion piece, fiction or simply other kinds of academic writing. Call this first question, the demarcation question about the essay. Essays are particularly hard to pin down, to demarcate its boundaries is almost impossible. The essay represents a distinct challenge for both theory and criticism. Unlike other literary and academic genres, at least since their modern inception in Montaignequest; s hands, essays challenge notions and assumptions that in other genres are transparent or can be more easily set aside. n The second question is: what does essaying "the embarking upon the kind of things essayists claim to be doing" have to do with the cultivation of one's self, the examination of one's actions and deeds in ordinary contexts and the project of shaping it in self-reflective ways. Call this second question, the Socratic aspiration of the essay. To answer this question, we woniquest; t start from any pre-establish theory or framework, but rather work our way out directly from the readings of a sample of essays drawn from various sources. n By the end of the course, the student will be in a better position to confront questions such as: why are the humanities part and parcel of our educational efforts, more generally, and how could they become part of my education, more particularly? What are the difficulties and advantages, the very point of, writing one's opinions in an attempt to address others? How is self-understanding connected to philosophical endeavors? What role, if any, could finding one's voice have for the purposes of reflective and critical thinking about one's self in relation to others?.

PHIL 23T. Intellectual trust in oneself and others. 2 Units.

Most people have many false beliefs. Yet, one routinely relies on one's own beliefs and on the views of others. Does that mean that one takes oneself to be exceptionally good at forming true beliefs, and exceptionally good at detecting false beliefs in others? When is it justified to place intellectual trust in oneself and in others?.

PHIL 23U. Death and What Comes After. 2 Units.

Is it irrational to fear death? Is death bad for you? Does it make sense to want to be immortal? How does what happens after our deaths matter to us? n Ancient and contemporary philosophers give surprising answers to these questions about death, answers that shed light on basic questions about what matters in life. Among those we'll read are Plato, Aristotle, Epicurus, Bernard Williams, Thomas Nagel and Samuel Scheffler.

PHIL 23V. Plato's Republic. 2 Units.

Who should rule? What is the best regime? What is the role of law? What makes a regime just? What is the relation between theory and practice in politics? n This course will focus on the political philosophy of the Republic, Plato's most well known dialogue and a foundational text in the history of political thought. We will also consider how Plato's psychology underlies his political philosophy and how the political philosophy of the Republic is related to political thinking in Plato's later works. Emphasis will be on primary texts, although the instructor will recommend relevant secondary sources as needed. Students will work closely with the instructor to tailor a final assignment that engages with the text and furthers the student's educational goals and interests.

PHIL 23W. Cognition and Perception. 2 Units.

In this tutorial, we will examine a cluster of questions concerning the relationship between cognitive states, such as beliefs and desires, and perception. We will examine the question of whether, and to what extent, concepts, beliefs, and desires can influence the content of perception. If these cognitive states can influence the content of perceptual states, how worried should we be about the ability of perception to justify belief, both in everyday life and in scientific inquiry?.

PHIL 23Y. Knowledge in Action: Anscombe's Intention. 2 Units.

Anscombe's Intention is one of the foundational texts of 20th century analytic philosophy. It brings together central issues from the philosophy of mind, epistemology, philosophy of language -- and lays the ground for contemporary philosophy of action. Anscombe raises (and answers) questions regarding the nature of intentional action, intention, reasons for action, agential self-knowledge, and practical reasoning, connecting them all in one unified account. n In the tutorial we will discuss these issues through a close reading of Intention. A short, terse, and marvelously rich self-contained piece of philosophical investigation, it is particularly well-suited for this purpose. Our work with the text should yield a solid basis notably in the philosophy of action, which will be useful for various other courses and areas (in philosophy of action, epistemology, philosophy of mind, and philosophy of language, and ethics). Methodologically the tutorial will foster philosophical skills regarding the analysis, interpretation, and criticism of a dense and rich philosophical text such as Anscombe's.

PHIL 25SI. The Animal-Human Relationship: Interdisciplinary Perspectives. 1 Unit.

The ethical, scientific, and spiritual problems that arise from the interaction between humans and other animals. Can animals have empathy? What does it mean for an animal to feel pain? How did humans come to dominate other animals? What moral obligations do humans have towards animals? Where do animals fit in religious thought? Is animal research ethical, and is it effective? What role does meat consumption play in modern society? How can the environmental impacts of livestock production be mitigated? Guest lecturers from philosophy, literature, biology, neurology, religious studies, psychology, anthropology, and environmental science.

PHIL 27S. Human Nature and its Discontents. 3 Units.

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of human beings that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. One of the themes running throughout Thucydides' History of the Peloponnesian War, for example, is the suggestion that human nature is motivated solely by passions of fear, envy, greed, and ambition. Thucydides highlights the ways in which he sees Athens as appealing to these passions while attempting to justify its unspeakable crimes against humanity in the name of "democracy." The aim of this course will be to work through some of the more salient examples of what I will call psychological or anthropological pessimism as outlined in the works of these thinkers, asking about the role their pessimism about human nature plays in their positive philosophical project. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

PHIL 30S. Justifying justice at home and abroad. 3 Units.
