- The Public Service Leadership Fellows Program provides an opportunity for students who want to be intentional about their leadership development. Center staff also provides leadership development through training, advising, and resources to Stanford

in Government, Alternative Spring Break, and other student groups engaged in service.

- With support from the center, Stanford faculty members have created service-learning courses that involve Stanford students in providing direct service and community-based research efforts in collaboration with local schools and other partner agencies. The center's Public Service Scholars Program supports seniors writing honors theses that combine academic research with service to communities.
- Faculty from Stanford's School of Education collaborate with center staff to provide curriculum guidance and training for tutors and mentors at nearby schools. Another program trains Stanford students to bring results of scientific research to neighborhood programs. The federally supported Community Service Work-Study program, administered in conjunction with the university's Financial Aid Office, allows students to satisfy work-study obligations year-round by working in community organizations and public agencies.
- The postgraduate and alumni programs help students, particularly graduating seniors, identify opportunities to assist in launching their public service careers in nonprofit and government agencies, and in the private sector in service-related positions.

Students interested in public service fellowships, service-learning courses, community-based research, public and community service internships for youth and education, or service organization leadership development should contact the center.

Bechtel International Center

Office: 584 Capistrano Way
Web Site: <http://icenter.stanford.edu>

The Bechtel International Center (I-Center) is a meeting place for students and senior research scholars at Stanford from throughout the world and for internationally oriented U.S. students, faculty, and short-term visitors on the campus. Through a variety of social, cultural, and educational programs, I-Center facilities are used to acquaint students and scholars with the life of the university and the community, and to bring them together in activities of mutual interest.

The Center believes that international educational exchange nurtures a lifelong global perspective, and plays a key role in supporting Stanford's standing as a truly international university in the following ways:

- Provides information about and assistance with obtaining and maintaining legal status in the U.S. to foreign students, scholars, and Stanford departments.
- Advises U.S. students who are pursuing scholarships for study and research abroad.
- Enables foreign students, scholars, and their family members at Stanford to receive maximum academic, cultural, and personal benefit from their stays in the U.S.
- Contributes to international activities at Stanford by helping to create a welcoming and supportive environment that is responsive to the needs of the international community.
- Facilitates professional meetings between visiting international delegations and their Stanford counterparts.
- Provides opportunities for Stanford students, faculty, staff, and members of the local community to broaden their horizons by interacting with people from different cultures through programs to increase international awareness and understanding.

Office of Community Standards

Office: Tresidder Memorial Union, 2nd floor
Mailing Address: 459 Lagunita Drive, Suite 9
Mail Code: 94305-3010

Phone: (650) 725-2485

Fax: (650) 736-0247

Web Site: <http://studentaffairs.stanford.edu/communitystandards>

Email: community_standards@stanford.edu (judicial.affairs@stanford.edu)

The primary codes of conduct for students are the Fundamental Standard and Honor Code. Cases of alleged violations of the university's Honor Code, Fundamental Standard, and other student conduct or university policies proceed through an established student conduct process outlined in the Student Judicial Charter of 1997, which can be found in its entirety at the Office of Community Standards (<https://studentaffairs.stanford.edu/communitystandards>) web site. The web site also contains the policies, rules, and interpretations, as well as the university's Student Conduct Penalty Code, applicable to those students found responsible for violating the Honor Code, the Fundamental Standard, or other university policy or rule.

Allegations of sexual misconduct, sexual harassment, stalking, or dating violence proceed through the Dean's Alternate Misconduct Review Process (<http://studentaffairs.stanford.edu/judicialaffairs/process/alternate-review>).

When a violation of the Fundamental Standard, Honor Code, or other university policy or rule governing student conduct is alleged, or whenever a member of the university community believes such a violation has occurred, he or she should contact the Office of Community Standards.

Fundamental Standard

Students at Stanford are expected to know, understand, and abide by the Fundamental Standard, which is the university's basic statement on behavioral expectations articulated in 1896 by Stanford's first President, David Starr Jordan, as follows:

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

The Fundamental Standard is an aspirational statement of Stanford's ideal of civic and moral community. Although the spirit of the Fundamental Standard remains unchanged since 1896, these aspirational learning goals for all Stanford students elaborate its basic values today:

- Students are expected to respect and uphold the rights and dignity of others regardless of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or socioeconomic status.
- Students are expected to uphold the integrity of the university as a community of scholars in which free speech is available to all and intellectual honesty is demanded of all.
- Students are expected to respect university policies as well as state and federal law.
- For the purposes of clarity, students should be aware that they may be subject to discipline at Stanford University for acts of misconduct including:
 - Violation of university policy
 - Violation of a specific university directive
 - Violation of an applicable law
 - Physical assault
 - Sexual misconduct, sexual assault, sexual harassment, stalking
 - Theft of property or services
 - Threats
 - Hazing
 - Hate crimes
 - Alcohol- and drug-related violations, including driving under the influence

- Intentional or reckless property damage
- Seeking a university benefit to which a student is not entitled
- Falsifying a document
- Impersonating another
- Computer violations
- Knowingly or recklessly exposing others to significant danger

There is no standard penalty that applies to violations of the Fundamental Standard. Infractions have led to penalties ranging from formal warning and community service to expulsion. In each case, the nature and seriousness of the offense, the motivation underlying the offense, and precedent in similar cases are considered.

Honor Code

The Honor Code is the University's statement on academic integrity. It is essentially the application of the Fundamental Standard to academic matters. Provisions of the Honor Code date from 1921, when the honor system was established by the Academic Council of the University Faculty at the request of the student body and with the approval of the President. The Honor Code reads:

"1. The Honor Code is an undertaking of the students, individually and collectively:

- a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
- b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.
3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

Examples of conduct that has been found to be in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading without the instructor's knowledge and consent
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

For more information, see the Interpretations and Applications of the Honor Code at the Community Standards (<http://studentaffairs.stanford.edu/judicialaffairs>) web site. The standard sanction for a first violation is a one quarter suspension from the University and 40 hours of community service. In addition, many faculty members issue a 'No Pass' for the course in which the violation occurred.

Old Union

Stanford's student union, known as the Old Union, serves as a hub for student activities on campus. The central structure in a three-building complex, the Old Union has administrative offices for ASSU, Office of

Student Activities and Leadership (SAL), Dean of Student Life, Dean of Educational Resources, and Diversity and First Gen Programs. It also houses a multifaith center known as CIRCLE (Center for Inter-Religious Community, Learning, and Experiences), meeting rooms for student use, and the Axe and Palm, which offers casual dining. Adjoining the Old Union, the Nitery houses a black-box theater, El Centro Chicano y Latino, and The Markaz: Resource Center; and the Clubhouse is home to the Asian American Activities Center and the Native American Cultural Center.

Office of Residential Education

Office: Tresidder Memorial Union

Phone: (650) 725-2800

Web Site: <http://studentaffairs.stanford.edu/resed>

The Office of Residential Education is responsible for developing the policies, programs, and staffing which support the intellectual, educational, and community-building activities in student residences. The conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education.

Residential Education Program

The Residential Education program provides Stanford undergraduates with a small community experience within a large research university. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students' preparation for a life of leadership, intellectual engagement, citizenship, and service. An extensive network of staff, including many who live in the residence halls, supports students during their undergraduate careers.

Residence Deans

Residence Deans provide assistance to on- and off-campus undergraduate students. They can advise students about personal matters, occasionally intervene directly in behavioral problems or mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of students, and administrative matters. Residence Deans work closely with the Dean of Student Life and other University offices. They are assigned to specific residences and to off-campus students. For further information, undergraduates should call Residential Education at (650) 725-2800. For assistance, graduate students can consult assistant deans in the Graduate Life Office at (650) 736-7078.

Office of Student Activities and Leadership

Office: Old Union, 520 Lasuen Mall, Suite 206

Web Site: <http://studentaffairs.stanford.edu/sal>

The Office of Student Activities and Leadership (SAL), located in Old Union, supports student activities, over 600 student organizations and the ASSU through publications, workshops, one-on-one consultation, advising and major event planning support.

Voluntary Student Organizations

There are over 600 different Voluntary Student Organizations (VSOs) at Stanford. VSOs are organizations

1. in which membership is not mandatory and is nondiscriminatory,
2. in which membership is both open and limited to current Stanford students registered in a degree-granting program,
3. in which students make all organizational decisions, and
4. whose purposes and procedures are consistent with the goals and standards of the University. In order to use University facilities, the Stanford name, or to receive ASSU funding, all voluntary student organizations must register with the University through the Office of Student Activities, Old Union, room 206.

As a condition of registration, each voluntary student organization must file and have approved each of the following:

1. A statement of purpose and organizational constitution.
2. A statement about membership eligibility.
3. Clear procedures for officer elections.
4. Identification of the authorized representatives of the group, who must be a currently registered student, and at least five active members in the organization who are currently registered students.

Each voluntary student organization must renew its registration with the University annually, early in Autumn Quarter, by submitting new registration materials.

If a voluntary student organization that is registered with the University seeks to use University facilities for meetings open to more than its own members and to specifically invited guests, such meetings shall be subject to the policies of the Committee on Public Events. All organization events held in University facilities must receive event approval from the Student Activities and Leadership and Stanford Events.

A voluntary student religious organization may hold open meetings in University facilities only with the approval of the Office of the Dean for Religious Life (as the delegatee of Student Activities and Leadership).

A registered voluntary student organization may advocate publicly a position on a public issue, provided the organization clearly identifies itself, and provided such an organization in any public statement makes clear it does not represent or speak for the University or the Associated Students.

No student group or individual student(s) may use University space or facilities or receive other University support for purposes of supporting candidates for public office. Groups may use White Plaza for tables, speeches, and similar activities and may request to reserve auditoriums and similar space for public events including speeches by political candidates as long as all University guidelines are followed.

Tresidder Memorial Union

Tresidder Memorial Union (TMU) is a center of community activity on the Stanford campus. It houses a variety of restaurants and meeting rooms, a ticket office and campus information center, a convenience store, banking and credit union offices with ATMs, a fitness center, FedEx/Kinkos and a hair salon.

TMU is also the home of several administrative offices: Meeting Services, Office of Community Standards, Residential Education, Student Services Center, Stanford Catering, Stanford Dining (Meal Card program), the LAIR computer center and the Office of the Vice Provost for Student Affairs.

Vaden Health Center

Center Office: 866 Campus Drive
Web Site: <http://vaden.stanford.edu>

The Allene G. Vaden Health Center strictly protects the confidentiality of information obtained in medical care and counseling.

Medical Services

Medical Services (650-498-2336, ext. 1) is the first stop for diagnosis and treatment of illness, injury, and ongoing conditions, as well as preventive counseling and education. Services available without additional charge for students who have paid the Campus Health Service fee include:

- Medical appointments in general medicine and sports medicine.
- Medical advice for routine concerns throughout the day. When Medical Services is closed, advice for urgent conditions is available from the on-call physician.
- Referral to specialists, primarily at Stanford Hospital and Clinics and Menlo Medical Clinic.

Additional services (fees apply):

- Allergy injections, immunizations, travel services, physical exams for employment and scholarships, HIV testing, laboratory, X-rays, drug screening (academic year only).
- Pharmacy (650-498-2336, ext. 3) and physical therapy (650-723-3195) are available on site.

Counseling and Psychological Services (CAPS)

CAPS (650-723-3785) helps students who experience a wide variety of personal, academic, and relationship concerns. Services available without additional charge for students who have paid the Campus Health Service Fee include:

- Evaluation and brief counseling, including personal, couples and group therapy. Students requesting or requiring longer, ongoing therapy incur fees.
- Workshops and groups that focus on students' social, personal and academic effectiveness.
- Crisis counseling for urgent situations 24 hours a day.
- Consultation and outreach to faculty, staff, and student organizations.

Confidential Sexual Assault Counseling (CSAC) Office

Office: Mariposa House, 585 Capistrano Way, 2nd Floor, Rooms 208 and 209

Phone: 650-736-6933

Web Site: <http://vaden.stanford.edu/sexual-assault>

- The Confidential Sexual Assault Counseling (CSAC) Office offers emotional support, consultation and short-term individual counseling to Stanford students impacted by sexual assault and relationship violence.
- After hours hotline: 650-725-9955
- Book an appointment through the Vaden Patient Portal (<https://vadenpatient.stanford.edu/WelcomeNewPatient.aspx>).

YWCA Rape Crisis Hotline

Stanford has contracted with the YWCA to assist students, staff, faculty and other Stanford campus affiliates who are victims of sexual assault. The YWCA also can be reached at its 24-hour campus telephone line (650) 493-7273 or 408-287-3000.

Health Promotion Services

Health Promotion Services (650-723-0821) educates and supports students to help them make informed, healthy decisions about their lifestyle.

Services include:

- Individual preventive counseling and resource referral concerning nutrition, weight management, eating and body image, alcohol, tobacco and other drug use, sexual assault and harassment, relationships, intimacy and gender issues, and sexual health.
- Health education speakers, programs, and events and workshops at student residences, community centers, student organizations, and for new students (such as Real World: Stanford).
- Academic courses and internships.
- Student groups and volunteer opportunities including Peer Health Educators, HIV Peer Anonymous Counseling and Testing (HIV*PACT), Sexual Health Peer Resource Center (SHPRC), and CPR/First Aid classes.

Health Insurance

All registered students are required to have health insurance. Call (650) 723-2135 for more information. Cardinal Care (<http://vaden.stanford.edu/insurance/>), the University-sponsored plan for students, fulfills this requirement. Insured by Aetna Student Health (medical), and ValueOptions (mental health), Cardinal Care features comprehensive, worldwide coverage, services by referral at Stanford University Medical Center and Menlo Medical Clinic, and lowest costs when one initiates care at Vaden Health Center. Stanford does not sponsor a health insurance plan for dependents; for available options, see the Dependent Health Insurance (<http://vaden.stanford.edu/insurance/dependent-coverage>) web site. Options for voluntary dental insurance are also offered.

Under certain circumstances, students with their own health insurance may waive Cardinal Care coverage. Domestic students who choose not to participate in Cardinal Care only have to waive once each academic year and must waive coverage before the first quarter in which they are enrolled for that academic year. At that time, and that time only, they will be able to waive Cardinal Care for the rest of the year by documenting equivalent health insurance in Axess (<http://axess.stanford.edu>) by the applicable deadline listed on Vaden's web site (http://vaden.stanford.edu/insurance/using_your_own.html#waive). International students must have coverage that meets or exceeds minimum standards established by the University in order to opt out of Cardinal Care; for more information see Vaden's web site (http://vaden.stanford.edu/insurance/using_your_own.html#international).

Vice Provost for Student Affairs: Greg Boardman

Associate Vice Provost and University Registrar: Thomas C. Black

Associate Vice Provost and Dean of Career Education: Farouk Dey

Associate Vice Provost and Dean of Educational Resources: Sally Dickson

Associate Vice Provost and Director of Vaden Health Center: Ira Friedman

Associate Vice Provost and Dean of Student Life: Chris Griffith

Associate Vice Provost and Dean of Residential Education: Deborah Golder

Senior Administrative Officer: Lee Connor

Centers, Laboratories, and Institutes

Independent research laboratories, centers, and institutes perform multidisciplinary research that extends beyond the scope of any one of the University's organized schools. The listings are not all-inclusive. A comprehensive list of Stanford offices is available on the University's A to Z Index page (<http://www.stanford.edu/atoz>).

The following tabs contain information on programs for undergraduates:

- Arts Institute (p. 708)
 - Interdisciplinary Honors in the Arts Program
- Center for Spatial and Textual Analysis (CESTA) (<https://cesta.stanford.edu>)
 - Graduate Certificate of Digital Humanities
- Center for the Study of Poverty and Inequality (CPI (p. 709))
 - Certificate Program on Poverty and Inequality
- Freeman Spogli Institute for International Studies (FSI) (p. 711)
 - Interschool Honors Program in Democracy, Development, and the Rule of Law
 - Interschool Honors Program in International Security Studies
- Woods Institute for the Environment (p. 712)
 - Goldman Interschool Honors Program in Environmental Science, Technology, and Policy

Office of Vice Provost and Dean of Research

Vice Provost and Dean of Research: Ann M. Arvin

Office: 450 Serra Mall, Main Quadrangle, Building 60

Contacts

Office: Stanford Arts Institute, Littlefield Center, 2nd Floor

Mail Code: 94305-2255

Email: artsinstitute@stanford.edu

Web Site: <http://artsinstitute.stanford.edu/programs/honors-in-the-arts-program/>

Courses offered by the Stanford Arts Institute are listed under the subject code ARTSINST (<http://http://explorecourses.stanford.edu/search?page=0&q=ARTSINST&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>) on the Stanford Bulletin's ExploreCourses web site.

The Stanford Arts Institute forges arts connections across the University; gives grants for faculty, staff, and students; presents arts events; incubates new arts projects; and supports artists and cultural groups across campus. Since its founding in 2006, the Stanford Arts Institute has been a catalyst helping the Stanford arts community to grow.

Honors in the Arts

The Stanford Arts Institute offers the interdisciplinary Honors in the Arts program, which is open to undergraduates in all majors.

Stanford students in any major can complete a capstone project integrating their major studies with a broad arts perspective and receive "Honors in the Arts." The program features two tracks:

- *Interdisciplinary honors within the arts*—for students majoring in an arts discipline who wish to incorporate other arts disciplines into their work. Students in this track are typically majors in a department such as Art and Art History (<http://art.stanford.edu>); departments within the Division of Languages, Cultures, and Literatures (<https://dcl.stanford.edu>); English (<https://english.stanford.edu>); Music (<http://music.stanford.edu/Home>); or Theater and Performance Studies (<http://taps.stanford.edu>), who wish to do an honors project involving approaches from another arts field.
- *Interdisciplinary honors for non-arts majors*—for students majoring in a non-arts discipline who complete a capstone project incorporating the arts. Students in this track are typically majors in a department other than those described above, who wish to do an honors project involving an arts element. This project should incorporate themes, discourse, or learning from a student's major.

Admission

A minimum overall GPA of 3.67 (A-) is typically required for admission into the program. Upon petition, exceptions may be granted by the program director in the case of students demonstrating particular strengths relevant to honors in the arts.

Students are required to take at least three courses identified as preparing them to execute an interdisciplinary capstone project. These courses should be in either an art practice area relevant to the capstone project or should explore the methodology of interdisciplinary arts study. A

sample list of courses can be found on the Arts Institute web site (<http://artsinstitute.stanford.edu/program/idhp-recommended-courses>). It is recommended that students complete at least two of these courses prior to entering the program. However, upon approval of the program director, students may take these courses while pursuing their honors project. Courses are typically at least 2 units and must be taken for a letter grade.

Prospective students must submit a brief essay outlining their preparation and proposing a capstone project.

Students interested in pursuing Honors in the Arts can apply for acceptance in the junior year. Students should contact the program coordinator at artsinstitute@stanford.edu to begin the application process.

Requirements

- Prior to Spring Quarter, Junior Year: Two preparatory courses for interdisciplinary study, 4-8 Units
- Prior to Spring Quarter, Junior Year/Concurrent with Capstone: Preparatory course for interdisciplinary study, 2-4 Units
- Winter Quarter, Junior Year: Apply for admission to Interdisciplinary Arts Honors
- Spring Quarter, Junior Year: Confirm preparatory courses with honors program director
- Autumn Quarter, Senior Year: ARTSINST 200A, 2 Units
- Winter Quarter, Senior Year: ARTSINST 200B, 2 Units
- Spring Quarter, Senior Year: ARTSINST 200C, 2 Units

The capstone project is developed during the senior year through three quarters of workshops. To receive Honors in the Arts, students must fulfill all requirements and must receive at least an 'A-' on the capstone project.

Stanford Center on Poverty and Inequality Certificate Program on Poverty and Inequality

The Stanford Center on Poverty and Inequality (CPI) monitors and publicizes trends in poverty and inequality, publishes the country's leading magazine on poverty and inequality (*Pathways Magazine*), supports research on the causes of poverty and inequality, and examines the effects of public policy on poverty and inequality. The center carries out these activities with ten research groups addressing the following topics:

- poverty measurement and trends
- educational access and achievement
- income inequality
- social mobility
- safety net use
- recession and recovery effects
- spatial segregation
- racial and ethnic inequality
- discrimination, poverty, and the labor market
- Hispanic poverty, inequality, and mobility.

The Certificate in Poverty and Inequality recognizes undergraduates who have developed expertise in one or more of these research areas. The certificate is conferred as soon as the coursework and research requirements listed below are completed. Although the certificate does not appear on an official University transcript, it provides formal recognition of a rigorous program of study in the field of poverty and inequality.

Admission

Applications to the CPI certificate program are available on the CPI web site (<http://www.stanford.edu/group/scspi>) and may be filed at any time. Admitted students are assigned an adviser who assists in planning coursework and providing research opportunities within CPI. Contact CPI (inequality@stanford.edu) with any questions.

Requirements

The student's course and research plan, which is submitted with the application, should meet the four requirements listed below.

1. *Core Foundation Course:* (SOC 140 Introduction to Social Stratification. This required introductory course examines the causes and consequences of poverty, inequality, and mobility. It is available as both a regular and online course.
2. *Elective Foundation Course:* The second foundation course is selected from among the normative, empirical, and policy courses listed below. These courses examine the principles by which certain types of living conditions may be deemed unjust or impoverished (i.e., normative analysis), the social processes and forces by which poverty and inequality are generated and maintained (i.e., empirical analysis), and the types of policies and interventions that might reduce or increase poverty and inequality (i.e., policy analysis).

		Units
3. Elective Foundation Courses		
Normative Foundation		
ETHICSOC 136R	Introduction to Global Justice	4
ETHICSOC 171	Justice	4-5
INTNLREL 136R	Introduction to Global Justice	4
PHIL 76	Introduction to Global Justice	4
PHIL 171	Justice	4-5
POLISCI 3P	Justice	4-5
POLISCI 136R	Introduction to Global Justice	4
POLISCI 136S	Justice	4-5
PUBLPOL 103C	Justice	4-5
Empirical Foundation		
SOC 141	Controversies about Inequality	5
SOC 144	Inequality and the Workplace	5
Policy Foundation		
CHEM 24N	Nutrition and History	3
ECON 11N	Understanding the Welfare System	3
SOC 135	Poverty, Inequality, and Social Policy in the United States	3

4. *Research Project:* Students must complete a research paper on poverty or inequality. Students are invited to join one of the ten CPI research groups and become involved in an ongoing CPI research project that might become the basis for their research paper. Alternatively, students write an independent research paper rather than joining a CPI Research Group. The research paper may either take the form of a research proposal or an empirical research project based on quantitative or qualitative methods. This paper should be completed while the student is enrolled in Independent Study with a CPI faculty affiliate (<http://www.stanford.edu/group/scspi>).
5. *Additional Elective:* Students must take an elective course with a poverty or inequality focus. This requirement may be satisfied by taking an additional foundation course from the list provided above or by taking any of the preapproved elective courses listed below. Additionally, other unlisted courses addressing issues of poverty and inequality may also satisfy this requirement, although such courses require CPI approval (which is requested by submitting the

Course Approval Form (<http://www.stanford.edu/group/scspi>). It is recommended that approval be secured in advance of taking an unlisted course. If a new applicant to the certificate program wishes to count a completed course toward the requirements, that should be indicated on the application form and, if necessary, the Course Approval Form (<http://www.stanford.edu/group/scspi>) should be filled out).

		Units
6. Preapproved Elective Courses		
Poverty		
EARTHSYS 106	World Food Economy	5
ECON 11N	Understanding the Welfare System	3
ECON 106	World Food Economy	5
EESS 106	World Food Economy	5

Graduate Certificate in Digital Humanities Overview

The Center for Spatial and Textual Analysis (CESTA) offers a Graduate Certificate in Digital Humanities (GCDH) to meet a growing need among the humanities for training in digital methods by leveraging existing resources at Stanford University. The Graduate Certificate in Digital Humanities allows graduate students to acquire and deepen their technical and conceptual skills as well as to strengthen their position in the competitive job market within and beyond the academy. The certificate program has been established as a pilot program from 2014-17.

Completion of the program results in a Certificate, signed by the CESTA director and the chair of the doctoral student's home department.

The Graduate Certificate in Digital Humanities is issued by the Center for Spatial and Textual Analysis (CESTA) and will not appear on any University record, including the student's transcript.

Contact

Office: Wallenberg Hall, 450 Serra Mall, Building 160

Mail Code: 94305-2084

Phone: (650) 721-1385. Fax: (650) 725-5916

Email: mattbryant.stanford@gmail.com

Web Site: <http://cesta.stanford.edu>

Staff

Core Faculty: Mark Algee-Hewitt, Franco Moretti, Richard White, Dan Edelstein, Paula Findlen, Giovanna Ceserani, Walter Scheidel, Elaine Treharne, Amir Eschel, Zephyr Frank

Affiliated CESTA Faculty: Allyson Hobbs, Edith Scheffer, Caroline Winterer, Mark McGurl, Ana Minian, Mikael Wolfe.

CESTA Staff, Affiliates, and others: Celena Allen (GIS), Erik Steiner (visualization design and cartography), Ryan Heuser (programming), Nicole Coleman (information design and visualization), Jason Heppler (digital

history), Elijah Meeks (information design), Karl Grossner (information design and cartography).

Admission

Admission to the program is on a rolling basis, and students may apply at any time. Submit a letter of interest and any supporting information to CESTA Lab Manager Matt Bryant (mattbryant.stanford@gmail.com) at mattbryant.stanford@gmail.com. For more information about the new GDCH program or CESTA in general, see the program's web site (<http://cesta.stanford.edu/gcdh>) or contact Matt Bryant (mattbryant.stanford@gmail.com) at mattbryant.stanford@gmail.com.

Course work

Students wishing to take part in the first cohort starting in 2014-15 and thereafter are expected to complete one GCDH-approved graduate core course for a letter grade, and one additional approved elective course. The approved core courses for the first year of the program are:

- HISTORY 401A Spatial History: Concepts, Methods, Problems
- ENGLISH 303C The Networks of Enlightenment
- DLCL 396 Humanities+Design: Visualizing the Grand Tour (same as CLASSICS 396, HISTORY 336E)

Students who have completed any of the core courses, or equivalent courses taught by members of the program, in past years are eligible to move to the next step in the GCDH program.

Following or concurrent with the completion of the required core course, students must complete the following two certificate components:

1. Additional course work (1 or more classes, may be taken credit/no credit, and must be approved in advance by the committee in charge) in computer science, information design, statistics, network analysis, linguistics, or other fields approved by the student's supervisor and the CESTA committee in charge. A list of course recommendations is forthcoming.
2. One of the following:
 - a. Independent research project and portfolio including a finished project which is evaluated and approved by an Academic Council supervisor and accepted as an affiliated project in one of CESTA's labs. The duration of such projects must be a minimum of one academic quarter. Students may take up to 5 units of credit of directed reading for the purpose of completing the independent research project. Final projects are included in the student's ePortfolio and published on the CESTA web site.
 - b. Supervised collaborative research in a CESTA lab with the expectation that the student's participation culminates in a digital humanities product substantially of the authorship of the student; this must be a minimum of two quarters in duration. The student's portion of the research is included in the ePortfolio and published on the CESTA web site.

Freeman Spogli Institute for International Studies (FSI)

Contacts

Office: Encina Hall Center, First Floor, 616 Serra Street
 Mail Code: 94305-6055
 Phone: 650-723-4581 / Fax 650-725-2592
 Web Site: <http://fsi.stanford.edu/>

The Freeman Spogli Institute for International Studies (FSI) provides opportunities for undergraduate research through the CDDRL

Undergraduate Honors Program and the CISAC Interschool Honors Program in International Security Studies.

Interschool Honors Program in Democracy, Development, and the Rule of Law

Director: Francis Fukuyama

The Center on Democracy, Development, and the Rule of Law (CDDRL) Undergraduate Senior Honors Program provides students majoring in any Stanford academic department the opportunity to conduct an independent research project focused on the fields of democracy, development, and the rule of law under CDDRL faculty guidance. Students are required to complete a year-long honors research seminar that begins autumn quarter of the junior year. They will spend the last quarter of the senior year working independently with their faculty adviser to complete and submit their honors thesis ahead of their formal defense in mid-May. Upon fulfilling individual department course requirements and completing the honors program, students graduate with a certificate in Honors in Democracy, Development, and the Rule of Law.

Students interested in the program consult with their prospective honors advisers in their junior year to determine the tentative thesis topic, which should have some degree of policy relevance. Prerequisites for the program include; a 3.5 grade-point average at the time they apply; a strong overall academic record; sufficient depth and breadth in the fields of democracy, economic and social development, rule of law, and human rights course work; and demonstrated skills in writing and conducting independent research.

Students are required to attend honors college in Washington, D.C. in September before Autumn Quarter classes begin. Applicants are discouraged from studying abroad during the duration of the CDDRL Undergraduate Honors program.

Required Course Work

Two courses that explore the areas of democracy, development, and the rule of law. CDDRL's flagship undergraduate lecture course taught during Autumn Quarter, which ideally should be completed before the student enters the honors program. DDRL Honors Research Methods Seminars meet on a weekly basis to present their project theses and receive feedback.

Typical Schedule for CDDRL Honors Program

Junior	Units		
	Autumn	Winter	Spring
Select one of the following:	5		
Democracy, Development, and the Rule of Law (INTNLREL 114D)			
Democracy, Development, and the Rule of Law (POLISCI 114D)			
DDRL 189 Honors Research Methods	3		
Year Total:	5		3
Senior	Units		
	Autumn	Winter	Spring
DDRL 190 Honors Research Workshop	3		
DDRL 190 Honors Research Workshop	3		
DDRL 191 Independent Study (Optional) ¹			
Year Total:	3		3
Total Units in Sequence:	14		

¹ Optional any quarter during senior year for 1-5 units, repeatable once for credit.

Admitted students must be able to fulfill all course requirements in their individual majors by the time they graduate, in addition to the units required for the honors program. For more information, contact Alice Kada, CDDRL Administrative Manager at akada@stanford.edu or go to <http://cddrl.stanford.edu/>.

Interschool Honors Program in International Security Studies

Co-Directors: Coit D. Blacker, Martha Crenshaw

The Center for International Security and Cooperation (CISAC) coordinates a University-wide Interschool Honors Program in International Security Studies. Students chosen for the honors program intern with a security-related organization, attend the program's honors college in Washington, D.C., in September, participate in a year-long core seminar, and under the direction of a faculty advisor produce an honors thesis relevant to international security policy. Upon fulfilling individual department course requirements and completing the honors program, students graduate in their major with the award of Honors in International Security Studies. To be considered for the program, students must demonstrate sufficient depth and breadth of international security course work. Successful applicants to the program are expected to have taken:

		Units
MSE 193	Technology and National Security	3
POLISCI 114S	International Security in a Changing World	5
and at least one related course such as		4-5
ECON 106	World Food Economy	5
HISTORY 103F	Introduction to Military History	5
HISTORY 204E	Totalitarianism	4-5
HUMBIO 129S	Global Public Health	4
INTNLREL 114D	Democracy, Development, and the Rule of Law	5
INTNLREL 140A	International Law and International Relations	5
LAW 479	International Law	4
MSE 93Q	Nuclear Weapons, Energy, Proliferation, and Terrorism	3
MSE 190	Methods and Models for Policy and Strategy Analysis	3
MSE 295	Energy Policy Analysis	3
POLISCI 42Q	The Rwandan Genocide	5
POLISCI 110D	War and Peace in American Foreign Policy	5
POLISCI 116	The International History of Nuclear Weapons	5
POLISCI 123/ PUBLPOL 101	Politics and Public Policy	5
PUBLPOL 102	Organizations and Public Policy	4-5
SOC 160	Formal Organizations	4

Students in the program enroll in IIS 199 Interschool Honors Program in International Security Studies, in Autumn, Winter, and Spring quarters for 3-5 credits for quarter (9-12 total credits). Information about and applications to this program may be obtained from the Center for International Security and Cooperation, C206-10, Encina Hall Central, telephone (650) 725-5365 or http://cisac.stanford.edu/docs/undergraduate_honors_program.

Center for Space Science and Astrophysics

Emeriti: (Professors) Robert Cannon, (Professors, Research) Donald L. Carpenter, Aldo V. daRosa, Daniel B. DeBra, W. Gary Ernst, Von R. Eshleman, Antony Fraser-Smith, Robert A. Helliwell, Bruce B. Lusignan,

Ronald J. P. Lyon, Laurence A. Manning, Bradford W. Parkinson, J. David Powell, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

Director: Roger W. Romani

Associate Directors: Umran S. Inan, Philip H. Scherrer

Professors: Roger Blandford (Physics, SLAC), Elliot Bloom (SLAC), Lambertus Hesselink (Electrical Engineering), Umran S. Inan (Electrical Engineering), Steven Kahn (Physics, SLAC), Tune Kame (SLAC), Peter F. Michelson (Physics), Vahé Petrosian (Physics), Roger W. Romani (Physics), Norman H. Sleep (Geophysics), Guenther Walther (Statistics), Howard Zebker (Electrical Engineering, Geophysics)

Associate Professors: Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Sarah Church (Physics),

Assistant Professors: Stefan Funk (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Risa Wechsler (Physics, SLAC)

Professors (Research): C-W. Francis Everitt (HEPL), Philip H. Scherrer (Physics)

SLAC Staff Physicist: Grzegorz Madejski

Center Offices: Varian, Room 340

Mail Code: 94305-4060

Phone: (650) 723-1439

Email: danav@stanford.edu

Web Site: <http://www.stanford.edu/dept/astro>

The Center for Space Science and Astrophysics is an interdepartmental organization coordinating research in space science and astrophysics. Its members are drawn from the Department of Geological and Environmental Sciences in the School of Earth Sciences; the departments of Aeronautics and Astronautics, Electrical Engineering, and Mechanical Engineering in the School of Engineering; the departments of Applied Physics, Physics, and Statistics in the School of Humanities and Sciences; the W. W. Hansen Experimental Physics Laboratory; and the SLAC National Accelerator Laboratory. Its membership also includes all faculty and appropriate staff at the Kavli Institute for Particle Astrophysics and Cosmology, located at SLAC and the Physics department.

The facilities of the center are available to any interested and qualified student, who must be admitted by and registered in a department. The departments of Aeronautics and Astronautics, Applied Physics, Electrical Engineering, Mechanical Engineering, and Physics offer opportunities leading to an M.S. or Ph.D. degree for work in space science or astrophysics. The center also offers opportunities to undergraduates who may, for instance, participate in research projects in their junior or senior years, on a part-time basis during the school year or on a full-time basis during the summer. The Astronomy Course Program operates a small student observatory where students may gain practical experience in astronomical observing.

Woods Institute for the Environment

Goldman Interschool Honors Program in Environmental Science, Technology, and Policy

The Woods Institute for the Environment (<http://woods.stanford.edu>) coordinates a University-wide interschool honors program in environmental science, technology, and policy. The Goldman Honors Program aims to

provide a unique capstone experience in environmental solutions. Over the course of the senior year, students select, design, and implement a capstone project that targets understanding or addressing an environmental challenge. Students are required to enroll and participate in three quarters of the weekly Goldman seminar. Students meet as a group with Stanford faculty to discuss a broad range of environmental challenges and potential solutions, and to design and receive feedback on their respective individual capstone projects.

Goldman projects may take the form of a research project mentored by a Stanford faculty member, and targeted at understanding an environmental challenge. In addition, projects may also take the form of creating a solution to an environmental challenge. Such solution projects can be mentored by a Stanford faculty member or by a partner mentor outside of Stanford, and could include design and development of technology, policy, curriculum, or social media. Students should identify a Stanford faculty member (academic council) to serve as their honors adviser prior to applying. Students work with their adviser and Woods staff to find a mentoring partnership either within or outside of Stanford, based on students' respective interests.

For application information, see the Goldman Honors Program (<http://woods.stanford.edu/educating-leaders/education/goldman-honors-program>) web site. Students apply in their junior year, with selections being made before the end of Winter Quarter. Once accepted, students must enroll in a prehonors seminar in the Spring Quarter. Students from all programs across campus are eligible and encouraged to apply. Selections are made based on academic record, creativity and relevance of potential capstone project, and cohort balance.

Libraries and Computing Resources

Stanford University Libraries and Academic Information Resources

University Librarian and Director of Academic Information Resources:
Michael A. Keller

Web Site: <http://libraries.stanford.edu>

Stanford University Libraries and Academic Information Resources (SULAIR) includes more than 30 libraries and programs supporting research, teaching, and learning at Stanford University. SULAIR acquires and delivers library collections in all formats, establishes policies and

standards to guide the use of academic information resources, develops training and support programs for academic uses of computers, and maintains a broad array of electronic information resources, including the online library catalog and several hundred article and indexing databases and electronic journal subscriptions.

In each library unit, knowledgeable professional staff provide assistance in locating and using print and online information resources. Subject specialists and reference librarians are available for individual consultation, group classes, demonstrations, and special workshops by request.

Libraries throughout campus provide group and individual study spaces, public computers, personal laptop connections, photocopy machines, and digital scanners for use by Stanford faculty, staff, and students.

For information about library hours, see the Library Hours (<http://libraryhours.stanford.edu>) web site.

In support of the University's academic mission, Academic Computing Services provides technology expertise, resources and services to students and faculty. Academic Computing Services supports the use of technology in teaching, learning, research, and community; operates and manages technology-enabled teaching and learning environments including classrooms and public study spaces, the Multimedia Studio in Meyer Library, the Digital Language Lab, and computer clusters in Green Library, Tresidder Union, and the student residences; provides technology education, consulting support, and multimedia services at Meyer and in the residences; provides faculty-specific computing resources through the Academic Technology Specialist Program and Academic Technology Lab; and provides technology support to Stanford University Libraries' services.

Information about the library collections, facilities, services, and policies is available at the Libraries & Academic Information Resources (<http://library.stanford.edu>) web site.

Further information about library services and resources is available from the Information Center staff in Cecil H. Green Library (<http://infocenter.stanford.edu>) and from reference staff in all University libraries.

Central Campus Libraries

The Cecil H. Green Library (East and Bing Wings) maintains research collections in the humanities, social sciences, area studies, and interdisciplinary areas. These collections number approximately 2.8 million volumes. Major services in Green Library include: the Information Center, the Media Microtext Center, the Jonsson Reading Room, the Lane Reading Room, the Bender Room, Loan Desk and Privileges, Interlibrary Services, course reserves, the Department of Special Collections, and the University Archives.

The J. Henry Meyer Memorial Library houses the East Asia Library as well as the Academic Computing Services group of SULAIR and provides study, multimedia, consulting, and instructional support services. In addition, Meyer Library houses the University's Digital Language Lab, technology enabled study spaces and classrooms, the Academic Technology Lab, and the central offices of Student Computing and Academic Computing Services.

Branch Libraries

Humanities and Social Sciences Branch Libraries include the Art and Architecture Library, Cubberley Education Library, East Asia Library, Music Library, and Archive of Recorded Sound.

Science Branch Libraries include the Branner Earth Sciences Library, Engineering Library, Falconer Biology Library, Mathematical and Computer Sciences Library, Harold A. Miller Library at the Hopkins Marine Station, Physics Library, and Swain Library of Chemistry and Chemical Engineering.

For a complete list of campus libraries, see the Libraries and Collections (<http://libraries.stanford.edu>) web site.

Coordinate Libraries

J. Hugh Jackson Library (<http://www.gsb.stanford.edu/jacksonlibrary>), Graduate School of Business

Director: Kathy Long

Lane Medical Library (<http://lane.stanford.edu>)

Director: Debra Ketchell

Crown Law Library (<http://www.law.stanford.edu/library>)

Director: Paul Lomio

SLAC Research Library (<http://www-group.slac.stanford.edu/library>)

Director of Technical Information Services: Patricia Kreitz

Hoover Institution Library and Archives

Director: John Raisian

Web Site: <http://www.hoover.org/library-and-archives>

Since its founding by Herbert Hoover in 1919 as a special collection dealing with the causes and consequences of World War I, the Hoover Institution has become an international center for documentation, research, and publication on political, economic, social, and educational change in the 20th and 21st centuries.

The Hoover Library and Archives include one of the largest private archives in the world and contain outstanding area collections on Africa, East Asia, Eastern Europe, Russia and the former Soviet Union, Latin America, the Middle East, North America, and Western Europe.

Holdings include government documents, files of newspapers and serials, manuscripts, memoirs, diaries, and personal papers of men and women who have played significant roles in the events of these centuries, the publications of societies and of resistance and underground movements, the publications and records of national and international bodies, both official and unofficial, and books and pamphlets, many of them rare and irreplaceable. The materials are open to all Stanford students, faculty, and staff, to scholars from outside the University, and to the public at large.

Information Technology Services (IT Services)

Web Site: <http://itservices.stanford.edu>

IT Services manages the University's central information technology infrastructure and provides hundreds of services and applications for use in academic and business activities. Support is provided in four layers:

- Participation and client-focused leadership in institutional IT planning, including strategies for data center expansion, centrally managed storage and backup, and business continuity and disaster recovery.
- Applications and services for departments and end-users including email, calendaring, wireless connectivity, web authentication, and Windows and Linux server hosting. These services are supported by a help desk, contract-support consultants, online self-help, and training.
- Applications and services that support other campus service providers, including the help desk, change management, and network registration systems.
- A communications and collaboration infrastructure robust enough to support advanced network, voice, and web-based services.

To learn about the variety of information technology resources available at Stanford, see the Information Technology Services (<http://computing.stanford.edu>) web site. For assistance with technology services at Stanford, contact the Stanford IT Help Desk at (650) 725-HELP (5-4357) or submit a request through the HelpSU (<http://helpsu.stanford.edu>) web site.

The Continuing Studies Program

The Continuing Studies Program provides adults from the surrounding communities the opportunity to take courses for the purpose of intellectual enrichment. Courses and events are offered in all four academic quarters, with over 400 courses planned throughout the year. The Continuing Studies Program, except for the MLA program, is a non-degree granting program.

The instructors are largely drawn from the ranks of the University's professoriate and academic staff. The program presents a wide variety of courses, with a central concentration in the liberal arts, including literature, history, art and architecture, and music.

Tuition discounts are available to University employees, Stanford students and faculty, Stanford Alumni Association members, educators, and those over age 65.

For a list of offered courses, see the Courses tab the Continuing Studies web site (<http://continuingstudies.stanford.edu>).

Master of Liberal Arts Program

Associate Dean and Director: Linda Paulson

Participating Faculty: Jonathan Berger (Music), Russell Berman (Comparative Literature, German Studies), Marc Bertrand (French and Italian, emeritus), Jay Bhattacharya (Medicine), George Brown (English, emeritus), Eamonn Callan (Education), William Chace (English, emeritus), James Daughton (History), Gerry Dorfman (Hoover Institution, Political Science), William Durham (Anthropology), Michele Elam (English), Martin Evans (English), Paula Findlen (History), Larry Friedlander (English), Kenneth Fields (English), Hester Gelber (Religious Studies), Albert Gelpi (English, emeritus), Barbara Gelpi (English, emerita), Denise Gigante (English), Robert Gregg (Religious Studies, emeritus), Tom Grey (Music), Hans Ulrich Gumbrecht (French and Italian), Van Harvey (Religious Studies, emeritus), Gavin Jones (English), Charles Junkerman (Continuing Studies Program), Nancy Kollmann (History), Herbert Lindenberger (English, emeritus), Marsh McCall (Classics, emeritus), Mark Mancall (History, emeritus), Scotty McLennan (Religious Life), Thomas Mullaney (History), Alexander Nemerov (Arts), David Palumbo-Liu (Comparative Literature), Linda Paulson (English), Grant Parker (Classics), Arnold Rampersad (Humanities, emeritus), Ronald Rebolz (English, emeritus), Rush Rehm (Drama, Classics), John Rick (Anthropology), John

Rickford (Linguistics), David Riggs (English, Emeritus), Paul Robinson (History, emeritus), Jeremy Sabol (SLE), Ramón Saldívar (English), Paul Seaver (History, emeritus), Thomas Sheehan (Religious Studies), Robert Siegel (Microbiology and Immunology), Peter Stansky (History, emeritus), Stephen Stedman (Freeman Spogli Institute for International Studies), Barton Thompson (Law), Peter Vitousek (Biology), Caroline Winterer (History), Yvonne Yarbro-Bejarano (Latin American Cultures), Emlé Young (Medicine, emeritus), Steven Zipperstein (Jewish Culture and History)

Program Offices: 365 Lasuen Street, Littlefield Center, Level G
Mail Code: 2078
Phone: (650) 725-0061 Fax: (650) 725-4248
Email: mlaprogram@stanford.edu
Web Site: <http://mla.stanford.edu>

Courses offered by the Master of Liberal Arts Program are listed under the subject code MLA on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=MLA&filter-catalognumber-MLA=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=MLA&filter-catalognumber-MLA=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=MLA&filter-catalognumber-MLA=on>).

Program Description

The Master of Liberal Arts (MLA) program aims to provide a flexible, interdisciplinary program for returning adult students who seek a broad education in the liberal arts. The underlying premise of the MLA program is that knowledge gained through an interdisciplinary course of study leads to intellectual independence and satisfaction not always found in discipline-based programs of study. The goals of the MLA program are to develop advanced critical thinking, to foster intellectual range and flexibility, and to cultivate an individual's ability to find the connections among different areas of human thought: art, history, literature, music, philosophy, political science, science, and theology.

The program is designed with part-time students in mind: seminars meet in the evening, and students complete the degree in 4-5 years. All master's seminars are taught by members of the Stanford faculty. Seminar size is limited to 20 students.

Learning Outcomes (Graduate)

The purpose of the Master of Liberal Arts Program is to address subjects that cross disciplinary boundaries; to develop an understanding of the strength and the shortcomings of disciplinary evaluation; to help students to refine their skills in writing, research, critical thinking, collaborative work, and collegial discussion. While students are not being groomed for academic careers, graduates of the program have used their experience to gain acceptance into Ph.D. programs at Stanford and elsewhere. Students who complete the MLA program are well positioned to advance in careers that require the careful analytical and rhetorical training they receive. This training is achieved through the completion of four foundations courses, which together emphasize the program's goals as stated above; seven seminars that offer a more specific engagement with interdisciplinary subject matter; and a master's thesis, accomplished under the direction of a Stanford faculty member who is expert in the subject of the thesis.

Degree Requirements

Candidates for the MLA degree must complete a minimum of 50 units of course work with at least a grade point average of 3.3 (B+). These units must include a three-quarter foundation course (equal to 12 units total), one 4-unit core introductory seminar for second-year students, at least seven 4-unit MLA seminars, and a 6-unit master's thesis. Students must also fulfill

distribution requirements in each of the following areas: humanities; social science or social policy; and science, engineering, or medicine.

Foundation Course

During the Autumn, Winter, and Spring quarters following admission to the program, a three quarter foundation course is required of all students. The purpose of this course is to lay the groundwork for the interdisciplinary, intercultural studies the student will shortly undertake. The foundation course introduces students to the broad framework of history, literature, philosophy, political science, and art.

Core Seminar

During the first quarter of the second year, students take the core introductory seminar, MLA 102 An Introduction to Interdisciplinary Graduate Study. This seminar prepares students for interdisciplinary graduate work at Stanford. Students concentrate on writing a critical graduate paper, conducting library research, presenting the results of their research, and productively participating in a collaborative seminar.

MLA Seminars

Students are required to take at least seven MLA seminars of 4 units each. Each year, at least nine seminars are offered in the MLA program. Each MLA course requires a substantial seminar paper. Students are encouraged to use these papers as a way to investigate new fields of interest, as well as a way to develop different perspectives on issues in which they have an ongoing interest.

Master's Thesis

The MLA program culminates in the master's thesis. Students approaching the end of the program write a thesis, approximately 75-100 pages in length, that evolves out of work they have pursued during their MLA studies. The thesis is undertaken with the prior approval of the MLA program, and under the supervision of a Stanford faculty member. During the process of writing the thesis, students are members of a work-in-progress group, which meets regularly to provide peer critiques, motivation, and advice. Each student presents the penultimate draft of the thesis to a colloquium of MLA faculty and students, in preparation for revising and submitting the final draft to the adviser and to the MLA program.

Enrollment Requirements

MLA students must enroll for each academic year from the time of original matriculation until conferral of the degree. To remain active, students must either:

1. complete a minimum of two courses (eight units) in one academic year, defined as from the beginning of Autumn Quarter through the end of the following Summer Quarter; or,
2. be actively working on their thesis and regularly attend a minimum of three quarters of the work-in-progress meetings from the time the student enrolls in work-in-progress through graduation.

Timeline for Completion

All requirements for the Master of Liberal Arts degree must be completed within five years after the student's first term of enrollment in the program. If extraordinary circumstances prevent completion within five years, a student may submit a written petition for a maximum one-year extension to the Associate Dean and Director. This petition is reviewed by a committee which makes a recommendation to the Director; the final decision is at the discretion of the Director. To be considered, the petition must be submitted on or before May 1 of the student's fifth year in the program.

Registration

Master of Liberal Arts students enroll in courses through Stanford's Axess (<http://axess.stanford.edu>) system.

Summer Session

Associate Dean of Summer Session: Jess Matthews
Assistant Dean of Summer College: John Robichaux

Contact

Program Offices: 365 Lasuen Street
Mail Code: 94305-6079
Phone: (650) 723-3109; Fax: (650) 725-6080
Email: summersession@stanford.edu
Web Site: <http://summer.stanford.edu>

Students attending Stanford Summer Session are either matriculated Stanford students, visiting undergraduate or graduate students, or enrolled in the High School Summer College.

Degree-seeking Stanford students should indicate on Axess during Spring Quarter that they intend to register for Summer Quarter. Separate application is not required.

Visiting undergraduate or graduate students are not presently candidates for a Stanford degree. These are students and adults who have taken at least one course at another college or university. These students must complete a short application, available at <http://summer.stanford.edu>. Qualified high school students who are at least sixteen years old may apply to the High School Summer College (<http://summer.stanford.edu/programs>) program.

Students in Stanford Summer Session, in general, enjoy the privileges of students in the regular degree programs except that work completed cannot be applied toward a Stanford degree or credential unless and until the student has been admitted to regular Stanford student standing. Admission as a visiting student does not imply later admission to matriculated status. However, should the visiting student matriculate at a later date through normal admission procedures, the summer work may be applied toward the requirements for a Stanford degree or credential at the discretion of the University or academic department.

Visiting undergraduate and graduate students and students in the High School Summer College are not matriculated Stanford University students, and not all University student policies apply to such students. The University reserves the right, at its discretion, to withhold registration from or require withdrawal from Stanford Summer Session for these students or applicants.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

For more information, contact Summer Session by email, mail, phone, or fax using the listings above. Information is updated annually in January and may also be found online at <http://summer.stanford.edu>.

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford

also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Dean and Associate Provost: Charles Junkerman

Associate Dean and Director: Dan Colman

Other Services and Programs

Bookstore

Web Site: <http://stanfordbookstore.com>

Organized in 1897, Stanford Bookstore, (650) 329-1217, located at 519 Lasuen Mall (White Plaza), provides a diverse selection of books, course materials, and supplies to the students, faculty, staff, and community in and surrounding Stanford. The bookstore carries over 130,000 titles, including a wide selection of medical books and books written by Stanford authors, making it one of the largest bookstores in the nation. The bookstore also carries medical instruments, Stanford logo apparel, gifts and souvenirs, periodicals, and features a café that provides an enhanced shopping experience. The Computer Store, in the main branch, sells academically priced computer hardware and software. Other services include shipping of purchases, gift cards, book buyback, fax service, postage stamp sales, an ATM, and Enterprise Rent-A-Car hotline. There are four branches in addition to the Stanford Bookstore that also serve the community: the Stanford Athletics Shop (formerly the Track House Sports Shop), (650) 327-8870, underneath the Cobb Track and Angell Field bleachers, is the headquarters for Stanford Athletic Gear; Tresidder Express convenience store, (650) 723-9224 in Tresidder Union; the Stanford Shop, (650) 614-0295, at the Stanford Shopping Center, provides Stanford apparel; and the Bookshop, (650) 725-2775, at the Cantor Center for the Arts, carries books on the arts, fine gifts, apparel, and jewelry.

Stanford Conference Services

Phone: (650) 723-3126

Email: conferenceinquiries@stanford.edu

Web Site: <http://conference.stanford.edu>

A conference is defined as any student, youth, or adult group that convenes for part of a day (including a luncheon), overnight, or for several days, outside the regular or summer academic sessions for registered students. Policies concerning conferences are the responsibility of the offices of the President and the Provost.

To make arrangements for hosting a new, academically sponsored residential summer conference during the mid-June through late-August time frame, contact Stanford Conference Services by phone or email as listed above. Stanford Conference Services also offers meeting planning services on a year-round basis for academically sponsored conference groups seeking assistance with planning and managing residential and non-residential conferences. In addition, conference organizers seeking to conduct conferences outside of the late August to early June time frame can also contact the non-academic facilities scheduling in the Office of

the University Registrar, (650) 723-6755 or reg-events@stanford.edu, or contact Stanford Events, (650) 723-2551 or stanfordevents@stanford.edu.

Academic sponsorship by a Stanford dean or department head is required for first time conferences hosted by University departments or by conferences hosted by external organizations interested in meeting at Stanford. Conferences initiated by University departments or external organizations must demonstrate consistency with the University's academic mission. For summer conferences, the sponsoring department submits its proposal to the Director of Stanford Conference Services for review in terms of available facilities and for the approval of the President's Office. At least half of the participants in any summer conference at Stanford hosted by an external organization must be housed in Stanford's campus residences and participate in daily meal plans provided by Stanford Dining. On-campus residential housing and dining services are normally available from the Sunday following Commencement through late August.

Summer conference groups should contact Stanford Conference Services concerning arrangements for tables, chairs, audio-visual aids, signage, janitorial services, trash pick-up and removal, sprinkler shutoffs, and other conference-related products/services. During the academic year, housing arrangements for University-sponsored visitors can be made through the Stanford Guest House (<http://guesthouse.stanford.edu>) web site or call (650) 926-2800.

Ombuds

Stanford University Ombuds: David Rasch
 Ombuds Office: Mariposa House, 585 Capistrano Way, Room 210
 Phone: (650) 723-3682
 Fax: (650) 725-7288
 Mail Code: 94305-8200
 Email: rasch@stanford.edu
 Web Site: <http://stanford.edu/dept/ombuds>

School of Medicine Ombuds: James Laflin
 Office: Medical School Office Building, 1265 Welch Road, Suite X301, MC: 5404
 Phone: (650) 498-5744
 Fax: (650) 498-5865
 Mail Code: 94305-5404
 Email: jlaflin@stanford.edu
 Web Site: <http://med.stanford.edu/ombuds>

The charge to the Ombuds office at Stanford is: "The Ombudsperson's task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual's experience with University activities. The Ombudsperson's office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress."

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision making authority, the Ombuds has wide powers of inquiry. The Ombuds refers matters to the proper person or office expeditiously and also provides conflict resolution services. For the role of the office of the Ombuds in cases of sexual harassment, see the "Non-Academic Regulations (<http://exploreddegrees.stanford.edu/nonacademicregulations>)" section of this bulletin.

Police Services

Department Office: Corner of Campus Drive and Serra Street
 Phone: (650) 723-9633
 Web Site: <http://police.stanford.edu>

The Stanford Department of Public Safety is a full service police department that operates 24 hours a day, 7 days a week. For police, fire, or ambulance response, dial 9-1-1, or 9-9-1-1 from a University phone. Emergency assistance can also be obtained by using one of the nearly 100 Blue Emergency Phone Towers strategically placed around campus.

The department is composed of the following divisions:

The Field Services Division consists of sworn and non-sworn officers who patrol the campus and respond to calls for service. Sworn officers receive their police powers through the Santa Clara County Sheriff's Office. Sworn officers have the legal authority to stop vehicles, make arrests, and enforce all laws. Non-sworn officers assist the sworn officers with security patrols, evidence collection, crime prevention presentations, and other assigned tasks.

Community Service Division: Community Service Officers (CSOs) enforce the parking rules and regulations on campus, and provide traffic control at special events, construction zones, and accident scenes. CSOs also provide building security during emergency or critical incidents.

The Support Services Division provides logistical, technical, and accounting support to the department. Special events are handled through this division as well. Special Events Personnel (SEPs) provide security at campus events including athletic events, concerts, student-sponsored events, and dignitary visits. SEPs are available for hire by groups needing security at their University events. Contact the special events office at (650) 723-4924, or email event_security@stanford.edu, for more information.

The Administrative Support Division supports the department through training, recruiting, payroll, human resources, and other business functions.

For additional safety information or to view the yearly crime statistics, see the Stanford Safety and Security Almanac, available free from the Public Safety (<http://police.stanford.edu>) web site.

Office for Religious Life

Office: Memorial Church
 Phone: (650) 723-1762
 Web Site: <http://religiouslife.stanford.edu>

The mission of the Office for Religious Life (ORL) is to guide and enhance spiritual, religious, and ethical life within the Stanford University community. Multifaith exploration and dialogue, central in Stanford's history from its founding, is a vital part of both its ethos and education.

The ORL is committed to welcoming students of all genders and sexual identities, all religious and non-religious traditions, and all cultural backgrounds, striving to ensure that students, faculty, and staff have access to supportive contexts in which to pursue their spiritual journeys on the Stanford campus.

The ORL oversees and provides support for Stanford Associated Religions (SAR), more than thirty religious organizations that offer their spiritual services to the campus, as well as the Center for Inter-Religious Community, Learning, and Experiences (the CIRCLE). Located on the third floor of the remodeled Old Union, the CIRCLE offers an interfaith sanctuary, a seminar room, a common room, a student lounge, a non-lending library, and offices housing many SAR member groups.

Stanford Alumni Association

Web Site: <http://stanfordalumni.org>
 Phone: (800) 786-2586 or (650) 723-2021

The Stanford Alumni Association (SAA) seeks to serve all Stanford alumni and students by offering programs and services such as reunions, regional events, Stanford Magazine, online services, volunteer and learning opportunities, and the alumni directory.

The Stanford Alumni Association's alumni and student class outreach department (ASCO) provides undergraduates and graduate students with

networking opportunities, celebratory and social events, and programs that enhance their Stanford experience and help connect them to the 200,000 alumni worldwide who make up the Stanford alumni community. ASCO programs bring students and alumni together through Reunion Homecoming Weekend each autumn and Commencement weekend in the spring, along with alumni networking events throughout the year.

For students, SAA sponsors events such as student tailgates, alumni panels, Senior Send-off, Senior Dinner on the Quad, and Class Day. The Alumni Association gives out the J.E. Wallace Sterling Award and the Stanford Award of Excellence annually to honor graduating seniors for exemplary service to the University. For more information on student programs at the Stanford Alumni Association (<http://police.stanford.edu>) web site.

Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (<https://osep.stanford.edu>) and Stanford Ticket Office (STO) (<http://tickets.stanford.edu>) are divisions of the Office of Public Affairs (<http://publicaffairs.stanford.edu>). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile university events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups. The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and University facilities, see the OSEP (<https://osep.stanford.edu>) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (<http://tickets.stanford.edu>) web site, or call (650) 725-ARTS (2787).

Diversity and Access Office

Director of the Diversity and Access Office: Rosa Gonzalez
Office: Mariposa House, 585 Capistrano Way
Mail Code: 94305-8230
Phone: (650) 723-0755; TTY: (650) 723-1216
Email: equal.opportunity@stanford.edu, disability.access@stanford.edu
Web Site: <https://diversityandaccess.stanford.edu/>

The Diversity and Access Office ensures compliance with (not limited to the following) Titles VI and VII of the Civil Rights Act, Equal Pay Act, Americans with Disabilities Act (ADA) and Sections 503 and 504 of the Rehabilitation Act, the Age Discrimination in Employment Act and Executive Order 11246, California Fair Employment and Housing Act (FEHA) and Unruh Civil Rights Act.

The Diversity and Access Office was created to advance Stanford University's equal opportunity and affirmative action goals and commitment to diversity. The office also ensures University compliance with federal, state and local regulations concerning nondiscrimination and disability access. The Director of the Diversity and Access Office is responsible for administering the ADA/Section 504 Grievance Procedure (Student

and the student Non-Academic Grievance Procedure. Finally, the office also provides an array of services and resources designed to ensure equal opportunity and address bias and discrimination prohibited by law or official University policy, as well as assists individuals with disabilities who have requests for accommodations in the workplace and access to Stanford facilities, programs, and activities.

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Awards and Honors Faculty and Staff Awards Kenneth M. Cuthbertson Award

The Kenneth M. Cuthbertson Award was established in 1981 to recognize exceptional service to Stanford University. It was established by members of the faculty who wish to remain anonymous. All members of the Stanford community are eligible for the award; the sole criterion is the quality of the contribution that the recipients have made to the University. The award provides a way of honoring members of the staff and faculty for their efforts on behalf of the University.

Ordinarily, one award is made each year. The award was first presented in 1981 to the person for whom it is named. Kenneth M. Cuthbertson was one of the early architects of Stanford's long-term financial planning and fundraising program. His service to Stanford set an enduring standard for those who will come after him. The award is made annually at the University Commencement Ceremony.

Lloyd W. Dinkelspiel Awards

The Lloyd W. Dinkelspiel Awards recognize distinctive and exceptional contributions to undergraduate education at Stanford University. The two principal awards are made to the faculty or staff members adjudged to have made the most distinctive contribution to the development and enrichment of undergraduate education in its broadest sense. Two awards are also made to graduating seniors who combine academic achievement with effective contributions to undergraduate student life. Preference is given to service in the School of Humanities and Sciences in the area of liberal education. The awards are made from an endowment fund established in memory of Lloyd W. Dinkelspiel, a Stanford alumnus and trustee. The awards are made annually at the University Commencement Ceremony.

Walter J. Gores Awards

The Walter J. Gores Faculty Achievement Awards for excellence in teaching were established by bequest of Walter J. Gores, Stanford Alumnus of the Class of 1917 and a professor at the University of Michigan for

30 years. Teaching is understood in its broadest sense and includes, in particular, lecturing, leading discussions, tutoring, and advising at the undergraduate or graduate levels. Any member of the teaching staff of the University is eligible for an award, including all faculty of professorial rank, instructors, lecturers, teaching fellows, and teaching and course assistants. Ordinarily, awards are made to a senior faculty member (associate or full professor) or senior lecturer; a junior faculty member or member of the teaching staff; and a teaching assistant (graduate or undergraduate student). The awards are made annually at the University Commencement Ceremony.

Allan Cox Medal For Faculty Excellence Fostering Undergraduate Research

The Allan Cox Medal for Faculty Excellence Fostering Undergraduate Research is awarded annually to a faculty member who has established a record of excellence directing undergraduate research over a number of years. It may also go to a faculty member who has done an especially outstanding job with just one or two undergraduates who have demonstrated superior work. The medal was established in memory of the former professor of Geophysics and Dean of the School of Earth Sciences, a strong supporter of faculty-student research collaboration.

Herbert Hoover Medal For Distinguished Service

David Starr Jordan's belief that every academic degree should represent work actually done in or under the direction of the institution granting it has meant that, since its founding, Stanford has awarded no honorary degrees. As a means of recognizing extraordinary individuals who deserve special acknowledgment, the Stanford Alumni Association in 1962 voted to establish the Herbert Hoover Medal for Distinguished Service. The name pays tribute to the former President's example of service to his University, to his country, and to the cause of world humanitarianism. Indeed, Mr. Hoover was the first award recipient. The gold medal is presented following selection by an anonymous committee appointed by the Chair of the Board of Directors of the Alumni Association.

Student Awards

Boothe Prize for Excellence in Writing

Awarded during the freshman year, the Boothe Prize recognizes excellence in writing. Students are selected for this honor on the basis of essays written for courses fulfilling the Introduction to the Humanities or Writing and Rhetoric requirements. The prize is named for Mr. and Mrs. D. Power Boothe, Jr., whose gifts to the University reflect their interest in the humanities.

President's Award for Academic Excellence in the Freshman Year

The President's Award honors students in the top 3% of the class who have exceptionally distinguished academic records that exemplify a strong program of study in the freshman year. Students eligible for the award normally have completed Writing and Rhetoric and Introduction to the Humanities requirements during their first year at Stanford.

Deans' Award for Academic Achievement

The Deans of Earth Sciences, Engineering, and Humanities and Sciences recognize from five to ten undergraduate students each year for their academic endeavors. Honorees are cited for noteworthy accomplishments which represent more than a high grade point average or success in course work. Faculty nominate students who have exceptional tangible

achievements in classes or independent research, national academic competitions, a presentation or publication for a regional or national audience, or exceptional performance in the creative arts.

Firestone Medal for Excellence in Research

The Firestone Medal is awarded to seniors in recognition of excellence in undergraduate research. Departments in the School of Humanities and Sciences nominate students who have completed outstanding honors projects in the social, physical, and natural sciences.

Robert M. Golden Medal for Excellence in the Humanities and Creative Arts

The Golden Medal recognizes outstanding achievement in the humanities and the creative arts. Seniors receive these medals upon nomination by their major department.

Hoefer Prize for Excellence in Undergraduate Writing

The Hoefer Prize recognizes students and faculty for their work in courses that meet the University Writing Requirement for writing in the major. Prizes are awarded in each of the five areas of the undergraduate curriculum: humanities, social sciences, natural sciences, engineering, and earth sciences.

Frederick Emmons Terman Engineering Scholastic Award

The School of Engineering annually presents the Terman Award to seniors for outstanding academic achievement. The awardees share their award with a high school teacher of their nomination.

Phi Beta Kappa

Phi Beta Kappa is a nationwide society honoring students for the excellence and breadth of their undergraduate scholarly accomplishments. Membership in the Stanford Chapter (Beta of California) is open to undergraduates of all majors. To be elected to Phi Beta Kappa at Stanford, a student must achieve academic distinction in the major as well as in courses across a broad range of fields.

Approximately a tenth of the members of a graduating class are elected to Phi Beta Kappa. Of this number, about one fifth are chosen in their junior year, the remainder in their senior year.

The chapter's election guidelines define breadth of study as excellence beyond the major field. To be considered for election, a student must have taken at least three courses of 3 units or more at Stanford by the time elections are held early in the Spring Quarter with a letter grade of 'B-' or better in each of the following three major domains of knowledge: humanities; science, engineering, and math; and social sciences. Students who transfer in their junior year must have taken at least two courses at Stanford in two of the major domains and at least one course in the third domain, and must have completed a minimum of 75 units of academic work at Stanford by the end of Winter Quarter. Students who transfer in their sophomore year must have taken at least two courses at Stanford in each of the major domains.

There is no direct correlation between Stanford University General Education Requirements (GERs) and Phi Beta Kappa breadth requirements. The elections committee analyzes the content of individual courses to determine which major domain requirement they may satisfy. IHUM, PWR, and first-year language courses do not satisfy the PBK breadth criterion.

A grade of '+' or 'CR' is not considered a sign of distinction. Minimally satisfying the breadth criterion is not considered a sign of distinction.

The academic records of eligible students are automatically reviewed, so no special action is required for students wishing to be considered for membership. Anonymity in the election process is ensured by removal of the students' names from their academic records before consideration. Students who desire that their records not be made available for consideration by the Stanford chapter of Phi Beta Kappa should inform the Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032.

Exchange Programs and Cross-enrollment Agreements

Stanford has exchange programs and cross-enrollment agreements with a number of other colleges and universities. The purpose of these programs and agreements is to offer Stanford students courses and training that are not available in the Stanford curriculum.

Undergraduate

Stanford has exchange programs with four colleges and universities that allow students to exchange schools for a quarter/semester or for a year, depending on the school. These programs are best suited to students in their junior year, when the major area of study has been determined. Stanford students register for zero units at Stanford during the quarter(s) in which they are attending another college or university and pay the regular Stanford tuition. Courses taken at the other institution are treated as transfer credit back to Stanford. Students should contact the External Credit Evaluation section of the Office of the University Registrar to determine whether the courses taken through an exchange program may qualify for credit toward a Stanford degree. Only the number of units accepted in transfer, not the course titles or the grades received, are recorded on the Stanford transcript.

Exchange programs are currently available at three historically black institutions: Howard University in Washington D.C.; and Morehouse College and Spelman College in Atlanta, Georgia. The exchange program at Dartmouth College in Hanover, New Hampshire, focuses on Native American Studies. Further information is available at the Undergraduate Advising and Research Center.

Graduate

The Exchange Scholar Program is open to doctoral students in programs other than the Graduate School of Business or Stanford Law School who have completed one full year of study at one of the participating institutions. These students may apply to study at Stanford, and Stanford students may apply to one of these other institutions, for a maximum of one academic year (Autumn, Winter, and Spring quarters) to take advantage of particular educational opportunities not available on the home campus. The participating institutions are Brown University, University of Chicago, Columbia University, Cornell University, Harvard University, Massachusetts Institute of Technology, Princeton University, Stanford University, University of Pennsylvania, and Yale University. Further information on the program may be obtained from the Office of the University Registrar, or the graduate dean's office at participating institutions. Some institutions may place restrictions on specific departments.

Stanford also has separate exchange programs with the University of California, Berkeley, the University of California, San Francisco, and the University of California, Santa Cruz for students in marine sciences. Further information may be obtained at the Office of the University Registrar.

Cross-Enrollment

See the ROTC section (p. 97) of this bulletin for information on ROTC cross-enrollment programs.

Course Descriptions

Courses Courses Courses Accounting Courses

ACCT 210. Financial Accounting. 4 Units.

Financial accounting is the measurement of economic activity for decision-making. Financial statements are a key product of this measurement process and an important component of firms' financial reporting activities. The objective of this course is not to train you to become an accountant but rather to help you develop into an informed user of financial statement information. While financial statement users face a wide variety of decisions, they are often interested in understanding the implications of financial statement information for the future cash flows and earnings potential of a firm. We will focus on understanding the mapping between underlying economic events and financial statements, and on understanding how this mapping affects inferences about future profitability and liquidity. The following learning objectives will be emphasized: (1) familiarity with the transactions businesses engage in, (2) fluency in accounting terminology, (3) understanding the structure that maps transactions into accounting numbers, (4) understanding the rationale for various accounting methods, and (5) awareness of the judgment involved and the discretion allowed in choosing accounting methods, making estimates, and disclosing information in financial statements.

ACCT 212. Managerial Accounting: Base. 2 Units.

This course provides an introduction to the concepts and tools of managerial accounting. The first part of the course covers alternative costing methods and illustrates how the resulting cost information can be used to analyze the profitability of individual products and customers. The second part of the course will examine the role of internal accounting systems in evaluating the performance of individual business segments and divisions of the firm. Included in this part are topics related to the choice of internal pricing methods for transferring goods and services across divisions of the firm and the use of financial metrics for assessing the profitability of these divisions.

ACCT 213. Financial Accounting - Accelerated. 4 Units.

This course develops students' ability to read, understand, and use corporate financial statements. The course is oriented toward the user of financial accounting data (rather than the preparer) and emphasizes the reconstruction and interpretation of economic events from published accounting reports. The course is geared toward students with some familiarity in dealing with financial statement information and allows for deeper coverage and discussion in class.

ACCT 215. Managerial Accounting: Accelerated. 3 Units.

This course provides a comprehensive introduction to the concepts and tools of managerial accounting. The first part of the course demonstrates how management can rely on internal accounting information to measure and manage the profitability of individual products and customers. As part of that analysis, we examine alternative costing methods and illustrate how the resulting cost information can be used for decision making. The second part of the course focuses on the role of the internal accounting system in evaluating managerial performance and in coordinating the activities among business units within the firm. Our focus here will be on performance metrics that enable effective decentralization by aligning the objectives of individual business units with the overall corporate goals.

ACCT 219. MSx: Accounting. 4 Units.

A characteristic of business is the extensive use of accounting data. The financial accounting course has the general objective of developing students' understanding of the nature, scope, and limitations of accounting information. To achieve this objective the course attempts to: (1) develop students' understanding of the conceptual accounting framework, including the objectives of financial reporting, and (2) develop students' ability to understand and critically evaluate the financial disclosures made by corporations. An issue of particular interest will be the managerial incentive aspects of accounting information and disclosures.

ACCT 311. Global Financial Reporting. 4 Units.

This course is designed to enhance students' understanding of current financial reporting issues through a detailed analysis and comparison of U.S. and International Financial Reporting Standards. The course will cover the development of accounting standards, implementation of these standards, and how to interpret output from these standards. The course highlights intermediate and advanced financial reporting topics including fair value accounting, asset securitization, consolidation including special purpose entities, foreign currency translation, derivatives and hedging, leases, revenue recognition, pensions, and equity compensation. The course also focuses on evaluating emerging financial reporting issues such as proposed financial reporting standards put forth by U.S. or international standard setting bodies. This course should help students better understand the environment governing global financial reporting and how firms develop financial statement information within this environment.

ACCT 312. Evaluating Earnings Quality. 4 Units.

This course aims to develop students' understanding of the relation between accounting numbers and underlying economic activity, and to develop students' ability to evaluate the quality of reported accounting numbers. The course will then focus on how to use them in decision contexts including evaluating profitability, forecasting future earnings and cash flows, selecting an appropriate financial reporting strategy, and assessing risk. Accordingly, the course will focus on several factors essential to this goal. These include understanding (1) the business environment a firm operates in, its contracting practices and their implications for what accounting principles are applied and what judgments are required; (2) the process that generates accounting numbers and its implications for the quality of those numbers for decision purposes; (3) approaches for assessing the sustainability and growth of a firm's revenues and earnings using financial statement information; and (4) approaches to evaluate earnings quality, the risk of earnings restatements, liquidity and solvency. This course should be of value to students who will be in senior positions within corporations and will determine financial reporting policies, as well as those outside corporations who will make investment or other decisions at least partially based on financial statement information.

ACCT 313. Accounting-Based Valuation. 4 Units.

This course is designed to develop students' ability to interpret and use financial accounting information in an equity valuation context. The perspective taken is that of an outsider relying on publicly available financial information for investment purposes. The course relies heavily upon financial statement analysis tools and the residual income framework for equity valuation. Through lectures, in-depth case studies, and real-time exercises, the first half of the course covers traditional financial statement analysis-based tools for critically analyzing and assessing a firm's current financial performance and economic condition, including ratio analysis, accounting quality analysis and financial distress / bankruptcy prediction models. The second half of the course introduces the accounting-based valuation framework and develops the link between financial statement analysis, forecasting and equity valuation. The capstone to the course is the completion of a comprehensive, real-time valuation of a publicly traded firm (or registered IPO candidate). The course is structured for students to gain a deeper understanding of the economic pressures behind the valuation creation and valuation process, and will be of useful to those students who anticipate making investment or credit decisions at least partially based on historical and prospective financial statement information.

ACCT 317. Managerial Accounting: Performance Measurement, Compensation, and Governance. 3 Units.

The course will examine the academic and professional controversies surrounding corporate governance and executive compensation. A basic framework will be developed to integrate the many important dimensions of corporate governance in the U.S. and international settings. The institutional features of corporate governance and executive compensation will be documented using the professional business and legal literatures. In addition, the scientific research in accounting, economics, finance, and organizational behavior will be used to provide insights into the measurement and consequences of observed corporate governance and executive compensation choices. After successfully finishing the course, a student should be able to (i) understand the debates about appropriate choices for corporate governance and executive compensation and (ii) critically evaluate the implications of academic and professional research studies on these controversial issues.

ACCT 332. Mergers and Acquisitions. 3 Units.

This course provides a comprehensive overview of accounting, economic, and financial issues related to mergers and acquisitions. Specifically, we review the market for corporate control, discuss strategic and corporate governance issues related to firms' decision to acquire or be acquired, and examine the M&A regulatory environment (e.g., anti-trust). We also review various pricing and deal structure considerations, and identify some of the strategies that underlay a successful negotiation. We also review the financial reporting effects of business acquisitions and the various income tax implications of such deals. In covering these and other related issues, we will discuss both the theory and practice of mergers and acquisitions. To provide some specific context we will analyze several M&A deals (e.g., Google/Motorola, HP/Compaq, UpJohn/Pharmacia, AOL/Time Warner, Oracle/PeopleSoft, and many more). In discussing these cases, we will examine the situation faced by the company, the issues surrounding the transaction, including the financial reporting implications, and focus on the managerial incentives and the judgment applied. We will also review some of the related literature in accounting, economic, and finance, to gain broader perspectives and insights into the financial issues associated with M&A transactions. Class time comprises mini lectures that introduce some of the more technical concepts, case discussions, and guest speakers who will offer additional perspectives on the subject matters. The course is co-taught by Ron Kasznik (GSB) and Safra Catz (Oracle Corporation). Ms. Catz is President of Oracle and a member of its Board of Directors. She has led Oracle through nearly 100 acquisitions in recent years (including PeopleSoft, Siebel, BEA, Sun Microsystems, and many more). Prior to joining Oracle in 1999, Ms. Catz was Managing Director at Donaldson, Lufkin & Jenrette, a global investment bank (now part of CSFB). Ms. Catz also serves on the board of directors for HSBC Holdings plc since 2008.

ACCT 333. Taxes and Business Strategy. 3 Units.

The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, and organizational form. The goal of this course is to provide a new approach to thinking about taxes that will be valuable across jurisdictions even as laws change.

ACCT 340. Alphanomics: Informational Arbitrage in Equity Markets. 4 Units.

This is an advanced elective course on the economics of active investing in equity markets. The course is designed as a "start-up kit for an equity hedge fund." We will cover some of the foundational skills needed to select and trade stocks, as well as build and manage a portfolio of public equity. Specifically, the course material is designed to improve student skills in: (1) assessing the relative attractiveness of individual companies, (2) building stock screens to filter and rank firms based on user-specified parameters, (3) trading individual equity positions, and (4) monitoring and managing portfolio risk. This is a hands-on course with an emphasis on experiential learning. Students will make extensive use of the analytical tools in the new "Real-time Analytics and Investment Lab" (R.A.I.L.) facility in the Bass Center. There is no final exam. However, there will be a number of individual cases and a final group project. 25% of the grade will be based on class participation, and 75% will be based on cases and projects. Because it is an advanced elective, students taking this class are expected to be well versed in core economic, accounting, and finance skills. Material covered in a second Financial Modeling course, as well as in Accounting 312 (Evaluating Financial Statement Information) and Accounting 313 (Accounting-based Valuation) will come in handy. However, none of these courses are required.

ACCT 354. Analysis and Valuation for Event-Driven Investing. 3 Units.

This Bass seminar is designed to develop students' ability to interpret and use financial accounting information in credit and equity valuation contexts. The course will focus on valuing the securities of companies undergoing significant changes as a result of litigation, restructuring, regulatory changes, mergers, spin-offs or significant industry shifts. Throughout the course, students will (1) enrich their understanding of how alternative economic, legal, political and regulatory outcomes affect the value of various components of a company's capital structure and (2) develop their ability to apply financial statement analysis to assess the likelihood and valuation implications of the events of interest. Event-driven investing follows the life cycle of companies as they revamp their corporate structures in response to economic and regulatory environments. For example, in rising economic periods companies may undertake acquisitions or spin off divisions to enhance shareholder value. During adverse environments, bankruptcy and reorganizations often reshape the capital structure by offering opportunities to create value through the restructuring process. During economic transitions, debt and equity investors may make significantly different assessments of the quality of a company's earnings, its assets, and its likelihood to meet its debt obligations. To assess the probability of corporate events, investors must make judgments about the quality of a company's earnings and assets and understand how accounting policies may influence management's representations. Investors must also interpret how accounting policies function at various points in a firm's life cycle, influencing the quality of earnings for firms differently in different economic environments. In the first half of the course, we will develop the course framework, and apply it to illustrative cases. Companies featured in the cases include Tyco, AIG, CIT, Fannie Mae, Tesla and Pharmasset and Gilead. Students will interpret information from companies' public financial disclosures to assess the likelihood of different events or outcomes. The course will also feature readings on current accounting standards, articles from the popular press, publicly available financial statement information, and guest speakers with in-depth knowledge of investing strategies vis a vis the case companies. The latter part of the course will be devoted to project work, with students working in teams to develop an event-driven investing strategy. The aim is to allow students to conduct independent research on a company, industry, economic context, or financial reporting environment of particular interest. Students will develop their investment idea, articulate their sense of the possible outcomes for the components of the firm's capital structure, and explain how they have assessed the likelihood and valuation consequences of those outcomes. At the conclusion of the course, students will present their strategies to the class and a panel of expert judges.

ACCT 506. Evaluating Earnings Quality. 2 Units.

This course aims to develop students' understanding of the relation between accounting numbers and underlying economic activity, and to develop students' ability to evaluate the quality of accounting numbers. The course will focus on several skills essential to these goals. These include (1) understanding the process that generates accounting numbers and its implications for the quality of those numbers for decision purposes, (2) understanding the business environment a firm operates in and the firm's financial, accounting and operating strategies, (3) tools for assessing a firm's performance including ratio and cash flow analysis, and (4) identifying patterns that suggest low earnings quality and/or earnings manipulation. This course should be of value to students who expect to be in senior positions within corporations and will determine financial reporting policies, as well as those in investment banking, venture capital, investment management, consulting or public accounting. Class sessions will be devoted to a mix of lecture, discussion, group exercises and cases. The class will conclude with a mini-project where you analyze how a firm manipulated its financial statements or disclosures and identify the key clues that are visible in their financial statements.

ACCT 516. Analysis and Valuation of Emerging Market Firms. 2 Units.

This course examines the unique institutional, governance and transparency issues affecting corporate valuations in emerging markets. Through lectures and the students' real-time analysis of an emerging market firm, this condensed course is structured for students to gain a deeper understanding of the economic pressures behind the value creation, value destruction and valuation process in emerging economies. The course focuses on critically interpreting financial and non-financial information for purposes of assessing firm fundamentals and risk in the presence of weak legal systems, strong political forces, limited investor protections, limited market development, strong macro-economic forces, opacity and resultant business arrangements. The course is beneficial for entrepreneurs, consultants, investors and managers operating in or considering expansion to developing markets.

ACCT 518. Analysis and Valuation of Emerging Market Firms. 2 Units.

The course is designed to introduce students to the unique institutional, corporate governance and transparency issues facing managers and investors in emerging economies, and the impact these issues have on assessment of firm performance and value. The goal of the class is to gain an understanding of how country-level institutional forces interact with firm-level factors to shape firm value in these countries, how to interpret published financial reports in this environment to identify the source of firm-level value creation, and to use your assessment of the firm to identify the primitive sources of the firm's risks and opportunities. Topics covered will include an assessment of related party transactions, importance of political factors and social networks, governance conflicts, and the risk of expropriation. Students will be expected to: (1) make one presentation (most likely as a part of a two-to-three person group) that explores the valuation and value drivers of a specific emerging market firm and (2) attend all four classes. Grades will be on a pass/fail basis. Professor Piotroski teaches the Accounting-based Valuation and Valuation in Emerging Economies courses at the GSB.

ACCT 523. Board Governance. 2 Units.

This course is focused on helping students understand the role boards and board members play in corporate governance and the lives of businesses large and small. This case-driven course is designed to help students who plan to serve on boards as private-equity or venture investors, entrepreneurs who will need to assemble and manage boards, and executives who realize they will need to interact with and answer to boards. The course is designed to help students understand the issues boards face - both routine and non-routine - through the eyes of the board member. By understanding the roles and responsibilities of board members and the mechanisms through which they exercise these duties, students will come away with an understanding of how boards function effectively (and in too many cases fail to function effectively). The course will include examining boards in a variety of contexts with a focus on three types of situations: public for-profit companies, early-stage private companies, and non-for-profit companies of different sizes.

ACCT 533. Taxes and Business Strategy. 2 Units.

The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, and organizational form. The goal of this course is to provide a new approach to thinking about taxes that will be valuable across jurisdictions even as laws change.

ACCT 541. Alphanomics II. 2 Units.

This is a 2-credit advanced elective in equity investing that will be offered in the Spring 2013 quarter. This course is open only to students that were enrolled in Alphanomics (ACCT340) in the Fall of 2012. If you complete ACCT340 in the Fall of 2012, your spot in this course will be automatically reserved. However, you still have a chance to opt out of this course at the end of the Fall 2012 quarter. The Fall (ACCT340) course is designed as a "start-up kit for an equity hedge fund". In the Fall quarter, we will cover some of the foundational skills needed to build and manage a portfolio of public stocks. Towards the end of Fall, student who choose to continue onto the Spring course (ACCT541) will form teams (of 4 to 6 each) and submit a proposal for a hedge fund product. Once their proposal is approved, each team will be given a \$1 million paper portfolio. Students then manage this portfolio for the rest of the school year (their trades and portfolio statistics are automatically tracked). Students enrolled in the Spring (ACCT541) will reconvene in the second half of the quarter for a series of class lectures/talks as well as team presentations, summarizing their experience. The ACCT541 portion of the course will require each student group to make a class presentation, as well as turn in a written report. 25% of the grades will be based on class participation, and 75% will be based on the presentations and reports. The overall goal of this course is to improve student skills in assessing the relative attractiveness of individual companies, as well as in managing portfolio risk according to pre-specified targets. This is a hands-on course with an emphasis on experiential learning. Students will make extensive use of analytical tools in the new "Real-time Analytics and Investment Lab" (High-speed R.A.I.L.) facility in the Bass Center. As part of this course, students will be required to design stock screens, conduct back-tests, do detailed company analyses, execute (virtual) trades, and manage portfolio risk.

ACCT 554. Project in Event-Driven Investing. 2 Units.

This project-focused course is designed to develop students' ability to interpret and use financial accounting information in credit and equity valuation contexts. The course will focus on valuing the securities of companies undergoing significant changes as a result of litigation, restructuring, regulatory changes, mergers, spin-offs or significant industry shifts. Students will work in groups to develop a recommendation for an event-driven investment strategy. The project will feature financial statement and valuation analysis to assess the risks and rewards of the proposed strategy. Groups will be mentored by experienced investors. The course will be of value to those students who anticipate making investment decisions using financial statement information.

ACCT 609. Financial Reporting and Management Control. 4 Units.

This course is aimed at doctoral students in accounting and neighboring fields including economics, finance, political economics and operations management. The course seeks to provide an introduction to the role of accounting information in (i) measuring firm performance, (ii) projecting profitability and firm value for external constituents, (iii) and motivating and controlling the firm's management. The main topics covered in this course include: 1. Profitability Measurement and Accrual Accounting. 2. Performance Evaluation and Managerial Incentives. 3. Accounting-based Equity Valuation. 4. The Informational Role of Accounting Numbers 5. Earnings Quality Constructs and Measures. The primary objective of the course is to introduce students to current research paradigms on these topics and to identify promising avenues for future research. The course readings include recent theoretical and empirical papers.

ACCT 610. Seminar in Empirical Accounting Research. 3 Units.

Empirical Research on Financial Reporting: This doctoral-level course covers research on the role of accounting information in capital markets. The focus is on introducing students to key themes in empirical accounting and capital markets research, and to key research designs applied to examine information-related questions. Course topics include market efficiency, the role of accounting in providing information to investors, anomalies, alternative sources of information, accounting measurement attributes, earnings management, earnings quality, and the role of auditors in the provision of information to investors. The course is interdisciplinary in nature. The readings focus on research design, and key theories, themes and approaches from the accounting, finance, economics and psychology literature. Our overall goal is not only to review existing research, but also to identify new research opportunities.

ACCT 611. Applications of Information Economics in Management and Accounting. 3 Units.

This course develops tools from information economics to study the strategic interactions between agents inside a firm and between firm insiders and market participants. Common to these studies is that agents acquire private information that is valuable to other parties. The range of applications includes: the structure of managerial performance measures, buyer-supplier contracting arrangements, earnings management, voluntary and mandatory disclosure and financial analysts.

ACCT 612. Financial Reporting Seminar. 3 Units.

The purpose of this PhD seminar is to facilitate your conception and execution of substantive individual research in financial reporting. It provides a vehicle for supplementing and integrating your knowledge of basic research tools and methods, as well as an exposure to the dimensions of contemporary research in the field of financial reporting. The focus of the research we will discuss in this seminar is on global financial reporting. Such research encompasses studies dealing with contemporary financial reporting issues as well as research addressing issues relating to the globalization of financial reporting. Because these issues are also of concern to financial reporting standard setters, we will discuss whether and how the research we study informs standard setting debates. Prerequisite: Consent of the instructor.

ACCT 615. Selected Topics in Empirical Accounting Research. 3 Units.

This course examines selected topics in accounting research. The course features four faculty who will each give a focused look at a given area, introduce students to important questions in that area, key papers in the related literature, and critical aspects of the research designs applied in the area. The aim is to increase student's familiarity with empirical accounting research, their ability to critically evaluate research and research designs, and to prepare students to conduct independent research.

ACCT 617. Managerial Incentives and Corporate Governance: Concepts and Empirical Methodology. 4 Units.

The course will consist of three set of topics. The first part of the class will examine a set of applied econometric topics that are useful in empirical accounting research. Each of these topics will be illustrated using contemporary examples from accounting, economics, and finance. The second part of the class will cover some of the basic theoretical work in moral hazard agency models and various extensions to this type of research. The final part of the course will discuss the empirical literature on corporate governance and executive compensation. The course will be taught in a seminar style and students will be required to develop a series of research projects on the topics covered in the class.

ACCT 618. Market Efficiency and Informational Arbitrage. 3 Units.

The informational efficiency of stock markets has been a central theme in financial economic research in the past 50 years. Over this period, the focus of academic research has gradually shifted from the general to the more specific. While earlier studies tend to view the matter as a yes/no debate, many recent studies now acknowledge the impossibility of fully efficient markets, and have focused instead on analyses of factors that could materially affect the timely incorporation of information into prices. At the same time, increasing attention is being paid to regulatory and market design issues that could either impede or enhance market pricing efficiency. In this course, we will cover recent research on the role of informational arbitrage in asset pricing. Our starting point is the observation that, with costly information, equilibrium prices will invariably reflect some mispricing. The existence of mispricing introduces a role for informational arbitrage, whereby some traders will invest resources to become informed about the mispricing, with hopes of profiting from it. We review recent academic evidence on this process, and reflect on its implications for future market-related research. We will also discuss how academic research might help lower information/arbitrage costs. This is a doctoral level course. Our goal is not only to review existing research, but also to stimulate new work in the area. As such, I expect it will be of primary interest to Ph.D. students majoring in accounting, finance, and economics. Given our focus on returns prediction and the role of information in arbitrage strategies, this course should be of particular interest to those interested exploring the relation between information flows and market pricing dynamics. The course content is interdisciplinary in nature, spanning finance, economics, and accounting. Most of the readings in the earlier readings derive from finance and economics (market efficiency, limits to arbitrage, and behavioral finance); most of the later readings derive from financial accounting (equity valuation, fundamental analysis, earnings management, and analyst behavior).

ACCT 691. PhD Directed Reading. 1-15 Unit.

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

ACCT 692. PhD Dissertation Research. 1-15 Unit.

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

ACCT 802. TGR Dissertation. 0 Units.

Same as: FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

Aeronautics Astronautics Courses

AA 100. Introduction to Aeronautics and Astronautics. 3 Units.

The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including takeoff, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. The history of aeronautics and astronautics. Prerequisites: MATH 41, 42; elementary physics.

AA 115N. The Global Positioning System: Where on Earth are We, and What Time is It?. 3 Units.

Preference to freshmen. Why people want to know where they are: answers include cross-Pacific trips of Polynesians, missile guidance, and distraught callers. How people determine where they are: navigation technology from dead-reckoning, sextants, and satellite navigation (GPS). Hands-on experience. How GPS works; when it does not work; possibilities for improving performance.

AA 116Q. Electric Automobiles and Aircraft. 3 Units.

Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues reconsider how we move, finding sustainable transportation solutions. An introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.

AA 190. Directed Research and Writing in Aero/Astro. 3-5 Units.

For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of student services manager and instructor.

AA 199. Independent Study in Aero/Astro. 1-5 Unit.

Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.

AA 200. Applied Aerodynamics. 3 Units.

Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on airfoil theory, finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, laminar-to-turbulent transition, compressibility effects, and similarity rules. Biweekly assignments require MATLAB or a suitable programming language. Prerequisite: undergraduate courses in basic fluid mechanics and applied aerodynamics, AA 210A.

AA 201A. Fundamentals of Acoustics. 3 Units.

Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchhoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.

AA 201B. Topics in Aeroacoustics. 3 Units.

Acoustic equations for moving medium, simple sources, Kirchhoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsive jets, and airframe and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.

AA 202. Hypersonic Flow. 3 Units.

The fundamental principals and equations governing hypersonic flight and high temperature gas dynamics, including chemical and thermal equilibrium and non-equilibrium; statistical thermodynamics; kinetic theory; transport phenomena; radiation; surface heating; and scramjet engines. Prerequisite: understanding of aerodynamics. Recommended: AA 200A.

AA 203. Introduction to Optimal Control Theory. 3 Units.

Basic solution techniques for optimal control problems. Dynamic programming, calculus of variations, and numerical techniques for trajectory optimization. Special cases (chiefly LQR and robotic motion planning); modern solution approaches (such as MPC and MILP); and introduction to stochastic optimal control. Examples in MATLAB. Prerequisites: Linear algebra (EE 263 or equivalent).

AA 206. Bio-Aerodynamics. 3 Units.

Topics: flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisite: course in aerodynamics such as 100, 200A, or 241A.

AA 208. Aerodynamics of Aircraft Dynamic Response and Stability. 3 Units.

Companion to 200A for those interested in control and guidance. Typical vehicles and the technical tradeoffs affecting their design. Equations of motion, stressing applications to dynamic performance, stability, and forced response. Forms and sources for the required aerodynamic data. Response to small disturbances and stability derivatives. Static stability and trim. Review of aerodynamic fundamentals, leading to airload predictions for wings, bodies, and complete aircraft. Paneling and other methods for derivative estimation. Natural motions of the aircraft, and the influence on them of various configuration parameters. Vehicle behavior in maneuvers of small and large amplitudes. Prerequisites: 200A, 210A, or equivalents (may be taken concurrently).

AA 210A. Fundamentals of Compressible Flow. 3 Units.

Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

AA 210B. Fundamentals of Compressible Flow. 3 Units.

Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonisentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.

AA 212. Analysis and Design of Multivariable Feedback Systems. 3 Units.

Analysis and design techniques for multivariable feedback systems. Review of basic properties of multi-input, multi-output linear time-invariant systems and of basic concepts from convex analysis. Study of the stability and robustness of feedback loops. Approaches for optimal and robust feedback control design, chiefly H2 and H-infinity synthesis. Prerequisite: EE 263. Recommended: EE 364A.

AA 214A. Introduction to Numerical Methods for Engineering. 3 Units.

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B. Same as: CME 206, ME 300C

AA 214B. Numerical Methods for Compressible Flows. 3 Units.

For M.S.-level graduate students. Covers the hierarchy of mathematical models for compressible flows. Introduction to finite difference, finite volume, and finite element methods for their computation. Ideal potential flow; transonic potential flow; Euler equations; Navier-Stokes equations; representative model problems; shocks, expansions, and contact discontinuities; treatment of boundary conditions; time and pseudo-time integration schemes. Prerequisites: basic knowledge of linear algebra and ODEs (CME 206 or equivalent).

AA 214C. Numerical Computation of Viscous Flow. 3 Units.

Numerical methods for solving parabolic sets of partial differential equations. Numerical approximation of the equations describing compressible viscous flow with adiabatic, isothermal, slip, and no-slip wall boundary conditions. Applications to the Navier-Stokes equations in two and three dimensions at high Reynolds number. Computational problems are assigned. Prerequisite: 214B.

AA 215A. Advanced Computational Fluid Dynamics. 3 Units.

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: CME 215A

AA 215B. Advanced Computational Fluid Dynamics. 3 Units.

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.

Same as: CME 215B

AA 218. Introduction to Symmetry Analysis. 3 Units.

Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

AA 222. Introduction to Multidisciplinary Design Optimization. 3-4 Units.

Design of aerospace systems within a formal optimization environment. Mathematical formulation of the multidisciplinary design problem (parameterization of design space, choice of objective functions, constraint definition); survey of algorithms for unconstrained and constrained optimization and optimality conditions; description of sensitivity analysis techniques. Hierarchical techniques for decomposition of the multidisciplinary design problem; use of approximation theory. Applications to design problems in aircraft and launch vehicle design. Prerequisites: multivariable calculus; familiarity with a high-level programming language: FORTRAN, C, C++, MATLAB, Python, or Julia.

AA 228. Decision Making under Uncertainty. 3-4 Units.

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language.

Same as: CS 238

AA 229. Advanced Topics in Sequential Decision Making. 3-4 Units.

Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221.

Same as: CS 239

AA 236A. Spacecraft Design. 3-5 Units.

The design of unmanned spacecraft and spacecraft subsystems emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

AA 236B. Spacecraft Design Laboratory. 3-5 Units.

Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisite: 236A or consent of instructor.

AA 236C. Spacecraft Design Laboratory. 3-5 Units.

AA 240A. Analysis of Structures. 3 Units.

Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

AA 240B. Analysis of Structures. 3 Units.

Thin plate analysis. Structural stability. Material behavior: plasticity and fracture. Introduction of finite element analysis; truss, frame, and plate structures. Prerequisite: 240A or consent of instructor.

AA 241A. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.

New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

AA 241B. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.

New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

AA 241X. Design, Construction, and Testing of Autonomous Aircraft. 3 Units.

Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A,B); applied aerodynamics (200A,B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).

AA 242A. Classical Dynamics. 3 Units.

Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

AA 242B. Mechanical Vibrations. 3 Units.

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed. Same as: ME 242B

AA 244A. Introduction to Plasma Physics and Engineering. 3 Units.

Physics and engineering of plasmas, including space and laboratory plasmas. Debye length and distribution functions. Single-particle motion and drifts. Plasmas as fluids and fluid drifts. Waves in plasmas, including electrostatic and electromagnetic. Diffusion and resistivity. Magnetohydrodynamics.

AA 244B. Advanced Plasma Physics and Engineering. 3 Units.

Equilibrium and instability. Turbulent flow in plasmas. Kinetic theory and the Vlasov equation. Nonlinear effects and solutions. Radiation in a plasma. Plasma diagnostics in ground- and space-based experiments.

AA 250. Nanomaterials for Aerospace. 3 Units.

Properties of nanomaterials and current approaches for engineering spacecraft, aircraft, and subsystems with nanotechnology. Manufacturing of nanomaterials; nano-fiber reinforced composites; structural mechanics of nanomaterials; structure-property relationships; and application of nanotechnology for lightweight structures, thermal protection, nanopropellants, and nanoelectronics.

AA 251. Introduction to the Space Environment. 3 Units.

The environment through which space probes and vehicles travel and orbit. Survey of physical phenomena in the sun, solar wind, magnetospheres, ionospheres, and upper atmospheres of objects in the solar system. Introduction to the physical processes governing space plasmas, solar-terrestrial interactions, and ionized and neutral media surrounding the Earth and other solar system bodies. Prerequisite: Introduction to Plasma Physics.

AA 252. Techniques of Failure Analysis. 3 Units.

Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

AA 256. Mechanics of Composites. 3 Units.

Fiber reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Individual design project required of each student, resulting in a usable computer software. Prerequisite: ENGR 14 or equivalent.

AA 260. Sustainable Aviation. 3 Units.

Quantitative assessment of the impact of aviation on the environment including noise, local, and global emissions, and models used to predict it. Current and future technologies that may allow the air transportation system to meet anticipated growth while reducing or minimizing environmental problems. Atmospheric effects of NO_x, CO₂, particulates, unburned hydrocarbons, and water vapor deposition at high altitudes and metrics for assessing global climate effects. Noise sources, measurement, and mitigation strategies. Fundamentals of aircraft and engine performance needed to assess current and future concepts. Major national and international policy implications of existing and future technology choices. Recommended: AA 241B.

AA 270. Distributed Space Systems. 3 Units.

Keplerian orbital mechanics and orbital perturbations; the general relative motion problem; linear formation flying dynamics and control; impulsive station-keeping and reconfiguration; high order relative motion equations; formulation of relative motion using orbital elements; perturbation-invariant formations; nonlinear formation control; low-thrust propulsion for formation flying; relative navigation using GNSS and optical navigation; applications: sparse-aperture imaging, remote sensing, on-orbit servicing, rendezvous, and docking. Prerequisite: AA 279A or equivalent, and familiarity with MatLab (or another mathematical programming language).

AA 271A. Dynamics and Control of Spacecraft and Aircraft. 3 Units.

The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA242A, ENGR 105.

AA 271B. Advanced Dynamics and Control of Spacecraft. 3 Units.

Attitude representation and parametrization; unperturbed and perturbed attitude dynamics and stability; attitude sensors and actuators; linear and nonlinear attitude control; optimal attitude maneuvers; dynamics of flexible spacecraft and space tethers; invited lectures from industry. Prerequisites: AA 271A and AA 279A or equivalents, and familiarity with MatLab (or another mathematical programming language).

AA 272C. Global Positioning Systems. 3 Units.

The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra and MatLab (or another mathematical programming language).

AA 279A. Space Mechanics. 3 Units.

Orbits of near-earth satellites and interplanetary probes; relative motion in orbit; transfer and rendezvous; orbit determination; influence of earth's oblateness; sun and moon effects on earth satellites; decay of satellite orbits; invited lectures from industry. Prerequisite: ENGR 15 or equivalent, and familiarity with MatLab (or another mathematical programming language).

AA 279B. Advanced Space Mechanics. 3 Units.

Restricted 3-body problem. Relative motion, Hill's and Clohessy-Wiltshire equations. Lambert's problem. Satellite constellations and optimization. Communications and link budgets. Space debris. High fidelity simulation. Interplanetary mission planning, launch windows and gravity assists. Basic trajectory optimization. Several guest lectures from practitioners in the field. Individual final project chosen in consultation with instructor. Prerequisites: 279A or equivalent with permission of instructor. Fluency with MATLAB (or another mathematical programming language with 2D and 3D plotting capabilities).

AA 280. Smart Structures. 3 Units.

Mechanics of smart materials and current approaches for engineering smart structures to monitor health, self heal, and adapt to environment. Definition of smart structures; constitutive models for smart materials; piezoelectric ceramics; electro-active polymers; shape memory alloys; bio-inspired materials and structures; self-healing materials; sensors and sensor networks; structural health monitoring; and energy harvesting. Prerequisite: AA 240A or consent of instructor.

AA 283. Aircraft and Rocket Propulsion. 3 Units.

Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turbofans, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

AA 284A. Advanced Rocket Propulsion. 3 Units.

The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Nonchemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 or consent of instructor.

AA 284B. Propulsion System Design Laboratory. 3 Units.

Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.

AA 284C. Propulsion System Design Laboratory. 3 Units.

Continuation of 284A,B. Prerequisite: 284B, and consent of instructor.

AA 290. Problems in Aero/Astro. 1-5 Unit.

(Undergraduates register for 190 or 199.) Experimental or theoretical investigation. Students may work in any field of special interest. Register for section belonging to your research supervisor. May be repeated for credit.

AA 291. Practical Training. 1-3 Unit.

Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student's academic program. Research report outlining work activity, problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.

AA 294. Case Studies in Aircraft Design. 1 Unit.

Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit.

AA 295. Aerospace Structures and Materials. 1 Unit.

Presentations by researchers and industry professionals in aerospace structures and materials. May be repeated for credit.

AA 297. Seminar in Guidance, Navigation, and Control. 1 Unit.

For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.

AA 300. Engineer Thesis. 1-15 Unit.

Thesis for degree of Engineer. Students register for section belonging to their thesis adviser.

AA 301. Ph.D. Dissertation. 1-15 Unit.

Prerequisite: completion of Ph.D qualifying exams. Students register for section belonging to their thesis adviser. (Staff).

AA 801. TGR Engineer Thesis. 0 Units.

Engineer's thesis or non-doctoral work for a TGR student.

AA 802. TGR Ph.D. Dissertation. 0 Units.

Doctoral dissertation for a TGR student in PhD program.

African American Studies Courses

AFRICAAM 16N. African Americans and Social Movements. 3 Units.
Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's rights, LGBT rights, environmental movement, and contemporary political conservatism. Same as: CSRE 16N, SOC 16N

AFRICAAM 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.
From the beginning of jazz to the war years. Same as: MUSIC 18A

AFRICAAM 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.
Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style. Same as: MUSIC 18B

AFRICAAM 19. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.
The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.) Same as: AMSTUD 147J, CSRE 147J, MUSIC 147J, MUSIC 247J

AFRICAAM 20A. Jazz Theory. 3 Units.
Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. Same as: MUSIC 20A

AFRICAAM 21. African American Vernacular English. 3-5 Units.
The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center). Same as: LINGUIST 65

AFRICAAM 24. Introduction to Dance in the African Diaspora. 4 Units.
This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project. Same as: CSRE 24D, DANCE 24, TAPS 152D

AFRICAAM 30. The Egyptians. 3-5 Units.
Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Weekly participation in a discussion section is required. Same as: CLASSICS 82

AFRICAAM 31. RealTalk: Intimate Discussions about the African Diaspora. 1 Unit.
Students to engage in an intellectual discussion about the African Diaspora with leading faculty at Stanford across departments including Education, Linguistics, Sociology, History, Political Science, English, and Theater & Performance Studies. Several lunches with guest speakers. This course will meet in the Program for African & African American Studies Office in Building 360 Room 362B (Main Quad). This course is limited to Freshman and Sophomore enrollment.

AFRICAAM 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.
This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations. Same as: AMSTUD 32, CSRE 32A, EDUC 32X, EDUC 432X, TAPS 32

AFRICAAM 33. From Moments to Movements: New Media, Narrative, and 21st Century Activism. 5 Units.
In this course, taught by leading cultural critic, dream hampton, we'll look at 21st century activism as influenced by both new media and an emphasis on narrative, critically investigating the opportunities and limitations created by #hashtag activism. We'll examine the work and talk to the organizers who are developing new strategies for on and offline activism. In real time, students will track, engage and create metric analytics of certain online activism trends, looking closely at those whose impact and success is measurable. Students will have the opportunity to participate in a day long, youth lead activist training. We will read classic twentieth century media: texts, posters, pamphlets and papers with an emphasis on the intersection of the political and cultural. Students will produce their own low fi zine or help a student organization of their choice develop their online presence.

AFRICAAM 34. Race, Policing, and Mass Incarceration. 1 Unit.
This course is a critical examination of the relationship between race, policing, and mass incarceration. Students will be reading the most important contemporary texts to discuss and deconstruct this relationship, as well as attending lectures and workshops by leading scholars and activists. The course will approach this critical nexus of concerns--race, policing, and mass incarceration--from social scientific, legal, theoretical and activist viewpoints. Same as: CSRE 34

AFRICAAM 35. On the Meaning of Freedom. 5 Units.
This course will be taught by Professor Angela Davis. This course examines this fundamental question: What is the meaning of freedom? We will read work that explores this question and seeks to end all social hierarchies that deny people their political, economic, cultural, and sexual freedom. We will confront the interconnected issues of race, gender, and class, as well as the on-going problems of incarceration, police violence, and barriers to food access and security. Students will consider the radical notion of freedom as a collective striving for real democracy, not a thing granted by the state, law, proclamation, or policy, but a participatory social process, rooted in difficult dialogues, that demands new ways of thinking and being.

AFRICAAM 36. REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.. 5 Units.

Probably since the first audience formed for the first chalk scrawls in a cave, there have been storytellers to narrate that caveperson's art and life, and critics to troll that caveperson's choice and usage of color. And so it goes. This course is an exploration into how to cover race, culture, and identity in the arts in journalism, such as print, web, video, radio, and podcasting. It is also an arts journalism practicum. During the quarter, we will be working toward creating work that is publishable in various venues and outlets. In this course, we will be discussing exemplary arts writers and their works and interrogating critical questions around race, identity, representation, and ethics. Experienced journalists, editors, and experts from different platforms and backgrounds will also be imparting important skills and training that will help you to navigate today's working media and transmedia environments. Those who enroll in the class will be expected to produce quality content (e.g. articles, blog posts, video reports, podcasts) for media outlets. Some travel outside of class may be required for additional reporting and training. This seminar class will be By Instructor Approval Only. Please submit an application by February 22 at 11:59pm. Starred items are required. The app is available at: <http://bit.ly/RepresentClass36> Those selected for this class will be informed by March 2nd so that they may enroll in the course. Please do not apply for the course if you are unsure about completing it. If you have any questions, you may email the instructor at: jeffc410@stanford.edu. Same as: CSRE 36

AFRICAAM 40SI. Possessive Investment in Whiteness. 1-2 Unit.

An approachable but nuanced way of developing a notion of the construction and maintenance of whiteness in the United States. By focusing on George Lipsitz's book, the class works to challenge and refine the ideas of white privilege and race in the history and contemporary United States. By focusing on the single text, with some outside supplementary material, the course does not contend that Lipsitz is providing the only truth, but the class looks to complicate his notions and expand them with personal and outside understandings. May be repeated for credit.

AFRICAAM 41. Genes and Identity. 3 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race.

Same as: ANTHRO 41, CSRE 41A

AFRICAAM 43. Introduction to African American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history.

Same as: AMSTUD 143, ENGLISH 43, ENGLISH 143

AFRICAAM 45. Dance Improvisation Techniques and Strategies Lab: From Hip Hop to Contact. 2 Units.

By learning various dance improvisation forms across cultures, students will develop techniques to gain a deep understanding of generating movement from the inside-out, inspired by conceptual strategies from master improvisors while harnessing that potential for creating dances. Guest dancer/choreographer workshops and Dance Jams enhance the learning experience. All Levels welcome.

Same as: DANCE 45

AFRICAAM 47. History of South Africa. 3 Units.

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: HISTORY 47

AFRICAAM 48Q. South Africa: Contested Transitions. 3 Units.

Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for S. Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet.

Same as: HISTORY 48Q

AFRICAAM 50B. 19th Century America. 3 Units.

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: HISTORY 50B

AFRICAAM 54N. African American Women's Lives. 3-4 Units.

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AMSTUD 54N, CSRE 54N, FEMGEN 54N, HISTORY 54N

AFRICAAM 64C. From Freedom to Freedom Now!: African American History, 1865-1965. 3 Units.

(Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

AFRICAAM 75E. Black Cinema. 2 Units.

How filmmakers represent historical and cultural issues in Black cinema.

AFRICAAM 101F. Race & Technology. 1-2 Unit.

The program in African & African American Studies will be offering a weekly lecture series to expose and introduce underrepresented groups to the world of technology by creating a space where the idea of starting can lead to a "Start Up". The AAAS "Race & Technology" course endeavors to de-code the language of technology creation, how to build a team, problem solving, pitching an idea, leveraging the work of all disciplines in creating an entrepreneurship mindset. nnnScholars and industry people will cover topics such as the digital divide, women in technology, and social media. Same as: AFRICAAM 201F

AFRICAAM 102. Introduction to Public History and Public Service. 4-5 Units.

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center). Same as: CSRE 201, HISTORY 201, HISTORY 301

AFRICAAM 103. Dance, Text, Gesture: Performance and Composition. 1 Unit.

Students practice, compose and combine the languages of dance, gestural movement, music and text, to render complete expression in performance. Suitable for dancers, actors, spoken word artists and triple threat performers to devise original performance, dance and theater, culminating in an end of quarter showing. Same as: DANCE 103

AFRICAAM 105. Introduction to African and African American Studies. 5 Units.

Interdisciplinary. Central themes in African American culture and history related to race as a definitive American phenomenon. African survivals and interpretations of slavery in the New World, contrasting interpretations of the Black family, African American literature, and art. Possible readings: Frederick Douglass, Harriet Jacobs, Booker T. Washington, W.E.B. DuBois, Richard Wright, Maya Angelou, James Baldwin, Malcolm X, Alice Walker, and Bell Hooks. Focus may vary each year.

AFRICAAM 106. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: CSRE 103B, EDUC 103B, EDUC 337

AFRICAAM 107C. The Black Mediterranean: Greece, Rome and Antiquity. 4-5 Units.

Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole.

Same as: CSRE 107

AFRICAAM 112. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: CSRE 112X, EDUC 112X, EDUC 212X, SOC 129X, SOC 229X

AFRICAAM 115. South African Encounters. 1 Unit.

This course is a prerequisite for all those accepted to or on the wait list for the following quarter's BOSP Cape Town term abroad. It will explore issues in contemporary South Africa.

Same as: AFRICAST 115

AFRICAAM 116. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: CSRE 216X, EDUC 216, HISTORY 255E

AFRICAAM 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121X, LINGUIST 155

AFRICAAM 122E. Art in the Streets: Identity in Murals, Site-specific works, and Interventions in Public Spaces. 4 Units.

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project.

Same as: CSRE 122E

AFRICAAM 123. Great Works of the African American Tradition. 5 Units.

Foundational African and African American scholarly figures and their work from the 19th century to the present. Historical, political, and scholarly context. Dialogues distinctive to African American culture. May be repeated for credit.

AFRICAAM 125V. The Voting Rights Act. 5 Units.

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: CSRE 125V, POLISCI 125V

AFRICAAM 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

AFRICAAM 127A. Can't Stop Won't Stop: A History Of The Hip-Hop Arts. 4 Units.

This course explores the history and development of the hip-hop arts movement, from its precursor movements in music, dance, visual arts, literature, and folk and street cultures to its rise as a neighborhood subculture in the Bronx in the early 1970s through its local, regional and global expansion and development. Hip-hop aesthetics, structures, and politics will be explored within the context of the movement; its rise as a post-multicultural form in an era of neoliberal globalization.

Same as: CSRE 127A

AFRICAAM 130. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor.

Same as: CSRE 130, EDUC 123X, EDUC 322

AFRICAAM 131. Genes and Identity. 5 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence; in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic family searching; in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: ANTHRO 131, CSRE 131

AFRICAAM 133. Literature and Society in Africa and the Caribbean. 4 Units.

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts, as well as excerpts of Francophone theater. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Required readings include: Aimee; Ce; saire, "Cahier d'un retour au pays natal," Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'envers des autres", Maryse Conde; "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Rome plutocrat; sue Vous". Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: FRENCH 133, JEWISHST 143

AFRICAAM 145A. Poetics and Politics of Caribbean Women's Literature. 5 Units.

Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization.

AFRICAAM 145B. Africa in the 20th Century. 5 Units.

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

Same as: HISTORY 145B

AFRICAAM 146A. African Politics. 4-5 Units.

Africa has lagged the rest of the developing world in terms of economic development, the establishment of social order, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, and to provide extensive case study and statistical material to understand what sustains it, and how it might be overcome. Same as: POLISCI 146A

AFRICAAM 147. History of South Africa. 5 Units.

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. Same as: HISTORY 147

AFRICAAM 148. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacute;, Olinto), prose poetry (Ceacute;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouloguem) and autobiography (Barack Obama). Same as: AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

AFRICAAM 150B. 19th-Century America. 5 Units.

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture. Same as: AMSTUD 150B, HISTORY 150B

AFRICAAM 152G. Harlem Renaissance. 5 Units.

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context. Same as: AMSTUD 152G, ENGLISH 152G

AFRICAAM 154. Black Feminist Theory. 5 Units.

This course will examine black feminist theoretical traditions, marking black women's analytic interventions into sexual and pleasure politics and reproduction, critical culture and race theory, citizenship, identity, power and agency, representation, and questions of the body. Exploring concepts such as intersectionality, controlling images, the politics of respectability and the particularities of a black feminist liberation politics, we will look to black feminist scholars, activists, and artists from the 19th century to today. Same as: FEMGEN 154

AFRICAAM 156. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project. Same as: TAPS 156, TAPS 356

AFRICAAM 157P. Allyship: Challenging Privilege and Doing Solidarity in Movements for Collective Liberation. 2-4 Units.

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations. Same as: AMSTUD 157P, CSRE 157P, FEMGEN 157P

AFRICAAM 158. Black Queer Theory. 5 Units.

This course takes a multifaceted approach to black queer theory, not only taking up black theories of gender and queer sexuality, but queer theoretical interrogations of blackness and race. The course will also examine some of the important ways that black queer theory reads and is intersected with issues like affect, epistemology, space and geography, power and subjectivity, religion, economy, the body, and the law, asking questions like: How have scholars critiqued the very language of queer and the ways it works as a signifier of white marginality? What are the different spaces we can find queer black relationality, eroticism, and kinship? How do we negotiate issues like trans*misogyny or tensions around gender and sexuality in the context of race? Throughout the course, students will become versed in foundational and emerging black queer theory as we engage scholars like Sharon Holland, Cathy Cohen, Hortense Spillers, Marlon B. Ross, Aliyyah Abdur-Rahman, Barbara Smith, Roderick Ferguson, Robert Reid-Pharr, E. Patrick Johnson, and many others. Students will also gain practice applying black queer theory as an interpretive lens for contemporary social issues and cultural production including film, music, art, and performance. Same as: FEMGEN 158

AFRICAAM 165. Race, Athletics and College Achievement. 3 Units.

How does racial group membership affect academic experiences, and how do race and athletic participation intersect with collegiate life? In this class, we will explore the relationships among race, athletic status, and academic experiences, with a focus on social science data and the specific experiences of Stanford students. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format with no prerequisites. Same as: CSRE 165, CTL 165

AFRICAAM 166. Introduction to African American History - the Modern Freedom Struggle. 3-5 Units.

(AFRICAAM-166/ AMSTUD-166/ HISTORY-166) This course focuses on African-American political movements of the period after 1930, with special emphasis on the contributions of grassroots activists and visionary leaders such as W. E. B. Du Bois, Martin Luther King, Jr., and Malcolm X. The lectures will utilize audio-visual materials extensively, and the exams will cover these materials as well as the content of traditional lectures. Students are encouraged to undertake research projects utilizing the unique resources of the King Research and Education Institute. Same as: AMSTUD 166, HISTORY 166

AFRICAAM 181Q. Alternative Viewpoints: Black Independent Film. 4 Units.

Preference to sophomores. Do you want to learn more about independent film as it was practiced in major urban centers by young filmmakers? This class focuses on major movements by groups such as the Sankofa Film Collective and the L.A. Rebellion. Learn how to analyze film and to discuss the politics of production as you watch films by Spike Lee, Julie Dash, Melvin Van Peebles, Ngozi Onwurah and more. We will discuss representation, lighting, press material, and of course the films themselves. This course includes a workshop on production, trips to local film festivals and time to critique films frame-by-frame. It matters who makes film and how they do so. When you have completed this class you will be able to think critically about "alternative viewpoints" to Hollywood cinema. You will understand how independent films are made and you will be inspired to seek out and perhaps produce or promote new visions. Same as: FILMSTUD 181Q, TAPS 181Q

AFRICAAM 190. Directed Reading. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

AFRICAAM 195. Independent Study. 5 Units.

.

AFRICAAM 199. Honors Project. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

AFRICAAM 200X. Honors Thesis and Senior Thesis Seminar. 5 Units.

Required for seniors. Weekly colloquia with AAAS Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing. Readings include foundational and cutting-edge scholarship in the interdisciplinary fields of African and African American studies and comparative race studies. Readings assist students situate their individual research interests and project within the larger. Students may also enroll in AFRICAAM 200Y in Winter and AFRICAAM 200Z in Spring for additional research units (up to 10 units total).

AFRICAAM 200Y. Honors Thesis and Senior Thesis Research. 3-5 Units.

Winter. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

AFRICAAM 200Z. Honors Thesis and Senior Thesis Research. 3-5 Units.

Spring. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

AFRICAAM 201F. Race & Technology. 1-2 Unit.

The program in African & African American Studies will be offering a weekly lecture series to expose and introduce underrepresented groups to the world of technology by creating a space where the idea of starting can lead to a "Start Up". The AAAS "Race & Technology" course endeavors to de-code the language of technology creation, how to build a team, problem solving, pitching an idea, leveraging the work of all disciplines in creating an entrepreneurship mindset. nnnScholars and industry people will cover topics such as the digital divide, women in technology, and social media. Same as: AFRICAAM 101F

AFRICAAM 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?. Same as: AFRICAST 112, AFRICAST 212

AFRICAAM 223. Literature and Human Experimentation. 3-5 Units.

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care. Same as: COMPLIT 223, CSRE 123B, HUMBIO 175H, MED 220

AFRICAAM 226. Mixed-Race Politics and Culture. 5 Units.

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement. Same as: AMSTUD 152K, CSRE 152K, ENGLISH 152K

AFRICAAM 229. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer. Same as: AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

AFRICAAM 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: CSRE 233A, EDUC 233A

AFRICAAM 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

Same as: CSRE 245, EDUC 245

AFRICAAM 254D. Law, Slavery, and Race. 5 Units.

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: CSRE 154D, HISTORY 254D, HISTORY 354

AFRICAAM 261E. Mixed Race Literature in the U.S. and South Africa. 5 Units.

As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa's post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

Same as: AMSTUD 261E

AFRICAAM 262D. African American Poetics. 5 Units.

Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre--from sonnets to spoken word, from blues poetry to new media performance--in defining an evolving literary tradition and cultural identity.

Same as: AMSTUD 262D

AFRICAAM 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AMSTUD 267E, HISTORY 267E

AFRICAAM 290. Ferguson in a Global Frame: Human Rights and the Arts. 3-5 Units.

This course introduces students to fundamental concepts of international human rights and uses these concepts to frame problems of inequality, marginality, exclusion and injustice that are chronic across the globe; including the United States. Focusing on Ferguson as a point of inflection, this course will consider police repression of political protest in a comparative context. The course will also use the lens of fundamental human rights to explore a state's failure to investigate and prosecute, and its failure to protect its citizens from violations committed by agents or from non-state agents. In each thematic unit, we will examine the United States in a comparative lens, and will consider how we understand, frame, mourn and contest the violations of rights in literature, the visual arts, and in social and political action. We will continuously examine the role of the arts in disseminating, shaping and deepening our understanding of multiple dimensions of human rights violations. At the same time, we will consider how these cultural products reflect on, illuminate, contest or problematize advocacy texts and sources of international law. We will examine texts from the United States, Brazil, South Africa, among other countries, as well as documents from international and regional human rights bodies.

Same as: COMPLIT 290, CSRE 290

AFRICAAM 301. RealTalk: Intimate Discussions about the African Diaspora. 1 Unit.

Students engage in an intellectual discussion about the African Diaspora with leading faculty at Stanford across departments including Education, Linguistics, Sociology, History, Political Science, English, and Theater and Performance Studies. Several lunches with guest speakers. Open graduate students. This course will meet in the Program for African & African American Studies Office in Building 360 Room 362B (Main Quad).

African Middle Eastern Languages Courses

AMELANG 15T. Intermediate to Advanced Turkish Conversation. 2 Units.

Students develop communicative skills while discussing real-life issues, current events and cultural topics. The goal is to use culturally appropriate forms in formal and informal conversations, expressing emotions, feelings, and ideas in social and academic contexts. Pronunciation, vocabulary building, presentational language and daily readings are stressed. Students lead class discussions and prepare short presentations. Prerequisite: consent of instructor.

AMELANG 51A. Reading Biblical Hebrew, First Quarter. 2 Units.**AMELANG 70A. Accelerated First-Year Swahili, Part 1. 5 Units.**

First quarter of the two-quarter accelerated sequence. For students with little or no prior experience studying Swahili. Students acquire beginning proficiency in Swahili at an accelerated pace through intensive listening, speaking, reading, and writing, with special insight into Swahili-speaking cultures. Emphasis is on authentic materials and active use of the language in real-world contexts in order to develop functional abilities. Completion of AMELANG 70B fulfills the University foreign language requirement.

AMELANG 70B. Accelerated first-year Swahili part 2. 5 Units.
Continuation of AMELANG 70A. Completes the first-year sequence in two rather than three quarters. Students develop first-year proficiency in Swahili at an accelerated pace through active language use and participation in Swahili-speaking practices. Emphasis is on development of speaking, listening, reading, and writing through authentic materials and appropriate cultural contexts. Fulfills the University foreign language requirement. Prerequisite: AMELANG 70A or consent of instructor.

AMELANG 84A. Accelerate First-Year Turkish, Part 1. 5 Units.
First part of the accelerated first-year sequence. AMELANG 84A and 84B complete the first year in two quarters rather than three quarters. Fulfills the University Language requirement. Goal is to engage in interactions with Turkish speakers using socially and culturally appropriate forms. Emphasis is on the accelerated development of language proficiency, listening comprehension, reading and writing skills through conversational practice and in-class/online writing activities. Discussion of culture and social life is integrated into daily language learning activities through authentic materials.

AMELANG 84B. Accelerated First-Year Turkish, part 2. 5 Units.
Second part of the accelerated first-year sequence. AMELANG 84A and 84B complete the first year in two rather than three quarters. AMELANG 84B (Accelerated First-Year Turkish, Part 2) fulfills the University language requirement. Goal is to engage in interactions with Turkish speakers using socially and culturally appropriate forms. Emphasis is on the accelerated development of language proficiency, listening comprehension, reading and writing skills through conversational practice and in-class/online writing activities. Discussion of culture and social life is integrated into daily language learning activities through authentic materials.

AMELANG 99. Undergraduate Directed Reading. 1-3 Unit.
This course does not fulfill the University language requirement.

AMELANG 100A. Beginning Amharic, First Quarter. 4 Units.

AMELANG 100B. First-Year Amharic, Second Quarter. 4 Units.
Continuation of AMELANG 100A. Prerequisite AMELANG 100A.

AMELANG 100C. First-Year Amharic, Third Quarter. 4 Units.
Continuation of AMELANG 100B. Prerequisite AMELANG 100B. Fulfills the University Foreign Language Requirement.

AMELANG 101A. Second-Year Amharic, First Quarter. 4 Units.
Continuation of AMELANG 100C. Prerequisite: AMELANG 100C.

AMELANG 101B. Second-Year Amharic, Second Quarter. 4 Units.
Continuation of AMELANG 101A. Prerequisite AMELANG 101A.

AMELANG 101C. Second-Year Amharic, Third Quarter. 4 Units.
Continuation of AMELANG 101B. Prerequisite: AMELANG 101B.

AMELANG 103A. First-Year Hausa, First Quarter. 4 Units.

AMELANG 103B. First-Year Hausa, Second Quarter. 4 Units.
Continuation of AMELANG 103A. Prerequisite: AMELANG 103A.

AMELANG 103C. First-Year Hausa, Third Quarter. 4 Units.
Continuation of AMELANG 103B. Prerequisite: AMELANG 103B.

AMELANG 106A. First-Year Swahili, First Quarter. 5 Units.

AMELANG 106B. First-Year Swahili, Second Quarter. 5 Units.
Continuation of AMELANG 106A. Prerequisite: AMELANG 106A.

AMELANG 106C. First-Year Swahili, Third Quarter. 5 Units.
Continuation of AMELANG 106B. Prerequisite: AMELANG 106B. Fulfills the University foreign language requirement.

AMELANG 107A. Second-Year Swahili, First Quarter. 5 Units.
Continuation of AMELANG 106C. Prerequisite: AMELANG 106C.

AMELANG 107B. Second-Year Swahili, Second Quarter. 5 Units.
Continuation of AMELANG 107A. Prerequisite: AMELANG 107A.

AMELANG 107C. Second-Year Swahili, Third Quarter. 5 Units.
Continuation of AMELANG 107B. Prerequisite: AMELANG 107B.

AMELANG 108A. Third-Year Swahili, First Quarter. 4 Units.
Continuation of AMELANG 107C. Prerequisite: AMELANG 107C.

AMELANG 108B. Third-Year Swahili, Second Quarter. 4 Units.
Continuation of AMELANG 108A. Prerequisite: AMELANG 108A.

AMELANG 108C. Third-Year Swahili, Third Quarter. 4 Units.
Continuation of AMELANG 108B. Prerequisite: amelang 108B or consent of instructor.

AMELANG 110A. First-Year Wolof, First Quarter. 3 Units.

AMELANG 114A. Beginning Afrikaans, First Quarter. 4 Units.

AMELANG 114B. Beginning Afrikaans, Second Quarter. 4 Units.

AMELANG 115A. Second year - Afrikaans, First Quarter. 4 Units.

AMELANG 115B. Second - year Afrikaans, Second Quarter. 4 Units.

AMELANG 115C. Second - Year Afrikaans, Third Quarter. 4 Units.

AMELANG 126. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music.

Same as: COMPLIT 145, JEWISHST 106

AMELANG 128A. First-Year Hebrew, First Quarter. 5 Units.

Continuation of AMELANG 157B. Prerequisite: AMELANG 157B.

AMELANG 170A. Biblical Hebrew, First Quarter. 2 Units.

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own. Same as: JEWISHST 107A, RELIGST 170A

AMELANG 170B. Biblical Hebrew, Second Quarter. 1 Unit.

Continuation of 170A.

Same as: JEWISHST 107B

AMELANG 170C. Biblical Hebrew, Third Quarter. 1 Unit.

Continuation of 170B.

AMELANG 171. The Bible in Modern Hebrew Literature. 3-4 Units.

The role of biblical myths in shaping Israeli identity and the development of a secular Hebrew literature. Readings include modern Hebrew poems and novels which offer new meanings to the stories of Genesis, Exodus, David, and the Song of Songs and make them relevant to the context of modern and postmodern Israeli culture. Readings in Hebrew and English. Prerequisite: intermediate Hebrew.

AMELANG 175. Co-Existence in Hebrew Literature. 4-5 Units.

Is co-existence possible? Does pluralism require co-existence? Can texts serve as forms of co-existence? The class will focus on these and other questions related to coexistence and literature. Through reading works mostly by Jewish authors writing in Europe, Israel and the US we will explore attempts for complete equality, for a variety of hierarchical systems and for different kinds of co-dependence. Guest speaker: professor Anat Weisman, Ben Gurion University of the Negev.

Same as: COMPLIT 161, JEWISHST 146

AMELANG 176. Introduction to Ladino: Language, Literature, and Culture. 1-4 Unit.

Prerequisite: two quarters of Spanish.

AMELANG 177. Middle Eastern Cities in Literature and Film. 4-5 Units.

Sources include short stories, novels, and movies about Beirut, Tel Aviv, Jerusalem, Cairo, and Amman. Focus is on a cultural and intellectual history of each city. Issues such as the role that Middle Eastern cities play in the development of the modern Hebrew and Arabic novels, the city as a center of social and political life, and the city as a space of collective memory.

AMELANG 180A. First-Year Kinyarwanda, First Quarter. 4 Units.**AMELANG 180B. First-Year Kinyarwanda, Second Quarter. 4 Units.**

Continuation of AMELANG 180A. Prerequisite: AMELANG 180A.

AMELANG 182A. Intermediate Fulani, First Quarter. 3 Units.

Fulfill the University foreign language requirement.

AMELANG 182B. Intermediate Fulani, Second Quarter. 3 Units.

Continuation of 182A.

AMELANG 182C. Intermediate Fulani, Third Quarter. 3 Units.

Continuation of 182B.

AMELANG 184A. First-Year Turkish, First Quarter. 5 Units.

Designed for students who have interest in learning Turkish language, culture, history, cuisine and social life. Proficiency-based orientation with emphasis on oral comprehension and speaking. The grammar is presented through communicative activities where students are exposed to authentic input.

AMELANG 184B. First-Year Turkish, Second Quarter. 5 Units.

Continuation of AMELANG 184A. Emphasis on speaking, oral comprehension and beginning reading and writing skills. Turkish culture and social life is integrated in daily language learning process through authentic materials. Prerequisite: AMELANG 184A.

AMELANG 184C. First-Year Turkish, Third Quarter. 5 Units.

Continuation of AMELANG 184B. Emphasis is on speaking, oral comprehension, reading and writing skills. Reading simple texts, studying Turkish pop music, viewing short documentaries and communicative writing exercises are part of daily class activities. Prerequisite: AMELANG 184B or consent of instructor. Fulfills the University Foreign Language Requirement.

AMELANG 185A. Second-Year Turkish, First Quarter. 4 Units.

Continuation of AMELANG 184C. Designed for students with previous knowledge of Turkish who wish to learn in depth about Turkish culture, history, social life, literature, cuisine and artistic trends. Emphasis on developing intermediate proficiency in reading, writing, listening and speaking. Class discussions and activities aim to enable students to perform various tasks in the target language. Prerequisite: AMELANG 184C.

AMELANG 185B. Second-Year Turkish, Second Quarter. 5 Units.

Continuation of AMELANG 185A. Main focus is on class discussions and essay writing practices about daily life in Turkey. Prerequisite: AMELANG 185A.

AMELANG 185C. Second-Year Turkish, Third Quarter. 5 Units.
Continuation of AMELANG 185B. Main focus is on class discussions and essay writing practices about daily life in Turkey. End of quarter presentation in Turkish. Prerequisite: AMELANG 185B.

AMELANG 186A. Third-Year Turkish, First Quarter. 3 Units.
Continuation of AMELANG 185C. Prerequisite: AMELANG 185C.

AMELANG 186B. Third-Year Turkish, Second Quarter. 3 Units.
Continuation of AMELANG 186A. Prerequisite: AMELANG 186A.

AMELANG 186C. Third-Year Turkish, Third Quarter. 4 Units.
Continuation of AMELANG 186B. Prerequisite: AMELANG 186B.

AMELANG 187A. First-Year Yoruba, First Quarter. 4 Units.

AMELANG 187B. First-Year Yoruba, Second Quarter. 4 Units.
Continuation of 187A.

AMELANG 187C. First-Year Yoruba, Third Quarter. 4 Units.
Continuation of 187B.

AMELANG 203A. Beginning Hausa, First Quarter. 3 Units.
For grads only.

AMELANG 203B. Beginning Hausa, Second Quarter. 3 Units.
For grads only.

AMELANG 206B. Intensive Beginning Swahili, Part B. 4 Units.

AMELANG 206C. Intensive Beginning Swahili, Part C. 4 Units.

AMELANG 216A. Contemporary Language of Iran, First Quarter. 3 Units.

AMELANG 216B. Contemporary Language of Iran, Second Quarter. 3 Units.

AMELANG 216C. Contemporary Language of Iran, Third Quarter. 3 Units.

AMELANG 250A. Reading Hebrew, First Quarter. 2-4 Units.
Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.
Same as: JEWISHST 205

AMELANG 297. Directed Reading in African and Middle Eastern Languages. 1-5 Unit.
May be repeated for credit. Prerequisite: consent of instructor.

AMELANG 395. Graduate Studies in African and Middle Eastern Languages. 1-5 Unit.
Prerequisite: consent of instructor.

African Studies Courses

AFRICAST 72SI. Conflict in the Congo. 1-2 Unit.

AFRICAST 109. Running While Others Walk: African Perspectives on Development. 5 Units.

Throughout the history of modern Africa, Africans have specified their desired future; development, understood broadly; and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of African intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.
Same as: AFRICAST 209

AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa. 5 Units.

Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.
Same as: AFRICAST 211

AFRICAST 112. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?
Same as: AFRICAAM 212, AFRICAST 212

AFRICAST 115. South African Encounters. 1 Unit.

This course is a prerequisite for all those accepted to or on the wait list for the following quarter's BOSP Cape Town term abroad. It will explore issues in contemporary South Africa.
Same as: AFRICAAM 115

AFRICAST 127. African Art and Politics, c. 1900 - Present. 4 Units.

This course explores the relationship between art and politics in twentieth century Africa. Artistic production and consumption is considered in the context of various major political shifts, from the experience of colonialism to the struggle against Apartheid. Each week we will look closely at different works of art and examine how artists and designers responded to such challenges as independence, modernization and globalization. We will look at painting, sculpture, religious art, public and performance art, photography and film. How western perceptions and understanding of African art have shifted, and how museums have framed African art throughout the twentieth century will remain important points of discussion throughout the course.
Same as: ARTHIST 127A

AFRICAST 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: ANTHRO 133B, CSRE 133B

AFRICAST 135. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 235, EDUC 135X, EDUC 335X, HUMBIO 26, MED 235

AFRICAST 138. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; structured around international military intervention and criminal trials based on international criminal courts; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 238, ANTHRO 138A, ANTHRO 238A

AFRICAST 138B. Urban Africa. 5 Units.

This course explores the production of urban space and the social, cultural, and political significance of cities in sub-Saharan Africa. Topics include: architecture and the built environment; urban planning and colonial public health; migration and rural-urban dynamics; youth, politics, and popular culture; violence, policing, and the privatization of public space; (in)formality in housing, transportation, and employment; class, gender, and mobility in the public sphere; urban citizenship and `right to the city; movements; gentrification, tourism, and the commodification of poverty; and efforts to (re)theorize postcolonial African cities. Readings are drawn from anthropology, history, urban studies, and geography. Discussion will situate struggles over urban forms and the contours of everyday life within broader trends in the political economy of the region from the late colonial period to the present.

Same as: ANTHRO 138B, URBANST 139

AFRICAST 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.

This course provides an introductory survey of Africa's past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent `without history; by highlighting the continent's vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse.

Same as: ANTHRO 139A, ARCHLGY 139A

AFRICAST 141A. Science, Technology, and Medicine in Africa. 4 Units.

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires in Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the techno-politics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.

Same as: ANTHRO 141A

AFRICAST 142. Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice. 3-5 Units.

This seminar is part of a broader program on Social Entrepreneurship at CDDRL in partnership with the Haas Center for Public Service. It will use practice to better inform theory. Working with three visiting social entrepreneurs from developing and developed country contexts students will use case studies of successful and failed social change strategies to explore relationships between social entrepreneurship, gender, democracy, development and justice. It interrogates current definitions of democracy and development and explores how they can become more inclusive of marginalized populations. This is a service learning class in which students will learn by working on projects that support the social entrepreneurs' efforts to promote social change. Students should register for either 3 OR 5 units only. Students enrolled in the full 5 units will have a service-learning component along with the course. Students enrolled for 3 units will not complete the service-learning component. Limited enrollment. Attendance at the first class is mandatory in order to participate in service learning.

Same as: INTNLREL 142

AFRICAST 145B. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacute;, Olinto), prose poetry (Ceacute;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

AFRICAST 151. AIDS in Africa. 3 Units.

Medical, social, and political aspects of the HIV epidemic in sub-Saharan Africa including: biology, transmission, diagnosis, and treatment of HIV; mother-to-child transmission and breastfeeding; vaccines; community and activist responses to the HIV epidemic; economics of HIV treatment; governance and health; ethics in research and program implementation.

AFRICAST 190. Madagascar Prefield Seminar. 1-2 Unit.

The purpose of this seminar is to prepare students for their overseas field experience in Madagascar. The seminar will provide an introduction to island biogeography and culture, with emphasis on Madagascar. During the seminar, students will give presentations on specific aspects of biogeography and will also lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. In addition, we will cover logistics, health and safety, cultural sensitivity, geography and politics, and basic language skills. We will also deal with post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus. Students will have the opportunity to participate pilot study aimed at developing a series of innovative online curriculum based upon their field experience.

AFRICAST 195. Back from Africa Workshop. 1-2 Unit.

For students who conducted research over the summer in Africa. Students reflect on their time in Africa, transform their observations and research into scholarship, and connect as a community. Cape Town fellows and any others who conducted summer research in Africa can use this course to finish their research.

AFRICAST 199. Independent Study or Directed Reading. 1-5 Unit.

May be repeated for credit.

AFRICAST 200. The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar. 1 Unit.

Goal is to prepare students for an HIV/AIDS prevention, service-learning experience in Tanzania. Topics include: history of HIV/AIDS epidemic globally and in Tanzania; social and economic impact of AIDS; national and societal responses; ethical issues in crosscultural service learning; teaching for prevention; biology of HIV transmission, disease progression, and prevention; introduction to Tanzanian history and politics; HIV/AIDS and development; social, cultural, and economic context of HIV risk; and strategies for HIV prevention in Tanzania.

AFRICAST 209. Running While Others Walk: African Perspectives on Development. 5 Units.

Throughout the history of modern Africa, Africans have specified their desired future; development, understood broadly; and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of African intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.

AFRICAST 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?.

Same as: AFRICAAM 212, AFRICAST 112

AFRICAST 224. Memory and Heritage In South Africa Syllabus. 1 Unit.

The focus of this course is to provide a forum in which students examine the role of memory and heritage in South Africa. The course will include visiting speakers, discussion and other activities. The complex relationship between memory and heritage in South Africa will provide the basis for a series of broad conversations about citizenship, national reconciliation, memorialization, justice, modernity and heritage ethics.

AFRICAST 229. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.

Same as: AFRICAAM 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

AFRICAST 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.

Same as: AFRICAST 135, EDUC 135X, EDUC 335X, HUMBIO 26, MED 235

AFRICAST 238. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; structured around international military intervention and criminal trials based on international criminal courts; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, ANTHRO 138A, ANTHRO 238A

AFRICAST 299. Independent Study or Directed Reading. 1-10 Unit.**AFRICAST 300. Contemporary Issues in African Studies. 1 Unit.**

Guest scholars present analyses of major African themes and topics. Brief response papers required. May be repeated for credit.

AFRICAST 301A. The Dynamics of Change in Africa. 4-5 Units.

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: HISTORY 346, POLISCI 246P, POLISCI 346P

AFRICAST 302. Research Workshop. 1 Unit.

Required for African Studies master's students. Student presentations.

American Studies Courses

AMSTUD 1B. Media, Culture, and Society. 5 Units.

The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity.

Same as: COMM 1B

AMSTUD 2. Introduction to American National Government and Politics. 5 Units.

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. (This course has merged with Political Science 123/PubPol 101).

Same as: POLISCI 2

AMSTUD 15. Global Flows: The Globalization of Hip Hop Art, Culture, and Politics. 1-2 Unit.

This course consists of film screenings, dialogues, and performances that examine and engage Hip Hop Cultures and artists from around the world. We will explore diverse scenes and artists, from the formation of new musical genres such as hiplife in Ghana, to the impact of the first Hip Hop concert in Morocco, to comparative investigations of race and citizenship in Japan, Cuba, Palestine, France, and the United States (including Black, Mexican and Arab-Americans).

AMSTUD 25Q. The Origins of the Modern American City, 1865-1920. 3 Units.

Are we living in a new Gilded Age? To answer this question, we go back to the original Gilded Age, as well as its successor, the Progressive Era. How did urban Americans around the turn of the twentieth century deal with stark inequalities of class, race, ethnicity, gender, and sexuality? And what can we learn from their struggles for our own time? Students use primary and secondary sources in digital and print formats. Possible field trip to San Francisco.

Same as: HISTORY 55Q, URBANST 25Q

AMSTUD 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations. Same as: AFRICAAM 32, CSRE 32A, EDUC 32X, EDUC 432X, TAPS 32

AMSTUD 50N. The Literature of Inequality: Have and Have-Nots from the Gilded Age to the Occupy Era. 3 Units.

Not since the turn of the last century have Americans experienced such a profound gap between those who have and those who do not, between wealthy and working poor, between defacto upper and lower classes, between those of the status quo and those who slip to the social periphery. We will be examining literary and artistic explorations of social and economic inequity, fiction and art that looks at reversals of fortune as well as the possibilities for social change. Readings include Jacob Riis; *How the Other Half Lives*, W.E.B. Du Bois; *The Souls of Black Folk*, Edith Wharton; *House of Mirth*, James Agee & Walker Evans; *Let Us Not Forget Famous Men*, T.C. Boyle; *The Tortilla Curtain*, Julie Otsuka; *When the Emperor Was Divine* and Occupy Movement art.

AMSTUD 51Q. Comparative Fictions of Ethnicity. 4 Units.

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"?. Same as: COMPLIT 51Q, CSRE 51Q

AMSTUD 54N. African American Women's Lives. 3-4 Units.

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, CSRE 54N, FEMGEN 54N, HISTORY 54N

AMSTUD 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: CSRE 63N, FEMGEN 63N, HISTORY 63N

AMSTUD 66. Ten Ways to Study Cars. 1 Unit.

This class is a lunch seminar on the car and auto-mobility in twentieth-century America. We will talk about cars with a guest each week from one of ten disciplines; and topics will range from design and mechanics, to film and literature, the mapping of the United States, a gas dependent economy, social mobility, car collectability, and the history of the driver's license. Guests from Design and the Stanford Revs Digital Archive will also attend. Once a week TBD at Noon. Manzanita Seminar Room. Limited Enrollment. Sophomore Priority. One Unit.

AMSTUD 68N. Mark Twain and American Culture. 4 Units.

Preference to freshmen. Mark Twain has been called our Rabelais, our Cervantes, our Homer, our Tolstoy, our Shakespeare. Ernest Hemingway maintained that all modern American literature comes from one book by Mark Twain called *The Adventures of Huckleberry Finn*. President Franklin D. Roosevelt got the phrase New Deal from *A Connecticut Yankee in King Arthur's Court*. Class discussions will focus on how Twain's work illuminates and complicates his society's responses to such issues as race, technology, heredity versus environment, religion, education, and what it means to be American.

AMSTUD 91. Exploring American Religious History. 4 Units.

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: RELIGST 91

AMSTUD 101. American Fiction into Film: How Hollywood Scripts and Projects Black and White Relations. 3-5 Units.

Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? Limited Enrollment, Instructor Request; Consent Required. Class meetings held in Manzanita Multipurpose Room.

AMSTUD 103. On the Road: Cars and the Auto-Mobility of Race, Gender, Class, and Age in American Literature. 3-5 Units.

The car in American literature, history, and culture, provides hope and makes it possible to relocate, transcend social status, and reinvent oneself. In this class we will examine how the car allows Americans to navigate identity in new ways. Readings include: Fitzgerald, Stein, Steinbeck, Escovedo-Colton, Nabokov, Barrett, Walker, Murray, Simpson, Wolfe, Kerouac, Davis, Freeman, Gilroy, Lucasi, Hamper, Moore, and Nass.

AMSTUD 105N. Law and Popular Culture. 3 Units.

This seminar focuses on the interface between two important subjects: law and popular culture. Before class, students will see a series of films or television shows relating to law, lawyers, and the legal system. There is also a weekly homework assignment based on materials in the assigned text and the assigned film or TV show. We will discuss the pop culture treatment of subjects such as the adversary system, good and bad lawyers, female and gay lawyers, the work life of lawyers, legal education, ethical issues, the jury system, and criminal and civil justice. The seminar discussions will draw on film theory and film-making technique to deepen understanding of the interrelationship between law and popular culture. The discussions will illuminate the ways in which pop culture products both reflect and change social views about law and lawyers. The assigned text is Michael Asimow & Shannon Mader, "Law and Popular Culture: A Course Book" (Peter Lang 2013).

AMSTUD 107. Introduction to Feminist Studies. 4-5 Units.

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: CSRE 108, FEMGEN 101, TAPS 108

AMSTUD 111. Transnational Reproductive Politics. 3-5 Units.

This course examines the issues and debates surrounding women's reproduction in a transnational framework, including birth control, abortion, surrogacy, prenatal diagnosis, labor and delivery, menstruation, sex trafficking, and the reproductive justice movement. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad.

Same as: FEMGEN 111

AMSTUD 114Q. Visions of the 1960s. 5 Units.

Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books.

AMSTUD 116. American Economic History. 5 Units.

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1A or 1V.

Same as: ECON 116, HISTORY 156

AMSTUD 120. Digital Media in Society. 4-5 Units.

(Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors.

Same as: COMM 120W, COMM 220

AMSTUD 121. Introduction to American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 121.) An exploration of the diverse political, racial, social, and aesthetic questions which inform works of American literature from the early national period to the late twentieth century.

Same as: ENGLISH 21, ENGLISH 121

AMSTUD 121L. Racial-Ethnic Politics in US. 5 Units.

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended.

Same as: CSRE 121L, POLISCI 121L, PUBLPOL 121L

AMSTUD 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, ANTHRO 121A, CSRE 121X, EDUC 121X, LINGUIST 155

AMSTUD 121Z. Political Power in American Cities. 5 Units.

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: POLISCI 121, PUBLPOL 133, URBANST 111

AMSTUD 123D. American Literature, 1855 to World War I. 5 Units.

A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language.

AMSTUD 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death. 3-5 Units.

The vitality and versatility of a writer who has been called America's Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain's legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook.

AMSTUD 124A. The American West. 5 Units.

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: ARTHIST 152, ENGLISH 124, HISTORY 151, POLISCI 124A

AMSTUD 132. American Art and Culture, 1528-1910. 4 Units.

The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

Same as: ARTHIST 132, ARTHIST 332

AMSTUD 134. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black box;quest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum cultures;quest;: representations of iquest;self;quest; and iquest;other;quest; within museums and institutional cultures of the museum world itself.

Same as: ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214, NATIVEAM 134

AMSTUD 135. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. In spring quarter 2015, this course will have a special focus on deliberative democracy in the the Greater China region. The course will discuss whether a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age. What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Case studies from the Deliberative Polling method and other deliberation methods, its applications, defenders and critics, both normative and empirical, will provide a cases studies for discussion. Some course sessions will utilize the case method to examine public consultations, the media, and civil society. Throughout the course, students will address how public participation is currently conducted around the world. As we have all seen successful, but more likely unsuccessful attempts to consult the public and this course will examine the various ways of consulting the public and how governments, media, and the public have responded and used the results.

Same as: COMM 135, COMM 235, COMM 335, POLISCI 234P, POLISCI 334P

AMSTUD 137. The Dialogue of Democracy. 4-5 Units.

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: COMM 137W, COMM 237, POLISCI 232T, POLISCI 332T

AMSTUD 139B. American Women Writers, 1850-1920. 5 Units.

The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman.

AMSTUD 140. Stand Up Comedy and the "Great American Joke" Since 1945. 5 Units.

Development of American Stand Up Comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitliniquest; Circuit, the Cold War, censorship battles, Civil Rights and other social movements of the 60s and beyond. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques.

Same as: CSRE 140C

AMSTUD 142. The Literature of the Americas. 5 Units.

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other. Same as: COMPLIT 142, CSRE 142, ENGLISH 172E

AMSTUD 143. Introduction to African American Literature. 3-5 Units.

(English majors and others taking 5 units, register for 143.) African American literature from its earliest manifestations in the spirituals, trickster tales, and slave narratives to recent developments such as black feminist theory, postmodern fiction, and hip hop lyricism. We will engage some of the defining debates and phenomena within African American cultural history, including the status of realist aesthetics in black writing; the contested role of literature in black political struggle; the question of diaspora; the problem of intra-racial racism; and the emergence of black internationalism. Attuned to the invariably hybrid nature of this tradition, we will also devote attention to the discourse of the Enlightenment, modernist aesthetics, and the role of Marxism in black political and literary history.

Same as: AFRICAAM 43, ENGLISH 43, ENGLISH 143

AMSTUD 145M. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented;and, at times, contested;by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.

Same as: ARTHIST 145, ARTHIST 345, FEMGEN 145

AMSTUD 146. Asian American Culture and Community. 3-5 Units.

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community;there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: ASNAMST 146S, COMPLIT 146, CSRE 146S

AMSTUD 146C. Hemingway, Hurston, Faulkner, and Fitzgerald. 5 Units.

While Hemingway and Fitzgerald were flirting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America's coming-of-age as a literary nation with their multifarious experiments in representing the regional and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished.

Same as: ENGLISH 146C

AMSTUD 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: AFRICAAM 19, CSRE 147J, MUSIC 147J, MUSIC 247J

AMSTUD 150. American Literature and Culture to 1855. 3-5 Units.

(English majors and others taking 5 units, register for ENGLISH 123 or AMSTUD 150). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War.

Same as: ENGLISH 23, ENGLISH 123

AMSTUD 150A. Colonial and Revolutionary America. 5 Units.

(Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.

Same as: HISTORY 150A

AMSTUD 150B. 19th-Century America. 5 Units.

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AFRICAAM 150B, HISTORY 150B

AMSTUD 150C. The United States in the Twentieth Century. 5 Units.

(Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War.

Same as: HISTORY 150C

AMSTUD 150X. From Gold Rush to Google Bus: History of San Francisco. 5 Units.

This class will examine the history of San Francisco from Native American and colonial settlement through the present. Focus is on social, environmental, and political history, with the theme of power in the city. Topics include Indians and Spanish settlers, the Gold Rush, immigration and nativism, earthquake and fire, progressive reform and unionism, gender, race and civil rights, sexuality and politics, redevelopment and gentrification.

Same as: HISTORY 152E, URBANST 150

AMSTUD 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

AMSTUD 152A. "Mutually Assured Destruction": American Culture and the Cold War. 5 Units.

The temperature of the early Cold War years via readings of Soviet and U.S. propaganda; documentary film and film noir; fiction by Bellow, Ellison, O'neill; Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Kennan's *Sources of Soviet Conduct*, the *Truman Doctrine*; speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, MacCarthyism, strategies of containment, the nuclear threat, the figure of the *ius cogens*; and the counterculture, and the cultural shift from sociological to psychological idioms.

AMSTUD 152C. The JFK Era and American Literature. 5 Units.

Few U.S. presidents have exerted so great a fascination on the national and global post-World War II imagination as John F. Kennedy. As the 2013's semi-centennial anniversary of Kennedy's assassination attests, the production of films, television and multimedia programs, biographies, conspiracy theories, academic studies, and literary texts about the iconic JFK and his fabled, thousand-day presidency continues unabated. In this course, we will explore the attention Kennedy has drawn from writers and filmmakers like Norman Mailer, Lorraine Hansberry, Don DeLillo, Oliver Stone, Mario Vargas Llosa, and Stephen King.

Same as: ENGLISH 152C

AMSTUD 152G. Harlem Renaissance. 5 Units.

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

Same as: AFRICAAM 152G, ENGLISH 152G

AMSTUD 152K. Mixed-Race Politics and Culture. 5 Units.

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, CSRE 152K, ENGLISH 152K

AMSTUD 154. American Intellectual and Cultural History to the Civil War. 5 Units.

(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images.

Same as: HISTORY 154

AMSTUD 154X. The American Civil War: A Visual History. 4 Units.

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: ARTHIST 154, ARTHIST 354

AMSTUD 155C. Abstract Expressionism: Painting/Modern/America. 4 Units.

The course will focus on American abstract painting from the 1930s to the 1960s, emphasizing the works of art at the Anderson Collection at Stanford. We will focus on looking closely at pictures by Jackson Pollock, Mark Rothko, Willem de Kooning, and other renowned abstract painters, developing skills of speaking and writing about these works of art. We will also place these pictures in their mid-20th century context: World War II and the Cold War; Hollywood and popular culture generally; Beat literature; and locations such as New York and San Francisco.

Same as: ARTHIST 155C

AMSTUD 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing.

Same as: FEMGEN 156H, HISTORY 156G

AMSTUD 157. The Constitution: A Brief History. 5 Units.

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime.

Same as: HISTORY 157, POLISCI 128S

AMSTUD 157P. Allyship: Challenging Privilege and Doing Solidarity in Movements for Collective Liberation. 2-4 Units.

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, CSRE 157P, FEMGEN 157P

AMSTUD 157X. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice an eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We will examine the role of rhetoric; the use of argument to persuade; in social movements working toward social justice.

Same as: FEMGEN 157, FEMGEN 257

AMSTUD 159X. American Photographs, 1839-1971: A Cultural History. 4 Units.

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: ARTHIST 159, ARTHIST 359

AMSTUD 160. Perspectives on American Identity. 5 Units.

Required for American Studies majors. Changing interpretations of American identity and Americanness.

AMSTUD 161. Women in Modern America. 4-5 Units.

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: CSRE 162, FEMGEN 161, HISTORY 161

AMSTUD 164C. From Freedom to Freedom Now: African American History, 1865-1965. 5 Units.

(Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

Same as: HISTORY 164C

AMSTUD 165. History of Higher Education in the U.S.. 3-5 Units.

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: EDUC 165, EDUC 265, HISTORY 158C

AMSTUD 166. Introduction to African American History - the Modern Freedom Struggle. 3-5 Units.

(AFRICAAM-166/ AMSTUD-166/ HISTORY-166) This course focuses on African-American political movements of the period after 1930, with special emphasis on the contributions of grassroots activists and visionary leaders such as W. E. B. Du Bois, Martin Luther King, Jr., and Malcolm X. The lectures will utilize audio-visual materials extensively, and the exams will cover these materials as well as the content of traditional lectures. Students are encouraged to undertake research projects utilizing the unique resources of the King Research and Education Institute.

Same as: AFRICAAM 166, HISTORY 166

AMSTUD 178. Ethnicity and Dissent in United States Art and Literature. 4 Units.

The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: ARTHIST 178, ARTHIST 378

AMSTUD 179. Introduction to American Law. 3-5 Units.

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: POLISCI 122, PUBLPOL 302A

AMSTUD 183. Re- Imagining American Borders. 5 Units.

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: CSRE 183, FEMGEN 183

AMSTUD 185. American Studies Internship. 1-3 Unit.

Restricted to declared majors. Practical experience working in a field related to American Studies for six to ten weeks. Students make internship arrangements with a company or agency, under the guidance of a sponsoring faculty member, and with the consent of the director or a program coordinator of American Studies. Required paper focused on a topic related to the internship and the student's studies. May be repeated for credit.

AMSTUD 186. Tales of Three Cities: New York, Chicago, Los Angeles. 5 Units.

How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century.

Same as: ENGLISH 186

AMSTUD 186A. American Hauntings. 5 Units.

Cultural, psychological, social, and political dynamics of haunting in American literature, from the early national period to the late 20th century. Sources include ghost stories and other instances of supernatural, emotional, or mental intervention. Authors include Charles Brockden Brown, Washington Irving, Edgar Allan Poe, Nathaniel Hawthorne, Louisa May Alcott, Charlotte Perkins Gilman, Charles Chesnut, Henry James, Edith Wharton, Toni Morrison, and Stephen King.

AMSTUD 186B. American Song in the 20th Century and after. 3-4 Units.

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canciacute;n and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: MUSIC 186B, MUSIC 286B

AMSTUD 195. Individual Work. 1-5 Unit.

.

AMSTUD 201. History of Education in the United States. 3-5 Units.

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: EDUC 201, HISTORY 158B

AMSTUD 214. The American 1960s: Thought, Protest, and Culture. 5 Units.

The meaning of the American 60s emphasizing ideas, culture, protest, and the new sensibility that emerged. Topics: black protest, the new left, the counterculture, feminism, the new literature and journalism of the 60s, the role of the media in shaping dissent, and the legacy of 60s protest. Interpretive materials from film, music, articles, and books.

AMSTUD 226. Race and Racism in American Politics. 5 Units.

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: CSRE 226, POLISCI 226, POLISCI 326

AMSTUD 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: CSRE 226X, EDUC 226X

AMSTUD 231X. Knowing God: Learning Religion in Popular Culture. 4 Units.

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: EDUC 231X, JEWISHST 291X, RELIGST 231X

AMSTUD 240A. Pre-Honors Seminar. 1-5 Unit.

Methods, interpretations, and issues pertinent to honors work in American Studies. Open to juniors interested in honors.

AMSTUD 244. The Visual Culture of the American Home Front, 1941-1945. 5 Units.

How does home front of WWII look now? What sort of meanings appear with the vantage of more than sixty years' distance? Examining Hollywood films from those years -films made during the war but mostly not directly about the war - the seminar focuses on developing students' abilities to write emotion-based criticism and history. Weekly short papers, each one in response to a film screening, are required. Among the films screened: *Shadow of a Doubt*, *Gaslight*, *I Walked with a Zombie*, *The Best Years of Our Lives*.

Same as: ARTHIST 244

AMSTUD 246B. Pop Art. 5 Units.

A new course on the history and meaning of Pop art in the United States and abroad. The course will feature close study of paintings, photographs, and prints at the Cantor Art Center. The course will be given in the Denning Family Resource Room, located in The Anderson Collection building. If you have any questions regarding the location, please contact Linda Esquivel at lindae@stanford.edu.

Same as: ARTHIST 246B

AMSTUD 250. Senior Research. 1-15 Unit.

Research and writing of senior honors thesis under the supervision of a faculty member. The final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.

AMSTUD 256. America- China Relations. 4-5 Units.

The history of turbulent relations, military conflict, and cultural clashes between the U.S. and China, and the implications for the domestic lives of these increasingly interconnected countries. Diplomatic, political, social, cultural, and military themes from early contact to the recent past.

Same as: HISTORY 256, HISTORY 356

AMSTUD 257. Journalism and Imaginative Writing in America. 5 Units.

Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

Same as: COMM 278

AMSTUD 258. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: CSRE 192E, FEMGEN 258, FEMGEN 358, HISTORY 258, HISTORY 358

AMSTUD 260. Disability, Gender, & Identity. 5 Units.

Course explores visible and invisible disabilities, focusing on issues of gender and identity. The course emphasizes psychological as well as physical health, cross-cultural variables, diversity of disability experiences, legal and political aspects, work and home accommodations, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of physical assistance.

Same as: FEMGEN 260, FEMGEN 360, HUMBIO 141

AMSTUD 261A. Geography, Time, and Trauma in Asian American Literature. 5 Units.

The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

Same as: ASNAMST 187

AMSTUD 261E. Mixed Race Literature in the U.S. and South Africa. 5 Units.

As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa's post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

Same as: AFRICAAM 261E

AMSTUD 262C. African American Literature and the Retreat of Jim Crow. 5 Units.

After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the "new liberalism."

AMSTUD 262D. African American Poetics. 5 Units.

Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre--from sonnets to spoken word, from blues poetry to new media performance--in defining an evolving literary tradition and cultural identity.

Same as: AFRICAAM 262D

AMSTUD 265. Writing Asian American History. 5 Units.

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: ASNAMST 265, HISTORY 265, HISTORY 365

AMSTUD 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AFRICAAM 267E, HISTORY 267E

AMSTUD 271. Mexicans in the United States. 5 Units.

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: CHILATST 171, CSRE 171H, HISTORY 271

AMSTUD 272E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: CHILATST 172, CSRE 172H, FEMGEN 272E, HISTORY 272E, HISTORY 372E

AMSTUD 275R. Roads Not Taken, 1880-1960. 4 Units.

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.

Same as: ETHICSOC 275R, PHIL 275R, POLISCI 335L

AMSTUD 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience.

History students must take course for at least 3 units.

Same as: EDUC 279X, HISTORY 288D, JEWISHST 297X, RELIGST 279X

AMSTUD 281. Asian Religions in America; Asian American Religions. 4 Units.

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: ASNAMST 281, RELIGST 281, RELIGST 381

Anesthesia Courses

ANES 70Q. The Psychosocial and Economic Ramifications of Critical Illness. 3 Units.

Preference to sophomores. The impact of critical illness on a patient and family members; difficulties involved in the decision making process for the patient, family, and healthcare professionals. Topics include: conventional views of death and dying, epidemiology of critical illness, grief, coping skills, cultural variations, euthanasia and withdrawal of care, palliative care and hospice, advanced directive and legal aspects of medical catastrophe, psychosocial dynamics of family meetings, and emotional ramifications of medical decisions.

ANES 80Q. Researching Strange Things. 3 Units.

Devising and implementing strong scientific research designs to better understand complex and mysterious phenomena. Parapsychology topics include remote viewing, telekinesis, precognition, telepathic communication, and other forms of extrasensory perception. History of parapsychology research, including how science has debunked popular claims of supernatural feats; therapeutic approaches still used today but often discredited (such as homeopathy and crystal healing), as well as commonly-supported but controversial techniques such as hypnosis, acupuncture, and naturopathy. Emphasis on distinguishing between scientific and pseudoscientific research methods and how to properly design experiments regardless of the subject matter. Course format includes lectures, discussion, group projects, and research experimentation.

ANES 199. Undergraduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

ANES 202. Anesthesiology and Pathophysiologic Implications for the Perioperative Patient. 1 Unit.

Provides participants a patient-care-related review of organ physiology and an in- depth discussion of the pathophysiologic mechanisms at work in the perioperative period that influence outcome in the surgical patient and their management. Organ systems addressed include cardiovascular, respiratory, renal, hematologic, and cerebral. Subject matter including airway management, ventilatory support, transfusion practices and the acute management of shock provides useful information for all students currently or in the future involved in acute care of the critically ill patient. Additional topics specific to anesthesia, including anesthetic pharmacology. Lecturers are Stanford anesthesia faculty and visiting guest faculty. Prerequisite: completion of first year curriculum is strongly encouraged.

ANES 204. Medical Education in the New Millenium: Innovation and Digital Disruption. 1-2 Unit.

Focus is on the unique learning preferences and needs of today's Millennial medical learners (medical students, residents, fellows, practicing physicians, nurses, pharmacists, allied medical professionals) and the role thoughtful learning design and use of technology can play in meeting their unique needs. Grounded in learning theory, colloquium course will provide accessible information for learners at all levels to understand learning design and use of educational technologies in the new Millennium. Features speakers from wide arrange of medical education-related fields, including experts in instructional design, learning theory and medical education technologies. Students enrolling for 2 units prepare a final paper.

ANES 205. Engage and Empower Me: Myths and Truths of Designing for Patient Behavior. 1-2 Unit.

Focus on patient stories and real-life experiences of successful patient engagement from industry leaders in healthcare, wellness and behavior sciences. Topics include the neuroscience behind motivating individuals into healthy behaviors, including patients in the care design process, how health educators, designers, techies and investors can improve success. Students enrolling for 2 units complete a class project.

ANES 206. Design for Health: Applying Design Innovation to Improve Healthcare. 2 Units.

Explores the crucial role design can play in optimizing healthcare. Focuses on principles of design-thinking and patient-centered design, and examines their impact on innovating solutions to healthcare problems. Goal is to understand how healthcare providers might better design for health. Includes presentations from patients and design experts.

ANES 207. Medical Acupuncture. 2 Units.

Acupuncture is part of a comprehensive system of traditional Chinese Medicine developed over the past two millennia. This course reviews the history and theoretical basis of acupuncture for the treatment of various diseases as well as for the alleviation of pain. Issues related to the incorporation of acupuncture into the current health care system and the efficacy of acupuncture in treating various diseases are addressed. Includes practical, hands-on sections.

ANES 215. Journal Club for Neuroscience, Behavior and Cognition Scholarly Concentration. 1 Unit.

Review of current literature in both basic and clinical neuroscience in a seminar format consisting of both faculty and student presentations.

ANES 243. Introduction to Integrative Medicine. 1 Unit.

Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.

Same as: FAMMED 243

ANES 280. Early Clinical Experience in Anesthesia. 1-2 Unit.

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

ANES 299. Directed Reading in Anesthesiology. 1-18 Unit.

Prerequisite: consent of instructor.

ANES 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

ANES 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Problems related to metabolism, toxicity, and mechanisms of anesthesia; pharmacologic studies involving pain management; the genetic and molecular basis of hemodynamic insufficiency. Animal studies may be included. Interested students should contact Drs. Trudell, MacIver, Clark, Giffard, Patterson, Angelotti, Drover, Chu, or Angst.

Anthropology Courses

ANTHRO 1. Introduction to Cultural and Social Anthropology. 5 Units.

Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.

Same as: ANTHRO 201

ANTHRO 1S. Introduction to Cultural and Social Anthropology. 3-5 Units.

Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.

Same as: ANTHRO 101S

ANTHRO 3. Introduction to Prehistoric Archeology. 3-5 Units.

Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.

Same as: ARCHLGY 1

ANTHRO 4. Language and Culture. 4-5 Units.

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language).

Same as: ANTHRO 204

ANTHRO 6. Human Origins. 5 Units.

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 206, HUMBIO 6

ANTHRO 10A. The Archaeology of Home. 3-5 Units.

Homes evoke powerful emotions about place and also highlight the dynamic and complex nature of people, their relationships, and the broader society they live in. Focus on the ways that material traces from the past shed light on the diversity of domestic life, which includes household organization, economic strategies, diet and status, rituals, and identity. Archaeological case studies to see how archaeologists identify reoccurring patterns in material culture found in homes or domestic dwellings to reconstruct household patterns and social relations.

Same as: ARCHLGY 10

ANTHRO 10SC. Darwin, Evolution, and Galapagos. 2 Units.

The tiny remote islands of Galapagos have played a large and central role in the study of evolution. Not surprisingly, they have also been central to the study of conservation. The fascinating adaptations of organisms to the unique ecosystems of the archipelago have left them particularly vulnerable to outside introductions. This seminar explores evolution, conservation, and their connection in the Galapagos. Using case-study material on finches, iguanas, tortoises, cacti, Scalesia plants, and more, we will explore current theory and debate about adaptation, sexual selection, speciation, adaptive radiation, and other topics in evolution. Similarly, we will explore the special challenges Galapagos poses today for conservation, owing to both its unusual biota and the increasing human impact on the archipelago. The first week is held on-campus, followed by an intensive eleven-day expedition to Galapagos to observe firsthand evolutionary phenomena and conservation issues. A chartered ship will serve as our floating classroom, dormitory, and dining hall as we work our way around the archipelago to visit as many as ten islands. For this portion of the class, undergraduates will be joined by a group of Stanford alumni and friends in a format called a Stanford "Field Seminar." Students are required to complete all course readings over the summer. Students will be asked to lead discussions and carry out literature research on the evolutionary and conservation biology of particular Galapagos species. The final assignment is a seven- to ten-page paper and class presentation as we travel in Galapagos. Travel to Galapagos will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Stanford Alumni Association Travel/Study Program and generous donors. Students will return to campus late afternoon Sunday, September 20.

Same as: HUMBIO 17SC

ANTHRO 11SC. Conservation and Development Dilemmas in the Amazon. 2 Units.

This course explores the human dimensions of conservation efforts under way in the Amazon Basin of South America. It has two specific goals: (1) to introduce the human ecology of Amazonia; and (2) to assess the prospects for joint efforts at biodiversity conservation and community development. We will draw on case studies to investigate such topics as the causes and consequences of deforestation, the social impact of parks and protected areas, and the potential for "Integrated Conservation and Development Projects" (ICDPs) such as extractive reserves, natural forest management, biodiversity prospecting, and community-based ecotourism. The course views Amazonia as a microcosm of the challenges facing conservation and development efforts today in the Third World. Part of the course is an intensive 11-day expedition to the Peruvian Amazon, at no extra cost, to observe firsthand the conservation and development dilemmas discussed in class. We will visit ecologies in the rainforest, walking miles of trails to learn about local flora, fauna, and conservation efforts. We will also visit Machu Picchu in the upper reaches of the rainforest. For the travel portion of the class, undergraduates will be joined by a group of Stanford alumni and friends. Student contributions and presentations are emphasized throughout the course. Students are expected to come well-prepared to each session, to lead discussions, and to carry out literature research. The final assignment is a 6 to 8 page paper on a case study of your own choosing; or an equivalent piece of a longer collaborative paper that offers a critical assessment of one particular conservation and/or development project in or near the region we will visit. Students will present the main findings of their papers in a joint seminar of undergraduates and alumni as we travel in the Peruvian Amazon. Note: Students will arrive on campus and will be housed at Stanford until we leave for the Amazon. Travel to and from Peru; organized by the Travel/Study Program of the Stanford Alumni Association; is included; costs are defrayed by the Stanford Field Seminar Fund and generous donors.

Same as: HUMBIO 18SC

ANTHRO 12. Anthropology and Art. 5 Units.

Modernity. How the concept of art appears timeless and commonsensical in the West, and with what social consequences. Historicizing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art.

ANTHRO 13A. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography. Same as: ARCHLGY 13, HISTORY 7E, HISTORY 107E

ANTHRO 13SL. Zombies: Anthropology of the American Undead. 1-2 Unit.

The zombie apocalypse, affectionately known as the iquest;Zombiepocalypse. In this combination class on zombie history, ethnography, biology, and culture, we will explore the origins of zombie legends (or truths?) and how the undead have been represented in American culture for the past 200 years. Classes will include lectures, film clip viewings, literary analysis, medical anthropology components, and disaster survival planning.

ANTHRO 14. Introduction to Anthropological Genetics. 3 Units.

For upper division undergraduates. The extent and pattern of variation among human genomes, the origin of these patterns in human evolution, and the social and medical impact of recent discoveries. Topics include: the Human Genome Project; human origins; ancient DNA; genetic, behavioral, linguistic, cultural, and racial diversity; the role of disease in shaping genetic diversity; DNA forensics; genes and reproductive technology.

ANTHRO 15. Sex and Gender. 3 Units.

Commonality and diversity of gender roles in crosscultural perspective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, changing views about men's and women's roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics.

ANTHRO 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

ANTHRO 19Q. Hauntings, Visions, and Prophecy. 1-3 Unit.

Preference to sophomores. Why do people see ghosts? Why do people believe that stars foretell the future? When do people see demons and angels? Focus is on the conditions under which people experience themselves as having sensory evidence of supernatural phenomena and the role of training and expectation in the process. Intellectual exploration of what is known from the ethnographic, historical, and psychological record. Practical experimental projects involve attempting to induce positive supernatural experience. Prerequisite: consent of instructor.

ANTHRO 21N. The Anthropology of Globalization. 4 Units.

Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization.

ANTHRO 22. Archaeology of North America. 3-5 Units.

Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact.

ANTHRO 22N. Ethnographies of North America: An Introduction to Cultural and Social Anthropology. 3-4 Units.

Preference to freshmen. Ethnographic look at human behavior, including cultural transmission, social organization, sex and gender, culture change, and related topics in N. America. Films.

ANTHRO 23N. Glimpses of Divinity. 3 Units.

Preference to freshmen. How human beings search for and identify the presence of the divine in everyday human life. Sources include spiritual classics in the Christian, Jewish, and Hindu traditions including works by Augustine, Teresa of Avila, Jonathan Edwards, the Bhagavad Gita, the Zohar, and some ethnographies of non-literate traditions.

ANTHRO 24N. Maya Hieroglyphic Writing. 4 Units.

Preference to freshmen. Decipherment of classic Maya writing. Principles of archaeological decipherment. Maya calendrical, astronomical, historical, mythological, and political texts on stone, wood, bone, shell, murals, ceramics, and books (screenfold codices). Archaeology and ethnohistory of Maya scribal practice and literacy. Related Mesoamerican writing systems. The evolution of writing and the relevance of writing to theories of culture and civilization.

ANTHRO 25N. Contemporary Japanese Popular Culture. 3 Units.

This is a seminar focusing on the intersection between politics and popular culture in contemporary Japan. It will survey a range of social and political implications of practices of popular culture. Topics include representations of gender in J-pop, manga, and anime, the otaku culture and its pathologization. Students will be introduced to theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular as well.

ANTHRO 26N. God and the Supernatural. 3-5 Units.

This course explores the conditions under which people have experiences that they identify as "supernatural": experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem "supernatural."

ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives. 3-5 Units.

Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic allegiance, and, why struggles over ethnic identity are so frequently violent. Our questions will be both historical iquest; how, why and when did people come to think of themselves as possessing different ethnic identities - and contemporary iquest; how are these identities lived, understood, narrated, and transformed and what is the consequence of such ethnicisation. We follow this through anthropological perspectives which ask persistently how people themselves locally narrate and act upon their experiences and histories. Through this we will approach some of the really big and yet everyday questions that many of us around the world face: how do we relate to ourselves and to those we define as others; and how do we live through and after profound violence? The seminar will take these larger questions through a global perspective focusing on cases from Rwanda and Burundi, India, Sri Lanka, Northern Ireland, Guatemala, and the countries of Former Yugoslavia among others. These cases cover a broad canvas of issues from questions of historicity, racial purity, cultural holism, and relations to the state, to contests over religious community, indigeneity, minority identities, globalization, gender, and generation.

ANTHRO 28N. Secularism and its Critics. 3-5 Units.

Secularism is often taken to be a necessary prerequisite for democracy in the modern world. The separation of religion and politics is often written into constitutions as a fundamental priority. Yet around the world, growing numbers of religious movements have sought to dispute the legitimacy of secularism. Social scientists, including anthropologists, are beginning to research the forms of domination and political violence that have been justified in the name of secularism. This course seeks to make sense of this global debate about secularism. It does so by taking up an anthropological perspective: much as anthropologists might study culture, religion, or kinship, we will interrogate secularism as a comparative social artifact, constituted by historically specific repertoires of signs, identities, everyday practices, and institutional powers. The course focuses on case studies in the United States, Western Europe, the Middle East, and South Asia.

ANTHRO 30Q. The Big Shift. 4 Units.

Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience "the good life"? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadlyworld of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillipe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by Celeste Fremon). Finally in Searching for Whitopia: an improbable journey into the heart of White America, Rich Benjamin explores the creation on ethnic enclaves (whitopias) as fear over immigration and the shrinking white majority redefine race consciousness in the 21st century. Each of these narratives provides a window into the various ways in which Americans approach the subjects of wealth and the good life, poverty and the underclass, and then construction of class, race, and gender in American society. Students will not be required to have any previous knowledge, just curiosity and an open mind.

ANTHRO 31. Ecology, Evolution, and Human Health. 3-5 Units.

Ecology, Evolution, and Human Health Human ecology, environments, adaptation and plasticity, and their relationship to health and well-being considered in the broad comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, urbanization, migration, infectious disease, the physiology of stress and the inflammatory response, social capital and social networks, nutrition, nutritional deficiencies, growth, and social inequalities. No prior course work in ecological or medical anthropology required.

ANTHRO 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: CSRE 32

ANTHRO 34. Animals and Us. 5 Units.

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of animals as social actors is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ARCHLGY 34

ANTHRO 41. Genes and Identity. 3 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race.

Same as: AFRICAAM 41, CSRE 41A

ANTHRO 42. Megacities. 5 Units.

In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.

ANTHRO 49. Violence and Belonging in the Middle East. 5 Units.

This course examines politics in the Middle East from an anthropological perspective. We will explore the symbolic expression of political identities, the effects of religious revival on political institutions, and the tumultuous culture of protest in the region. Readings discuss the historical development of rights and citizenship, Islamic politics, sectarian tensions, and imaginings of revolution. Course materials are drawn from ethnographic studies and films, which provide a rich contextualization of social life and cultural politics in the region.

ANTHRO 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions.

Same as: REES 54A

ANTHRO 77. Japanese Society and Culture. 5 Units.

Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class; contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism.

Same as: ANTHRO 277

ANTHRO 82. Medical Anthropology. 4 Units.

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 282, HUMBIO 176A

ANTHRO 90B. Theory of Cultural and Social Anthropology. 5 Units.

Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies.

ANTHRO 90C. Theory of Ecological and Environmental Anthropology. 5 Units.

Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America.

Same as: HUMBIO 118

ANTHRO 90D. Social Theory in the Anthropological Sciences. 5 Units.

Required of majors. Foundational course in the history of social theory in anthropology from the late 19th century to the present. Major approaches to human culture and society: symbolic, social, material, and psychological. Questions about the role of theory in anthropology and how it can be applied to human issues. (HEF IV).

ANTHRO 91. Method and Evidence in Anthropology. 5 Units.

This course provides a broad introduction to various ways of designing anthropological questions and associated methods for collecting evidence and supporting arguments. We review the inherent links between how a question is framed, the types of evidence that can address the question, and way that data are collected. Research activities such as interviewing, participant observation, quantitative observation, archival investigation, ecological survey, linguistic methodology, tracking extended cases, and demographic methods are reviewed. Various faculty and specialists will be brought in to discuss how they use different types of evidence and methods for supporting arguments in anthropology.

ANTHRO 91A. Archaeological Methods. 5 Units.

Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions. Same as: ARCHLGY 102

ANTHRO 92A. Undergraduate Research Proposal Writing Workshop. 2-3 Units.

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

ANTHRO 92B. Undergraduate Research Proposal Writing Workshop. 2-3 Units.

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

ANTHRO 93. Prefield Research Seminar. 5 Units.

For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.

ANTHRO 93B. Prefield Research Seminar: Non-Majors. 5 Units.

Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Service Learning Course (certified by Haas Center).

ANTHRO 94. Postfield Research Seminar. 5 Units.

Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates' work and revise their own writing in light of others' comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.

ANTHRO 95. Research in Anthropology. 1-10 Unit.

Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.

ANTHRO 95B. Directed Study in Honors and Senior Papers. 1-10 Unit.

Taken in the final quarter before graduation. Independent study and work on senior paper for students admitted to the program. Prerequisite: consent of program adviser and instructor.

ANTHRO 96. Directed Individual Study. 1-10 Unit.

Prerequisite: consent of instructor.

ANTHRO 97. Internship in Anthropology. 1-10 Unit.

Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit. Service Learning Course (certified by Haas Center).

ANTHRO 98B. Digital Methods in Archaeology. 3-5 Units.

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods. Same as: ANTHRO 298B, ARCHLGY 98B

ANTHRO 98E. Catalhoyuk and Neolithic Archaeology. 1-3 Unit.

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

ANTHRO 98F. Field School Training Workshop. 1-3 Unit.

Provides students important preparatory orientation to anthropology as well as the methods, ethics, and logistics of the specific field school each student will be attending in the summer.

ANTHRO 100A. India's Forgotten Empire: The Rise and Fall of Indus Civilization. 3 Units.

How and why cities with public baths, long-distance trade, sophisticated technologies, and writing emerged, maintained themselves, and collapsed in the deserts of present-day Pakistan and India from 2500 to 1900 B.C.

ANTHRO 100B. Lifeways of the Ancient Maya. 5 Units.

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 200B

ANTHRO 100D. Chavin de Huantar Research [Seminar]. 3-5 Units.

Archaeological analytical techniques appropriate for data recovered during archaeological fieldwork in Chavin de Huantar, Peru. Open to all interested students; fieldwork participants are expected to take the course. Students work on data from the previous field season to produce synthetic written reports, focusing on specific methodological issues.

ANTHRO 101. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology. 3-5 Units.

The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century.

ANTHRO 101A. Archaeology as a Profession. 5 Units.

Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.

Same as: ARCHLGY 107A

ANTHRO 101B. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 201B, ARCHLGY 100, ARCHLGY 200

ANTHRO 101S. Introduction to Cultural and Social Anthropology. 3-5 Units.

Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.

Same as: ANTHRO 1S

ANTHRO 102. Urban Ethnography. 5 Units.

Ethnographic research and writing focuses on the ways our lives are shaped by interacting forces such as history, political economy, and creative cultural practices. In the last fifty years, more and more cultural anthropology has been carried out in urban contexts, due to both urbanization around the world and changes in anthropology as a field. This seminar focuses on careful reading and analysis of book-length ethnographies about urban cultures, people and dynamics to consider what the theory and methodological tools of anthropology have to offer us as we seek to better understand the city. Readings include a variety of approaches to ethnographic research in and/or about cities, with a mix from different eras and about different cities around the world.

Same as: URBANST 140

ANTHRO 102A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 202A

ANTHRO 102B. Aztec Language and Culture. 3 Units.

Introduction to Nahuatl, the language of the Aztecs. Also known as Mexicano, Nahuatl was once used as a lingua franca throughout Mesoamerica, and is today spoken by about 1.5 million people. Emphasis on vocabulary, colonial documents, including Central Mexican codices, and archaeology. Attention also given to modern dialects, the place of Nahuatl in the Uto-Aztecan language phylum, and the relationship between Nahuatl and Aztec culture. Appropriate for students interested in linguistics, anthropology, archaeology, and history, and those desiring to better understand the native linguistic heritage of Mesoamerica and its impact on Spanish.

ANTHRO 102C. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3-5 Units.

This interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples. Using an innovative combination of online lectures by Stanford faculty and students, and recorded interviews with Indigenous leaders, artists, performers, scholars and museum professionals, the seminar will explore and problematize: historic and contemporary understandings of "Indigenous cultural heritage" and the impact of colonialism, urbanization and other forces on Indigenous identity and cultural heritage; current and potential domestic and international legal and non-legal frameworks for Indigenous cultural heritage protection and repatriation; past and present museum approaches to Indigenous peoples and their cultural material; and optimal methods of resolving repatriation disputes. While the seminar will cover primarily the situation of Indigenous peoples in North America, comparisons will be drawn with other regions of the globe. The on-campus component of the seminar will involve directed discussions of the online content, the online forum, assigned readings and short writing assignments. Students can choose between a final exam, paper or video project. Lunch is provided. Same as: ARCHLGY 101, ARCHLGY 202, CSRE 102, NATIVEAM 102

ANTHRO 103. The Archaeology of Modern Urbanism. 5 Units.

Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods.

ANTHRO 103A. Human Osteoarchaeology. 5 Units.

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 203A

ANTHRO 105. Ancient Cities in the New World. 3-5 Units.

Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 205

ANTHRO 105A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, we will investigate an archaeological site on campus using methods of survey, mapping, testing, and excavation (digging, recording units/features, profile illustration). In seminar, we will critically examine archaeological fieldwork through reading, writing, and discussion, exploring topics such as history of archaeological excavation, production of archaeological knowledge, disjunction between theory and practice, reflexive methodologies, ethics, collaboration, and specialization. No experience necessary, but students with fieldwork experience are welcome. Same as: ANTHRO 205A

ANTHRO 105B. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture. Same as: ANTHRO 205B, ARCHLGY 105

ANTHRO 106. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 206A, ARCHLGY 102B

ANTHRO 106A. Gang Colors: The Racialization of Violence and the American City. 5 Units.

Street gangs (e.g. Bloods, Crips, Mara Salvatrucha, M-18, etc.) serve as a window onto the experience of racial, ethnic and economic marginalization under late capitalism. This class explores the context that gives rise to gang violence through a combination of anthropological, sociological, and historical approaches. Students will be familiarized with the macro-social factors that shape both gangs and the politics of violence in the Americas, North and South.

Same as: CSRE 106A

ANTHRO 108E. Catalhoyuk and Neolithic Archaeology. 3 Units.

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

Same as: ARCHLGY 108E

ANTHRO 109. Archaeology: World Cultural Heritage. 5 Units.

Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?.

Same as: ANTHRO 209

ANTHRO 110A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why *Homo sapiens* has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 210A

ANTHRO 110B. Examining Ethnographies. 5 Units.

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 210B

ANTHRO 111. Archaeology of Sex, Sexuality, and Gender. 5 Units.

How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

Same as: ANTHRO 211

ANTHRO 111A. Archaeology of the Andes of Argentina. 3-5 Units.

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 211A

ANTHRO 111B. Muwékma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwékma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwékma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwékma, and the fight for acknowledgement of Muwékma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwékma.

Same as: ARCHLGY 111B, NATIVEAM 111B

ANTHRO 112. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 212, ASNAMST 112

ANTHRO 112B. Advanced Study in Public Archaeology. 2-5 Units.

This service-learning course is offered only to students who have completed Anthro 112a and wish to deepen their scholarship in public archaeology and heritage practice through continued study. Students enrolled in Anthro 112b complete readings, collections management study, public archaeology events, and community-based research oriented towards their specific interests. Prerequisite: Completion of Anthro 112a AND instructor consent.

ANTHRO 113. Faunal Analysis: Animal Remains for the Archaeologist. 5 Units.

The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

Same as: ANTHRO 213, BIO 166, BIO 266

ANTHRO 113B. Religious Practices in Archaeological Cultures. 5 Units.

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 213B, ARCHLGY 113B

ANTHRO 114. Prehistoric Stone Tools: Technology and Analysis. 5 Units.

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 214

ANTHRO 114B. Landscape Archaeology and Global Information Systematics. 3-5 Units.

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 214B

ANTHRO 115. The Social life of Human Bones. 3-5 Units.

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 215, ARCHLGY 115

ANTHRO 115A. The Aegean in the Neolithic and Bronze Age. 3-5 Units.

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a 'state-like' quest; 'palatial' quest; society. It will draw on the region's; wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 215A, ARCHLGY 139, ARCHLGY 239

ANTHRO 115B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 215B

ANTHRO 116. Data Analysis for Quantitative Research. 5 Units.

This course allows graduate and advanced undergraduate students in archaeology and anthropology to acquire practical skills in quantitative data analysis. Some familiarity with basic statistical methods is useful but not assumed; the structure of the course will be flexible enough to accommodate a range of student expertise and interests. Topics covered include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis.

Same as: ANTHRO 216

ANTHRO 117. Thinking Through Animals. 5 Units.

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of animals as social actors is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 217

ANTHRO 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

Same as: EARTHSYS 118

ANTHRO 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.

Interpreting the past is no longer just for people like historians and archaeologists, and is no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and are putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ASNAMST 118A, CSRE 118A

ANTHRO 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the hands-on component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 219, ARCHLGY 119

ANTHRO 119A. Spirits, Selves, and the Social: Histories of Thinking about Religion. 5 Units.

Why do humans worship gods, spirits, and ancestors? What roles do religion, witchcraft, and magic play in everyday life? How does religious action become meaningful in a particular context? In what sense can we know about the religious experiences of others? Focus is on approaches to religion throughout anthropology's history. Each student will carry out a mini-ethnography on a religious community of their choice. Students will not be required to have any previous knowledge in anthropology or the study of religion.

Same as: RELIGST 119X

ANTHRO 120B. Indian Popular Culture. 5 Units.

This course will explore key topics in contemporary India through an analysis of its popular culture. Bollywood and Kollywood films, Hindi soap operas and reality shows, vernacular music in Bihar, Tamil pulp fiction, matchboxes from Bangalore, clothing styles of Kerala college students, advertising in Mumbai, and cell phones used in Varanasi will all be brought together to help us shape an image of India as complex, contested, and changing. As an anthropology course, we will focus on the consumption of these media and discuss what they do in the world. Looking at both the source material itself and the way in which it is used, we will explore topics such as: nationalism, gender and sexuality, middle class aspiration, globalization, neoliberal consumerism, and the postcolonial condition.

ANTHRO 121. Language and Prehistory. 4-5 Units.

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III)

Same as: ANTHRO 221

ANTHRO 121A. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AFRICAAM 121X, AMSTUD 121X, CSRE 121X, EDUC 121X, LINGUIST 155

ANTHRO 122A. Race and Culture in Mexico and Central America. 3-5 Units.

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 222A

ANTHRO 122C. Research in Maya Hieroglyphic Writing. 1-2 Unit.

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 222C

ANTHRO 123. Readings in Linguistic Anthropology. 2 Units.

One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

Same as: ANTHRO 223

ANTHRO 124. Maya Mythology and the Popol Vuh. 3-5 Units.

The mythology and folklore of the ancient Maya, emphasizing the relationship between the 16th-century Quicheacute; Maya mythological epic *Popol Vuh* (Book of the Council) and classic lowland Maya art, architecture, religion, and politics. General Mesoamerican mythology. Anthropological and other theories of mythology. Class participates in the creation of a web project on the *Popol Vuh*.

ANTHRO 124N. Maya Mythology and the Popol Vuh. 3 Units.

Shortly after the Spanish conquest of Highland Guatemala, an anonymous Quicheacute; Mayan noble translated a sacred text of his people, *Popol Vuh* (iquest;Council Bookiquest;), and committed the Mayan to Spanish letters. His book, with its account of creations and destructions of the world by the gods, the descent of the Hero Twins into the Underworld and their ball games with its lords, and a history of the ruling clan of the Quicheacute; state, is a grand apology for the values and world of the Quicheacute; Maya, but it is no drab political treatise. It relates the daily life of the Quicheacute; to their natural world (including the skies) and to the underworld journey that they expected in death, and is a compilation crafted to instruct and entertain at several levels of interpretation, from those of sophisticated scholars to children. In the 1970iquest;s, we began to realize that many of the ceramic vessels unearthed from the tombs of the Classic Lowland Maya, originally intended to accompany their owners on their perilous journey through the underworld, actually illustrate scenes described in *Popol Vuh*. More recently, it has been possible to relate the mythology to texts newly deciphered from Mayan inscriptions as well as vases. The *Popol Vuh* has thus been shown to be a survival of a much older and more widespread culture. Like most survivals, though, it had been re-crafted in the image of the contemporary Quicheacute; culture. When are mythological similarities sufficient to imply relatedness of the stories through common descent? How can mythical similarities imply universals of mind and culture? How have myths been used as state political instruments? This is an exciting combination of archaeology, linguistics, cultural anthropology, art, and literature. Students will analyze the text critically, examine Mayan art, and help develop a web site. No prerequisites.

ANTHRO 125. Language and the Environment. 4-5 Units.

Lecture course on vocabulary and grammar as keys to peoples iquest; understanding and use of the environment. Ethnobotany, ethnobiology, and ethnosemantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 225

ANTHRO 125A. International Criminal Courts and the Question of Global Justice. 3-5 Units.

What are the cultural, legal and political implications of the global extrapolation of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon, Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).nn.

ANTHRO 125S. International Criminal Courts and the Question of Global Justice. 3 Units.

What are the cultural, legal and political implications of the globalization of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).

ANTHRO 126. Urban Culture in Global Perspective. 5 Units.

Core course for Urban Studies majors. We will study urban space both historically and cross-culturally. Urban Studies, by definition, is an interdisciplinary field, where the methodological approaches draw upon a diverse set of analytic tools. Disciplines that occupy a prominent place in this class are geography, cultural anthropology, sociology, history, media studies, and literature. In this context, we will discuss the importance of cities around the world to the economic, cultural, and political well-being of modern societies and examine how forces such as industrialization, decentralization, and globalization affect the structure and function of cities. Same as: URBANST 114

ANTHRO 127. City and Sounds. 5 Units.

How do people experience modern cities and urban public cultures through auditory channels? How does sound mediate and constitute urban space? How to listen to and write about culture through sound. Students carry out narrative interviews and sound fieldwork in the Bay Area. Readings include urban anthropology, semiotics, art history, social studies of science and technology, media studies, and musicology.

ANTHRO 127A. Cities and the Future: Utopias, Dystopias, and Other Urbanisms to Come. 3 Units.

What sort of futures are being imagined for the cities of the twenty-first century? An interdisciplinary seminar, this course will critically analyze how the future of cities, and the cities of the future, are being thought about and acted upon in the present. It is designed for graduate students and advanced undergraduates with experience in the social sciences and humanities and who also have a keen interest in urban studies. Its primary objective is to develop sophisticated ways of thinking about the future of cities, since doing so has real significance for the kind of city we want to, and eventually will, ourselves inhabit.

ANTHRO 128. Visual Studies. 5 Units.

Drawing on anthropology, art history, cultural studies, and other fields, this course explores how and why one might want to think critically about the politics of visuality, social imagination, the politics of making and consuming images and things, iconophilia and iconophobia, the classification of people and things into objects, artists, and artworks, and cultural production more generally.

ANTHRO 130A. Interpreting Space and Place: An Introduction to Mapmaking. 5 Units.

How mapmaking, geographical information systems (GIS), and spatial tools can be applied in social research. Qualitative and quantitative approaches in the use of geospatial information. Methodologies and case examples.

ANTHRO 130B. Introduction to GIS in Anthropology. 5 Units.

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 230B

ANTHRO 130D. Spatial Approaches to Social Science. 5 Units.

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 230D, POLISCI 241S, URBANST 124

ANTHRO 131. Genes and Identity. 5 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence; in slavery reparations cases, debates on whether Black Freedmen should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching; in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: AFRICAAM 131, CSRE 131

ANTHRO 132. Religion and Politics in the Muslim World. 5 Units.

This course provides an ethnographic examination of religion and politics in the Muslim world. What is the role of Islam in the political life of modern Muslim societies? Conversely, how do modern political powers shape and constrain the terms of religious life? This course takes an anthropological perspective on the study of Islam: our investigations will not focus on the origins of scriptures and doctrines but rather on the use of religious texts and signs in social context and on the political significance of ritual and bodily practices. A major aim of the course is provide students with analytical resources for thinking critically about the history and politics of modern Muslim societies, with a particular focus on issues of religious authority, gender and sexuality, and the politics of secularism.

ANTHRO 132B. Islam Law in Muslim and Non-Muslim Societies. 3-5 Units.

In this course, students will engage with scholarly material that demonstrates the multiple and varying ways in which Islam is invoked as a legal discourse in Muslim and Non-Muslim societies. In this course, we look at Islam not merely as being in the domain of legislation and adjudication, but as a cultural object; an important signifier in politics, for the state to enforce itself, as well as a technology for people's strategic use. The point of this course is therefore to consider how Islam operates in legal contexts as a 1) discourse of power and of strategy (at personal and political levels) and 2) as a discourse of identity that concerns issues of ethics, rights, gender, kinship, class and nation.

ANTHRO 133A. Anthropology of the Middle East. 3-5 Units.

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region.

Same as: CSRE 133A

ANTHRO 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: AFRICAST 133B, CSRE 133B

ANTHRO 134. Object Lessons. 5 Units.

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 234

ANTHRO 135. Cultural Studies. 5 Units.

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 235

ANTHRO 135A. The Anthropology of Security. 3-5 Units.

This seminar begins by outlining the main theoretical and empirical challenges in the areas of surveillance studies and security studies. The seminar provides a space wherein students will be able to discuss these inter-disciplinary areas and develop their own Anthropology-informed perspectives. The seminar then discusses the work of Anthropologists who through their ethnographic and theoretical work have helped developed and important and emergent area: The Anthropology of Security. Areas covered include, inter alia, national security, security and war, biometrics, gated-ness, and environmental and bio-security threats.

Same as: ANTHRO 235A

ANTHRO 135H. Conversations in CSRE: Case Studies in the Stanford Community. 1-2 Unit.

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135H

ANTHRO 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135I

ANTHRO 136. The Anthropology of Global Supply Chains. 5 Units.

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 236

ANTHRO 137. The Politics of Humanitarianism. 5 Units.

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generates a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes; or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the quest; cause of humanity; quest;. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (quest; the Third World; quest;), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 237

ANTHRO 137A. Traditional Medicine in the Modern World. 3 Units.

This class considers "traditional medicine" in contemporary times. We will survey major systems of traditional medicine while considering their broader social, cultural, and political contexts. The class will study the symbolic uses of traditional medicine, the role of traditional medicines in early modern medical knowledge, the place of indigenous knowledge in bioprospecting, health-seeking behavior and medical pluralism, and the WHO's approach to traditional medicine and how it has affected government health policies. The class emphasizes a critical approach to the concepts of tradition and modernity, and an understanding of traditional medicine as a changing, flexible, and globalized category of healing.

ANTHRO 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 238, CSRE 138

ANTHRO 138A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; quest; structured around international military intervention and criminal trials based on international criminal courts; quest; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 238A

ANTHRO 138B. Urban Africa. 5 Units.

This course explores the production of urban space and the social, cultural, and political significance of cities in sub-Saharan Africa. Topics include: architecture and the built environment; urban planning and colonial public health; migration and rural-urban dynamics; youth, politics, and popular culture; violence, policing, and the privatization of public space; (in)formality in housing, transportation, and employment; class, gender, and mobility in the public sphere; urban citizenship and `right to the city; quest; movements; gentrification, tourism, and the commodification of poverty; and efforts to (re)theorize postcolonial African cities. Readings are drawn from anthropology, history, urban studies, and geography. Discussion will situate struggles over urban forms and the contours of everyday life within broader trends in the political economy of the region from the late colonial period to the present.

Same as: AFRICAST 138B, URBANST 139

ANTHRO 139. Ethnography of Africa. 5 Units.

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 239

ANTHRO 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.

This course provides an introductory survey of Africa; quest; s past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent `without history; quest; by highlighting the continent; quest; s vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse.

Same as: AFRICAST 139A, ARCHLGY 139A

ANTHRO 140. Ethnography of Africa. 3 Units.

This course is an exploration of some central themes and issues in contemporary African society through close readings of a selection of recent ethnographies. It aims to understand Africa as a place where many of the most challenging issues of a modern, globalized world are being thought about in exciting and creative ways, both by ethnographers and by the people about whom they write. Among the key issues that the course seeks to address are: the history and politics of colonial domination; the ways that medicine and government intersect; the increasing use of humanitarian frames of reference in understanding African realities; the changing meanings of HIV/AIDS, sex, and love; and the role of mass media in enabling cultural and imaginative production to take form.

ANTHRO 140A. Ethnographic Archaeologies. 4-5 Units.

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.
Same as: ANTHRO 240A, ARCHLGY 137

ANTHRO 141A. Science, Technology, and Medicine in Africa. 4 Units.

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires in Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the techno-politics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.
Same as: AFRICAST 141A

ANTHRO 141B. The Anthropology of Bits and Bytes: Digital Media in the Developing World. 5 Units.

Recent historical developments, including the widespread adoption of the mobile phone across Africa and Southeast Asia, the rise of Arab Spring, and the rise of technology sectors in cities such as Nairobi, Bangalore, and Accra, have turned digital technology in the global South into a topic of growing popular interest and increasing scholarly concern. This course attempts to make sense of these developments by interrogating diverse theoretical approaches to digital technology and assessing what these approaches reveal and obscure in specific cases of technology adoption in Africa, Asia, and Latin America. Students will be introduced to an overview of scholarly approaches to digital technology from anthropology, science and technology studies (STS), critical theory, geography, and communications studies. We will analyze the relative utility of these explanations through case studies of specific instances of technological production and/or use. These case studies will be drawn from both secondary texts and primary materials such as social media, digital maps, videos, blogs, and news reports. At the same time, we will examine how digital discourses and practices both draw upon and inform broader issues of context-specific political and cultural importance. Major topics to be discussed include development and the State, civil society and the public sphere, youth culture, gender politics, mobility, and globalization. Students will come away from the course with a strong understanding of the major issues at stake in the increasing digitalization of the global South and the socio-cultural, political, and technical debates that frame them.

ANTHRO 143. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.

Over the last twenty years, residents of the People's Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation. We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.
Same as: ANTHRO 243

ANTHRO 143B. Anthropology and International Development. 3-5 Units.

International development as a set of projects, policies, and controversies has been a major force in shaping the world over the past seventy years. Throughout, the discipline of anthropology has been involved as both participant and as critical observer. After a brief overview of development theory and history, this course will discuss (1) the ways in which anthropology has contributed to development projects and ideas and (2) how the discipline has critiqued development practice over the past three decades. What has anthropology offered to those who work towards social and economic development? and how has development shaped the discipline itself? Readings will include detailed ethnographic and historical case studies from across the developing world.

ANTHRO 144A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles; the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan -- the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.
Same as: REES 244A

ANTHRO 145. Race and Power. 5 Units.

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.
Same as: ANTHRO 245, CSRE 145F

ANTHRO 145B. Reinventing the Other: Greeks, Romans, Barbarians. 3-5 Units.

Ancient ethnography was a highly conventionalized tradition stretching from "the father of History," Herodotus, to the last historian of the ancient world, Procopius. We will read selections of these two authors' works as well as of Sallust, Tacitus, and lesser known ones. Within various theoretical frameworks rhetorical, anthropological, structuralist we will reconstruct the shifting images of The Other, explore what they tell us about their producers, and reflect on what ancient ethnography contributed to its modern descendant.

ANTHRO 146. Global Mobilities. 5 Units.

In this STS senior capstone seminar, students will study the local and global impacts of the technologies that have increased personal mobility. STS majors must have Senior status to enroll in this Senior Capstone course.
Same as: STS 200B

ANTHRO 146A. Anthropology of Youth. 5 Units.

This course will be a survey of classical texts and contemporary research on youth and generations. We will explore the historical and cultural construction of youth; and youth practices across regions over time. We will pay special attention to the organization of contemporary capitalism, its effect in producing marginality and exclusion, and issues underlying youth political movements.

ANTHRO 146G. Paperwork. 5 Units.

"Paperwork" is an intensive reading course in a seminar format, concerning the production, circulation and mediation of "paperwork" both as a material and symbolic infrastructure for the operation of modern institutions and governance. We will explore diverse techniques and technologies of paperwork, including note-taking, memos, lists, files, and documents, and forms of paperwork such as medical record, petition, passport, ID card, immigration paper, as well as archives and other mnemonic technologies both as cultural practices and reflexive objects. The goal of the course is to understand "bureaucracy" in the fields of law, business, and public administration, as well as in civil society generally, from the vantage point of concrete inscription, circulation, and storage of papers and documents. Readings will include works by Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Friedrich Kittler, and others.
Same as: STS 200G

ANTHRO 147. Nature, Culture, Heritage. 5 Units.

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.
Same as: ANTHRO 247

ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.

Same as: REES 247A

ANTHRO 148. Health, Politics, and Culture of Modern China. 4-5 Units.

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 248

ANTHRO 149. South Asia: History, People, Politics. 5 Units.

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 249

ANTHRO 149A. Cities and Citizens in the Middle East. 4 Units.

This course will explore historical formation of cities and citizens in the Eastern Mediterranean since the 19th century. We will explore urban development, economy, social classes and local politics with a focus Egypt and Turkey and in particular two world-historical cities, Cairo and Istanbul. Drawing on history, cultural anthropology, geography and sociology disciplines, we will examine how urban space in Egypt and Turkey have reconfigured through histories of colonialism, nationalism, developmentalism and globalization. Rural to urban immigration, informality, gendered places, consumption, urban regeneration, local politics and branding the city will be the themes of our discussion. We will study these themes in relation to two main questions: How do spatial changes engender new social practices and redefine cultural difference?; How do power struggles at the intersection of local and global interests shape urban change? It will be of interest for urban studies majors and other students at all levels who would like to study urban struggles and change in Turkey, Egypt, the Middle East and the Global South.
Same as: URBANST 144

ANTHRO 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: FEMGEN 150A, REES 250A

ANTHRO 151. Women, Fertility, and Work. 5 Units.

How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.

Same as: ANTHRO 251, HUMBIO 148W

ANTHRO 151A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 251A

ANTHRO 152. Ritual, Politics, Power. 5 Units.

Our everyday lives are made up of multiple routines, some consciously staged and imagined and others unconscious and insidious. Anthropologists call these rituals. Rituals shape every aspect of our lives, creating our symbolic universes and governing the most minute of our practices. For early anthropologists and for those interested in religious and symbolic life, rituals and rites were seen as both one of the most universal features of human existence, and, as that which enables us to reflect upon our human existence. A prominent example are that of the rites de passage found in every culture, from puberty initiation rites, weddings or funerals, which socially signal the change from one status to another. While initially for anthropologists, rituals marked the difference between the sacred and the profane, soon scholars began to see the ubiquity of ritual and the symbolic in shaping even the most mundane activity such as the structure of a meal and why one is not meant to eat dessert before the main course. The first half of the class examines these different debates surrounding the meaning and effects of rituals and rites. The second half of the class takes these debates to think about the question of power and politics. We return to the question of how our symbolic universes are staged and imagined by us through ritual forms such as the annual Presidential pardoning the turkey at Thanksgiving. The question of power however pushes us even further to ask why it is that we obey particular kinds of authority, consent to particular actions, and find ourselves doing things we haven't consciously decided to do. Many have argued that these kinds of political questions about how we respond and are shaped by power have something to do with our symbolic worlds and ritual, from the most obvious (the monarchy) to the most subtle (listening in a classroom). Throughout the course, these abstract questions will be grounded in cross-cultural examples and analysis.

Same as: SOC 156

ANTHRO 152A. Urban Poverty and Inequality in Contemporary China. 5 Units.

Experiences of poverty and inequality and their relationship to gender, space development, post-socialism, and globalization. How processes of class-making in China's cities are bound up with transformations in the country's sociopolitical landscape.

ANTHRO 153A. Population and social trends in Japan. 3-5 Units.

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Re-structuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan.

Same as: ANTHRO 253A

ANTHRO 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.

This course examines the significant role drugs play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 254B, CSRE 154

ANTHRO 155. Research Methods in Ecological Anthropology. 5 Units.

The course prepares students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in a way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 255

ANTHRO 156B. Environment, Nature and Race. 3-5 Units.

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about "nature" and the "environment". This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is "natural"? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and "nature" interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology.

Same as: CSRE 156J

ANTHRO 160. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Woodrow Wilson Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will develop a research paper throughout the term which will be presented to a panel of selected Woodrow Wilson Faculty during the final week of the term.

Same as: ANTHRO 260

ANTHRO 160A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.

The tragedy of the commons is a classic social dilemma; a situation in which individual interests conflict with collective ones; and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives.

Same as: ANTHRO 260A

ANTHRO 161. Human Behavioral Ecology. 3-5 Units.

Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.

Same as: ANTHRO 261, HUMBIO 117H

ANTHRO 161A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change.

Same as: ANTHRO 261A

ANTHRO 162. Indigenous Peoples and Environmental Problems. 3-5 Units.

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.

Same as: ANTHRO 262

ANTHRO 163. Conservation and Evolutionary Ecology. 5 Units.

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.

Same as: ANTHRO 263

ANTHRO 163A. Endangered Languages and Language Revitalization. 3-4 Units.

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.

Same as: ANTHRO 263A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

ANTHRO 164. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer request; are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested.

Same as: ANTHRO 264

ANTHRO 164A. Anthropology of Ecotourism. 5 Units.

Ecotourism has been touted as a win-win scenario for both biodiversity conservation and the well-being of local residents. In practice, these lofty ideals of ecotourism have proven difficult to implement. The rapid development of ecotourism over the last two decades. Focus is on the scholarly literature relating to ecotourism from both supporting and critical perspectives.

ANTHRO 164B. Anthropology of Tourism. 5 Units.

As inquest; the largest scale movement of goods, services, and people that humanity has ever seen, inquest; tourism is an immense phenomenon and is currently the world's most immense industry, reaching some of the most remote people and places on the planet. Yet scholars have only begun to focus on the topic in recent decades. This seminar-style course will focus on the key anthropological and social science literature relating to tourism from both supporting and critical perspectives; however, tourism is an inherently multi-disciplinary subject and students from all disciplines are encouraged to enroll. After providing an initial overview of this phenomenon and field of study, later sections of the course will focus on emerging sub-types of tourism including sustainable tourism, ecotourism, agritourism, and geotourism to name just a few.

ANTHRO 165. Parks and Peoples: The Benefits and Costs of Protected Area Conservation. 5 Units.

Seminar. Emphasis is on the social impact of parks and reserves. Integrated conservation and development projects (ICDPs) based on protected areas; alternative ways to derive local social benefits from them. Cases include Yellowstone, Manu, Galapagos, Ngorongoro, and Guanacaste.

ANTHRO 165A. People and Parks: Management of Protected Areas. 5 Units.

As resources become scarcer, parks increasingly serve as ideological battlegrounds for contested core human values and often put livelihoods at stake. Their historical development and the complex array of present-day issues associated with the formal protection of biodiversity. The ideas behind parks and the evolution of these ideas.

ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.

Same as: ANTHRO 266

ANTHRO 167A. A Wilderness Empire: The Political Ecology of California. 5 Units.

This course traverses the historical and geographic space of California to explore the intersection of nature, economy and politics in the making of the contemporary American West. The course links popular historical accounts of the state to related core theoretical literature from anthropology, preparing students to use the analytic tools of anthropology to pursue questions about the people, processes and landscapes that are part of our taken for granted lived experience in California. The class draws theoretically from cultural anthropology, ecological anthropology, cultural and economic geography, and literature to develop a holistic understanding of the historical and social co-production of nature and economy in California and the American West.

ANTHRO 168. Everest: Extreme Anthropology. 3-5 Units.

Using Mt. Everest as a touch point, this class will examine the anthropology of nature, specifically focusing on exploration and adventure travel.

ANTHRO 168A. Risky Environments: The Nature of Disaster. 5 Units.

This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view nature; in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.

Same as: ANTHRO 268A

ANTHRO 169. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

Same as: ANTHRO 269

ANTHRO 169A. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: CHILATST 168, CSRE 168, FEMGEN 140H

ANTHRO 170. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 270, EARTHSYS 172

ANTHRO 171. The Biology and Evolution of Language. 4-5 Units.

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 271, HUMBIO 145L

ANTHRO 171A. Linguistic Field Methods. 5 Units.

Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

ANTHRO 172. Seminar on Cultural Evolution and Coevolution. 3-5 Units.

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 272

ANTHRO 173. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice. 3 Units.

The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nation-states most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.

Same as: HUMBIO 111

ANTHRO 174. Beginnings of Social Complexity. 5 Units.

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 274

ANTHRO 175. Human Skeletal Anatomy. 5 Units.

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 275, BIO 174, BIO 274, HUMBIO 180

ANTHRO 176. Cultures, Minds, and Medicine. 1 Unit.

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 276

ANTHRO 177. Environmental Change and Emerging Infectious Diseases. 3-5 Units.

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 277, HUMBIO 114

ANTHRO 178. Evolution and Conservation in Galapagos. 5 Units.

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 278

ANTHRO 178A. Culture, Narrative, and Medicine. 5 Units.

This course examines the ways in which medicine is practiced in diverse cultural contexts with narrative skills of recognizing, interpreting and being moved by the stories of illness. It is an examination of the human experience of illness and healing through narratives as presented in literature, film, and storytelling. We explore how cultural resources enable and empower healing and how narrative medicine can guide the practice of culturally competent medical care.

Same as: HUMBIO 177C

ANTHRO 179. Cultures of Disease: Cancer and HIV/AIDS. 5 Units.

History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.

ANTHRO 179A. Health, Illness, and Healing in South Asia. 5 Units.

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia.

Same as: ANTHRO 279A

ANTHRO 180. Science, Technology, and Gender. 3-5 Units.

Why is engineering often seen as a masculine profession? What have women's experiences been in entering fields of science and technology? How has gender been defined by scientists? Issues: the struggles of women in science to negotiate misogyny and cultural expectation (marriage, children), reproductive issues (surrogate motherhood, visual representations of the fetus, fetal surgery, breast feeding, childbirth practices), how the household became a site of consumerism and technology, and the cultural issues at stake as women join the ranks of scientists.

ANTHRO 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's and men's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: FEMGEN 181A

ANTHRO 182. An Anthropology of Annihilation: Tobacco at the Turn of the Millennium. 3-5 Units.

The cigarette as the world's greatest weapon of mass destruction: 100 million dead worldwide from cigarettes during the 20th century, one billion expected to die in the 21st century. How to understand this toll, its production, management, politicization, and depoliticization? What can anthropological and allied perspectives disclose? How does the catastrophe challenge key precepts within anthropology and other branches of the academy?

ANTHRO 182A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 282A

ANTHRO 182N. Smoke and Mirrors in Global Health. 3 Units.

A few years ago, health experts began calling out tobacco as engendering a global health crisis, categorizing the cigarette as the world's greatest weapon of mass destruction. A "global health crisis"? What merits that title if not tobacco use? A hundred million people were killed by tobacco in the 20th century, and ten times that number is expected; a billion people are predicted to die prematurely from exposure to cigarette smoke over the next hundred years. How has tobacco come to be labeled a global health crisis over the last decade and what has been the political response? From whence does activism and ongoing complacency regarding tobacco arise? How are they created in different cultural contexts? This course aims to provide students conceptual tools to tackle two specific thought projects: (1) to understand how institutional actors compete to define a situation in the world today as a problem of global health, and (2) to understand the sociocultural means by which something highly dangerous to health such as the cigarette is made both politically contentious and inert. On both fronts, special attention will be given to the ways global health activism and complacency unfold in the U.S. and China.

ANTHRO 183B. Human Mobility and Adaptability. 5 Units.

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle; sometimes permanently, sometimes temporarily; in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 283B

ANTHRO 184. Spirituality and Healing. 3-5 Units.

The puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? Shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

Same as: HUMBIO 179S

ANTHRO 185. Medical Anthropology of Contemporary Africa. 5 Units.

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 285

ANTHRO 185A. Race and Biomedicine. 3-5 Units.

Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

Same as: ASNAMST 185A

ANTHRO 186. Culture and Madness. 5 Units.

'Madness' lends insight into the construction of the normal and abnormal; the boundaries of reason and unreason; the epistemological relation of mind and body, and the management of difference and disease. Taking an interdisciplinary perspective, this course explores the fundamental questions madness poses to subjectivity, culture and modernity.

Same as: ANTHRO 286

ANTHRO 186N. The Most Rational People in the World. 4 Units.

Humans, broadly construed, emerged as bipedal apes in the African mixed savanna-woodlands approximately two million years ago. From humble beginnings, humans have gone on to become the ecologically dominant species in most biomes and grown to a global population in excess of seven billion. This dominance arises from a combination of features of the human organism including its extreme degree of behavioral flexibility and flexible social organization. The prima facie evidence of human evolutionary and ecological success raises a paradox with respect to recent work in economics and psychology which increasingly argues for pervasive irrationality in human decision-making in a wide array of behavioral contexts. How is it possible for an organism with such seemingly flawed software supporting decision-making to become the globally dominant species? We will use this contradiction as the launching point for understanding what rationality means in a broad ecological and cross-cultural context. What do we mean by 'rationality'? How do different disciplines conceive of rationality in different ways? Is there such a thing as a rationality that transcends cultural differences or is the very idea of rationality a cultural construction that is used to justify imperialism and other modes of paternalism? Are there systematic factors that promote or impede rational decision-making? The seminar will provide a gentle introduction to the formal approaches of decision theory which we will apply to an unusual array of topics centered on the subsistence and reproductive decisions of hunter-gatherers, horticulturalists, pastoralists, and agrarian peasants, in short, people living in face-to-face, subsistence societies. In addition to doing reading from a broad array of social and natural science disciplines around the topic of rationality, students will regularly engage in exercises to assess their own approaches to decision-making.

ANTHRO 187. Nuclear Cultures. 5 Units.

This course examines the new cultural forms that arose out of the use of nuclear technology. Subjects covered will include: The Manhattan Project, nuclear activism, nuclear experimentation in medicine, pre-nuclear history, nuclear energy, and nuclear waste and trade.

ANTHRO 187A. The Anthropology of Race, Nature, and Animality. 5 Units.

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism.

Same as: CSRE 187A

ANTHRO 193. Anthropology Capstone: Contemporary Debates in Anthropology. 5 Units.

Do you know what an anthropological perspective is? Can you describe some of the key assumptions and questions within the discipline? A major in Anthropology is composed of many specialized courses in different tracks, different emphases and seemingly a never-ending multiplication of perspectives and ethnographies. However, Anthropology is also an ongoing intellectual conversation with foundational questions, some of longstanding and some new. These foundational questions have stimulated different responses and answers and thus have also led to constant renewal of the discipline in the midst of profound disagreement. In this Anthropology Capstone course students across tracks and emphases will address some of the critical debates that have been central to the discipline as it has developed. We will feature three debate questions in the class. Preparation for each debate will be through class discussion of critical readings as well as extra-mural reading and preparation with one's debating partners.

ANTHRO 199. Senior and Master's Paper Writing Workshop. 1-2 Unit.

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.

Same as: ANTHRO 299

ANTHRO 200B. Lifeways of the Ancient Maya. 5 Units.

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 100B

ANTHRO 200C. STS Senior Capstone. 5 Units.

Genetics, Ethics and Society. This course will explore three socially transforming components of genetics research that hold simultaneously liberating and constraining possibilities for populations and publics, both locally and globally. Typically the course will be divided into three sections. First, we will examine past and present issues dealing with the study of human subjects, as well as recent proposals to eventually bring full genome scans to every individual (personal genomics). Next we will learn of large-scale projects that aim to map the presence of environmental pathogens by their genetic signatures on a planetary scale and how different global populations may be affected. The last section of the course will focus on still other projects and policies that aim to expand the scope and capacity of state and international law enforcement through DNA-based forensics (the FBI CODIS database and the UKiquest;s Human Provenance Pilot Project). Projects like the latter also overlap with theories about community, families, and citizens who may or may not be linked through DNA. New concepts, such as the forensic "genetic informant" within a family unit, human DNA and isotope iquest;country matchesiquest; in cases of state asylum, and DNA based kinship rules for family reunification in many Western countries, will be explored. In all three sections we will also examine scientific ethics when subject populations are minorities, or somehow structurally disadvantaged globally.n This capstone course will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state and certain publics in shaping scientific research agendas that promise to reorganize critical aspects of human life. Students will be encouraged to explore these dynamics within such important societal domains as health, law, markets of bio-surveillance, and the growing industry of disease and heritage DNA identity testing among others. We will read works from social scientists of science practice, ethicists, medial humanists and scientists. This course will equip students with tools to write about the intersection of science and society and to engage in a research project that relates to the topical foci of the course, broadly conceived. Same as: STS 200C

ANTHRO 201. Introduction to Cultural and Social Anthropology. 5 Units.

Crosscultural anthropological perspectives on human behavior, including cultural transmission, social organization, sex and gender, culture change, technology, war, ritual, and related topics. Case studies illustrating the principles of the cultural process. Films.

Same as: ANTHRO 1

ANTHRO 201B. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ARCHLGY 100, ARCHLGY 200

ANTHRO 202A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 102A

ANTHRO 203A. Human Osteoarchaeology. 5 Units.

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 103A

ANTHRO 204. Language and Culture. 4-5 Units.

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language).

Same as: ANTHRO 4

ANTHRO 205. Ancient Cities in the New World. 3-5 Units.

Preindustrial urbanism as exemplified by prehispanic New World societies.

Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 105

ANTHRO 205A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, nwe will investigate an archaeological site on campus using methods of survey, nmapping, testing, and excavation (digging, recording units/features, profilenillustration). In seminar, we will critically examine archaeological fieldworknthrough reading, writing, and discussion, exploring topics such as history ofnarchaeological excavation, production of archaeological knowledge, disjuncturebetween theory and practice, reflexive methodologies, ethics, collaboration, andnspecialization. No experience necessary, but students with fieldwork experientenare welcome.

Same as: ANTHRO 105A

ANTHRO 205B. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture.

Same as: ANTHRO 105B, ARCHLGY 105

ANTHRO 206. Human Origins. 5 Units.

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 6, HUMBIO 6

ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 106, ARCHLGY 102B

ANTHRO 209. Archaeology: World Cultural Heritage. 5 Units.

Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?.

Same as: ANTHRO 109

ANTHRO 210A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why Homo sapiens has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleoanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 110A

ANTHRO 210B. Examining Ethnographies. 5 Units.

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 110B

ANTHRO 211. Archaeology of Sex, Sexuality, and Gender. 5 Units.

How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

Same as: ANTHRO 111

ANTHRO 211A. Archaeology of the Andes of Argentina. 3-5 Units.

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 111A

ANTHRO 212. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 112, ASNAMST 112

ANTHRO 213. Faunal Analysis: Animal Remains for the Archaeologist. 5 Units.

The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

Same as: ANTHRO 113, BIO 166, BIO 266

ANTHRO 213B. Religious Practices in Archaeological Cultures. 5 Units.

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 113B, ARCHLGY 113B

ANTHRO 214. Prehistoric Stone Tools: Technology and Analysis. 5 Units.

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 114

ANTHRO 214B. Landscape Archaeology and Global Information Systematics. 3-5 Units.

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 114B

ANTHRO 215. The Social life of Human Bones. 3-5 Units.

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with exhumation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 115, ARCHLGY 115

ANTHRO 215A. The Aegean in the Neolithic and Bronze Age. 3-5 Units.

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a 'state-like' quest; 'palatial' quest; society. It will draw on the region's quest; wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 115A, ARCHLGY 139, ARCHLGY 239

ANTHRO 215B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 115B

ANTHRO 216. Data Analysis for Quantitative Research. 5 Units.

This course allows graduate and advanced undergraduate students in archaeology and anthropology to acquire practical skills in quantitative data analysis. Some familiarity with basic statistical methods is useful but not assumed; the structure of the course will be flexible enough to accommodate a range of student expertise and interests. Topics covered include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis.

Same as: ANTHRO 116

ANTHRO 217. Thinking Through Animals. 5 Units.

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of 'animals as social actors' is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 117

ANTHRO 219. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the 'hands-on' component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 119, ARCHLGY 119

ANTHRO 221. Language and Prehistory. 4-5 Units.

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III).

Same as: ANTHRO 121

ANTHRO 222A. Race and Culture in Mexico and Central America. 3-5 Units.

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 122A

ANTHRO 222C. Research in Maya Hieroglyphic Writing. 1-2 Unit.

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 122C

ANTHRO 223. Readings in Linguistic Anthropology. 2 Units.

One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

Same as: ANTHRO 123

ANTHRO 225. Language and the Environment. 4-5 Units.

Lecture course on vocabulary and grammar as keys to peoples' quest; understanding and use of the environment. Ethnobotany, ethnobiology, and ethno-semantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 125

ANTHRO 230B. Introduction to GIS in Anthropology. 5 Units.

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 130B

ANTHRO 230D. Spatial Approaches to Social Science. 5 Units.

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, POLISCI 241S, URBANST 124

ANTHRO 234. Object Lessons. 5 Units.

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 134

ANTHRO 235. Cultural Studies. 5 Units.

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 135

ANTHRO 235A. The Anthropology of Security. 3-5 Units.

This seminar begins by outlining the main theoretical and empirical challenges in the areas of surveillance studies and security studies. The seminar provides a space wherein students will be able to discuss these inter-disciplinary areas and develop their own Anthropology-informed perspectives. The seminar then discusses the work of Anthropologists who through their ethnographic and theoretical work have helped developed and important and emergent area: iquest;The Anthropology of Securityquest;.

Areas covered include, inter alia, national security, security and war, biometrics, gated-ness, and environmental and bio-security threats.

Same as: ANTHRO 135A

ANTHRO 236. The Anthropology of Global Supply Chains. 5 Units.

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 136

ANTHRO 237. The Politics of Humanitarianism. 5 Units.

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes iquest; or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the iquest;cause of humanityquest;. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (iquest;the Third Worldquest;), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 137

ANTHRO 238. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics.nThis seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 138, CSRE 138

ANTHRO 238A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; structured around international military intervention and criminal trials based on international criminal courts; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 138A

ANTHRO 239. Ethnography of Africa. 5 Units.

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 139

ANTHRO 240A. Ethnographic Archaeologies. 4-5 Units.

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

Same as: ANTHRO 140A, ARCHLGY 137

ANTHRO 241. The State in Africa. 5 Units.

Postcolonial African states in historical and ethnographic context. Focus is on contemporary African states not as failures, but as the products of distinctive regional histories and political rationalities.

ANTHRO 243. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.

Over the last twenty years, residents of the People's Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation. We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.

Same as: ANTHRO 143

ANTHRO 245. Race and Power. 5 Units.

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, CSRE 145F

ANTHRO 245A. Evolutionary Theory in Archaeology. 3-5 Units.

The ability of scientific evolutionary theory to explain human behavior as represented in the archaeological record. Past attempts to apply evolutionary theory in archaeology are compared to more recent Darwinian efforts, as are current evolutionary approaches to human behavior in related fields. The ontological underpinnings and methodological requirements of a Darwinian archaeology and its potential contribution to archaeology as an explanatory system. (HEF I).

ANTHRO 247. Nature, Culture, Heritage. 5 Units.

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

Same as: ANTHRO 147

ANTHRO 248. Health, Politics, and Culture of Modern China. 4-5 Units.

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 148

ANTHRO 249. South Asia: History, People, Politics. 5 Units.

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 149

ANTHRO 251. Women, Fertility, and Work. 5 Units.

How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.

Same as: ANTHRO 151, HUMBIO 148W

ANTHRO 251A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 151A

ANTHRO 253A. Population and social trends in Japan. 3-5 Units.

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Re-structuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan. Same as: ANTHRO 153A

ANTHRO 254B. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.

This course examines the significant role of drugs; play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, CSRE 154

ANTHRO 255. Research Methods in Ecological Anthropology. 5 Units.

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 155

ANTHRO 260. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Woodquist; Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will development a research paper throughout the term which will be presented to a panel of selected Woodquist; Faculty during the final week of the term.

Same as: ANTHRO 160

ANTHRO 260A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.

The tragedy of the commons; is a classic social dilemma; a situation in which individual interests conflict with collective ones; and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives.

Same as: ANTHRO 160A

ANTHRO 261. Human Behavioral Ecology. 3-5 Units.

Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.

Same as: ANTHRO 161, HUMBIO 117H

ANTHRO 261A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures; past and present; is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change.

Same as: ANTHRO 161A

ANTHRO 262. Indigenous Peoples and Environmental Problems. 3-5 Units.

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.

Same as: ANTHRO 162

ANTHRO 263. Conservation and Evolutionary Ecology. 5 Units.

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.

Same as: ANTHRO 163

ANTHRO 263A. Endangered Languages and Language Revitalization. 3-4 Units.

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.

Same as: ANTHRO 163A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

ANTHRO 264. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer; are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested.

Same as: ANTHRO 164

ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.

Same as: ANTHRO 166

ANTHRO 268A. Risky Environments: The Nature of Disaster. 5 Units.

This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view nature; in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.

Same as: ANTHRO 168A

ANTHRO 269. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

Same as: ANTHRO 169

ANTHRO 270. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 170, EARTHSYS 172

ANTHRO 271. The Biology and Evolution of Language. 4-5 Units.

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 171, HUMBIO 145L

ANTHRO 272. Seminar on Cultural Evolution and Coevolution. 3-5 Units.

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 172

ANTHRO 274. Beginnings of Social Complexity. 5 Units.

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 174

ANTHRO 275. Human Skeletal Anatomy. 5 Units.

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, BIO 174, BIO 274, HUMBIO 180

ANTHRO 276. Cultures, Minds, and Medicine. 1 Unit.

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 176

ANTHRO 277. Environmental Change and Emerging Infectious Diseases. 3-5 Units.

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, HUMBIO 114

ANTHRO 278. Evolution and Conservation in Galapagos. 5 Units.

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 178

ANTHRO 279A. Health, Illness, and Healing in South Asia. 5 Units.

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia.

Same as: ANTHRO 179A

ANTHRO 282. Medical Anthropology. 4 Units.

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 82, HUMBIO 176A

ANTHRO 282A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 182A

ANTHRO 283. Ecology, Evolution, and Human Health. 3-5 Units.

Human ecology, human environments, adaptation and plasticity, and their relationship to health and well-being. Comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, migration, infectious disease, risk management, and social inequalities. Particular attention will be paid to small-scale subsistence populations. Small-scale societies demonstrate an enormous range of variation in both environmental challenges faced and adaptations thereto. The process of human adaptation cannot be understood in the absence of a grounding in this range of challenge and adaptation.

ANTHRO 283B. Human Mobility and Adaptability. 5 Units.

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle; sometimes permanently, sometimes temporarily; in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 183B

ANTHRO 285. Medical Anthropology of Contemporary Africa. 5 Units.

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 185

ANTHRO 286. Culture and Madness. 5 Units.

'Madness' lends insight into the construction of the normal and abnormal; the boundaries of reason and unreason; the epistemological relation of mind and body, and the management of difference and disease. Taking an interdisciplinary perspective, this course explores the fundamental questions madness poses to subjectivity, culture and modernity.

Same as: ANTHRO 186

ANTHRO 293B. Master's Thesis Writing Seminar. 2-4 Units.

May be repeated for credit.

ANTHRO 298B. Digital Methods in Archaeology. 3-5 Units.

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 98B, ARCHLGY 98B

ANTHRO 299. Senior and Master's Paper Writing Workshop. 1-2 Unit.

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299. Same as: ANTHRO 199

ANTHRO 300. Reading Theory Through Ethnography. 5 Units.

Required of and restricted to first-year ANTHRO Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis. Prerequisite: consent of instructor.

ANTHRO 301. History of Anthropological Theory, Culture and Society. 5 Units.

Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.

ANTHRO 301A. Foundations of Social Theory. 5 Units.

The purpose of this course is to introduce key themes in social theory - the social, the modern subject, reason, autonomy, civility, interests, exchange, morality, life, the senses - through a reading of classic texts from Descartes up to psychoanalysis and phenomenology. Each section has original texts, commentaries, and background readings that place these texts in their deeper historical setting. Many of these commentaries trace how practical theories of 'lower' or minor selves - the subject people of the colonies, slaves, and other - were integral to the very development of ideas of the modern, autonomous and reasonable self in the western world. Prerequisite, by instructor consent.

ANTHRO 302. History of Anthropological Theory, Ecology and Environment. 5 Units.

Evolutionary and ecological theory from the 19th century to present. Theory and concepts from evolution and ecology, emphasizing anthropological applications. Evolutionary theories of human behavior, culture, and societies. Ecological theory behind carrying capacity, sustainable yield, and population growth. Emphasis is on tools of analysis and formulating research questions in anthropology today. Upper division undergrads require consent of instructor.

ANTHRO 303. Introduction to Archaeological Theory. 5 Units.

The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual archaeology in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues. Prerequisite: consent of instructor.

ANTHRO 304. Data Analysis for Quantitative Research. 5 Units.

Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra. Prerequisite: consent of instructor.

ANTHRO 305. Research Methods in Ecological Anthropology. 5 Units.

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

ANTHRO 306. Anthropological Research Methods. 5 Units.

Required of ANTHRO Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Prerequisite: consent of instructor.

ANTHRO 307. Archaeological Methods. 5 Units.

Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques. Prerequisite: consent of instructor.

ANTHRO 308. Proposal Writing Seminar in Cultural and Social Anthropology. 5 Units.

Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

ANTHRO 308A. Proposal Writing Seminar in Archaeology. 5 Units.

Required of second-year Ph.D. students in the archaeology track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

ANTHRO 309. Advanced Evolutionary Theory in Anthropological Sciences. 5 Units.

History of evolutionary theory from the 19th century to present, emphasizing anthropological applications. Theory and concept in evolutionary biology; evolutionary theories of culture; and interactions of genetic, social, and cultural evolution and their implications. Emphasis is on tools of analysis and the value of evolutionary thinking for formulating research questions in anthropology today. Prerequisite: graduate standing or consent of instructor. (HEF II, III).

ANTHRO 310C. Intersections. 5 Units.

Themes of materiality and visuality, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.

ANTHRO 310G. Introduction to Graduate Studies. 2 Units.

Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline. Prerequisite: consent of instructor.

ANTHRO 311. Ethnographic Writing. 3-5 Units.

For graduate students writing or planning to write a dissertation using ethnographic methods. The choices made by the authors of ethnographies in constructing an argument, using data and speaking to an audience of readers. Readings include chapters written by class members currently writing dissertations. Prerequisite: consent of instructor.

ANTHRO 311G. Introduction to Culture and Society Graduate Studies in Anthropology. 2 Units.

Required graduate seminar for CS track. The history of anthropological theory and key theoretical and methodological issues in cultural anthropology. Prerequisites: this course is open only to Ph.D. students in anthropology or by permission of the instructor.

ANTHRO 312. Writing Across Audiences: Styles and Methods. 5 Units.

This course examines the way anthropologists and others write to different audiences. What do you need to do communicate to a mainstream anthropology audience? How does that change when you write an editorial or place something in a popular venue? When you try to capture a non-anthropological medical audience? What methods might you consider adding to enable that cross-talk? We will examine a series of examples of people who have written across. Prerequisite: consent of instructor.

ANTHRO 313. Anthropology of Neoliberalism. 5 Units.

How is the recent worldwide restructuring under the name neoliberalism understood as a social, cultural, and economic phenomenon? Focus is on interrogation of analytic categories, and ethnographic explorations of social and political processes. Prerequisite: graduate standing or consent of instructor.

ANTHRO 316. Politics of the Mass Subject. 5 Units.

Harbinger of democracy or arbiter of tyrannous rule? Source of collective agency or threat to political order? Over the past century, notions of the masses, the multitudes, and the people have served as volatile focal points for political theory and for institutions of governance. Drawing on historical, ethnographic, and theoretical readings, this course explores how tensions haunting these concepts continue to animate, as much as beleaguer, contemporary discussions of democratic citizenship and political modernity.

ANTHRO 317. Colonial Archives and Archaeology: Models and Methods of Analysis. 5 Units.

This course details the methodological challenges associated with using primary historical documents, ethnographic methods and sources and archaeological data. How do archaeologists deal with multiple sources of data, primary texts (translated and original) and ethnographic materials? This course examines archaeological monographs as models for individual student projects leading to dissertation research and publishing beyond the dissertation. Students will be required to present materials, research questions and primary source materials to the class in order to expand our understanding of the challenges and insights provided by archival and archaeological studies.

ANTHRO 318. Democracy and Political Authority. 5 Units.

Democracy is commonly defined in formalist terms as a form of government (involving the consent of the governed) and a procedure of governance (involving the rule of law). In place of a formalist definition, this course examines democracy as a historical and discursive form. In what ways have the rights of citizenship for some been premised on the domination of others (workers, women, the colonized, etc.)? What forms of violence are not only tolerated as practical necessity in the contemporary order of democratic states but sanctioned as morally just? What mechanisms of political authority operate by defining the boundaries between the tolerable and the intolerable, between citizenly belonging and terrorism; in short, between democracy and its others (e.g., an arbitrary despot, a feudal economy, a religious fundamentalism)? These questions require urgent interrogation in the present day: the past thirty years have witnessed a virtual explosion of new constitutions proclaiming democratic sovereignty across the world. What forms of global power and institutional domination are constitutive of the contemporary era of liberty, freedom, and equality? Readings are drawn from a variety of disciplines, including anthropology, political theory, and political philosophy. Prerequisite: consent of instructor.

ANTHRO 319. South Asia: History, People, Politics. 5 Units.

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences. Prerequisite: consent of instructor.

ANTHRO 320A. Race, Ethnicity, and Language. 3-4 Units.

This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of "doing race" through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics. Prerequisite: consent of instructor.

Same as: EDUC 389X, LINGUIST 253

ANTHRO 321. Reading Marx, Reading Weber. 5 Units.

This advanced graduate seminar is devoted to a critical reading of selected writings by two nineteenth century social theorists who continue to shape anthropology and social analysis more broadly. Prerequisites: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural or social anthropology, social theory or cultural studies is required. No auditing is permitted. Maximum enrollment 12.

ANTHRO 321A. Anthropology and Literature: Problems of Representation, Power, and Textuality. 5 Units.

How are literary and social scientific forms of cultural description, evocation, and interpretation related? The seminar reads classic texts as well as recent experiments, addressing issues of genre, rhetoric, epistemology, translation, authority, and collaboration. The emphasis is on writing as a situated practice; embodied, relational, and historically circumscribed. Authors may include Malinowski, Mead, Benedict, Leacock, Vi-Strauss, Geertz, Taussig, Leiris, Conrad, Achebe, Said, Barthes, Kroeber, Le Guin, and selected contemporary ethnographies. Examples from film, visual culture, and performance art may also be included.

Same as: COMPLIT 321B

ANTHRO 322. From Biopolitics to Necropolitics and Beyond. 5 Units.

Scholarship produced and informed by Michel Foucault. Focus is on the final period of Foucault's life; how his discussions of biopolitics, subjectification, governmentality, and death have served as touchstones for recent empirical research. Key interventions initially made under these rubrics; how anthropologists and others have applied, challenged, and extended them. Prerequisite: consent of instructor.

ANTHRO 324. Political Anthropology. 5 Units.

An anthropological approach to politics through bringing anthropological ways of thinking and modes of analysis to bear on key presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity; ethnographic accounts used to identify the limits of conventional analytical approaches and to document the forms of politics that such approaches either ignore or misunderstand. Prerequisite: consent of instructor.

ANTHRO 326. Postcolonial and Indigenous Archaeologies. 5 Units.

The role of postcolonial and Indigenous archaeologies as emergent disciplinary activities within contemporary society. Community based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context. Prerequisite: consent of instructor.

ANTHRO 327. Language and Political Economy. 5 Units.

Theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. The theorization of language in its linkages to power, social relations, and history. Prerequisites: Linguistics or Anthropology course work. Prerequisite: consent of instructor.

ANTHRO 328. Visual Culture. 5 Units.

The politics of visuality, social imagination, and the ethics of visual production and consumption in the current moment. Sources include anthropology, art history, and philosophy. Prerequisite: consent of instructor.

ANTHRO 331. The Anthropology of Technology. 5 Units.

Iconic discipline-building works of the last three decades; readings that lay out and intervene in contemporary debates. Prerequisite: consent of instructor.

ANTHRO 332. Transformative Design. 3-5 Units.

Project-based. How interactive technologies can be designed to encourage behavioral transformation. Topics such as self-efficacy, social support, and mechanism of cultural change in domains such as weight-loss, energy conservation, or safe driving. Lab familiarizes students with hardware and software tools for interaction prototyping. Students teams create functional prototypes for self-selected problem domains. Prerequisite: consent of instructor. Design Institute class; see <http://dschool.stanford.edu>.

Same as: ENGR 231

ANTHRO 332A. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice.

Same as: ARCHLGY 132, ARCHLGY 232, ARCHLGY 332

ANTHRO 333. Anthropologies of Evidence. 5 Units.

Drawing on literature in Anthropology and Science and Technology Studies, this course will examine what kinds of artifacts and arguments count as evidence in intellectual and scientific debate.

ANTHRO 333A. The Cultural Politics of Ambiguity. 5 Units.

Contemporary conceptual approaches to understanding the politics and production of certainty, ambiguity, and doubt. The seemingly ambiguous nature of the science of industrial pollution and contamination exonerate corporate and government polluters from rising rates of cancer, while the science of liberal economic models seems to create no alternative to massive economic subsidies of the financial sector. How culpability, exoneration, transformative action, institutional stasis, and political rely on the production of certainty, ambiguity, and doubt. Prerequisite: consent of instructor.

ANTHRO 334. Trauma and Healing. 5 Units.

This course considers class and recent work on culture and psychiatry with an emphasis on trauma. We consider work on the main diagnostic categories like depression and schizophrenia, but also the work on dissociation, war combat, PTSD, and psychosis.

ANTHRO 335A. Animism and Alter-Native Modernities. 5 Units.

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour).

Same as: FRENCH 335A, REES 335A

ANTHRO 336. Anthropology of Rights. 5 Units.

Ideas of rights at the center of contemporary politics around the world. An anthropological perspective on how rights are invoked, claimed, and translated into institutional policies in ethnographic cases. The limitations of liberal notions of rights and innovative forms of politics emerging within and against rights talk. Prerequisite: consent of instructor.

ANTHRO 337. The Politics of Humanitarianism. 5 Units.

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issues a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes iquest; or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the iquest;cause of humanity iquest;. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (iquest;the Third World iquest;), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

ANTHRO 338. Anthropological Approaches to Religion. 5 Units.**ANTHRO 339. Anthropology of Religion. 5 Units.**

This course presents classic and contemporary work on the anthropology of religion: Durkheim *Elementary Forms of the Religious Life*; Levy-Bruhl; *Primitive Mentality*; Douglas *Purity and Danger*; Evans Pritchard *Nuer Religion*; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others.

ANTHRO 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course.

Same as: FRENCH 339A

ANTHRO 341. The Archaeology of Religious Crusading in Medieval Europe. 5 Units.

This course will present a chronologically framed outline of the three main regions that witnessed the greatest impact of the crusading period. Commencing with the initial capture of Jerusalem and the subsequent establishment of a crusader kingdom in the Middle East in AD1099, till its eventual end in 1291, this will be followed by the `pagan conversions iquest; of the Northern Baltic. Centred on Poland (Prussia) and Latvia (Livonia) from the 13th to 15th c., this example will also be compared with neighbouring Lithuania, which never fell under the political hegemony of the Monastic Orders. Finally, the course covers the Iberian case, where the Reconquista iquest; or `reconquest iquest; - of lands from Muslim groups concluded with the fall of Granada and the unification of Spain in 1492. Through archaeological and historical evidence, the materials, technologies and ideas of the crusading groups will be compared and contrasted, with a particularly emphasis on bioarchaeological datasets. Ultimately, the course deals with the economic, social and practical mechanisms used by the religious orders to `colonise iquest;, once the initial conquest had been achieved. Prerequisite: graduate standing or consent of instructor.

ANTHRO 343. Culture as Commodity. 5 Units.

Focus is on theories of commodification, interests in tourism, national cultures as marketable objects, and how identities are constituted through production and consumption. The formation of global style and taste. Prerequisite: consent of instructor.

ANTHRO 344. Graphic Medicine. 5 Units.

In this course students will study medical cultures through visual communication ranging from x-rays and PET scans to graphic novels. Course will also include literature on visual theory.

ANTHRO 345. New Visions in Medical Anthropology. 5 Units.

Recent experimental histories of the field. Emphasis is on how, working within anthropology's classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, and often violent relationships between the body and social change. The authors' expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields. Prerequisite: consent of instructor.

ANTHRO 346. The Social Imagination. 5 Units.

The imagination as such has not been an accustomed object of ethnographic fieldwork or theoretical debate in anthropology. This seminar consists of a cluster of thematic explorations including: the spatial imagination of states; the imagination of race, colonialism, and domination; the social imagination of evil and of the good; and conceptualizations of the creative imagination.

ANTHRO 346A. Sexuality Studies in Anthropology. 5 Units.

Current research on sexuality from perspectives including paleoanthropology, archaeology, ethnography, and linguistic anthropology. Readings paired with case studies that explore theoretical and methodological issues. Prerequisite: consent of instructor.

ANTHRO 347. Religion and Modernity. 5 Units.

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: RELIGST 332X

ANTHRO 348. Representing Medicine. 5 Units.

The seminar will offer the opportunity to discuss the recent work of a series of 9 scholars known for their innovation in writing and research. The seminar will offer professional networking as well as the opportunity to engage authors in questions of writing, approaches to fieldwork, strategies for career advancement, and brainstorming on how to structure relevant arguments. Prerequisite: graduate standing or consent of instructor.

ANTHRO 349. Anthropology of Capitalism. 5 Units.

This advanced graduate seminar explores capitalism as an historically-situated and culturally-mediated articulation of practices rather than as an economic system or social structure governed by an internal logic. It draws on poststructural theories of culture, society and subjectivity to investigate the processes through which diverse capitalist practices are produced. Prerequisite: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural anthropology, social theory or cultural studies is required. No auditing is permitted. Enrollment limited to 12.

ANTHRO 350. Topics in Linguistic Anthropology. 5 Units.

Reading seminar; restricted to Anthropology graduate students. The anthropology of language and semiotics. Focus is on the limits of textualism, and alternative semiotic and epistemic bases for theorizing language and representation. No linguistic anthropology course work required.

ANTHRO 352. Foucault: The Question of Method. 5 Units.

Foucault as methodological exemplar for historical and social research. Emphasis is on his historical studies of clinical medicine, prisons, and sexuality, and on applying his methods to empirical studies of topics such as colonialism, race, and liberal governmental rationality.

ANTHRO 353. Landscape. 5 Units.

This seminar offers an interdisciplinary approach to the study of landscape, noting the various processes and projects that have help create them. Readings draw together a broad range of theoretical approaches that are attentive to human-non-human interactions and the overlapping and divergent spatial and temporal questions of the exchanges between landscapes and humans. The readings will also draw attention to representational and non-representational ways that material and symbolic aspects of landscapes help constitute the making of place. The aim of the seminar is to explore the various methodologies for what they offer for the study of place.

ANTHRO 355. Cities in Global Perspective. 5 Units.

Interdisciplinary approach to examining global cities. The concept of the global city, and the interdependent processes that help produce urban spaces. Situating the transformation of urban spaces within globalization and its differential effects; current explanatory frameworks that pay attention to multiple scales of spatial and economic articulation. Prerequisite: graduate standing. Prerequisite: consent of instructor.

ANTHRO 356. The Anthropology of Development. 5 Units.

Multidisciplinary. Topics vary annually. Areas include Africa, S. Asia, and Latin America. Prerequisite: consent of instructor.

ANTHRO 357. Other Minds: Puzzles in Psychiatric and Psychological Anthropology. 5 Units.

Problems in the way anthropologists explore other minds anthropologically and the ways in which anthropologists seek to understand the models of other minds held by the people observed. Topics include theory of mind, witchcraft, belief, empathy, psychosis, trauma, Freud, Vygotsky, and cognitive dissonance. Prerequisite: consent of instructor. Under grads cannot take this class without permission of the instructor.

ANTHRO 358. Anthropology and the Limit of Experience. 5 Units.

In this course, we will examine the concept of the limit; in relation to questions of experience. Taking an interdisciplinary perspective, we will explore how the limit (as border, threshold, other, transgression, liminality, etc.) frames and disrupts discourses of experience in ethnography, philosophy and literature.

ANTHRO 359. Copies, Collections, and Commodities. 5 Units.

In this class we will grapple with multiple questions that arise with reproduction. On the one hand, reproducibility is good: we want generic drugs to work as well as the originals, we want trial subjects to adequately stand in for the people likely to be having a treatment, and we want a cartographic map to describe the landscape that unfolds before us. On the other hand, the copy threatens the value the object it is meant to imitate or represent, and to take on a life of its own. A series of classic and new ethnographies will be organized around these issues.

ANTHRO 360. Social Structure and Social Networks. 5 Units.

In this course, we will explore social network analysis, a set of methods and theories used in the analysis of social structure. The fundamental conceit underlying social network analysis is that social structure emerges from relationships between individuals. We will therefore concentrate in particular on the measurement of relationships, emphasizing especially practical methodology for anthropological fieldwork. This is a somewhat unusual course because of its focus on social network research coming out of anthropological and ethological traditions. While most current practitioners of social network analysis are (probably) sociologists, many of both the methodological antecedents and theoretical justifications for the field can be found in these two traditions. A major goal of this course is to understand how the methods and perspectives of social network analysis can be usefully incorporated into contemporary approaches to ethnography and other anthropological modes of investigation. Prerequisite: graduate standing or consent of instructor.

ANTHRO 361. Life and Death in Contemporary Latin America: An Anthropological Inquiry. 5 Units.

This seminar explores life and death in contemporary Latin America. We will address anthropological understanding of the role of colonialism, migration, violence, urbanization, democratic transition and neoliberalism as they configure the experience of, and threshold between, vital and deadly processes. This is not a standard survey course, covering the region as a whole however. Instead, we will critically engage several recent ethnographies that explore, for example: the politics and practices of memory; border thinking and living; the political economy of death and desire; state violence and social movements; the relationship between the laboring city and body. We will supplement ethnographies with contemporary Latin American critical theory, film, and literary texts. Prerequisite: consent of instructor.

ANTHRO 362. Human Spatial Dynamics: Seminar in Communicating Contemporary Science. 5 Units.

This seminar is designed to bring together all students and faculty currently working on issues related to human use of land and spatially defined resources. The focus is to provide a forum for reporting on recent results and question development, providing students with vital skills in designing and communicating the results of research. Under grads by permission of instructor.

ANTHRO 362A. Introduction to Human Evolution, Ecology, Genetics, and Culture. 5 Units.

Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student's first year in the graduate program.

ANTHRO 363. Demography and Life History Theory. 5 Units.

Problems in demography and theoretical population biology applied to human systems. Emphasis is on establishing relationships between models in theoretical population biology and empirical demographic methodology. Topics include philosophy of models and model building, population dynamics, stable population theory, species interactions in human ecology, models of infectious diseases and their control, cultural evolution. Prerequisites: HUMBIO 137 or consent of instructor.

ANTHRO 364. EcoGroup: Current Topics in Ecological, Evolutionary, and Environmental Anthropology. 2-5 Units.

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

ANTHRO 364A. EcoGroup: Problems in Ecological and Evolutionary Anthropology. 2-5 Units.

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

ANTHRO 365. The Theory of the Modern Subject. 5 Units.

This course traces the emergence of a coherent theory of the modern subject through readings of philosophical works and social theory from 18th century to the 20th century. Prerequisite: graduate standing or consent of instructor.

ANTHRO 366. Material Semiotics. 5 Units.

This seminar will focus on the emerging body of literature on the materiality of the production, circulation, and mediation of paperwork as constitutive of modern forms of governance. We will discuss specific genres of paperwork; notes, memos, files, documents, as well as archives and other mnemonic technologies; both as cultural practices and reflexive objects, and examine how they produce modern social epistemologies of accountability, evidence, the fact, and truth in the fields of law, business, and public administration, as well as in civil society generally. Readings will include works by Max Weber, Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Ann Stoler, and others. Prerequisite: graduate standing or consent of instructor.

ANTHRO 367. The Anthropology of Science: Global Politics and Laboratory Life. 5 Units.

Science and technology are important cultural products that often dramatically reorganize various aspects of human life. In this course we will explore how recent innovations in the life sciences and biomedicine may reconfigure crucial elements of social institutions, lend new structures to identity politics, and often change the way we interact with and conceive of nature. We will examine these issues in various global settings to explore how everyday politics shape politics of life in different locales.

ANTHRO 368. Dynamics of Coupled Human-Natural Systems. 5 Units.

This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as coupled human-natural systems. We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a coupled human-natural system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

ANTHRO 369. Advanced Topics in Human Behavioral. 2-5 Units.

Course covers a variety of advanced topics which rotate annually, such as: ownership and egalitarianism, the integration of landscape and behavioral ecology, conservation and indigenous subsistence, or fertility and demography. Course may be repeated for credit when topics change.

ANTHRO 370. Advanced Theory and Method in Historical Archaeology. 5 Units.

Current debates about theory and method. Prerequisite: consent of instructor.

ANTHRO 371. Proposal Writing for Archaeologists. 3 Units.

The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor. Same as: ARCHLGY 371

ANTHRO 372. Urban Ecologies. 5 Units.

At the intersections of urbanism and environmental studies, political ecology, postcolonial theory and the new materialism, new fields are in formation. This seminar explores scholarship that connects cities with countryside through questions of resources and infrastructures. We will consider questions of inequality, access and community as well as unexpected urban ecologies.

ANTHRO 373. Things: An Archaeology of the Relationships Between Humans and Things. 5 Units.

This course examines a variety of approaches that claim to explore the relationships between humans and things. Some of the approaches include Marx and material culture studies; Heidegger; cognitive and phenomenological; Actor Network Theory. But there is a need also to examine behavioral and ecological and Darwinian approaches. Many of these approaches do not adequately deal with the physicality of things as objects and there is a need to seek a way to incorporate such aspects of things into social theory. Prerequisite: graduate standing or consent of instructor.

ANTHRO 374. Archaeology of Colonialism/Postcolonialisms. 5 Units.

Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and and subaltern, postcolonial, and transnational feminist/queer theory. Prerequisite: consent of instructor.

ANTHRO 375. Archaeology and Globalism. 4-5 Units.

The emergence of archaeology as a discipline in the context of the rise of the nation state. Global economies and other issues have created a new context for archaeology. How are archaeology and heritage responding? The idea of world heritage. The impact of postcolonialism. The commodification of the past: the past as theme park, as travel tourism or nostalgia, as exotic and other. Conflict between uses of the past for identity and as theme park; between heritage and resource or play. The impact of the Goddess, New Age, and other movements. Archaeology and human rights issues including forensic archaeology. Prerequisite: consent of instructor.

ANTHRO 376. Archaeology: The Emergence of a Discipline. 5 Units.

This course explores the key thinkers and practitioners who have founded the discipline of archaeology. Reaching back into the nineteenth century, the course examines in depth the key figures, their preoccupations and projects that shaped the way that archaeology grew through the 20th and into the 21st century. Global in scope, the emphasis will be on field projects and practical problems that stimulated the intellectual development of archaeology as an independent discipline closely tied to geology, history, anthropology, and the natural sciences. Prerequisite: consent of instructor.

ANTHRO 377. The Mystery of Ministry: What is Authority?. 5 Units.

Why do people obey others in the absence of explicit coercion? Why do people accept some leaders but not others? What does it mean to say something or someone has authority? Is authority personal or institutional? Why do people believe in the Pope? Why do people believe some objects have power and others not? Is charisma only a perfume? Can institutions wield charismatic power? These are questions that from Max Weber onwards classical and contemporary anthropologists and sociologists continue to ask. In returning to (Weberian) questions of authority and legitimacy this course takes a question posed by Bourdieu: what is the mystery of ministry? We will apply the question of authority broadly, not just in the explicitly political realm but also to understand, for example, how (culturally specific) charismatic and sacral authority can be fashioned through persons and through objects (eg. relics). The course will thus move between interrelated religious, moral, and political notions to try to generate some critical questions for how a contemporary anthropology that explicitly (rather than implicitly) re-addresses authority might look.

ANTHRO 378. Dynamics of Coupled Human-Natural Systems. 5 Units.

This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as "coupled human-natural systems." We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a "human" vs. a "natural" system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

ANTHRO 379. Empathy Lab. 5 Units.

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.
Same as: TAPS 284, TAPS 384

ANTHRO 380. Practice and Performance: Bourdieu, Butler, Giddens, de Certeau. 5 Units.

Poststructuralist theories of iteration and mimesis used by social scientists to negotiate the tension between social structure and social practice: Giddens' structuration theory; Bourdieu's practice theory; Butler's theories of gender performativity; and de Certeau's analysis of tactics and strategies. Ethnographic and archaeological case studies that employ methodologies inspired by these approaches. Intersections and contradictions between these theorists' work; their use in anthropological practice. Issues of gender, sexuality, and ethnicity. Prerequisite: consent of instructor.

ANTHRO 381. Archaeology of Violence. 5 Units.

This advanced graduate seminar reflects on archaeological research on violence in relation to readings in philosophy, political anthropology, cultural studies, and gender and ethnic studies. While some forensic approaches are discussed, the emphasis is more on structural and collective violence and the role of violence in the formation of the archaeological record.

ANTHRO 382. Advanced Topics in Medical Anthropology. 5 Units.

Graduate seminar. The history and theories of medical anthropology. Focus is on medical anthropology's transformations in the 20th century: how medical anthropology has emerged as a field of inquiry, grown in dialogue with other areas of scholarship, and come to offer a unique array of theoretical positions and modes of ethnographic engagement. Emphasis is on debates within interpretive and critical medical anthropology, and how an understanding of these debates may be used to assess contemporary works within the field. Prerequisite: consent of instructor.

ANTHRO 384. Sacrifice, Ethics and Modern Convictions. 5 Units.

This course is an investigation of how notions of sacrifice, of ethics and conviction are embedded in both ordinary and extraordinary practices in our contemporary world. The key question is how the modern global condition has transformed the way in which it is possible to hold convictions, and to frame forms of ethical conduct, be they religious or secular. We will ask if convictions based on choice or moral outrage differ from convictions based on inhabiting and reversing stigmatized racial and social identities. Rather than maintaining a categorical distinction between `the religious' and `the secular', we will focus on how groups and individuals have attached themselves passionately to ideas, abstractions, ritual communities or ethical frames. When do certain attachments appear necessary and compelling, almost beyond choice? How does one forge a sense of ethics and ethical conduct through social media rather than face-to-face contact? Students will acquire a grounded and guided understanding of philosophical and anthropological theories of ideas of ethics, sacrifice, and political conviction as well as explore these ideas through contemporary ethnographic contexts. Readings will be philosophical, historical and ethnographic; drawing on original texts and ethnographic accounts from Europe, Asia and Africa.

ANTHRO 386. Epidemics, Chronics, and Contagion. 5 Units.

The seminar will take as its focal point the question: how do institutional and personal responses to disease result from judgements about threat level? Through a series of contemporary monographs on obesity, HIV/AIDS, avian flu, vaccination, cancer, and other health issues, this class will examine ways of understanding broader ideologies of health in the United States.

ANTHRO 387. Strangers and Intimate: Exploring Civility. 5 Units.

How do we encounter and read each other in public and private spaces? How are these very spaces historically constituted around such distinctions and manners of reading? What do these questions look like in dense heterogeneous cities with differentiated class, caste and ethnic communities? How might we consider the differentiation between private and public in different ethnographic contexts? What kinds of sociality might emerge from these kinds of encounters? This course will explore these questions through social theory and ethnographies. There are two major sets of concepts that will be explored and interrogated. The first is that deriving from the essays of the Georg Simmel such as *quest*; *The Facequest*; and *quest*; *The Strangerquest*; which explore the new forms of sociality enabled by seemingly anonymous city life, which in turn have been interpreted very differently by Zygmunt Bauman and James Siegel to understand the place of continually excluded outsiders and the high stakes of reading each other. The other is the strand of work on the emergence of the public sphere such as the work of Jurgen Habermas, Richard Sennet, Michael Warner, Nancy Fraser etc. While much of the social theory on the public, the stranger and civility emerge from studies of Euro-American politics and city spaces, in this course we will move some of these discussion into considering these questions in the global south and the kinds of sociality (including their historicity) that make up the dense fabric of ordinary life. How does this work out in contexts where we take into account intense social differentiation by class, race, and communitarian divisions? This could be asked of the historical and social context addressed in these theories as well as from the postcolonial world. The course will attempt to understand whether such theorizations can indeed be re-rooted and re-imagined or whether ethnographic and historical difference re-route them instead. In doing so we will also bring theories of the private and the intimate to bear on questions of the public and the stranger.

ANTHRO 388. Anthropology of the Extraordinary: Ontologies and Phenomenologies. 5 Units.

In the last few years anthropology has taken what has come to be called an *quest*; *ontological turnquest*; in which the ways an object or experience is felt to be real is explored from different perspectives. Often this involves exploring phenomena (like ghosts, talking trees and humans who become jaguars) which could be called *quest*; *extraordinaryquest*; and which challenge secular, western expectations of what is real. There has also been a *quest*; *phenomenological turnquest*; in which anthropologists have become interested in classifying and categorizing human experience in particular detail. The class will explore the scholarship in this area. Readings will include an introduction to classic philosophical writing (William James, Karl Jaspers, Martin Heidegger) and more recent work such as David Hufford, *The Terror that Comes in the Night*; Eduardo Kohn *How Forests Think*; Morton Pederson *Not Quite Shamans*; Ann Taves *Religious Experience Reconsidered*; Annemarie Mol, *The Body Multiple*; Roger Lohmann *Dream Travelers*, and others.

ANTHRO 389. Ethnographic Writing and Beyond. 3-5 Units.

In this class we analyze anthropological writing that has examined and pushed the bounds of the discipline. We will focus on how writing itself is a practice in anthropology, and how styles of writing impact argument, affect, and ultimately, the discipline itself. Students will also work in different genres of writing to better understand writing as a craft, a discipline, and a means of communication.

ANTHRO 400. Dissertation Writers Seminar. 1-3 Unit.

Required of fifth-year Ph.D. students returning from dissertation field research and in the process of writing dissertations and preparing for professional employment. Prerequisite: consent of instructor.

ANTHRO 401A. Qualifying Examination: Topic. 2-5 Units.

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit.

ANTHRO 401B. Qualifying Examination: Area. 2-5 Units.

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit one time.

ANTHRO 440. Teaching Assistantship. 3-5 Units.

Supervised experience as assistant in one undergraduate course.

ANTHRO 441. Master's Research Thesis. 1-15 Unit.

Supervised work for terminal and coterminal master's students writing the master's project in the final quarter of the degree program.

ANTHRO 442. Reading Group. 2-3 Units.

Graduate student reading group on a thematic topic of interest. Intended for first or second-year cohort PhD students. Sections: Liisa Malkki, Sylvia Yanagisako, Thomas Hansen, Paulla Ebron, and Miyako Inoue.

ANTHRO 444. Anthropology Colloquium. 1 Unit.

Department Colloquia Lecture Series. Lectures presented on a variety of anthropological topics. Colloquium is intended for the Department of Anthropology's under graduate majors and graduate students. May be repeated for credit.

ANTHRO 445. Anthropology Brown Bag Series. 1 Unit.

Current topics and trends in cultural/social anthropology, archaeology, and environmental and ecological anthropology. Enrollment in this noon-time series is restricted to the Department of Anthropology Master's students and First and Second-year PhD students.

ANTHRO 446A. Method of Analysis Program in the Social Sciences. 1 Unit.

Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See <http://mapss.stanford.edu>. Same as: COMM 310

ANTHRO 450. Research Apprenticeship. 1-15 Unit.

Supervised work on a research project with an individual faculty member. May be repeated for credit.

ANTHRO 451. Directed Individual Study. 1-15 Unit.

Supervised work for a qualifying paper, examination, or project with an individual faculty member.

ANTHRO 452. Graduate Internship. 3-5 Units.

Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.

ANTHRO 801. TGR Project. 0 Units.

.

ANTHRO 802. TGR Dissertation. 0 Units.

.

Applied Physics Courses

APPPHYS 10AX. The Expressive Vessel: An Immersive Introduction to Clay. 2 Units.

Students will learn to make and to analyze functional ceramic forms, with a focus on wheel-thrown pottery. Studio time will be dedicated to the acquisition and refinement of shaping, marking/glazing and finishing skills; supplementary lectures and discussions will be used to explore the aesthetic range of contemporary studio ceramics as well as major historical traditions in clay. No prior experience is necessary, but instructors will work individually with students at all levels of ability to make this Arts Intensive experience both challenging and rewarding. Each student will produce functional ware (e.g. dishes, cups, vases, et cetera) suitable for use and display and will give a final class presentation on a selection of their most personally expressive work.

APPPHYS 77N. Functional Materials and Devices. 3 Units.

Preference to freshmen. Exploration via case studies how functional materials have been developed and incorporated into modern devices. Particular emphasis is on magnetic and dielectric materials and devices. Recommended: high school physics course including electricity and magnetism.

APPPHYS 79N. Energy Options for the 21st Century. 3 Units.

Preference to freshmen. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy.

APPPHYS 100. The Questions of Clay: Craft, Creativity and Scientific Process. 5 Units.

Description will be forthcoming.

APPPHYS 201. Electrons and Photons. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and special relativity. Interaction of electrons with intense electromagnetic fields from microwaves to x-ray, including electron accelerators, x-ray lasers and synchrotron light sources, attosecond laser-atom interactions, and x-ray matter interactions. Mechanisms of radiation, free-electron lasing, and advanced techniques for generating ultrashort brilliant pulses. Characterization of electronic properties of advanced materials, prospects for single-molecule structure determination using x-ray lasers, and imaging attosecond molecular dynamics.
Same as: PHOTON 201

APPPHYS 203. Atoms, Fields and Photons. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and ordinary differential equations. Structure of single- and multi-electron atoms and molecules, and cold collisions. Phenomenology and quantitative modeling of atoms in strong fields, with modern applications. Introduction to quantum optical theory of atom-photon interactions, including quantum trajectory theory, mechanical effects of light on atoms, and fundamentals of laser spectroscopy and coherent control.

APPPHYS 204. Quantum Materials. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics. Introduction to materials and topics of current interest. Topics include superconductivity, magnetism, charge and spin density waves, frustration, classical and quantum phase transitions, multiferroics, and interfaces. Prerequisite: elementary course in quantum mechanics.

APPPHYS 205. Introduction to Biophysics. 3-4 Units.

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: BIO 126, BIO 226

APPPHYS 206. Dynamical Systems: Linear, Non-Linear, and Stochastic. 4 Units.

Introduction to dynamical systems including linear, nonlinear, stochastic and spatiotemporal models. Emphasis on asymptotic and multi-scale analysis as well as fundamental concepts of stability, bifurcation and oscillation. Prerequisites: linear algebra and unfamiliarity with ordinary and partial differential equations; basic probability.

APPPHYS 207. Laboratory Electronics. 4 Units.

Lecture/lab emphasizing analog and digital electronics for lab research. RC and diode circuits. Transistors. Feedback and operational amplifiers. Active filters and circuits. Pulsed circuits, voltage regulators, and power circuits. Precision circuits, low-noise measurement, and noise reduction techniques. Circuit simulation tools. Analog signal processing techniques and modulation/demodulation. Principles of synchronous detection and applications of lock-in amplifiers. Common laboratory measurements and techniques illustrated via topical applications. Limited enrollment. Prerequisites: undergraduate device and circuit exposure.

APPPHYS 208. Laboratory Electronics. 4 Units.

Lecture/lab emphasizing analog and digital electronics for lab research. Continuation of APPPHYS 207 with emphasis on applications of digital techniques. Combinatorial and synchronous digital circuits. Design using programmable logic. Analog/digital conversion. Microprocessors and real time programming, concepts and methods of digital signal processing techniques. Current lab interface protocols. Techniques commonly used for lab measurements. Development of student lab projects during the last three weeks. Limited enrollment. Prerequisites: undergraduate device and circuit exposure. Recommended: previous enrollment in APPPHYS 207.

APPPHYS 215. Numerical Methods for Physicists and Engineers. 4 Units.

Fundamentals of numerical methods applied to physical systems. Derivatives and integrals; interpolation; quadrature; FFT; singular value decomposition; optimization; linear and nonlinear least squares fitting; error estimation; deterministic and stochastic differential equations; Monte Carlo methods. Lectures will be accompanied by guided project work enabling each student to make rapid progress on a project of relevance to their interests.

APPPHYS 216. X-Ray and VUV Physics. 3 Units.

Research and classical concepts in photon science. Photon-electron interactions; x-ray absorption and Compton scattering. X-ray spectroscopy; EXAFS, SEXAFS, edge structure, magnetic circular dichroism, and linear dichroism. Photoemission spectroscopy and many-electron effects: angle-resolved and integrated photoemission, resonance photoemission, spin-polarized photoemission. Photoelectron diffraction and holography. X-ray interactions with condensed matter: diffraction and scattering. Photon sources: synchrotron, wigglers, and undulators. Photon and electron detectors and analyzers. Prerequisite: familiarity with quantum mechanics.
Same as: PHOTON 216

APPPHYS 217. Estimation and Control Methods for Applied Physics. 4 Units.

Recursive filtering, parameter estimation, and feedback control methods based on linear and nonlinear state-space modeling. Topics in: dynamical systems theory; practical overview of stochastic differential equations; model reduction; and tradeoffs among performance, complexity, and robustness. Numerical implementations in MATLAB. Contemporary applications in systems biology and quantum precision measurement. Prerequisites: linear algebra and ordinary differential equations.

APPPHYS 219. Solid State Physics Problems in Energy Technology. 3 Units.

Technology issues for a secure energy future; role of solid state physics in energy technologies. Topics include the physics principles behind future technologies related to solar energy and solar cells, solid state lighting, superconductivity, solid state fuel cells and batteries, electrical energy storage, materials under extreme condition, nanomaterials.

APPPHYS 220. Applied Electrodynamics. 3 Units.

Techniques for general electrodynamics, illustrated by examples from geophysics, microwave engineering, optical devices, accelerators, antennas, and plasma physics. RF/microwave structure representations, scattering matrices, treatments for periodic systems. Perturbation and variational techniques applied to approximate solutions, fundamentals of numerical techniques. Analysis methods via expansions in terms of natural modes. Introduction to finite element methods via the application of variational techniques. Laboratory experiments including time domain and frequency domain methods. Solutions of inverse electrodynamic problems via perturbation techniques coupled with lab measurements (such as estimation of a physical structure via experimental measurements and formal models). Prerequisites: PHYSICS 121, MATH 106 and MATH 132, or equivalent experience.

APPPHYS 223. Stochastic and Nonlinear Dynamics. 3 Units.

Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics. Same as: BIO 223

APPPHYS 223B. Nonlinear Dynamics: This Side of Chaos. 3 Units.

Linear dynamics, periodic systems, Hamiltonian motion and phase space. The physics of nonlinear motion: thinking in phase space. Perturbation theory, periodic orbits, resonances, stability and instability. Integrability and symplectic integration. The KAM theorem and renormalization description of the transition to chaos. Dissipation and bifurcation. Application of methods to nanoscience, lasers and accelerators, condensed matter physics and biophysics. Prerequisites: differential equations and classical mechanics.

APPPHYS 225. Probability and Quantum Mechanics. 3 Units.

Structure of quantum theory emphasizing states, measurements, and probabilistic modeling. Generalized quantum measurement theory; parallels between classical and quantum probability; conditional expectation in the Schrödinger and Heisenberg pictures; covariance with respect to symmetry groups; reference frames and super-selection rules. Classical versus quantum correlations; nonlocal aspects of quantum probability; axiomatic approaches to interpretation. Prerequisites: undergraduate quantum mechanics, linear algebra, and basic probability and statistics.

APPPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: BIO 132, BIO 232, BIOPHYS 232, GENE 232

APPPHYS 236. Biology by the Numbers. 3 Units.

For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision.

Same as: BIOC 236

APPPHYS 240. From Atom Smashers to X-ray Lasers. 3 Units.

Physics and impact of particle beams and accelerators from their origins up to the present state of the art. Accelerator fundamentals, special topic lectures by expert scientists, laboratory accelerator experiment using state of the art accelerators at SLAC. Prerequisites: Advanced undergraduate courses in Maxwell's equations, special relativity, mathematical physics, and introductory quantum mechanics.

Same as: PHOTON 240

APPPHYS 270. Magnetism and Long Range Order in Solids. 3 Units.

Cooperative effects in solids. Topics include the origin of magnetism in solids, crystal electric field effects and anisotropy, exchange, phase transitions and long-range order, ferromagnetism, antiferromagnetism, metamagnetism, density waves and superconductivity. Emphasis is on archetypal materials. Prerequisite: PHYSICS 172 or MATSCI 209, or equivalent introductory condensed matter physics course.

APPPHYS 272. Solid State Physics. 3 Units.

Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. (Graduate student enrollees will be required to complete additional assignments in a format determined by the instructor.) Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents. Same as APPPHYS 272.

Same as: PHYSICS 172

APPPHYS 273. Solid State Physics II. 3 Units.

Introduction to the many-body aspects of crystalline solids. Second quantization of phonons, anharmonic effects, polaritons, and scattering theory. Second quantization of Fermi fields. Electrons in the Hartree-Fock and random phase approximation; electron screening and plasmons. Magnetic exchange interactions. Electron-phonon interaction in ionic/covalent semiconductors and metals; effective attractive electron-electron interactions, Cooper pairing, and BCS description of the superconducting state. Prerequisite: APPPHYS 272 or PHYSICS 172.

APPPHYS 280. Phenomenology of Superconductors. 3 Units.

Phenomenology of superconductivity viewed as a macroscopic quantum phenomenon. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, the Josephson effect, type I type II superconductivity, and the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation. Introduction to thermal fluctuation effects in superconductors and quantum superconductivity.

APPPHYS 285. Physics of Disordered Systems. 3 Units.

Topics include types of disorder, percolation, localization, glasses and spin glasses, fractals, self-organized criticality, aggregation, gelation, and other random processes leading to disordered media.

APPPHYS 290. Directed Studies in Applied Physics. 1-15 Unit.

Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.

APPPHYS 291. Practical Training. 3 Units.

Opportunity for practical training in industrial labs. Arranged by student with research adviser's approval. Summary of activities required.

APPPHYS 293. Theoretical Neuroscience. 3 Units.

Introduction to fundamental theoretical ideas that provide conceptual insights into how networks of neurons cooperatively mediate important brain functions. Topics include basic mathematical models of single neurons, neuronal computation through feedforward and recurrent network dynamics, principles of associative memory, applications of information theory to early sensory systems, correlations and neural population coding, network plasticity and the self-organization of stimulus selectivity, and supervised and unsupervised learning through multiple mechanisms of synaptic plasticity. Emphasis on developing mathematical and computational skills to analyze complex neural systems. Prerequisites: calculus, linear algebra, and basic probability theory, or consent of instructor.

APPPHYS 294. Cellular Biophysics. 3 Units.

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: BIO 294

APPPHYS 304. Lasers Laboratory. 4 Units.

Theory and practice. Theoretical and descriptive background for lab experiments, detectors and noise, and lasers (helium neon, beams and resonators, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth and tuning, Q-switching and modelocking. Limited enrollment. Prerequisites: EE 236C and EE 332, or consent of instructor.

APPPHYS 305. Advanced Nonlinear Optics Laboratory. 4 Units.

Core concepts and experiments in the nonlinear interaction of laser light with matter. Experiments on second harmonic generation and optical parametric oscillation culminate with assembly and use of an optical frequency comb for student-defined, open-ended experiments. Supercontinuum light generation, carrier-envelope phase stabilization, and metrology and spectroscopy. Prerequisites: APPPHYS 304, or consent of instructor.

APPPHYS 315. Methods in Computational Biology. 3 Units.

Methods of bioinformatics and biomolecular modeling from the standpoint of biophysical chemistry. Methods of genome analysis; cluster analysis, phylogenetic trees, microarrays; protein, RNA and DNA structure and dynamics, structural and functional homology; protein-protein interactions and cellular networks; molecular dynamics methods using massively parallel algorithms.

APPPHYS 324. Introduction to Accelerator Physics. 3 Units.

Physics of particle beams in linear and circular accelerators. Transverse and longitudinal beam dynamics, equilibrium emittances in electron storage rings, high-brightness electron sources, RF acceleration and emittance preservation, bunch compression and associated collective effects, accelerator physics design for x-ray FELs, advanced accelerator concepts.

APPPHYS 325. X-rays: Past, Present and Future. 3 Units.

Introduction to the physics of bright x-ray sources. Topics include: physics and basic properties of short wavelength radiation, X-ray generation via incoherent Compton scattering and High Harmonic Generation (HHG), applications and impact of insertion devices in synchrotron radiation facilities and the development of x-ray free electron lasers. Includes selected laboratory tours of the Linac Coherent Light Source and/or measurements at SLAC. Prerequisite: graduate-level electrodynamics, or consent of instructor.

Same as: PHOTON 325

APPPHYS 345. Advanced Numerical Methods for Data Analysis and Simulation. 3 Units.

Gaussian and unit sphere quadrature, singular value decomposition and principal component analysis, Krylov methods, non-linear fitting and super-resolution, independent component analysis, 3d reconstruction, "shrink-wrap", hidden Markov methods, support vector machines, simulated annealing, molecular dynamics and parallel tempering, Markov state methods, Monte Carlo methods for constrained systems.

APPPHYS 376. Literature of Cavity QED and Cavity Optomechanics. 3 Units.

Cavity quantum electrodynamics and optomechanics in modern quantum optics, photonics and quantum engineering. Review of basic concepts and survey of key literature in seminar format.

APPPHYS 383. Introduction to Atomic Processes. 3 Units.

Atomic spectroscopy, matrix elements using the Coulomb approximation, summary of Racah algebra, oscillator and line strengths, Einstein A coefficients. Radiative processes, Hamiltonian for two- and three-state systems, single- and multi-photon processes, linear and nonlinear susceptibilities, density matrix, brightness, detailed balance, and electromagnetically induced transparency. Inelastic collisions in the impact approximation, interaction potentials, Landau-Zener formulation. Continuum processes, Saha equilibrium, autoionization, and recombination.

APPPHYS 387. Quantum Optics and Measurements. 3 Units.

Basic concerns and fundamental postulates in quantum theory of measurements. Quantum non-demolition measurements, nonlinear measurements and continuous measurements. Non-local quantum correlation and Bell's inequality. Generation, detection, and application of single photons and entangled photon-pairs. Reservoir theory of an open dissipative system. Laser phase transition versus BCS transition in microcavities.

APPPHYS 390. Dissertation Research. 1-15 Unit.

.

APPPHYS 392. Topics in Molecular Biophysics: Biophysics of Functional RNA. 3 Units.

Survey of methods used to relate RNA sequences to the structure and function of transcribed RNA molecules. Computation of contributions of the counter-ion cloud to the dependence of free energy on conformation of the folded RNA. The relation of structure to function of riboswitches and ribozymes.

APPPHYS 453A. Synchrotron Radiation and Free Electron Lasers: Principles and Applications. 3 Units.

Synchrotron radiation sources for scientific exploration. X-ray FELs for studies of ultrafast processes at the atomic scale. Fundamental concepts in electron and photon beams, bending magnet and undulator radiation, one-dimensional and three-dimensional FEL theory and simulations, self-amplified spontaneous emission, seeding and other improvement schemes, x-ray methodology, techniques and instrumentation for the study of ultrafast phenomena. Course may be repeated when a different course is offered as a Special Topics.

Same as: PHOTON 453A

APPPHYS 470. Condensed Matter Seminar. 1 Unit.

Current research and literature; offered by faculty, students, and outside specialists. May be repeated for credit.

APPPHYS 473B. Topics in Condensed Matter Physics: Quantum Matter Meets Quantum Optics. 3 Units.

Graduate seminar to survey the contemporary literature on emerging topics in light-matter interactions, including novel optical spectroscopy approaches to the study of material properties and exotic optical properties of novel materials.

APPPHYS 483. Optics and Electronics Seminar. 1 Unit.

Current research topics in lasers, quantum electronics, optics, and photonics by faculty, students, and invited outside speakers. May be repeated for credit.

APPPHYS 801. TGR Master's Project. 0 Units.

.

APPPHYS 802. TGR PhD Dissertation. 0 Units.

.

Arabic Language Courses

ARABLANG 1. First-Year Arabic, First Quarter. 5 Units.

(Formerly AMELANG 1A.) One-year sequence designed to develop beginning proficiency, with additional emphasis is on reading and writing standard Arabic.

ARABLANG 1A. Accelerated First-Year Arabic, Part I. 5 Units.

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test or consent of instructor.

ARABLANG 1H. First-Year Arabic for Heritage Learners, First Quarter. 5 Units.

(Formerly AMELANG 1H). For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test or consent of instructor.

ARABLANG 2. First-Year Arabic, Second Quarter. 5 Units.

(Formerly AMELANG 1B.) One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 1.

ARABLANG 2A. Accelerated First-Year Arabic, Part II. 5 Units.

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test, completion of ARABLANG 1A. This course fulfills the University Foreign Language Requirement.

ARABLANG 2H. First-Year Arabic for Heritage Learners, Second Quarter. 5 Units.

(Formerly AMELANG 2H). Continuation of ARABLANG 1H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 1H.

ARABLANG 3. First-Year Arabic, Third Quarter. 5 Units.

(Formerly AMELANG 1C.) Continuation of ARABLANG 2. One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic (*fusha*). Fulfills the University Foreign Language Requirement. Prerequisite: Placement Test, ARABLANG 2.

ARABLANG 3H. Beginning Arabic for Heritage Learners, Third Quarter. 5 Units.

Continuation of ARABLANG 2H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: ARABLANG 2H.

ARABLANG 5. Intensive first year Arabic. 15 Units.

Same as ARABLANG 1, 2, 3 combined. One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic.

ARABLANG 10. Arabic Calligraphy. 2 Units.

(Formerly AMELANG 30). Calligraphy requires no linguistic background, stipulates no artistic skill for one to appreciate it and is the supreme art form of the Islamic world. Other Islamic arts (architecture, metal work, ceramics, glass, and textiles) draw on calligraphy as their principal source of embellishment. Interactive lecture-workshop sketches its development and illustrates the forms of Arabic calligraphy in use today.

ARABLANG 14A. Short Stories and Poetry from the Arab World - Part I. 2-4 Units.

(Formerly AMELANG 34). Short Stories and Poetry from the Arab World - Selections of short stories and poetry written by contemporary Arab writers. Discussion and analysis of representative samples spanning a wide spectrum of the Arab world, e.g., Egypt, Iraq, Lebanon, Libya, Morocco, Palestine, Sudan, Syria, Tunisia, and Yemen. The creative impulses and cultural symbols involved in the interpretation of each work. The stories and poetry illustrate the rich diversity of the Arab world and accentuate the various cultural issues and forces influencing Arab writers. Prerequisite: completion of 2nd year Arabic or equivalent.

ARABLANG 21. Second-Year Arabic, First Quarter. 5 Units.

(Formerly AMELANG 11A.) One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 3.

ARABLANG 21A. Accelerated Second-Year Arabic, Part I. 5 Units.

Completes second-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test, ARABLANG 2A.

ARABLANG 21H. Second-Year Arabic for Heritage Learners, First Quarter. 5 Units.

(Formerly AMELANG 11H). For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 3H.

ARABLANG 22. Second-Year Arabic, Second Quarter. 5 Units.

(Formerly AMELANG 11B.) Continuation of ARABLANG 21. One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 21.

ARABLANG 22A. Accelerated second-Year Arabic, Part II. 5 Units.

Completes Second-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test, ARABLANG 22A.

ARABLANG 22H. Second-Year Arabic for Heritage Learners, Second Quarter. 5 Units.

(Formerly AMELANG 12H). Continuation of ARABLANG 21H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 21H.

ARABLANG 23. Second-Year Arabic, Third Quarter. 5 Units.

(Formerly AMELANG 11C.) Continuation of ARABLANG 22. One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 22.

ARABLANG 23H. Second-Year Arabic for Heritage Learners, Third Quarter. 5 Units.

(Formerly AMELANG 13H). Continuation of ARABLANG 22H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 23H.

ARABLANG 25. Intensive 2nd year Arabic. 15 Units.

Same as ARABLANG 21, 22, 23 combined. Prerequisite: one year of college-level Arabic or equivalent or completion of ARABLANG 3. Stanford graduate students restricted to 9 units may take ARABLANG 225 for a total of 9 units.

ARABLANG 125A. Colloquial Arabic, First Quarter. 2-4 Units.

(Formerly AMELANG 25A.) Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic.

ARABLANG 125B. Colloquial Arabic, Second Quarter. 2-4 Units.

(Formerly AMELANG 25B.) Continuation of ARABLANG 125A. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: ARABLANG 125A.

ARABLANG 125C. Colloquial Arabic, Third Quarter. 2-4 Units.

(Formerly AMELANG 25C.) Continuation of ARABLANG 125B. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: ARABLANG 125B.

ARABLANG 126A. Media Arabic, First Quarter. 2-4 Units.

(Formerly AMELANG 26A.) Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: 2 years of Arabic.

ARABLANG 126B. Media Arabic, Second Quarter. 2-4 Units.

(Formerly AMELANG 26B.) Continuation of ARABLANG 126A. Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: ARABLANG 126A.

ARABLANG 126C. Media Arabic, Third Quarter. 2-4 Units.

(Formerly AMELANG 26C.) Continuation of ARABLANG 126B. Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: ARABLANG 126B.

ARABLANG 127. Intermediate to Advanced Conversation. 2-3 Units.

Students develop communication skills (listening and speaking) in Arabic while discussing real-life issues, current events, and cultural topics. Pronunciation, vocabulary development, and group discussion skills are stressed. May be taken concurrently with other Arabic courses. Prerequisite: Completion of First-Year Arabic.

ARABLANG 131. Third-Year Arabic, First Quarter. 5 Units.

(Formerly AMELANG 21A.) Continuation of ARABLANG 23. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARABLANG 23.

ARABLANG 131H. Third-Year Arabic for Heritage Learners, First Quarter. 5 Units.

Continuation of ARABLANG 23H. Prerequisite ARABLANG 23H.

ARABLANG 132. Third-Year Arabic, Second Quarter. 5 Units.

(Formerly AMELANG 21B.) Continuation of ARABLANG 131. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARABLANG 131.

ARABLANG 132H. Third-Year Arabic for Heritage Learners, Second Quarter. 5 Units.

Continuation of ARABLANG 131H. Prerequisite: ARABLANG 131H.

ARABLANG 133. Third-Year Arabic, Third Quarter. 5 Units.

(Formerly AMELANG 21C.) Continuation of ARABLANG 132. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARABLANG 132.

ARABLANG 133H. Third-Year Arabic for Heritage Learners, Third Quarter. 5 Units.

Continuation of ARABLANG 132H. Prerequisite: ARABLANG 132H.

ARABLANG 141. Fourth-Year Arabic, First Quarter. 3-4 Units.

(Formerly AMELANG 23A.) Prerequisite: three years of Arabic.

ARABLANG 142. Fourth-Year Arabic, Second Quarter. 3-4 Units.

(Formerly AMELANG 23B.) Continuation of ARABLANG 141. Prerequisite: ARABLANG 141.

ARABLANG 143. Fourth-Year Arabic, Third Quarter. 3-4 Units.

(Formerly AMELANG 23C.) Continuation of ARABLANG 142. Prerequisite ARABLANG 142.

ARABLANG 225. Intensive Second-Year Arabic for Graduate Students. 6-9 Units.

Equivalent to ARABLANG 21, 22, 23 combined or ARABLANG 25. Prerequisite one year of College Arabic or equivalent or completion of ARABLANG 3. Stanford graduate students restricted to 9 units may take ARABLANG 225 for a total of 9 units.

ARABLANG 297. Directed Reading. 1-5 Unit.**ARABLANG 394. Graduate Studies in Arabic Conversation. 1-3 Unit.**

Prerequisite: Consent of Instructor.

ARABLANG 395. Graduate Studies in Arabic. 1-5 Unit.

Prerequisite: Consent of instructor.

Archaeology Courses

ARCHLGY 1. Introduction to Prehistoric Archeology. 3-5 Units.

Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.

Same as: ANTHRO 3

ARCHLGY 10. The Archaeology of Home. 3-5 Units.

Homes evoke powerful emotions about place and also highlight the dynamic and complex nature of people, their relationships, and the broader society they live in. Focus on the ways that material traces from the past shed light on the diversity of domestic life, which includes household organization, economic strategies, diet and status, rituals, and identity.

Archaeological case studies to see how archaeologists identify reoccurring patterns in material culture found in homes or domestic dwellings to reconstruct household patterns and social relations.

Same as: ANTHRO 10A

ARCHLGY 12. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.

Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.

ARCHLGY 13. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography.

Same as: ANTHRO 13A, HISTORY 7E, HISTORY 107E

ARCHLGY 34. Animals and Us. 5 Units.

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of 'animals as social actors' is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 34

ARCHLGY 42. Pompeii. 3-5 Units.

(Formerly CLASSART 42 and CLASSGEN 60.) The Roman town of Pompeii, buried by the eruption of Mt. Vesuvius in 79 C.E., provides information about the art and archaeology of ancient social life, urban technology and production, and ancient spatial patterns and experience. Its fame illustrates modern relationships to the ancient past, from Pompeii's importance on the Grand Tour, to plaster casts of vaporized bodies, to debates about reconstruction, preservation, and archaeological methods.

ARCHLGY 51. Introduction to the Archaeology of Greece. 3-5 Units.

An introduction to the archaeology of ancient Greece, from the first city states through the cultural achievements of classical Athens to the conquest by Rome.

Same as: CLASSICS 51

ARCHLGY 64. Cultural Heritage and Human Rights. 1 Unit.

This interdisciplinary research workshop will critically engage the issue of the growing currency of human rights discourse within cultural heritage. Epistemological and practical areas of tension between rights discourse and cultural discourse will be surveyed within the context of current global challenges facing heritage practice, conservation and archaeology. Topics will include the inequities of cultural recognition between North-South globalizations, questions of cultural property and rights, the role of tourism, and the impact of environmental conservation discourse on cultural rights.

Same as: ARCHLGY 164

ARCHLGY 81. Introduction to Roman Archaeology. 3-5 Units.

(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.

Same as: CLASSICS 52

ARCHLGY 97. Archaeology Internship. 1-10 Unit.

Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, museums or government agency. May be repeated for credit. Prior instructor consent needed.

ARCHLGY 98B. Digital Methods in Archaeology. 3-5 Units.

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 98B, ANTHRO 298B

ARCHLGY 99A. Historical Archaeology in the Archive, Lab, and Underground: Methods. 5 Units.

The practice of historical archaeology through methodologies including archival research, oral history, material culture analysis, and archaeological excavation. Students use these methods to analyze the history and archaeology of a local park, the Thornewood Open Space Preserve.

ARCHLGY 100. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ANTHRO 201B, ARCHLGY 200

ARCHLGY 101. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3-5 Units.

This interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples. Using an innovative combination of online lectures by Stanford faculty and students, and recorded interviews with Indigenous leaders, artists, performers, scholars and museum professionals, the seminar will explore and problematize: historic and contemporary understandings of "Indigenous cultural heritage" and the impact of colonialism, urbanization and other forces on Indigenous identity and cultural heritage; current and potential domestic and international legal and non-legal frameworks for Indigenous cultural heritage protection and repatriation; past and present museum approaches to Indigenous peoples and their cultural material; and optimal methods of resolving repatriation disputes. While the seminar will cover primarily the situation of Indigenous peoples in North America, comparisons will be drawn with other regions of the globe. The on-campus component of the seminar will involve directed discussions of the online content, the online forum, assigned readings and short writing assignments. Students can choose between a final exam, paper or video project. Lunch is provided.

Same as: ANTHRO 102C, ARCHLGY 202, CSRE 102, NATIVEAM 102

ARCHLGY 102. Archaeological Methods. 5 Units.

Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.

Same as: ANTHRO 91A

ARCHLGY 102B. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 106, ANTHRO 206A

ARCHLGY 103. History of Archaeological Thought. 5 Units.

Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.

ARCHLGY 104C. The Archaeology of Ancient China. 5 Units.

Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.

Same as: ARCHLGY 304C

ARCHLGY 105. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture.

Same as: ANTHRO 105B, ANTHRO 205B

ARCHLGY 106A. Museums and Collections. 5 Units.

Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.

Same as: ARCHLGY 306A

ARCHLGY 107A. Archaeology as a Profession. 5 Units.

Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.

Same as: ANTHRO 101A

ARCHLGY 108E. Catalhoyuk and Neolithic Archaeology. 3 Units.

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

Same as: ANTHRO 108E

ARCHLGY 111. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

Same as: CHINGEN 141, CHINGEN 241

ARCHLGY 111B. Muwékma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwékma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwékma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwékma, and the fight for acknowledgement of Muwékma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwékma.

Same as: ANTHRO 111B, NATIVEAM 111B

ARCHLGY 113B. Religious Practices in Archaeological Cultures. 5 Units.

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 113B, ANTHRO 213B

ARCHLGY 115. The Social life of Human Bones. 3-5 Units.

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 115, ANTHRO 215

ARCHLGY 118. Engineering the Roman Empire. 4-5 Units.

(Formerly CLASSART 117.) Roman monuments and monumental space were designed to impress. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from arches, columns and domes to road networks, machines and landscape modification, we investigate not only the materials, methods, and knowledge behind Roman architectural innovation, but the communication of imperial messages through designed space.

Same as: CLASSICS 168

ARCHLGY 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the hands-on component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 119, ANTHRO 219

ARCHLGY 124. Archaeology of Food: production, consumption and ritual. 3-5 Units.

This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.

Same as: ARCHLGY 224

ARCHLGY 125. ARCHAEOLOGICAL FIELD SURVEY METHODS. 3 Units.

Practicum applying a variety of survey techniques to discover, map, and record archaeological sites. Basic cartographic skills for archaeologists and an introduction to GIS tools, GPS instruments, and geophysical techniques. Participants should be able to walk 3 - 4 miles over uneven terrain or make special arrangements with the instructor for transportation.

ARCHLGY 126. Archaeobotany. 5 Units.

Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.

Same as: ARCHLGY 226

ARCHLGY 127. Introduction to bioarchaeological Method and Theory. 3-5 Units.

This course deals with the skeletal biology of past populations, covering both the theoretical approaches and methods used in the study of skeletal and dental remains. Issues surrounding the reconstruction of the individual and population, which include age, sex and other paleodemographic factors, will be explored. The health and disease of teeth and bones, and the biomechanical and chemical analyses of bone will also be explored to illustrate how the variety of methods available to bioarchaeologists can be used to reconstruct past lifeways. While this course will be of primary interest to students interested in skeletal biology and archaeology, it is not exclusive to those pursuing careers in biological anthropology. The emphasis is on critical analysis, research skills, and communication skills that can be useful to students pursuing careers in other sub-disciplines of anthropology, laboratory research, or other lateral health-related fields. Required readings will be selected from current literature, and in some classes there will be practical material/exercises so that students can learn some of these techniques. The class is intended to be an interactive learning process in discussion format, and students are required to take an active part in class along with lectures.

Same as: ARCHLGY 227

ARCHLGY 132. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice.

Same as: ANTHRO 332A, ARCHLGY 232, ARCHLGY 332

ARCHLGY 134. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black boxquest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum culturesquest;: representations of iquest;selfquest; and iquest;otherquest; within museums and institutional cultures of the museum world itself.

Same as: AMSTUD 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214, NATIVEAM 134

ARCHLGY 135. Constructing National History in East Asian Archaeology. 3-5 Units.

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 235, CHINGEN 118, CHINGEN 218

ARCHLGY 137. Ethnographic Archaeologies. 4-5 Units.

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

Same as: ANTHRO 140A, ANTHRO 240A

ARCHLGY 139. The Aegean in the Neolithic and Bronze Age. 3-5 Units.

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a `state-likequest; `palatialquest; society. It will draw on the regionquest; wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 115A, ANTHRO 215A, ARCHLGY 239

ARCHLGY 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.

This course provides an introductory survey of Africaquest;s past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent `without historyquest; by highlighting the continentquest;s vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse.

Same as: AFRICAST 139A, ANTHRO 139A

ARCHLGY 140. Post-Socialist Heritages: memorialisation, past mastering and nostalgia in Eurasia. 3-5 Units.

The post-Soviet story is far from resolved! While national identities and geopolitical alliances are being (re)negotiated across Eurasia, unresolved atrocities continue to reopen old wounds. Within this process the past is skillfully embraced to support and sustain conflicting political discourses. Drawing on a variety of highly topical case studies this course will explore the main dynamics and historically entrenched structures that define how the past plays out in the present since the disintegration of the Soviet Empire.

Same as: ARCHLGY 240, REES 240

ARCHLGY 142. Lost and found: Roman Coinage. 4-5 Units.

New trends in Roman numismatics (from the late Republic to the early Empire, 3rd-c. BCE-1st-c. CE). Archaeology from coins. Barter, money, and coinage. The introduction of coinage in Rome and the provinces. Making money (coin production), using money (monetary, non-monetary and ritual uses), losing money (coin circulation, hoards, single finds): contextual interpretations. Monetary systems: coins from Rome and coins from the provinces. Coinage and identity. False coinage.

Same as: ARCHLGY 242, CLASSART 232

ARCHLGY 143. Classical Archaeology Today: Ethical Issues of Excavation, Ownership, and Display. 3-5 Units.

(Formerly CLASSART 143.) While Classical archaeology engages with material remains from the Greco-Roman past, it is embedded within and inseparable from contemporary practice. Through an examination of case studies, legal statutes, professional codes, and disciplinary practices, this seminar discusses ethical dilemmas raised by Classical archaeology in the 21st century. We will focus on broad issues ranging from ownership, looting, reconstruction, and collecting to nationalism, religion, tourism, and media, with an eye toward defining ethical iquest;best practicesquest; for Classical archaeology.

ARCHLGY 145. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-4 Units.

(Formerly CLASSART 145.) Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era.

At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.

Same as: CLASSICS 154

ARCHLGY 148. Ceramic Analysis for Archaeologists. 3-5 Units.

The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar.

Same as: ARCHLGY 248

ARCHLGY 151. Ten Things: An Archaeology of Design. 3 Units.

(Formerly CLASSART 113/213.) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgwood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

Same as: CLASSICS 151

ARCHLGY 153. Ancient Urbanism. 5 Units.

(Formerly CLASSART 112/212.) Archaeology of Greek, Roman and early Islamic cities and urbanism in the Mediterranean and western Asia. Comparison and contrast of the shaping role of religion and politics; definitions of public and private space, monumental buildings, houses, streets, infrastructure. Special themes are city and country connections; the problems of giant cities; cities in the longue dureacute;e. Case studies include Athens, Olynthos, Rome, Pompeii, Constantinople, Damascus and Cairo.

Same as: CLASSICS 153, URBANST 119

ARCHLGY 164. Cultural Heritage and Human Rights. 1 Unit.

This interdisciplinary research workshop will critically engage the issue of the growing currency of human rights discourse within cultural heritage. Epistemological and practical areas of tension between rights discourse and cultural discourse will be surveyed within the context of current global challenges facing heritage practice, conservation and archaeology. Topics will include the inequities of cultural recognition between North-South globalizations, questions of cultural property and rights, the role of tourism, and the impact of environmental conservation discourse on cultural rights.

Same as: ARCHLGY 64

ARCHLGY 169. Archaeology of Britannia. 3-4 Units.

Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.

Same as: CLASSICS 169

ARCHLGY 190. Archaeology Directed Reading/Independent Study. 1-5 Unit.

.

ARCHLGY 195. Independent Study/Research. 1-5 Unit.

Students conducting independent study and or research with archaeology faculty members.

ARCHLGY 199. Honors Independent Study. 5-6 Units.

Independent study with honors faculty adviser.

ARCHLGY 200. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ANTHRO 201B, ARCHLGY 100

ARCHLGY 202. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3-5 Units.

This interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples. Using an innovative combination of online lectures by Stanford faculty and students, and recorded interviews with Indigenous leaders, artists, performers, scholars and museum professionals, the seminar will explore and problematize: historic and contemporary understandings of "Indigenous cultural heritage" and the impact of colonialism, urbanization and other forces on Indigenous identity and cultural heritage; current and potential domestic and international legal and non-legal frameworks for Indigenous cultural heritage protection and repatriation; past and present museum approaches to Indigenous peoples and their cultural material; and optimal methods of resolving repatriation disputes. While the seminar will cover primarily the situation of Indigenous peoples in North America, comparisons will be drawn with other regions of the globe. The on-campus component of the seminar will involve directed discussions of the online content, the online forum, assigned readings and short writing assignments. Students can choose between a final exam, paper or video project. Lunch is provided. Same as: ANTHRO 102C, ARCHLGY 101, CSRE 102, NATIVEAM 102

ARCHLGY 222. Pottery Analysis for Archaeologists: The Social and Material Dimensions of Ceramic Containers. 5 Units.

Due to the dominance of pottery in the archaeological record for the past 10,000 years, its analysis has attracted a great deal of research attention, making it imperative that all archaeologists have at least a working knowledge of ceramics. This course provides classroom and laboratory perspectives for understanding the information about ancient society, economy, and culture that can be plausibly derived from pottery and the visual, structural, and compositional methods that best help obtain that information.

ARCHLGY 224. Archaeology of Food: production, consumption and ritual. 3-5 Units.

This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.

Same as: ARCHLGY 124

ARCHLGY 226. Archaeobotany. 5 Units.

Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.

Same as: ARCHLGY 126

ARCHLGY 227. Introduction to bioarchaeological Method and Theory. 3-5 Units.

This course deals with the skeletal biology of past populations, covering both the theoretical approaches and methods used in the study of skeletal and dental remains. Issues surrounding the reconstruction of the individual and population, which include age, sex and other paleodemographic factors, will be explored. The health and disease of teeth and bones, and the biomechanical and chemical analyses of bone will also be explored to illustrate how the variety of methods available to bioarchaeologists can be used to reconstruct past lifeways. While this course will be of primary interest to students interested in skeletal biology and archaeology, it is not exclusive to those pursuing careers in biological anthropology. The emphasis is on critical analysis, research skills, and communication skills that can be useful to students pursuing careers in other sub-disciplines of anthropology, laboratory research, or other lateral health-related fields. Required readings will be selected from current literature, and in some classes there will be practical material/exercises so that students can learn some of these techniques. The class is intended to be an interactive learning process in discussion format, and students are required to take an active part in class along with lectures.

Same as: ARCHLGY 127

ARCHLGY 232. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice.

Same as: ANTHRO 332A, ARCHLGY 132, ARCHLGY 332

ARCHLGY 234. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the black box of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores museum cultures: representations of self and other; within museums and institutional cultures of the museum world itself.

Same as: AMSTUD 134, ARCHLGY 134, ARTHIST 284B, CSRE 134, EDUC 214, NATIVEAM 134

ARCHLGY 235. Constructing National History in East Asian Archaeology. 3-5 Units.

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 135, CHINGEN 118, CHINGEN 218

ARCHLGY 239. The Aegean in the Neolithic and Bronze Age. 3-5 Units.

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a "state-like" society. It will draw on the regional wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 115A, ANTHRO 215A, ARCHLGY 139

ARCHLGY 240. Post-Socialist Heritages: memorialisation, past mastering and nostalgia in Eurasia. 3-5 Units.

The post-Soviet story is far from resolved! While national identities and geopolitical alliances are being (re)negotiated across Eurasia, unresolved atrocities continue to reopen old wounds. Within this process the past is skillfully embraced to support and sustain conflicting political discourses. Drawing on a variety of highly topical case studies this course will explore the main dynamics and historically entrenched structures that define how the past plays out in the present since the disintegration of the Soviet Empire.

Same as: ARCHLGY 140, REES 240

ARCHLGY 242. Lost and found: Roman Coinage. 4-5 Units.

New trends in Roman numismatics (from the late Republic to the early Empire, 3rd-c. BCE-1st-c. CE). Archaeology from coins. Barter, money, and coinage. The introduction of coinage in Rome and the provinces. Making money (coin production), using money (monetary, non-monetary and ritual uses), losing money (coin circulation, hoards, single finds): contextual interpretations. Monetary systems: coins from Rome and coins from the provinces. Coinage and identity. False coinage.

Same as: ARCHLGY 142, CLASSART 232

ARCHLGY 248. Ceramic Analysis for Archaeologists. 3-5 Units.

The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar.

Same as: ARCHLGY 148

ARCHLGY 270. Heritage Ecologies: Heritage, Culture, and the Environment. 3-5 Units.

Conceptual and theoretical approaches to examine cultural and natural heritage from an interdisciplinary perspective. We ask: What are heritage ecologies? How are natural and cultural heritages interpreted, managed, and defined? Do heritage managers privilege nature and conservation over cultural heritage? This course uses archaeological data, ethnographic methods, archival analysis, and guest lectures to examine case studies representing key issues including conservation, indigenous rights, cultural landscapes, heritage in conflict, international heritage policy, and the use of expert knowledge in heritage contexts.

ARCHLGY 299. INDEPENDENT STUDY/RESEARCH. 1-5 Unit. nnINDEPENDENT STUDY/RESEARCH.**ARCHLGY 304C. The Archaeology of Ancient China. 5 Units.**

Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.

Same as: ARCHLGY 104C

ARCHLGY 306A. Museums and Collections. 5 Units.

Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.

Same as: ARCHLGY 106A

ARCHLGY 319. Archaeological Theory: Graeco-Roman Antiquity. 3-5 Units.

The ways that archaeology is a medium of understanding Classical antiquity. We will selectively and deeply review themes in archaeological theory as they inform the academic study of Graeco-Roman antiquity. The aim is not to acquire comprehensive coverage of contemporary archaeological theory, but to focus on concepts, methodologies and practices that have a strong connection with agendas in contemporary Classics, and to explore interdisciplinary links through social and cultural theory and critique, performance studies, science studies (including the history and sociology of technology), design studies and approaches to material culture.

ARCHLGY 327. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.

Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world.

Same as: CLASSICS 352

ARCHLGY 332. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice.

Same as: ANTHRO 332A, ARCHLGY 132, ARCHLGY 232

ARCHLGY 335. Models in Archaeology. 3-5 Units.

(Formerly CLASSART 335.) This seminar explores how we can use archaeological sources to build models of Graeco-Roman antiquity. A model is defined as a systematic and schematic representation of the way the ancient world worked, and particularly by using social and cultural theory. We will take in classic works of Marx and Weber, as well as contemporary approaches. A key objective is for class members to connect this most important aspect of social science to their own research project.

ARCHLGY 342. Archaeology of Roman Slavery. 4-5 Units.

(Formerly CLASSART 342.) The archaeological study of Roman slavery has been severely limited by a focus on identifying the traces of slaves in the material record. This seminar explores a range of newer and more broadly conceived approaches to understanding slavery and slaves' experiences, including spatial analysis, bioarchaeology, epigraphy, visual imagery, and comparative archaeologies of slavery. Students will learn about the current state of research, work with different kinds of evidence and a range of methodologies, and develop original research projects of their own.

ARCHLGY 353. Archaeology: Post-Humanist Agendas. 3-5 Units.

How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.

Same as: CLASSICS 353

ARCHLGY 367. Mediterranean Networks. 3-5 Units.

The the ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functioned, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches--both broad theoretical network paradigms and specific network science methodologies--as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.

Same as: CLASSICS 367

ARCHLGY 371. Proposal Writing for Archaeologists. 3 Units.

The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

Same as: ANTHRO 371

Art History Courses

ARTHIST 1A. Introduction to the Visual Arts: Prehistoric through Medieval. 5 Units.

A survey of the art and architecture from the cave paintings of Lascaux to the Gothic Cathedrals of France; the material is organized both chronologically and thematically and covers a multiplicity of religions: pagan, Christian, and Islamic.

Same as: CLASSICS 56

ARTHIST 1B. Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present. 5 Units.

This course surveys the history of Western painting from the start of the 14th century to the late 20th century and our own moment. Lectures introduce important artists (Giotto, Rembrandt, Velazquez, Goya, Manet, Matisse, Pollock, and others), and major themes associated with the art of particular periods and cultures. The course emphasizes training students to look closely at - and to write about - works of art.

ARTHIST 2. Asian Arts and Cultures. 5 Units.

An introduction to major monuments, themes, styles, and media of East and South Asian visual arts, in their social, literary, religious, and political contexts. Through close study of primary monuments of architectural, pictorial, and sculptural arts and related texts, this course will explore ritual and mortuary arts; Buddhist arts across Asia; narrative and landscape images; and courtly, urban, monastic, and studio environments for art from Bronze Age to modern eras.

Same as: JAPANGEN 60

ARTHIST 3. Introduction to World Architecture. 5 Units.

This lecture course surveys the history of architecture and urbanism, from the first societies to the present, in Europe, West and East Asia, the Americas, and Africa. The course progresses by case studies of exemplary monuments and cities, and examines the built environment as both cultural artifact and architectural event. It considers the social and political circumstances of architectural invention as well as plumbing the depth of artistic context by which particular formal choices resonate with an established representational culture.

Same as: CLASSICS 54

ARTHIST 10SC. Photography: Truth or Fiction or.... 2 Units.

"All photographs are accurate. None is the truth." Richard Avedon (1923-2004)
The invention of photography inspired the belief that there could be a truthful and objective way to visually record the world. From portraits to travel photographs to documentary, photography has influenced how modern history is understood and remembered. Yet, a photograph is a manipulated image, shaped by the perspective of the photographer and further framed by its printing, presentation, and interpretation. The complex ethical and political issues associated with photography significantly impact how events and moments are recorded by history. Consider, for example, the US government's 18-year ban (ended in 2009) on photographing the flag-draped coffins of America's war dead as their bodies are returned to the United States. What matters most: protecting the privacy of military families or protecting American citizens from the death toll of war? Over the past decade, the number of photographers has increased exponentially, further blurring the boundary between what is truth and what is fiction. Even the concept of "gatekeepers" is obsolete: anyone with a smartphone is armed with a camera and can create their own stories, their own records, and their own truths. Further, the Internet grants nearly universal freedom to document and disseminate images that record, incriminate, illuminate, persuade, enrage, and glorify. In this course, we will examine the ethical parameters of photography and the many ways in which photography contributes to presenting powerful truths, creating compelling fictions, and recontextualizing history.
The course will feature opportunities to work with photographs in the Cantor's collection and to explore the many photographic communities of the Bay Area including extensive field trips to museums, galleries, artists studios, private collections, photo studios, and more. Our discussions will also be informed by course readings. In addition, special sessions covering photographic techniques will familiarize students with the diversity of the medium and hands on experience to create work, if interested. No prior experience required. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

ARTHIST 80N. The Portrait: Identities in Question. 3 Units.

Most of us hold libraries of hundreds or thousands of images: portraits, self-portraits, more or less instantly available posed images of ourselves and others. For most of human history, before the development of portable and digital cameras, portraiture was a much rarer and more deliberate social act and cultural practice, involving special materials and techniques, encounters with expert portraitists or photographers, and established settings for display. What almost all portraits, of whatever time or cultural place, have in common are presentations of social identities, roles, or persona, as well as a potential fascination and power that may be based in our neurological capacities for facial recognition and reading of facial expressions. This introductory seminar will explore many aspects of this basically simple category of thing: images of particular persons. Our point of departure will be from the history of art, focusing on portrait sculptures, paintings, and photographs from many eras and cultures, some of which are among the most studied and discussed of all artistic monuments. We will consider techniques and approaches of portrait making, including the conventions that underlie seemingly realistic portraits, posing, the portrait situation, and portrait genres. Our primary focus will be on the multiple purposes of portraiture, from commemoration, political glorification, and self-fashioning to making claims of social status, cultural role, and personal identity. We will also discuss the changing status of portraiture under modern states of social dislocation, technological change, and psychoanalytic interrogation, and in postmodern conditions of multi-mediated realities and distributed subjectivities. Along the way, we will see that our understandings of portraiture benefits from the approaches and insights of many fields: political and social history, anthropology, neuroscience, and literary studies among others.

ARTHIST 99A. Student Guides at the Cantor Center for the Visual Arts. 2 Units.

Open to all Stanford students. Public speaking, inquiry methods, group dynamics, theme development, and art-related vocabulary. Introduction to museum administration; art registration, preparation and installation; rights and reproduction of images; exhibition planning; and art storage, conservation, and security. Students research, prepare, and present discussions on art works of their choice.

ARTHIST 100N. The Artist in Ancient Greek Society. 3 Units.

Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vases from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Ceramic sets with scenes of Dionysian excess were reserved for elite symposia from which those who potted and painted them were excluded. Sculptors were less lowly but even those who carved the Parthenon were still regarded as "mechanics," with soft bodies and soft minds (Xenophon) "indifferent to higher things" (Plutarch). The seminar addresses these issues. Students will read and discuss texts, write response papers and present slide lectures and gallery talks on aspects of the artist's profession.

Same as: CLASSICS 18N

ARTHIST 101. Archaic Greek Art. 4 Units.

In the decades 480-460, just before work began on the Parthenon, the sculptor Myron, creator of the Discus-Thrower, was even more celebrated for his bronze cow. Ancient authors describe an image so palpably alive that shepherds threw stones at her, thinking that she had strayed from the herd, and bulls vied for her attention. A century later, the quest for mimesis prompted a contest between two artists. Zeuxis painted a bunch of grapes seductive enough to attract hungry birds; Parrhasios then added a linen curtain, which Zeuxis asked to be removed from his painting. Zeuxis conceded defeat since he had fooled only birds, whereas Parrhasios had deceived an artist. This course explores the art and culture of the ancestors of these men. The Greeks of the archaic period (1000-480) would have understood the painters' competitive zeal, but only toward the end of the period would they have recognized naturalism as an artistic aim. Earlier Greek art is more abstract than life-like, closer to Calder than Michelangelo. In the eighth century Homer's descriptions of the rippling muscles (and egos) of his heroes, and the grief of Achilles, horses, evoke living men and sentient animals, but his fellow sculptors and painters prefer abstraction. This changes in the seventh century as a result of commercial contacts with the Near East and Egypt. Imported bronzes, ivories and other Near Eastern exotica alerted Greek artists to a wider range of subjects, techniques and intentions, including naturalism. Later in the century, Greek expatriates learned the art of carving hard stone from Egyptian masters and soon marble sculpture and architecture spread throughout Greece. In the course of the sixth and early fifth centuries Greek artists assimilate what they had borrowed, compete with one another, obey and disobey their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. When the Persians invaded the Acropolis in 480 and 479, they encountered artifacts with little trace of alien influence or imprint and, at Salamis and Plataea, fought decisive battles in which the Greeks prevailed. In the aftermath of the war, as the Greeks rebuilt their cities and their lives, Myron's cow reminded them of their debts to other cultures and their resolve to remain true to their own.

Same as: CLASSICS 161

ARTHIST 102. Empire and Aftermath: Greek Art from the Parthenon to Scopas. 4 Units.

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceed in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: ARTHIST 302, CLASSICS 162

ARTHIST 105. Art & Architecture in the Medieval Mediterranean. 4 Units.

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 305, CLASSICS 172

ARTHIST 105B. Medieval Journeys: Introduction through the Art and Architecture. 3-5 Units.

The course explores the experience and imagination of medieval journeys through an interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages in particular the art and architecture of the period. The Middle Ages is presented as a network of global economies, fueled by a desire for natural resources, access to luxury goods and holy sites. We will study a large geographical area encompassing the British Isles, Europe, the Mediterranean, Central Asia, India, and East Africa and trace the connectivity of these lands in economic, political, religious, and artistic terms from the fourth to the fourteenth century C.E. The students will have two lectures and one discussion session per week. Depending on the size of the class, it is possible that a graduate student TA will run the discussion session. Our goal is to give a skills-oriented approach to the Middle Ages and to engage students in creative projects that will satisfy 1. Ways-Creative Expression requirement as well as one of the following two: Ways-Analytical Interpretive or Ways-Engaging Difference.

Same as: DLCL 123

ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 306, CLASSICS 171

ARTHIST 106B. What Do Medieval Images Want? Theories of the Image in Byzantium, Islam, and the Latin West. 4 Units.

What is an image? The medieval response was tied to religious identity. At the core of the debate was whether the image was just a mimetic representation or a living entity: matter imbued with divine spirit. Byzantium, Islam, and the Latin West each developed their own positions and used it as a platform for political legitimacy. We will study the development of the medieval image theories by focusing on specific monuments and objects and by reading both primary sources in translation and current scholarly interpretations.

Same as: ARTHIST 306B

ARTHIST 107A. St. Petersburg, a Cultural Biography: Architecture, Urban Planning, the Arts. 4 Units.

The most premeditated city in the whole world, according to Dostoevsky; created in 1703 by Peter the Great as a counterpoise to Moscow and old Russian culture; planned as a rational, west-European-appearing capital city of the Russian Empire. St. Petersburg's history through works of its artists, architects, urban planners, writers, and composers.

ARTHIST 108. Virginity and Power: Mary in the Middle Ages. 4 Units.

The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies through which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.

Same as: ARTHIST 308

ARTHIST 109. The Book in the Medieval World. 4 Units.

Studying the design and function of books in medieval society from the 7th to the 15th century, and the ways in which manuscripts are designed to meet (and shape) the cultural and intellectual demands of their readers. Major themes are the relationships between text and image, and between manuscripts and other media; the audience and production context of manuscripts; and changing ideas about pictorial space, figural style, page design, and progression through the book. Final project may be either a research paper or an original artist's book.

Same as: ARTHIST 309

ARTHIST 109D. Means, Media and Mode: An Introduction to Western Medieval Art. 4 Units.

The course is an introduction to western medieval art approached primarily through distinctions of materials and media. We work with a combination of medieval and later sources, often engaging with the modern objects and spaces available for study on campus in order to create new perspectives on the historical material. Medieval case studies are chosen that raise particularly complex issues of materiality, mixed-media form, and cross-media citation.

Same as: ARTHIST 309D

ARTHIST 111. Introduction to Italian Renaissance, 1420-1580. 4 Units.

New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.

Same as: ARTHIST 311

ARTHIST 114. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.

A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painter's imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.

Same as: ARTHIST 314

ARTHIST 117. Picturing the Papacy, 1300-1850. 4 Units.

Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.

Same as: ARTHIST 317

ARTHIST 118. Titian, Veronese, Tintoretto. 4 Units.

The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.

Same as: ARTHIST 318

ARTHIST 118N. Pagan Mythology and the Making of Modern Europe. 3 Units.

Once a religion loses its claim to truth it enters the sphere of the mythic. From the fifteenth through the seventeenth century, European artists turned to the legends and poetry of Greco-Roman paganism for pictorial subjects. What roles could Venus and Mars, Mercury and Minerva play in a Christian culture? Artists and humanists had different answers to this question. As relics from the past the stories of the ancient gods could serve as the prehistory of worldly and religious institutions and hence legitimize them. Or pagan myth, because of its alien nature, could convey fantasies of the body, which could not be articulated otherwise. Among the artists who explored creatively the ancient legends were Donatello, Botticelli, Michelangelo, Raphael, Velazquez, Rubens, Rembrandt, Bernini, and Poussin. Next to ancient authors such as Homer and Ovid we shall be reading excerpts from the humanists Dante, Boccaccio, Petrarch, and Vasari as we explore word/image relationships. The seminar includes excursions to the Cantor Arts Center at Stanford University to look at Old Master prints from the museum's storage, not normally on display, and we shall study paintings and sculptures with mythological subjects in the Legion of Honor, the Fine Arts Museum of San Francisco.

ARTHIST 120. Living in a Material World: Seventeenth-century Dutch and Flemish Painting. 4 Units.

Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.

Same as: ARTHIST 320

ARTHIST 121. 18th-Century Art in Europe, ca 1660-1780. 4 Units.

Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.

Same as: ARTHIST 321

ARTHIST 122. The Age of Revolution: Painting in Europe 1780-1830. 4 Units.

Survey of European painting bracketed by the French Revolution and the end of the Napoleonic conquest. Against this background of social upheaval, the visual arts were profoundly affected by shifts in patronage, public, and ideas about the social utility of image making. Lectures and readings align ruptures in the tradition of representation with the unfolding historical situation, and trace the first manifestations of a "romantic" alternative to the classicism that was the cultural legacy of pre-Revolutionary Europe.

Same as: ARTHIST 322

ARTHIST 123N. Thinking about Visual Attention : from Balzac to Facebook. 3 Units.

Writing in 1829, the French author Honoré de Balzac celebrated the acute visual attention of the flâneur, a character he closely associates with modern life: "To flâneur is to take pleasure, to collect flashes of wit, to admire sublime scenes of unhappiness, of love, of joy as well as graceful or grotesque portraits, to thrust one's attention into the depths of a thousand lives." In July 2012 the Huffington Report pointed to a fact of modern life: "On city streets, in suburban parking lots and in shopping centers, there is usually someone strolling while talking on a phone, texting with his head down, listening to music, or playing a video game. The problem isn't as widely discussed as distracted driving, but the danger is real." These two very different ways of circulating in urban space suggest that a major shift in how we humans relate to our environment has occurred over the course of nearly two centuries--especially in the densely populated spaces of modern cities. Where the great spectacle of urban life was a marvel of the nineteenth century, today's inhabitants want mainly to block it out by insulating themselves in a cocoon of favorite music or personal conversation, whether by voice or text, that they risk stepping into traffic, colliding with lightposts, or bumping into others similarly self-absorbed. This seminar proposes to think about the hows and whys of that important shift from the unique perspective of art history, a field of study especially attuned to the limits and exigencies of visual acuity. We will explore the topic across a range of media, from daguerreotypes to stereoscopes, from paintings to films, from television screen to the hand-held displays of our smartphones.

ARTHIST 124. The Age of Naturalism, Painting in Europe 1830-1874. 4 Units.

Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies-- notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.

Same as: ARTHIST 324

ARTHIST 126. Post-Naturalist Painting. 4 Units.

How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art.

Same as: ARTHIST 326

ARTHIST 127A. African Art and Politics, c. 1900 - Present. 4 Units.

This course explores the relationship between art and politics in twentieth century Africa. Artistic production and consumption is considered in the context of various major political shifts, from the experience of colonialism to the struggle against Apartheid. Each week we will look closely at different works of art and examine how artists and designers responded to such challenges as independence, modernization and globalization. We will look at painting, sculpture, religious art, public and performance art, photography and film. How western perceptions and understanding of African art have shifted, and how museums have framed African art throughout the twentieth century will remain important points of discussion throughout the course.

Same as: AFRICAST 127

ARTHIST 132. American Art and Culture, 1528-1910. 4 Units.

The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.
Same as: AMSTUD 132, ARTHIST 332

ARTHIST 140N. Couture Culture: Fashion, Art & Modernism from Manet to Mondrian. 3-4 Units.

This course examines the ways in which fashion has figured in the construction of modern experience and how it has been represented in the visual arts, primarily in Europe and the United States between about 1850 and 1965. Alongside the emergence of haute couture, the rise of the ready-to-wear industry during this period coincided with the consolidation of the department store; these institutions contributed to the development of a culture of consumption and display that continues to shape our lives today. Manet, Degas and other Impressionist painters were sensitive to the nuances of fashion, which they, like Baudelaire, saw as an aspect of modernity indispensable to their art. Clothing was no less significant in the context of the Russian revolution, when Alexander Rodchenko, for example, outfitted himself in a home-made version of workers' overalls in order to reinforce his identification with factory laborers and thereby to suggest the breaking down of class distinctions. The course also explores the significance of fashion for an abstract painter like Piet Mondrian, but, more to the point, we look at how Mondrian's work was appropriated to the world of fashion by Yves Saint-Laurent, who assured that Mondrian's signature geometric style would become instantly recognizable and eventually function as a hugely popular brand. The circuits through which we can trace the historical trajectory of fashion will illuminate its importance for understanding many facets of modern culture.

ARTHIST 142. Architecture Since 1900. 4 Units.

Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.

Same as: CEE 32G

ARTHIST 142A. Home Alone: Houses that Artists and Thinkers Design for Themselves. 4 Units.

This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.

Same as: ARTHIST 342A

ARTHIST 143A. American Architecture. 4 Units.

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.

Same as: ARTHIST 343A

ARTHIST 144. On Looking: Art, Obscenity, and the Ethics of Spectatorship. 4 Units.

This course considers the ethics of looking at art, photography, and other forms of visual representation that have been declared obscene or indecent, whether by religious authorities, government officials, community representatives, or legal opinions. What are the ethical stakes of looking at such materials? And what are the ethical implications of looking away and insisting that others do so as well? The creation of vanguard art since the late 19th-century has often been linked to the concept of transgression. Is it, we will ask, the modern artist's responsibility to challenge accepted standards of representation and the protocols of looking? If so, how are we, as viewers and students of art, to distinguish between legitimate art and unfit obscenity?.

ARTHIST 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented; and, at times, contested; by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.
Same as: AMSTUD 145M, ARTHIST 345, FEMGEN 145

ARTHIST 146X. What is Contemporary Art, and Where Did it Come From?. 3 Units.

"Contemporary art challenges us to question our assumptions," wrote philanthropist and collector Eli Broad. "It asks us to think beyond the limits of conventional wisdom." This course aims to introduce both the difficulties and the great rewards presented by Contemporary Art (1970 to the present). Examining the historical foundations of Contemporary Art in the 18th, 19th, and 20th centuries, we will learn about the century's most game-changing art practices and movements such as cubism, abstract expressionism, conceptual art, and performance art. Working from the assumption that art in its moment of production was always contemporary, the course will organize content through various thematic lenses such as "portraiture and vision", "the photographic", and "the hand and the mind." Lectures occur both as traditional classroom sessions as well as on-site sessions at Stanford University's public sculpture collection, the Cantor Art Center, and the Anderson Collection, emphasizing close and direct engagement with artworks. Drawing on these experiences and on close readings of key texts, assignments will range from short essays to online curation to gallery talks. Students will develop and enhance their critical visual literacy and ability to grapple with the unknown through skills of creative synthesis, identifying patterns across time and space, and exercising conceptual and visual analysis. Broadly, the goals of the class are to understand the present through the past, to demystify the often confusing nature of contemporary art, and to question why art matters and how.

ARTHIST 147. MODERNISM AND MODERNITY. 4 Units.

The development of modern art and visual culture in Europe and the US, beginning with Paris in the 1860s, the period of Haussmann, Baudelaire and Manet, and ending with the Bauhaus and Surrealism in the 1920s and 30s. Modernism in art, architecture and design (e.g., Gauguin, Picasso, Duchamp, Mondrian, Le Corbusier, Breuer, Dali) will be explored as a compelling dream of utopian possibilities involving multifaceted and often ambivalent, even contradictory responses to the changes brought about by industrialization, urbanization, and the rise of mass culture.
Same as: ARTHIST 347

ARTHIST 148. Art and the First Amendment: Testing the Limits of Expression. 5 Units.

This course will take place in Washington D.C.
Same as: SIW 148

ARTHIST 149S. Art After the A-bomb: American and European Art, 1945-1989. 4 Units.

This course surveys the major movements, figures, and themes in American and European art during the Cold War, from the drop of the A-bomb in 1945 to the fall of the Berlin Wall in 1989. It examines the formative relationship between art and politics in this explosive period. We will consider the changed role of the avant-garde after the catastrophes of World War II; the use and abuse of modern art as propaganda; spectacular postwar affluence and the rise of the culture industry; multimedia, intermedia, and the invention of new communications technologies; the burgeoning military-industrial complex and the Vietnam War; the revolutionary efforts of second-wave feminism, sexual liberation, and the counterculture; and the charged debates of the iquest;culture wars; and the crisis of representation in the 1980s. What was art; its social, cultural, and political function in the recent past; and how is this role instructive in the present? Topics include Abstract Expressionism, Color Field Painting, Neo-Dada, Pop, Op, Fluxus, Happenings, Minimalism, Conceptualism, Performance, Institutional Critique, Process Art, Systems Art, Earth Art, Video Art, and theories of modernism and postmodernism. We will visit the Cantor Arts Center to view original works.

ARTHIST 152. The American West. 5 Units.

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ENGLISH 124, HISTORY 151, POLISCI 124A

ARTHIST 154. The American Civil War: A Visual History. 4 Units.

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: AMSTUD 154X, ARTHIST 354

ARTHIST 155C. Abstract Expressionism: Painting/Modern/America. 4 Units.

The course will focus on American abstract painting from the 1930s to the 1960s, emphasizing the works of art at the Anderson Collection at Stanford. We will focus on looking closely at pictures by Jackson Pollock, Mark Rothko, Willem de Kooning, and other renowned abstract painters, developing skills of speaking and writing about these works of art. We will also place these pictures in their mid-20th century context: World War II and the Cold War; Hollywood and popular culture generally; Beat literature; and locations such as New York and San Francisco.

Same as: AMSTUD 155C

ARTHIST 156. American and European Art, 1945-1968. 4 Units.

Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.

Same as: ARTHIST 356

ARTHIST 156N. Art and the Power of Place: Site, Location, Environment. 3 Units.

Many iconic works in the history of art draw their power and significance from the place in which they are sited or installed. The cave paintings of Altamira, Spain; Michelangelo's Sistine Chapel and the monumental "earthworks" made in the deserts of the American Southwest during the 1960s are just a few examples showcasing the important relationship between art and place. In this seminar we will explore how works of art throughout history create a sense of place; and how place, in turn, changes the interpretation of works of art. We will learn how to analyze works of art in terms of their immediate contexts and surroundings, whether temples, museums, spaces of the city or unexpected environments, charting the historical meanings of place in the process. We will look at a range of examples throughout time, from prehistory to the present day. A critical feature of the seminar will be to consider works of art outside the classroom, on both the Stanford campus and beyond. Possible field trips include visits to Alcatraz Prison (where the famous Chinese artist, Ai Weiwei, will install a new work in the fall of 2014).

ARTHIST 157A. Histories of Photography. 4 Units.

This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the iquest;work; performed by photography. Through historical case studies, it considers how `to photograph; is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.

Same as: ARTHIST 357A

ARTHIST 159. American Photographs, 1839-1971: A Cultural History. 4 Units.

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: AMSTUD 159X, ARTHIST 359

ARTHIST 160. Intro to Contemporary Art. 4 Units.

Introduction to major themes, figures, movements and ideas in contemporary art, beginning with the question of art and politics in the 1960s. Topics: Postmodernism and the rise of consumer and spectacle culture; the "death" of painting, the impact of technology, cybernetics and the rise of new media; art at the end of the Cold War; globalization and the new global art world. An intro art history course is recommended.

ARTHIST 162. Race, Gender, and Sexuality in Contemporary Art. 4 Units.

This course focuses on issues of race, gender, and sexuality in American art and criticism from 1972 to the present. How have the terms of racial identity and sexual difference shaped the production and reception of contemporary art across the last four decades? What status has the body--and more specifically, the body of the artist--been accorded within recent work on identity and difference? Throughout the course of the semester, we will be particularly attentive to issues of racial and sexual stereotype. What critical or subversive uses have contemporary artists found for pictorial stereotype? How have stereotypes of race, gender, and sexuality been recycled in order to be mocked or deconstructed?.

Same as: ARTHIST 362

ARTHIST 164A. Technology and the Visual Imagination. 4 Units.

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 364A, FILMSTUD 164A, FILMSTUD 364A

ARTHIST 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 365A, FILMSTUD 165A, FILMSTUD 365A

ARTHIST 166. Representing Fashion. 4 Units.

Course on the representation of fashion in the 20th and 21st century, with focus on fashion photography. Topics include: history of fashion illustration, fashion photography, and fashion films; intersection of art and commerce; role of designers, photographers, editors, and models; studio v. street photography; the place of mass media, alternative magazines, and online publications; and use of media, photography, and design theory for interpretation of fashion representations. Illustrators and artists include Lepape, Erte, Avedon, Penn, Klein, Newton, Sherman, and Leibovitz.

ARTHIST 167. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 367, FILMSTUD 167B, FILMSTUD 367B

ARTHIST 173. Issues in Contemporary Art. 4 Units.

Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.

Same as: ARTHIST 373

ARTHIST 176. Feminism and Contemporary Art. 4 Units.

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 376

ARTHIST 178. Ethnicity and Dissent in United States Art and Literature. 4 Units.

The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: AMSTUD 178, ARTHIST 378

ARTHIST 184. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 384, JAPANGEN 184, JAPANGEN 384

ARTHIST 186. Theme and Style in Japanese Art. 4 Units.

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 386, JAPANGEN 186, JAPANGEN 286

ARTHIST 187. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.

Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.

Same as: ARTHIST 387, JAPANGEN 185

ARTHIST 188A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.

The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.

Same as: ARTHIST 388A

ARTHIST 188B. From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art. 4 Units.

Chinese artistic engagements with international arenas and with the cultural politics of modernity, from the late 19th century to the present. Topics will include Shanghai modernity and public media; artistic reform and political activism at the end of empire; competition between national style painting and international modernisms; politicized arts of resistance and revolution; post-Mao era experimental and avant-garde movements; transnational careers and exhibition circuits.

ARTHIST 189C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.

Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidentaries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems. Same as: ARTHIST 389C

ARTHIST 192B. Art of the African Diaspora. 4 Units.

This introduction to the art of the African Diaspora uses art and visual culture as means to explore the history and impact of the global spread of African peoples from slavery until the present day. Lectures and discussions will examine a range of artistic practices from street festivals and Afro-Caribbean religious traditions to the work of studio-trained artists of international repute.

ARTHIST 200M. The Artist in Ancient Greek Society. 4-5 Units.

An exploration of the low status of artists in a culture that valued their work but not the men themselves. Potters were especially scorned but even sculptors of gold and ivory statues were seen as "mechanics" (Herodotus), with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). Topics include case studies of individual artists, their importance to the polis, their workshops, wages and occupational hazards and the impact of social isolation on the quality of their work. Same as: ARTHIST 400M

ARTHIST 203. Greek Art In and Out of Context. 4-5 Units.

The seminar considers Greek artifacts in the context of Greek life (including the life of the workshop), and the endless ways in which craftsmen served the needs of Greek society. Their foundries, factories and ceramic studios produced the material goods that defined Greek life: temples, statues and other offerings for the gods; arms and armor for warriors; sporting equipment and prizes for athletes; houses, clothing and crockery for the family; ships and sailcloth, wagons and ploughs, wine and oil-presses for a thriving domestic and overseas economy; gravestones and funeral vases for the dead. (Formerly CLASSART 109.) Most of the antiquities exhibited in museums, or purchased by private collectors from galleries and auction houses, survive because they were buried with people who used and cherished them. The Greek belief that the artifacts they valued in life would serve them in the afterlife informs the second part of the seminar, which is devoted to the recent history of tomb looting and the illicit trafficking in antiquities. Same as: CLASSICS 163

ARTHIST 205. Cairo and Istanbul: Urban Space, Memory, Protest. 5 Units.

In the aftermath of the Arab Spring, the city of Cairo has become a theater of social and political upheaval. In Istanbul, the Gezi protests in spring and summer 2013 drew attention to the contested public space. These events are the result of longstanding developments in the urban and social fabric. This seminar introduces students to the architectural and urban history of Istanbul and Cairo, with the current transformations as a central point of reference. Readings will focus on the tension between historical center and recent urban development, the social problems arising from the segregation, and reactions of scholars, architects, and artists to these issues.

ARTHIST 205A. Islamic Painting: Landscape, Body, Power. 5 Units.

This seminar focuses on the production of paintings, mostly but not exclusively miniatures in books, in the Islamic world. A particular focus lies on the Muslim Empires of the sixteenth to eighteenth centuries, namely the Ottoman, Safavid, and Mughal realms, together stretching from the Balkans to India. During this period, illustrated books were popular objects of high-level patronage, and numerous examples have survived that allow a detailed study of the implications of these images. Themes discussed include: figural representation in Islam, patronage and court culture; gender and the body; illustrations of literature and history; images of Sufis ceremonies; portraiture; images of animals and nature; the impact of European prints and paintings; space and landscape. A field-trip to the Museum of Asian Art in San Francisco to view Mughal paintings from India is planned.

ARTHIST 206H. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation. Same as: FEMGEN 216, HISTORY 216, HISTORY 316

ARTHIST 207C. Phenomenology and Aesthetics in Medieval Art. 5 Units.

This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homilies of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels. Same as: ARTHIST 407C

ARTHIST 208. Hagia Sophia. 5 Units.

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics). Same as: CLASSICS 173

ARTHIST 208B. The Art of Medieval Spain: Muslims, Christians, Jews. 5 Units.

The seminar and its study trip explore the hybrid character of the art of Medieval Spain between the sixth and the fifteenth centuries. Rather than strictly chronological, our exploration of the artistic production of Muslims, Jews, and Christians is structured around major topics such as imperial power, pilgrimage, word and image. The readings juxtapose historical studies of specifically Spanish sites and objects with theoretical approaches tied to the broader themes.

ARTHIST 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

ARTHIST 209. Art and Religious Experience in Byzantium and Islam. 5 Units.

This course presents a comparative study of Christian and Islamic paradigms (sixth to the thirteenth centuries) in the construction of religious experience through the material fabric of the building, the interior decor, objects, and rituals. We will read medieval ekphrastic texts and poetry, which stirred the viewer/participant to experience the building/object as animate. Among the sites we will study are: Hagia Sophia, the Ka'ba, the Dome of the Rock, the Mosque at Damascus and at Cordoba. We will read Byzantine and Arabic writers such as Paul the Silentiary, Patriarch Germanos, Maximus Confessor, Shahrawardi, and Ibn Arabi.

Same as: ARTHIST 309, CLASSICS 174

ARTHIST 209C. Iconoclasm. 5 Units.

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 409, CLASSICS 158, CLASSICS 258, REES 409

ARTHIST 212. Renaissance Florence, 1440-1540. 5 Units.

Notions of cultural superiority in light of changes in Florentine society as it went from being a republic to a duchy ruled by the Medici. Artists and architects such as Donatello, Brunelleschi, Botticelli, Michelangelo, and Pontormo praised as having revived the arts and returned them to a level of ancient splendor. The role of the sacred in daily life and uses of the pagan past for poetic and scholarly expressions and as vehicles for contemporary experience.

ARTHIST 213. Renaissance Print Culture: Art in the Cantor Arts Center. 5 Units.

The seminar takes place in the Cantor Arts Center and provides a unique opportunity to study original works of art from the museum's storage. Beginning in the fifteenth century new techniques of reproduction changed the pictorial culture of Europe. Some engravings called attention to the engraver's virtuosity, and the private nature of the medium was explored for erotic imagery. By the sixteenth century printed images were used for political and religious propaganda during the societal upheavals.

ARTHIST 214. From the Pantheon to the Capitol: Architecture, Cosmology, Mathematics and Illusion. 5 Units.

This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism. Individual case studies will familiarise you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC.

Same as: SIW 214

ARTHIST 217B. Architectural Theory from Antiquity to Le Corbusier. 5 Units.

This seminar focuses on themes and theories in architectural design from antiquity until the early twentieth century. Modern and contemporary architecture has often claimed its modernity through the incorporation of theory, but this seminar examines selections from key texts that have also moulded architectural and urbanistic thought in the ancient, medieval, and early modern eras in combination with analytical comparisons of built architecture.

Same as: ARTHIST 417B

ARTHIST 225. Cezanne. 5 Units.

This seminar will study the complexity and richness of pictures made by Paul Cezanne that affected the course of modernist painting during the early twentieth century. Usually called an Impressionist, Cezanne shares only partially Monet's concern for fleeting effects, and he evokes little of Renoir's charm. He did not paint the bustle of city life like Manet or Degas. Cezanne spent most of his career near his hometown of Aix-en-Provence painting landscapes, a few local residents, and many still-lives. Yet Matisse was serious when he said, "Cezanne, you see is a sort of god of painting. Dangerous his influence? So what? Too bad for those without the strength to survive it." The seminar will explore the foundations of that influence.

ARTHIST 229D. Topophilia: Place in Japanese Visual Culture through 19th Century. 5 Units.

Attachments to "place" and "home" are hard-wired into the biology of humans and animals alike, although such attachments vary according to specific times, cultures, and states of mind. Can we speak of a "Japanese sense of place" and if so, what is distinctive about it? Seminar explores religious visions and ritual fields; narratives of itinerancy; cityscapes; topographic taxonomies. Knowledge of Japanese culture is beneficial but not mandatory.

Same as: JAPANGEN 229

ARTHIST 243C. The Art of Travel. 5 Units.

This undergraduate seminar explores a variety of objects upon which we see the marks of makers smitten and/or stymied by new technologies of transportation: objects about the steamship, the railroad, the automobile, the airplane, the space shuttle, the internet. Among many types of material culture, the course considers scrimshaw, album quilts, maps, paintings, photographs, city plans, hood ornaments, and advertisements from the early Republic to the present. How do objects mark geographic movement, and the social relationships forged in the process? What do these marks tell us about how we, as contemporary viewers, experience the world?.

ARTHIST 244. The Visual Culture of the American Home Front, 1941-1945. 5 Units.

How does home front of WWII look now? What sort of meanings appear with the vantage of more than sixty years' distance? Examining Hollywood films from those years - films made during the war but mostly not directly about the war - the seminar focuses on developing students' abilities to write emotion-based criticism and history. Weekly short papers, each one in response to a film screening, are required. Among the films screened: *Shadow of a Doubt*, *Gaslight*, *I Walked with a Zombie*, *The Best Years of Our Lives*.

Same as: AMSTUD 244

ARTHIST 245. Art, Business & the Law. 5 Units.

This course examines the intersection of art, business, and the law from a number of different angles, focusing on issues that impact our understanding of works of art and their circulation in the modern and contemporary periods. Topics range from individual case studies (e.g., Leonardo da Vinci; Richard Serra) to the consolidation of the art market, and include cultural heritage issues, problems of censorship, and conceptions of authorship and intellectual property.

ARTHIST 246A. California Dreaming: West Coast Art and Visual Culture, 1848 - present. 5 Units.

This seminar examines art, photography, and other forms of cultural production (e.g. film, advertisements, postcards) in and about California from the middle of the 19th century to the present. It approaches California as a contested political, historical and geographical site and as a series of images and alternative "lifestyles." How have artists pictured the state's diverse landscapes, both natural and commercial, as well as its complex history of labor, immigration, ethnicity, tourism, and social division?.

ARTHIST 246B. Pop Art. 5 Units.

A new course on the history and meaning of Pop art in the United States and abroad. The course will feature close study of paintings, photographs, and prints at the Cantor Art Center. The course will be given in the Denning Family Resource Room, located in The Anderson Collection building. If you have any questions regarding the location, please contact Linda Esquivel at lindae@stanford.edu.

Same as: AMSTUD 246B

ARTHIST 248B. Architecture, Urbanism, and Visual Culture in Early Modern Rome. 5 Units.

This seminar investigates architecture in Rome, from Michelangelo to Piranesi. It examines the origins of modern urbanism; the piazza as ceremonial theater; the water network and fountain displays; palace design inside and out; religious institutions, from convents to confraternities; church design inside and out; the devotional and illusionistic space of the family chapel; festival architecture; light symbolism and geometry; the use of new materials and technologies; the relationship of early modern architecture to painting and sculpture; and the question of a unity of the arts.

ARTHIST 255. Hidden Histories: Art and Misrepresentation. 5 Units.

What happens when art functions as a decoy, taking us away from stories that it refuses to tell? We will explore three modern artists who grapple, in unpredictable ways, with the historical events that have shaped them: Philip Guston and the Holocaust; Martin Puryear and the Civil Rights movement; and South African artist William Kentridge and apartheid. When appropriate, we will look at objects at the Cantor Art Center (Stanford) as well as museums in the Bay Area. The course will provide the foundation for an exhibition at the Cantor Arts Center and the Yale University Art Gallery in 2016.

ARTHIST 262. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.

This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not be limited to: Koolhaas's early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation.

Same as: CEE 132Q

ARTHIST 263B. The View through the Windshield: Cars and the American Landscape. 4 Units.

Both cars and the landscape are fundamental to American identity. This seminar will consider the relationship between them: how they have shaped each other, how one mediates the experience of the other, and how American artists such as Ansel Adams, Edward Hopper, and Ed Ruscha have represented both. We will discuss the relationship between nature and technology; the aesthetics of highways and parkways; the phenomenology of driving and road trips; maps and way finding; and the future of cars, mapping, and the landscape.

ARTHIST 264A. Picturing the Cosmos. 5 Units.

This seminar explores the place of images in how we understand and imagine the universe. The course draws on art, science, and popular culture, and pays particular attention to the ways they inform each other. Examples include: star maps, science fiction films, appropriated astronomical images, and telescopic views of stars, planets, and nebulae. Using these representations as well as accompanying readings we will discuss the importance of aesthetics for conceptions of the cosmos; the influence of technology on representations; strategies for representing concepts that exceed the limits of human vision; and the ways that views of the universe reflect and shape their cultural context. Open to undergraduates and graduates.

ARTHIST 269A. Art and Technology. 5 Units.

The dynamic relationship between art and technology and its formative impact on culture, politics and society. Beginning with Aristotle on the notion of *techne* and its implications for art and craft, the seminar will focus primarily on the modern period as well as contemporary developments. Topics: The invention of linear perspective during the Renaissance as influenced by Arab mathematics; the culture of optical devices and painting; the birth of photography and cinema and new forms of pictorial representation; the avant-garde and the iquest;Machine Ageiquest;; art and technology collaborations during the 1960s; interactivity and the rise of media arts; sound art; biotechnology and the arts. Guest speakers and possible field trips. Enrollment limited to STS Senior majors and art and art history majors.

Same as: STS 200I

ARTHIST 278. Anatomy of Exhibition. 5 Units.

This course provides students with the opportunity to research, write the exhibition texts, design, and install an exhibition at the Cantor Arts Center of paintings, prints, and drawings by African American artist Jacob Lawrence (1917-2000). An influential force in 20th-century art, Lawrence captured the trials and triumphs of the black experience. The works are a recent gift to the Cantor that have only rarely been exhibited up to now.

ARTHIST 284B. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black boxiquest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum culturesiquest;; representations of iquest;selfiquest; and iquest;otheriquest; within museums and institutional cultures of the museum world itself.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, CSRE 134, EDUC 214, NATIVEAM 134

ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.

Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (*ehon*) and popular broadsheets (*kawaraban*). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.

Same as: ARTHIST 487X, JAPANLIT 287

ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime. 5 Units.

The Japanese tea ceremony, the ultimate premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and other treasured objects into a choreographed ritual wherein host, objects, and guests perform designated roles on a tiny stage sometimes only six feet square. In addition to its much-touted aesthetic and philosophical aspects, the practice of tea includes inevitable political and rhetorical dimensions. This course traces the evolution of tea practice from its inception within the milieu of courtier diversions, Zen monasteries, and warrior villas, through its various permutations into the 20th century, where it was manipulated by the emerging industrialist class for different-but ultimately similar-ends.

Same as: JAPANGEN 287A

ARTHIST 288B. The Enduring Passion for Ink: Contemporary Chinese Ink Painting. 5 Units.

Contemporary Chinese ink painters are exploring new ground. They push the limits of the medium, creating installations and performances, mixing ink with other media, and advancing age-tested brushstrokes and compositions. The recent flurry of exhibitions attests to contemporary ink painting's increasing importance. This seminar introduces major figures (Xu Bing, Liu Dan, Zheng Chongbin, Li Huasheng, etc.) and movements in contemporary Chinese ink art. Emphasis is placed on improving writing abilities and on in-class reports and discussion. Topics for discussion include readings, individual works of art, and broad issues in contemporary art. Prerequisite: courses in Art History and/or Studio Art OR permission of instructor. open to undergraduates and graduates.

ARTHIST 289A. Making the Masterpiece in Song Dynasty China. 5 Units.

Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks.

Same as: ARTHIST 489A

ARTHIST 294. Writing and the Visual. 5 Units.

The course examines how various forms of writing and description--from wall labels to scholarly texts--shape the history and perception of visual objects. Through concrete examples, we will analyze the limits of language in describing visual images and consider how those limits might be expanded or redrawn. Required course for Art History majors. WIM Course.

ARTHIST 295. Visual Arts Internship. 1-5 Unit.

Professional experience in a field related to the Visual Arts for six to ten weeks. Internships may include work for galleries, museums, art centers, and art publications. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. To supplement the internship students maintain a journal and write a research paper related to the experience and their area of academic interest. Evaluations from the student and the supervisor are submitted at the end of the internship. Restricted to declared majors and minors. May be repeated for credit.

ARTHIST 296. Junior Seminar: Methods & Historiography of Art History. 5 Units.

Historiography and methodology. Through a series of case studies, this course introduces a range of influential critical perspectives in art history as a discipline and a practice. The goal is to stimulate thinking about what it means to explore the history of art today, to expose and examine our assumptions, expectations and predilections as we undertake to learn and write about works of art, their meanings and their status in the world.

ARTHIST 297. Honors Thesis Writing. 1-5 Unit.

May be repeated for credit.

ARTHIST 298. Individual Work: Art History. 1-15 Unit.

For approved independent research with individual faculty members. Letter grades only. May be repeated for credit.

ARTHIST 302. Empire and Aftermath: Greek Art from the Parthenon to Scopas. 4 Units.

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceed in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's quest; discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: ARTHIST 102, CLASSICS 162

ARTHIST 305. Art & Architecture in the Medieval Mediterranean. 4 Units.

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 105, CLASSICS 172

ARTHIST 306. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 106, CLASSICS 171

ARTHIST 306B. What Do Medieval Images Want? Theories of the Image in Byzantium, Islam, and the Latin West. 4 Units.

What is an image? The medieval response was tied to religious identity. At the core of the debate was whether the image was just a mimetic representation or a living entity: matter imbued with divine spirit. Byzantium, Islam, and the Latin West each developed their own positions and used it as a platform for political legitimacy. We will study the development of the medieval image theories by focusing on specific monuments and objects and by reading both primary sources in translation and current scholarly interpretations.

Same as: ARTHIST 106B

ARTHIST 308. Virginité and Power: Mary in the Middle Ages. 4 Units.

The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies through which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.

Same as: ARTHIST 108

ARTHIST 309. The Book in the Medieval World. 4 Units.

Studying the design and function of books in medieval society from the 7th to the 15th century, and the ways in which manuscripts are designed to meet (and shape) the cultural and intellectual demands of their readers. Major themes are the relationships between text and image, and between manuscripts and other media; the audience and production context of manuscripts; and changing ideas about pictorial space, figural style, page design, and progression through the book. Final project may be either a research paper or an original artist's book.

Same as: ARTHIST 109

ARTHIST 309D. Means, Media and Mode: An Introduction to Western Medieval Art. 4 Units.

The course is an introduction to western medieval art approached primarily through distinctions of materials and media. We work with a combination of medieval and later sources, often engaging with the modern objects and spaces available for study on campus in order to create new perspectives on the historical material. Medieval case studies are chosen that raise particularly complex issues of materiality, mixed-media form, and cross-media citation.

Same as: ARTHIST 109D

ARTHIST 311. Introduction to Italian Renaissance, 1420-1580. 4 Units.

New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.

Same as: ARTHIST 111

ARTHIST 314. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.

A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painterly quest; his imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.

Same as: ARTHIST 114

ARTHIST 317. Picturing the Papacy, 1300-1850. 4 Units.

Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.

Same as: ARTHIST 117

ARTHIST 318. Titian, Veronese, Tintoretto. 4 Units.

The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.

Same as: ARTHIST 118

ARTHIST 320. Living in a Material World: Seventeenth-century Dutch and Flemish Painting. 4 Units.

Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.

Same as: ARTHIST 120

ARTHIST 321. 18th-Century Art in Europe, ca 1660-1780. 4 Units.

Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.

Same as: ARTHIST 121

ARTHIST 322. The Age of Revolution: Painting in Europe 1780-1830. 4 Units.

Survey of European painting bracketed by the French Revolution and the end of the Napoleonic conquest. Against this background of social upheaval, the visual arts were profoundly affected by shifts in patronage, public, and ideas about the social utility of image making. Lectures and readings align ruptures in the tradition of representation with the unfolding historical situation, and trace the first manifestations of a "romantic" alternative to the classicism that was the cultural legacy of pre-Revolutionary Europe.

Same as: ARTHIST 122

ARTHIST 324. The Age of Naturalism, Painting in Europe 1830-1874. 4 Units.

Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies- notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.

Same as: ARTHIST 124

ARTHIST 326. Post-Naturalist Painting. 4 Units.

How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art.

Same as: ARTHIST 126

ARTHIST 332. American Art and Culture, 1528-1910. 4 Units.

The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

Same as: AMSTUD 132, ARTHIST 132

ARTHIST 342A. Home Alone: Houses that Artists and Thinkers Design for Themselves. 4 Units.

This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.

Same as: ARTHIST 142A

ARTHIST 343A. American Architecture. 4 Units.

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.

Same as: ARTHIST 143A

ARTHIST 345. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented; and, at times, contested; by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.

Same as: AMSTUD 145M, ARTHIST 145, FEMGEN 145

ARTHIST 347. MODERNISM AND MODERNITY. 4 Units.

The development of modern art and visual culture in Europe and the US, beginning with Paris in the 1860s, the period of Haussmann, Baudelaire and Manet, and ending with the Bauhaus and Surrealism in the 1920s and 30s. Modernism in art, architecture and design (e.g., Gauguin, Picasso, Duchamp, Mondrian, Le Corbusier, Breuer, Dali) will be explored as a compelling dream of utopian possibilities involving multifaceted and often ambivalent, even contradictory responses to the changes brought about by industrialization, urbanization, and the rise of mass culture.

Same as: ARTHIST 147

ARTHIST 354. The American Civil War: A Visual History. 4 Units.

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: AMSTUD 154X, ARTHIST 154

ARTHIST 356. American and European Art, 1945-1968. 4 Units.

Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.

Same as: ARTHIST 156

ARTHIST 357A. Histories of Photography. 4 Units.

This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the iquest;workiquest; performed by photography. Through historical case studies, it considers how `to photographiquest; is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.

Same as: ARTHIST 157A

ARTHIST 359. American Photographs, 1839-1971: A Cultural History. 4 Units.

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: AMSTUD 159X, ARTHIST 159

ARTHIST 362. Race, Gender, and Sexuality in Contemporary Art. 4 Units.

This course focuses on issues of race, gender, and sexuality in American art and criticism from 1972 to the present. How have the terms of racial identity and sexual difference shaped the production and reception of contemporary art across the last four decades? What status has the body--and more specifically, the body of the artist--been accorded within recent work on identity and difference? Throughout the course of the semester, we will be particularly attentive to issues of racial and sexual stereotype. What critical or subversive uses have contemporary artists found for pictorial stereotype? How have stereotypes of race, gender, and sexuality been recycled in order to be mocked or deconstructed?.

Same as: ARTHIST 162

ARTHIST 364A. Technology and the Visual Imagination. 4 Units.

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, FILMSTUD 164A, FILMSTUD 364A

ARTHIST 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, FILMSTUD 165A, FILMSTUD 365A

ARTHIST 367. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, FILMSTUD 167B, FILMSTUD 367B

ARTHIST 373. Issues in Contemporary Art. 4 Units.

Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.

Same as: ARTHIST 173

ARTHIST 376. Feminism and Contemporary Art. 4 Units.

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 176

ARTHIST 378. Ethnicity and Dissent in United States Art and Literature. 4 Units.

The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: AMSTUD 178, ARTHIST 178

ARTHIST 384. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 184, JAPANGEN 184, JAPANGEN 384

ARTHIST 386. Theme and Style in Japanese Art. 4 Units.

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 186, JAPANGEN 186, JAPANGEN 286

ARTHIST 387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.

Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan. Same as: ARTHIST 187, JAPANGEN 185

ARTHIST 388A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.

The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.

Same as: ARTHIST 188A

ARTHIST 389C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.

Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidenteries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems.

Same as: ARTHIST 189C

ARTHIST 400M. The Artist in Ancient Greek Society. 4-5 Units.

An exploration of the low status of artists in a culture that valued their work but not the men themselves. Potters were especially scorned but even sculptors of gold and ivory statues were seen as "mechanics" (Herodotus), with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). Topics include case studies of individual artists, their importance to the polis, their workshops, wages and occupational hazards and the impact of social isolation on the quality of their work.

Same as: ARTHIST 200M

ARTHIST 405. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.

Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an. How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance. The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.

Same as: CLASSICS 376

ARTHIST 405A. Graduate Pedagogy Course. 2 Units.

This course is designed for graduate students in Art History and Film Studies preparing to work as teaching assistants in the Department of Art and Art History. The seminar will focus on a range of theoretical and practical concerns pertaining to the successful conceptualization, organization, and execution of class lectures and discussion sections. Students will be exposed to a variety of perspectives and strategies related to quality teaching at the college level.

ARTHIST 407C. Phenomenology and Aesthetics in Medieval Art. 5 Units.

This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homiles of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels.

Same as: ARTHIST 207C

ARTHIST 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

ARTHIST 409. Iconoclasm. 5 Units.

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, CLASSICS 158, CLASSICS 258, REES 409

ARTHIST 411. Animation, Performance, Presence in Medieval Art. 5 Units.

(Formerly CLASSART 311.) This course will explore concepts of animacy, performance, and presence in the art of Byzantium, focusing on the concept of image understood as the living bodies of the saints, the space of Hagia Sophia and its Eucharist ritual, the polymorphism of the mixed-media icon, and the interaction with these objects in prayer and recitation of epigrams.

Same as: CLASSICS 377

ARTHIST 413. Michelangelo. 5 Units.

Michelangelo's long career in light of recent scholarship. Topics include the status of the cult image, the paragon between poetry and the pictorial arts, painting and questions of literary genre, and Counter Reformation reactions to his art.

ARTHIST 415. Baroque: 1900-2000. 5 Units.

The seminar, which is largely methodological and historiographic, problematizes issues of periodization. The course examines different approaches to the question of "what is baroque," from Alois Riegl and Erwin Panofsky to Michel Foucault, Svetlana Alpers and Giovanni Careri.

ARTHIST 416. Bernini. 5 Units.

This seminar examines the career of Gianlorenzo Bernini (1598-1680), sculptor, architect, painter, stage designer and playwright, the premier artist of the popes. It will examine his cultural, political and religious milieu and lay particular emphasis on the theoretical relations between the arts that his oeuvre is seen to embody. In the process it will also review the genre of artistic biography, the historiography of the baroque and the myths of dynamism, theatricality, eroticism (and others) always associated with the period, and Bernini's work in particular.

ARTHIST 417B. Architectural Theory from Antiquity to Le Corbusier. 5 Units.

This seminar focuses on themes and theories in architectural design from antiquity until the early twentieth century. Modern and contemporary architecture has often claimed its modernity through the incorporation of theory, but this seminar examines selections from key texts that have also moulded architectural and urbanistic thought in the ancient, medieval, and early modern eras in combination with analytical comparisons of built architecture.

Same as: ARTHIST 217B

ARTHIST 422. Reception and Literacy in Roman Art. 5 Units.

(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.

Same as: CLASSICS 373

ARTHIST 423. The Material Imagination. 5 Units.

This seminar deals with the materials that artists have chosen in art and construction from antiquity to the early modern era. The particular focus is upon pre-modern perceptions of the inherent properties of materials, from amber and ivory to marble and granite, as well as the diverse ways in which societies have associated particular substances with social and cultural values. Particular emphasis is laid upon the architectural use of materials.

ARTHIST 426. NARRATIVE THEORY & VISUAL FORM. 5 Units.

The theoretical terrain of narrative studies in literary criticism and historiography. The critical implications of narrative analysis for the writing of history in general. Readings integrated with students' current research projects.

ARTHIST 432. Rethinking American Art. 5 Units.

A re-examination of American art of the 18th and 19th centuries, focusing on works in the collection of the de Young Museum, San Francisco. The class will meet weekly at the de Young, where we will be joined by Professor Margaretta Lovell and students from the University of California, Berkeley. Each student will pursue an in-depth study of a single work in the Museum's superb American collections, using documents of social and cultural history. We will pay particular attention to recent scholarship, questions of genre (landscape, portrait, still life and images of everyday life), and the "biography of objects" (the way works of art shift in context and interpretation over time). Graduate seminar open to advanced undergraduates with the instructor's approval.

ARTHIST 440A. The Art Market. 5 Units.

This seminar is designed to examine aspects of the art market in the current moment and since the mid 19th century. Participants will have an opportunity to engage with problems and perspectives that, until recently, have generally been overlooked or marginalized in narratives of the history of art. Each week, students will write a response to the readings to be shared in advance of the class meeting, and each week, discussion will be initiated by a different student. In individual research projects culminating in a seminar paper, students will be encouraged to focus on how the art market may have impacted the production, reception, and/or circulation of a work or works by a particular artist.

ARTHIST 442. Looking at Violence. 5 Units.

Violence in the media and its effects upon viewers, especially thennyoung, is an issue of national concern that has produced legislationnnfor the ratings of movies, television shows, and computer/video games. Parental control software makes it possible to program cable boxes andnncomputers to censor what broadcasts or websites are accessible tonnchildren. These are political and technical fixes to a perceivednnsocial problem. They do not ask why one is drawn to watch violence innnthe first place, nor why certain kinds of violent imagery is compelling. Debates about how such measures should be implemented usually proceed from the given that images of violence are subjectspecific, with little or no consideration of their formal qualities or visual protocols. This seminar assumes that the tools and categories of visual analysis specific to the History of Art might enrich our thinking about the attraction and impact of violence across media andnncross time. The seminar proposes to situate its topic at the intersection of social, philosophic, and visual traditions so as to allow productive points of view to emerge. Readings will include texts from the history of aesthetics, psychology, and moral philosophy. Research projects will encourage analysis of all forms of visual media: painting, sculpture, prints, photographs, film, video, and computer graphics.

ARTHIST 445. What's not American about American Art?. 5 Units.

This seminar focuses on American art as a history of migration (of people but also of visual objects) across national and continental boundaries. We examine trans-Atlantic and trans-Pacific dialogues and consider how anxieties about foreigners, immigrants, and political dissidents shaped American art and culture at particular moments in the 20th century. In the second half of the course, we consider a series of museum exhibitions that repositioned American art as a history of social conflict and exclusion.

ARTHIST 447. Piet Mondrian: Art, History and Historiography. 5 Units.

Taking Mondrian as a case study, this seminar will examine some of the salient factors that shape how a modern artist emerges into history. Participants will explore Mondrian's work and ideas, attending not only to his own self-fashioning but also to the myriad forces that have shaped his reception since his death in New York in 1944, including scholarship, museum exhibitions, the art market, the responses of innumerable subsequent artists, and the wide circulation of his work in popular culture.

ARTHIST 453. Reading Walter Benjamin. 5 Units.

Few cultural critics are so often cited by scholars in the humanities as Walter Benjamin. The impact of his writings has been decisive to some of the most influential art historians of recent memory, although usually based on a small number of texts (the *Kunstwerk* essay, the writings on photography, the flacirc;neur, and cinema). Literary historians have turned to somewhat different studies with great profit, notably his writings on Baudelaire, translation, and German tragic drama. The publication of Benjaminiquest;s entire oeuvre in English has made his work more accessible to a broad range of scholars with diverse interests; one direction emerging from this familiarity is a deeper awareness of his commitment to materialist history. With the palpable collapse of iquest;social art historyiquest; amongst younger art historians, dispersed ambitions of where iquest;visual studiesiquest; might lead, and the return to aesthetic meditations derived from protracted analyses of single works, it may be the time to re-read Benjamin with an eye towards understanding his ambitions for a iquest;materialist history.iquest; That is the objective of this seminar : we will read deeply in Benjaminiquest;s writings, configure some ideas of what history meant to him, and attempt to export some of those practices to our current art-historical projects.

ARTHIST 454. The Image in Question : French theory after Foucault. 5 Units.

TBD.

ARTHIST 457. Abstract Expressionism. 5 Units.

Coinciding with the opening of the Anderson Collection in the fall of 2014, this seminar considers the expanded field of Abstract Expressionism relative to both domestic and international cultural politics. Topics: Modernism and existentialism; transnational avant-gardes; interdisciplinary approaches to the visual image at mid-century; the ideologies of formalism and autonomous art; cold war aesthetics. Pollock. de Kooning, Guston, Newman, Rothko, Still, Gorky others. Close readings of Greenberg, Rosenberg and critics associated with *Partisan Review* and *little magazines*. Enrollment limited by application only; Phd students only with preference to Art History.

ARTHIST 458. Warhol and After. 5 Units.

This seminar focuses on the wide-ranging career of Andy Warhol as a meansnbsp;to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warholiquest;s visual production (e.g. his career as a commercial artist in the 1950s, his everyday photographs of the 1970s and 1980s)nbsp;as well as now-canonical Pop paintings of the early-to-mid 1960s. Warholiquest;s critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warholiquest;s legacy and influence on American art in the decades since his death in 1987.

ARTHIST 461. The American Civil War: An Experiential History. 5 Units.

Can one write a history of lived experience, of ephemeral states that never were represented? Can one look at representations of paintings, photographs, and literature to see where these ephemeral states might be trapped, or might otherwise be pictured? Feeling that the real war did not get in the books (for the most part), the course examines those books and other representations and so many things that never attained so exalted a form to look at the war anew. Methodological readings as well as readings about the Civil War.

ARTHIST 462. The Sense of Place in American Art. 5 Units.

The course will focus on places in American art, literature, and material culture--how places are imagined; how they are conceived in opposition to the pure flow of forgettable experience; how what happens in a place somehow remains.

ARTHIST 463. Grad Seminar: American - Ekphrasis. 5 Units.

Description is a prime skill for an art historian. nbsp;How to make a reader (or listener) see a work, whether it is illustrated or not, is arguably the most fundamental and important task and pleasure in this discipline. nbsp;How to make a world--both for oneself and for one's audience--is the larger purpose of such imagistic writing. nbsp;Considering historical and more recent examples of ekphrasis, the course will concentrate on works of art in the Cantor Arts Center, requiring each student to select a work that will become the basis for a quarter-long writing project.

ARTHIST 465. Media Technology Theory. 3-5 Units.

This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.

Same as: COMM 384

ARTHIST 470. Globalization and the Visual Arts. 5 Units.

Enrollment restricted to graduate students. Globalization as the most important paradigm for the production, circulation, and reception of contemporary art since the 1990s. The expanding terrain of the art world; biennial culture; new economies of scale and the art market along with its critique in the discourses of empire and multitudes. Debates on the thematics of hybridity; post-Fordism; the flat world and capital flows; exteriority and site specificity; and new models of collectivism in recent art.

ARTHIST 472. Mellon Curating Course. 5 Units.

This course focuses on the production, criticism, and curating of art. It encompasses both the study of curatorial work and the organization of an exhibition at the Cantor. Through a series of required readings, intensive class discussions, class trips, guest lectures, and first-hand encounters with art objects and exhibitions, we will investigate the history and contemporary practice of curating. Our work together will culminate in an exhibition at the Cantor organized by class members in close consultation with Cantor staff. The show will open in late fall 2015-16 and will be on view for approximately 12-15 weeks. Students are expected to enroll in both the Spring 2014-15 and Fall 2015-16 quarters. For graduate students only and with the approval of the faculty. Course will be co-taught by Richard Meyer and Connie Wolf.

ARTHIST 478. Problems in the History of Collecting, Circulation and Display. 5 Units.

This graduate seminar involves intensive study of art collecting, circulation and display through the lens of one of the principal institutions of art history: the museum. It will include a site visit to the Solomon R. Guggenheim Museum to gain a comprehensive view of this complex institution as a basis for seminar-related research and writing. Limited to PhD students in Art History and Film Studies, or by permission of the instructor.

ARTHIST 485. The Situation of the Artist in Traditional Japan. 5 Units.

Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons/quest; desires and artists/quest; modes of production.

Same as: JAPANGEN 220

ARTHIST 485A. Exhibiting East Asian Art. 1-5 Unit.

This seminar will explore the history, conceptual approaches, design, and practicalities of museum-based exhibitions of East Asian art. Through readings, field trips, and site-based exercises the seminar will look to inform the planned reinstallation of the Cantor Center's East Asian galleries. Open to graduate and undergraduate students with interests in art history, museology, design, and cultural representation. Permission of the instructor required.

ARTHIST 487X. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.

Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.

Same as: ARTHIST 287, JAPANLIT 287

ARTHIST 489. Connoisseurship Studies of Chinese Painting, Calligraphy, and Seals. 5 Units.

This course focuses on taking connoisseurship out of the classroom and into the collecting world. With many classes being held at the Asian Art Museum and private collections in the Bay Area, students will learn not only what the role connoisseurship plays in the current art landscape, but how a museum works. Combines case studies in the field, reading material, eyes-on experience, and discussion, this class will address the topics of utilizing resources, conducting research, cultivating collectors, building collections, and curating exhibitions through the lens of connoisseurship.

ARTHIST 489A. Making the Masterpiece in Song Dynasty China. 5 Units.

Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks.

Same as: ARTHIST 289A

ARTHIST 490. Curatorial Activism in the Arts of Africa. 5 Units.

Enrollment restricted to graduate students and advanced undergraduates. What is contemporary in African art and how does one curate the contemporary in and through African art? The course examines curatorial practices and activist projects. Topics include redefining museum exhibitions and collections of African art at the Cantor Arts Center and museums around the world; breaking away from stereotypical representations of the arts and cultures of Africa; controversial issues and dilemmas; curatorial activities directed toward cultural, social, and political activism; strategic modes of display and design; subjectivity vs. objectivity; and fostering critical dialogues about the arts and cultures of Africa.

ARTHIST 502. Methods and Issues in Visual Studies. 5 Units.

This course introduces grad students to a range of interpretive methods in the study of art, visual culture, and media. Required for incoming PhD students in Art History.

ARTHIST 600. Art History Bibliography and Library Methods. 1 Unit.**ARTHIST 610. Teaching Praxis. 1-5 Unit.****ARTHIST 620. Area Core Examination Preparation. 5 Units.**

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

ARTHIST 640. Dissertation Proposal Preparation. 5 Units.

(Staff).

ARTHIST 650. Dissertation Research. 5 Units.

(Staff).

ARTHIST 660. Independent Study. 1-15 Unit.

For graduate students only. Approved independent research projects with individual faculty members.

ARTHIST 660E. Extended Seminar. 4 Units.

May be repeated for credit. (Staff).

ARTHIST 670. Dissertation Seminar. 3-5 Units.

For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects.

ARTHIST 680. Curricular Practical Training. 1-3 Unit.

CPT course required for international students completing degree. Prerequisite: Art History Ph.D. candidate.

ARTHIST 802. TGR Dissertation. 0 Units.

Art Studio Courses

ARTSTUDI 10AX. Filmmaking. 2 Units.

Production skills and project development in documentary filmmaking. The fundamentals of filmmaking using digital video production techniques focused on documentary storytelling. Shooting in mini-DV format and editing with Final Cut Pro software, students actualize their ideas in an audiovisual medium from conceptualization through post-production and exhibition.

ARTSTUDI 11A. Drawing: Means & Alternate Means. 2 Units.

The first half of the quarter students explore more traditional ways of drawing (still life, models, etc.) to develop a hand/eye relationship. The class will focus on seeing and documenting what is in front of them. The second half of the quarter expands into using alternative means of mark making to deconstruct and re-construct ideas learned in the first half of the quarter. String, tape, body parts and shadows are all fair game. This will be a lively class. The students are graded on their attendance, participation, weekly assignments and one final assignment consisting of two finished works, one being traditional, the other experimental.

ARTSTUDI 11AX. Digital Art and Design in Practice. 2 Units.

Hands-on exploration of art and design using digital tools. Overview of contemporary digital art and design including fine art, graphic design, film, and animation. Analysis of new work in these areas and visits to Bay Area production and artist studios. Demos will focus on 2D and time-based techniques, but students interested in procedural or 3D computer graphic are welcome. Students will complete a multi-part visual project to be included in a final exhibit.

ARTSTUDI 12AX. Drawing Intensive: Revisiting Nature. 2 Units.

As increasing technological advances can further separate us from direct impressions of nature, this class is designed to reconnect and enhance our relationship to the natural world and our surrounding environment. To do this we will develop visual skills and critical thinking through careful observation and classical drawing techniques. Inspired by Stanford's natural and manicured landscapes, students will enjoy the great outdoors while learning elements of perspective, composition, light, and form. Students will learn about master landscape artists, investigate the built and natural environment of the campus, and experiment with various drawing techniques, mediums, and styles.

ARTSTUDI 13A. Fundamentals of Oil Painting. 2 Units.

This course is an introduction to oil painting. Students concentrate primarily on the technical aspects of the medium (i.e. how to paint as opposed to what to paint.) We examine color: how to mix it, how it establishes spatial relationships, light, and shadow. The class progresses through a series of problems designed to develop a sensitivity to paint application and surface quality; as well as to value, composition, volume, light, and space as the necessary elements of recreating perceptual experience. By the end of the course, students are able to apply some sophisticated techniques to visual problem solving. The aim of the course is to demonstrate the mechanical structure of oil painting.

ARTSTUDI 13AX. Photography. 2 Units.

This hands-on course in photography will emphasize the techniques, aesthetics, and conceptual considerations of traditional black and white photography. Students will also explore photography's history and applications as an expressive tool, with the power to communicate ideas and move the viewer. Throughout the course, students will master the use of their own manual 35mm camera and process the film themselves in our lab. They will also learn the techniques needed to make quality black and white prints in the darkroom. Students will coordinate an exhibition and present their finest work in a professional manner.

ARTSTUDI 13BX. Narrative Painting For Non-Majors. 2 Units.

This course will introduce students to the fundamentals of painting using acrylic paints, while simultaneously examining the narrative in visual art. Content for this course will be centered on how human experience is remembered and transformed through self-reflexive, experiential learning that connects our artwork to our personal lives. Formal issues will include the use of color, paint handling, value, and composition. Students will become familiar with the materials through hands-on demonstrations, discussions of historical context for the medium, and in-class critiques. We will also discuss surface preparation, clean-up, and safety. Slide lectures, readings, and a visit to the Cantor museum will enhance studio work time. Drawing background preferred but not required.

ARTSTUDI 14. Drawing for Non-Majors. 2 Units.

Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with graphite, charcoal, conte, and inks. Lectures alternate with studio work.

ARTSTUDI 14AX. Sculpture and the Expanded Field. 2 Units.

Sculpture involves space, materials, techniques, and ideas. It is an art of the extraordinary as well as the everyday. No longer tied to architecture, mimesis, or commemorative representation, sculpture now appears in a variety of forms including as installations, collaborations, projections, appropriations, interventions, performances, and experimental projects that address formal concerns as well as issues of identity, historical memory, narrative, economics, the environment, popular culture, technology, globalism, politics, and time. Examples of such work; expanded work; sculpture include public art made to attach to buildings or to be given away, inflatable homeless shelters, and wearable art for street demonstrations. The principle area of knowledge addressed in this course involves exploratory learning about the formal, historical, and global dimensions of contemporary sculptural art. Students will work alone or in groups using a range of materials from cardboard to wood, to found objects, social affects, and conceptual ideas.

ARTSTUDI 15AX. Introduction to Sculpture. 2 Units.

This course offers a unique and interdisciplinary perspective on contemporary sculpture and art practice with the purpose of enabling artistic creation and discovery. The class will become familiar with traditional and non-traditional techniques through hands on workshops and instruction as well as lectures, visiting artists, and studio visits with working sculptors. There will be three major projects resulting in three complete works of art including a self-guided final project building on techniques and concepts covered in this course.

ARTSTUDI 16AX. Drawing Marathon. 2 Units.

Hosted by the New York Studio School of Drawing, Painting, and Sculpture and based entirely in New York, Drawing Marathon helps students learn the importance of drawing as the basis of understanding one's experience of the world. Drawing is seen here as the most direct route to the examination of our perceptions. Unorthodox tools and exercises will be introduced to broaden the students' drawing vocabulary. This course will investigate many implications of drawing as a physical and cerebral activity as well as drawing as a philosophy. It will discuss key issues, including those of scale, tiny to huge; the use of different formats; the use of the rectangle; the vertical axis and its significance; the nature of distortions; the compression of space and depth; the search for "form" and its consequences; space and its meaning; functions and the different kinds of space; and the nature of relational drawing. Students can expect to be in the studio 9 a.m. to 9 p.m. most days. The average day is spent mostly drawing from perspective and includes several group critiques; most nights accumulate in a lengthy final critique at the end of the physical drawing session. This practice intensifies for the last critique at the end of the course. Students learn to engage in clear and succinct dialogue and discussions within the group. Instruction encourages students to participate in and understand the visual language of drawing. The Marathons are intensive all-day programs that run for two weeks at the beginning of each semester at the acclaimed NY Studio School. Students reside in New York City during the program period. Daily drawing sessions at the Studio School, field trips, and creative exploration of the city are all included in the program. Drawing marathon is led both by full-time NYSS faculty and distinguished visiting artists. The Drawing Marathon is open to beginning and advanced artists, regardless of their major.

ARTSTUDI 17A. Black and White Darkroom. 2 Units.

A beginning black & white darkroom photography class with an emphasis on project conceptualization and the utilization of local environments. Students in addition to learning photography basics, will complete a cohesive, short body(s) of work. Students work collectively to realize a group exhibition. Theme and title of the exhibition are chosen at the beginning of the quarter and projects will be developed within its framework.

ARTSTUDI 17AX. Art in the Streets: Identity in Murals, Site-Specific Works, and Interventions in Public Spaces. 2 Units.

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project.

ARTSTUDI 17X. Photography for Non-Majors: Discovering Photography. 2 Units.

This course is designed to introduce the beginning photographer to the basics of making, looking at and discussing fine-art photographs. Students will learn the fundamentals of camera operation; including focus, exposure, depth of field, and motion control. Emphasis will also be placed on learning the basic visual and linguistic vocabulary of photography through in-class discussions focused on the concerns addressed by fine-art photographers since the inception of the media. Students will be encouraged to approach their own image making with the intent of developing a series or set of images, rather than thinking in singular pictures.

ARTSTUDI 31X. New Art-Cinema for Non Majors. 2 Units.

This is a studio course in contemporary cinema art, focusing on actionable, ultra-low budget methods for creating sprawling, proprietary cinematic expressions. Students will build familiarity with the myriad tools of and approaches to digital cinema creation and their practical use in works of art. Students will also be encouraged to conceive of cinema art expansively-- as an opportunity to enclose, express and explore other forms of art: the written word, sound, sculpture, image-making and performance. We will think, talk, and work through the question of the role of art in cinema, and vice versa. We will create as a class no less than two short films. For each film, students will have the opportunity to reinvent their role (thinker-actor, writer-dancer, sound recordist, location scout, human sculpture, etc.). Together, we will smash the myth of the auteur as we hone ourselves into a finely ground machine for breakneck film-making.

ARTSTUDI 130. Interactive Art: Making it with Arduino. 4 Units.

Students use electronics and software to create kinetic and interactive elements in artwork. No prior knowledge of electronics or software is required. Students learn to program the Arduino, a small easy-to-use microprocessor control unit (see <http://www.arduino.cc/>). Learn to connect various sensors such as light, motion, sound and touch and use them to control software. Learn to interface actuators like motors, lights and solenoids to create movement. Learn to connect the Arduino to the MAX/MSP/Jitter programming environment to create media-intensive video and audio environments. Explore the social dimensions of electronic art. (lower level).

ARTSTUDI 130N. Introduction to Art Practice. 3 Units.

This hands-on introduction course will introduce students to formal and conceptual visual strategies in expression through a diversity of artistic mediums which may include drawing, digital media, printmaking, photography, performance and sculpture. This course is meant to give students an overview of many of the mediums and facilities that are available in the Art Practice program. Field trips, guest artists.

ARTSTUDI 131. Sound Art I. 4 Units.

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level). Same as: MUSIC 154A

ARTSTUDI 138. Sound and Image. 4 Units.

Practices that combine audio and visual media. Topics include synesthesias, visual music, film soundtracks, and immersive multimedia practices that combine sound, music, still and moving images, projections, and performance. (lower level).

ARTSTUDI 140. Drawing I. 4 Units.

Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work. (lower level).

ARTSTUDI 141. Plein Air Painting Now. 4 Units.

Surrounded by so many technologies for image production, why choose to take a course based on a style of painting developed over a hundred years ago? The standard answer to this question has changed remarkably little. Rather than answering that the camera cannot capture what the eye sees, we might instead respond that neither the computer, nor the camera, nor video, can reproduce in paint the subjective gaze of the contemporary viewer. Contained within this answer lies the trajectory for the class "PLEIN AIR PAINTING NOW!" In this course students will be introduced to various water based media appropriate for plein air painting and learn various techniques and strategies for making paintings outdoors. The course will include the traditional discussions of brushes, paints, the different types of supports as well as easels, umbrellas and chairs. A broad variety of painting techniques will be demonstrated. We will set up in various locations around campus, paying particular attention to the specifics of the sites as this will serve as the jumping off point for discussion of the readings that form the second component of the class. Please note that this class takes place outdoors. Plan accordingly, as we will be meeting in various locations around campus, and will be subject to inclement weather. Freshmen and Sophomores receive priority for enrollment. This is a designated CREATIVE EXPRESSIONS course.

ARTSTUDI 141S. Drawing Outdoors. 3 Units.

In this introductory class, we take drawing out into the world, exploring different environments, techniques, and approaches as we go. The fundamental nuts-and-bolts of basic drawing techniques: light logic, depicting depth and drawing the figure, are integrated into each environment. From the Stanford campus; it's a cafe's, architecture and landscaping, to redwoods and water, to more urban settings, drawings will range from high-speed gestures to longer, more contemplative work. Through pen, graphite, charcoal, ink, watercolor/ gouache and mixed media, we explore dichotomous relationships, as well as those in seemingly perfect harmony. We move from the inanimate to animate, figure and architecture, motion and stillness, to the micro and macro, considering how even the smallest patch of earth may be as monumental as Hoover Tower. Both beginning and advanced students are welcome. Summer.

ARTSTUDI 145. Painting I. 4 Units.

Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure used as subject matter. Emphasis is on painting and drawing from life. (lower level).

ARTSTUDI 145A. PAINTING WITH ACRYLICS. 4 Units.

This introduction to painting takes full advantage of the quick-drying properties of acrylic paint. A flexible medium which can be altered to resemble everything from watercolor to oil paint to cement, we explore the options. Beginning with basic technique and considerations of color and composition, we move through selected schools of painting from Impressionism and Expressionism to Pop and personal projects. No experience necessary.

ARTSTUDI 147. Artist's Book. 4 Units.

Explores contemporary aesthetic interpretations of the book as an art object while invigorating traditional artistic practices of the art of the book. Through the medium of drawing, collage, and mixed media students produce their own artist's book. The course familiarizes students with bookbinding and the various techniques used, as well as exploring the narrative, text and image, and the book as a sculptural object.

ARTSTUDI 147S. DRAWING AND PAINTING INTENSIVE. 3 Units.

This introductory course teaches the basic tools of drawing and painting with acrylics, along with an introduction to a range of artists for inspiration. From the beginning, we take advantage of Stanford's beautiful campus, drawing and painting outside, along with studio work and slide lectures. We begin with our unique gestures and mark-making, moving through linear perspective, light logic, photo-realism, and the figure, using a range of media from graphite and charcoal to bamboo brush and ink. The introduction to acrylic painting explores the many ways we may use acrylic paint, looking at different art historical approaches along the way. A flexible medium, acrylic can be used to mimic watercolor, oil paint, or even cement, and works on a variety of surfaces. We begin by learning color theory and different paint applications through abstract painting, taking as our inspiration Piet Mondrian, Hans Hofmann, and J.W. Turner. Using thick, impasto paint, we move outdoors for plein air painting, stealing strategies from the Impressionists, and adapting them in our personal projects with today's technologies. Moving back indoors, we switch it up again, exploring the expressive gesture, and figurative distortion, using acrylic now more thinly, a la watercolor or gouache, along with charcoal, creating dramatic effects, and working on different surfaces. Each student will finish the quarter with a wide range of techniques and materials at the ready. No previous painting or drawing experience is necessary.

ARTSTUDI 148. Monotype. 4 Units.

Introduction to printmaking using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, and Pendergast. May be repeated for credit. Prerequisite: 140. (lower level). May be repeated 2 times for total of 8 units.

ARTSTUDI 148A. Lithography. 4 Units.

The classic technique of printing from limestones. Techniques to draw an image on the stone, etch and fix the image on the stone, and print it in numbered editions. Students work on a variety of stone sizes. Field trips to local publishers of lithography or lithography exhibitions. (lower level).

ARTSTUDI 148B. Introduction to Printmaking Techniques. 4 Units.

Techniques such as monotype, monoprint, photocopy transfers, linocut and woodcut, intaglio etching. Demonstrations of these techniques. Field trips to local print collections or print exhibitions. (lower level).

ARTSTUDI 148P. DIGITAL PRINTMAKING. 4 Units.

The Digital Printmaking course explores a combination of experimental printmaking methods and investigates print media within contemporary art and culture. Techniques like large-format inkjet printing and laser plate etching will be demonstrated in class. Students will have in-class access to a flatbed printer that is capable of printing digital images on a wider variety of materials like glass, fabric, and wood. Through a series of hands-on labs, students will develop projects using a combination of methods and discussions will address issues relating to print media today; audience, distribution, repetition, originality, and reproduction.

ARTSTUDI 149C. Etching. 4 Units.

In this class students will explore various techniques of etching (or intaglio) on zinc plates such as, hard ground, soft ground, aquatint, marbling aquatint and sugar lift, through an electrolytic process that uses no acid but sulfates and very low electrical power (1.5 V or the same as a AA battery). This process is much less toxic than the traditional etching with nitric (which produces toxic fumes) or ferric acid (difficult to clean). These techniques will be complemented by other ones that can be mixed with etching such as photocopy transfers, Chine collecut; (attaching a different color paper between plate and main paper), and mono-printing. Etching/Intaglio (making a mark under the surface of the plate) is one of the most tactile and elegant forms of printmaking. The plate leaves a 3-D line mark and embossed marks in the deep etched areas as well as at the edges of the plate. Many major artists have left memorable images by working in this medium (Rembrandt, Goya, Kathe Kollwitz, Eduard Munch, and many others) influencing many contemporary artists.

ARTSTUDI 151. Sculpture I. 4 Units.

Traditional and non-traditional approaches to sculpture production through working with materials including wood, metal, and plaster. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips; guest lecturers.

ARTSTUDI 153N. Ecology of Materials. 3 Units.

This hands on studio based sculpture course takes a critical look at the materials used in sculpture and addresses the environmental concerns surrounding them. We will look at artists concerned with environmental impact and the interconnection of art to other fields. This class also addresses the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations will be addressed. Students will learn traditional building techniques as needed (wood shop, metal shop, mold making, found object) as well as anti-object techniques. Existing at the intersection of art, science, technology and ecology, environmental art often functions to inform and/or interpret natural conditions and the processes associated with both "non-human" and "human-made" constructions. It will also educate us about environmental issues and concerns. This course introduces and provides a context for this area of interdisciplinary exchange and artist production by examining areas commonly known as cradle to cradle design, land art, eco art, environmental art, and art and technology. What role does sculpture play in a fragile world with depleting natural resources, global economies and media dominance? What is the life cycle of object making and creating? What is our relationship to objects in a growing technological age? Students will make 3-4 projects based on these questions. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program Recology at the San Francisco Dump, visiting artists and visiting faculty from Stanford doing environmental research will augment this class.

ARTSTUDI 155. Social Sculpture. 4 Units.

This course investigates the immediacy of the body as material and sculpture in order to investigate private and social spaces. Actions are often used to understand or question the function and psychological aspects of a space and are documented for the perpetuation of these ideas. Throughout the quarter we will investigate the body as material and develop site specific performances enacted for: Private/Domestic and Public Space; Constructed Space & Physical Space; ecological systems; and generate both Individual & Collaborative based Actions, Interventions, & Events."

ARTSTUDI 160. Design I : Fundamental Visual Language. 3-4 Units.

Formal elements of visual expression (color, composition, space, and process) through hands-on projects. Two- and three-dimensional media. Emphasis is on originality and inventiveness. Content is realized abstractly. Centered in design; relevant to visual art study and any student seeking to develop visual perception. (lower level).

ARTSTUDI 161. Catalysts for Design. 3-4 Units.

Nature and science as sources of design inspiration. Projects in natural pattern formation, biological growth and form, Fibonacci numbers and the golden section, planar and spatial symmetry, mechanics, chaos, and fractals. Emphasis is on importance of creative synthesis to the design process. Projects take the form of physical constructions as opposed to renderings or computer models. Field trips. (lower level).

ARTSTUDI 166. Design in Motion. 3-4 Units.

Design areas for which movement and transformation are essential. Experimentation with mechanical means such as linking, hinging, inflating, and rotating. Projects in lighting, automata, tools and utensils, chain reactions, toys and games, festival props, and quasi-architecture emphasize the creation of works in which motion is a significant agent for aesthetic gratification. No experience in mechanical engineering required. (lower level).

ARTSTUDI 167. Introduction to Animation. 3-4 Units.

Projects in animation techniques including flipbook, cutout/collage, stop-motion such as claymation, pixilation, and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (lower level).

ARTSTUDI 170. Introduction to Photography. 4 Units.

Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. Course requires the use of a 35mm camera. The Department will supply if necessary. (lower level).

ARTSTUDI 170S. Introduction to Photo- Summer. 3 Units.

Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. Course requires the use of a 35mm camera. The Department will supply if necessary. Summer. (lower level).

ARTSTUDI 171. Intro to Digital Photo. 3 Units.

This course offers an introduction to creative digital imaging. Students will master camera controls and explore meaningful image production. Course topics include: image capture, composition, artificial & natural light, image correction, data storage, night photography, and photography as a communicative tool.

ARTSTUDI 173E. Cell Phone Photography. 4 Units.

The ubiquity of cell phone photography has had a widespread impact on the tradition, practice, and purposes of photography, as well as concepts of art and what art should be for. In this class, we discuss the documentarian bent of much cell phone photography, its potential as a component of citizen journalism, the ways in which the environments of these photographs (Instagram, Tumblr) are changing ideas of the image and of authorship, and effects that cell phone photography may be having on us as subjects. Alongside these discussions, students will create works of art utilizing the experimental, documentary, and social potentials of cell phone photography.

ARTSTUDI 174B. Creativity in the Age of Facebook: Making Art for and from Networks. 4 Units.

This class explores the history, practice and technique of creating art on and for the internet. Discussions, projects and readings focus on the ways in which internet art embodies changing ideas about artistic creation, technology, and interactivity as a way of blurring the line between artist and audience. Setting recent work against the backdrop of earlier moments in contemporary art (found object art, photomontage), this course also situates internet art in the pre-internet tradition of finding new perspectives on, and meanings in, overfamiliar or banal media surroundings. In collaborative and individual projects, students will create visual compositions on online platforms such as NewHive and explore social media interventions, Twitter experiments, crowdsourced work, collections of online found imagery, supercuts, GIFs, and "choose your own adventure"- style online storytelling.

ARTSTUDI 176. Time Shifts. 4 Units.

In this course, we examine how both individual perceptions and artistic representations of time have historically shifted with changes in technology. What are the current possibilities to extend/re-imagine how we represent time using digital tools? How do these possibilities, in turn, re-inform traditional media? This is a conceptual and experimental class with a studio focus. Examples are mainly from an art context, but include interaction design, information visualization, and scientific illustration of time-based events and processes. Students should have previous experience with a set of digital tools - Photoshop, FinalCutPro, AfterEffects, or a programming language that will allow you to digitally manipulate images. Assignments include exercises using traditional media, and digitally based projects. Occasional writing assignments also required.

ARTSTUDI 177. Video Art I. 4 Units.

Students create experimental video works. Conceptual, formal, and performance-based approaches to the medium. The history of video art since the 70s and its influences including experimental film, television, minimalism, conceptual art, and performance and electronic art. Topics: camera technique, lighting, sound design, found footage, cinematic conventions, and nonlinear digital editing. (lower level).

ARTSTUDI 178. Art and Electronics. 4 Units.

Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (lower level).

ARTSTUDI 179. Digital Art I. 4 Units.

Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the computer as interface and object. (lower level).

ARTSTUDI 180. Color. 3-4 Units.

Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level). Same as: TAPS 180P

ARTSTUDI 230. Interdisciplinary Art Survey. 4 Units.

This course is designed to develop diversity of concepts and strategies within the student's artistic practice. The course includes a survey of artists using different media taught in the department's studio program such as painting, drawing, video and digital art, printmaking, photography, and sculpture. This seminar-style class seeks to expand the artistic practice outside of traditional media boundaries and focuses on the translation of concepts across various media. Priority to Art Practice majors and minors. (upper level).

ARTSTUDI 236. Future Media, Media Archaeologies. 3-4 Units.

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate. Same as: MUSIC 236

ARTSTUDI 239. Intermedia Workshop. 3-4 Units.

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit. Same as: MUSIC 155, MUSIC 255

ARTSTUDI 240. Drawing II. 4 Units.

Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 140 or consent of instructor. (upper level).

ARTSTUDI 245. Painting II. 4 Units.

Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Duumlrer, Rembrandt, Ceacute;zanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. May be repeated for credit. Prerequisites: 140, 145, or consent of instructor. (upper level).

ARTSTUDI 246. Individual Work: Drawing and Painting. 1-15 Unit.

Prerequisites: two quarters of painting or drawing and consent of instructor.

ARTSTUDI 249. Advanced Undergraduate Seminar. 3-4 Units.

Capstone experience for majors in Art Practice. Interdisciplinary. Methods of research, cross-media critiques, and strategies for staging and presenting work, including a group exhibition for Commencement. Guest artists from the Bay Area. Minors may interview for possible inclusion. (upper level).

ARTSTUDI 250. Individual Work: Sculpture. 1-15 Unit.

May be repeated for credit.

ARTSTUDI 252. Sculpture II. 4 Units.

Builds upon 151. Installation and non-studio pieces. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for the studio work. Field trips; guest lecturers. (upper level).

ARTSTUDI 254. Kinetic Sculpture. 3-4 Units.

This course is focused on developing a practical, hands on understanding of kinetic mechanisms applied to objects and materials in sculpture and installation. Class time will take the form of lectures and technical demos, and hands-on labs where you will be exposed to different strategies for making movement in the physical world. Topics investigated include Rube Goldberg machines, devices of wonder, interactivity, audience experience and participation. This course will not be co-taught this year.

ARTSTUDI 260. Design II. 3-4 Units.

The historical spectrum of design including practical and ritual. The values and conceptual orientation of visual fundamentals. Two- and three-dimensional projects grouped to relate design theory to application, balancing imaginative and responsible thinking. Prerequisite: ARTSTUDI 160 and ME 203 (upper level). May be repeated for credit.

ARTSTUDI 261. Individual Work: Design. 1-15 Unit.

May be repeated for credit.

ARTSTUDI 262. The Chair. 3-4 Units.

Students design and fabricate a highly refined chair. The process is informed and supported by historical reference, anthropometrics, form studies, user testing, material investigations, and workshops in fiberglass molding, wood steam-bending, plywood forming, metal tube bending, TIG & MIG welding, upholstery & sewing. Prerequisites: ME 203, or consent of instructor. (upper level).

ARTSTUDI 263. Paper. 3-4 Units.

Beyond conventional use of paper as a foundation for mark-making to its potential as a medium in its own right. Students experiment with papers to develop facility with techniques of folding, scoring, curling, cutting, tearing, piercing, embossing, layering, and binding to create three-dimensional forms, patterned/textured surfaces, reliefs, interactive dynamic structures such as pop-ups, containers, and book forms. (upper level). May be repeated for credit.

ARTSTUDI 265. Design for Exploration. 3-4 Units.

A collaboration with the Exploratorium in San Francisco. Students investigate and experiment with all aspects of the creation of interactive museum exhibits. On-site exhibit floor sessions and prototyping workshops. Lectures from museum staff on exhibit design. Students design and construct exhibits for temporary placement on the floor of the Exploratorium. To be considered for admission to the course, student must fill out an application form at <http://stanford.edu/~edmark/application.htm> no later than Nov 30th, 2013.

Same as: ME 213

ARTSTUDI 270. Advanced Photography Seminar. 1-5 Unit.

Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit. (upper level).

ARTSTUDI 271. The View Camera: Its Uses and Techniques. 4 Units.

For students of photography who wish to gain greater control and refine skills in image making. 4x5 view cameras provided. Enrollment limited to 8. (upper level).

ARTSTUDI 272. Individual Work: Photography. 1-5 Unit.

Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit.

ARTSTUDI 273. Individual Work: Experimental Media Art. 1-15 Unit.

May be repeated for credit.

ARTSTUDI 274. Alternative Processes. 4 Units.

Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 170, 270, or consent of instructor. (upper level).

ARTSTUDI 275. Introduction to Digital Photography and Visual Images. 4 Units.

Students use Adobe Lightroom to organize and edit images, manipulate and correct digital files, print photographs, create slide shows, and post to the Internet. How to use digital technology to concentrate on visual thinking rather than darkroom techniques. (upper level). May be repeated 2 times for a total of 8 units.

ARTSTUDI 276. The Photographic Book. 4 Units.

Grouping and sequencing photographic images to produce a coherent body of work with a thematic structure. (lower level).

ARTSTUDI 277. Project class: Digital and Analog Projects in Photography. 4 Units.

Students pursue a topic of their own definition. Further exploration of darkroom and other printing techniques; contemporary theory and criticism. (lower level). May be repeated for credit 2 times for a maximum of 8 units.

ARTSTUDI 278. Intermediate Black and White Photography. 4 Units.

This course explores several intermediate-level topics and techniques in film based photography. These include medium format photography utilizing the school's cameras; fine printing techniques using fiber paper; the full range of black and white films currently available; and alternative black and white techniques such as pinhole photography, photograms, and Holga cameras. We briefly discuss basic lighting techniques. The course emphasizes improving the student's image content and sequencing of images.

ARTSTUDI 279A. Digital Art II. 4 Units.

Advanced. Interactive art works using multimedia scripting software. Experimental interfaces, computer installation work, and mobile technologies. Contemporary media art theory and practice. (upper level).

ARTSTUDI 284. Art and Biology. 4 Units.

The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists' relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (upper level).

ARTSTUDI 285. Topics in Media Studies: Street Media. 4 Units.

Literal and figurative meanings of street and how they provide potential to media technologies and invite innovative forms of artistic practice. Contemporary art as the juncture where street movements and new media collide. Small projects. May be repeated for credit.

ARTSTUDI 310A. Directed Reading: Studio. 1-15 Unit.

.

ARTSTUDI 310B. Directed Reading: Studio. 1-15 Unit.

.

ARTSTUDI 310C. Directed Reading: Studio. 1-15 Unit.

.

ARTSTUDI 342. MFA Project: Tutorial. 1-15 Unit.

Students construct an individual tutorial with an instructor selected from the studio art faculty, including visiting artists. The student must take tutorials with at least three different faculty members during the six-quarter program. Prior approval of advisor is required.

ARTSTUDI 342A. MFA: Object Seminar. 1-15 Unit.

Weekly seminars, studio practice, and individual tutorials. Student work is critiqued on issues of identity, presentation, and the development of coherent critical language. May be repeated for credit. Restricted to M.F.A. studio students only.

ARTSTUDI 342B. MFA: Concept Seminar. 1-15 Unit.

Weekly seminars, studio practice, and individual tutorials. Modes of conceptualization to broaden the base of cognitive and generative processes. May be repeated for credit. Restricted to M.F.A. studio students only.

ARTSTUDI 342C. M.F.A Seminar. 1-15 Unit.

Professional practices; preparation of documentation; exhibition and presentation. Restricted to M.F.A. studio students only. May be repeat for credit total units allowed 45 and total completion 6.

ARTSTUDI 350A. Art & Design I: History and Theory. 3 Units.

This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The first quarter of the course is a seminar, which focuses on the history of design practices and theories in a broad range of fields including design, art, and architecture. We will examine how well known concepts such as "The Bauhaus", "the designer", "Design Thinking", and metaphors such as "workshop", "school", "laboratory", "studio", or "post-studio" arise, and how they shape the artist or designer's work in a particular cultural context. Through reading, writing, and discussion, students will attempt to define their current position within a historical context and chart their future vision. The course may involve guest lectures and visits to various collections and archives.

ARTSTUDI 350B. Art & Design II: Personal Practice. 3 Units.

This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The second quarter of the course is a studio class, which examines our personal relationships to various creative processes (technical, procedural, and conceptual). Our goal is to gain new insights into our creative processes and find new possibilities within our available working methods. We will investigate issues such as constraint, iteration, collaboration, delegation, daily practice, and tools. Assignments such as "handmade-readymade-fablab" will challenge students to work with various processes and conceptual frameworks within single projects. The course will include four major projects, many minor studio exercises, readings, and discussion.

ARTSTUDI 360A. Design Masters Project I. 4 Units.

This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. The first quarter of this course examines artists as contextually engaged problem solvers and provocateurs. What strategies have artists used to draw attention to, and drive change regarding issues they care about? How is art used to change habits, shift the directions of cultural discussions, and make the invisible visible? We will study artists and designers who use innovative techniques to these ends such as Merle Ukeles, Krzysztof Wodiczko, Eduardo Kac, Jon Rubin, Amy Franceschini, Alfredo Jaar, Stamen Design (cab spotting), and Rebar. In addition to readings and discussions, students will create and critique a series of four studio projects that engage participants to rethink a specific site or situation.

ARTSTUDI 360B. Design Masters Project II. 4 Units.

This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. In this second quarter of the course, students will refine and expand one of their assignments from Sites/Situations I to create a completed site-specific installation, intervention, or product/object, which provokes discussion or change in our community. Works will be realized at various sites around campus, or in the community at large. Issues such as budget, public safety and code will be addressed. Time will be allotted for documentation, critique, and assessment of these projects.

ARTSTUDI 360C. Master's Project: Design. 2-4 Units.

Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.

ARTSTUDI 361. MFA First Year Seminar: Context. 1-15 Unit.

tbd.

ARTSTUDI 801. TGR Project. 0 Units.

.

Arts Institute Courses

ARTSINST 10AX. Tiny Eco House for Artists - Social Practice, Design / Build. 2 Units.

Guest artist, David Szlasa will work with students to build a mobile art studio for use on Stanford campus. Students would then curate a program to implement in the studio, which will be placed in White Plaza during Fall Quarter of 2015. Longer term, the studio will be a presence at Jasper Ridge Biological Preserve as a venue for artists engaging with the natural environment and Stanford community. The studio structure is built from salvaged materials largely from scrap material available at the Jasper Ridge maintenance site. We intend that Jasper Ridge will be the home for the mobile studio after this initial build and campus intervention, so the use of scrap from the preserve would be a wonderful link between the land and the art. Students will explore four major themes: 1. Art and design as social practice and community engagement, including curatorial practice and public programming as civic engagement 2. Sustainable construction and design from theory to practice 3. Scalability in design and implementation, theorizing a mobile national arts residency program. 4. Developing a dialogue around arts and environmental research.

ARTSINST 11Q. Art in the Metropolis. 3 Units.

This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and the SAI programming director. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see <http://artsinstitute.stanford.edu>.
Same as: MUSIC 11Q

ARTSINST 15. The Stillness of the Dunes. 3 Units.

An advanced writing course in nonfiction craft, drawing, and contemplative practice. A significant portion of each class meeting will focus on the development and sharpening of writing craft, especially of the essay, in a hybrid form both scholarly and personal. We will also explore writing as meditative practice, through examples and through short exercises. We will deepen our cultural understanding of the desert and its impact, through art, literature, philosophy, film, and contemplative practice, and the course will build toward a four-day camping trip to the dunes of Death Valley, six weeks into the quarter.

ARTSINST 150. The Changing World of Popular Music. 2 Units.

This course will cover changes in the business, economics, and practices of the popular music industry. It will provide a brief historical overview of the industry and its business models. The majority of the course will focus on the industry as it works today and on forces that are causing it to change rapidly. The course will feature guest artists and executives with current experience in the field, as well as project-based assignments designed to give students hands-on experience. Topics will include: Economics and business models of commercial music business, Technology and music production, Technology and music distribution, Technology and marketing, Leadership in the music industry: case studies, Managing creative projects, Copyright and legal issues.

ARTSINST 199. Independent Study. 1-5 Unit.

May be repeated for credit.

ARTSINST 200A. Honors in the Arts Workshop. 2 Units.

First in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

ARTSINST 200B. Honors in the Arts Workshop. 2 Units.

Second in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

ARTSINST 200C. Honors in the Arts Workshop. 2 Units.

Third in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

Asian American Studies Courses

ASNAMST 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.

In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society.
Same as: CSRE 52D

ASNAMST 107. Asian American Leadership: Controversies, Dilemmas, and Decision-Making Strategies. 3-5 Units.

This course examines the experiences of Asian Americans in a variety of contemporary leadership contexts to identify the complexities of race, gender, class, and ethnicity for both understanding and responding to social relations of power. Through seminar discussion, readings, guest speakers, case studies, and experiential activities, students evaluate situated practices of Asian American leadership in consideration of longstanding themes that have animated the field of Asian American Studies: self- and collective identification, representation and equality, community organizing and advocacy, interracial coalition-building, and minority empowerment. Students explore how Asian American leadership is conceptualized, practiced, and assessed in relation to the following contexts: campus and community activism of the Asian American movement of the 1960s to the present, institutional settings of employment, electoral politics, the field of Asian American Studies, and public intellectual life. A multidisciplinary approach will draw upon anthropology, psychology, political science, sociology, and Asian American Studies.

ASNAMST 112. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 112, ANTHRO 212

ASNAMST 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ANTHRO 118A, CSRE 118A

ASNAMST 131. Trauma, healing, and empowerment in Asian America. 3-5 Units.

This course will look at the ways in which Asian Americans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds.

Same as: CSRE 131C

ASNAMST 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.

Same as: CSRE 144, FEMGEN 144X

ASNAMST 146S. Asian American Culture and Community. 3-5 Units.

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: AMSTUD 146, COMPLIT 146, CSRE 146S

ASNAMST 185A. Race and Biomedicine. 3-5 Units.

Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

Same as: ANTHRO 185A

ASNAMST 187. Geography, Time, and Trauma in Asian American Literature. 5 Units.

The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

Same as: AMSTUD 261A

ASNAMST 189. The Vietnamese Experience in America. 3 Units.

The purpose of this course to study the experience of the Vietnamese refugees from their exodus after the Vietnam War to their resettlement in America, and to examine larger historical, social, political, and economic processes at work. We will focus on the processes that lead to the formation of this community the variables leading to various locations.

ASNAMST 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

Same as: EDUC 193F

ASNAMST 200R. Directed Research. 1-5 Unit.

May be repeated for credit.

ASNAMST 200W. Directed Reading. 1-5 Unit.

(Staff).

ASNAMST 265. Writing Asian American History. 5 Units.

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, HISTORY 265, HISTORY 365

ASNAMST 281. Asian Religions in America; Asian American Religions. 4 Units.

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, RELIGST 281, RELIGST 381

ASNAMST 295F. Race and Ethnicity in East Asia. 4-5 Units.

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: HISTORY 295F, HISTORY 395F

Asian Languages Courses

ASNLANG 1. 1ST YR JPNESE. 0-60 Units.

Astronomy Courses

Athletics, Physical Education, Recreation Courses

ATHLETIC 3M. Aikido. 1 Unit.

Aikido originated in the centuries-old tradition of the Japanese martial arts and is a form of budo; a way of life that seeks to polish the self through a blend of rigorous physical training and spiritual discipline. There is no attack in Aikido. Its uniqueness as a martial art lies in its awareness of a deep sense of harmony with all of creation with training to defend not only the self but to bring the attacker under control without the necessity of inflicting injury. Because of Aikido's noncompetitive, harmonious philosophy, men and women of all ages can train together in a mutually supportive atmosphere, at an energy level appropriate for each individual. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://aikido.stanford.edu>.

ATHLETIC 4C. Archery Club Team. 1 Unit.

Restricted to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. Not a PE class or for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. Students new to a team should register for the course in future quarters once committed as a team member. (AU).

ATHLETIC 5C. Climbing Club Team. 1 Unit.

This class is for members of the Climbing Club Sports team. All students must complete 21 hours of participation with the team and meet any other team requirements during the quarter. While many teams are open to beginners, this class is for returning athletes committed to the team for the year and are at an intermediate or advanced level. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. May be repeat for credit.

ATHLETIC 10. Band, Sports Activity. 1 Unit.

(AU).

ATHLETIC 12V. Baseball, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 14V. Basketball, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 15V. Basketball, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 20M. Capoeira Club. 1 Unit.

Capoeira is a breathtaking Afro-Brazilian art which combines practical martial arts, dance, acrobatics, music, history and philosophy. The origin of Capoeira is obscure since the evolution of Capoeira during the Brazilian slave trade was not well documented. Most theories point toward adapted movements from traditional Angola dance which evolved into techniques of self-defense. When Capoeira was outlawed by slave owners the fighting art became disguised as a dance through the addition of music and acrobatic movements. In the 1930s Capoeira was legalized in Brazil and is now spreading throughout the world. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements.

ATHLETIC 22C. Competitive Cheer Club. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member.

ATHLETIC 25V. Crew, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 26V. Crew, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 28V. Cross Country, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 29V. Cross Country, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 31C. Cycling Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 34V. Diving, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 35V. Diving, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 37C. Equestrian Club Team. 1 Unit.

(AU).

ATHLETIC 38M. Eskrima. 1 Unit.

Eskrima is the study of the Filipino martial art. It focuses on practical self-defense from a unique weapons-oriented perspective. Unlike most martial arts, Eskrima teaches students empty hand and weapon techniques concurrently. Here at Stanford, we study the Inayan System of Eskrima under the instruction of Suro Jason Inay. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://eskrima.stanford.edu>.

ATHLETIC 41V. Fencing, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 42V. Fencing, Varsity Women. 1-2 Unit.

(AU) (Milgram).

ATHLETIC 47V. Field Hockey, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 48V. Football, Varsity. 1-2 Unit.

(AU).

ATHLETIC 55V. Golf, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 56V. Golf, Varsity Women. 1-2 Unit.

AU.

ATHLETIC 60V. Gymnastics, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 61V. Gymnastics, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 70C. Horse Polo Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 72C. Ice Hockey Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. Men (AU).

ATHLETIC 73M. JKA Shotokan Karate. 1 Unit.

Shotokan Karate is a weaponless martial art developed in Okinawa and Japan, emphasizing power and efficiency in combat. Skilled karateka defeat their opponents with minimal number of techniques and effort, which is particularly useful when facing multiple opponents. Shotokan is distinguished from other martial arts by the linearity and strength of its punches, blocks, and kicks. Precise techniques, accompanied by mastery and focus of energy flows and a deep knowledge of the body's vital points, make this karate style a comprehensive system for self-defense and combat. However, Shotokan Karate is much more than just a way to defend and fight; it is an holistic system in which the training itself has far reaching effects on the trainee. It is an ideal way to become and stay fit, as it combines intense aerobic and anaerobic exercises. It is a way to gain self-discipline and the confidence to surmount everyday obstacles, whether tangible or not. Shotokan Karate encourages and helps in the exploration and understanding of both the physical and mental self. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://karate.stanford.edu>.

ATHLETIC 74C. Judo Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 75M. Jujitsu Self Defense. 1 Unit.

The Stanford Self-Defense Class teaches practical methods of self-defense drawn from all the martial arts. This coed course is available to beginners every quarter. Advanced training also is available year-round through senior black belt level, and is offered to improve and widen each student's skills. All Stanford students, faculty and staff members are invited to join our relaxed atmosphere, as we work on conditioning and coordination. Students who have completed the beginner's course can further refine their basic skills, as well as learn more complicated techniques. Advanced students may continue as long as they wish, with the possibility of receiving formal belt ranks in Aiki Jujitsu. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://jujitsu.stanford.edu>.

ATHLETIC 76M. Kendo. 1 Unit.

Kendo is a Japanese form of fencing with two-handed bamboo swords, originally developed as a safe form of sword training for samurai. This is part of the Stanford Martial Arts program.

ATHLETIC 77C. Lacrosse Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).
Same as: Men

ATHLETIC 78M. Kenpo Karate. 1 Unit.

The Stanford Kenpo Karate Association teaches vital self-defense techniques, designed to maximize effectiveness regardless of size or strength. Beginning students will learn tools for responding to a modern street-fight situation, including single- or multiple-attackers, with or without weapons, under a variety of circumstances. Kenpo students learn multiple-strike defenses, hand strikes, kicks, joint locks, evasions, pressure points, sweeps, throws and even falls and rolls. In addition to self-defense, SKKA also teaches sparring and kata, encouraging balance, flexibility, strength and personal growth in the martial arts. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://www.stanfordkenpo.com>.

ATHLETIC 78V. Lacrosse, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 81M. Muay Thai. 1 Unit.

Muay Thai or Thai Kickboxing is a martial art developed in Thailand about 500 years ago to defend the country against invaders. Muay Thai combines Western-style boxing with kicking, and includes the use of elbows and knees. Though traditionally Muay Thai is designed to be fatal to the opponent, in our class we focus on self-defense and counter attack. Usually light sparring is practiced with minimal use of elbows. During class, students will wear boxing gloves, shin guards, and mouth protectors. Head protection is required for sparring. In order to excel in Muay Thai, one will need to develop flexibility, strength, endurance, concentration, and reflexes. One will learn to adapt the techniques according to their strengths and weaknesses on their own pace. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://kickboxing.stanford.edu>.

ATHLETIC 82. Manager: Athletic Team. 1 Unit.

For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach. (AU).

ATHLETIC 91C. Rugby Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).
Same as: Men

ATHLETIC 92C. Rugby Club Team. 1 Unit.

(AU).

Same as: Women

ATHLETIC 104V. Sailing, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 105V. Sailing, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 107C. Ski Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 118V. Soccer, Varsity Men. 1-2 Unit.

(AU).

ATHLETIC 119V. Soccer, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 121V. Softball, Varsity Women. 1-2 Unit.

(AU).

ATHLETIC 125C. Squash Club Team. 1 Unit.
(AU).

Same as: Men

ATHLETIC 126V. Squash, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 135V. Swimming, Synchronized: Varsity. 1-2 Unit.
(AU).

ATHLETIC 136V. Swimming, Varsity Men. 1-2 Unit.
(AU).

ATHLETIC 137V. Swimming, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 141C. Tae Kwon Do Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 143C. Tennis Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 148V. Tennis, Varsity Men. 1-2 Unit.
(AU).

ATHLETIC 149V. Tennis, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 153V. Track and Field, Varsity Men. 1-2 Unit.
(AU).

ATHLETIC 154V. Track and Field, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 156C. Triathlon Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 158C. Ultimate Frisbee Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

Same as: Men

ATHLETIC 159C. Ultimate Frisbee Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU) (Staff).

Same as: Women

ATHLETIC 166V. Volleyball, Varsity Men. 1-2 Unit.
(AU).

ATHLETIC 167V. Volleyball, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 168C. Volleyball Club Team. 1 Unit.

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

ATHLETIC 171V. Water Polo, Varsity Men. 1-2 Unit.
(AU).

ATHLETIC 172V. Water Polo, Varsity Women. 1-2 Unit.
(AU).

ATHLETIC 178M. Wing Chun Kung Fu. 1 Unit.

Wing Chun Kung Fu; its roots can be traced from the Southern Shaolin Temple in China to the late Grand Master Yip Man. It is one of the few martial arts that attributes its origins to a woman. Although popularized as Bruce Lee's; mother's, the practice of Wing Chun remains substantially different from his Jeet Kune Do. Taught as a predominantly internally-oriented style stressing technique, sensitivity, and subtle awareness instead of brute force, Wing Chun provides practical self-defense for men and women and a means for developing the mind and spirit. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://wingchun.stanford.edu>.

ATHLETIC 180V. Wrestling, Varsity. 1-2 Unit.
(AU).

ATHLETIC 181M. Wushu. 1 Unit.

Modern Wushu is a martial art which combines a foundation in the traditional Chinese fighting arts with a modern disposition towards aesthetics, grace, and performance. It emphasizes a combination of strength, speed, and flexibility rarely seen in other martial arts or sports. Both a martial art and a performance art, Wushu is the national sport of China, and is practiced throughout the world. Along with open hand training, Wushu athletes do extensive training with weapons such as broadsword, staff, spear, and straight sword. This class is part of the Stanford Martial Arts program, in order to receive credit you must meet program requirements. For more information visit: <http://wushu.stanford.edu>.

Biochemistry Courses

BIOC 109A. The Human Genome and Disease. 3 Units.

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIO 109A, BIOC 209A, HUMBIO 158

BIOC 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIO 109B, BIOC 209B

BIOC 118Q. Genomics and Medicine. 3 Units.

Preference to sophomores. Knowledge gained from sequencing human genomes and implications for medicine and biomedical research. Novel diagnoses and treatment of diseases, including stem cells, gene therapy and rational drug design. Personal genomics and how it is used to improve health and well being. Social and ethical implications of genetic information such as privacy, discrimination and insurability. Course Webpage: <http://biochem118.stanford.edu/>.

BIOC 158. Genomics, Bioinformatics and Medicine. 3 Units.

Molecular basis of inherited human disease. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases. Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genomics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIO 118 not eligible to enroll. Course webpage: <http://biochem158.stanford.edu/>. Same as: BIO 258, BIOMEDIN 258, HUMBIO 158G

BIOC 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

BIOC 200. Applied Biochemistry. 2 Units.

Enrollment limited to MD candidates. Fundamental concepts of biochemistry as applied to clinical medicine. Topics include vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metabolic pathways. Clinical case studies discussed in small-group, problem-based learning sessions.

BIOC 202. Biochemistry Bootcamp. 1 Unit.

Open to first year Biochemistry students and to other PhD students with consent of instructor. Hands-on, week-long immersion in biochemical methods and practice, high-throughput sequencing and data analysis, theory and application of light microscopy, and computational approaches to modern biological problems.

BIOC 205. Molecular Foundations of Medicine. 3 Units.

For medical students. Topics include DNA structure, replication, repair, and recombination; gene expression, including mechanisms for regulating transcription and translation; chromosome structure and function; gene cloning, protein engineering, and genomics. Patient presentations and journal clubs illustrate how molecular biology affects the practice of medicine.

BIOC 209A. The Human Genome and Disease. 3 Units.

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIO 109A, BIOC 109A, HUMBIO 158

BIOC 209B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both. Same as: BIO 109B, BIOC 109B

BIOC 215. Frontiers in Biological Research. 1 Unit.

Literature discussion in conjunction with the Frontiers in Biological Research seminar series in which investigators present current work. Students and faculty meet beforehand to discuss papers from the speaker's primary research literature. Students meet with the speaker after the seminar to discuss their research and future directions, commonly used techniques to study problems in biology, and comparison between the genetic and biochemical approaches in biological research. Same as: DBIO 215, GENE 215

BIOC 220. Chemistry of Biological Processes. 3 Units.

The principles of organic and physical chemistry as applied to biomolecules. The goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Current topics may include chemical genetics, activity-based probes, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies. Prerequisites: organic chemistry and biochemistry, or consent of instructor. Same as: CSB 220

BIOC 221. The Teaching of Biochemistry. 3 Units.

Required for teaching assistants in Biochemistry. Practical experience in teaching on a one-to-one basis, and problem set design and analysis. Familiarization with current lecture and text materials; evaluations of class papers and examinations. Prerequisite: enrollment in the Biochemistry Ph.D. program or consent of instructor.

BIOC 223. Open Problems in Biology. 1 Unit.

Introduces open problems in biology to those outside the field with quantitative backgrounds (e.g. science, computer science, engineering, and mathematics). Ten different experts cover ten different topics.

BIOC 224. Advanced Cell Biology. 4 Units.

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor. Same as: BIO 214, MCP 221

BIOC 226. Interdisciplinary Approaches to Biochemistry: Single Molecule Biophysics to Clinical Outcomes. 3 Units.

Interdisciplinary analyses from basic biochemistry and biophysics to clinical outcomes of disease states and potential therapeutic interventions (translational research). Focus on cardiac system. Cardiomyopathies arise from missense mutations in cardiac muscle proteins, including the cardiac myosin motor. Single molecule biophysics and classical enzyme kinetics and use of induced pluripotent stem cells (iPS cells) and single cell studies lay the foundation for discussions of the effects of cardiomyopathy mutations on heart function. Potential therapeutic approaches discussed, including genetic analysis, DNA cloning, reconstitution of functional assemblies, xray diffraction and 3D reconstruction of electron microscope images, spectroscopic methods, computational approaches, single molecule biophysics, use of induced pluripotent stem cells in research, and other interdisciplinary approaches. Current papers examined. Prerequisites: basic biochemistry.

BIOC 236. Biology by the Numbers. 3 Units.

For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological times time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision. Same as: APPPHYS 236

BIOC 241. Biological Macromolecules. 3-5 Units.

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only. Same as: BIOPHYS 241, GENE 241, SBIO 241

BIOC 257. Currents in Biochemistry. 1 Unit.

Seminars by Biochemistry faculty on their ongoing research. Background, current advances and retreats, general significance, and tactical and strategic research directions.

BIOC 258. Genomics, Bioinformatics and Medicine. 3 Units.

Molecular basis of inherited human disease. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases. Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genomics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIOIC 118 not eligible to enroll. Course webpage: <http://biochem158.stanford.edu/>. Same as: BIOIC 158, BIOMEDIN 258, HUMBIO 158G

BIOC 299. Directed Reading in Biochemistry. 1-18 Unit.

Prerequisite: consent of instructor.

BIOC 350. Development of Thesis Research. 2 Units.

Biochemistry 2nd year PhD students with permission of instructor only. Students place their thesis research into a broader scientific perspective, identify important questions to ask, and learn to communicate these clearly. The course includes a series of roundtable discussions with students and faculty about the students' proposed research topics. The initial focus is on developing the equivalent of a specific aims page for a research grant.

BIOC 360. Developing an Original Research Proposal. 1 Unit.

Biochemistry 3rd year PhD students with permission of instructor only. Students foster broad familiarity with the biomedical literature and learn to develop new research directions. Topics well outside of each student's research topic are chosen for regular informal journal club presentations. Students work with faculty to hone skills for identifying important open scientific questions, formulating hypotheses, and refining experimental logic. Students work collectively to create a "model" research proposal on a topic of general interest to the group, and then individually to develop an original proposal on a topic of each student's choice.

BIOC 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

BIOC 399. Graduate Research and Special Advanced Work. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members.

BIOC 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

BIOC 801. TGR Project. 0 Units.

.

BIOC 802. TGR Dissertation. 0 Units.

.

Bioengineering Courses

BIOE 10N. Form and Function of Animal Skeletons. 3 Units.

Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology. Field trips to labs.

Same as: ME 10N

BIOE 32Q. Bon Appétit, Marie Curie! The Science Behind Haute Cuisine. 3 Units.

This seminar is for anyone who loves food, cooking or science! We will focus on the science and biology behind the techniques and the taste buds. Not a single lecture will pass by without a delicious opportunity - each weekly meeting will include not only lecture, but also a lab demonstration and a chance to prepare classic dishes that illustrate that day's scientific concepts.

BIOE 36Q. The Biophysics of Innate Immunity. 3 Units.

The innate immune system provides our first line of defense against disease--both infections, and cancer. Innate immune effectors such as host defense peptides are deployed by numerous cell types (for instance neutrophils, macrophages, NK cells, epithelial cells and keratinocytes) and work by biophysical mechanisms of action. The course draws from the primary literature and covers the evolution, structures, mechanisms, and physiological functions of important "innate immune effectors" (components of the innate immune system that can attack pathogens, and infected or host cells, and kill or incapacitate them directly). The course is aimed at students who have an interest in biochemistry, molecular/cellular biology, biophysics, and/or bioengineering.

BIOE 41. Physical Biology of Macromolecules. 4 Units.

Principles of statistical physics, thermodynamics, and kinetics with applications to molecular biology. Topics include entropy, temperature, chemical forces, enzyme kinetics, free energy and its uses, self assembly, cooperative transitions in macromolecules, molecular machines, feedback, and accurate replication. Prerequisites: MATH 41, 42; CHEM 31A, B (or 31X); strongly recommended: PHYSICS 41, CME 100 or MATH 51, and CME 106; or instructor approval.

BIOE 42. Physical Biology of Cells. 4 Units.

Principles of transport, continuum mechanics, and fluids, with applications to cell biology. Topics include random walks, diffusion, Langevin dynamics, transport theory, low Reynolds number flow, and beam theory, with applications including quantitative models of protein trafficking in the cell, mechanics of the cell cytoskeleton, the effects of molecular noise in development, the electromagnetics of nerve impulses, and an introduction to cardiovascular fluid flow. Prerequisites: MATH 41, 42; CHEM 31A, B (or 31X); strongly recommended: CS 106A, PHYSICS 41, CME 100 or MATH 51, and CME 106; or instructor approval. 4 units, Spr (Huang, K).

BIOE 44. Fundamentals for Engineering Biology Lab. 4 Units.

Introduction to next-generation techniques in genetic, molecular, biochemical, and cellular engineering. Lab modules build upon current research including: gene and genome engineering via decoupled design and construction of genetic material; component engineering focusing on molecular design and quantitative analysis of experiments; device and system engineering using abstracted genetically encoded objects; and product development based on useful applications of biological technologies. Concurrent or previous enrollment in BIO 41.

BIOE 51. Anatomy for Bioengineers. 4 Units.

Fundamental human anatomy, spanning major body systems and tissues including nerve, muscle, bone, cardiovascular, respiratory, gastrointestinal, and renal systems. Explore intricacies of structure and function, and how various body parts come together to form a coherent and adaptable living being. Correlate clinical conditions and therapeutic interventions. Participate in lab sessions with predissected cadaveric material and hands-on learning to gain understanding of the bioengineering human application domain. Encourage anatomical thinking, defining challenges and opportunities for bioengineers.

BIOE 70Q. Medical Device Innovation. 3 Units.

BIOE 70Q introduces students to the design of medical technologies and the non-technical factors that impact their clinical adoption and market success. Guest speakers include engineers, doctors, and other professionals who have helped bring ideas from concept to clinical use. Hands-on design projects will challenge students to invent their own solutions to clinical needs. No previous engineering training is required.

BIOE 80. Introduction to Bioengineering. 4 Units.

Broad but rigorous overview of the field of bioengineering, centered around the common theme of engineering analysis and design of biological systems. Topics include biomechanics, systems and synthetic biology, physical biology, biomolecular engineering, tissue engineering, and devices. Emphasis on critical thinking and problem solving approaches, and quantitative methods applied to biology. 4 units, Spr (Cochran). Same as: ENGR 80

BIOE 101. Systems Biology. 4 Units.

Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: CME 102; BIO 41, BIO 42; or consent of instructor. Same as: BIOE 210

BIOE 103. Systems Physiology and Design. 4 Units.

Physiology of intact human tissues, organs, and organ systems in health and disease, and bioengineering tools used (or needed) to probe and model these physiological systems. Topics: Clinical physiology, network physiology and system design/plasticity, diseases and interventions (major syndromes, simulation, and treatment, instrumentation for intervention, stimulation, diagnosis, and prevention), and new technologies including tissue engineering and optogenetics. Discussions of pathology of these systems in a clinical-case based format, with a view towards identifying unmet clinical needs. Learning computational skills that not only enable simulation of these systems but also apply more broadly to biomedical data analysis. Prerequisites: MATH 41, 42; CME 102; PHY 41; BIO 41, 42; strongly recommended PHY 43; or instructor approval.

BIOE 103B. Systems Physiology and Design. 4 Units.

ONLINE Offering of BIOE103. This pilot class, BIOE103B, is an entirely online offering with the same content, learning goals, and prerequisites as BIOE103. Students attend class by watching videos and completing assignments remotely. Students may attend recitation and office hours in person, but cannot attend the BIOE103 in-person lecture due to room capacity restraints. Physiology of intact human tissues, organs, and organ systems in health and disease, and bioengineering tools used (or needed) to probe and model these physiological systems. Topics: Clinical physiology, network physiology and system design/plasticity, diseases and interventions (major syndromes, simulation, and treatment, instrumentation for intervention, stimulation, diagnosis, and prevention), and new technologies including tissue engineering and optogenetics. Discussions of pathology of these systems in a clinical-case based format, with a view towards identifying unmet clinical needs. Learning computational skills that not only enable simulation of these systems but also apply more broadly to biomedical data analysis. Prerequisites: MATH 41, 42; CME 102; PHY 41; BIO 41, 42; strongly recommended PHY 43; or instructor approval.

BIOE 115. Computational Modeling of Microbial Communities. 4 Units.

Provides biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students learn basic programming skills focused on Matlab, but also are introduced to Perl and Python. Topics include: image analysis, bioinformatics algorithms, reaction diffusion modeling, Monte Carlo algorithms, and population dynamics. Students apply computational skills to a miniature research project studying the human gut microbiota. Same as: MI 245

BIOE 122. Biosecurity and Bioterrorism Response. 4-5 Units.

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. This course satisfies the TiS requirement for Engineering students; please check with your major advisor to verify this. 4 units for twice weekly attendance (Mon. and Wed.); additional 1 unit for writing a research paper for 5 units total maximum. PLEASE NOTE: This class will meet for the first time on Wednesday, April 1. Same as: PUBLPOL 122, SURG 122

BIOE 123. Optics and Devices Lab. 4 Units.

This course provides a hands-on introduction to designing, and building devices for controlling experiments in the field of bioengineering. This course focuses on the tools and concepts related to optics and electronics, but also touches on other valuable techniques such as rapid prototyping and micro-fluidics. The first part of the course consists of guided modules, while the second half of the course is project based where students design and develop their own biotic game. Prerequisites: BIOE 41 and Matlab recommended.

BIOE 131. Ethics in Bioengineering. 3 Units.

Bioengineering focuses on the development and application of new technologies in the biology and medicine. These technologies often have powerful effects on living systems at the microscopic and macroscopic level. They can provide great benefit to society, but they also can be used in dangerous or damaging ways. These effects may be positive or negative, and so it is critical that bioengineers understand the basic principles of ethics when thinking about how the technologies they develop can and should be applied. On a personal level, every bioengineer should understand the basic principles of ethical behavior in the professional setting. This course will involve substantial writing, and will use case-study methodology to introduce both societal and personal ethical principles, with a focus on practical applications.

BIOE 141A. Senior Capstone Design I. 4 Units.

Lecture/Lab. First course of two-quarter capstone sequence. Team based project introduces students to the process of designing new biological technologies to address societal needs. Topics include methods for validating societal needs, brainstorming, concept selection, and the engineering design process. First quarter deliverable is a design for the top concept. Second quarter involves implementation and testing. Guest lectures and practical demonstrations are incorporated. Prerequisites: BIOE 123 and BIOE 44. This course is open only to seniors in the undergraduate Bioengineering program.

BIOE 141B. Senior Capstone Design II. 4 Units.

Lecture/Lab. Second course of two-quarter capstone sequence. Team based project introduces students to the process of designing new biological technologies to address societal needs. Emphasis is on implementing and testing the design from the first quarter with the at least one round of prototype iteration. Guest lectures and practical demonstrations are incorporated. Prerequisites: BIOE123 and BIOE44. This course is open only to seniors in the undergraduate Bioengineering program. **IMPORTANT NOTE:** class meets in Shriram 112.

BIOE 191. Bioengineering Problems and Experimental Investigation. 1-5 Unit.

Directed study and research for undergraduates on a subject of mutual interest to student and instructor. Prerequisites: consent of instructor and adviser. (Staff).

BIOE 191X. Out-of-Department Advanced Research Laboratory in Bioengineering. 1-15 Unit.

Individual research by arrangement with out-of-department instructors. Credit for 191X is restricted to declared Bioengineering majors pursuing honors and requires department approval. See <http://bioengineering.stanford.edu/education/undergraduate.html> for additional information. May be repeated for credit.

BIOE 196. INTERACTIVE MEDIA AND GAMES. 1 Unit.

Interactive media and games increasingly pervade and shape our society. In addition to their dominant roles in entertainment, video games play growing roles in education, arts, and science. This seminar series brings together a diverse set of experts to provide interdisciplinary perspectives on these media regarding their history, technologies, scholarly research, industry, artistic value, and potential future.

BIOE 201C. Diagnostic Devices Lab. 2 Units.

This course exposes students to the engineering principles and clinical application of medical devices through lectures and hands-on labs, performed in teams of two. Teams take measurements with these devices and fit their data to theory presented in the lecture. Devices covered include X-ray, CT, MRI, EEG, ECG, Ultrasound and BMI (Brain-machine interface). Prerequisites: BioE 103 or BioE 300B or EE 122B. Same as: BIOE 301C

BIOE 210. Systems Biology. 4 Units.

Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: CME 102; BIO 41, BIO 42; or consent of instructor. Same as: BIOE 101

BIOE 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent. Same as: BIOE 311, BIOPHYS 311, DBIO 211

BIOE 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor. Same as: BIOMEDIN 212, CS 272, GENE 212

BIOE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units. Same as: BIOMEDIN 214, CS 274, GENE 214

BIOE 215. Physics-Based Simulation of Biological Structure. 3 Units.

Modeling, simulation, analysis, and measurement of biological systems. Computational tools for determining the behavior of biological structures- from molecules to organisms. Numerical solutions of algebraic and differential equations governing biological processes. Simulation laboratory examples in biology, engineering, and computer science. Limited enrollment. Prerequisites: basic biology, mechanics ($F=ma$), ODEs, and proficiency in C or C++ programming.

BIOE 220. Introduction to Imaging and Image-based Human Anatomy. 3 Units.

Focus on learning the fundamentals of each imaging modality including X-ray Imaging, Ultrasound, CT, and MRI, to learn normal human anatomy and how it appears on medical images, to learn the relative strengths of the modalities, and to answer, "What am I looking at?" Course website: <http://rad220.stanford.edu>.

Same as: RAD 220

BIOE 221. Physics and Engineering of Radionuclide Imaging. 3 Units.

Physics, instrumentation, and algorithms for positron emission tomography (PET) and single photon emission computed tomography (SPECT). Topics include basic physics of photon emission and detection, electronics, system design, strategies for tomographic image reconstruction, data correction algorithms, methods of image quantification, and image quality assessment, and current developments in the field. Prerequisites: Completion of university level mathematics and physics.

Same as: RAD 221

BIOE 222. Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects. 4 Units.

Focuses on instruments, algorithms and other technologies for imaging of cellular and molecular processes in living subjects. Introduces preclinical and clinical molecular imaging modalities, including strategies for molecular imaging using PET, SPECT, MRI, Ultrasound, Optics, and Photoacoustics. Covers basics of instrumentation physics, the origin and properties of the signal generation, and image data quantification.

Same as: RAD 222

BIOE 223. Physics and Engineering of X-Ray Computed Tomography. 3 Units.

CT scanning geometries, production of x-rays, interactions of x-rays with matter, 2D and 3D CT reconstruction, image presentation, image quality performance parameters, system components, image artifacts, radiation dose. Prerequisites: differential and integral calculus. Knowledge of Fourier transforms (EE261) recommended.

Same as: RAD 223

BIOE 224. Probes and Applications for Multi-modality Molecular Imaging of Living Subjects. 4 Units.

Focuses on molecular contrast agents (a.k.a. "probes") that interrogate and target specific cellular and molecular disease mechanisms. Covers the ideal characteristics of molecular probes and how to optimize their design for use as effective imaging reagents that enables readout of specific steps in biological pathways and reveal the nature of disease through noninvasive imaging assays. Prerequisites: none.

Same as: RAD 224

BIOE 225. Ultrasound Imaging and Therapeutic Applications. 3 Units.

Covers the basic concepts of ultrasound imaging including acoustic properties of biological tissues, transducer hardware, beam formation, and clinical imaging. Also includes the therapeutic applications of ultrasound including thermal and mechanical effects, visualization of the temperature and radiation force with MRI, tissue assessment with MRI and ultrasound, and ultrasound-enhanced drug delivery. Course website: <http://bioe325.stanford.edu>.

Same as: RAD 225

BIOE 226. In Vivo Magnetic Resonance Spectroscopy and Imaging. 3 Units.

Collections of identical independent nuclear spins are described by the classical vector model of magnetic resonance imaging (MRI); however, interactions among spins, as occur in many in vivo processes, require a more complete description. Physics and engineering principles of these in vivo magnetic resonance phenomena with emphasis on current research questions and clinical applications. Topics: quantum mechanical description of magnetic resonance, density matrix theory, product operator formalism, relaxation theory and contrast mechanisms, spectroscopic imaging, spectral editing, and multinuclear studies. Prerequisites: EE 369B or familiarity with magnetic resonance, working knowledge of linear algebra.

Same as: RAD 226

BIOE 227. Functional MRI Methods. 3 Units.

(Same as RAD 227, BIOPHYS 227) Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

BIOE 229. Advanced Research Topics in Multi-modality Molecular Imaging of Living Subjects. 4 Units.

Covers advanced topics and controversies in molecular imaging in the understanding of biology and disease. Lectures will include discussion on instrumentation, probes and bioassays. Topics will address unmet needs for visualization and quantification of molecular pathways in biology as well as for diagnosis and disease management. Areas of unmet clinical needs include those in oncology, neurology, cardiovascular medicine and musculoskeletal diseases. The aim is to identify important problems and controversies in a field and address them by providing background and relevance through review of the relevant primary literature, and then proposing and evaluating innovative imaging strategies that are designed to address the problem. The organization of lectures is similar to the thought process that is necessary for writing an NIH grant proposal in which aims are proposed and supported by background and relevance. The innovation of proposed approaches will be highlighted. An aim of the course is to inform students on how to creatively think about a problem and propose a solution focusing on the key elements of writing a successful grant proposal. Prerequisites: none.

Same as: RAD 222C

BIOE 231. Protein Engineering. 3 Units.

The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial and rational methodologies, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry. Winter, Cochran.

Same as: BIOE 331

BIOE 236. Biophysical Mechanisms of Innate Immunity. 3 Units.

The innate immune system provides our first line of defense against infections of all kinds as well as cancer. Innate immune effectors, e.g. host defense peptides are deployed by numerous cell types (neutrophils, macrophages, NK cells, as well as epithelial cells, keratinocytes, and others) and attack by biophysical mechanisms of action. Disorders of innate immunity are increasingly being implicated in human autoimmune disease. Using primary literature, we will cover the evolution, structures, mechanisms, and functions of innate immune effectors.

BIOE 244. Advanced Frameworks and Approaches for Engineering Integrated Genetic Systems. 4 Units.

Concepts and techniques for the design and implementation of engineered genetic systems. Topics covered include the quantitative exploration of tools that support (a) molecular component engineering, (b) abstraction and composition of functional genetic devices, (c) use of control and dynamical systems theory in device and systems design, (d) treatment of molecular "noise", (e) integration of DNA-encoded programs within cellular chassis, (f) designing for evolution, and (g) the use of standards in measurement, genetic layout architecture, and data exchange. Prerequisites: CME104, CME106, CHEM 33, BIO41, BIO42, BIOE41, BIOE42, and BIOE44 (or equivalents), or permission of the instructors.

BIOE 253. Science and Technology Policy. 3-4 Units.

How U.S. and international political institutions and processes govern science and technology; the roles of scientists, engineers, and physicians in creating and implementing policies; introduction to analytical techniques that are common to research and policy analysis in technology and public policy; and examples from specific mission areas (e.g., economic growth, health, climate, energy and the environment, information technology, international security). Assignments: analyzing the politics of particular legislative outcomes, assessing options for trying to reach a policy objective, and preparing a mock policy memo and congressional testimony. Same as: PUBLPOL 353

BIOE 260. Tissue Engineering. 3 Units.

Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem. Same as: ORTHO 260

BIOE 261. Principles and Practice of Stem Cell Engineering. 3 Units.

Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals. Same as: NSUR 261

BIOE 273. BIODESIGN FOR MOBILE HEALTH. 1-2 Unit.

This seminar examines the emerging Mobile Health industry. Mobile Health is the provision of health services and information via mobile technologies such as mobile phones and wearable sensors. Faculty from Stanford University and other Academic Institutions and guest lecturers from the Mobile Health industry discuss the driving needs, opportunities and challenges that characterize the emerging Mobile Health innovation landscape, and present an overview of the technologies, initiatives and companies that are transforming the way we access health care today. Same as: MED 273

BIOE 280. Skeletal Development and Evolution. 3 Units.

The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42. Same as: ME 280

BIOE 281. Biomechanics of Movement. 3 Units.

Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation. Same as: ME 281

BIOE 283. Mechanotransduction in Cells and Tissues. 3 Units.

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted. Same as: ME 244

BIOE 284B. Cardiovascular Bioengineering. 3 Units.

Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies. Same as: ME 284B

BIOE 287. Introduction to Physiology and Biomechanics of Hearing. 3 Units.

Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therapies.

Same as: ME 166, ME 266

BIOE 291. Principles and Practice of Optogenetics for Optical Control of Biological Tissues. 3 Units.

Principles and practice of optical control of biological processes (optogenetics), emphasizing bioengineering approaches. Theoretical, historical, and current practice of the field. Requisite molecular-genetic, optoelectronic, behavioral, clinical, and ethical concepts, and mentored analysis and presentation of relevant papers. Final projects of research proposals and a laboratory component in BioX to provide hands-on training. Contact instructor before registering.

BIOE 299B. Practical Training. 1 Unit.

For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

BIOE 300A. Molecular and Cellular Bioengineering. 3 Units.

The molecular and cellular bases of life from an engineering perspective. Analysis and engineering of biomolecular structure and dynamics, enzyme function, molecular interactions, metabolic pathways, signal transduction, and cellular mechanics. Quantitative primary literature. Prerequisites: CHEM 171 and BIO 41 or equivalents; MATLAB or an equivalent programming language.

BIOE 300B. Physiology and Tissue Engineering. 3 Units.

This course focuses on engineering approaches to quantifying, modeling and controlling the physiology and pathophysiology of complex systems, from the level of individual cells to tissue, organ and multi-organ systems.

BIOE 300C. Medical Devices, Diagnostics, and Pharmaceuticals: Technologies, Regulation, and Applications. 3 Units.

Preference to Bioengineering graduate students. Major classes of technologies including imaging techniques, chemical diagnostics, drug design and delivery. Topics include pacemakers, fMRI, PCR, stents, and biomaterials. Principles, practical limitations, and feature trade-offs in clinical settings.

BIOE 301A. Molecular and Cellular Engineering Lab. 2 Units.

Preference to Bioengineering graduate students. Practical applications of biotechnology and molecular bioengineering including recombinant DNA techniques, molecular cloning, microbial cell growth and manipulation, and library screening. Emphasis is on experimental design and data analysis. Limited enrollment. Fall (Cochran).

BIOE 301B. Clinical Needs and Technology. 2 Units.

The goal of this course is to introduce bioengineering students to medical technology as it is used in current clinical practice, in the modern tertiary care, subspecialty hospital. Half of the course will be devoted to labs, in which small groups of students participate in hands-on experiences using advanced clinical technology in areas such as medical imaging, robotic surgery, and minimally invasive diagnosis and treatment. The second half of the course brings pairs of students and clinical faculty mentors together for a more in-depth, focused exposure to clinical care in one specific area. Final grades will be based on attendance, and presentations made by each pair of student to the class about their mentoring experience.

BIOE 301C. Diagnostic Devices Lab. 2 Units.

This course exposes students to the engineering principles and clinical application of medical devices through lectures and hands-on labs, performed in teams of two. Teams take measurements with these devices and fit their data to theory presented in the lecture. Devices covered include X-ray, CT, MRI, EEG, ECG, Ultrasound and BMI (Brain-machine interface). Prerequisites: BioE 103 or BioE 300B or EE 122B. Same as: BIOE 201C

BIOE 311. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent. Same as: BIOE 211, BIOPHYS 311, DBIO 211

BIOE 313. Neuromorphics: Brains in Silicon. 3 Units.

This course introduces neuromorphic system design, starting at the device level, going through the circuit level, and ending up at the system level. At the device level, it covers MOS transistor operation in the subthreshold region. At the circuit level, it covers silicon neuron and synapse design. And at the system level, it covers to reroutable interconnection. At the end of the course, you will understand how various neuromorphic architectures request; area and energy use scale with network size. Prerequisites: EE114 & EE108A.

Same as: EE 304

BIOE 326B. In Vivo MR: Relaxation Theory and Contrast Mechanisms. 3 Units.

Principles of nuclear magnetic resonance relaxation theory as applicable to in vivo processes with an emphasis on medical imaging. Topics: physics and mathematics of relaxation, relaxation times in normal and diseased tissues, magnetization transfer contrast, chemical exchange saturation transfer, MRI contrast agents, and hyperpolarized ¹³C. Prerequisites: RAD 226.

Same as: RAD 226B

BIOE 331. Protein Engineering. 3 Units.

The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial and rational methodologies, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry. Winter, Cochran.

Same as: BIOE 231

BIOE 332. Large-Scale Neural Modeling. 3 Units.

This course examines the dynamics of large networks of spiking neurons (several thousand), with particular focus on how these networks achieve cognitive behaviors such as working memory, selective attention, and decision making. The course will feature lectures and labs using two Python-based simulators: Brian, a software platform, and Neurogrid, a hardware platform that simulates up to a million spiking neurons in real time. Most of the course will be project-based, allowing students to explore their individual interests.

BIOE 333. Interfacial Phenomena and Bionanotechnology. 3 Units.

Control over and understanding of interfacial phenomena and colloidal science are the essential foundation of bionanotechnology. Key mathematical relationships derived by Laplace, Gibbs, Kelvin and Young are derived and explained, along with the thermodynamics of systems of large interfacial area. Forces controlling surface and interfacial phenomena and surfactant and biomacromolecule self-assembly are discussed. Protein folding/unfolding and aggregation, and nano- and microfluidics are elucidated in these terms. Students will gain insight into the interplay between physical and chemical properties of biomolecules. Spring, (Barron, A.).

BIOE 334. Engineering Principles in Molecular Biology. 3 Units.

The achievements and difficulties that exemplify the interface of theory and quantitative experiment. Topics include: bistability, cooperativity, robust adaptation, kinetic proofreading, analysis of fluctuations, sequence analysis, clustering, phylogenetics, maximum likelihood methods, and information theory. Sources include classic papers.

BIOE 335. Molecular Motors I. 3 Units.

Physical mechanisms of mechanochemical coupling in biological molecular motors, using F1 ATPase as the major model system. Applications of biochemistry, structure determination, single molecule tracking and manipulation, protein engineering, and computational techniques to the study of molecular motors.

BIOE 337. Organismic Biophysics and Living Soft-matter. 3 Units.

Integrated physical biology; from molecules to organisms. Tree of life, diversity of life forms. Multi-scale/hierarchical systems in biophysics, Hierarchical self-organization. Basic theory of squishy materials, colloidal physics. Phase transitions in living soft-matter. Experimental techniques in soft-matter physics. Active fluid models for living matter. Design of self-assembling and self-organizing, biomimetic supramolecular systems.

BIOE 355. Advanced Biochemical Engineering. 3 Units.

Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

Same as: CHEMENG 355

BIOE 361. Biomaterials in Regenerative Medicine. 3 Units.

Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.

Same as: MATSCI 381

BIOE 370. Microfluidic Device Laboratory. 2 Units.

Fabrication of microfluidic devices for biological applications. Photolithography, soft lithography, and micromechanical valves and pumps. Emphasis is on device design, fabrication, and testing.

BIOE 371. Global Biodesign: Medical Technology in an International Context. 1-3 Unit.

(Same as OIT 587) This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, United States and Latin America. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics. The class will utilize real-world case studies and class projects (for 3-unit students) to promote engagement and provide a hands-on learning experience. There is no 2 unit option for this course.

Same as: MED 271

BIOE 372. Design for Service Innovation. 4 Units.

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.

Same as: HRP 274, MED 274

BIOE 374A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.

This is the first quarter of a two-quarter course series (OIT 384/OIT 385). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. The first quarter includes an introduction to needs finding methods, brainstorming and concept creation. Students learn strategies for understanding and interpreting clinical needs, researching literature and searching patents. Working in small entrepreneurial multidisciplinary teams, students gain exposure to clinical and scientific literature review, techniques of intellectual property analysis and feasibility, basic prototyping and market assessment. Students create, analyze and screen medical technology ideas, and select projects for future development. Final presentations at the end of the winter quarter to a panel of prominent inventors and investors in medical technology provide the impetus for further work in the spring quarter. Course format includes expert guest lecturers (Thu: 4:15 to 6:05 pm), faculty-led practical demonstrations and coaching sessions, and interactive team meetings (Tues: 4:15 to 6:05 pm). Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive techniques for bariatric surgery; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 300,000 patients have been treated to date with technologies developed as part of this program and more than thirty venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp>.

Same as: ME 368A, MED 272A

BIOE 374B. Biodesign Innovation: Concept Development and Implementation. 4 Units.

Two-quarter sequence (see OIT384 for complete description of the sequence). The second quarter focuses on how to take a conceptual solution to a medical need forward into development and potential commercialization. Continuing work in teams with engineering and medical colleagues, students will learn the fundamentals of medical device prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing a commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of developing a business or research plan/canvas; and strategies for assembling a development team. Final project presentations are made to a panel of prominent venture and corporate investors. New students (i.e. students who did not take OIT384 in the winter quarter) may be admitted, depending on team needs. Candidates need to submit an application at <http://biodesign.stanford.edu/bdn/courses/bioe374app.jsp> by March 1.

Same as: ME 368B, MED 272B

BIOE 375A. Biodesign Innovation: Needs Finding and Concept Creation. 2 Units.

Enrollment limited to SCPD students. Two quarter sequence. Inventing new medical devices and instrumentation, including: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; brainstorming and early prototyping. Guest lecturers and practical demonstrations.

BIOE 375B. Biodesign Innovation: Concept Development and Implementation. 2 Units.

Enrollment limited to SCPD students. Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. Prerequisite: BIOE 375A.

BIOE 376. Startup Garage: Design. 4 Units.

A hands-on, project-based course, in which teams identify and work with users, domain experts, and industry participants to identify an unmet customer need, design new products or services that meet that need, and develop business models to support the creation and launch of startup products or services. This course integrates methods from human-centered design, lean startup, and business model planning. Each team will conceive, design, build, and field-test critical aspects of both the product or service and the business model.

BIOE 377. Startup Garage: Testing and Launch. 4 Units.

STRAMGT 356/BIOE 376 teams that concluded at the end of fall quarter that their preliminary product or service and business model suggest a path to viability, may continue with STRAMGT 366/BIOE 377 in winter quarter. Teams develop more elaborate versions of their product/service and business model, perform a series of experiments to test key hypotheses about their product and business model, and prepare and present an investor pitch for a seed round of financing to a panel of seasoned investors and entrepreneurs.

BIOE 381. Orthopaedic Bioengineering. 3 Units.

Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices.

Same as: ME 381

BIOE 386. Neuromuscular Biomechanics. 3 Units.

The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders.

Same as: ME 386

BIOE 390. Introduction to Bioengineering Research. 1-2 Unit.

Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.

Same as: MED 289

BIOE 391. Directed Study. 1-6 Unit.

May be used to prepare for research during a later quarter in 392. Faculty sponsor required. May be repeated for credit.

BIOE 392. Directed Investigation. 1-10 Unit.

For Bioengineering graduate students. Previous work in 391 may be required for background; faculty sponsor required. May be repeated for credit.

BIOE 393. Bioengineering Departmental Research Colloquium. 1 Unit.

Bioengineering department labs at Stanford present recent research projects and results. Guest lecturers. Topics include applications of engineering to biology, medicine, biotechnology, and medical technology, including biodesign and devices, molecular and cellular engineering, regenerative medicine and tissue engineering, biomedical imaging, and biomedical computation. Aut, Win, Spr (Lin, Riedel-Kruse, Barron).

BIOE 450. Advances in Biotechnology. 3 Units.

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

Same as: CHEMENG 450

BIOE 454. Synthetic Biology and Metabolic Engineering. 3 Units.

Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

Same as: CHEMENG 454

BIOE 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, CHEM 459, CHEMENG 459, PSYCH 459

BIOE 484. Computational Methods in Cardiovascular Bioengineering. 3 Units.

Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

Same as: ME 484

BIOE 485. Modeling and Simulation of Human Movement. 3 Units.

Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

Same as: ME 485

BIOE 500. Thesis. 1-15 Unit.

(Staff).

Same as: Ph.D.

BIOE 802. TGR Dissertation. 0 Units.

(Staff).

Biology Courses

BIO 1. Human Evolution and Environment. 3 Units.

Human genetic and cultural evolution and how people interact with their environments, from the ancestors of Australopithecus to current events. Issues include race, gender, and intelligence; pesticide and antibiotic resistance; abortion and contraception; ecosystem services; environmental economics and ethics; the evolution of religion; climate change; population growth and overconsumption; origins and spread of ideas and technologies; and the distribution of political and economic power.

BIO 3. Frontiers in Marine Biology. 1 Unit.

An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

BIO 3N. Views of a Changing Sea: Literature & Science. 3 Units.

The state of a changing world ocean, particularly in the eastern Pacific, will be examined through historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters.

BIO 7N. Introduction to Conservation Photography. 3 Units.

Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects.

BIO 7S. Introduction to Biology. 3 Units.

The major fields of biology: biochemistry, the cell, evolution, and diversity. Foundation for higher-level biology courses.

BIO 7SL. Introduction to Biology Lab. 2 Units.

Optional lab to be taken concurrently with BIO 7S.

BIO 9S. Introduction to Biological Research Methods. 3 Units.

Theory and practice of experimental biology. Introduction to how to plan an experiment, conduct, and analyze data. Introduction to scientific writing and reading scientific journal articles. Prerequisite: high school biology.

BIO 10AX. Conservation Photography. 2 Units.

Account of the genre of conservation photography and strategic use of visual communication in the environmental arena. Introduction to use of digital SLR cameras and digital image processing. Case studies of conservation issues accompanied by multimedia platforms including images, video, and audio. Theory and application of photographic techniques. Lectures, tutorials, demonstrations, and field trips. Individual and group projects.

BIO 10SC. Natural History, Marine Biology, and Research. 2 Units.

Monterey Bay is home to the nation's largest marine sanctuary and also home to Stanford's Hopkins Marine Station. This course, based at Hopkins, explores the spectacular biology of Monterey Bay and the artistic and political history of the region. The course focuses on issues of conservation, sanctuary, and stewardship of the oceans and coastal lands. We will meet with conservationists, filmmakers, artists, authors, environmentalists, politicians, land-use planners, and lawyers, as well as scientists and educators, to learn what is being done to appreciate, protect, and study the coastline and near-shore waters at local and national levels. We will take a look at the discipline of marine biology to discover the range of topics and methods of research it embraces and to help define some of the larger issues in biology that loom in our future. The course emphasizes interactions and discussions between individuals, groups, and our guests; it is a total immersion experience. We will be together all of the time, either at our base at the Belden House in Pacific Grove or hiking and camping in Big Sur. Students are expected to have read the several books provided as introductory material before the course begins, and each is also expected to become our local expert in an area such as plant identification, bird identification, poetry, weather prediction, photography, history, ethnography, etc. The course requires an individual research project of your choice on a topic related to the general theme. Final reports will be presented at the last meeting of the group and may involve any medium, including written, oral, and performance media. Note: This course will be held at the Hopkins Marine Station in the Monterey region, and housing will be provided nearby. Transportation from campus to the housing site will be provided once students arrive on campus on August 30. Transportation to campus from the Belden House in Pacific Grove will be provided on September 19. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

BIO 11N. Biotechnology in Everyday Life. 3 Units.

Preference to freshmen. The science that makes transgenic plants and animals possible. Current and future applications of biotechnology and the ethical issues raised.

BIO 12N. Sensory Ecology of Marine Animals. 3 Units.

Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.

BIO 13N. Environmental Problems and Solutions. 3 Units.

Preference to freshmen. Students do independent investigations of current environmental problems, analyzing differing views of them and discussing possible solutions. Each student gives seminar presentations and leads seminar discussions. Short, documented position papers are written for policy makers.

BIO 15N. Environmental Literacy. 3 Units.

Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of the scientific and decision making processes that accompany most environmental issues: what can happen, what are the odds, how can the credibility of sources of expertise be assessed, which components of environmental debates deal with factual and theoretical issues, and which are political value judgments?.

BIO 17N. Getting Renewable Energy up to Scale: The Problem of Location. 3 Units.

As the climate continues to warm, plants and animals around the globe have a higher risk of going extinct. The Intergovernmental Panel for Climate Change (IPCC) Assessment Report 4 said in 2007 that when the global average temperature gets to 2 degrees C (3.6 degrees F) above the global average temperature in the mid 1700s, 20 to 40% of the species on the planet could be at high risk of extinction. Given that we know about two million species on the planet that means that 400,000 to 800,000 species could be at high risk. The IPCC went on to say that if the global average temperature gets to as much as 4 degrees C (7.2 degrees F) above natural, then as many as half of the species on the planet could be at high risk of extinction. Currently we are on a trajectory of surpassing 2 degrees C well before the end of the 21st Century. The only way to drop to a lower temperature trajectory is to decrease the amount of CO₂ in the atmosphere, which can be done by either scrubbing the CO₂ out of the atmosphere or decreasing our emission of CO₂. Techniques to do the former at the scale needed are not known as of yet, while decreasing our emissions substantially we do understand: it will require increasing substantially the amount of renewable energy used, which in turn will require deployment of renewables to a much greater amount than is planned currently. One of the main reasons holding up deployment of renewables is the debate about where the renewables will be located. This seminar will examine the arguments about the need for renewables, investigate the pros and cons of locating renewable at different sites and try to determine if and where the best locations might be.

BIO 18Q. Plant Evolutionary Ecology. 3 Units.

Plant EcoEvo analyzes the conceptual basis of ecology and evolution from the plants' perspective. After a broad overview of the biomes of the world, it explores population ecology, community ecology and biotic interactions. This is followed by an analysis of biodiversity from the botanical perspective and closes with a discussion of anthropogenic impact on plants. The course is based on lectures and practical activities (discussion of selected papers; analysis of data; laboratory activities, 2 field trips). Emphasis: Latin American ecosystems.

BIO 19N. Organ Development and Disease. 3 Units.

The development of tissues and organs is a fascinating process that we can directly observe in model organisms such as the zebrafish or chick. Particularly amazing is watching organs that move in front of our very eyes such as the beating heart or circulating blood. Unfortunately, the development of these complex systems often goes awry resulting in diseases that plague our society. This class will introduce some concepts of organogenesis, how disruptions can cause disease, and how we find underlying genetic mutations. It will include lectures and discussions, direct observations of developing organs in experimental animals, and an inspiring field trip. Students will be expected to participate in discussions and complete a short presentation.

BIO 20. Introduction to Brain and Behavior. 3 Units.

Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities.

Same as: HUMBIO 21

BIO 21. The Science of the Extreme Life of the Sea. 3 Units.

Based on the book *Extreme Life of the Sea*, this course will explore the new science about how marine species thrive in some of the world's most difficult environments. Species that live in the hottest, coldest, deepest and shallowest habitats will be described along with the genetic, biochemical, physiological and behavioral adaptations that allow them to persist. We will also examine the fastest, the oldest, the most archaic, the smallest, biggest and the most numerous species. Emphasis will be on the scientific discoveries about these species that give insight into their lives.

BIO 22Q. Infection, Immunity, and Global Health. 3 Units.

Why do infectious diseases continue to challenge us despite advances in medicine? This course will explore the causes and prevention of infectious diseases, focusing on the interplay between pathogens, the immune system, the environment, and societal factors that affect disease occurrence and outcomes. Topics will include: basic elements of microbiology, immunology, and epidemiology; case studies of old diseases (e.g., smallpox, tuberculosis, malaria) and recently-emergent diseases (e.g., Ebola, AIDS, antibiotic-resistant bacteria, Lyme disease, and pandemic influenza) that illustrate the biological, environmental, cultural, political, and economic factors that affect disease emergence, spread, and control; the limitations of modern medical approaches such as antibiotics and vaccines; and strategies for reducing global infectious disease threats. The seminar will feature class discussion, student projects, and faculty and student presentations. Prerequisite: biology background, preferably introductory college courses (e.g., 41, 42, or HUMBIO 2A, 3A).

BIO 23N. FACEBUG: The Social Life of Microbes. 3 Units.

Exploration of three crucial aspects of microbial life. First, examine how the unseen microbial majority is responsible for critical but under-appreciated aspects of the biology of the planet. Second, investigate the array of current genomic and imaging tools available to probe microscopic organisms in the environment. Last, we will research the importance of microbial communities and social dynamics in ecological and human health settings.

BIO 25Q. The Molecular Basis of Genetic Disease. 3 Units.

Preference to sophomores. Focus is on two genetic diseases resulting from the production of protein molecules that are unable to fold into their native conformations, called conformational diseases: cystic fibrosis and amyotrophic lateral sclerosis or Lou Gehrig's disease. Hypotheses and controversies surrounding the molecular basis of these disorders, and implications for novel therapeutics. Readings from research literature.

BIO 26N. Maintenance of the Genome. 3 Units.

Preference to freshmen. The precious blueprint for life is entrusted to the genomic DNA molecules in all living cells. Multiple strategies have evolved to prevent the deleterious consequences from endogenous DNA alterations and damage from radiation or genotoxic chemicals in the environment. In this seminar you will learn about the remarkable systems that scan cellular DNA for alterations and make repairs to ensure genomic stability. Deficiencies in DNA repair have been implicated in many hereditary diseases involving developmental defects, premature aging, and/or predisposition to cancer. An understanding of DNA repair mechanisms is important for advances in the fields of cancer biology, neurobiology, and gerontology. Background readings, introductory lectures, student presentations, short term paper.

BIO 29N. PARTY WITH TREES. 3 Units.

Ever marveled at the imposing trees around campus? This course will explore trees on campus using Bracewell's marvelous "Trees of Stanford" as a rough guide. We will develop tools and explore ideas that will allow the wider community to cherish and appreciate the oft-neglected trees on campus. The course will include guest lectures that focus on the theme of trees: from literature to the physics and biology of trees, to the environmental impact of global forest loss.

BIO 30. Ecology for Everyone. 4 Units.

Everything is connected, but how? Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects, mostly done in groups. The goal is to learn to think analytically about everyday ecological processes involving bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science.

Same as: EARTHYSYS 30

BIO 30N. Extinctions in Near Time: Biodiversity loss since the Pleistocene. 3 Units.

The transition 11,700 years ago from the Pleistocene glacial period into the Holocene interglacial witnessed the expansion of humans around the world, climatic warming and the demise of many large vertebrate species. Since that time extinctions have continued on land and in the sea, culminating with the biodiversity crisis we are experiencing today. We will explore these prehistoric extinctions: "Who? When? Where? and Why?" in order to learn more about our planet's future.

BIO 31Q. Ants: Behavior, Ecology, and Evolution. 3 Units.

Preference to sophomores. Behavior: the organization of colonies, how they operate without central control, how they resemble other complex systems like brains. Ecology: how populations of colonies change, comparing the ecology of a species in SW American desert and invasive Argentine ants. Evolution: why are there so many species of ants; how are they alike, how do they differ, and why? Ants as the theme for exploring how to do research in animal behavior, ecology, and evolution. Research project will be on the invasive Argentine ant: its distribution on campus, foraging trails, and nest structure.

BIO 33N. Conservation Science and Practice. 3 Units.

Preference to freshmen. Interdisciplinary. The science and art of conservation today. The forces that are driving change in Earth's atmosphere, lands, waters, and variety of life forms. Which broad dimensions of the biosphere, and which elements of ecosystems, most merit protection? The prospects for, and challenges in, making conservation economically attractive and commonplace. Field trip; project.

BIO 34N. Hunger. 3 Units.

The biology of hunger and satiety, disease states that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth's growing population, local and global efforts to alleviate hunger, and hunger in fiction.

BIO 35N. Water: From Cadillac Deserts to Plant Physiology. 3 Units.

Water is an essential ingredient for life. While the Mediterranean climate of California draws immigrants and tourists to our mild dry climate, infrequent rain and prized water rights have led to a tumultuous history behind how water is currently distributed. In this freshman seminar we will discuss water in California from multiple perspectives that span weather, history, art and plant physiology. The implications of climate change on agriculture and the Californian economy and lifestyle will also be discussed.

BIO 37N. Green Revolution and Plant Biotechnology. 2-3 Units.

Feeding ever-growing populations is a constant challenge to mankind. In the second half of the 20th century, the breeding of improved varieties combined with the use of chemical fertilizers and pesticides led to crop yield increases labeled the Green Revolution. Modern technologies in genetic engineering are expected to bring the second green revolution. Meeting the current and future global food needs without further damaging the fragile environment requires innovative effort from scientists and the society.

BIO 41. Genetics, Biochemistry, and Molecular Biology. 5 Units.

Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: CHEM 35; MATH 19, 20, 21 or 41, 42.

BIO 41A. Bio Solve-It. 1 Unit.

Students enrolled in Bio41 lecture and regular discussion sections attend an additional 75 min section. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio41 lecture and section. Space is limited, by application only. Application is due September 22, 2014. Co-Requisite: Bio 41.

BIO 41S. Biochemistry, Genetics, and Molecular Biology. 5 Units.

Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35.

BIO 42. Cell Biology and Animal Physiology. 5 Units.

Cell structure and function; principles of animal physiology (immunology, renal, cardiovascular, sensory, motor physiology, and endocrinology); neurobiology from cellular basis to neural regulation of physiology. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: BIO 41; CHEM 35; MATH 19, 20, 21 or 41, 42.

BIO 42A. Bio Solve-It. 1 Unit.

Students enrolled in Bio42 lecture and regular discussion sections attend an additional 75 min section. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio42 lecture and section. Space is limited, by application only. Application deadline is December 12, 2014. Co-Requisite: Bio 42.

BIO 43. Plant Biology, Evolution, and Ecology. 5 Units.

Principles of evolution: macro- and microevolution and population genetics. Ecology: the principles underlying the exchanges of mass and energy between organisms and their environments; population, community, and ecosystem ecology; populations, evolution, and global change. Equivalent to BIOHOPK 43. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: BIO 41, 42; CHEM 35; MATH 19, 20, 21 or 41, 42.

BIO 43A. Bio Solve-It. 1 Unit.

Students enrolled in Bio43 lecture and regular discussion sections attend an additional 75 min section. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio43 lecture and section. Space is limited, by application only. Click to apply. Application deadline = March 20, 2015. Co-Requisite: Bio 43.

BIO 44X. Core Molecular Biology Laboratory. 5 Units.

Investigate yeast strains that are engineered to express the human protein, p53, and use modern molecular methods to identify the functional consequences of p53 mutations isolated from tumor cells. Learn about the protein's role as a tumor suppressor through lectures and by reading and discussing journal articles. Use molecular visualization programs to examine the structure of wild type and mutant p53 proteins. Formulate a testable hypothesis and assay the ability of mutant p53 to direct expression of several reporter genes. During guided reflection, formulate further analyses to determine whether mutant p53 is present in the cell, can bind to DNA, and/or can enter the nucleus. Conduct lab experiments, present findings through a team oral presentation, as well as a scientific poster. Prerequisites: CHEM 31X, or 31A,B, and 33; concurrent or past enrollment in Biology or Human Biology core. 44X,Y should be taken sequentially in the same year, preferably as sophomores, to prepare for internships. Preference given to juniors and seniors in fall quarter, preference given to sophomores in winter quarter. Lab fee. Information about this class is available at <http://bio44.stanford.edu>.

BIO 44Y. Core Plant Biology & Eco Evo Laboratory. 5 Units.

The goal of this course is to develop an understanding of how to conduct biological research, using a topic in Ecology, Evolutionary Biology, and Plant Biology as a practical example. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for field- and lab-based data collection, analyzing data using appropriate statistical methods, and finally writing and sharing results. To build these skills, this course will focus on communities of microorganisms living in floral nectar at Stanford's nearby Jasper Ridge Biological Preserve. Students, working in teams, will develop novel research hypotheses and execute the necessary experiments and measurements to test these hypotheses. The capstone of the course will be an oral defense of students' findings, as well as a research paper in the style of a peer-reviewed journal article. Labs will be completed both on campus and at Jasper Ridge. Lab fee. Information about this class is available at <http://bio44.stanford.edu>. Satisfies WIM in Biology.

BIO 54SI. Aberrant Immune Responses: Allergy, Asthma, and Autoimmunity. 1 Unit.

This is a discussion-based course for advanced undergraduate and graduate students. Its purpose is to introduce students to a basic understanding of diseases involving overactive immune responses and immune responses directed against the host. Lectures may include a history of the disease, etiology, epidemiology, current and future treatments, and relevant research. This class will emphasize key scientific discoveries in molecular and cellular biology that have benefited our understanding and treatment of these diseases.

BIO 101. Ecology. 4 Units.

The principles of ecology. Topics: interactions of organisms with their environment, dynamics of populations, species interactions, structure and dynamics of ecological communities, biodiversity. Half-day field trip required. Satisfies Central Menu Area 4. Prerequisite: 43, or consent of instructor. Recommended: statistics.

BIO 102. Demography: Health, Development, Environment. 3 Units.

Demographic methods and their application to understanding and projecting changes in human infant, child, and adult mortality and health, fertility, population, sex ratios, and demographic transitions. Progress in human development, capabilities, and freedoms. Relationships between population and environment. Prerequisites: numeracy and basic statistics; Biology or Human Biology core; or consent of instructor.

Same as: HUMBIO 119

BIO 104. Advanced Molecular Biology. 5 Units.

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core.

Same as: BIO 200

BIO 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: EARTHSYS 105A

BIO 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: EARTHSYS 105B

BIO 107. Human Physiology Laboratory. 4 Units.

This laboratory course is inquiry based, so the subject matter of the course will change in successive years. In 2015, the two questions to be researched concurrently in Spring will be (1) Can heat-related performance decrements incurred by individuals clad in impermeable attire (e.g., biohazard personal protective suits) be mitigated?; and (2) Can the sensation of thermal comfort be affected by regional skin temperature manipulations. Students will participate both as experimenters and as subjects. The laboratory work will focus on exercise and temperature. Thus, participants must be in good physical condition and be willing to participate in strenuous exercise routines under adverse environmental conditions. Varsity athletes currently participating in a spring sport should first talk with Prof. Heller before applying. Combined Lab/Discussion sessions will be Tue and Thurs 1:15 - 5:05. You must attend both days each week, with no conflicts with other courses. Prerequisite is Bio 42 or HumBio 4A. Satisfies WIM for majors in biology. Enrollment for Spring 2015 course is limited to 16 students by permission. See: sites.stanford.edu/bio107 for the link to online application form.

Same as: HUMBIO 136

BIO 108. Essential Statistics for Human Biology. 4 Units.

Introduction to statistical concepts and methods that are essential to the study of questions in biology, environment, health, epidemiology and related areas. The course will teach and use the computer language R. Topics include distributions, probabilities, likelihood, linear models; illustrations will be based on recent research.

Same as: HUMBIO 85A

BIO 109A. The Human Genome and Disease. 3 Units.

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIOC 109A, BIOC 209A, HUMBIO 158

BIO 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIOC 109B, BIOC 209B

BIO 110. DNA Replication and Genomic Maintenance. 3 Units.

Maintenance of the genome and its accurate replication are prerequisites for life. DNA replication is also intricately connected to pathways for responding to genotoxic stress, which include inevitable collisions with transcription. In eukaryotes, DNA repair and replication are tightly connected to chromatin modification. Emphasis for lecture topics include: DNA-templated chromatin transactions; Chromatin manipulation during replication and DNA damage responses; Structural biology and molecular mechanisms of replication and DNA repair enzymes; Inducible responses to genotoxic stress; Relationships of DNA damage processing to mutagenesis, carcinogenesis, aging and human genetic disease.

Same as: BIO 210

BIO 112. Human Physiology. 4 Units.

Human physiology will be examined by organ systems: respiratory, cardiovascular, renal, and gastrointestinal. Concepts of cell and molecular biology that underlie organ development, pathophysiology and opportunities for regenerative medicine will be introduced. Signaling and integrative control by the endocrine, autonomic and central nervous systems will be introduced. Prerequisite: Biology or Human Biology core.

Same as: HUMBIO 133

BIO 113. Fundamentals of Molecular Evolution. 4 Units.

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.

Same as: BIO 244

BIO 115. The hidden kingdom - evolution, ecology and diversity of fungi. 4 Units.

Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will choose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: Bio 43 recommended.

BIO 116. Ecology of the Hawaiian Islands. 4 Units.

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTHSYS 116

BIO 117. Biology and Global Change. 4 Units.

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: EARTHSYS 111, EESS 111

BIO 118. Genetic Analysis of Biological Processes. 4 Units.

Focus is on using mutations and genetic analysis to study biological and medical questions. The first portion of the course covers how the identification and analysis of mutations can be used in model systems to investigate biological processes such as development and metabolism. In the second portion of the course, we focus on the use of existing genetic variation in humans and other species to identify disease-associated genes as well as to investigate variation in morphological traits such as body size and shape.

BIO 120. Bacteria in Health and Disease. 3 Units.

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught.

Same as: MI 120

BIO 121. Biogeography. 3 Units.

Global distributions of organisms through the Phanerozoic, with emphasis on historical causes. Topics: plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity. Satisfies Central Menu Area 4.

BIO 126. Introduction to Biophysics. 3-4 Units.

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course.

Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: APPPHYS 205, BIO 226

BIO 127. From Generation to Generation: Scientific and Cultural Approaches to Jewish Genetics. 1 Unit.

This series of guest lectures aims to explore the connections between genetics and Jewish Studies. How do different Jewish populations relate to each other? To what extent are Jewish populations of the present descended from those of the past? What are the causes of diseases that occur disproportionately in Jewish populations? These and other questions will be addressed in a program that crosses the boundaries between science and Jewish Studies, culture and biology.

BIO 128. Geographic Impacts of Global Change: Mapping the Stories. 4 Units.

Forces of global change (eg., climate disruption, biodiversity loss, disease) impart wide-ranging political, socioeconomic, and ecological impacts, creating an urgent need for science communication. Students will collect data for a region of the US using sources ranging from academic journals to popular media and create an interactive Story Map (<http://stanford.maps.arcgis.com/apps/StorytellingTextLegend/index.html?appid=dafe2393fd2e4acc8b0a4e6e71d0b6d5>) that merges the scientific and human dimensions of global change. Students will interview stakeholders as part of a community-engaged learning experience and present the Map to national policy-makers. Our 2014 Map is being used by the CA Office of Planning & Research.

Same as: EARTHSYS 129

BIO 129A. Cellular Dynamics I: Cell Motility and Adhesion. 4 Units.

Cell motility emphasizing role of actin assembly and dynamics coupling actin organization to cell movement. Interaction of cells with extracellular matrix, and remodelling of extracellular matrix in development and disease. Directed cell migration by chemotaxis (neuronal path-finding, immune cells). Cell-cell adhesion, formation of intercellular junctions and mechanisms regulating cell-cell interactions in development and diseases. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core.

BIO 129B. Cellular Dynamics II: Building a Cell. 4 Units.

Principles of cell organization; how common biochemical pathways are modified to generate diversity in cell structure and function. Roles of actin and microtubule cytoskeletons in cellular architecture. Mechanisms of protein sorting and trafficking, and protein modules and switches in regulating cell polarity. Yeast to polarized epithelial cells and neurons. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core. Recommended: 129A.

BIO 131. Complex Systems Lab. 1 Unit.

Applications of complex systems will be explored in this seminar through lectures, discussions, and a class project. Lecture topics include a discussion of chaos in weather modeling and aircraft turbulence, application of network science to understand Ebola and the ALS ice bucket challenge, and self-organized processes such as crowd dynamics and Wikipedia. The first half of the course will emphasize complex systems applications. Students will apply complex systems analysis techniques to their personal research, a current event, or repeat a classic complex systems experiment. Projects can include topics such as calculating the fractal dimension of a forest, simulating crowd dynamics, studying the degree distribution of social networks, or making a Van der Pol oscillator. Graduate student led seminar. Can be repeated for credit.

BIO 132. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 232, BIOPHYS 232, GENE 232

BIO 136. Evolutionary Paleobiology. 4 Units.

A paleontological approach to evolutionary theory. Topics: history of life, speciation, heterochrony, evolutionary constraint, coevolution, macroevolution, the Cambrian Explosion, mass extinctions, taphonomy, life on land, life in the sea, life in the air. Satisfies Central Menu Area 4. Prerequisite: Biology Core.

BIO 137. Plant Genetics. 3-4 Units.

Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Satisfies Central Menu Area 2. Prerequisite: Biology core or consent of instructor. Satisfies WIM in Biology.

BIO 138. Ecosystem Services: The Science of Valuing Nature. 3 Units.

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. Class size is limited to 12. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests. Same as: BIO 238

BIO 139. Biology of Birds. 3 Units.

How birds interact with their environments and each other, emphasizing studies that had impact in the fields of population biology, community ecology, and evolution. Local bird communities. Emphasis is on field research. Enrollment limited to 20. Prerequisites: 43 or equivalent, and consent of instructor. Recommended: birding experience.

BIO 141. Biostatistics. 3-5 Units.

Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.

Same as: STATS 141

BIO 143. Evolution. 3 Units.

Principles of evolution. Adaptation and natural selection. Darwin and the history of evolutionary thought. Population genetics, including genetic variation and mutation, and effects of migration, drift, linkage, and recombination. Evolutionary phenomena: developmental evolution, life history evolution, molecular evolution, sexual selection, social evolution, and speciation. Pattern and process in biological diversity. Case studies, including human evolution. Satisfies central menu area 4, ecology & evolution.

BIO 144. Conservation Biology: A Latin American Perspective. 3 Units.

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 234, HUMBIO 112

BIO 145. Ecology and evolution of animal behavior. 3 Units.

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics.

Same as: BIO 245

BIO 146. Population Studies. 1 Unit.

Series of talks by distinguished speakers introducing approaches to population and resource studies.

BIO 149. The Neurobiology of Sleep. 4 Units.

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

Same as: BIO 249, HUMBIO 161

BIO 150. Human Behavioral Biology. 5 Units.

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

Same as: BIO 250, HUMBIO 160

BIO 151. Mechanisms of Neuron Death. 3 Units.

For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer's), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson's and ALS), triplet repeat diseases (Huntington's), and AIDS-related dementia. Student presentations. Enrollment limited to 15; application required.

BIO 152. Imaging: Biological Light Microscopy. 3 Units.

Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core. Same as: MCP 222

BIO 153. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.

Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology. Same as: PSYCH 120

BIO 154. Molecular and Cellular Neurobiology. 4 Units.

For advanced undergraduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3 for Bio majors. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

BIO 156. Epigenetics. 2 Units.

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104.

Same as: BIO 256

BIO 157. Biochemistry and Molecular Biology of Plants. 3-4 Units.

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.

Same as: BIO 257

BIO 158. Developmental Neurobiology. 4 Units.

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent.

Same as: BIO 258

BIO 160A. Developmental Biology I. 4 Units.

Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. Topics covered in this quarter include embryonic axis formation, morphogen signaling, cell type specification and stem cells. Experimental logic and methods of research in developmental biology. Discussions of research papers. Satisfies Central Menu Areas 1 or 2. Prerequisite: Biology core or consent of instructor.

BIO 160B. Developmental Biology II. 4 Units.

Continuation of BIO 160A. Focus is on the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. The role of cell-cell communication in controlling key developmental decisions. The topics include sexual control of development, tissue polarity and growth, cell migration, regeneration, and the evolution of developmental mechanisms. Experimental logic and methods of research in developmental biology. Discussions of research papers. Satisfies Central Menu Areas 1 or 2. Prerequisites: Biology Core and 160A, or consent of instructor.

BIO 163. Neural Systems and Behavior. 4 Units.

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. Same as: BIO 263, HUMBIO 163

BIO 164. Biosphere-Atmosphere Interactions. 4 Units.

Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor. Same as: BIO 264

BIO 165. Molecular and Cellular Mechanisms of Neurological Disease. 1 Unit.

Current topics in research and investigative therapies of neurological disorders, including epilepsy, OCD, Alzheimer's disease, stroke and multiple sclerosis. Analysis and discussion of primary research papers as well as sources directed at general public. Emphasis on critical thinking, experimental design, therapeutic approaches. Guest lecturers include Dr. Lawrence Steinman and Dr. Gary Steinberg."

BIO 166. Faunal Analysis: Animal Remains for the Archaeologist. 5 Units.

The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis. Same as: ANTHRO 113, ANTHRO 213, BIO 266

BIO 168. Explorations in Stem Cell Biology. 3 Units.

A discussion-based course for advanced undergraduates. The purpose of this course is to introduce students to key topics in stem cell biology and foster the development of strong scientific writing skills. We will review and discuss some landmark and current primary literature in the stem cell field. Topics will include embryonic and adult stem cells, cellular reprogramming and stem cells in disease and regenerative medicine. Students will present a current research paper in their preferred stem cell topic area and compose a novel research proposal. Prerequisites: Biology or Human Biology core. Satisfies WIM in Biology.

BIO 171. Principles of Cell Cycle Control. 3 Units.

Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2. Same as: BIO 271, CSB 271

BIO 174. Human Skeletal Anatomy. 5 Units.

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week. Same as: ANTHRO 175, ANTHRO 275, BIO 274, HUMBIO 180

BIO 177. Plant Microbe Interaction. 3 Units.

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry. Same as: BIO 277

BIO 178. Microbiology Literature. 3 Units.

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as *Salmonella*, *Vibrio*, and/or *Yersinia*. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry. Same as: BIO 278

BIO 181. Human Genetic Variation. 3 Units.

The geographic distribution of human genetic variation; the genetic perspective on ancient and recent human migrations; quantitative methods for inference of human evolutionary history from patterns of genetic variation. Connections of human genetic variation to current topics such as ancestry testing, DNA forensics, and identification of disease genes. Prerequisites: Bio or HumBio core, calculus.

BIO 182. Modeling Cultural Evolution. 3 Units.

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution. Same as: BIO 282

BIO 183. Theoretical Population Genetics. 3 Units.

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor. Same as: BIO 283

BIO 186. Natural History of the Vertebrates. 4 Units.

Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California's distinct biomes. Prerequisite: Biology core. Same as: BIO 286

BIO 188. Biochemistry I. 3 Units.

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 288, CHEM 181, CHEMENG 181, CHEMENG 281

BIO 189. Biochemistry II. 3 Units.

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 289, CHEM 183, CHEMENG 183, CHEMENG 283

BIO 196A. Biology Senior Reflection. 3 Units.

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. Satisfies WIM in Biology.

BIO 196B. Biology Senior Reflection. 3 Units.

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

BIO 196C. Biology Senior Reflection. 3 Units.

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

BIO 197WA. Senior Writing Project: The Personal Essay in Biology. 3 Units.

Seminar focused on writing. Compose, workshop and revise scientifically relevant and personal essays in biology directed at a mainstream audience, interweaving research, interview, memoir, and other elements of nonfiction craft. Satisfies WIM in Biology.

BIO 198. Directed Reading in Biology. 1-15 Unit.

Individually arranged under the supervision of members of the faculty.

BIO 198X. Out-of-Department Directed Reading. 1-15 Unit.

Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See <http://biohonors.stanford.edu> for information and petitions. May be repeated for credit.

BIO 199. Advanced Research Laboratory in Experimental Biology. 1-15 Unit.

Individual research taken by arrangement with in-department instructors. See <http://biohonors.stanford.edu> for information on research sponsors, units, and credit for summer research. May be repeated for credit.

BIO 199W. Senior Honors Thesis: How to Effectively Write About Scientific Research. 3 Units.

Workshop. For seniors pursuing an honors thesis in a biology-focused major or program. Focus on improving scientific writing and synthesizing in the context of students' individual research projects. Complete literature review which will form the basis for the thesis introduction. Develop methods section of the thesis. Small seminar-style discussion sections with research-based discussions, student led PowerPoint presentations, and writing workshops. Co-requisite: Concurrent enrollment in 199 or 199X or equivalent. Satisfies WIM in Biology.

BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology. 1-15 Unit.

Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See <http://biohonors.stanford.edu> for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.

BIO 200. Advanced Molecular Biology. 5 Units.

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core.

Same as: BIO 104

BIO 202. Ecological Statistics. 3 Units.

Intended for graduate students (and advanced undergraduates in special circumstances with consent of instructors) in biology and related environmental sciences, this course is an introduction to statistical methods for ecological data analysis, using the programming language R. The course will have lectures, discussions, and independent research projects using the students' own data or simulated or publicly available data.

BIO 204. Neuroplasticity: From Synapses to Behavior. 3 Units.

This course will focus on neuroplasticity from a broad perspective, from molecular cellular mechanism to its involvement in behavior and diseases. Emphasis will be on: a) molecular and cellular mechanisms underlying various forms of neuroplasticity; b) the neuroplasticity during brain development; c) the neuroplasticity in adult brain with respect to learning and memory; and d) maladaptive neuroplasticity in neurodegenerative disease and drug addiction. This course is designed for Ph.D. students from both the Biology and Neuroscience programs. Open to advanced undergraduates by consent of instructor.

BIO 207. Life and Death of Proteins. 3 Units.

How proteins are made and degraded in the cell. Discussion of primary literature. Case studies follow the evolution of scientific ideas, and evaluate how different experimental approaches contribute to our understanding of a biological problem. Emphasis on multidisciplinary approaches. Topics: protein folding and assembly, mechanisms of chaperone action, sorting into organelles, misfolding and disease, and the ubiquitin-proteasome pathway. Enrollment limited to 30.

BIO 208. Spanish in Science/Science in Spanish. 2 Units.

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.

Same as: EARTHSYS 207, LATINAM 207

BIO 210. DNA Replication and Genomic Maintenance. 3 Units.

Maintenance of the genome and its accurate replication are prerequisites for life. DNA replication is also intricately connected to pathways for responding to genotoxic stress, which include inevitable collisions with transcription. In eukaryotes, DNA repair and replication are tightly connected to chromatin modification. Emphasis for lecture topics include: DNA-templated chromatin transactions; Chromatin manipulation during replication and DNA damage responses; Structural biology and molecular mechanisms of replication and DNA repair enzymes; Inducible responses to genotoxic stress; Relationships of DNA damage processing to mutagenesis, carcinogenesis, aging and human genetic disease.

Same as: BIO 110

BIO 214. Advanced Cell Biology. 4 Units.

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

Same as: BIOC 224, MCP 221

BIO 216. Terrestrial Biogeochemistry. 3 Units.

Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

Same as: EESS 216

BIO 217. Neuronal Biophysics. 4 Units.

Biophysical descriptions and mechanisms of passive and excitable membranes, ion channels and pumps, action potential propagation, and synaptic transmission. Introduction to dynamics of single neurons and neuronal networks. Emphasis is on the experimental basis for modern research applications. Interdisciplinary aspects of biology and physics. Literature, problem sets, and student presentations. Prerequisites: undergraduate physics, calculus, and biology.

BIO 220. Essential Mathematics for Research in Life and Social Sciences. 2 Units.

Targeted review of mathematics for research in life (and social) sciences. Material includes: real and complex functions, sequences and series, essential calculus, linear algebra, probability, stochastic processes, model-building and introduction to Matlab. Links techniques to applications in research and modeling, particularly in population biology. Students will use online materials including lecture videos, problem sets, course notes, and self-paced tests.

BIO 222. Exploring Neural Circuits. 3 Units.

Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates and graduate students with background in physical science, engineering, and biology may apply to enroll. Recommended: background in neuroscience.

BIO 223. Stochastic and Nonlinear Dynamics. 3 Units.

Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.

Same as: APPPHYS 223

BIO 226. Introduction to Biophysics. 3-4 Units.

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: APPPHYS 205, BIO 126

BIO 227. Foundations of Community Ecology. 2 Units.

Discussion of classic papers in community ecology (Forbes, Clements, Gleason, Grinnell, Lindeman, Preston, Elton, Hutchinson, May, MacArthur, Odum, Connell, Paine, Tilman, etc.) and contemporary papers on related topics, to develop historical perspectives to understand current issues and identify future directions. Prerequisite for undergraduates: consent of instructor.

BIO 230. Molecular and Cellular Immunology. 4 Units.

Components of the immune system and their functions in immune responses in health and disease: development of the immune system; innate and adaptive immunity; structure and function of antibodies; molecular biology and biochemistry of antigen receptors and signaling pathways; cellular basis of immune responses and their regulation; genetic control of immune responses and disease susceptibility. Lectures and discussion in class and in sections. Satisfies Central Menu Areas 1 or 2. For upper class undergraduates and graduate students who have not previously taken an introductory immunology course. Prerequisite for undergraduates: Biology or Human Biology core, or consent of instructor.

BIO 230A. Molecular and Cellular Immunology Literature Review. 1 Unit.

Special discussion section for graduate students. Supplement to 230. Corequisite: 230.

BIO 232. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIOPHYS 232, GENE 232

BIO 234. Conservation Biology: A Latin American Perspective. 3 Units.

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 144, HUMBIO 112

BIO 238. Ecosystem Services: The Science of Valuing Nature. 3 Units.

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. Class size is limited to 12. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests.

Same as: BIO 138

BIO 244. Fundamentals of Molecular Evolution. 4 Units.

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.

Same as: BIO 113

BIO 245. Ecology and evolution of animal behavior. 3 Units.

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics.

Same as: BIO 145

BIO 249. The Neurobiology of Sleep. 4 Units.

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.

Same as: BIO 149, HUMBIO 161

BIO 250. Human Behavioral Biology. 5 Units.

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.

Same as: BIO 150, HUMBIO 160

BIO 254. Molecular and Cellular Neurobiology. 3-5 Units.

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.

Same as: NBIO 254

BIO 256. Epigenetics. 2 Units.

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104.

Same as: BIO 156

BIO 257. Biochemistry and Molecular Biology of Plants. 3-4 Units.

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.

Same as: BIO 157

BIO 258. Developmental Neurobiology. 4 Units.

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent.

Same as: BIO 158

BIO 263. Neural Systems and Behavior. 4 Units.

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.

Same as: BIO 163, HUMBIO 163

BIO 264. Biosphere-Atmosphere Interactions. 4 Units.

Physiological, ecological, and physical aspects of ecosystem function, emphasizing how ecosystems influence and are influenced by the atmosphere. Prerequisites: 42, 43; or consent of instructor.

Same as: BIO 164

BIO 266. Faunal Analysis: Animal Remains for the Archaeologist. 5 Units.

The analysis of fossil animal bones and shells to illuminate the behavior and ecology of prehistoric collectors, especially ancient humans. Theoretical and methodological issues. The identification, counting, and measuring of fossil bones and shells. Labs. Methods of numerical analysis.

Same as: ANTHRO 113, ANTHRO 213, BIO 166

BIO 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

Same as: NENS 267

BIO 268. Statistical and Machine Learning Methods for Genomics. 3 Units.

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.

Same as: BIOMEDIN 245, CS 373, GENE 245, STATS 345

BIO 271. Principles of Cell Cycle Control. 3 Units.

Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.

Same as: BIO 171, CSB 271

BIO 274. Human Skeletal Anatomy. 5 Units.

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, ANTHRO 275, BIO 174, HUMBIO 180

BIO 274S. Hopkins Microbiology Course. 3-12 Units.

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

Same as: BIOHOPK 274, CEE 274S, EESS 253S

BIO 277. Plant Microbe Interaction. 3 Units.

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

Same as: BIO 177

BIO 278. Microbiology Literature. 3 Units.

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as *Salmonella*, *Vibrio*, and/or *Yersinia*. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

Same as: BIO 178

BIO 282. Modeling Cultural Evolution. 3 Units.

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution.

Same as: BIO 182

BIO 283. Theoretical Population Genetics. 3 Units.

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

Same as: BIO 183

BIO 286. Natural History of the Vertebrates. 4 Units.

Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California's distinct biomes. Prerequisite: Biology core.

Same as: BIO 186

BIO 287. Advanced topics in human population genetics. 3 Units.

Focused examination of specific topics in human population genetics, with emphasis on primary literature. Course themes may include: mathematical properties of statistics used in human population genetics, population genetics and biological race, and statistical inference of human migrations.

BIO 288. Biochemistry I. 3 Units.

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 188, CHEM 181, CHEMENG 181, CHEMENG 281

BIO 289. Biochemistry II. 3 Units.

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 189, CHEM 183, CHEMENG 183, CHEMENG 283

BIO 290. Teaching of Biology. 1-5 Unit.

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.

BIO 291. Development and Teaching of Core Experimental Laboratories. 1-2 Unit.

Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.

BIO 292. Curricular Practical Training. 1-3 Unit.

CPT course required for international students completing degree requirements.

BIO 294. Cellular Biophysics. 3 Units.

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: APPPHYS 294

BIO 299. Biology PhD Lab Rotation. 1-10 Unit.

Limited to first year Biology PhD students. Lab rotations with Biosciences faculty.

BIO 300. Graduate Research. 1-10 Unit.

For graduate students only. Individual research by arrangement with in-department instructors.

BIO 300X. Out-of-Department Graduate Research. 1-10 Unit.

Individual research by arrangement with out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See <http://biohonors.stanford.edu> for more information. May be repeated for credit.

BIO 301. Frontiers in Biology. 1-3 Unit.

Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department's Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

BIO 302. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors."

BIO 303. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors."

BIO 304. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors.

BIO 306. Current Topics in Integrative Organismal Biology. 1 Unit.

Limited to and required of graduate students doing research in this field. At Hopkins Marine Station.

BIO 312. Ethical Issues in Ecology and Evolutionary Biology. 1 Unit.

Focus is on ethical issues addressed in Donald Kennedy's *Academic Duty* and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Discussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: PhD student in the ecology and evolutionary biology or marine program, or consent of instructor.

BIO 321. Ecological Genetics. 1-3 Unit.

Systematic exploration of (1) the types of questions that can be addressed by ecological genetics techniques (i.e., community genomics, genetic variation between species in the same ecosystem, resource use, landscape genetics, etc.); (2) laboratory techniques available; and (3) analyses and modeling best suited for ecological genetics questions. Analysis of specific research problems and efforts (now underway or planned for the near future) among seminar participants, and discussion of these efforts with group review of the relative merits of alternative approaches.

BIO 325. The Evolution of Body Size. 2 Units.

Preference to graduate students and upper-division undergraduates in GES and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size?.

Same as: GES 325

BIO 326. Foundations in Biogeography. 2 Units.

Seminar. Focus on classic papers covering the global distribution and abundance of organisms through time. Topics include: phylogenetics, phylogeography, plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity, conservation and a history of the field.

BIO 342. Plant Biology Seminar. 1-3 Unit.

Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See <http://carnegiedpb.stanford.edu/seminars/seminars.php>.

BIO 346. Advanced Seminar on Prokaryotic Molecular Biology. 1 Unit.

Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.

BIO 375. Field Ecology & Conservation. 4 Units.

This course is based on question-driven research in the field, addressing both conceptual frameworks and methodological aspects of evolutionary ecology and conservation biology. It consists of faculty-led research projects and student independent projects. The field part takes place in a tropical rain forest research station in Mexico September 5-15, 2014. The field component is followed by sessions on campus, where the research data are analyzed, discussed and prepared as scientific papers. The training includes presentations of the papers in a mini-symposium organized as a professional meeting.

BIO 383. Seminar in Population Genetics. 1-3 Unit.

Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. May be repeated for credit. Prerequisite: consent of instructor.

BIO 384. Theoretical Ecology. 1-3 Unit.

Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.

BIO 387. Hacking Consciousness: Consciousness, Cognition, and the Brain. 1 Unit.

Listen to renowned physicists, nutritionists, neuroscientists, etc. as they investigate the nature of consciousness as a field of all possibilities. We'll explore consciousness as the source not only of the human mind and its ability to experience, know, innovate... but also as the source of all structures and functions in creation, from fine particles to DNA to galaxies, in parallel with the scientific notion of a unified field, or superstring at the basis of the infinite diversity of time and space.

BIO 390. Topics in Biology. 1 Unit.

Seminar. Topics in biology ranging from neurobiology to ecology.

BIO 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIOC 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

BIO 802. TGR Dissertation. 0 Units.

Biology/Hopkins Marine Courses

BIOHOPK 43. Plant Biology, Evolution, and Ecology. 5 Units.

Introduction to biology in a marine context. Principles of plant biology: physiology, structure, diversity. Principles of evolution: macro and microevolution, population genetics. Ecology: the principles governing the distribution and abundance of organisms; population, community, and ecosystem ecology. Equivalent to BIO 43. Corequisite: BIOHOPK 44Y.

BIOHOPK 44Y. Core Laboratory in Plant Biology, Ecology and Evolution. 5 Units.

Laboratory and field projects provide working familiarity with the concepts, organisms, and techniques of plant and evolutionary biology, and ecology. Emphasis is on hands-on experimentation in the marine environment, analysis of data, and written and oral presentation of the experiments. Equivalent to BIO 44Y. Corequisite: BIOHOPK 43. Satisfies WIM in Biology.

BIOHOPK 150H. Ecological Mechanics. 3 Units.

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics: fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.

Same as: BIOHOPK 250H

BIOHOPK 151H. Ecological Mechanics. 2 Units.

(Graduate students register for 151H.) A continuation of BIOHOPK 150. The principles of life's physical interactions. We will explore basic physics and fluid dynamics to see how these physical principles can be used to investigate ecology at levels from the individual to the community. Thermal mechanics, biological materials, fracture mechanics, adhesion, beam theory, variation and scale, the statistics of extremes, and self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous, but not necessary.

Same as: BIOHOPK 251H

BIOHOPK 152H. Physiology of Global Change. 2 Units.

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 252H

BIOHOPK 153H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.

Same as: BIOHOPK 253H

BIOHOPK 154H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.

Same as: BIOHOPK 254H

BIOHOPK 160H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.

(Graduate students register for 261H.) Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 260H

BIOHOPK 161H. Invertebrate Zoology. 5 Units.

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 261H

BIOHOPK 162H. Comparative Animal Physiology. 5 Units.

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 262H

BIOHOPK 163H. Oceanic Biology. 4 Units.

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor.

Same as: BIOHOPK 263H

BIOHOPK 165H. The Extreme Life of the Sea. 3 Units.

(Graduate students register for 265H.) Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.

Same as: BIOHOPK 265H

BIOHOPK 166H. Molecular Ecology. 5 Units.

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

Same as: BIOHOPK 266H

BIOHOPK 167H. Nerve, Muscle, and Synapse. 5 Units.

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor.

Same as: BIOHOPK 267H

BIOHOPK 172H. Marine Ecology: From Organisms to Ecosystems. 5 Units.

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomechanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor. Fulfills WIM in Biology.

Same as: BIOHOPK 272H

BIOHOPK 173H. Marine Conservation Biology. 4 Units.

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course.

Same as: BIOHOPK 273H

BIOHOPK 174H. Experimental Design and Probability. 3 Units.

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 274H

BIOHOPK 177H. Dynamics and Management of Marine Populations. 4 Units.

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions.

Same as: BIOHOPK 277H

BIOHOPK 179H. Physiological Ecology of Marine Megafauna. 3 Units.

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to study marine megafauna in some of the most logistically challenging habitats on earth.

Same as: BIOHOPK 279H

BIOHOPK 180H. Air and Water. 3 Units.

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor.

Same as: BIOHOPK 280H

BIOHOPK 182H. Stanford at Sea. 16 Units.

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 323H, EARTHSYS 323, EESS 323

BIOHOPK 184H. Holistic Biology. 16 Units.

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 284H

BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities. 5 Units.

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete Stanford's Scientific Diver Training workshop, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment.

Same as: BIOHOPK 285H

BIOHOPK 187H. Sensory Ecology. 4 Units.

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

Same as: BIOHOPK 287H

BIOHOPK 189H. Sustainability and Marine Ecosystems. 3 Units.

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.

Same as: BIOHOPK 289H

BIOHOPK 198H. Directed Instruction or Reading. 1-15 Unit.

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff).

BIOHOPK 199H. Undergraduate Research. 1-15 Unit.

Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.

BIOHOPK 250H. Ecological Mechanics. 3 Units.

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics: fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.

Same as: BIOHOPK 150H

BIOHOPK 251H. Ecological Mechanics. 2 Units.

(Graduate students register for 151H.) A continuation of BIOHOPK 150. The principles of life's physical interactions. We will explore basic physics and fluid dynamics to see how these physical principles can be used to investigate ecology at levels from the individual to the community. Thermal mechanics, biological materials, fracture mechanics, adhesion, beam theory, variation and scale, the statistics of extremes, and self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous, but not necessary.

Same as: BIOHOPK 151H

BIOHOPK 252H. Physiology of Global Change. 2 Units.

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 152H

BIOHOPK 253H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.

Same as: BIOHOPK 153H

BIOHOPK 254H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.

Same as: BIOHOPK 154H

BIOHOPK 260H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.

(Graduate students register for 261H.) Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 160H

BIOHOPK 261H. Invertebrate Zoology. 5 Units.

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 161H

BIOHOPK 262H. Comparative Animal Physiology. 5 Units.

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 162H

BIOHOPK 263H. Oceanic Biology. 4 Units.

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor.

Same as: BIOHOPK 163H

BIOHOPK 264H. POPULATION GENOMICS. 1-2 Unit.

Introduces students to the analysis of single nucleotide polymorphism data from next generation sequencing projects. Computer analysis, hypothesis testing, and projects based on existing data sets will be pursued.

BIOHOPK 265H. The Extreme Life of the Sea. 3 Units.

(Graduate students register for 265H.) Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.

Same as: BIOHOPK 165H

BIOHOPK 266H. Molecular Ecology. 5 Units.

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

Same as: BIOHOPK 166H

BIOHOPK 267H. Nerve, Muscle, and Synapse. 5 Units.

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor.

Same as: BIOHOPK 167H

BIOHOPK 272H. Marine Ecology: From Organisms to Ecosystems. 5 Units.

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomechanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor. Fulfills WIM in Biology.

Same as: BIOHOPK 172H

BIOHOPK 273H. Marine Conservation Biology. 4 Units.

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course. Same as: BIOHOPK 173H

BIOHOPK 274. Hopkins Microbiology Course. 3-12 Units.

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents. Same as: BIO 274S, CEE 274S, EESS 253S

BIOHOPK 274H. Experimental Design and Probability. 3 Units.

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor. Same as: BIOHOPK 174H

BIOHOPK 275H. Synthesis in Ecology. 2 Units.

Introduction to frameworks and approaches to synthesizing large data sets, including meta-analysis and permutational multivariate analysis of variance. Hands-on data analysis sessions. May be repeated for credit.

BIOHOPK 276H. Estimates and Errors: The Theory of Scientific Measurement. 3 Units.

Measurement plays a fundamental role in science, but many biologists have no formal training in what it means to measure something. Errors are inevitable in any measurement. Which are inherent, and which can be controlled? How do errors propagate? How can you decide which data to reject? When are uncertainties normal? In this course we will work our way into the theory of measurement, covering some topics that overlap with inferential statistics (but from a new and perhaps more intuitive perspective), and extending beyond those basics to include spectral analysis and the dangers of measurement in the digital realm.

BIOHOPK 277H. Dynamics and Management of Marine Populations. 4 Units.

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions. Same as: BIOHOPK 177H

BIOHOPK 279H. Physiological Ecology of Marine Megafauna. 3 Units.

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth. Same as: BIOHOPK 179H

BIOHOPK 280. Short Course on Ocean Policy. 3 Units.

The course will introduce graduate students in the natural and social sciences to ocean policy and governance in the US at national, regional, state, and local levels. Together with leaders in ocean science and policy, students will examine pressing issues in ocean sustainability from natural science, social science, and legal and policy perspectives, with an emphasis on the role of science in the policy and governance processes. Students will learn and apply practical skills in communication, leadership and interdisciplinary problem-solving through participation in a group project, interactive discussions and simulations, and field trips. Prerequisite: consent of instructor.

BIOHOPK 280H. Air and Water. 3 Units.

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor. Same as: BIOHOPK 180H

BIOHOPK 284H. Holistic Biology. 16 Units.

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major. Same as: BIOHOPK 184H

BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities. 5 Units.

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete Stanford's Scientific Diver Training workshop, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment. Same as: BIOHOPK 185H

BIOHOPK 287H. Sensory Ecology. 4 Units.

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior. Same as: BIOHOPK 187H

BIOHOPK 289H. Sustainability and Marine Ecosystems. 3 Units.

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.

Same as: BIOHOPK 189H

BIOHOPK 290H. Teaching of Biological Science. 1-15 Unit.

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor.nn (Staff).

BIOHOPK 300H. Research. 1-15 Unit.

Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy); L. Crowder: Marine ecology, fisheries, bycatch, integrating science and policy, marine conservation; G. De Leo: Population dynamics and management, wildlife diseases, environmental policies and sustainable development; M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neurobiology (analysis of giant axon systems in marine invertebrates from molecular to behavioral levels); J. Goldbogen: Physiological and Behavioral Ecology (functional morphology and biomechanics of marine organisms); C. Lowe: Evolution of Development (origin of chordates, early evolution of body plans); F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); S. Thompson: Neurobiology (neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neurotransmission); J. Watanabe: Marine Ecology (kelp forest ecology and invertebrate zoology).

BIOHOPK 315H. Career Development for Graduate Students. 2 Units.

The course will cover multiple skills required to succeed in graduate school and beyond, including fund raising, publishing, selecting career options, job application and negotiation, and teaching, through lectures, group discussions, and practical exercises.

BIOHOPK 320H. Physical Biology. 3 Units.

Physics, mathematics, and biology are often studied as separate subjects. In this two-week intensive course we will attempt to bring them together in a dynamic combination of lectures and hands on projects. We will draw on the diverse flora and fauna of Monterey Bay for our experimental organisms, and will take advantage of the facilities at Hopkins Marine Station to explore questions at levels ranging from molecules to ecological communities.

BIOHOPK 323H. Stanford at Sea. 16 Units.

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 182H, EARTHSSYS 323, EESS 323

.

BIOHOPK 802H. TGR Dissertation. 0 Units.

.

Biomedical Informatics Courses

BIOMEDIN 156. Economics of Health and Medical Care. 5 Units.

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 256, ECON 126, HRP 256

BIOMEDIN 200. Biomedical Informatics Colloquium. 1 Unit.

Series of colloquia offered by program faculty, students, and occasional guest lecturers. May be repeated three times for credit.

BIOMEDIN 201. Biomedical Informatics Student Seminar. 1 Unit.

Participants report on recent articles from the Biomedical Informatics literature or their research projects. Goals are to teach critical reading of scientific papers and presentation skills. May be repeated three times for credit.

BIOMEDIN 205. Precision Practice with Big Data. 1 Unit.

Primarily for M.D. students; open to other graduate students. Provides an overview of how to leverage large amounts of clinical, molecular, and imaging data within hospitals and in cyberspace--big data--to practice medicine more effectively. Lectures by physicians, researchers, and industry leaders survey how the major methods of informatics can help physicians leverage big data to profile disease, to personalize treatment to patients, to predict treatment response, to discover new knowledge, and to challenge established medical dogma and the current paradigm of clinical decision-making based solely on published knowledge and individual physician experience. May be repeated for credit. Prerequisite: background in biomedicine. Background in computer science can be helpful but not required.

BIOMEDIN 206. Informatics in Industry. 1 Unit.

Effective management, modeling, acquisition, and mining of biomedical information in healthcare and biotechnology companies and approaches to information management adopted by companies in this ecosystem. Guest speakers from pharmaceutical/biotechnology companies, clinics/hospitals, health communities/portals, instrumentation/software vendors. May be repeated for credit.

BIOMEDIN 207. Smart Health through Digital Medicine. 1 Unit.

The widespread use of Health IT, such as electronic health records, and of health applications on the part of patients and consumers, will radically alter the practice of medicine in the coming decades. This seminar, comprised of guest lectures from healthcare professionals in industry and academia, will highlight the practical challenges and successes of health IT design and transformed care delivery programs. The goal of the course is to provide an understanding of how technology designs can advance the delivery and quality of healthcare. In addition to attending lectures, students will be asked to think through a health IT solution to a care delivery problem in a short report.

BIOMEDIN 208. Clinical Informatics Literature Review Seminar. 1 Unit.

Focus is on reading and discussing seminal papers in clinical and health informatics. Topics include biomedical informatics methods, systems design, implementation and evaluation. Limited enrollment.

BIOMEDIN 210. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving. 3 Units.

Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology.

Same as: CS 270

BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor.

Same as: BIOE 212, CS 272, GENE 212

BIOMEDIN 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

Same as: BIOE 214, CS 274, GENE 214

BIOMEDIN 215. Data Driven Medicine. 3 Units.

With the spread of electronic health records and increasingly low cost assays for patient molecular data, powerful data repositories with tremendous potential for biomedical research, clinical care and personalized medicine are being built. But these databases are large and difficult for any one specialist to analyze. To find the hidden associations within the full set of data, we introduce methods for data-mining at the internet scale, the handling of large-scale electronic medical records data for machine learning, methods in natural language processing and text-mining applied to medical records, methods for using ontologies for the annotation and indexing of unstructured content as well as semantic web technologies. Prerequisites: CS 106A; familiarity with statistics (STATS 202) and biology. Recommended: one of CS 246 (previously CS 345A), STATS 305, or CS 229.

BIOMEDIN 216. Representations and Algorithms for Molecular Biology: Lectures. 1-2 Unit.

Lecture component of BIOMEDIN 214. One unit for medical and graduate students who attend lectures only; may be taken for 2 units with participation in limited assignments and final project. Lectures also available via internet. Prerequisite: familiarity with biology recommended.

BIOMEDIN 217. Translational Bioinformatics. 4 Units.

Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology.

Same as: CS 275

BIOMEDIN 218. Translational Bioinformatics Lectures. 2 Units.

Same content as BIOMEDIN 217; for medical and graduate students who attend lectures and participate in limited assignments and final project. Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming at the level of CS 106A; familiarity with statistics and biology.

BIOMEDIN 219. Mathematical Models and Medical Decisions. 2 Units.

Analytic methods for determining the optimal diagnostic and therapeutic decisions for the care of individual patients and for the design of policies affecting the care of patient populations. Topics: utility theory and probability modeling, empirical methods for estimating disease prevalence, probability models for periodic processes, binary decision-making techniques, Markov models of dynamic disease state problems, utility assessment techniques, parametric utility models, utility models for multidimensional outcomes, analysis of time-varying clinical outcomes, and the design of cost-constrained clinical policies. Extensive problem sets compliment course materials. Prerequisites: introduction to calculus and basic statistics.

BIOMEDIN 224. Principles of Pharmacogenomics. 3 Units.

Introduction to the relevant pharmacology, genomics, experimental methods for high-throughput measurements (sequencing, expression, genotyping), analysis methods for GWAS, chemoinformatics, and natural language processing. Review of key gene classes (cytochromes, transporters, GPCRs), key drugs for which genetics is critical (warfarin, clopidogrel, statins, NSAIDs, neuropsychiatric drugs and cancer drugs). Also reviews resources for pharmacogenomics (PharmGKB, Drugbank, CMAP, and others) as well as issues in doing clinical implementation of pharmacogenomics testing. Reading of key papers, including student presentations of this work. Problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, BIO 42, BIO 43, BIO 44X, BIO 44Y or consent of instructor.

Same as: GENE 224

BIOMEDIN 225. Data Driven Medicine: Lectures. 2 Units.

With the spread of electronic health records and increasingly low cost assays for patient molecular data, powerful data repositories with tremendous potential for biomedical research, clinical care and personalized medicine are being built. But these databases are large and difficult for any one specialist to analyze. To find the hidden associations within the full set of data, we introduce methods for data-mining at the internet scale, the handling of large-scale electronic medical records data for machine learning, methods in natural language processing and text-mining applied to medical records, methods for using ontologies for the annotation and indexing of unstructured content as well as semantic web technologies. Prerequisites: familiarity with statistics (STATS 202) and biology.

BIOMEDIN 231. Computational Molecular Biology. 3 Units.

Practical, hands-on approach to field of computational molecular biology. Recommended for molecular biologists and computer scientists desiring to understand the major issues concerning analysis of genomes, sequences and structures. Various existing methods critically described and strengths and limitations of each. Practical assignments utilizing tools described. Prerequisite: BIO 41 or consent of instructor. All homework and coursework submitted electronically. Course webpage: <http://biochem218.stanford.edu/>.

BIOMEDIN 233. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference. Same as: HRP 261, STATS 261

BIOMEDIN 245. Statistical and Machine Learning Methods for Genomics. 3 Units.

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets. Same as: BIO 268, CS 373, GENE 245, STATS 345

BIOMEDIN 251. Outcomes Analysis. 4 Units.

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics. Same as: HRP 252, MED 252

BIOMEDIN 256. Economics of Health and Medical Care. 5 Units.

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 156, ECON 126, HRP 256

BIOMEDIN 258. Genomics, Bioinformatics and Medicine. 3 Units.

Molecular basis of inherited human disease. Diagnostics approaches: simple Mendelian diseases and complex, multifactorial diseases. Genomics: functional genomics, epigenetics, gene expression, SNPs, copy number and other structural genomic variations involved in disease. Novel therapeutic methods: stem cell therapy, gene therapy and drug developments that depend on the knowledge of genomics. Personal genomics, pharmacogenomics, clinical genomics and their role in the future of preventive medicine. Prerequisites: BIO 41 or HUMBIO 2A or consent of instructor. Those with credit in BIOC 118 not eligible to enroll. Course webpage: <http://biochem158.stanford.edu/>. Same as: BIOC 158, BIOC 258, HUMBIO 158G

BIOMEDIN 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.

The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units with reduced project requirements requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab highly recommended.

Same as: RAD 260

BIOMEDIN 262. Computational Genomics. 3 Units.

Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

Same as: CS 262

BIOMEDIN 273A. A Computational Tour of the Human Genome. 3 Units.

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>.

Same as: CS 273A, DBIO 273A

BIOMEDIN 290. Biomedical Informatics Teaching Methods. 1-6 Unit.

Hands-on training in biomedical informatics pedagogy. Practical experience in pedagogical approaches, variously including didactic, inquiry, project, team, case, field, and/or problem-based approaches. Students create course content, including lectures, exercises, and assessments, and evaluate learning activities and outcomes. Prerequisite: instructor consent.

BIOMEDIN 299. Directed Reading and Research. 1-18 Unit.

For students wishing to receive credit for directed reading or research time. Prerequisite: consent of instructor. (Staff).

BIOMEDIN 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

BIOMEDIN 374. Algorithms in Biology. 2-3 Units.

Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents. Same as: CS 374

BIOMEDIN 390A. Curricular Practical Training. 1 Unit.

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 390B. Curricular Practical Training. 1 Unit.

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 390C. Curricular Practical Training. 1 Unit.

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

BIOMEDIN 432. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.

(Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application. Same as: HRP 392

BIOMEDIN 801. TGR Master's Project. 0 Units.

Project credit for masters students who have completed all course requirements and minimum of 45 Stanford units.

BIOMEDIN 802. TGR PhD Dissertation. 0 Units.

Biophysics Courses

BIOPHYS 227. Functional MRI Methods. 3 Units.

Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended. Same as: RAD 227

BIOPHYS 228. Computational Structural Biology. 3 Units.

Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet. Same as: SBIO 228

BIOPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. Same as: APPPHYS 232, BIO 132, BIO 232, GENE 232

BIOPHYS 241. Biological Macromolecules. 3-5 Units.

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only. Same as: BIOC 241, GENE 241, SBIO 241

BIOPHYS 242. Methods in Molecular Biophysics. 3 Units.

Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectroscopy. Prerequisite: physical chemistry or consent of instructor. Same as: SBIO 242

BIOPHYS 250. Seminar in Biophysics. 1 Unit.

Required of Biophysics graduate students. Presentation of current research projects and results by faculty in the Biophysics program. May be repeated for credit.

BIOPHYS 297. Bio-Inorganic Chemistry. 3 Units.

Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents. Same as: CHEM 297

BIOPHYS 300. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

BIOPHYS 311. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent. Same as: BIOE 211, BIOE 311, DBIO 211

BIOPHYS 399. Directed Reading in Biophysics. 1-18 Unit.

Prerequisite: consent of instructor.

BIOPHYS 801. TGR Project. 0 Units.

.

BIOPHYS 802. TGR Dissertation. 0 Units.

.

Biosciences Interdisciplinary Courses

BIOS 200. Foundations in Experimental Biology. 6 Units.

This course is divided into three 3-week cycles and is focused on the broad themes of Evolution, Energy and Information. During each cycle, students work in small teams and will be coached by faculty to develop an original research project and compose a brief written proposal explaining the research. Skills emphasized include: 1) reading for breadth and depth; 2) developing compelling, creative arguments; 3) communicating with the spoken and written word; 4) working in teams. Peer assessment and workshops; substantial face-to-face discussion with faculty drawn from across the Biosciences programs.

BIOS 201. Next Generation Sequencing and Applications. 2 Units.

Usher in the golden age of biological discovery with next generation sequencing (NGS) through its wide spectrum of applications. Modules include general introduction of Next Generation Sequencing (NGS) technologies, applications of these sequencing technologies, caveats and comparisons with previous approaches, analysis and interpretation of sequencing data, principles of tools and resources and practical ways to utilize them, and features and pitfalls. Prerequisite: background in molecular biology.

BIOS 202. Hippocampal Field Potentials, an Introduction to CNS in Vitro Electrophysiology. 1-3 Unit.

Enrollment limited to graduate students in the School of Medicine; undergraduates may enroll with instructor consent. Introduces students to theory and practice of in vitro CNS electrophysiology. Lectures cover basic electrical and electrode theory, hippocampal anatomy, interpretation of these potentials, common pitfalls and misinterpretations, design of experiments using field potentials and other related topics. Practicum is hands on training in obtaining, recording and interpreting field potentials from in vitro hippocampal slices. Students develop skills in data collection, analysis and evaluation, art and design of electrophysiological studies of the brain.

BIOS 203. Introduction to Atomistic Simulations for Biochemical Applications. 3 Units.

Theory and application of atomistic simulations needed to model and understand systems of biological relevance (proteins, DNA, small molecule therapeutic drug properties) for beginners. Topics: molecular interactions and classical force fields, first principles energy approaches, molecular dynamics, rare event and transition-state finding techniques, protein folding, and solvation methods. Hands-on tutorials based on key topics in biochemical simulation that use variety of state-of-the-art software packages on both standard and new, advanced graphical processing unit hardware for simulation and analysis of biochemical properties. Prerequisites: Some knowledge of quantum mechanics, biochemistry, and shell scripting (BASH or python) preferred.

BIOS 204. Practical Tutorial on the Modeling of Signal Transduction Motifs. 2 Units.

Basics of ordinary differential equation modeling of signal transduction motifs, small circuits of regulatory proteins and genes that serve as building blocks of complex regulatory circuits. Morning session covers numerical modeling experiments. Afternoon session explores theory underpinning that day's modeling session. Modeling done using Mathematica, Standard Edition provided to enrolled students.

BIOS 205. Introductory Data Analysis in R for Biomedical Students. 1 Unit.

Topics include: basics of R (widely used, open-source programming and data analysis environment) programming language and data structures, reading/writing files, graphics tools for figure generation, basic statistical and regression operations, survey of relevant R library packages. Interactive format combining lectures and computer lab. For course and enrollment information, see <http://bios205.stanford.edu>.

BIOS 206. Stem Cells and Regeneration: Transitioning from Basic Research to Clinical Therapies. 1-2 Unit.

Presents emerging therapies based on stem cell by the scientists leading these pioneering efforts, including academic and industry-based groups. Provides hands-on instruction in laboratory methods valuable in development of stem cell therapies.

BIOS 207. Interdisciplinary Approaches to Biochemistry: Single Molecule Biophysics to Clinical Outcomes. 1 Unit.

Interdisciplinary analysis from basic biochemistry and biophysics to clinical outcomes of disease states and potential therapeutic interventions. Focus on cardiac system. Single molecule biophysics and classical enzyme kinetics and use of induced pluripotent stem (iPS) cells and single cell studies lay foundation for discussions of effects of cardiomyopathy mutations on heart function. Analytical approaches discussed include genetic analysis, reconstitution of functional assemblies, x-ray diffraction, 3D reconstruction of electron microscope images, spectroscopic methods, computational approaches, single molecule biophysics, use of induced pluripotent stem cells in research.

BIOS 208. Computational Macromolecule Structure Modeling. 2 Units.

Concepts, workflow, and methodology of protein structure modeling presented through short lectures followed by hands-on exercises with the Rosetta software package. Several problem types demonstrate how to formulate and test well-defined hypotheses, in addition to the design and engineering of structure, function, and interactions.

BIOS 209. Practical Protein NMR Structure Determination. 2 Units.

Work toward solving a high-resolution 3D structure from unprocessed NMR data acquired on a small well-characterized protein. Short lectures followed by hands-on computer exercises demonstrate best practices for data processing, spectra interpretation, and structure calculation with attention to troubleshooting and validation methods. Students should be familiar with fundamental concepts of protein structure and NMR spectroscopy and comfortable with the command-line environment. Prerequisite: SBIO242/BIOPHYS 242 strongly recommended, but not required.

BIOS 210. Axonal Transport and Neurodegenerative Diseases. 1-2 Unit.

Introduction to mechanisms underlying axonal transport, significance of proper regulation in maintaining neuronal activities, and its implication in disease pathology. Lab section: visualize axonal transport of various axonal organelles such as mitochondria, synaptic vesicles and dense core vesicles in live cells and tissues.

BIOS 211. Histology for Biosciences. 1 Unit.

Fundamentals of tissue organization as seen by light microscopy. Includes: epithelium, connective tissue, muscle, bone, cartilage, blood cells, nerve, and quick overview of several major organs. Each session has interactive 30 min presentation followed by 1.5 hours viewing glass histology slides using individual microscopes and a multi-shy;headed microscope. Slide sessions interspersed with interactive exercises to stimulate discussions. Supporting materials include select readings from histology atlas, electron micrographs, and virtual (whole-slide) images provided online.

BIOS 212. Plant Genetics: Large Scale Experiments and Clonal Analysis. 2 Units.

Using sectored dahlia flowers student teams perform clonal analysis of petals. Brief lectures introduce key topics and dahlia biology (http://www.stanford.edu/group/dahlia_genetics/). Discussion topics: papers on clonal analysis and specification of floral parts in advanced and primitive Angiosperms, theory and best practices for structuring maize crosses in transposon tagging, allelism with 20 loci, and bulk segregant and fine mapping. Genes likely contributing to petal form and pigmentation nominated from RNA-Seq data and qRT-PCR validated. Genetic screen of ~105 plants to find tagged male-sterile alleles and puton validation performed. Prerequisite: graduate Genetics course.

BIOS 213. Scientific Illustration and Animation. 1 Unit.

Techniques of presenting big picture ideas and detailed experiments as simple cartoons. Mixed lecture/lab course culminates with students producing figures and animations for an introduction/conclusion of a research presentation. Covers basic design principles to help produce figures useful for broad and focused audiences. Includes static illustrations, Flash style, and stop motion animation.

BIOS 214. Molecules & Math. 1 Unit.

Introduction to molecular systems and their behavior as well as fundamental mathematical and computational tools for modeling molecular systems. Application of tools to critical medical areas: modeling of cardiovascular physiology; simulation of protein interactions; modeling of cellular differentiation; extraction of useful information from anatomic, functional and molecular images. Weekly lectures, group discussions, and individual project work.

BIOS 215. Transplantation Immunology and Tolerance. 2 Units.

Extensive literature review of experimental strategies to promote tolerance, including limitations involved in translating tolerance-promoting strategies to the clinic and targets of Immunosuppression. State of art approaches and limitations of current approaches. Discussions with prominent scientists and clinicians in field of transplantation. Student presentations on novel concepts and approaches in basic science, translational and clinical transplant.

BIOS 216. Structural Biology and Vaccine Design. 1 Unit.

Structural biology is playing an increasing role in the development and analysis of vaccines and deepening understanding of challenging vaccine targets. Structural studies of target antigens have allowed mapping of neutralizing antibody epitopes and antigenic variation. Studies of antibody:antigen complexes have clarified how rare antibodies can confer broad neutralization to highly variant viruses, such as influenza virus and HIV. Course explores current structure-based efforts to improve vaccines to highly potent neutralizing epitopes, utilizing protein fragments, carbohydrate engineering and epitope scaffolding. Research from current literature on viruses including HIV, influenza virus, RSV and others examined.

BIOS 217. The Ultimate Face Book: Understanding Normal and Abnormal Craniofacial Development. 1 Unit.

How the face is assembled during embryonic development to gain insights into facial birth defects and new "regenerative medicine" approaches to reconstruct the face following disease or injury. Learn how "a man finds room in the few square inches of the face for the traits of all his ancestors; for the expression of all his history, and his wants."

BIOS 218. Molecular basis of membrane traffic. 2 Units.

Transport of proteins through the secretory and endocytic pathways is essential for life; dysregulation causes disease and pathogens hijack these pathways to their best advantage. 5 international experts present didactic lectures and engage with students. Topics include: history of genetic and biochemical experiments to identify key components; reconstitution approaches; coated vesicle formation and cargo selection; control of membrane traffic by Rab GTPases; siRNA screens; high throughput microscopy analysis and systems biology approaches. Students devise and present research proposals based on the research of the guest speakers.

BIOS 219. Human Gene Regulation: Genomic Thinking and Genomic Tools for Experimentalists. 1 Unit.

Focused look at the promoter/enhancer and related landscape of the human genome. Genomics and epigenomics of human gene regulation - truth, myths and mysteries. Genomic tools for the interpretation of vertebrate gene regulation experiments and predictions, and the insights behind them. Genomic thinking: purity vs. comprehensiveness, genome-wide vs. single locus. Prerequisites: undergraduate Biology or equivalent. Programming skills not required or taught.

BIOS 220. Adventures in the Human Virosphere. 3 Units.

Structure and function of viruses focusing on viruses that infect humans. Explore the interaction of humans and viruses from diverse perspectives: historical, cultural, political, demographic, organismal, molecular biological, biochemical, immunological, taxonomic. Emphasis on general principles of biology and matters of decision-making and policy. Selected case studies illustrate course material. Full-time immersive format of lectures, discussions, videos and model building. Recommended for non-virology students.

BIOS 221. Modern Statistics for Modern Biology. 3 Units.

Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Minimal familiarity with computers. Instructor consent. Same as: STATS 366

BIOS 222. Authentic Courage for Constructive Change: Skills and Practice for Leadership. 1 Unit.

Explores concepts in decision making and constructive conflict as a mechanism for desired change via purposeful actions. Students assess personal conflict comfort zones and use case studies and class activities to develop skills with authenticity, active and intentional decision making, and other related topics.

BIOS 223. Introduction to Quantitative Reasoning in Biology. 1 Unit.

Mini-course. Focus on development of basic skills for quantitative reasoning in biology, including order-of-magnitude estimation and use of the broad spectrum of time scales to enable understanding. Primary examples include going from molecular size and energy scales to functions of single cells and going from mutational and selective processes acting on organisms to evolution of populations on laboratory global scales.

BIOS 224. Big Topics in Stem Cell Ethics. 2 Units.

Mini-course. Focuses on framing the major ethical issues, legal issues, normative ethical guidelines and oversight in stem cell research. Includes discussion of religious and ethical debates around the moral status of the human embryo.

BIOS 225. Gender in Science. 1 Unit.

Introduction to the social science literature on factors contributing to gender disparities in the scientific workplace (e.g. implicit bias and stereotype threat). Discussions focus on steps that individuals and institutions can take to promote the advancement of women and other underrepresented groups in science, and thus promote the advancement of science.

BIOS 226. Introduction to Force Spectroscopy. 1 Unit.

Mini-course. Covers the fundamentals of major single-molecule manipulation methods (optical tweezers, magnetic tweezers, and atomic force microscopy), principles of force measurement signal and noise, and applications to studies of folding, binding, measurement signal and noise, and applications to studies of folding, binding, polymer elasticity, and structural transitions in proteins and nucleic acids. Intended for students with no previous exposure to single-molecule manipulation or for beginning practitioners. Lectures and discussion of current literature.

BIOS 227. Mass Spectrometry and Proteomics: Opening the Black Box. 2 Units.

Focus on designing and analyzing effective proteomics experiments using mass spectrometry and critically evaluating published mass spectrometry-based studies and datasets. Introduces students to the instrumentation, experimental strategies, and computational methods used for identifying and quantifying proteins and protein post-translational modifications using mass spectrometry. Topics include comparative evaluation of mass spectrometer instrument configurations, tandem mass spectrum interpretation, relative and absolute quantitation, and proteome-scale data set analysis. Laboratory time will focus on sample preparation methods, real-time data acquisition, and data analysis software and techniques.

BIOS 228. Understanding Chemistry in Biology and Biological Experiments. 2 Units.

Chemical transformations are central to biology and function and chemical methods provide some of the most powerful tools for everyday experimental biology. Focuses on the concepts and principles underlying biological chemical transformations, allowing students to generalize and understand cell metabolism and regulation. Topics include basic principles and procedures to evaluate and utilize in practice chemical approaches in biological experiments. In-class problems and evaluation of literature. Three-week mini-course.

BIOS 229. Drug Discovery and Development Project Simulation. 2 Units.

Two-day short course. Focus is on the progression of a drug discovery project from target identification through pre-clinical research, early and late clinical development, and registration with the health authorities. Presented by Novartis. Enrollment limited to postdoctoral students and graduate students with research experience.

BIOS 230. Biomedical Data Analysis in MATLAB. 2 Units.

Focuses on empowering biomedical scientists and engineers with MATLAB tools that are directly useful in their research. Topics include linear- and non-linear-parameter estimation, ordinary- and partial-differential equations, Simulink, GUI design and image processing. Weekly hands-on tutorials accompany lectures and help students code more efficiently and elegantly. Weekly problems sets use MATLAB to interrogate a biomedical phenomenon. Pre-requisites: permission of instructor required.

BIOS 231. Neuroimaging Genomics. 3 Units.

Preference to graduate students and medical students. Emphasis is on introducing students to the field of neuroimaging genomics, characterizing large-scale genomic and imaging datasets to uncover relationships between imaging features, molecular genomic profiles, and phenotype.

BIOS 232. Two-photon Imaging of Neural Circuits. 2 Units.

Focuses on application of two-photon imaging to modern neuroscience. Topics include microscopy and imaging.

BIOS 233. Experimental Metagenomics: Nectar Microbes as a Model System. 3 Units.

Preference to graduate students and post-docs; open to upper-level undergraduates with instructor consent. Emphasis on developing a practical understanding of how to conduct metagenomic research by combining cutting-edge molecular sequencing with experimental ecological approaches. Focuses on the community ecology of the bacterial and yeast species that colonize floral nectar via pollinators and the implications for plant-pollinator interactions within an agriculturally relevant framework. Ecological, evolutionary, and phylogenetic principles and microbiological and molecular techniques that will be taught are broadly applicable in many biological fields, including the medical ecology of the human microbiome. Inquiry-based with individual student-led projects.

BIOS 234. Personalized Genomic Medicine. 1 Unit.

Focuses on next-generation sequencing and its implications for personalized genomic medicine. Students gain hands-on experience with popular DNA sequence analysis tools as well as a practical understanding of the underlying algorithms and biomedicine.

BIOS 235. Metabolism and Metabolic Ecology: Microbes, Gut and Cancer. 2 Units.

Preference to graduate students. Focuses on modern aspects of metabolism and metabolic biochemistry as it affects fitness and ecology of cells and organisms on a systems level. Students obtain a broad understanding of the governing principles and logic of metabolic pathways and their networks as well as an intuition of metabolism in context of natural selection and fitness acting on the cell or host. Emphasis is primarily on microorganisms and their habitats in nature and the human gut, but topics also include metabolism of cancer cells and of engineered microbes.

BIOS 236. Developmental Biology in the Ocean: Comparative Embryology and Larval Development. 4 Units.

Three-week course at Hopkins Marine Station. Focuses on the embryology and larval development of a broad range of marine invertebrate phyla. The goal of the course is to give students an appreciation of the range of developmental strategies and larval forms in the ocean and why this is critical for constructing hypotheses of EvoDevo and animal evolution. Includes observation and documentation of the development of embryos and larvae by scientific illustration and photo/video microscopy. Pre-requisite: Developmental Biology coursework and instructor consent.

BIOS 237. Investigating Biology with Fluorescent Proteins. 1 Unit.

Focuses on fluorescent proteins, a proven research tool for imaging a wide range of biological phenomena and continuously uncover exciting discoveries in many areas. Students gain practical expertise in concepts, methodology, and data analysis through lectures, literature discussion, and hands-on computer exercises with "real world" data.

BIOS 238. Quantitative single cell analysis of live cell images. 1 Unit.

.

BIOS 239. Synapse Development. 3 Units.

Focuses on the mechanisms of synapse development, including the role of adhesion molecules in establishing neuronal contacts, the function of synapse-inducing molecules, how pre- and postsynaptic material is transported to nascent synapses, synapse maturation, synapse elimination as well as how synaptic dysfunction may lead to neurological disorders. Readings from primary literature.

BIOS 240. Cellular Metabolism: An Emerging Hallmark of Cancer and Aging. 1 Unit.

Introduction to cellular metabolism, including changes in metabolic flux that drive diverse disease states from cancer to aging. Topics covered include cancer metabolism, cellular nutrient sensing, metabolism in aging, and the influence of metabolism on stem cell fate. This course uses discussion of recent advances in the field to place an emphasis on practical applications, including the integration of metabolomics into the era of iquest;Big Dataiquest;. This mini-course culminates with a lab section allowing the students to conduct an extracellular flux experiment using the Seahorse analyzer to study changes in mitochondrial respiration and glycolysis in cancer cells.

BIOS 241. Dissecting algorithms for RNA Sequencing. 2 Units.

Class focuses on a few popular and commonly used algorithms for RNA-Seq analysis. The course dissects the algorithmic assumptions, statistical methods they use to test hypotheses about RNA expression and evaluates properties such as robustness, sensitivity and specificity, highlighting some large "blind spots" in many algorithms.

BIOS 242. Writing Successful NIH Fellowships and K Awards. 2 Units.

An overview of principles and fundamentals for writing competitive NIH Kirschstein NRSA fellowships (F31, F32) and career-development awards (K). Topics include: developing specific aims and career development plans; using the review criteria to inform writing; timelines and resources. Participants develop F or K proposals through guided exercises with an emphasis on in-class peer review and focused faculty feedback.

BIOS 243. Grant Writing Academy Mini Course: Specific Aims. 1 Unit.

Concise overview of the fundamentals for writing competitive NIH Kirschstein NRSA fellowships (F31, F32) and K Awards. Topics include developing specific aims; outlining research and career development plans; and using the review criteria to inform writing. Participants develop their one-page NIH-Specific Aims document with an emphasis on in-class peer review and protected daily proposal writing. Students enroll for units in one small-group section, and also attend two mandatory lectures as noted in class schedule.

Cancer Biology Courses

CBIO 101. Cancer Biology. 4 Units.

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.

Same as: PATH 101

CBIO 241. Molecular, Cellular, and Genetic Basis of Cancer. 4 Units.

Core course required for first-year Cancer Biology graduate students. Focus is on key experiments and classic primary research papers in cancer biology. Letter grade required. Undergraduates require consent of course director.

CBIO 242. Scientific and Translational Basis for Clinical Cancer Therapy. 3 Units.

Required for first- and second-year medical students who wish to join the Cancer Biology Scholarly Concentration Program. Also open to advanced undergraduates with instructor consent; limited enrollment. The curriculum includes a sampling of recent biomedical research discoveries that led to the current cancer diagnosis and therapeutic treatments.

CBIO 243. Principles of Cancer Systems Biology. 3 Units.

Focus is on the study of cancer that integrates experimental and computational methods when synthesizing and testing biological hypothesis. Covers basic principles of cancer systems biology research with an emphasis on network biology and pathway analysis. Topics include reconstruction of regulatory networks from multi-omic data (gene expression, methylation, miRNA, CNV) from the Cancer Genome Atlas (TCGA), functional approaches to large scale sequencing, single cell systems analysis of the tumor microenvironment, oncogene-specific synthetic lethal interactions, signaling analysis of targeted drugs and cancer proteomics.

CBIO 260. Teaching in Cancer Biology. 1-10 Unit.

Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

CBIO 275. Tumor Immunology. 3 Units.

Focuses on the ability of innate and adaptive immune responses to recognize and control tumor growth. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor immunotherapy, cancer vaccines and dendritic cell therapy. Tracks the historical developments of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core. Same as: IMMUNOL 275

CBIO 280. Cancer Biology Journal Club. 1 Unit.

Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

CBIO 299. Directed Reading in Cancer Biology. 1-18 Unit.

Prerequisite: consent of instructor.

CBIO 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

CBIO 801. TGR Project. 0 Units.

.

CBIO 802. TGR Dissertation. 0 Units.

.

Cardiothoracic Surgery Courses

CTS 199. Undergraduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CTS 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

CTS 399. Graduate Research. 1-18 Unit.

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

Catalan Language Courses

CATLANG 1A. Accelerated First-Year Catalan, Part 1. 5 Units.

First quarter of the two-quarter sequence. For students with knowledge of another Romance language, preferably Spanish. Emphasis is on developing beginning proficiency in interpersonal, interpretive, and presentational spheres. Prerequisite: consent of instructor.

CATLANG 2A. Accelerated First-Year Catalan, Part 2. 5 Units.

Continuation of CATLANG 1A. For students with knowledge of another Romance language, preferably Spanish. Further development of socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Completion of CATLANG 2A fulfills the University language requirement. Prerequisite: CATLANG 1A.

CATLANG 11A. Accelerated Second-Year Catalan, Part A. 4-5 Units.

Continuation of CATLANG 2A. Sequence integrating culture and language of the Catalan-speaking world. Socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis is on oral and written proficiency in formal, informal, academic, and professional contexts. Prerequisite: CATLANG 2A.

CATLANG 199. Individual Work. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CATLANG 395. Graduate Studies in Catalan. 2-5 Units.

May be repeated for credit. Prerequisite consent of instructor.

Center for Teaching Learning Courses

CTL 53. Working Smarter. 2 Units.

Once you get into the school of your dreams, how will you be sure you can succeed there? College coursework often entails work of higher complexity, volume, and intensity than in high school settings, and students need a different set of skills in order to succeed. This class will use research-based practices to help students gain insight into effective learning strategies and will help students gain comfort with college level writing, oral presentations, reading and study skills, note-taking techniques, and time management.

CTL 120. Peer Tutor Training. 1 Unit.

Goal is to help students become effective peer tutors for course material already mastered by articulating aims; developing practical tutoring skills including strategies for drop-in sessions; observing experienced tutors; discussing reading assignments; role playing; and reflecting on experiences as a peer tutor intern. Prerequisite: consent of instructor.

CTL 165. Race, Athletics and College Achievement. 3 Units.

How does racial group membership affect academic experiences, and how do race and athletic participation intersect with collegiate life? In this class, we will explore the relationships among race, athletic status, and academic experiences, with a focus on social science data and the specific experiences of Stanford students. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format with no prerequisites.

Same as: AFRICAAM 165, CSRE 165

CTL 199. Independent Study. 1-3 Unit.

Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

CTL 221. Practicum for fellows in the Stanford-SJSU Preparing Future Professors Program. 1 Unit.

Nine weekly one-hour sessions consisting of discussions of: (1) the previous week's SJSU shadowing experiences and (2) readings related to session themes.

CTL 231. Preparing for Faculty Careers. 1 Unit.

For graduate students from all disciplines who are considering a faculty career of any type and at any of a broad range of institutions. Postdoctoral fellows may audit by consent of instructor. Begins with a methodology to help determine if a faculty career is a good fit for the values, interests and abilities of each participant. Progresses to an exploration of different types of faculty roles and different institutional contexts (e.g., tenure-track vs. non-tenure-track; research-intensive vs. teaching-intensive; large vs. small; etc.). Discusses how to identify and land a faculty position. Ends with concrete tips on how to thrive in such a role. May be repeated for credit.

CTL 297. Teaching and Learning in Higher Education. 3-4 Units.

This course is co-taught by Mariatte Denman, Associate Director of the Center on Teaching and Learning. It provides POLS students with an opportunity to focus on teaching and learning along with doctoral students from many disciplines throughout the university. Students watch and interview master teachers at Stanford, prepare a syllabus module for a workshop or class they might teach, and learn a range of effective pedagogical methods. Preparing an analytic paper is an alternative for those who do not want to prepare a syllabus module. The course is open not only to POLS students who expect to work in higher education, but also to students interested in K-12 education, and they may develop a teaching module for use in those schools.

Same as: EDUC 297

CTL 299. Independent Study. 1-3 Unit.

Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

CTL 312. Science and Engineering Course Design. 2-3 Units.

For students interested in an academic career and who anticipate designing science or engineering courses at the undergraduate or graduate level. Goal is to apply research on science and engineering learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.

Same as: ENGR 312

Chemical Systems Biology Courses

CSB 199. Undergraduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CSB 201. Chemical and Systems Biology Bootcamp. 1 Unit.

In this "boot camp" students perform hands-on original research in small groups, combining chemical biology systems-level approaches to investigate current biological problems. This year's course will investigate the function and regulation of uncharacterized genes. Students will acquire conceptual and methodological training in a wide range of modern techniques, including "omics" approaches, fluorescence microscopy, genome editing, computational approaches, and quantitative data analysis.

CSB 210. Cell Signaling. 4 Units.

The molecular mechanisms through which cells receive and respond to external signals. Emphasis is on principles of cell signaling, the systems-level properties of signal transduction modules, and experimental strategies through which cell signaling pathways are being studied. Prerequisite: working knowledge of biochemistry and genetics.

CSB 220. Chemistry of Biological Processes. 3 Units.

The principles of organic and physical chemistry as applied to biomolecules. The goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Current topics may include chemical genetics, activity-based probes, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies. Prerequisites: organic chemistry and biochemistry, or consent of instructor.

Same as: BIOC 220

CSB 240A. A Practical Approach to Drug Discovery and Development. 3-4 Units.

Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour.

CSB 240B. A Practical Approach to Drug Discover and Development. 3-4 Units.

(Continuation of 240A) Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour. Prerequisite: 240A.

CSB 242. Drug Discovery and Development Seminar Series. 1 Unit.

The scientific principles and technologies involved in making the transition from a basic biological observation to the creation of a new drug emphasizing molecular and genetic issues. Prerequisite: biochemistry, chemistry, or bioengineering.

CSB 244. Drug Discovery and Development: A Case-based Approach. 2 Units.

Provides an overview of the drug discovery and development process through use of case examples--successful and unsuccessful attempts to integrate the scientific, clinical, regulatory, and commercial requirements to bring a new drug to patients. Focus on the complex array of independent tasks that must be accomplished to bring a new drug to the clinic. Specific cases discussed in a seminar format.

CSB 245. Economics of Biotechnology. 2 Units.

Focuses on translation of promising research discovery into marketed drugs and the integration of scientific method, clinical needs assessment, clinical and regulatory strategy, market analysis, economic considerations, and the influence of the healthcare economic ecosystem necessary for successful translation. Explores the economic perspectives of various stakeholders--patients, providers, payers, biotechnology and pharmaceutical companies, FDA, and financial markets--and how they influence drug development.

CSB 250. The Biology of Chromatin Templated Processes. 3 Units.

Topics include mechanisms of DNA replication; gene expressions regulation; DNA damage sensing and DNA repair; chromatin structure and function; and epigenetics and nuclear reprogramming. Prerequisite: working knowledge of molecular biology, biochemistry and genetics, or instructor consent.

CSB 260. Concepts and Applications in Chemical Biology. 3 Units.

Current topics include chemical genetics, activity-based probes, inducible protein degradation, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies.

CSB 270. Research Seminar. 1 Unit.

Guest speakers and discussion on current research in pharmacology.

CSB 271. Principles of Cell Cycle Control. 3 Units.

Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature. Satisfies Central Menu Area 2.

Same as: BIO 171, BIO 271

CSB 299. Directed Reading in Chemical and Systems Biology. 1-18 Unit.

Prerequisite: consent of instructor.

CSB 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

CSB 399. Graduate Research. 1-18 Unit.

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

CSB 801. TGR Project. 0 Units.

.

CSB 802. TGR Dissertation. 0 Units.

.

Chemical Engineering Courses

CHEMENG 10. The Chemical Engineering Profession. 1 Unit.

Open to all undergraduates. Overview of and careers in chemical engineering; opportunities to develop networks with working professionals. Panel discussions on career paths and post-graduation opportunities available. Areas include biotechnology, electronics, energy, environment, management consulting, nanotechnology, and graduate school in business, law, medicine, and engineering.

CHEMENG 12SC. An Exploration of Art Materials: The Intersection of Art and Science. 2 Units.

There is growing interest in the intersection of art and science, whether from artists adapting technology to suit their visions or from scientists and engineers seeking to explain various visual effects. To take advantage of possible creative sparks at the art/science interface, it is necessary for fuzzies and techies to have some knowledge of the language used by the other side. This interface will be explored through examining approaches used by an artist and an engineer in the context of the materials science of cultural objects. In-class lectures, hands-on studio practice, and field trips will be used to illustrate these different perspectives. At the heart of the scientific approach is the notion that a cultural object, e.g., a painting, is a physical entity comprising materials with different physical properties and different responses to environmental stresses presented by light, heat, and water. In support of this outlook, in-class lectures and discussions will focus on the basic concepts of color, optics, mechanics, composite structures, and response of the object to environmental stress, and we will visit Bay Area museums to see how artists employ such techniques. The hands-on studio experience is designed to increase students' confidence and develop their appreciation of differences in materials. It is not necessary to have any artistic training, only a willingness to experiment. The in-class studio projects will include working with line and shadow; color, binders, and mordants; global sources of pigments; substrates and writing; and material failure. Students will make one technical presentation on a topic in one of the five areas relevant to a painting: color, optics, mechanics, composites, and stress response. In addition, they will prepare one essay on the issues surrounding the intersection of art and science. Finally, they will complete a project related to one of the thematic areas covered in the hands-on studio sessions and make a final oral presentation describing their project. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

CHEMENG 20. Introduction to Chemical Engineering. 3 Units.

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31.

Same as: ENGR 20

CHEMENG 25B. Biotechnology. 3 Units.

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent course.

Same as: ENGR 25B

CHEMENG 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent.

Same as: ENGR 25E

CHEMENG 35N. Renewable Energy for a Sustainable World. 3 Units.

Preference to freshmen. Organized to prepare a renewable energy plan for California. Energy concepts and quantitation approaches are learned, energy needs and natural resources are assessed, and renewable energy technologies are evaluated for economic performance and environmental impact. An investment plan is developed along with implementation and research recommendations. The same concepts are then applied to Mexico as a second model system.

CHEMENG 60Q. Environmental Regulation and Policy. 3 Units.

Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions.

CHEMENG 70Q. Masters of Disaster. 3 Units.

Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes.

CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials. 3 Units.

Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking.

CHEMENG 100. Chemical Process Modeling, Dynamics, and Control. 3 Units.

Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53.

CHEMENG 110. Equilibrium Thermodynamics. 3 Units.

Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: CHEM 171 or equivalent.

CHEMENG 120A. Fluid Mechanics. 4 Units.

The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; 100 and CME 102 or equivalent.

CHEMENG 120B. Energy and Mass Transport. 4 Units.

General diffusive transport, heat transport by conduction, Fourier's law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite 120A or consent of instructor.

CHEMENG 130. Separation Processes. 3 Units.

Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes.

CHEMENG 140. Micro and Nanoscale Fabrication Engineering. 3 Units.

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55. Same as: CHEMENG 240

CHEMENG 142. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photocatalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173. Same as: CHEMENG 242

CHEMENG 150. Biochemical Engineering. 3 Units.

Systems-level combination of chemical engineering concepts with biological principles. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation, and biobusiness and regulatory issues. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41 or equivalent.

CHEMENG 160. Polymer Science and Engineering. 3 Units.

Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33 and 171, or equivalent.

Same as: CHEMENG 260

CHEMENG 162. Polymers for Clean Energy and Water. 3 Units.

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171.

Same as: CHEMENG 262

CHEMENG 170. Kinetics and Reactor Design. 3 Units.

Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.

CHEMENG 174. Environmental Microbiology I. 3 Units.

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

Same as: CEE 274A, CHEMENG 274

CHEMENG 180. Chemical Engineering Plant Design. 4 Units.

Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.

CHEMENG 181. Biochemistry I. 3 Units.

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 188, BIO 288, CHEM 181, CHEMENG 281

CHEMENG 183. Biochemistry II. 3 Units.

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 189, BIO 289, CHEM 183, CHEMENG 283

CHEMENG 185A. Chemical Engineering Laboratory A. 4 Units.

Experimental aspects of chemical engineering science. Emphasizes laboratory work and development of communication skills. Lab work in student groups. Student presentations. In addition to lectures, students are required to attend one weekly lab section (5 hours each); to be arranged separately. Prerequisites: 120A,B. Corequisite: 170.

CHEMENG 185B. Chemical Engineering Laboratory B. 4 Units.

Methods and techniques in molecular biology and biochemical engineering. Emphasis is on team organization, communication skills, experimental design, and project execution. Creation of presentations, experiments, and demonstrations for high school students. Additional laboratory times to be arranged. Prerequisite: BIO 41, CHEMENG 181, or equivalent.

CHEMENG 190. Undergraduate Research in Chemical Engineering. 1-6 Unit.

Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects. Course may be repeated.

CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering. 1-5 Unit.

For Chemical Engineering majors pursuing a B.S. with Honors degree who have submitted an approved research proposal to the department. Unofficial transcript must document BSH status and at least 9 units of 190H research for a minimum of 3 quarters. May be repeated for credit.

CHEMENG 191H. Undergraduate Honors Seminar. 1 Unit.

For Chemical Engineering majors approved for B.S. with Honors research program. Honors research proposal must be submitted and unofficial transcript document BSH status prior to required concurrent registration in 190H and 191H. May be repeated for credit. Corequisite: 190H.

CHEMENG 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEM 296, CHEMENG 296

CHEMENG 240. Micro and Nanoscale Fabrication Engineering. 3 Units.

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55. Same as: CHEMENG 140

CHEMENG 242. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photo-catalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173. Same as: CHEMENG 142

CHEMENG 260. Polymer Science and Engineering. 3 Units.

Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33 and 171, or equivalent. Same as: CHEMENG 160

CHEMENG 262. Polymers for Clean Energy and Water. 3 Units.

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171. Same as: CHEMENG 162

CHEMENG 274. Environmental Microbiology I. 3 Units.

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents. Same as: CEE 274A, CHEMENG 174

CHEMENG 281. Biochemistry I. 3 Units.

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171. Same as: BIO 188, BIO 288, CHEM 181, CHEMENG 181

CHEMENG 283. Biochemistry II. 3 Units.

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). Same as: BIO 189, BIO 289, CHEM 183, CHEMENG 183

CHEMENG 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects. Same as: CHEM 196, CHEM 296, CHEMENG 196

CHEMENG 300. Applied Mathematics in the Chemical and Biological Sciences. 3 Units.

Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents. Same as: CME 330

CHEMENG 310. Microhydrodynamics. 3 Units.

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents. Same as: ME 451D

CHEMENG 320. Chemical Kinetics and Reaction Engineering. 3 Units.

Theoretical and experimental tools useful in understanding and manipulating reactions mediated by small-molecules and biological catalysts. Theoretical: first classical chemical kinetics and transition state theory; then RRKM theory and Monte Carlo simulations. Experimental approaches include practical application of modern spectroscopic techniques, stopped-flow measurements, temperature-jump experiments, and single-molecule approaches to chemical and biological systems. Both theory and application are framed with regard to systems of particular interest, including industrially relevant enzymes, organometallic catalysts, heterogeneous catalysis, electron transfer reactions, and chemical kinetics within living cells.

CHEMENG 340. Molecular Thermodynamics. 3 Units.

Classical thermodynamics and quantum mechanics. Development of statistical thermodynamics to address the collective behavior of molecules. Establishment of theories for gas, liquid, and solid phases, including phase transitions and critical behavior. Applications include electrolytes, ion channels, surface adsorption, ligand binding to proteins, hydrogen bonding in water, hydrophobicity, polymers, and proteins.

CHEMENG 345. Fundamentals and Applications of Spectroscopy. 3 Units.

Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Application to photon and electron spectroscopies of the gas and solid phases. Topics: rotational spectroscopy; infrared and Raman vibrational spectroscopies; fluorescence spectroscopy; Auger, x-ray and ultraviolet photoelectron spectroscopies. Prerequisite: CHEM 271 or course in quantum mechanics.

Same as: PHOTON 345

CHEMENG 355. Advanced Biochemical Engineering. 3 Units.

Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

Same as: BIOE 355

CHEMENG 399. Graduate Research Rotation in Chemical Engineering. 1 Unit.

Introduction to graduate level laboratory and theoretical work. Performance in this course comprises part of the mandatory evaluation for pre-candidacy standing and suitability to continue in the chemical engineering Ph.D. program.

CHEMENG 410. Public Communication of Research. 1 Unit.

Develop skills for communicating complex science to the public through writing, video, and public speaking. Learn how to work with the media to explain scientific discoveries without overselling the science. Work in small groups and one-on-one with writers and guest speaker; develop a short written piece and video explaining own research; develop skills that will translate to future scientific projects. Open to graduate students in the biosciences, chemistry, and engineering. Enrollment limited to 20.

CHEMENG 420. Growth and Form. 3 Units.

Advanced topics course examining the role of physical forces in shaping living cells, tissues, and organs, making use of D'Arcy Thompson's classic text *On Growth and Form*. The course begins with a review of relevant physical principles drawn from statistical physics, polymer theory, rheology and materials science. We then examine current knowledge of cellular mechanotransduction pathways, the roles of physical forces in guiding embryonic development, and the contribution of aberrant cellular response to mechanical cues in heart disease and cancer. The course concludes by examining current frontiers in stem cell biology and tissue engineering.

CHEMENG 432. Electrochemical Energy Conversion. 3 Units.

Electrochemistry is playing an increasingly important role in renewable energy. This course aims to cover the fundamentals of electrochemistry, and then build on that knowledge to cover applications of electrochemistry in energy conversion. Topics to be covered include fuel cells, solar water-splitting, CO₂ conversion to fuels and chemicals, batteries, redox flow cells, and supercapacitors. Prerequisites: CHEM 31AB or 31 X, CHEM 33, CHEM 171, CHEM 175 or CHEMENG 170, or equivalents. Recommended: CHEM 173.

CHEMENG 442. Structure and Reactivity of Solid Surfaces. 3 Units.

The structure of solid surfaces including experimental methods for determining the structure of single crystal surfaces. The adsorption of molecules on these surfaces including the thermodynamics of adsorption processes, surface diffusion, and surface reactions. Molecular structure of adsorbates. Current topics in surface structure and reactivity, including systems for heterogeneous catalysis and electronic materials.

CHEMENG 444. Electronic Structure Theory and Applications to Chemical Kinetics. 3 Units.

Fundamentals of electronic structure theory as it applies to chemical reaction kinetics in homogeneous and heterogeneous reaction systems. Development and application of the theory of chemical kinetics, including traditional and harmonic transition state theories. Relationships between thermodynamics and kinetics to overall mechanism predictions. Lab involves chemical modeling including *ab initio* electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions. DFT calculations for catalysis applications are also covered. Prerequisite: quantum mechanics.

Same as: ENERGY 256

CHEMENG 450. Advances in Biotechnology. 3 Units.

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

Same as: BIOE 450

CHEMENG 454. Synthetic Biology and Metabolic Engineering. 3 Units.

Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

Same as: BIOE 454

CHEMENG 456. Microbial Bioenergy Systems. 3 Units.

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.

Same as: CEE 274B

CHEMENG 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOE 459, BIOE 459, CHEM 459, PSYCH 459

CHEMENG 462. Complex Fluids and Non-Newtonian Flows. 3 Units. Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor. Same as: ME 455

CHEMENG 464. Polymer Chemistry. 3 Units. Polymer material design, synthesis, characterization, and application. Topics include organic and kinetic aspects of polymerization, polymer characterization techniques, and structure and properties of bulk polymers for commercial applications and emerging technologies.

CHEMENG 466. Polymer Physics. 3 Units. Concepts and applications in the equilibrium and dynamic behavior of complex fluids. Topics include solution thermodynamics, scaling concepts, semiflexibility, characterization of polymer size (light scattering, osmotic pressure, size-exclusion chromatography, intrinsic viscosity), viscoelasticity, rheological measurements, polyelectrolytes, liquid crystals, biopolymers, and gels.

CHEMENG 469. Solid Structure and Properties of Polymers. 3 Units. Fundamental structure-properties relationships of solid polymers in bulk and thin films. Topics include chain conformations in bulk amorphous polymers, glass transition, crystallization, semi-crystalline morphology, liquid crystalline order, polymer blends, block copolymers, polymer networks/gels, semiconducting polymers, and experimental methods of characterizing polymer structure.

CHEMENG 470. Complex Fluid Interfaces: Capillarity and Interfacial Dynamics. 3 Units. Complex fluid interfaces arise whenever amphiphiles (surfactants, phospholipids, polymers, colloidal particles) collect at liquid-fluid surfaces, imbuing them with nonlinear mechanical responses. Examples in nature include the cell membrane, lung surfactants, and the tear film. Industrial applications include emulsions and foams that require stabilization. The course discusses concepts in capillarity and wetting, interfacial fluid dynamics, thin film stability, the microstructure of self-organized monolayers and bilayers. Experimental microstructural methods (Brewster angle microscopy, fluorescence microscopy, grazing incidence x-ray diffraction) will be described. Prerequisite: 310 or equivalent.

CHEMENG 482. The Startup Garage: Design. 4 Units. (Same as STRAMGT 356) The Startup Garage is an experiential lab course that focuses on the design, testing and launch of a new venture. Multidisciplinary student teams work through an iterative process of understanding user needs, creating a point of view statement, ideating and prototyping new product and services and their business models, and communicating the user need, product, service and business models to end-users, partners, and investors. In the autumn quarter, teams will identify and validate a compelling user need and develop very preliminary prototypes for a new product or service and business models. Students form teams, conduct field work and iterate on the combination of business model -- product -- market. Teams will present their first prototypes (business model - product - market) at the end of the quarter to a panel of entrepreneurs, venture capitalists, angel investors and faculty. Same as: SOMGEN 282

CHEMENG 484. The Startup Garage: Testing and Launch. 4 Units. (Same as STRAMGT 366) This is the second quarter of the two-quarter series. In this quarter, student teams expand the field work they started in the fall quarter. They get out of the building to talk to potential customers, partners, distributors, and investors to test and refine their business model, product/service and market. This quarter the teams will be expected to develop and test a minimally viable product, iterate, and focus on validated lessons on: the market opportunity, user need and behavior, user interactions with the product or service, business unit economics, sale and distribution models, partnerships, value proposition, and funding strategies. Teams will interact with customers, partners, distributors, investors and mentors with the end goal of developing and delivering a funding pitch to a panel of entrepreneurs, venture capitalists, angel investors and faculty. Same as: SOMGEN 284

CHEMENG 500. Special Topics in Protein Biotechnology. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 501. Special Topics in Semiconductor Processing. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 503. Special Topics in Biocatalysis. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 505. Special Topics in Microrheology. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 507. Special Topics in Polymer Physics and Molecular Assemblies. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 510. Special Topics in Transport Mechanics. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 513. Special Topics in Functional Organic Materials for Electronic and Optical Devices. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 514. Special Topics in Biopolymer Physics. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 515. Special Topics in Molecular and Systems Biology. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 516. Special Topics in Energy and Catalysis. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 517. Special Topics in Microbial Physiology and Metabolism. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 518. Special Topics in Advanced Biophysics and Protein Design. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 519. Special Topics in Interface Science and Catalysis. 1 Unit. Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

CHEMENG 520. Special Topics in Biological Chemistry. 1 Unit.
Recent developments and current research. May be repeated for credit.
Prerequisite: graduate standing and consent of instructor.

CHEMENG 521. Special Topics in Nanostructured Materials for Energy and the Environment. 1 Unit.
Recent developments and current research. May be repeated for credit.
Prerequisite: graduate standing and consent of instructor.

CHEMENG 600. Graduate Research in Chemical Engineering. 1-12 Unit.
Laboratory and theoretical work leading to partial fulfillment of requirements for an advanced degree. Course may be repeated for credit.

CHEMENG 699. Colloquium. 1 Unit.
Weekly lectures by experts from academia and industry in the field of chemical engineering. Course may be repeated for credit.

CHEMENG 801. TGR Project. 0 Units.

CHEMENG 802. TGR Dissertation. 0 Units.

Chemistry Courses

CHEM 1. Structure and Reactivity. 4 Units.
First lecture class in summer organic series. Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics and chemical equilibria. Recitation. Prerequisite: 31 A, B or 31 X or an AP Chemistry score of 5. Course equivalent: Chem 33.

CHEM 1L. Introduction to Organic Chemistry Lab. 2 Units.
Techniques for separation of compounds: distillation, crystallization, extraction and chromatographic procedures in the context of reactions learned in Chem 1. Use of GC instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 33 or Chem 1 co-requisite.

CHEM 2. Organic Monofunctional Compounds. 4 Units.
Second lecture class in summer organic series. Organic chemistry of oxygen and nitrogen aliphatic compounds. Recitation. Prerequisite: Chem 33 or Chem 1. Course equivalent: Chem 35.

CHEM 2L. Organic Chemistry Lab I. 2 Units.
Application of separation techniques in the context of reactions learned in Chem 2. Use of IR instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 1L. Co-requisite: Chem 35 or Chem 2. Course equivalent in conjunction with Chem 3L: Chem 130.

CHEM 3. Organic Polyfunctional Compounds. 4 Units.
Last lecture class in summer organic series. Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids and polymers. Recitation. Prerequisite: Chem 35 or Chem 2. Course equivalent: Chem 131.

CHEM 3L. Organic Chemistry Lab II. 2 Units.
Qualitative and analytical techniques applied to reactions learned in Chem 3. Use of NMR instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 2L. Co-requisite: Chem 131 or Chem 3. Course equivalent in conjunction with Chem 2L: Chem 130.

CHEM 4. Biochemistry: Chemistry of Life. 4 Units.
A four-week intensive biochemistry course from a chemical perspective. The chemical basis of life, including thermodynamics, amino acids, proteins, carbohydrates, lipids, nucleic acids, and metabolism. Recitation includes group work on case studies that support the daily lecture material. Prerequisites: CHEM 33,35,131 or 1 year of organic chemistry; Math 19, 20, 21 or 41, 42 or 1 year of single variable calculus.

CHEM 10. Exploring Research and Problem Solving Across the Sciences. 2 Units.
Development and practice of critical problem solving and study skills using wide variety of scientific examples that illustrate the broad yet integrated nature of current research. Student teams will have the opportunity to explore and present on topics revolving around five central issues: energy, climate change, water resources, medicine, and food & nutrition from a chemical perspective. Course offered in August prior to start of fall quarter.

CHEM 24N. Nutrition and History. 3 Units.
Preference to freshmen. Intended to broaden the introductory chemistry experience. Fundamentals of human nutrition with emphasis on the chemistry and biochemistry of the known macro- and micronutrients (carbohydrate, protein, lipid, vitamins, minerals). Historical context in which food sources are discovered and developed, and sociological and economic effects of those events on human populations. Prerequisite: high school chemistry. Recommended: 31A,B, or 31X, or 33.

CHEM 25N. Science in the News. 3 Units.
Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

CHEM 25Q. Science-in-Theatre: A New Genre?. 3 Units.
Preference to sophomores. Contrasts through selected "science-in-theatre" plays what Theatre can do for science compared to what Science occasionally does for the theatre as well as emphasizing in that regard some unique features of the theatre compared to films. Illustrates why more intellectually challenging "science-in-theatre" plays have appeared in recent times where scientific behavior and scientists are presented accurately rather than just as Franksteins, Strangeloves or nerds. Students also engage in a modest playwriting experiment.

CHEM 26N. The What, Why, How and wow's of Nanotechnology. 3 Units.
Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets.

CHEM 27N. Light and Life. 3 Units.
Preference given to freshmen. Light plays a central role in many biological processes. In this course, we will discuss the nature of light, how it is measured, how it is generated in the laboratory, how molecules are excited, and the fate of this excitation in biological chromophores. We will take a chemical perspective on the molecules that absorb and emit light in biological systems, focusing on the "primary" light-driven processes of electron transfer, proton transfer, energy transfer, and isomerization. Chem 31X or 31A preferred, but not required.

CHEM 28N. Science Innovation and Communication. 3 Units.
Preference to freshmen. The course will explore evolutionary and revolutionary scientific advances; their consequences to society, biotechnology, and the economy; and mechanisms for communicating science to the public. The course will engage academic and industrial thought leaders and provide an opportunity for students to participate in communicating science to the public.

CHEM 31A. Chemical Principles I. 5 Units.
For students with moderate or no background in chemistry. Stoichiometry; periodicity; electronic structure and bonding; gases; enthalpy; phase behavior. Emphasis is on skills to address structural and quantitative chemical questions; lab provides practice. Recitation.

CHEM 31AC. Problem Solving in Science. 1 Unit.

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 31A.

CHEM 31B. Chemical Principles II. 5 Units.

Chemical equilibrium; acids and bases; oxidation and reduction reactions; chemical thermodynamics; kinetics. Lab. Prerequisite: 31A.

CHEM 31BC. Problem Solving in Science. 1 Unit.

Development and practice of critical problem solving skills using chemical examples. Students should also be concurrently enrolled in the parent course 31B. Limited enrollment and with permission of the instructor.

CHEM 31X. Chemical Principles Accelerated. 5 Units.

Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: AP chemistry score of 5 or passing score on chemistry placement test, and AP Calculus AB score of 4 or Math 41. Recommended: high school physics.

CHEM 33. Structure and Reactivity. 5 Units.

Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31A,B, or 31X, or an AP Chemistry score of 5.

CHEM 33C. Problem Solving in Science. 1 Unit.

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 33.

CHEM 35. Synthetic and Physical Organic Chemistry. 5 Units.

The structure and reactivity of mono- and polyfunctionalized molecules; retrosynthetic analysis and multi-step chemical synthesis. Course will emphasize deductive logic and reasoning skills through conceptual learning. Students gain an appreciation for the profound impact of organic chemistry on humankind in fields ranging from biology and medicine to gastronomy, agriculture, and materials science. A three hour lab section provides hands on experience with modern chemical methods for preparative and analytical chemistry. Prerequisite: Chem 33.

CHEM 36. Organic Chemistry Laboratory I. 3 Units.

Techniques for separations of compounds: distillation, crystallization, extraction, and chromatographic procedures. Lecture treats theory; lab provides practice. Prerequisite: CHEM 35.

CHEM 110. Directed Instruction/Reading. 1-2 Unit.

Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31A,B, 31X, or 33; and consent of instructor and the Chemistry undergraduate study committee.

CHEM 111. Exploring Chemical Research at Stanford. 1 Unit.

Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.

CHEM 130. Organic Chemistry Laboratory. 3 Units.

Diels-Alder, reduction, and Wittig reactions; qualitative analysis. Lab. Limited enrollment Autumn Quarter. Prerequisite: Chem 35 taken in Aut 2014-15 or later, or Chem 35 and 36. Corequisite: 131.

CHEM 131. Organic Polyfunctional Compounds. 3 Units.

Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35.

CHEM 132. Synthesis Laboratory. 3 Units.

Advanced synthetic methods in organic and inorganic laboratory chemistry. Prerequisites: 35, 130.

CHEM 134. Analytical Chemistry Laboratory. 5 Units.

Methods include gravimetric, volumetric, spectrophotometric, and chromatographic. Writing instruction includes communications, full papers, research proposals, and referee papers. Lab. Prerequisite: 130.

CHEM 135. Physical Chemical Principles. 3 Units.

Introductory physical chemistry intended for students of the life sciences, geology and environmental engineering. Chemical kinetics: rate laws, integration of rate laws, reaction mechanisms, enzyme kinetics. Chemical thermodynamics: first, second and third laws, thermochemistry, entropy, free energy, chemical equilibrium, physical equilibrium, osmotic pressure, other colligative properties. Prerequisites: 31A,B, or 31X, calculus.

CHEM 137. Special Topics in Synthesis. 3 Units.

The course covers the basic toolbox for construction of more complex structures for function, largely directed towards molecules of biological relevance. The focus will be the ability to perform structural changes efficiently in order to enable the design of the best structure for a function. The concepts of catalytic processes are at the heart of the how small molecule drug discovery is performed. Fundamentals of the pertinent catalytic processes are discussed. The inter-relationship of synthetic chemistry and pharmaceuticals is emphasized. See more at: <http://library.stanford.edu/guides/chem-137-special-topics-organic-chemistry#sthash.vi9khNU5.dpuf>. Prerequisite CHEM 35.

CHEM 151. Inorganic Chemistry I. 3 Units.

Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35. Recommended: 171.

CHEM 153. Inorganic Chemistry II. 3 Units.

The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173.

CHEM 155. Advanced Inorganic Chemistry. 3 Units.

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 255

CHEM 171. Physical Chemistry I. 3 Units.

Chemical thermodynamics and kinetic molecular models; fundamental principles, Gibbsian equations, systematic deduction of equations, equilibrium conditions, gases, phase changes, solutions and chemical equilibrium. Introduction to chemical kinetics: roles of thermal motion and energy barriers, relationship between rate and reaction mechanism, and modeling of specific reactions. The MATLAB programming language will be used for modeling, analysis and visualization throughout. Optional discussion section. Prerequisites: 31A,B, or 31X; 33; PHYS 41; either CME 100 or MATH 51 and (MATH 51M or CME 192 or CS 106A).

CHEM 173. Physical Chemistry II. 3 Units.

Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: CHEM 171; CME 102, 104 or MATH 53; PHYSICS 41, 43.

CHEM 174. Electrochemical Measurements Lab. 3 Units.

This course provides an introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent.

Same as: CHEM 274

CHEM 175. Physical Chemistry III. 3 Units.

Molecular theory of kinetics and statistical mechanics: transport and reactions in gases and liquids, ensembles and the Boltzmann distribution law, partition functions, molecular simulation, structure and dynamics of liquids. Diffusion and activation limited reactions; potential energy surfaces, collision theory and transition-state theory of reaction rates.

Prerequisites: 171, 173.

CHEM 176. Physical Chemistry Laboratory. 3 Units.

Use of spectroscopic instrumentation to study molecular properties and physical chemical time-dependent processes. Experiments include electronic ultraviolet/visible absorption, fluorescence, Raman, infrared vibrational and nuclear magnetic resonance spectroscopies. Prerequisite: 173.

CHEM 181. Biochemistry I. 3 Units.

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 188, BIO 288, CHEMENG 181, CHEMENG 281

CHEM 183. Biochemistry II. 3 Units.

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 189, BIO 289, CHEMENG 183, CHEMENG 283

CHEM 184. Biological Chemistry Laboratory. 4 Units.

Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and single-molecule fluorescence microscopy. Prerequisite: 181.

CHEM 185. Biochemistry III. 3 Units.

Advanced biophysical chemistry. Topics include: protein and DNA structure, stability, and folding, membrane lateral organization and dynamics, and transmembrane transport. Prerequisites: 171, 173, 183.

CHEM 187. Chemistry of Posttranslational Modification of Proteins. 1 Unit.

This short course runs for the first four weeks of the quarter, January only. This course examines the chemical principles and mechanisms of major classes of covalent PTMs. Up to 2000 enzyme catalysts are dedicated to PTM creation and reversal, including phosphorylations, acylations, alkylations, glycosylations, oxygenations, automodifications such as green fluorescent protein formation, and controlled proteolysis, including protein splicing. The different PTM chemistries both constrain and enable the diverse biological functions of modified protein substrates. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 287

CHEM 190. Introduction to Methods of Investigation. 1-5 Unit.

Limited to undergraduates who have completed Chem 35 and/or Chem 134, or by special arrangement with a member of the teaching staff. May be repeated 8 times for a max of 27 units. For general character and scope, see Chem 200. Prerequisite: 35 or 134. Corequisite: 300.

CHEM 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 296, CHEMENG 196, CHEMENG 296

CHEM 200. Research and Special Advanced Work. 1-15 Unit.

Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200.

CHEM 221. Advanced Organic Chemistry. 3 Units.

Physical organic chemistry: experimental and theoretical aspects of molecular structures, bonding and interactions, thermodynamic and kinetic understanding of reactivity and reaction mechanism. Prerequisites: 137, 175.

CHEM 223. Advanced Organic Chemistry. 3 Units.

Continuation of 221. Modern synthetic organic chemistry with an emphasis on structure, reactivity, and stereocontrol. Prerequisite: 221 or consent of instructor.

CHEM 225. Advanced Organic Chemistry. 3 Units.

Continuation of 223. Organic reactions, new synthetic methods, selectivity analysis, and exercises in the syntheses of complex molecules. Prerequisite: 223 or consent of instructor.

CHEM 227. Synthesis and Analysis at the Chemistry-Biology Interface. 3 Units.

Focus on organic chemistry of biomacromolecules. Synthetic methods and conjugation chemistry; labeling and chemical modification of nucleic acids and peptides; combinatorial library construction and selection methods. Completion of a course in molecular biology is helpful but not required. Prerequisite: One year of undergraduate organic chemistry.

CHEM 229. Organic Chemistry Seminar. 1 Unit.

Required of graduate students majoring in organic chemistry. Students giving seminars register for 231.

CHEM 231. Organic Chemistry Seminar Presentation. 1 Unit.

Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.

CHEM 233A. Creativity in Organic Chemistry. 1 Unit.

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

CHEM 233B. Creativity in Organic Chemistry. 1 Unit.

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

CHEM 233C. Creativity in Organic Chemistry. 1 Unit.

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

CHEM 235. Applications of NMR Spectroscopy. 3 Units.

The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.

CHEM 251. Advanced Inorganic Chemistry. 3 Units.

Primarily intended for first-year graduate students, as a review of some of the basic concepts in inorganic chemistry. Specific topics covered will include: symmetry, group theory, electronic structure of molecules and solids, and reactivity of coordination complexes. Prerequisite: Advanced undergraduate-level inorganic chemistry.

CHEM 253. Advanced Inorganic Chemistry. 3 Units.

Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.

CHEM 255. Advanced Inorganic Chemistry. 3 Units.

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 155

CHEM 258A. Research Progress in Inorganic Chemistry. 1 Unit.

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

CHEM 258B. Research Progress in Inorganic Chemistry. 1 Unit.

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

CHEM 258C. Research Progress in Inorganic Chemistry. 1 Unit.

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

CHEM 259. Inorganic Chemistry Seminar. 1 Unit.

Required of graduate students majoring in inorganic chemistry.

CHEM 271. Advanced Physical Chemistry. 3 Units.

The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Time dependent methods including exactly solvable problems, time dependent perturbation theory, and density matrix formalism. Different representations of quantum theory including the Schrödinger, matrix, and density matrix methods. Absorption and emission of radiation Angular momentum. Atomic structure calculations and simple molecular structure methods. Prerequisite: 175 or equivalent course.

CHEM 273. Advanced Physical Chemistry. 3 Units.

Statistical mechanics is a fundamental bridge that links microscopic world of quantum mechanics to macroscopic thermodynamic properties. We discuss the principles and methods of statistical mechanics from the ensemble point of view. Applications include statistical thermodynamics, quantum systems, heat capacities of gases and solids, chemical equilibrium, pair correlation functions in liquids, and phase transitions. Prerequisite: 271.

CHEM 274. Electrochemical Measurements Lab. 3 Units.

This course provides an introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent. Same as: CHEM 174

CHEM 275. Advanced Physical Chemistry. 3 Units.

Topics in molecular modeling. Molecular simulation: molecular dynamics in various ensembles, Monte Carlo. Extracting properties from simulations: free energy, dynamical properties from time-correlation functions. Advanced simulation techniques: multiple time-scale methods and rare event sampling. Electronic structure theory: Hartree-Fock, configuration interaction and density functional theory. Non classical nuclei: path integral representation, quantum-classical dynamics. Recommended: Chem 273 and either Chem 271 or Physics 230.

CHEM 277. Materials Chemistry and Physics. 3 Units.

Topics: structures and symmetries and of solid state crystalline materials, chemical applications of group theory in solids, quantum mechanical electronic band structures of solids, phonons in solids, synthesis methods and characterization techniques for solids including nanostructured materials, selected applications of solid state materials and nanostructures. May be repeated for credit.

CHEM 278A. Research Progress in Physical Chemistry. 1 Unit.

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

CHEM 278B. Research Progress in Physical Chemistry. 1 Unit.

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

CHEM 279. Physical Chemistry Seminar. 1 Unit.

Required of graduate students majoring in physical chemistry. May be repeated for credit.

CHEM 280. Single-Molecule Spectroscopy and Imaging. 3 Units.

Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy: interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.

CHEM 287. Chemistry of Posttranslational Modification of Proteins. 1 Unit.

This short course runs for the first four weeks of the quarter, January only. This course examines the chemical principles and mechanisms of major classes of covalent PTMs. Up to 2000 enzyme catalysts are dedicated to PTM creation and reversal, including phosphorylations, acylations, alkylations, glycosylations, oxygenations, automodifications such as green fluorescent protein formation, and controlled proteolysis, including protein splicing. The different PTM chemistries both constrain and enable the diverse biological functions of modified protein substrates. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 187

CHEM 291. Introduction to Nuclear Magnetic Resonance. 3 Units.

Introduction to quantum and classical descriptions of NMR; analysis of pulse sequences and nuclear spin coherences via density matrices and the product operator formalism; NMR spectrometer design; Fourier analysis of time-dependent observable magnetization; NMR relaxation in liquids and solids; NMR strategies for biological problem solving. Prerequisite: Chem 173.

CHEM 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEMENG 196, CHEMENG 296

CHEM 297. Bio-Inorganic Chemistry. 3 Units.

Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.

Same as: BIOPHYS 297

CHEM 299. Teaching of Chemistry. 1-3 Unit.

Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.

CHEM 300. Department Colloquium. 1 Unit.

Required of graduate students. May be repeated for credit.

CHEM 301. Research in Chemistry. 2 Units.

Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axxess.

CHEM 390. Curricular Practical Training for Chemists. 1 Unit.

For Chemistry majors who need work experience as part of their program of study. Confer with Chem student services office for signup.

CHEM 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, BIOE 459, CHEMENG 459, PSYCH 459

CHEM 802. TGR Dissertation. 0 Units.

.

Chicana/o Studies Courses

Chicana/o-Latina/o Studies Courses

CHILATST 13SL. Second-Year Spanish: Emphasis on Service Learning, Third Quarter. 4-5 Units.

Continuation of SPANLANG 12. Integration of community engagement and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, community and professional contexts. SL content focuses on immersion in civics-based reciprocity and service learning in the Spanish-speaking local community. Service Learning Course (certified by Haas Center). Prerequisite: Placement Test, SPANLANG 12C, 12R, 12M or 12S. Fulfills the IR major Language Requirement.

Same as: SPANLANG 13SL

CHILATST 14N. Growing Up Bilingual. 3 Units.

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

Same as: CSRE 14N, EDUC 114N

CHILATST 53J. Love Notes: Queers of Color on Politics of the Heart. 3 Units.

This course unfolds in three ways. First, we will begin by examining theories of love by women of color feminists and queer theorists. Secondly, we will position these theories alongside art, literature, photography, comics, and film by and about queers of color who partake in the cultural representation of the love story. Finally, we will interrogate the aesthetic politics of each work in order engage with the ways that the writers, artists, and filmmakers contribute to the theorization of love.

Same as: CSRE 53J

CHILATST 120. Queer Raza. 3-5 Units.

Examination of cultural representations by U.S. Latin@s that explore the following questions: How is the mutual constitution of race/sex/class/gender theorized and represented? How is desire racialized? How is racial difference produced through sex acts and what is the function of sex in racial (self)formation? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and other structures of power? How do these texts reinforce or contest stereotypes and the "ideal" bodies of national identity? How do these texts produce queerness as a web of social relations?

Same as: FEMGEN 120, ILAC 287

CHILATST 125S. Chicano/Latino Politics. 5 Units.

The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.

Same as: POLISCI 125S

CHILATST 140. Migration in 21st Century Latin American Film. 3-5 Units.

Focus on how images and narratives of migration are depicted in recent Latin American film. It compares migration as it takes place within Latin America to migration from Latin America to Europe and to the U.S. We will analyze these films, and their making, in the global context of an evergrowing tension between "inside" and "outside"; we consider how these films represent or explore precariousness and exclusion; visibility and invisibility; racial and gender dynamics; national and social boundaries; new subjectivities and cultural practices. Films include: *El nintilde;opez*, *Bolivia*, *Ulises*, *Faustino* *Mayta visita a su prima*, *Copacabana*, *Chico y Rita*, *Sin nombre*, *Los que se quedan*, *Amador*, and *En la puta calle*. Films in Spanish, with English subtitles. Discussions and assignments in Spanish. Same as: ILAC 140

CHILATST 160N. Chican@/Latin@ Performance in the U.S.. 4 Units.

This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece.

Same as: TAPS 160N

CHILATST 164. Immigration and the Changing United States. 4 Units.

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CSRE 164, SOC 164, SOC 264

CHILATST 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CSRE 168, FEMGEN 140H

CHILATST 171. Mexicans in the United States. 5 Units.

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CSRE 171H, HISTORY 271

CHILATST 172. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration. Same as: AMSTUD 272E, CSRE 172H, FEMGEN 272E, HISTORY 272E, HISTORY 372E

CHILATST 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CSRE 177E, EDUC 177A, HUMBIO 29A

CHILATST 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CSRE 177F, EDUC 177B

CHILATST 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CSRE 177G, EDUC 177C

CHILATST 179. Chicano & Chicana Theater: Politics In Performance. 3-5 Units.

This is a practicum course, where the basic tenets and evolving politic and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Niterly Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: TAPS 179, TAPS 379

CHILATST 179F. Flor y Canto: Poetry Workshop. 3-5 Units.

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlacut;n. Required 20-page poetry manuscript.

Same as: CSRE 179F, TAPS 179F, TAPS 279F

CHILATST 180E. Introduction to Chicana/o-Latina/o Studies. 5 Units. Historical and contemporary experiences that have defined the status of Latina/o peoples living in the U.S. Topics include the U.S./Mexico border and the borderlands; immigration and transnational migrations; literary and cultural traditions; music; labor; historical perspectives on Latina/o peoples in the U.S. and the Chicano movement; urban realities; gender relations; political and economic changes; and inter- and intra-group interactions. Sources include social science and humanities scholarship.

CHILATST 183X. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: EDUC 183X, EDUC 283X

CHILATST 189W. Language and Minority Rights. 3 Units.

Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages.

Same as: CSRE 189W, EDUC 189X

CHILATST 198. Internship for Public Service. 1-5 Unit.

Students should consult with CCSRE Director of Service-Learning (nadiad@stanford.edu) to develop or sign-up for a community service internship. Group meetings may be required. May be repeated for credit. Service Learning Course (certified by Haas Center).

Same as: CSRE 198

CHILATST 200. Latin@ Literature. 3-5 Units.

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of latinidad. All share the historical experience of Spanish colonization and U.S. imperialism, yet their im/migration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.

Same as: CSRE 200, ILAC 280, ILAC 382

CHILATST 200R. Directed Research. 1-5 Unit.

CHILATST 200W. Directed Reading. 1-5 Unit.

(Staff).

CHILATST 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era. 5 Units.

How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.

Same as: CSRE 201B

CHILATST 201C. Critical Concepts in Chican@ Literature. 3-5 Units.

Combines primary texts of Chican@ literature with a metacritical interrogation of key concepts informing Chican@ literary criticism, the construction of Chican@ literary history, and a Chican@ literary canon. Interrogates the resistance paradigm and the "proper" subject of this literature, and critiques established genealogies and foundational authors and texts, as well as issues of periodization, including the notion of "emergence" (e.g. of feminist voices or dissident sexualities). Considers texts, authors and subjects that present alternatives to the resistance paradigm.

Same as: CSRE 201C, ILAC 380E

CHILATST 275B. Governance, Resistance, and Identity in Modern Mexico. 5 Units.

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Chinese General Courses

CHINGEN 10SC. The Cult of Happiness: Pursuing the Good Life in America and China. 2 Units.

The 2006 film *Pursuit of Happiness*, an unabashed celebration of the American Dream, was enthusiastically embraced by Chinese audiences. It seems that the pursuit of happiness has become truly globalized, even as the American Dream is slipping away for many. Are Americans still convinced that their conception of happiness is a self-evident truth and a universal gospel? Is there anything that Americans might learn about what it means to live a good life from not only the distant past, but also cultures in which happiness is conceptualized and sought after very differently? This course takes a multi-disciplinary approach to the question of happiness and invites undergraduate students to reflect on its relationship to virtue, wisdom, health, love, prosperity, justice, and solidarity. Giving equal weight to Chinese and Western sources, it seeks to defamiliarize some of the most deeply held ideas and values in American society through the lens of cross-cultural inquiry. nDuring the summer, students will read a selection of novels, memoirs, and reflections by philosophers, psychologists, and sociologists. In September, we will review these texts and place them alongside movies, short fiction, news stories, and social commentary while we interrogate the chimera of happiness. In addition to daily seminars, we will experiment with meditation, short-form life writing, and service learning with participation of local elders. Furthermore, there will be at least three guest speakers, including a prominent Confucian philosopher and a Stanford alum now running a happiness-related enterprise. nSophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

Same as: COMPLIT 10SC

CHINGEN 70N. Animal Planet and the Romance of the Species. 3-4 Units.

Preference to freshmen. This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century?.

Same as: COMPLIT 70N

CHINGEN 73. Chinese Language, Culture, and Society. 4 Units.

Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent.

Same as: CHINGEN 173

CHINGEN 73N. Chinese Language, Culture, and Society. 4 Units.

Functions of languages in Chinese culture and society, origin of the Chinese language, genetic relations with neighboring languages, development of dialects, language contacts, evolution of Chinese writing, language policies in Greater China. Prerequisite: one quarter of Chinese 1 or 1B or equivalent recommended. Freshman seminar.

Same as: CHINGEN 170

CHINGEN 91. Introduction to China. 5 Units.

Required for Chinese and Japanese majors. Introduction to Chinese culture in a historical context. Topics include political and socioeconomic institutions, religion, ethics, education, and art and literature.

CHINGEN 95. Beauty and Decadence in China. 4-5 Units.

An inquiry into the conception of aesthetic beauty in China. Special attention to the coupling of aesthetics ("beauty") and morality ("goodness") in the visual and literary arts, as well as the frequent dissonance or rivalry between them.

Same as: CHINGEN 195

CHINGEN 101. How to Be Modern in China: A Gateway to the World Course. 3-4 Units.

A gateway course on China, with a focus on the politics of everyday life, in the capital city of Beijing. Introduction to the history and politics of modern China. The pleasures, frictions, and challenges of daily living in the penumbra of power in Beijing as reported, represented, and reflected upon in fiction, film, reportage, social commentary, and scholarly writings. Priority to those preparing to participate in BOSP-Beijing Program or returning from the program.

CHINGEN 118. Constructing National History in East Asian Archaeology. 3-5 Units.

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 135, ARCHLGY 235, CHINGEN 218

CHINGEN 119. Popular Culture and Casino Capitalism in China. 3-4 Units.

Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.

Same as: CHINGEN 219

CHINGEN 120. Soldiers and Bandits in Chinese Culture. 3-5 Units.

Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.

Same as: CHINGEN 220

CHINGEN 121. Classical Chinese Rituals. 3-5 Units.

Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.

Same as: CHINGEN 221

CHINGEN 131. Chinese Poetry in Translation. 4 Units.

From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required.

Same as: CHINGEN 231

CHINGEN 132. Chinese Fiction and Drama in Translation. 4 Units.

From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation.

Same as: CHINGEN 232

CHINGEN 133. Literature in 20th-Century China. 4-5 Units.

(Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social movements and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course.

Same as: CHINGEN 233

CHINGEN 134. Early Chinese Mythology. 3-5 Units.

The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts.

Same as: CHINGEN 234

CHINGEN 135. Chinese Bodies, Chinese Selves. 3-5 Units.

Interdisciplinary. The body as a contested site of representational practices, identity politics, cultural values, and social norms. Body images, inscriptions, and practices in relation to health, morality, gender, sexuality, nationalism, consumerism, and global capitalism in China and Taiwan. Sources include anthropological, literary, and historical studies, and fiction and film. No knowledge of Chinese required.

Same as: CHINGEN 235

CHINGEN 136. The Chinese Family. 3-5 Units.

History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change.

Same as: CHINGEN 236

CHINGEN 137. Tiananmen Square: History, Literature, Iconography. 3-5 Units.

Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. Held in Knight Bldg. Rm. 18.

Same as: CHINGEN 237

CHINGEN 138. Love and Politics in Chinese Cinema. 4-5 Units.

How films work as expressions of desire, impulse, emotional connection, and communal attachment during times of social upheaval and reconstruction. Film theory and aesthetics, and alternative paradigms about world and social relations. Chinese language not required.

Same as: CHINGEN 238

CHINGEN 139. Cultural Revolution as Literature. 4 Units.

Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

Same as: CHINGEN 239

CHINGEN 140. Chinese Justice: Law, Morality, and Literature. 3-5 Units.

Explores the relationship between law and morality in Chinese literature, culture, and society. Readings include court case romances, crime plays, detective novels, and legal dramas from traditional era and modern and contemporary periods. Prior coursework in Chinese history, civilization, or literature is recommended. All readings are in English.

Same as: CHINGEN 240

CHINGEN 141. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

Same as: ARCHLGY 111, CHINGEN 241

CHINGEN 143. Images of Women in Ancient China and Greece. 3-5 Units.

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.

Same as: CHINGEN 243, CLASSICS 143, CLASSICS 243

CHINGEN 146. Gods, Ghosts, and Ancestors: Anthropology of Chinese Folk Religion. 3-5 Units.

Same as: CHINGEN 246

CHINGEN 150. Sex, Gender, and Power in Modern China. 3-5 Units.

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.

Same as: CHINGEN 250, FEMGEN 150, FEMGEN 250

CHINGEN 151. Manuscripts, Circulation of Texts, Printing. 3-4 Units.

History of texts before the advent of printing as well as during the early period of printing, focus on Tang and Song periods. Attention to the material existence of texts, their circulation, reading habits before and after printing, the balance between orality and writing, the role of memorization, and rewriting during textual transmission. Readings in English.

Same as: CHINGEN 251

CHINGEN 152. Beijing: Microcosm of Modern China. 3-4 Units.

Uses Beijing as a microcosm of China to examine the political, social, and cultural transformations of modern China. Explores critical issues affecting modern Chinese history and contemporary Chinese society through lectures, videos, presentations, and discussions.

Same as: CHINGEN 252

CHINGEN 155. Cultural Images in China-US Relations. 3-5 Units.

This course is designed to examine Chinese and American cultural images of each other during various historical periods and discuss the relationship between image building and policy orientations.

Same as: CHINGEN 255

CHINGEN 160. New Directions in the Study of Poetry and Literary Culture. 3-4 Units.

Inquiry into new approaches and interpretations of the poetic tradition in China in the context of cultural history. Readings in recent scholarship and criticism that situate poetry in print history, manuscript culture, gender studies, social history, etc. Readings in English. Reading knowledge of Chinese desirable but not required.

Same as: CHINGEN 260

CHINGEN 169. What is Chinese Theater? The Formation of a Tradition. 3-4 Units.

A survey of Chinese drama from its origins to late imperial China. Explores theories of the origins of Chinese drama, contrasting theories with the documented beginnings of theater and its first texts. How traditions turned into "elite theater" in the Ming and Qing dynasties, and how esthetic norms and moral values went into the process of theatrical transformation.

Same as: CHINGEN 269

CHINGEN 170. Chinese Language, Culture, and Society. 4 Units.

Functions of languages in Chinese culture and society, origin of the Chinese language, genetic relations with neighboring languages, development of dialects, language contacts, evolution of Chinese writing, language policies in Greater China. Prerequisite: one quarter of Chinese 1 or 1B or equivalent recommended. Freshman seminar.

Same as: CHINGEN 73N

CHINGEN 173. Chinese Language, Culture, and Society. 4 Units.

Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent.

Same as: CHINGEN 73

CHINGEN 193E. Female Divinities in China. 3-5 Units.

The role of powerful goddesses, such as the Queen Mother of the West, Guanyin, and Chen Jinggu, in Chinese religion. Imperial history to the present day. What roles goddesses played in the spirit world, how this related to the roles of human women, and why a civilization that excluded women from the public sphere granted them such a major, even dominant place, in the religious sphere. Readings in English-language secondary literature.

Same as: CHINGEN 393E

CHINGEN 194. The History and Culture of Peking Opera. 3-4 Units.

Explores the history and culture of Peking opera from its regional origins to a major national form. It will focus on genre formation, the professional and social position of actors and the political role of Peking opera. In addition to academic texts, we will read memoirs, biographies and watch videos and movies.

Same as: CHINGEN 294

CHINGEN 195. Beauty and Decadence in China. 4-5 Units.

An inquiry into the conception of aesthetic beauty in China. Special attention to the coupling of aesthetics ("beauty") and morality ("goodness") in the visual and literary arts, as well as the frequent dissonance or rivalry between them.

Same as: CHINGEN 95

CHINGEN 196. The Culture of Entertainment in China. 3-4 Units.

Sophisticated, organized entertainment in China is evident at least as early as the second century B.C. in the court spectacles described in the early histories and in the depictions of jugglers, dancers and acrobats represented in tomb reliefs. The importance attached to entertainment from ancient times both at court and in society at large is manifest not just in the establishment of imperial institutions such as the Music Bureau, but also in the appearance of large entertainment districts within the cities where people would invest extraordinary amount of resources in the pursuit of pleasure, and in small scale gatherings. This class will look at the representation of play and pleasure in Chinese culture from a variety of sources (art, history, literature and performance) in different periods of Chinese history. In the process we will address the place of pleasure in Chinese culture, as well as ethical, socio-political and economical concerns. Held in old Knight Bldg., 521 Memorial Way, Rm. 102.

Same as: CHINGEN 296

CHINGEN 198. Senior Colloquium in Chinese Studies. 1 Unit.

Students research, write, and present a capstone essay or honors thesis.

CHINGEN 200. Directed Readings in Asian Languages. 1-12 Unit.

For Chinese literature. Prerequisite: consent of instructor. (Staff).

CHINGEN 201. Teaching Chinese Humanities. 1 Unit.

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

CHINGEN 218. Constructing National History in East Asian Archaeology. 3-5 Units.

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 135, ARCHLGY 235, CHINGEN 118

CHINGEN 219. Popular Culture and Casino Capitalism in China. 3-4 Units.

Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.

Same as: CHINGEN 119

CHINGEN 220. Soldiers and Bandits in Chinese Culture. 3-5 Units.

Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.

Same as: CHINGEN 120

CHINGEN 221. Classical Chinese Rituals. 3-5 Units.

Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.

Same as: CHINGEN 121

CHINGEN 231. Chinese Poetry in Translation. 4 Units.

From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required.

Same as: CHINGEN 131

CHINGEN 232. Chinese Fiction and Drama in Translation. 4 Units.

From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation.

Same as: CHINGEN 132

CHINGEN 233. Literature in 20th-Century China. 4-5 Units.

(Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social movements and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course.

Same as: CHINGEN 133

CHINGEN 234. Early Chinese Mythology. 3-5 Units.

The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts.

Same as: CHINGEN 134

CHINGEN 235. Chinese Bodies, Chinese Selves. 3-5 Units.

Interdisciplinary. The body as a contested site of representational practices, identity politics, cultural values, and social norms. Body images, inscriptions, and practices in relation to health, morality, gender, sexuality, nationalism, consumerism, and global capitalism in China and Taiwan.

Sources include anthropological, literary, and historical studies, and fiction and film. No knowledge of Chinese required.

Same as: CHINGEN 135

CHINGEN 236. The Chinese Family. 3-5 Units.

History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change.

Same as: CHINGEN 136

CHINGEN 237. Tiananmen Square: History, Literature, Iconography. 3-5 Units.

Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. Held in Knight Bldg. Rm. 18.

Same as: CHINGEN 137

CHINGEN 238. Love and Politics in Chinese Cinema. 4-5 Units.

How films work as expressions of desire, impulse, emotional connection, and communal attachment during times of social upheaval and reconstruction. Film theory and aesthetics, and alternative paradigms about world and social relations. Chinese language not required.

Same as: CHINGEN 138

CHINGEN 239. Cultural Revolution as Literature. 4 Units.

Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

Same as: CHINGEN 139

CHINGEN 240. Chinese Justice: Law, Morality, and Literature. 3-5 Units.

Explores the relationship between law and morality in Chinese literature, culture, and society. Readings include court case romances, crime plays, detective novels, and legal dramas from traditional era and modern and contemporary periods. Prior coursework in Chinese history, civilization, or literature is recommended. All readings are in English.

Same as: CHINGEN 140

CHINGEN 241. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

Same as: ARCHLGY 111, CHINGEN 141

CHINGEN 243. Images of Women in Ancient China and Greece. 3-5 Units.

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.

Same as: CHINGEN 143, CLASSICS 143, CLASSICS 243

CHINGEN 246. Gods, Ghosts, and Ancestors: Anthropology of Chinese Folk Religion. 3-5 Units.

Same as: CHINGEN 146

CHINGEN 250. Sex, Gender, and Power in Modern China. 3-5 Units.

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Chinese Language Courses

CHINLANG 1. First-Year Modern Chinese, First Quarter. 5 Units.

Conversation, grammar, reading, elementary composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements.

CHINLANG 1B. First-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.

For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition.

CHINLANG 2. First-Year Modern Chinese, Second Quarter. 5 Units.

Continuation of CHINLANG 1. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: placement test, CHINLANG 1.

CHINLANG 2B. First-Year Modern Chinese for Bilingual Students, Second Quarter. 3 Units.

Continuation of CHINLANG 1B. For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition. Prerequisite: Placement Test, CHINLANG 1B.

CHINLANG 3. First-Year Modern Chinese, Third Quarter. 5 Units.

Continuation of CHINLANG 2. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Fulfills the University language requirement. Prerequisite: Placement Test, CHINLANG 2.

CHINLANG 3B. First-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.

Continuation of CHINLANG 2B. For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition. Prerequisite: Placement Test, CHINLANG 2B or consent of instructor. Fulfills University language requirement.

CHINLANG 5. Intensive First-Year Modern Chinese. 8 Units.

Equivalent to 1,2,3 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University.

CHINLANG 6. Beginning Conversational Chinese, First Quarter. 2 Units.

Three quarter sequence. Basic language skills in Mandarin to function abroad.

CHINLANG 7. Beginning Conversational Chinese, Second Quarter. 2 Units.

Continuation of CHINLANG 6. Basic language skills in Mandarin to function abroad. Prerequisite: CHINLANG 6.

CHINLANG 8. Beginning Conversational Chinese, Third Quarter. 2 Units.

Continuation of CHINLANG 7. Basic language skills in Mandarin to function abroad. Prerequisite: CHINLANG 7.

CHINLANG 10. Beginning Southern Min (Taiwanese) Conversation, First Quarter. 2 Units.

Three quarter sequence. Basic language skills for everyday life situations.

CHINLANG 11. Beginning Southern Min (Taiwanese) Conversation, Second Quarter. 2 Units.

Continuation of CHINLANG 10. Prerequisite: CHINLANG 10.

CHINLANG 12. Beginning Southern Min (Taiwanese) Conversation, Third Quarter. 2 Units.

Continuation of 11. Prerequisite: 11.

CHINLANG 13A. Intermediate Southern Min (Taiwanese) Conversation, First Quarter. 2 Units.

Continuation of CHINLANG 12. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 12.

CHINLANG 13B. Intermediate Southern Min (Taiwanese) Conversation, Second Quarter. 2 Units.

Continuation of CHINLANG 13A. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 13A.

CHINLANG 13C. Intermediate Southern Min (Taiwanese) Conversation, Third Quarter. 2 Units.

Continuation of CHINLANG 13B. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 13B.

CHINLANG 15. Beginning Conversational Cantonese, First Quarter. 2 Units.

This is the first of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture.

CHINLANG 15M. Beginning Conversational Cantonese for Mandarin Speakers, First Quarter. 2 Units.

This is the first of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught.

CHINLANG 16. Beginning Cantonese Conversation, Second Quarter. 2 Units.

Continuation of CHINLANG 15. This is the second of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives.

Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 15.

CHINLANG 16M. Beginning Conversational Cantonese for Mandarin Speakers, Second Quarter. 2 Units.

Continuation of CHINLANG 15M. This is the second of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught. Prerequisite: CHINLANG 15M.

CHINLANG 17. Beginning Conversational Cantonese, Third Quarter. 2 Units.

Continuation of CHINLANG 16. This is the third of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives.

Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 16.

CHINLANG 17M. Beginning Conversational Cantonese for Mandarin Speakers, Third Quarter. 2 Units.

Continuation of CHINLANG 16M. This is the third of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught. Prerequisite: CHINLANG 16M.

CHINLANG 18. Intermediate Cantonese Conversation, First Quarter. 2 Units.

Continuation of CHINLANG 17. This is the first of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 17.

CHINLANG 19. Intermediate Conversational Cantonese, Second Quarter. 2 Units.

Continuation of CHINLANG 18. This is the second of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 18.

CHINLANG 20. Intermediate Conversational Cantonese, Third Quarter. 2 Units.

Continuation of CHINLANG 19. This is the third of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 19.

CHINLANG 20A. Advanced Conversational Cantonese, First Quarter. 2 Units.

Continuation of CHINLANG 20. This is the first of the 3-course series on advanced Cantonese. The primary objective of the advanced series is to help students become proficient speakers so that they can talk about a wide range of topics: students (a) review movies, (b) describe their communities, (c) narrate events in different time frames, and (d) talk about current events and topics of interest to them. Linguistic structures for textual cohesion, subordinating and coordinating sentences, and foregrounding and backgrounding information are emphasized. Authentic materials such as movies and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 20.

CHINLANG 20B. Advanced Conversational Cantonese, Second Quarter. 2 Units.

Continuation of CHINLANG 20A. This is the second of the 3-course series on advanced Cantonese. The primary objective of the advanced series is to help students become proficient speakers so that they can talk about a wide range of topics: students (a) review movies, (b) describe their communities, (c) narrate events in different time frames, and (d) talk about current events and topics of interest to them. Linguistic structures for textual cohesion, subordinating and coordinating sentences, and foregrounding and backgrounding information are emphasized. Authentic materials such as movies and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 20A.

CHINLANG 20C. Advanced Cantonese Conversation - Third Quarter. 2 Units.

Continuation of CHINLANG 20B. This is the third of the 3-course series on advanced Cantonese. The primary objective of the advanced series is to help students become proficient speakers so that they can talk about a wide range of topics: students (a) review movies, (b) describe their communities, (c) narrate events in different time frames, and (d) talk about current events and topics of interest to them. Linguistic structures for textual cohesion, subordinating and coordinating sentences, and foregrounding and backgrounding information are emphasized. Authentic materials such as movies and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 20B.

CHINLANG 21. Second-Year Modern Chinese, First Quarter. 5 Units.

Continuation of CHINLANG 3. Grammar, reading, conversation, composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 3.

CHINLANG 21B. Second-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.

Continuation of CHINLANG 3B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Equivalent to CHINLANG 21. Prerequisite: Placement Test, CHINLANG 3B.

CHINLANG 22. Second-Year Modern Chinese, Second Quarter. 5 Units.

Continuation of CHINLANG 21. Grammar, reading, conversation, composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 21.

CHINLANG 22B. Second-Year Chinese for Bilingual Students, Second Quarter. 3 Units.

Continuation of CHINLANG 21B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Prerequisite: Placement Test, CHINLANG 21B.

CHINLANG 23. Second-Year Modern Chinese, Third Quarter. 5 Units.

Continuation of CHINLANG 22. Grammar, reading, conversation, composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 22.

CHINLANG 23B. Second-Year Chinese for Bilingual Students, Third Quarter. 3 Units.

Continuation of CHINLANG 22B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Prerequisite: Placement Test, CHINLANG 22B.

CHINLANG 25. Intensive Second-Year Modern Chinese. 8 Units.
Equivalent to 21,22,23 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 3 or equivalent.

CHINLANG 27. Intermediate Chinese Conversation, First Quarter. 2 Units.

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Prerequisite: CHINLANG 3.

CHINLANG 28. Intermediate Chinese Conversation, Second Quarter. 2 Units.

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners' communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Continuation of CHINLANG 27. Prerequisite: CHINLANG 27. Consent of instructor.

CHINLANG 29. Intermediate Chinese Conversation, Third Quarter. 2 Units.

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners' communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Continuation of CHINLANG 28. Prerequisite: CHINLANG 28. Consent of instructor.

CHINLANG 31E. Accelerated Beginning Mandarin for Engineering Students, First Quarter. 4 Units.

Restricted to engineering students participating in the China Internship Program. Grad students enroll in CHINLANG 331E.

CHINLANG 33G. Accelerated Beginning Mandarin III. 4 Units.

For GSB students only.

CHINLANG 41. Intermediate-to-Advanced Chinese Conversation, First Quarter. 2 Units.

Repeatable once for units. Prerequisite: CHINLANG 23.

CHINLANG 42. Intermediate-to-Advanced Chinese Conversation, Second Quarter. 2 Units.

Continuation of CHINLANG 41. Repeatable once for units. Prerequisite: CHINLANG 41.

CHINLANG 43. Intermediate-to-Advanced Chinese Conversation, Third Quarter. 2 Units.

Continuation of CHINLANG 42. Repeatable once for units. Prerequisite: CHINLANG 42.

CHINLANG 99. Language Specials. 1-5 Unit.

Prerequisite: consent of instructor. (Staff).

CHINLANG 101. Third-Year Modern Chinese, First Quarter. 5 Units.

Continuation of CHINLANG 23. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 23.

CHINLANG 101B. Third-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.

Continuation of CHINLANG 23B. Equivalent to CHINLANG 101. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: Placement Test, CHINLANG 23B.

CHINLANG 102. Third-Year Modern Chinese, Second Quarter. 5 Units.

Continuation of CHINLANG 101. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 101.

CHINLANG 102B. Third-Year Modern Chinese for Bilingual Students, Second Quarter. 3 Units.

Continuation of CHINLANG 101B. Equivalent to CHINLANG 102. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: Placement Test, CHINLANG 101B.

CHINLANG 103. Third-Year Modern Chinese, Third Quarter. 5 Units.

Continuation of CHINLANG 102. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 102.

CHINLANG 103B. Third-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.

Continuation of CHINLANG 102B. Equivalent of CHINLANG 103. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: CHINLANG 102B.

CHINLANG 105. Intensive Third-Year Modern Chinese. 8 Units.

Equivalent to 101,102,103 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent.

CHINLANG 121. Advanced Chinese Conversation, First Quarter. 2 Units.

Continuation of CHINLANG 29. This is the first quarter of a three-quarter sequence designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students, development of conversational skills. Placement Test, CHINLANG 103.

CHINLANG 122. Advanced Chinese Conversation, Second Quarter. 2 Units.

Continuation of CHINLANG 121. Second quarter of Advanced Conversational Chinese. It is designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students, development of conversational skills. Prerequisite: CHINLANG 121.

CHINLANG 123. Advanced Chinese Conversation, Third Quarter. 2 Units.

Continuation of CHINLANG 122. Third quarter of Advanced Conversational Chinese. It is designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students' development of conversational skills. Prerequisite: CHINLANG 122.

CHINLANG 131. Business Chinese, First Quarter. 3-4 Units.

Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 103 or equivalent.

CHINLANG 132. Business Chinese, Second Quarter. 3-4 Units.

Continuation of CHINLANG 131. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 131.

CHINLANG 133. Business Chinese, Third Quarter. 3-4 Units.

Continuation of CHINLANG 132. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 132.

CHINLANG 199. Individual Reading. 1-5 Unit.

.

CHINLANG 200. Directed Reading. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CHINLANG 205S. Intensive Third-Year Modern Chinese. 7 Units.

Equivalent to 101, 102, 103 if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent. Grads only.

CHINLANG 211. Fourth-Year Modern Chinese, First Quarter. 5 Units.

Continuation of CHINLANG 103. This is the first quarter of a three-quarter sequence designed for students with advanced-level proficiency in Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or academic, interest more effectively and accurately. Prerequisite: placement test, CHINLANG 103.

CHINLANG 211B. Fourth-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.

Continuation of CHINLANG 103B. This is the first quarter of a three-quarter sequence designed for bilingual students with advanced-level proficiency in Chinese. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 103B.

CHINLANG 212. Fourth-Year Modern Chinese, Second Quarter. 5 Units.

Continuation of CHINLANG 211. Second quarter of fourth year Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal or academic interest more effectively and accurately. Prerequisite: Placement Test, CHINLANG 211.

CHINLANG 212B. Fourth-Year Modern Chinese for Bilingual Students, Second Quarter. 3 Units.

Continuation of CHINLANG 211B. Second quarter of Fourth Year Chinese for bilingual students. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 211B.

CHINLANG 213. Fourth-Year Modern Chinese, Third Quarter. 5 Units.

Continuation of CHINLANG 212. Third quarter of Fourth Year Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or academic, interests more effectively and accurately. Prerequisite: Placement Test, CHINLANG 212.

CHINLANG 213B. Fourth-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.

Continuation of CHINLANG 212B. Third quarter of Fourth Year Chinese for bilingual students. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 212B.

CHINLANG 231. Fifth-Year Modern Chinese: Cultural China, First Quarter. 4 Units.

Continuation of CHINLANG 213. Year-long sequence. Rhetorical devices through essays about China's cultural journey in relationship to geographical regions. Prerequisite: CHINLANG 213, 223B.

CHINLANG 232. Fifth-Year Modern Chinese: Cultural China, Second Quarter. 4 Units.

Continuation of CHINLANG 231. Year-long sequence. Rhetorical devices through essays about China's cultural journey in relationship to geographical regions. Prerequisite: CHINLANG 231.

CHINLANG 233. Fifth-Year Modern Chinese: Cultural China, Third Quarter. 4 Units.

Continuation of CHINLANG 232. Year-long sequence. Rhetorical devices through essays about China's cultural journey in relationship to geographical regions. Prerequisite: CHINLANG 232.

CHINLANG 331E. Accelerated Beginning Mandarin for Engineering Students, First Quarter. 2-5 Units.

Restricted to graduate engineering students participating in the China Internship Program.

CHINLANG 394. Graduate Studies in Chinese Conversation. 1-3 Unit.

Prerequisite: consent of instructor.

CHINLANG 395. Graduate Studies in Chinese. 1-5 Unit.

Prerequisite: consent of instructor.

Chinese Literature Courses

CHINLIT 93. Late Imperial China. 3 Units.

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: FEMGEN 93, HISTORY 93

CHINLIT 125. Beginning Classical Chinese, First Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent.

Same as: CHINLIT 205

CHINLIT 126. Beginning Classical Chinese, Second Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent.

Same as: CHINLIT 206

CHINLIT 127. Beginning Classical Chinese, Third Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent.

Same as: CHINLIT 207

CHINLIT 130. Lyrical and Local Prose. 3-5 Units.

Informal and personal prose of Tang and Song dynasties, with special attention to lyrical expression (prose as close alternative to poetry) and local interest (e.g., in travel diaries). These new uses and styles of prose will be compared with more formal expository prose and with poetry written by the same authors, to better understand the distribution of expressive aims and effects. Prerequisite: Classical Chinese or advanced reading knowledge of Chinese.

Same as: CHINLIT 230

CHINLIT 132. Chinese Biographies of Women. 2-5 Units.

Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women's history, intellectual history, historiography, and literary studies.

Same as: CHINLIT 232

CHINLIT 135. Ghost Stories and Other Strange Tales. 3-4 Units.

Study of the zhiguai tradition, with readings in landmark collections from different dynastic periods (e.g., Tang, Song, Qing). Consideration of the cultural significance as well as the literary qualities of this tradition of storytelling in China. Readings in English.

Same as: CHINLIT 235

CHINLIT 155. Classical Poetry: Reading, Theory, Interpretation. 4 Units.

Introduction to the reading and interpretation of classical Chinese poetry, with attention to the language of poetry, aesthetics, expressive purposes, and social roles. Readings in Chinese. Prerequisite: three years of modern Chinese or equivalent.

Same as: CHINLIT 255

CHINLIT 165. Major Figures in Classical Chinese Poetry. 4 Units.

Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year's poet is Du Fu. Prerequisite: 3 years Modern Chinese or equivalent.

Same as: CHINLIT 265

CHINLIT 166. Chinese Ci Poetry (Song Lyrics). 3-4 Units.

Introduction to poetry in the ci "song lyrics" form. This year the focus is on song lyrics of Li Qingzhao (1084-1150s), read against song lyrics composed by male writers of her day. Attention to the special challenges she faced as a woman writer, and the ways that the tradition struggled to accommodate this "talented woman." Prerequisite: Classical Chinese or advanced reading knowledge of Chinese.

Same as: CHINLIT 266

CHINLIT 174. Modern Chinese Novel: Theory, Aesthetics, History. 4 Units.

From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love.

Prerequisite: advanced Chinese.

Same as: CHINLIT 274, COMPLIT 254

CHINLIT 189A. Honors Research. 2-5 Units.

.

CHINLIT 189B. Honors Research. 5 Units.

Open to senior honors students to write thesis.

CHINLIT 190. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.

Same as: CHINLIT 290, COMPLIT 135

CHINLIT 191. The Structure of Modern Chinese. 2-4 Units.

Focus is on on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor.

Same as: CHINLIT 291

CHINLIT 192. The History of Chinese. 4 Units.

Emphasis is on syntactic and semantic changes in the last 2,000 years and grammaticalization. Students use a computer corpus to do research on the history of Chinese. Prerequisite: 126 or consent of instructor.

Same as: CHINLIT 292

CHINLIT 199. Individual Reading in Chinese. 1-4 Unit.

Asian Language majors only. Prerequisite: CHINLANG 103 or consent of instructor. Units by arrangement.

CHINLIT 200. Directed Reading in Chinese. 1-12 Unit.

.

CHINLIT 201. Proseminar: Bibliographic and Research Methods in Chinese Studies. 3-5 Units.

Bibliographic, pedagogical, and research methods in Chinese studies. Prerequisite: 127/207 or equivalent.

CHINLIT 205. Beginning Classical Chinese, First Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent. Same as: CHINLIT 125

CHINLIT 206. Beginning Classical Chinese, Second Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent. Same as: CHINLIT 126

CHINLIT 207. Beginning Classical Chinese, Third Quarter. 2-5 Units.

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent. Same as: CHINLIT 127

CHINLIT 221. Advanced Classical Chinese: Philosophical Texts. 3-5 Units.

Prerequisite: 207 or equivalent.

CHINLIT 222. Advanced Classical Chinese: Historical Narration. 2-5 Units.

Prerequisite: 127/207 or equivalent.

CHINLIT 223. Advanced Classical Chinese: Literary Essays. 2-5 Units.

Readings and grammatical analyses of literary essays throughout imperial China. Prerequisite: CHINLIT 127/207 or equivalent.

CHINLIT 230. Lyrical and Local Prose. 3-5 Units.

Informal and personal prose of Tang and Song dynasties, with special attention to lyrical expression (prose as close alternative to poetry) and local interest (e.g., in travel diaries). These new uses and styles of prose will be compared with more formal expository prose and with poetry written by the same authors, to better understand the distribution of expressive aims and effects. Prerequisite: Classical Chinese or advanced reading knowledge of Chinese.

Same as: CHINLIT 130

CHINLIT 232. Chinese Biographies of Women. 2-5 Units.

Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women's history, intellectual history, historiography, and literary studies.

Same as: CHINLIT 132

CHINLIT 235. Ghost Stories and Other Strange Tales. 3-4 Units.

Study of the zhiguai tradition, with readings in landmark collections from different dynastic periods (e.g., Tang, Song, Qing). Consideration of the cultural significance as well as the literary qualities of this tradition of storytelling in China. Readings in English.

Same as: CHINLIT 135

CHINLIT 255. Classical Poetry: Reading, Theory, Interpretation. 4 Units.

Introduction to the reading and interpretation of classical Chinese poetry, with attention to the language of poetry, aesthetics, expressive purposes, and social roles. Readings in Chinese. Prerequisite: three years of modern Chinese or equivalent.

Same as: CHINLIT 155

CHINLIT 261. Sources of Chinese Poetry. 4 Units.

The Book of Songs (ca. 1000-500 B.C.E.) and Songs of Chu (ca. 400 B.C.E.), the earliest anthologies of Chinese poetry.

CHINLIT 263. Lyric (Shih) I. 2-4 Units.

Han through Sui dynasties.

CHINLIT 265. Major Figures in Classical Chinese Poetry. 4 Units.

Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year's poet is Du Fu. Prerequisite: 3 years Modern Chinese or equivalent. Same as: CHINLIT 165

CHINLIT 266. Chinese Ci Poetry (Song Lyrics). 3-4 Units.

Introduction to poetry in the ci "song lyrics" form. This year the focus is on song lyrics of Li Qingzhao (1084-1150s), read against song lyrics composed by male writers of her day. Attention to the special challenges she faced as a woman writer, and the ways that the tradition struggled to accommodate this "talented woman." Prerequisite: Classical Chinese or advanced reading knowledge of Chinese.

Same as: CHINLIT 166

CHINLIT 272. Traditional Chinese Fiction: Novels. 2-4 Units.

Major novels of late imperial China. Prerequisite: 127/207 or consent of instructor.

CHINLIT 273. Readings in Chinese Drama. 2-4 Units.

Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor.

CHINLIT 274. Modern Chinese Novel: Theory, Aesthetics, History. 4 Units.

From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love. Prerequisite: advanced Chinese.

Same as: CHINLIT 174, COMPLIT 254

CHINLIT 279. For Love of Country: National Narratives in Chinese Literature and Film. 3-5 Units.

Explores the nation as it is constructed, deconstructed, and continuously contested in novels, short stories, films, and other media from the second half of the 20th century in mainland China and Taiwan. Asks how the trope of the nation and the ideology of nationalism mediate the relationships between politics and aesthetics. Explores the nation's internal fault lines of gender, ethnicity, geography, language, and citizenship.

Same as: CHINLIT 379

CHINLIT 283. China's Dynastic Founders. 3-5 Units.

This course examines the lives of China's dynastic founders, among whom we find the most influential, the most celebrated, the most complicated, and the most controversial rulers in premodern Chinese history. We seek to understand the ideas of leadership and legitimacy, the relationships among statecraft, military might, and moral virtue, and the importance of precedents and exemplars in traditional Chinese political culture. Primary readings are the biographies of the dynastic founders in the official histories, supplemented by the representations of these rulers in other genres of writings. Prerequisite: Two years of classical Chinese, or consent of instructor.

CHINLIT 289. The Poetics and Politics of Affect in Modern China. 3-5 Units.

The role of affect in modern Chinese aesthetics and politics. Cultural and social theories of affect (love, hate, fear, grief, resentment, rage, sympathy, sincerity, shame, and nostalgia); affective discourses across genres and media including fiction, poetry, film, journalism, and television; and mass social movements such as protest, uprising, and revolution. Advanced undergraduates requires consent of instructor. Recommended: reading knowledge of Chinese.

CHINLIT 290. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.

Same as: CHINLIT 190, COMPLIT 135

CHINLIT 291. The Structure of Modern Chinese. 2-4 Units.

Focus is on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor.

Same as: CHINLIT 191

CHINLIT 292. The History of Chinese. 4 Units.

Emphasis is on syntactic and semantic changes in the last 2,000 years and grammaticalization. Students use a computer corpus to do research on the history of Chinese. Prerequisite: 126 or consent of instructor.

Same as: CHINLIT 192

CHINLIT 299. Master's Thesis or Translation. 1-5 Unit.

A total of 5 units taken in one or more quarters.

CHINLIT 369. Late Imperial Chinese Fiction. 2-5 Units.

Primary works examined include Jin Ping Mei, Xingshi yinyuan zhuan, Hongloumeng, Qilu deng, Rulin waishi, and Ernu yingxiong zhuan.

Secondary readings focus on social dimensions of the Chinese novel (ca. 1600-1850), but students may explore other aspects of the texts in their presentations and research papers. Comparisons with the English novel, particularly on the rise of the novel and the advent of modernity.

CHINLIT 371. Aesthetics, Politics, Modernity and China. 2-5 Units.

The making of global heroes--and the many bodies of Chairman Mao. This course explores a number of key motifs of critical theory relevant to Chinese studies. It introduces some seminal theories of visuality and the making of (global) heroes and problematizes the writing of visual histories and the uses of Digital Humanities for this purpose. Part of an ongoing research project which focuses on two hyper-visible male protagonists of the twentieth century--Mohandas Gandhi and Mao Zedong. How have these flesh and blood men been transformed through the work of visual imagery into globally recognizable, transcultural "bio-icons"? Prerequisite: CHINLIT 127/207 or consent of instructor.

Same as: COMPLIT 371

CHINLIT 379. For Love of Country: National Narratives in Chinese Literature and Film. 3-5 Units.

Explores the nation as it is constructed, deconstructed, and continuously contested in novels, short stories, films, and other media from the second half of the 20th century in mainland China and Taiwan. Asks how the trope of the nation and the ideology of nationalism mediate the relationships between politics and aesthetics. Explores the nation's internal fault lines of gender, ethnicity, geography, language, and citizenship.

Same as: CHINLIT 279

CHINLIT 391. Seminar in Chinese Syntax. 4 Units.

May be repeated for credit.

CHINLIT 392B. Law and Society in Late Imperial China. 4-5 Units.

(Same as LAW 773.) Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history.

Same as: HISTORY 392B

CHINLIT 399. Dissertation Research. 1-12 Unit.

.

Civil Environmental Engineering Courses

CEE 1. Introduction to Environmental Systems Engineering. 1 Unit.

Field trips visiting environmental systems installations in Northern California, including coastal, freshwater, and urban infrastructure. Requirements: Several campus meetings, and field trips. Enrollment limited; priority given to undergraduates who have declared Environmental Systems Engineering major. Contact hildemann@stanford.edu to request enrollment/permission code.

CEE 1A. Graphics Course. 1 Unit.

This course, intended for students taking a design studio, will focus on presentation theories, skills and design approaches. Through readings and exercises, and ultimately the student's own work, students will develop skill and complexity in their graphic and verbal presentations.

CEE 10. Introduction to the Civil & Environmental Engineering Majors. 1 Unit.

Open to freshman and sophomores; limited enrollment. Overview of undergraduate majors and possible career paths in Civil Engineering, Environmental Engineering, Atmosphere/Energy, and Architectural Design. Panel discussions with current undergraduate majors, and with alumni. Hands-on activities with faculty in CEE. For students with interest areas such as water resources, environmental biotechnologies, sustainability, architecture, infrastructure planning, global warming, green energy, structures, and construction.

CEE 10A. Introduction to Architecture. 2 Units.

This class introduces students to the discipline of architecture and to the fundamental question: What is an architect and how is architecture distinct from other arts and sciences? To answer this question, the class will focus on concepts important to the practice of architecture including: project conception, drawing, modeling, materials, structure, form, and professionalism. These terms will be investigated through short talks, site visits, historical precedent, in-class exercises, panel discussions and two on-campus case studies. No prior knowledge of architecture is required.

CEE 10AX. Chicago Architecture: History and Form. 2 Units.

Chicago is America's architectural hub. Rebuilt, phoenix-like, out of a devastating fire, but at a moment of great technological change, Chicago is the birthplace of grand American planning - the high-rise, construction technologies - and continues to this day to be a place of urban and architectural innovation. In this course students will be introduced to the history of Chicago including the Burnham Plan, the technological developments of the iron structure, modern curtain wall, and elevator that allowed for the first high-rises, the subsequent development of innovative structural systems, and the modern high-rise. Further investigation will include the legacies of Louis Sullivan, Frank Lloyd Wright, Mies Van Der Rohe, SOM, and others. Based at a Chicago Architecture firm, the class will mix a short high-rise design exercise on a real site with discussions with local architects, field trips to landmark structures, and exploration of current development and planning issues. The course will include extensive walks and trips using local transit. This course is open to all students regardless of their experience in architecture.

CEE 10B. Presentation Skills. 0 Units.

TBD.

CEE 11SC. People, Land, and Water in the Heart of the West. 2 Units.

Salmon River. Sun Valley. Pioneer Mountains. The names speak of powerful forces and ideas in the American West. Central Idaho - a landscape embracing snow-capped mountains, raging rivers, sagebrush deserts, farms, ranches, and resort communities - is our classroom for this field-based seminar led by David Freyberg, professor of Civil and Environmental Engineering, and David Kennedy, professor emeritus of History. This course focuses on the history and future of a broad range of natural resource management issues in the western United States. We will spend a week on campus preparing for a two-week field course in Idaho exploring working landscapes, private and public lands, water and fisheries, conservation, and the history and literature of the relationship between people and the land in the American West. After the first week spent on campus, we will drive to Idaho to begin the field portion of our seminar. In Idaho, we will spend time near Twin Falls, at Lava Lake Ranch near Craters of the Moon National Monument, in Custer County at the Upper Salmon River, and near Stanley in the Sawtooth National Forest. No prior camping experience is required, but students should be comfortable living outdoors in mobile base camps for periods of several days. Students will investigate specific issues in-depth and present their findings at the end of the course. Same as: EARTHYSYS 13SC

CEE 12SC. Good Food, Fast Cars, Great Spaces: Connections Between Architecture, Cooking, Photography, Design. 2 Units.

Why is it that architects almost routinely share passions for cuisine, vehicles, photography, and sailing? Many chefs were trained as architects, most architects are excellent cooks and photographers, and a stunning number of architects own boats. This course will explore the key design ideas, notions of creativity, and interest in form that thread through each of these professions. The first half of the course will focus on readings and discussion about creativity and form; the second half will test a single conceptual idea through a series of projects in two or three fields. Possible field trips may include a visit to Tesla, America's Cup events in SF, Baume (2 Michelin Star restaurant in Palo Alto), IDEO, and architecture firms.

CEE 13SC. Energizing a Sustainable Future. 2 Units.

The economic advancement, social equity, and planet earth habitat of your and future generations depend in major part on preparing for sustainable supply and efficient use of energy. The objective of this course is to provide a foundation for your future scholarship and action to increase energy sustainability. We will explore three major energy activities: development of fossil and renewable resources; conversion to useful forms; and use in buildings, transportation, and industry. All are strongly influenced by the energy markets, technologies, and policies that we will also study. Our quest for a sustainable energy future will begin at Stanford's Bass Center in Washington D.C. and conclude back on the Farm. This will allow access to policy makers and major organizations along with plans for major improvements to Stanford's energy system and buildings. The course requires: query responses on the readings in advance of class sessions; participation in morning class discussions and afternoon activities with key energy players; in teams of two, analysis of a self-selected topic related to an energy market or technology; and a group course project to analyze an energy policy or proposal. It is offered for two units with Satisfactory/No Credit grading. Students cover their own travel to the Bass center and arrive by 5 p.m. on September 6. The program will cover your travel to campus on September 16. Students planning to observe religious holidays during September Studies should check with the instructor to work through potential conflicts.

CEE 13SI. Introduction to Architectural Modeling. 2 Units.

Architecture is half design, half communicating design. In this course, students will gain the skills necessary to communicate architectural concepts through 3D modeling. From foam core to basswood to less known materials, students will gain a tactile understanding of material qualities and present their study models in portfolio format. Special focus will also be placed on techniques incorporating both computer-aided drafting and physical modeling through the laser cutter machine. No prior experience is necessary, but students will be expected to work in the studio outside of class time. Limited enrollment. Please contact Derek Ouyang at derekouyang@gmail.com for more info.. Class meets in PRL 36.

CEE 14SC. When Engineers Go Sailing: the Science and Technology of America's Cup Yachts and Matches. 2 Units.

Intense competition drives technological advancement in many sports; the America's Cup sailing competition stands out as a leading venue for innovation. The 34th AC competition will take place in San Francisco Bay during September 2013, providing close proximity, great timing, and the showcasing of major new technologies to create a special learning opportunity for Sophomore College students. This seminar will introduce students to engineering fundamentals, computer-based modeling and design, and advanced materials, using America's Cup technology as examples. The course will include guest speakers from America's Cup teams, visits to facilities, and field trips to matches. Students will complete readings and queries prior to the class sessions; class and laboratory exercises for sailing, modeling, and materials testing; group observation and analysis of America's Cup races; and group course projects analyzing a part of the technology for an America's Cup yacht. The course will also explore how students can apply engineering fundamentals, modeling techniques, advanced materials, and processes of innovation to other activities and industries. The seminar is offered for 2 units with S/NC grading.

CEE 16SC. Energy in the Southwest. 2 Units.

We will examine the technical, social, and political issues surrounding energy management and use in the West, using California, Nevada, and Arizona as our field laboratory. Students will explore a number of energy narratives, such as: Who supplies our energy and from what sources? How is it transported? Who distributes to users and how do they do it? Water for energy and energy for water; two intertwined natural resources; Meeting carbon emission goals by 2020; Conflicts between desert ecosystems and renewable energy development. We will place particular emphasis on renewable energy sources and the water-energy nexus, a critically important issue for the arid and semi-arid southwest. Central to the course will be field exploration in northern and southern California, as well as neighboring areas in Arizona and Nevada, to tour sites such as wind and solar facilities, geothermal plants, hydropower pumped storage, desalination plants, water pumping stations, a liquid fuels distribution operations center, and California's Independent System Operator. Students will have the opportunity to meet with community members and with national, state, and regional authorities to discuss Western energy challenges and viable solutions. We will also take advantage of Stanford's own energy systems with site visits to the new energy facilities. Woven throughout will be an introduction to the basics of energy and energy politics through discussions, lectures, and with the help of guest speakers. Over the summer, students will be responsible for assigned readings, online interactive materials, and relevant recent news articles. Participants will return to Stanford by September 19. Travel expenses during the course will be provided (except incidentals) by the Bill Lane Center for the American West and Sophomore College.

Same as: ENERGY 11SC, POLISCI 25SC

CEE 20. Elementary Surveying. 0-60 Units.

.

CEE 29N. Managing Natural Disaster Risk. 3 Units.

Natural disasters arise from the interaction of natural processes, such as earthquakes or floods, with human development that suffers safety-related and economic losses. We cannot predict exactly when those disasters will occur, or prevent them entirely, but we have a number of engineering and policy options that can reduce the impacts of such events.

CEE 31. Accessing Architecture Through Drawing. 4 Units.

Preference to Architectural Design and CEE majors; others by consent of instructor. Drawing architecture to probe the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

CEE 31B. Architectural Drawing and Rendering. 4 Units.

Course will expand on basics taught in CEE 31. Refresher on the basics of plans, sections, elevations, axonometrics, and perspectives. Students will be encouraged in conceptual thinking and translating concepts into Architecture. Introduction of computers for renderings and drafting as well as expanding on early model building. Field trip.

CEE 31Q. Accessing Architecture Through Drawing. 4 Units.

Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

CEE 32A. Psychology of Architecture. 3 Units.

This course argues that architecture often neglects the interdisciplinary investigation of our internal psychological experience and the way it impacts our creation of space. How does our inner life influence external design? How are we impacted emotionally, physically, psychologically by the spaces we inhabit day to day? How might we intentionally imbue personal and public spaces with specific emotions? This seminar serves as a call to action for students interested in approaching architecture with a holistic understanding of the emotional impact of space. Sample topics addressed will include: conscious vs. unconscious design; the ego of architecture; psycho-spatial perspectives; ideas of home; integral/holistic architecture; phenomenology of inner and outer spaces; exploring archetypal architecture; and translating emotion through environment.

CEE 32B. Design Theory. 4 Units.

This seminar focuses on the key themes, histories, and methods of architectural theory -- a form of architectural practice that establishes the aims and philosophies of architecture. Architectural theory is primarily written, but it also incorporates drawing, photography, film, and other media. One of the distinctive features of modern and contemporary architecture is its pronounced use of theory to articulate its aims. One might argue that modern architecture is modern because of its incorporation of theory. This course focuses on those early-modern, modern, and late-modern writings that have been and remain entangled with contemporary architectural thought and design practice. Rather than examine the development of modern architectural theory chronologically, it is explored architectural through thematic topics. These themes enable the student to understand how certain architectural theoretical concepts endure, are transformed, and can be furthered through his/her own explorations.

CEE 32D. Construction: The Writing of Architecture. 4 Units.

This seminar focuses on the construction of architectural writing. The class will analyze this idea through four topics: formal analysis, manifesto, translation, and preservation. The seminar is divided into two-week modules with each of these four concepts functioning as organizing principles. The first week of each module will involve familiarizing the seminar with both the terms and rhetorical tactics of the given theme by reading and analyzing specific texts and completing a short written analysis (1-2 pages). The second week will expand upon this foundation and involve further analysis in addition to each student writing a short paper (3-4 pages) drawing on the examples discussed and their own experiences in the discipline. The goal of the seminar is for each student to be able to analyze how an architectural writing is constructed and to develop his/her skills in the construction of his/her own writing.

CEE 32F. Light, Color, and Space. 3 Units.

This course explores color and light as a medium for spatial perception. Through the introduction of color theory, color mixing, and light analyses, students will learn to see and use light and color fields as a way to shape experience. We will examine the work of a range of architects and artist who use light and color to expand the field of perception (i.e. Rothko, Turrell, Eliasson, Holl, Aalto).

CEE 32G. Architecture Since 1900. 4 Units.

Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.

Same as: ARTHIST 142

CEE 32H. Transparent Structures: Design-Build Seminar Proposal. 2 Units.

This design-build seminar investigates the use of glass as a structural system and spatial medium. We will examine the physical and visual properties of engineered high-strength glass, and develop structural systems and spatial configurations that will expand our understanding of what glass can do. The seminar will culminate in a full-scale installation of the developed design on campus. The experiential objectives of the seminar draw upon Colin Rowe's definition of phenomenal transparency as a unique spatial order, in which the perception of space is fluctuating and in constant activity. The installation will act as a filter through which the surrounding context will be redefined, resulting in a complex spatial experience.

CEE 32Q. Place: Making Space Now. 3 Units.

This seminar argues that architects are ultimately "placemakers," and questions what that means in the contemporary world. Part I investigates the meaning of the word "place." Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from "home" to "the city." What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be "out of place"? What sense of place does a nomad have, and how is this represented? What are the "non-places" and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary space. The role of digital and cyber technologies, the construction of locality in a global world, and the in-between places that result from a world in flux are topics discussed in this section of the seminar. Learning goals: Specific goals include close reading of texts, understanding of philosophical thinking and writing, argument under uncertainty, and developed concepts of place, space and architecture.

CEE 44Q. Critical Thinking and Career Skills. 3 Units.

Factors required for successful careers. Guest speakers. Case studies. Participation in real world corporate interviews, testing and reviews conducted by industry trainers. Limited enrollment.

CEE 46Q. Fail Your Way to Success. 3 Units.

Preference to sophomores. How to turn failures into successes; cases include minor personal failures and devastating engineering disasters. How personalities and willingness to take risks influence the way students approach problems. Field trips, case studies, and guest speakers applied to students day-to-day interactions and future careers. Goal is to redefine what it means to fail.

CEE 48N. Managing Complex, Global Projects. 3 Units.

This freshman seminar highlights the challenges associated with planning and executing complex and challenging global projects in private, governmental and nonprofit/NGO settings. Covers organization and project management theory, methods, and tools to optimize the design of work processes and organizations to enhance complex, global project outcomes. Student teams model and analyze the work process and organization of a real-world project team engaged in a challenging local or global project.

CEE 50N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended.

Same as: EARTHSYS 49N, EESS 49N

CEE 63. Weather and Storms. 3 Units.

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Nintilde;o, la Nintilde;a, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. Same as: CEE 263C

CEE 64. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 263D

CEE 70. Environmental Science and Technology. 3 Units.

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems.

Same as: ENGR 90

CEE 70N. Water, Public Health, and Engineering. 3 Units.

Preference to sophomores. Linkages between water, wastewater and public health, with an emphasis on engineering interventions. Topics include the history of water and wastewater infrastructure development in the U.S. and Europe; evolution of epidemiological approaches for water-related health challenges; biological and chemical contaminants in water and wastewater and their management; and current trends and challenges in access to water and sanitation around the world. Identifying ways in which freshwater contributes to human health; exposure routes for water- and sanitation-illness. Classifying illnesses by pathogen type and their geographic distribution. Identifying the health and economic consequences of water- and sanitation-related illnesses; costs and benefits of curative and preventative interventions. Interpreting data related to epidemiological and environmental concepts. No previous experience in engineering is required.

CEE 73. Foundations of Water Science and Engineering. 3 Units.

Water physics and chemistry shape our world. Without water there is no life, no biology. This class provides an introduction to these basic sciences as applied to water and considers how they interact to give water its critical role in the processes that sustain, and sometimes poison, our planet. We will explore both the natural world and the engineered systems critical to civilization.

CEE 100. Managing Sustainable Building Projects. 4 Units.

Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; lifecycle assessment methods; individual writing assignment related to a real world project.

CEE 101A. Mechanics of Materials. 4 Units.

Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinate and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisites: ENGR 14.

CEE 101B. Mechanics of Fluids. 4 Units.

Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, estuaries, and wind turbines. Prerequisites: E14, PHYSICS 41 (formerly 53), MATH 51.

CEE 101C. Geotechnical Engineering. 3-4 Units.

Introduction to the principles of soil mechanics. Soil classification, shear strength and stress-strain behavior of soils, consolidation theory, analysis and design of earth retaining structures, introduction to shallow and deep foundation design, slope stability. Lab projects. Prerequisite: ENGR 14. Recommended: 101A.

CEE 101D. Computations in Civil and Environmental Engineering. 3 Units.

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 201D

CEE 101S. Science & Engineering Problem-Solving with MatLab.. 3 Units.

Introduction to the application of MATLAB to an array of engineering systems. Emphasis on computational and visualization methods in the design, modeling and analysis of engineering problems.

Same as: CEE 201S

CEE 102. Legal Principles in Design, Construction, and Project Delivery. 3 Units.

Introduction to the key legal principles affecting design, construction and the delivery of infrastructure projects. The course begins with an introduction to the structure of law, including principles of contract, negligence, professional responsibility, intellectual property, land use and environmental law, then draws on these concepts to examine current and developing means of project delivery.

CEE 107S. Energy Resources: Fuels and Tools. 3 Units.

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHSYS 103. Same as: CEE 207S

CEE 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units.

Same as: EARTHSYS 109, ENVRINST 109

CEE 110A. Building Information Modeling and Short Course. 2-4 Units.

Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment /instructor consent required.

Same as: CEE 210A

CEE 112A. Industry Applications of Virtual Design & Construction. 2-4 Units.

Building upon the concept of VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

CEE 112B. Industry Applications of Virtual Design & Construction. 2-4 Units.

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A).

Same as: CEE 212B

CEE 112C. Industry Applications of Virtual Design & Construction. 2-4 Units.

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval.

Same as: CEE 212C

CEE 112D. Industry Applications of Virtual Design and Construction. 2-4 Units.

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval.

Same as: CEE 212D

CEE 113. Patterns of Sustainability. 1-4 Unit.

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 213

CEE 115. Goals and Methods of Sustainable Building Projects. 3 Units.

(Graduate students register for 215.) Goals related to sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, and economic and social sustainability. Methods to integrate these goals and enhance the economic, ecological, and equitable value of building projects. Industry and academic rating systems, project case studies, guest lecturers, and group project.

Same as: CEE 215

CEE 120A. Building Information Modeling Workshop. 2-4 Units.

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 220A

CEE 120B. Building Information Modeling Workshop. 2-4 Units.

This course builds upon the Building Information Model concepts introduced in 110A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. The course covers the essential physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance.

Same as: CEE 220B

CEE 120C. Parametric Design and Optimization. 2-4 Units.

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling-Design exploration using parametric modeling platforms (Revit/FormIt, Rhino)-Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript)-Single- and multi-dimensional optimization techniques and guidance strategies.

Same as: CEE 220C

CEE 120S. Building Information Modeling Special Study. 2-4 Units.
Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis.
Same as: CEE 220S

CEE 122A. Computer Integrated Architecture/Engineering/Construction. 2 Units.
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222A. Apprentices participate in all activities of the AEC team, including the goals, objectives, constraints, tasks, and process of a crossdisciplinary global AEC teamwork in the concept development phase of a comprehensive building project. Prerequisite: consent of instructor.
Same as: A/E/C

CEE 122B. Computer Integrated A/E/C. 2 Units.
Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222B. Project activity focuses on modeling, simulation, life-cycle cost, and cost benefit analysis in the project development phase. Prerequisite: CEE 122A.

CEE 124. Sustainable Development Studio. 1-5 Unit.
(Graduate students register for 224A.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

CEE 127A. Energy System Design in Eastern Europe. 2 Units.
Field-based seminar to evaluate and design future energy systems for Eastern Europe. 14-day field trip during early September 2013. Site visits, fact-finding, stakeholder meetings, presentation to policy makers. One unit for field trip; one unit for project deliverable. Prerequisite: consent of instructor.
Same as: CEE 227A

CEE 127E. Infrastructure, Disruptive Technologies and Entrepreneurship.. 1 Unit.
Silicon Valley provides a dynamic environment perfectly suited for developing the disruptive technologies that are changing the faces of today's mainstream infrastructure systems and essential service industries. This course will provide an overview of the most exciting technologies emerging from Silicon Valley right now and the potential that exists to disrupt mainstream transportation, electricity, intelligence gathering, and banking infrastructure systems that were dominant in the 20th Century. Guest speakers include prominent CEOs, visionaries, investors, and serial entrepreneurs who are building game changing companies.
Same as: CEE 227E

CEE 129. Climate Change Adaptation for Coastal Cities: Engineering and Policy for a Sustainable Future. 3 Units.
How will climate change affect cities and how will cities respond? Includes an exploration of the threat of climate change to coastal cities worldwide and the potential engineering and policy responses. Understanding of the nature of the challenge of city adaptation planning in terms of earth systems, infrastructure development, urban planning, and social systems. Consideration of economic, social, legal and environmental implications. Student projects will contribute to on-going research. Interdisciplinary. Guest speakers, case studies, and readings.
Same as: CEE 229

CEE 129S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.
How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See www.groupspaces.com/seaports2100.
Same as: CEE 229S

CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process. 4 Units.
Preference to Architectural Design majors; others by consent of instructor. Projects investigate conceptual approaches to the design of key architectural elements, such as wall and roof. Functional and structural considerations. Focus is on constructing 3-D models in a range of materials; 3-D computer modeling. Students keep a graphic account of the evolution of their design process. Final project entails design of a simple structure. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.

CEE 131. Architectural Design Process. 4 Units.
Preference to Architectural Design and CEE majors; others by consent of instructor. Issues in the architectural profession including programming, site analysis, design process, and professional practice concerns. Building/landscape design case study project using architectural graphics and models. Limited enrollment.

CEE 131A. Professional Practice: Mixed-Use Design in an Urban Setting. 4 Units.
The delivery of a successful building design program involves unique collaboration between architect and client. This course will endeavor to teach the skills necessary for a designer to identify, evaluate, conceptualize and fully document a complex mixed-use urban design. Students will complete the course with a detailed knowledge of the consultants, engineers and other professionals needed for a complete program. Course deliverables will include three short assignments and a final project consisting of basic schematic drawings for the selected project. Guest presenters will cover topics of interest. Lectures, discussions, in-class studio-work and an oral presentation. Pre-requisite: CEE 130.

CEE 131B. Financial Management of Sustainable Urban Systems. 3 Units.
Focus is on financial management of sustainable urban systems. The course will study different kinds of financial services available, the management of financial resources, and relationships to financial service providers. The course will also study how financial services and relationships to financial service providers can be used to accomplish construction management, energy, and architecture work in sustainable urban systems. The learning outcome is an understanding of how financial services can be used in development of sustainable urban systems. The course work is structured so that there are three modules: 1) general knowledge of financial management, 2) in-depth application in construction management, energy, or architecture, and 3) comparison of similarities and differences in-between the in-depth applications. Students will focus on one of the in-depth applications in a group work, and present the result of this application to students that make other applications. A key learning aspect is the understanding of how finance is used in construction management, energy, and architecture work. Students should be able to show the value, financial viability, and risk management of sustainable urban system development in construction management, energy, and architecture. Students should be able to finance construction management, energy, and architecture work. Readings include applications of finance and management to construction management, energy, or architecture. Guest speakers include developers, financial managers at construction firms, managers at energy firms, construction managers.

CEE 132. Interplay of Architecture and Engineering. 4 Units.

The range of requirements that drive a building's design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work.

Same as: CEE 232

CEE 132Q. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.

This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not be limited to: Koolhaas's early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation.

Same as: ARTHIST 262

CEE 133. Advanced Rhinoceros Modeling and Workflows. 3 Units.

Rhinoceros is a powerful 3D modeling program that provides great control and accuracy, and also allows great flexibility and creativity in the design process. Rhinoceros is used by many top-level architecture firms because it can be customized, it can be integrated with many other design programs, and has the potential to create unique and detailed forms. The course will concentrate on introducing students to the Rhinoceros platform in great depth so that they may comfortably utilize the program for any type of design project. In addition to basic and advanced modeling skills in Rhinoceros, the course will explore an integrated workflow between design environments. Comprehension will be expanded from simple 3D modeling to a process that optimizes the strengths of different design platforms. Students will study and implement an integrated workflow that connects powerful conceptual modeling with building information models in order to produce a quality design product ready for documentation and presentation. Same as: CEE 233

CEE 133F. Principles of Freehand Drawing. 3 Units.

Traditional methods of depicting shape, form, and surface are applied to the discipline of architectural drawing. Students develop abilities to observe visual phenomenon analytically and translate subjects onto a two-dimensional surface in a variety of media. Drawing techniques such as modeling form, shading, rendering materials, and articulating landscaping are explored. Linear perspective exercises provide a foundation for the construction of drawings to illustrate cohesive design proposals. Step-by-step constructions, quick freehand sketches from slides, and on-location studies.

CEE 134A. Site and Space. 4 Units.

Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring the Stanford Green Dorm project. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Enrollment limited to 14. Prerequisites: 31 or 31Q, and 110 and 130.

CEE 134B. Intermediate Arch Studio. 4 Units.

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit.

Same as: CEE 234B

CEE 135. Parametric Modeling and Optimization. 4 Units.

This course introduces and explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. The course covers several parametric design modeling platforms and scripting environments that enable rapid generation and evaluation of parametrically-driven design alternatives. Topics include: Parametric modeling platforms ((Revit/FormIt, Rhino, Digital Project); Scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single-goal optimization; and Multi-dimensional optimization techniques and selection/guidance strategies.

CEE 135A. Parametric Modeling and Optimization. 4 Units.

This course introduces and explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. The course covers several parametric design modeling platforms and scripting environments that enable rapid generation and evaluation of parametrically-driven design alternatives.

CEE 136. Green Architecture. 4 Units.

Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring green design and green design processes. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Prerequisites: 31 or 31Q, and 110 and 130. Enrollment is limited to 14 (or possibly 16) students. Please do not enroll in the class until after attending the first class meeting. If the number of students interested in taking the class is greater than 14 (or possibly 16), space will be assigned based on requirements for graduation.

Same as: CEE 236

CEE 137A. Form and Structure. 4 Units.

Preference to Architectural Design and CEE majors; others by consent of instructor. Intermediate architectural studio. The integration of structure, form, site, and program. Emphasis is on developing a schematic design in the context of site topography and structural systems. Limited enrollment. Prerequisites: 31 or 31Q, and 130.

CEE 137B. Advanced Architecture Studio. 5 Units.

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design.

Same as: CEE 237B

CEE 138A. Contemporary Architecture: Materials, Structures, and Innovations. 3 Units.

Structural and material bases for contemporary architecture; its roots in modern innovations. Recent technological developments; new materials and structural expressions. Sources include specific buildings and construction techniques. How to think critically about design strategies, material properties, and structural techniques.

CEE 139. Design Portfolio Methods. 2 Units.

Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment. Prerequisites: two Art or Architecture studio courses, or consent of instructor.

CEE 140. Field Surveying Laboratory. 3 Units.

Graduate students register for 225. Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools ; introduction to the newest generation of digital measuring, positioning, and mapping tools. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions.

Same as: CEE 225

CEE 141A. Infrastructure Project Development. 3 Units.

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements.

Same as: CEE 241A

CEE 141B. Infrastructure Project Delivery. 3 Units.

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities ,and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals.

Same as: CEE 241B

CEE 141C. Global Infrastructure Projects Seminar. 1-2 Unit.

Real infrastructure projects presented by industry guest speakers. Energy, transportation, water, public facilities and communications projects are featured. Course provides comparisons of project development and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Field trips to local projects.

Same as: CEE 241C

CEE 142A. Negotiating Sustainable Development. 3 Units.

How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

Same as: CEE 242A, EARTH SYS 142A, EARTH SYS 242A

CEE 144. Design and Innovation for the Circular Economy. 3 Units.

The last 150 years of our industrial evolution have been material and energy intensive. The linear model of production and consumption manufactures goods from raw materials, wells and uses them, and then discards the products as waste. Circular economy provides a framework for systems-level redesign. It builds on schools of thought including regenerative design, performance economy industrial ecology, blue economy, biomimicry, and cradle to cradle. This course introduces the concepts of the circular economy and applies them to case studies of consumer products, household goods, and fixed assets. nStudents will conduct independent projects on circular economy. Students may work alone or in small teams under the guidance of the teaching team and various collaborators worldwide. Class is limited to 14 students. All disciplines are welcome. This class fulfills the Writing & Rhetoric 2 requirement. Prerequisite: PWR 1.

CEE 146A. Engineering Economy. 3 Units.

Fundamentals of financial and economic analysis. Engineering Economy Principles. Interest rates, Present value, annual cash flow, internal rate of return, benefit-cost analysis. Economic Life, Life Cycle Costs. Replacement analysis. Project Selection - Mutually Exclusive Alternatives, Multiple Objective Criteria. Depreciation. Inflation and Taxes. Sensitivity and risk analysis. Uncertainty and Probability. Decision Trees. Capital Budgeting. For CEE 146A: enrollment is limited to juniors and seniors. Attendance to the first class is mandatory (for both CEE 146A and CEE 246A).

Same as: CEE 246A

CEE 147. Cases in Personality, Leadership, and Negotiation. 3 Units.

Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors.

Same as: CEE 247

CEE 151. Negotiation. 3 Units.

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

Same as: CEE 251, EARTH SCI 251

CEE 154. Cases in Estimating Costs. 3 Units.

Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent or instructor and application downloaded from CourseWork prior to start of class.

Same as: CEE 254

CEE 155. Introduction to Sensing Networks for CEE. 3-4 Units.

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment.

Same as: CEE 255

CEE 156. Building Systems. 4 Units.

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

Same as: CEE 256

CEE 160. Mechanics of Fluids Laboratory. 2 Units.

Lab experiments illustrate conservation principles and flows of real fluids, analysis of error and modeling of simple fluid systems. Corequisite: 101B.

CEE 161A. Rivers, Streams, and Canals. 3-4 Units.

Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B.

Same as: CEE 264A

CEE 164. Introduction to Physical Oceanography. 4 Units.

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 262D, EARTHYSYS 164, EESS 148

CEE 165C. Water Resources Management. 3 Units.

Examination of the basic principles of surface and ground water resources management in the context of increasing water scarcity and uncertainty due to climate change and other factors. Specific topics include reservoir, river basin and aquifer management, conjunctive use of surface and ground water, and treated wastewater reuse. Special emphasis is placed on demand management through conservation, increased water use efficiency and economic measures. Besides the technical aspects of water management, an overview of its legal and institutional framework is provided.

Same as: CEE 265C

CEE 166A. Watersheds and Wetlands. 3 Units.

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg).

Same as: CEE 266A

CEE 166B. Floods and Droughts, Dams and Aqueducts. 3 Units.

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg).

Same as: CEE 266B

CEE 166D. Water Resources and Water Hazards Field Trips. 2 Units.

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 266D

CEE 169. Environmental and Water Resources Engineering Design. 5 Units.

Application of fluid mechanics, hydrology, water resources, environmental sciences, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B.

CEE 171. Environmental Planning Methods. 3 Units.

For juniors and seniors. Use of microeconomics and mathematical optimization theory in the design of environmental regulatory programs; tradeoffs between equity and efficiency in designing regulations; techniques for predicting adverse effects in environmental impact assessments; information disclosure requirements; and voluntary compliance of firms with international regulating norms. Prerequisites: MATH 51. Recommended: 70.

CEE 171E. Environmental Challenges and Policies in Europe. 3 Units.

Current and future environmental challenges in Europe and related public policies in the European Union (EU). State of the European environment and human development, European environmental policy-making (multi-level ecological governance), global ecological role of the EU. Specific challenges include climate change adaptation, mitigation (carbon taxes, carbon market), climate change and European cities, biodiversity and ecosystems preservation (economics of biodiversity), energy management. Specific policies include environmental justice (environmental inequalities), human development and environmental sustainability indicators (beyond GDP) and absolute and relative decoupling (carbon intensity and resource productivity improvement). Open to undergraduates (freshmen, sophomores, juniors and seniors) as CEE 171E.

Same as: CEE 271E

CEE 171F. New Indicators of Well-Being and Sustainability. 3 Units.

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper.

Same as: CEE 271F

CEE 172. Air Quality Management. 3 Units.

Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51.

CEE 172A. Indoor Air Quality. 2-3 Units.

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi.

Recommended: 172 or 278A.

Same as: CEE 278C

CEE 172S. Green House Gas Mitigation. 1-3 Unit.

This course will introduce the main concepts of greenhouse gas (GHG) emissions measurement and management, and it will explore the main mitigation options for reducing emissions or sequestering carbon dioxide. It will address technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. The course explores policy options, carbon trading and business strategies for GHG mitigation.

Same as: CEE 272S

CEE 173A. Energy Resources. 3-5 Units.

Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. CEE 173 is offered for 4-5 units; ES 103 is offered for 4-5 units; CEE 207A is offered for 3-5 units: instructor approval required for 3-unit option.

Same as: CEE 207A, EARTHSYS 103

CEE 173C. Introduction to Membrane Technology for Water / Wastewater Treatment. 3 Units.

This course equips students with a basic understanding of membrane processes and their application in the water industry. Topics covered include: introduction to membrane separation, reverse osmosis, nanofiltration, membrane characterization techniques (XPS, TEM, ATR-FTIR, streaming potential), mass transport phenomena (concentration polarization, solution-diffusion, pore-flow) fouling processes (scaling, biofouling), rejection of salts and trace organics, brine disposal, system design, energy and cost considerations of membrane treatment, pre- and post-treatment, case studies. The course includes a field trip to a reverse osmosis pilot plant and evaluation of field data.

Same as: CEE 273C

CEE 174A. Providing Safe Water for the Developing and Developed World. 3 Units.

This course will cover basic hydraulics and the fundamental processes used to provide and control water, and will introduce the basics of engineering design. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. The course should enable students to work competently in environmental engineering firms or on non-profit projects in the developing world such as Engineers without Borders. Pre-requisite: Chem31B/X.

CEE 174B. Wastewater Treatment: From Disposal to Resource Recovery. 3 Units.

This course builds upon CEE 174A, covering basic hydraulics and the fundamental processes used to treat wastewater. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. After covering conventional processes, the class addresses newer processes used to meet emerging treatment objectives, including nutrient removal, composting of biosolids and recycling of wastewater for beneficial uses, including potable reuse. Pre-requisites: CEE 174A.

CEE 175A. California Coast: Science, Policy, and Law. 3-4 Units.

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

Same as: CEE 275A, EARTHSYS 175, EARTHSYS 275

CEE 175S. Environmental Entrepreneurship and Innovation. 2 Units.

Our current infrastructure for provision of critical services-clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests.

Same as: CEE 275S

CEE 176A. Energy Efficient Buildings. 3-4 Units.

Analysis and design. Thermal analysis of building envelope, heating and cooling requirements, HVAC, and building integrated PV systems. Emphasis is on residential passive solar design and solar water heating. Lab.

CEE 176B. Electric Power: Renewables and Efficiency. 3-4 Units.

Renewable and efficient electric power systems emphasizing analysis and sizing of photovoltaic arrays and wind turbines. Basic electric power generation, transmission and distribution, distributed generation, combined heat and power, fuel cells. End use demand, including lighting and motors. Lab.

CEE 176C. Energy Storage Integration - Vehicles, Renewables, and the Grid. 3-4 Units.

This course will describe the background on existing energy storage solutions being used on the electric grid and in vehicles with a primary focus on batteries and electrochemical storage. It will discuss the operating characteristics, cost and efficiency of these technologies and how tradeoff decisions can be made. The course will describe the system-level integration of new storage technologies, including chargers, inverters, battery management systems and controls, into the existing vehicle and grid infrastructure. Specific focus will be given to the integration of electric vehicle charging combined with demand-side management, scheduled renewable energy absorption and local grid balancing. This course may be taken for 3 units; or 4 units if taken with the optional laboratory session.

CEE 176D. Advanced Topics in Integrated Demand Side Management. 2 Units.

The American economy is highly inefficient: between 14-39% of the energy inputs into the US economy are ultimately used to create goods and services, while the remaining energy is lost in energy conversion and other inefficiencies. While this inefficiency results in a heavy social, environmental, and economic burden on both individuals and society as a whole, it also presents an tremendous opportunity to re-imagine how we use and manage our energy consumption. Recent technological advances, including the rise of information technology, sensors, controls, are dramatically re-shaping how energy is utilized, controlled, stored and integrated with traditional supply side resources. These emerging technologies and energy management techniques provide some of the greatest opportunities to improve the efficiency of our economy and address climate change. This course begins with an overview of demand side management (the application of efficiency, demand reduction, distributed generation, storage, and other resource to shape energy demand) practice to date and a detailed look at how energy is used throughout each sector of the economy. Based on this starting point, the course explores emerging technologies and optimization strategies that enable greater insight and control of energy use both at the device and aggregate level, including integration with renewables, storage, and electric vehicles. It then quantifies and monetizes these optimization strategies into revenue streams to both utility and end-user, and culminates in a discussion of how the intersection of these new technologies, optimization strategies, and revenue streams can help de-carbonize the American economy and shape energy use and the utility of the future. Prerequisites: This course is intended for students who wish to gain an understanding of how energy efficiency and demand management occurs in practice. While there are no formal prerequisites, it is expected that students will have familiarity with energy resources and building energy end uses, such as topics covered in CEE 176A/276A, CEE 173A/207A, CEE 156/256, and CEE226E.

Same as: CEE 276C

CEE 176F. Energy Systems Field Trips: China Energy Systems. 1-2 Unit.

Energy resources and policies in use and under development in China. 12-day field trip to China during Spring Break. One unit for seminar and readings; one unit for field trip. Tuesday section is required for all students, Thursday section is also required for students attending the field trip. Prerequisite: consent of instructor for field trip. Same as: CEE 276F

CEE 176S. Instrumental Analysis of Emerging Contaminants in the Environment. 3 Units.

Introduction to the occurrence and behavior of trace organic compounds in the environment and focus on research approaches to investigate these compounds. Principles of analytical techniques and experimental approaches to detect and monitor trace organic contaminants in the environment will be examined. Students will critically review published original research and prepare and an original research project proposal. Same as: CEE 276S

CEE 177. Aquatic Chemistry and Biology. 4 Units.

Introduction to chemical and biological processes in the aqueous environment. Basic aqueous equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31.

CEE 177K. Environmental Information Engineering. 2-3 Units.

The role of information technology (IT) in enabling mankind to understand its impact on the planet and balance that with improving the quality of life of a rapidly growing population. After surveying the field, the course will examine the specific impacts that IT may have, by reference to case studies from energy, transportation, water and urban design fields. While some specific information technologies will be examined, this will be from a business perspective - detailed technical knowledge of IT not required. Same as: CEE 277K

CEE 177L. Smart Cities & Communities. 2-3 Units.

The role of information technology (IT) in enabling mankind to improve the operations and sustainability of cities and communities. Review of what a "smarter" city of community might be, the role of IT in enabling them to become "smarter" (including what IT cannot achieve). Case studies on water, energy, transportation urban design and resilience. Same as: CEE 277L

CEE 177S. Design for a Sustainable World. 1-5 Unit.

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff). Same as: CEE 277S

CEE 177X. Current Topics in Sustainable Engineering. 1-3 Unit.

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. Instructor consent required. Same as: CEE 277X

CEE 178. Introduction to Human Exposure Analysis. 3 Units.

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission. Same as: CEE 276

CEE 179A. Water Chemistry Laboratory. 3 Units.

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques. Same as: CEE 273A

CEE 179C. Environmental Engineering Design. 5 Units.

Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. Enrollment limited; preference to seniors in Civil and Environmental Engineering.

CEE 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings. Same as: CEE 279S, EARTHSYS 179S, EESS 179S

CEE 179X. Sustainable Urban System Seminar. 1 Unit.

SYSTEM OF SYSTEMS: Cities are based on several different systems; infrastructures, networks and environments. The effectiveness and efficiency of these systems determine how cities work and how successful a city is at delivering critical services. These systems are not discrete and must be considered holistically as well as individually. These core systems are interconnected and must be treated as such. Understanding one system and making it work better means that cities must comprehend the larger context and how the various systems are interconnected. This seminar series will explore various aspects of these critical systems and how we can make them more resilient and robust, to meet future challenges. Guest speakers, discussion and critical readings. Same as: CEE 279X

CEE 180. Structural Analysis. 4 Units.

Analysis of beams, trusses, frames; method of indeterminate analysis by consistent displacement, least work, superposition equations, moment distribution. Introduction to matrix methods and computer methods of structural analysis. Prerequisite: 101A and ENGR 14.

CEE 181. Design of Steel Structures. 4 Units.

Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Prerequisite: 180.

CEE 182. Design of Reinforced Concrete Structures. 3-4 Units.

Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180.

CEE 183. Integrated Civil Engineering Design Project. 4 Units.

Studio format. Design concepts for civil engineering facilities from schematic design through construction, taking into account sustainable engineering issues. Design exercises culminating in the design of a civil engineering facility, emphasizing structural systems and materials and integration with construction and other project requirements. Prerequisites: CEE 180, 181, 182; civil engineering major; architectural design major with instructor consent.

CEE 195. Fundamentals of Structural Geology. 3 Units.

Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB.

Prerequisites: GES 1, MATH 51.

Same as: GES 111

CEE 196. Engineering Geology and Global Change. 3 Units.

The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GES 1 or consent of instructor.

Same as: GES 115

CEE 198. Directed Reading or Special Studies in Civil Engineering. 1-4 Unit.

Written report or oral presentation required. Students must obtain a faculty sponsor.

CEE 199. Undergraduate Research in Civil and Environmental Engineering. 1-4 Unit.

Written report or oral presentation required. Students must obtain a faculty sponsor.

CEE 199A. Special Projects in Architecture. 1-4 Unit.

Faculty-directed study or internship. May be repeated for credit.

Prerequisite: consent of instructor.

CEE 199B. Directed Studies in Architecture. 1-4 Unit.

Projects may include studio-mentoring activities, directed reading and writing on topics in the history and theory of architectural design, or investigations into design methodologies.

CEE 199E. Outreach and Mentoring Program Development in CEE. 1-2 Unit.

Open to undergraduates who are declared majors in Civil Engineering, Environmental Engineering, Atmosphere/Energy, and Architectural Design. Will brainstorm and develop an innovative curriculum and engaging activities for CEE 10 (Intro. to the Civil & Environmental Engineering Professions).

CEE 199H. Undergraduate Honors Thesis. 2-3 Units.

For students who have declared the Civil Engineering B.S. honors major and have obtained approval of a topic for research under the guidance of a CEE faculty adviser. Letter grade only. Written thesis or oral presentation required. (Staff).

CEE 199L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.

Prerequisite: Consent of Instructor.

CEE 200A. Teaching of Civil and Environmental Engineering. 1 Unit.

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A. Aut, 200B. Win, 200C. Spr.

CEE 200B. Teaching of Civil and Environmental Engineering. 1 Unit.

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

CEE 200C. Teaching of Civil and Environmental Engineering. 1 Unit.

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

CEE 201D. Computations in Civil and Environmental Engineering. 3 Units.

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 101D

CEE 201S. Science & Engineering Problem-Solving with MatLab.. 3 Units.

Introduction to the application of MATLAB to an array of engineering systems. Emphasis on computational and visualization methods in the design, modeling and analysis of engineering problems.

Same as: CEE 101S

CEE 202. Construction Law and Claims. 3 Units.

Concepts include the preparation and analysis of construction claims, cost overrun and schedule delay analysis, general legal principles, contracts, integrated project delivery, public private partnerships and the resolution of construction disputes through ADR and litigation. Requires attendance of the ten weeks of Monday classes (1/6/14 - 3/10/14) and the first five weeks of Tuesday classes (1/7/14 - 2/4/14).

CEE 203. Probabilistic Models in Civil Engineering. 3-4 Units.

Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models used in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression.

CEE 204. Structural Reliability. 3-4 Units.

Procedures for evaluating the safety of structural components and systems. First- and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent.

CEE 205A. Structural Materials Testing and Simulation. 3-4 Units.

Hands-on laboratory experience with fabrication, computer simulation, and experimental testing of material and small-scale structural components. Comparison of innovative and traditional structural materials. Behavior and application of high-performance fiber reinforced concrete materials for new design, fiber-reinforced polymeric materials for structural retrofits and introduction to sustainable, bio-based composites. Prerequisites: basic course in reinforced concrete design CEE 182 or equivalent.

CEE 205B. Advanced Topics in Structural Concrete. 3 Units.

Concepts and application of strut and tie modeling including deep beams, design for torsion resistance, beam-column joints, bridge components, and post-tensioned anchor zones. Course project integrating computer simulation and physical experimentation of a structural concrete component. Prerequisites: CEE 285A or equivalent.

CEE 206. Decision Analysis for Civil and Environmental Engineers. 3 Units.

Current challenges in selecting an appropriate site, alternate design, or retrofit strategy based on environmental, economic, and social factors can be best addressed through applications of decision science. Basics of decision theory, including development of decision trees with discrete and continuous random variables, expected value decision making, utility theory value of information, and elementary multi-attribute decision making will be covered in the class. Examples will cover many areas of civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

CEE 206A. Decision Models in Civil Engineering. 2 Units.

For advanced graduate students in CEE. Applications of decision science to address current challenges in selecting an appropriate site and appropriate design or retrofit strategy based on environmental, economic, and social factors. Examples from everyday civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

CEE 207A. Energy Resources. 3-5 Units.

Comprehensive overview of fossil and renewable energy resources and energy efficiency. Topics covered for each resource: resource abundance, location, recovery, conversion, consumption, end-uses, environmental impacts, economics, policy, and technology. Applied lectures in specific energy sectors: buildings, transportation, the electricity industry, and energy in the developing world. Required field trips to local energy facilities. Optional discussion section for extra unit. CEE 173 is offered for 4-5 units; ES 103 is offered for 4-5 units; CEE 207A is offered for 3-5 units; instructor approval required for 3-unit option.

Same as: CEE 173A, EARTHYSYS 103

CEE 207S. Energy Resources: Fuels and Tools. 3 Units.

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHYSYS 103. Same as: CEE 107S

CEE 208. Structural Health Monitoring Using Statistical Methods. 1-2 Unit.

Structural health monitoring systems, which enables us to automatically diagnose structural damage, are important to ensure safe and functional built environment. This course provides theoretical background on damage diagnosis algorithms using model-based and signal-based methods for civil structures with an emphasis on the underlying physical interpretations and their practical usage.

CEE 209. Risk Quantification and Insurance. 2 Units.

Principles of risk management along with concepts of frequency and severity and various risk measures such as probabilities of exceeding given loss level, probabilities of insolvency, and expected value of shortfall will be introduced. Various risk handling techniques will be discussed with particular emphasis on insurance. Ability to express preferences between random future gains or losses, will be presented in the context of stochastic ordering of risks. Credibility theory and generalized linear models will be used for claims predictions. Prerequisites: CEE 203 or equivalent.

CEE 210A. Building Information Modeling and Short Course. 2-4 Units.

Creation, management, and application of building information models. Process and tools available for creating 2D and 3D computer representations of building components and geometries. Organizing and operating on models to produce architectural views and construction documents, renderings and animations, and interface with analysis tools. Lab exercises, class projects. Limited enrollment /instructor consent required.

Same as: CEE 110A

CEE 212A. Industry Applications of Virtual Design & Construction. 2-4 Units.

Building upon the concept of the VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction, and Virtual Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE 112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

CEE 212B. Industry Applications of Virtual Design & Construction. 2-4 Units.

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A). Same as: CEE 112B

CEE 212C. Industry Applications of Virtual Design & Construction. 2-4 Units.

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval. Same as: CEE 112C

CEE 212D. Industry Applications of Virtual Design and Construction. 2-4 Units.

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval. Same as: CEE 112D

CEE 213. Patterns of Sustainability. 1-4 Unit.

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 113

CEE 214. Introduction to Modeling and Analysis in CEE. 3 Units.

Introduces students to modeling of products, processes and organizations in the AEC industry. Modeling and analysis purposes include support of technical, social, psychological and ethical decision making for different stakeholders. Different purposes and levels of detail for different models. CEM/DCI integrated approach to building using physical, mathematical, graphical and computer models of products, organizations and processes.

CEE 215. Goals and Methods of Sustainable Building Projects. 3 Units.

(Graduate students register for 215.) Goals related to sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, and economic and social sustainability. Methods to integrate these goals and enhance the economic, ecological, and equitable value of building projects. Industry and academic rating systems, project case studies, guest lecturers, and group project.

Same as: CEE 115

CEE 217. Renewable Energy Infrastructure. 3 Units.

Construction of renewable energy infrastructure: geothermal, solar thermal, solar photovoltaic, wind, biomass. Construction and engineering challenges and related issues and drivers for performance, cost, and environmental impact. Context of renewable energy infrastructure development including comparison of the types of renewable energy, key economic, environmental, and social contextual factors, applicability of a type of renewable energy given a context, related barriers and opportunities. Class project to plan a start-up for developing a type of energy infrastructure based on an engineering innovation.

CEE 220A. Building Information Modeling Workshop. 2-4 Units.

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 120A

CEE 220B. Building Information Modeling Workshop. 2-4 Units.

This course builds upon the Building Information Model concepts introduced in 110A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. The course covers the essential physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance.

Same as: CEE 120B

CEE 220C. Parametric Design and Optimization. 2-4 Units.

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling; Design exploration using parametric modeling platforms (Revit/ FormIt, Rhino); Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single- and multi-dimensional optimization techniques and guidance strategies.

Same as: CEE 120C

CEE 220S. Building Information Modeling Special Study. 2-4 Units.

Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis.

Same as: CEE 120S

CEE 221A. Planning Tools and Methods in the Power Sector. 3-4 Units.

This course covers the planning methods most commonly used in the power sector today. It covers both the fundamental methods used and their applications to electricity generation, transmission and distribution planning, integrated resource planning using both energy efficiency and renewable resources as well as utility finance and ratemaking. The methods covered will include forecasting (time series, regression and the use of markets), resource assessment (including energy efficiency and demand-side management) optimization (in power markets operation and in expansion planning) and the processes used in decision-making.

CEE 222A. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 3 Units.

AEC students engage in a crossdisciplinary, collaborative, geographically distributed, and multicultural project-based teamwork. AEC teams exercise their domain knowledge and information technologies in a multidisciplinary context focusing on the design and construction concept development phase of a comprehensive building project. Prerequisite: interview with Instructor in Autumn Quarter.

CEE 222B. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 2 Units.

Global AEC student teams continue their project activity focusing on the most challenging concept developed in 222A and chosen jointly with their client. Comprehensive team project focusing on design and construction, including: project development and documentation; detailing, 3D and 4D modeling, simulation, sustainable concepts, cost benefit analysis, and life-cycle cost analysis; and final project presentation of product and process. Prerequisite: CEE 222A.

CEE 223. Materials for Sustainable Urban Systems. 3 Units.

Students will learn to evaluate alternate materials and make a case for materials selection for given urban infrastructure projects considering the material's performance over time, life cycle impacts, and effect on humans. Limited enrollment. Pre-requisites: CEE 226, CEE 101A or equivalent.

CEE 223A. Based Materials, Properties and Durability. 2 Units.

Students will develop an understanding of the chemical and physical processes of cement and concrete hydration, strength development, mechanical performance and durability. Students will learn how the properties of materials and admixture combine to create a wide range of cement-based materials used in the built environment. The course will address sustainable construction, including the use of alternative cements, admixtures, and aggregates. Students will apply the principles in this course to various aspects of civil and structural engineering, including innovative mix design specification and review, structural investigations and failure analysis, and cementitious materials research.

CEE 224A. Sustainable Development Studio. 1-5 Unit.

(Undergraduates, see 124.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

CEE 225. Field Surveying Laboratory. 3 Units.

Graduate students register for 225. Friday afternoon laboratory provides practical surveying experience. Additional morning classes to prepare for the afternoon sessions. Hands-on operation of common traditional field survey tools ; introduction to the newest generation of digital measuring, positioning, and mapping tools. Emphasis is on the concept of using the data collected in the field as the basis for subsequent engineering and economic decisions.

Same as: CEE 140

CEE 226. Life Cycle Assessment for Complex Systems. 3-4 Units.

Life cycle modeling of products, industrial processes, and infrastructure/building systems; material and energy balances for large interdependent systems; environmental accounting; and life cycle costing. These methods, based on ISO 14000 standards, are used to examine emerging technologies, such as biobased products, building materials, building integrated photovoltaics, and alternative design strategies, such as remanufacturing, dematerialization, LEED, and Design for Environment: DfE. Student teams complete a life cycle assessment of a product or system chosen from industry.

CEE 226E. Advanced Topics in Integrated, Energy-Efficient Building Design. 2-3 Units.

Innovative methods and systems for the integrated design and evaluation of energy efficient buildings. Guest practitioners and researchers in energy efficient buildings. Student initiated final project. Prerequisites: CEE 156 or CEE 256. All students are expected to participate in the group project assignments. Students taking the course for two units will not be required to complete in-class assignments or individual homework assignments.

CEE 227. Global Project Finance. 3-5 Units.

Public and private sources of finance for large, complex, capital-intensive projects in developed and developing countries. Benefits and disadvantages, major participants, risk sharing, and challenges of project finance in emerging markets. Financial, economic, political, cultural, and technological elements that affect project structures, processes, and outcomes. Case studies. Limited enrollment.

CEE 227A. Energy System Design in Eastern Europe. 2 Units.

Field-based seminar to evaluate and design future energy systems for Eastern Europe. 14-day field trip during early September 2013. Site visits, fact-finding, stakeholder meetings, presentation to policy makers. One unit for field trip; one unit for project deliverable. Prerequisite: consent of instructor.

Same as: CEE 127A

CEE 227E. Infrastructure, Disruptive Technologies and Entrepreneurship.. 1 Unit.

Silicon Valley provides a dynamic environment perfectly suited for developing the disruptive technologies that are changing the faces of today's mainstream infrastructure systems and essential service industries. This course will provide an overview of the most exciting technologies emerging from Silicon Valley right now and the potential that exists to disrupt mainstream transportation, electricity, intelligence gathering, and banking infrastructure systems that were dominant in the 20th Century. Guest speakers include prominent CEOs, visionaries, investors, and serial entrepreneurs who are building game changing companies.

Same as: CEE 127E

CEE 228. Innovative Global Construction Technology. 2 Units.

(Formerly 245T.) Five-week class. How innovative companies invent new construction processes based on relative local labor, and materials and equipment cost, availability, and capabilities, and developed from experience and knowledge of construction technology in bridge, tunnel, and high-rise building. The process of generating new ideas. Industry guest speakers address the link between product/process innovation and construction technology.

CEE 228C. Design and Construction for Sustainability in Extreme Environments. 2 Units.

Course focuses on multi-disciplinary conceptual design of self-sustaining facilities in remote, extreme environments. Through this learn-by-doing course, students will apply an integrated sustainable design methodology for facility planning and operations. Research into environmental design criteria, opportunities, and constraints to logically guide facility form, shape, systems, and operational requirements. Additional independent study unit available for participation in process experiment. Guest lectures, discussion section, class project. Graduate only.

CEE 229. Climate Change Adaptation for Coastal Cities: Engineering and Policy for a Sustainable Future. 3 Units.

How will climate change affect cities and how will cities respond? Includes an exploration of the threat of climate change to coastal cities worldwide and the potential engineering and policy responses. Understanding of the nature of the challenge of city adaptation planning in terms of earth systems, infrastructure development, urban planning, and social systems. Consideration of economic, social, legal and environmental implications. Student projects will contribute to on-going research. Interdisciplinary. Guest speakers, case studies, and readings.

Same as: CEE 129

CEE 229S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.

How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See www.groupspaces.com/seaports2100.

Same as: CEE 129S

CEE 232. Interplay of Architecture and Engineering. 4 Units.

The range of requirements that drive a building's design including architecture, engineering, constructability, building codes, and budget. Case studies illustrate how structural and mechanical systems are integrated into building types including residential, office, commercial, and retail. In-class studio work.

Same as: CEE 132

CEE 233. Advanced Rhinoceros Modeling and Workflows. 3 Units.

Rhinoceros is a powerful 3D modeling program that provides great control and accuracy, and also allows great flexibility and creativity in the design process. Rhinoceros is used by many top-level architecture firms because it can be customized, it can be integrated with many other design programs, and has the potential to create unique and detailed forms. The course will concentrate on introducing students to the Rhinoceros platform in great depth so that they may comfortably utilize the program for any type of design project. In addition to basic and advanced modeling skills in Rhinoceros, the course will explore an integrated workflow between design environments. Comprehension will be expanded from simple 3D modeling to a process that optimizes the strengths of different design platforms.

Students will study and implement an integrated workflow that connects powerful conceptual modeling with building information models in order to produce a quality design product ready for documentation and presentation. Same as: CEE 133

CEE 234B. Intermediate Arch Studio. 4 Units.

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit.

Same as: CEE 134B

CEE 236. Green Architecture. 4 Units.

Preference to Architectural Design and CEE majors; others by consent of instructor. An architectural design studio exploring green design and green design processes. Initial sessions develop a working definition of sustainable design and strategies for greening the built environment in preparation for design studio work. Prerequisites: 31 or 31Q, and 110 and 130. Enrollment is limited to 14 (or possibly 16) students. Please do not enroll in the class until after attending the first class meeting. If the number of students interested in taking the class is greater than 14 (or possibly 16), space will be assigned based on requirements for graduation.

Same as: CEE 136

CEE 237B. Advanced Architecture Studio. 5 Units.

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design.

Same as: CEE 137B

CEE 241. Managing Fabrication and Construction. 4 Units.

Methods to manage the physical production of construction projects; design, analysis, and optimization of the fabricate-assemble process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Prerequisite: 100 or consent of instructor. Recommended corequisite: 240.

CEE 241A. Infrastructure Project Development. 3 Units.

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements.

Same as: CEE 141A

CEE 241B. Infrastructure Project Delivery. 3 Units.

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals.

Same as: CEE 141B

CEE 241C. Global Infrastructure Projects Seminar. 1-2 Unit.

Real infrastructure projects presented by industry guest speakers. Energy, transportation, water, public facilities and communications projects are featured. Course provides comparisons of project development and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Field trips to local projects.

Same as: CEE 141C

CEE 241P. Integrated Management of Fabrication and Construction. 3-4 Units.

Application of the fundamental fabrication and construction management concepts covered in CEE 241T to an actual project; integrated software environments; integration of scope, schedule, and cost information for scheduling, estimating, and progress control; scope management with BIM; off-site fabrication vs. on-site construction and supply chain coordination; group project; project permitting, potential for a joint project with CEE 242P. Prerequisites: CEE 210, CEE 241T.

CEE 241T. Fundamentals of Managing Fabrication and Construction. 2 Units.

Schedule representations including Gantt chart, critical path method (CPM), 4D modeling, and location-based schedules (LBS); activity definition; Product Breakdown Structure (PBS) and Work Breakdown Structure (WBS); consideration of resources constraints, variability, and types of materials in schedule definition; production systems including push, pull, and collaborative systems; project control including earned value analysis (EVA) and plan percent complete (PPC); schedule performance metrics. Class will be held during the first five weeks of Autumn Quarter only.

CEE 242A. Negotiating Sustainable Development. 3 Units.

How to be effective at achieving sustainability by learning the skills required to negotiate differences between stakeholders who advocate for their own interests. How ecological, social, and economic interests can be effectively balanced and managed. How to be effective actors in the sustainability movement, and use frameworks to solve complex, multiparty processes. Case study analysis of domestic and international issues. Students negotiate on behalf of different interest groups in a variety of arenas including energy, climate, land use, and the built environment. One Saturday all day field trip. No prerequisites.

Same as: CEE 142A, EARTHSYS 142A, EARTHSYS 242A

CEE 242P. Designing Project Organizations. 2 Units.

Sequel to CEE 242T. Course develops information-processing approach for designing project and project-based company organizations to deliver sustainable construction projects; includes design of organizations and work processes for integrated project delivery and public-private partnership concession project delivery. Term project applies computer-based organization simulation to optimize design of project organization for a participating company.

CEE 242T. Organizational Behavior and Design for Construction. 2 Units.

Introduction to organizational behavior and organizational design for Architecture, Engineering and Construction projects and companies. Class incorporates readings, individual and group case study assignments. Students use computer simulation to analyze project organizations and predict schedule, cost and quality risks. This class is a prerequisite for CEE 242P.

CEE 244. Fundamentals of Construction Accounting and Finance. 2 Units.

Concepts of financial accounting and economics emphasizing the construction industry. Financial statements, accounting concepts, project accounting methods, and the nature of project costs. Case study of major construction contractor. Ownership structure, working capital, and the sources and uses of funds.

CEE 244A. Sustainable Banking Seminar. 1 Unit.

This seminar explores ideas for redesigning banks and the banking sector to achieve three goals: (1) keep the bank and its depositors safe, (2) keep the borrowers, communities, and societies affected by the bank's lending decisions safe, and (3) use bank transactions to improve the sustainability of natural ecosystems. Weekly speakers include bankers, bank regulators, and financial technology (fintech) innovators focused on sustainable banking.

CEE 245A. Global Project Seminar. 3 Units.

Issues related to large, complex, global development projects including infrastructure development, urban and rural development, and the development of new cities. Guest presentations by industry practitioners and academics, including: Sabeer Bhatia, founder of Hotmail and architect of NanoCity; Ian Bremmer, CEO of the Eurasia Group, and Greg Huger, managing director of AirliePartners. May be repeated for credit.

CEE 246. Entrepreneurship in Civil & Environmental Engineering. 3-4 Units.

CEE 246 is a team project-based course geared toward developing entrepreneurial businesses related to civil and environmental engineering. With support of industry mentors, students are guided through the process of identifying opportunities, developing business plans, and determining funding sources. The class culminates with presentations to industry experts and venture capitalists (VC) to mimic typical investor pitches. The goal is to provide students with the knowledge and network to realize their business idea.

CEE 246A. Engineering Economy. 3 Units.

Fundamentals of financial and economic analysis. Engineering Economy Principles. Interest rates, Present value, annual cash flow, internal rate of return, benefit-cost analysis. Economic Life, Life Cycle Costs. Replacement analysis. Project Selection - Mutually Exclusive Alternatives, Multiple Objective Criteria. Depreciation. Inflation and Taxes. Sensitivity and risk analysis. Uncertainty and Probability. Decision Trees. Capital Budgeting. For CEE 146A: enrollment is limited to juniors and seniors. Attendance to the first class is mandatory (for both CEE 146A and CEE 246A). Same as: CEE 146A

CEE 246B. Real Estate Finance Seminar. 1 Unit.

Real estate principles and process. Financial modeling. Feasibility analysis. Sources and uses of funds. Cash flow projections. Profit and loss reports. Financing issues for different types of real estate projects. Redevelopment projects. Financing green projects and technologies. Current challenges in financial markets. Group project and presentation. Limited enrollment with priority to CEM, DCI, and SDC students not enrolled in CEE 248. Prerequisites: CEE 246A or equivalent, ENGR 60. Recommended: knowledge of spreadsheets.

CEE 247. Cases in Personality, Leadership, and Negotiation. 3 Units.

Case studies target personality issues, risk willingness, and life skills essential for real world success. Failures, successes, and risk willingness in individual and group tasks based on the professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Application downloaded from coursework must be submitted before first class; mandatory first class attendance. No auditors. Same as: CEE 147

CEE 247A. Network Governance. 3-4 Units.

This course aims at providing students with insights, concepts and skills needed to understand the dynamics of multi-actor interaction processes in uncertain and often highly politicized contexts and to be able to cope with technological and strategic uncertainties and risks including the unpredictable behavior of actors. They will develop knowledge, skills and competences about how to manage divergent and conflicting interests of different actors including principles of integrative negotiation, communication and mediation.

CEE 248. Real Estate Development. 3 Units.

Critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public roles, steps for project approval, project finance, contracting and construction, property management, and sales. Group projects focus on actual developments now in the planning stage. Enrollment limited to 24; priority to graduate majors in the department's CEM and GSB programs. Prerequisites: 241, 244A or equivalent, ENGR 60.

CEE 248G. Certifying Green Buildings. 1 Unit.

Open to all disciplines. Goal is prepare students for the United States Green Building Council's professional accreditation exam. Basic metrics for project certification via USGBC's LEED rating system. Recommended: familiarity with design and construction terminology .

CEE 248S. Introduction to Real Estate Development Seminar. 1 Unit.

This seminar will offer students an introduction to Real Estate Development. Senior Principals from Sares Regis, a regional commercial and residential real estate development company, will cover topics on all aspects of the development process. Guest speakers from the fields of architecture and engineering, finance and marketing will participate in some of the classes. They will offer the students a window into the world of how houses, apartments, office buildings and public facilities are conceived of, brought through the design and approval process, financed, marketed and then sold and/or rented. There will be five one-and-a-half-hour lectures (robust class discussion encouraged). Classes commence on April 9th and complete on May 7th. There will be one written project assignment due prior to class on April 23rd. No prior knowledge of real estate is required.

CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution. 2 Units.

Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.

CEE 251. Negotiation. 3 Units.

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

Same as: CEE 151, EARTHSCI 251

CEE 252. Construction Methods for Concrete and Steel Structures. 3 Units.

Providing technical support for concrete and steel construction operations on buildings or infrastructure projects. Concrete materials, construction properties of fresh concrete. Resources and operations for batching, transporting, placing, finishing, and curing concrete. Design, fabrication, and use of formwork. Special operations and formwork systems. Detailing, fabricating, erecting, and connecting structural steel. Lifting equipment and lift planning. Welding processes, operations, and quality control. Readings, exercises and course projects.

CEE 252P. Construction Engineering Practicum. 3 Units.

Construction engineering is a series of technical activities to meet project objectives related to cost and schedule, safety, quality, and sustainability. These activities include: 1) designing temporary works and construction work processes; 2) providing the required temporary and permanent resources; and 3) integrating activities to consider construction during all project phases and between projects. The objectives of CEE252P are to learn about the technical fundamentals, resources, and field operations required to complete construction engineering activities and to develop a foundation for continued related learning. The course requires reviewing recorded presentations and other online resources, completing queries, participating in class sessions with guest speakers and in field trips, completing group exercises and projects, and preparing an individual final paper. The exercises, completed by all groups, include construction engineering activities for earthwork, concrete construction, and steel erection. Each group will also complete a project to analyze one of the following types of systems or facilities: building electrical systems, lighting systems, HVAC systems, control systems, solar photovoltaic power plant, solar thermal power plant, and wind turbine power plant.

CEE 252Q. Construction Engineering Fundamentals. 2 Units.

Construction engineering is a series of technical activities to meet project objectives related to cost and schedule, safety, quality, and sustainability. These activities include: 1) designing temporary works and construction work processes; 2) providing the required temporary and permanent resources; and 3) integrating activities to consider construction during all project phases and between projects. The objectives of CEE 252Q are to learn about the technical fundamentals, resources, and field operations required to complete construction engineering activities and to develop a foundation for continued related learning. The course requires reviewing recorded presentations and other online resources, completing queries, participating in class sessions with guest speakers and in field trips, and completing group exercises and projects. The exercises, completed by all of the student groups, include construction engineering activities for earthwork, concrete construction, and steel erection. Each group will also complete a project to analyze one of the following types of systems or facilities: building electrical systems, lighting systems, HVAC systems, control systems, solar photovoltaic power plant, and wind turbine power plant.

CEE 253A. Earthwork Construction. 1 Unit.

Construction properties of soil. Technical fundamentals of operations and equipment for earthwork. Description of systems and machine forms for construction equipment. Application of modeling techniques in planning, selecting equipment, estimating production rates. Field trip to infrastructure contractor.

CEE 254. Cases in Estimating Costs. 3 Units.

Students participate in bidding contests requiring cost determination in competitive markets. Monetary forces driving the construction industry as general principles applicable to any competitive business. Cases based on field trips and professor's experience as small business owner and construction engineer. Required full afternoon field trips to local sites. Limited enrollment; no auditors. Prerequisites: consent or instructor and application downloaded from CourseWork prior to start of class. Same as: CEE 154

CEE 255. Introduction to Sensing Networks for CEE. 3-4 Units.

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment. Same as: CEE 155

CEE 256. Building Systems. 4 Units.

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants. Same as: CEE 156

CEE 258. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.

Presentations from construction industry leaders. Discussions with speakers from various segments of industry regarding career options. Student groups interact with industry representatives after class.

CEE 258B. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.

Weekly seminars and field trips focusing on technical aspects of concrete and steel construction. Submission of abstract and paper required.

CEE 259A. Construction Problems. 1-3 Unit.

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

CEE 259B. Construction Problems. 1-3 Unit.

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies. Prerequisites: graduate standing in CEM program and consent of instructor.

CEE 260A. Physical Hydrogeology. 4 Units.

(Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus. Same as: EESS 220

CEE 260B. Surface and Near-Surface Hydrologic Response. 3 Units.

Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology. Same as: GES 237

CEE 260C. Contaminant Hydrogeology and Reactive Transport. 4 Units.

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology EESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: EESS 155, EESS 156/256 GES 90, GES 170/279, GES 171, CEE 177 or CEE 270). Same as: EESS 221, GES 225

CEE 262A. Hydrodynamics. 3-4 Units.

The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

CEE 262B. Transport and Mixing in Surface Water Flows. 3-4 Units.

Application of fluid mechanics to problems of pollutant transport and mixing in the water environment. Mathematical models of advection, diffusion, and dispersion. Application of theory to problems of transport and mixing in rivers, estuaries, and lakes and reservoirs. Recommended: 262A and CME 102 (formerly ENGR 155A), or equivalents.

CEE 262C. Modeling Environmental Flows. 3 Units.

Introduction to numerical methods for modeling surface water flows in rivers, lakes, estuaries and the coastal ocean. Topics include stability and accuracy analysis, curvilinear and unstructured grids, implicit/explicit methods, transport and diffusion, shallow water equations, nonhydrostatic equations, Navier-Stokes solvers, turbulence modeling. Prerequisites: CEE262A, CME206, or equivalent.

CEE 262D. Introduction to Physical Oceanography. 4 Units.

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 164, EARTHSYS 164, EESS 148

CEE 262E. Lakes and Reservoirs. 2-3 Units.

Physics and water quality dynamics in lakes and reservoirs. Implementation of physical and biogeochemical processes in 1-D models. Recommended: 262B.

CEE 262F. Ocean Waves. 3 Units.

The fluid mechanics of surface gravity waves in the ocean of relevance to engineers and oceanographers. Topics include irrotational waves, wave dispersion, wave spectra, effects of bathymetry (shoaling), mass transport, effects of viscosity, and mean currents driven by radiation stresses. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

CEE 263A. Air Pollution Modeling. 3-4 Units.

The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear's method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.

CEE 263B. Numerical Weather Prediction. 3-4 Units.

Numerical weather prediction. Continuity equations for air and water vapor, the thermodynamic energy equation, and momentum equations derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic weather prediction model. Prerequisite: CS 106A or equivalent.

CEE 263C. Weather and Storms. 3 Units.

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Nintilde;o, la Nintilde;a, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. Same as: CEE 63

CEE 263D. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 64

CEE 263S. Atmosphere/Energy Seminar. 1 Unit.

Interdisciplinary seminar with talks by researchers and practitioners in the fields of atmospheric science and renewable energy engineering. Addresses the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. May be repeated for credit.

CEE 264. Sediment Transport Modeling. 3 Units.

Mechanics of sediment transport in rivers, estuaries and coastal oceans, with an emphasis on development of models and application of three-dimensional software tools. Topics include bottom boundary layers in steady and wave-driven flows, bedform dynamics, suspended and bedload transport, cohesive sediments. Prerequisites: CEE262A or consent of instructor.

CEE 264A. Rivers, Streams, and Canals. 3-4 Units.

Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B.

Same as: CEE 161A

CEE 265A. Sustainable Water Resources Development. 3 Units.

Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Influence of international aid agencies and NGOs on water projects. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.

CEE 265C. Water Resources Management. 3 Units.

Examination of the basic principles of surface and ground water resources management in the context of increasing water scarcity and uncertainty due to climate change and other factors. Specific topics include reservoir, river basin and aquifer management, conjunctive use of surface and ground water, and treated wastewater reuse. Special emphasis is placed on demand management through conservation, increased water use efficiency and economic measures. Besides the technical aspects of water management, an overview of its legal and institutional framework is provided.

Same as: CEE 165C

CEE 265D. Water and Sanitation in Developing Countries. 1-3 Unit.

Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor, see jennadavis.stanford.edu for application.

CEE 266A. Watersheds and Wetlands. 3 Units.

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg).

Same as: CEE 166A

CEE 266B. Floods and Droughts, Dams and Aqueducts. 3 Units.

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg).

Same as: CEE 166B

CEE 266C. Advanced Topics in Hydrology and Water Resources. 3 Units.

Graduate seminar. Focus is on one or more hydrologic processes or water resources systems. Topics vary based on student and instructor interest. Examples include freshwater wetland hydrology, watershed-scale hydrologic modeling, renaturalization of stream channels, reservoir sediment management, and dam removal. Enrollment limited. Prerequisites: 266A,B, or equivalents. Recommended: 260A or equivalent.

CEE 266D. Water Resources and Water Hazards Field Trips. 2 Units.

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 166D

CEE 268. Groundwater Flow. 3-4 Units.

Flow and mass transport in porous media. Applications of potential flow theory and numerical modeling methods to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics.

CEE 269A. Environmental Fluid Mechanics and Hydrology Seminar. 1 Unit.

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

CEE 269B. Environmental Fluid Mechanics and Hydrology Seminar. 1 Unit.

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

CEE 269C. Environmental Fluid Mechanics and Hydrology. 1 Unit.

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

CEE 270. Movement and Fate of Organic Contaminants in Waters. 3 Units.

Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physicochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.

CEE 270B. Environmental Organic Reaction Chemistry. 2-3 Units.

With over 70,000 chemicals now in production worldwide, predicting their fate in the environment is a difficult task. The course focuses on developing two key skills. First, students should develop the ability to derive mass balance equations used to quantify the fate of chemicals in the environment. With so many chemicals having been introduced in the past ~60 years, many of the key parameters needed for mass balance models have not been measured experimentally. The class builds on CEE 270, which developed methods of predicting equilibrium partitioning coefficients. For many situations involving reactions of target contaminants, equilibrium is not attained. The course develops methods of predicting the reactivity of chemicals based upon their chemical structures both qualitatively and quantitatively. Natural reaction processes covered include acid-base speciation, nucleophilic substitution, oxidation/reduction reactions, and photochemical reactions. Key treatment reactions (ozone, UV treatment and advanced oxidation) are also covered. Prerequisites: CEE 270, Chem 31B/X.

CEE 271A. Physical and Chemical Treatment Processes. 3 Units.

Physical and chemical unit operations for water treatment, emphasizing process combinations for drinking water supply. Application of the principles of chemistry, rate processes, fluid dynamics, and process engineering to define and solve water treatment problems by flocculation, sedimentation, filtration, disinfection, oxidation, aeration, and adsorption. Investigative paper on water supply and treatment. Prerequisites: 101B, 270. Recommended: 273.

CEE 271B. Environmental Biotechnology. 4 Units.

Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.

CEE 271D. Introduction to Wastewater Treatment Process Modeling. 2 Units.

The course will present a structured protocol for simulator application comprising project definition, data collection and reconciliation, model set-up, calibration and validation, and simulation and result interpretation. This course will include a series of guided simulation exercises evaluating resource consumption (e.g., electrical energy, natural gas, chemicals) and resource recovery (e.g., biogas, struvite, biosolids, recycled water) from a variety of treatment plant configurations. Coursework for all students will comprise guided simulation exercises begun in class. Students may elect to take the course for 2 units by completing a group project evaluating an assigned plant configuration and presenting the results before the class.

CEE 271E. Environmental Challenges and Policies in Europe. 3 Units.

Current and future environmental challenges in Europe and related public policies in the European Union (EU). State of the European environment and human development, European environmental policy-making (multi-level ecological governance), global ecological role of the EU. Specific challenges include climate change adaptation, mitigation (carbon taxes, carbon market), climate change and European cities, biodiversity and ecosystems preservation (economics of biodiversity), energy management. Specific policies include environmental justice (environmental inequalities), human development and environmental sustainability indicators (beyond GDP) and absolute and relative decoupling (carbon intensity and resource productivity improvement). Open to undergraduates (freshmen, sophomores, juniors and seniors) as CEE 171E.

Same as: CEE 171E

CEE 271F. New Indicators of Well-Being and Sustainability. 3 Units.

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper.

Same as: CEE 171F

CEE 271M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.

Same as: CEE 371M

CEE 272. Coastal Contaminants. 3-4 Units.

Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens and nutrients. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates require consent of instructor.

CEE 272R. Modern Power Systems Engineering. 3 Units.

Focus is on Power Engineering from a systems point of view. Topics covered may include modeling of generation, transmission and distribution systems, load flow analysis, transient and steady-state stability analysis. Special emphasis given to modern market operations and dispatch, modeling intermittent controllable power sources, storage technologies, mechanisms for demand response, sensing the grid and the role of market mechanisms for deep integration. Course content may vary year to year.

CEE 272S. Green House Gas Mitigation. 1-3 Unit.

This course will introduce the main concepts of greenhouse gas (GHG) emissions measurement and management, and it will explore the main mitigation options for reducing emissions or sequestering carbon dioxide. It will address technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. The course explores policy options, carbon trading and business strategies for GHG mitigation.

Same as: CEE 172S

CEE 272T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit.

Same as: EE 292T

CEE 272W. Wind Power project Development. 1 Unit.

Introduction to wind power resource assessment and project development. Topics include the dynamics of large-scale and small-scale wind systems, vertical scaling of winds in the boundary layer, measurement instruments used for resource assessments, wind turbine technology, and wind farm siting, planning and economics. Analysis methods of wind data, use of industry-standard software for optimizing turbine siting and project feasibility studies. Project work using existing resource assessment from local areas. Prerequisite: Math41/42 or equivalent. Limited enrollment.

CEE 273. Aquatic Chemistry. 3 Units.

Chemical principles and their application to the analysis and solution of problems in aqueous geochemistry (temperatures near 25deg; C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.

CEE 273A. Water Chemistry Laboratory. 3 Units.

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.

Same as: CEE 179A

CEE 273C. Introduction to Membrane Technology for Water/Wastewater Treatment. 1 Unit.

Membrane separation processes focusing on their use for water and wastewater purification. Topics will include membrane types and materials; transport across and rejection by membranes; membrane fouling, cleaning and degradation; and design and operation of membrane systems.

CEE 273D. Wastewater Treatment Process Simulators and Their Use for Emerging Technologies. 2 Units.

Process simulators are used widely for analysis and design of municipal and industrial wastewater treatment facilities. The current generation of simulators integrates biological, chemical, and physical process models that enable steady-state and dynamic "whole plant" simulation of liquid and solids treatment process performance. This course reinforces the concepts presented in CEE 271A, CEE 271B, and CEE 273 and shows how these concepts are applied to analyze and design treatment systems for BOD removal, energy recovery, phosphorus removal and recovery, and nitrogen removal using BioWin TM 4, a commercially-available software package. A process-specific model for anaerobic treatment of domestic wastewater will also be developed for the new Staged Anaerobic Fluidized Membrane Bioreactor (SAF-MBR) based on the International Water Association (IWA) Anaerobic Digester Model No. 1 (ADM1) and implemented using the simulation software Aquasim.

CEE 273S. Chemical Transformation of Environmental Organic Compounds. 3 Units.

This course provides an introduction to the chemistry of organic compounds focusing on chemical transformation and the application of this knowledge to understand and predict the fate of environmentally relevant organic chemicals. The course will cover fundamental rules that govern chemical transformations of organic compounds and will familiarize students with the major physical/chemical factors influencing the kinetics of organic reactions in nature. Prerequisites: CEE 270.

CEE 274A. Environmental Microbiology I. 3 Units.

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

Same as: CHEMENG 174, CHEMENG 274

CEE 274B. Microbial Bioenergy Systems. 3 Units.

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.

Same as: CHEMENG 456

CEE 274D. Pathogens and Disinfection. 3 Units.

Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.

CEE 274E. Pathogens in the Environment. 3 Units.

Sources, fates, movement, and ecology of waterborne pathogens in the natural environment and disinfection systems; epidemiology and microbial risk assessment. No microbiology background required; undergraduates may enroll with consent of instructor.

CEE 274P. Environmental Health Microbiology Lab. 3-4 Units.

Microbiology skills including culture-, microscope-, and molecular-based detection techniques. Focus is on standard and EPA-approved methods to enumerate and isolate organisms used to assess risk of enteric illnesses, such as coliforms, enterococci, and coliphage, in drinking and recreational waters including lakes, streams, and coastal waters. Student project to assess the microbial water quality of a natural water. Limited enrollment; priority to CEE graduate students. An application form must be filed and approved before admission to the class.

CEE 274S. Hopkins Microbiology Course. 3-12 Units.

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A,B, or equivalents.

Same as: BIO 274S, BIOHOPK 274, EESS 253S

CEE 275A. California Coast: Science, Policy, and Law. 3-4 Units.

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Field work: how experts from different disciplines work to resolve coastal policy questions. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in at least three mandatory field trips.

Same as: CEE 175A, EARTHSYS 175, EARTHSYS 275

CEE 275B. Process Design for Environmental Biotechnology. 3 Units.

Use of microbial bioreactors for degradation of contaminants and recovery of clean water, clean energy and/or green materials. Student teams design, operate, and analyze bioreactors and learn to write consulting style reports. Limited enrollment. Prerequisites: 271B.

CEE 275C. Water, Sanitation and Health. 1-4 Unit.

Students acquire basic knowledge to participate in a dialogue on water, sanitation and health issues in developing and developed countries. The focus is on enteric pathogenic pollutants. Material includes: Important pathogens, their modes of transmission and the diseases they cause, their fate and transport in the environment, and the means by which they are measured; statistical methods for processing and interpreting waterborne pollutant concentrations, and interpreting data from epidemiology studies; microbial source tracking; epidemiology and quantitative microbial risk assessment; reduction of pathogens in water and sludge; and non-experimental water, sanitation, and hygiene research. Several laboratory sessions will allow students to measure indicator bacteria and viruses using culture-based techniques and expose students to molecular methods for measuring health-relevant targets in water.

CEE 275K. The Practice of Environmental Consulting. 2 Units.

Class consists of eight interactive two-hour seminars with discussions, and will cover the evolution of the environmental consulting business, strategic choices and alternative business models for private and public firms, a review of the key operational issues in managing firm, organizational strategies, knowledge management and innovation, and ethical issues in providing professional services. Case studies will be used to illustrate key concepts. Selected reading materials drawn from the technical and business literature on the consulting business. Student groups will prepare and present an abbreviated business plan for an environmental based business. Enrollment limited to CEE MS and PHD students.

CEE 275S. Environmental Entrepreneurship and Innovation. 2 Units.

Our current infrastructure for provision of critical services-clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests.

Same as: CEE 175S

CEE 276. Introduction to Human Exposure Analysis. 3 Units.

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission.

Same as: CEE 178

CEE 276C. Advanced Topics in Integrated Demand Side Management. 2 Units.

The American economy is highly inefficient: between 14-39% of the energy inputs into the US economy are ultimately used to create goods and services, while the remaining energy is lost in energy conversion and other inefficiencies. While this inefficiency results in a heavy social, environmental, and economic burden on both individuals and society as a whole, it also presents a tremendous opportunity to re-imagine how we use and manage our energy consumption. Recent technological advances, including the rise of information technology, sensors, controls, are dramatically re-shaping how energy is utilized, controlled, stored and integrated with traditional supply side resources. These emerging technologies and energy management techniques provide some of the greatest opportunities to improve the efficiency of our economy and address climate change. This course begins with an overview of demand side management (the application of efficiency, demand reduction, distributed generation, storage, and other resource to shape energy demand) practice to date and a detailed look at how energy is used throughout each sector of the economy. Based on this starting point, the course explores emerging technologies and optimization strategies that enable greater insight and control of energy use both at the device and aggregate level, including integration with renewables, storage, and electric vehicles. It then quantifies and monetizes these optimization strategies into revenue streams to both utility and end-user, and culminates in a discussion of how the intersection of these new technologies, optimization strategies, and revenue streams can help de-carbonize the American economy and shape energy use and the utility of the future. Prerequisites: This course is intended for students who wish to gain an understanding of how energy efficiency and demand management occurs in practice. While there are no formal prerequisites, it is expected that students will have familiarity with energy resources and building energy end uses, such as topics covered in CEE 176A/276A, CEE 173A/207A, CEE 156/256, and CEE226E.

Same as: CEE 176D

CEE 276E. Environmental Toxicants. 2-3 Units.

Chemicals in the environment that pose toxicity risk. Introduction to environmental toxicology principles for identifying and characterizing toxicants based on sources, properties, pathways, and toxic action. Past and present environmental toxicant issues.

CEE 276F. Energy Systems Field Trips: China Energy Systems. 1-2 Unit.

Energy resources and policies in use and under development in China. 12-day field trip to China during Spring Break. One unit for seminar and readings; one unit for field trip. Tuesday section is required for all students, Thursday section is also required for students attending the field trip. Prerequisite: consent of instructor for field trip. Same as: CEE 176F

CEE 276S. Instrumental Analysis of Emerging Contaminants in the Environment. 3 Units.

Introduction to the occurrence and behavior of trace organic compounds in the environment and focus on research approaches to investigate these compounds. Principles of analytical techniques and experimental approaches to detect and monitor trace organic contaminants in the environment will be examined. Students will critically review published original research and prepare and an original research project proposal. Same as: CEE 176S

CEE 277C. Environmental Governance. 3 Units.

This interdisciplinary course presents an overview of environmental governance through an examination of how and why societies manage the relationships between human beings and the natural world. By comparing regulatory, community-based, and incentive-based environmental management systems, we address why certain environmental problems are managed as they are, and what approaches to environmental management are more (or less) successful. Designed for graduate students and upper-level undergraduates with some exposure to both the natural sciences (ecology/environmental chemistry), and the social sciences (anthropology, economics, political science, or sociology). A pre-course incoming survey is required. Same as: ENVRES 250

CEE 277D. Water, Health & Development in Africa. 1 Unit.

Graduate seminar focused on emerging research in the areas of water supply, sanitation, hygiene and health in developing countries. Limited enrollment; instructor permission required.

CEE 277F. Advanced Field Methods in Water, Health and Development. 1-10 Unit.

Field methods for assessing household stored water quality, hand contamination, behaviors, and knowledge related to water, sanitation and health. Limited enrollment. Instructor consent required.

CEE 277K. Environmental Information Engineering. 2-3 Units.

The role of information technology (IT) in enabling mankind to understand its impact on the planet and balance that with improving the quality of life of a rapidly growing population. After surveying the field, the course will examine the specific impacts that IT may have, by reference to case studies from energy, transportation, water and urban design fields. While some specific information technologies will be examined, this will be from a business perspective - detailed technical knowledge of IT not required. Same as: CEE 177K

CEE 277L. Smart Cities & Communities. 2-3 Units.

The role of information technology (IT) in enabling mankind to improve the operations and sustainability of cities and communities. Review of what a "smarter" city of community might be, the role of IT in enabling them to become "smarter" (including what IT cannot achieve). Case studies on water, energy, transportation urban design and resilience. Same as: CEE 177L

CEE 277S. Design for a Sustainable World. 1-5 Unit.

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff). Same as: CEE 177S

CEE 277X. Current Topics in Sustainable Engineering. 1-3 Unit.

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. Instructor consent required. Same as: CEE 177X

CEE 278A. Air Pollution Fundamentals. 3-4 Units.

The sources and health effects of gaseous and particulate air pollutants. The influence of meteorology on pollution: temperature profiles, stability classes, inversion layers, turbulence. Atmospheric diffusion equations, downwind dispersion of emissions from point and line sources. Removal of air pollutants via settling, diffusion, coagulation, precipitation, Mechanisms for ozone formation, in the troposphere versus in the stratosphere. Effects of airborne particle size and composition on light scattering/absorption, and on visual range. Prerequisites: MATH 51 or equivalent. Recommended: 101B, CHEM 31A, or equivalents.

CEE 278B. Atmospheric Aerosols. 3 Units.

The characterization of atmospheric particulate matter: size distributions, chemical composition, health effects. Atmospheric diffusion and transport of particles: removal by convection, impaction, gravitational settling. Effect of aerosols on visibility: light scattering and absorption, reduction of visual range. Mechanics influencing ambient size distributions: Brownian coagulation, laminar shear flow, homogeneous nucleation, heterogeneous condensation. Prerequisite: MATH 51, or equivalent. Recommended: 101B or equivalent.

CEE 278C. Indoor Air Quality. 2-3 Units.

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Recommended: 172 or 278A. Same as: CEE 172A

CEE 279. Environmental Engineering Seminar. 1 Unit.

Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, the 20 hours of required seminar attendance may be accrued throughout the school year. Must prepare a publication synopsis, and maintain log of seminar attendance. See Aut Qtr CEE 279 syllabus for details on course requirements. Contact hildemann@stanford.edu to be added to Coursework website.

CEE 279S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings. Same as: CEE 179S, EARTHSYS 179S, EESS 179S

CEE 279W. Innovation in Water Sector. 1 Unit.

A project class on the diffusion of ReNUWI technologies into practice (David Sedlak is the overall course lead at UC Berkeley, Chris Higgins is the lead at Colorado School of Mines, and Dick Luthy is the lead at Stanford). Specifically, the class will examine the pathway through which ReNUWI technologies will be adopted by utilities and consultants beyond our current group of industrial partners. We will work together to prepare background information that will be used in a 2-day workshop involving ReNUWI researchers, utility leaders and technical experts in early 2015.

CEE 279X. Sustainable Urban System Seminar. 1 Unit.

SYSTEM OF SYSTEMS: Cities are based on several different systems; infrastructures, networks and environments. The effectiveness and efficiency of these systems determine how cities work and how successful a city is at delivering critical services. These systems are not discrete and must be considered holistically as well as individually. These core systems are interconnected and must be treated as such. Understanding one system and making it work better means that cities must comprehend the larger context and how the various systems are interconnected. This seminar series will explore various aspects of these critical systems and how we can make them more resilient and robust, to meet future challenges. Guest speakers, discussion and critical readings.
Same as: CEE 179X

CEE 280. Advanced Structural Analysis. 3-4 Units.

Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.

CEE 281. Mechanics and Finite Elements. 3 Units.

Fluid conduction and solid deformation; conservation laws: balance of mass and balance of momentum; generalized Darcy's law and Hooke's law in 3D; the use of tensors in mechanics; finite element formulation of boundary-value problems; variational equations and Galerkin approximations; basic shape functions, numerical integration, and assembly operations.

CEE 282. Nonlinear Structural Analysis. 3-4 Units.

Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280 and an advanced course in structural behavior (e.g., 285A, 285B or equivalent).

CEE 283. Structural Dynamics. 3-4 Units.

Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.

CEE 284. Finite Element Methods in Structural Dynamics. 3-4 Units.

Computational methods for structural dynamics analysis of discrete and continuous systems in free and forced vibration; finite element formulation; modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283.

CEE 285A. Advanced Structural Concrete Behavior and Design. 3-4 Units.

Behavior and design of reinforced and prestressed concrete for building and bridge design. Emphasis on flexural behavior, prestressed concrete design, slender columns, and two-way slab design & analysis.

CEE 285B. Advanced Structural Steel Behavior and Design. 3-4 Units.

Advanced topics in structural steel design. Topics include composite floor systems; bolted and welded connections; beam-column connections; innovative lateral load resisting systems. As part of this course students design a 15-story steel building. Prerequisite: basic course in structural steel design CEE181 or equivalent.

CEE 287. Earthquake Resistant Design and Construction. 3-4 Units.

Evaluation, design, and construction of structures in seismic regions. Factors influencing earthquake ground motions, design spectra, design of linear and nonlinear single- and multiple-degree-of-freedom-system structures, force-based and displacement-based design methods, capacity design, detailing and construction of steel and reinforced concrete structures, introduction to performance-based design, seismic isolation, and energy dissipation. Prerequisites: 283 and either 285A or 285B.

CEE 288. Introduction to Performance Based Earthquake Engineering. 3-4 Units.

Earthquake phenomena, faulting, ground motion, earthquake hazard formulation, effects of earthquakes on manmade structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering problems. Prerequisites: 203, 283.

CEE 289. Random Vibrations. 3-4 Units.

Introduction to random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Crossing rates, first-exursion probability, and distributions of peaks and extremes. Applications in earthquake, wind, and ocean engineering. Prerequisite: 203 or equivalent.

CEE 290. Structural Performance and Failures. 2 Units.

Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.

CEE 291. Solid Mechanics. 3 Units.

Introduction to vectors and tensors; kinematics, deformation, forces, and stress concept of continua and structures; balance principles; aspects of objectivity; hyperelastic materials; thermodynamics of materials; variational principles; applications to structural engineering.

CEE 292. Computational Micromechanics. 3 Units.

Thermodynamics of general internal variable formulations of inelasticity; 1D and 3D material models at small strains (nonlinear elasticity, viscoelasticity, plasticity, damage); development of efficient algorithms and finite element implementations; micromechanical based crystal plasticity models; review of nonlinear continuum mechanics; micromechanical based finite deformation rubber elasticity models; introduction to homogenization methods and micro-macro transitions. Prerequisite: CEE 281 or equivalent.

CEE 293. Foundations and Earth Structures. 3 Units.

Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Prerequisite: 101C or equivalent.

CEE 294. Computational Poromechanics. 3 Units.

Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: CEE 281 or equivalent.

CEE 295. Plasticity Modeling and Computation. 3 Units.

Rate-independent elastoplasticity; classical plasticity models for metals and cohesive-frictional materials; cap plasticity models for porous materials; return-mapping algorithm; shear bands, faults, and other discontinuities; Lagrange multipliers, penalty and augmented Lagrangian methods for frictional contact; multiscale techniques: extended finite element and strong discontinuity methods; fault rupture dynamics with bulk plasticity. Prerequisite: CEE 281 or equivalent.

CEE 296. Special Topics in Fluid-Solid Interactions. 2 Units.

Civil, mechanical, and biomedical engineering. Topics include surge and wave impact on structures, tsunami induced sediment transport and scour, wave-soil interactions, dam-reservoir-foundation interactions, shock and blast loads on composite structures, hydroelastic tailoring of composite structures, and blood-vessel interactions. Term project.

CEE 297. Issues in Geotechnical and Environmental Failures. 3 Units.

Causes and consequences of the failure of buildings, earth structures, waste storage, and high hazard facilities in contact with the environment; technical, ethical, economic, legal, and business aspects; failure analysis and forensic problems; prevention, liability, and dispute management. Case histories including earthquake, flood, and hazardous waste facilities. Student observation, participation in active lawsuits where possible.

CEE 297M. Managing Critical Infrastructure. 2 Units.

Safe and effective performance of infrastructure systems is critical to our economy, quality of life and safety. This course will present topics associated with risk analysis and management of critical civil infrastructure systems, tolerable risk and community resilience. Methods of risk analysis including systems analysis, reliability analysis, expert elicitation and systems analysis for spatially distributed infrastructure systems will be presented. Aspects of seismic and flood risk analysis will also be discussed. Case histories and lessons learned from Hurricane Katrina, Tohoku earthquake, among others will be presented. The evolution of change in the risk management of civil infrastructure systems; how they are analyzed, designed and operated is discussed. Guest speakers. Student presentations. (Prerequisite: CEE 203 or equivalent).

CEE 297Q. Large Deformation Computational Inelasticity. 3 Units.

Covers kinematics, thermodynamics, constitutive modeling, numerical time integration, and finite element implementation of large deformation inelasticity. Kinematics of multiplicative decomposition and resulting objective stress rates in the current configuration. Linearization for formulation and finite element implementation of algorithm (consistent) tangent moduli, and local Newton-Raphson iteration for solution of nonlinear constitutive models. Emphasis is on being able to formulate, and numerically implement within a nonlinear finite element program, a wide range of finite strain inelastic constitutive models for solid materials of interest.

CEE 297R. Structural Geology and Rock Mechanics. 4 Units.

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GES 1, MATH 53, MATLAB or equivalent.

Same as: GEOPHYS 251, GES 215

CEE 298. Structural Engineering and Geomechanics Seminar. 1 Unit.

Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.

CEE 299. Independent Study in Civil Engineering for CEE-MS Students. 1-5 Unit.

Directed study for CEE-MS students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.

CEE 299L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.

Prerequisite: Consent of Instructor.

CEE 299S. Independent Project in Civil and Environmental Engineering. 1-4 Unit.

Prerequisite: consent of instructor.

CEE 300. Thesis. 1-15 Unit.

Research by Engineer candidates.

Same as: Engineer Degree

CEE 301. The Energy Seminar. 1 Unit.

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit.

Same as: ENERGY 301

CEE 305. Damage and Failure Mechanics of Structural Systems. 3-4 Units.

Examine the mechanics and failure mechanisms of structural deterioration mechanisms and hazards. Overview of fracture mechanics concepts as a general basis for analyzing brittle failure modes in steel and concrete structures. Analysis and design theory for corrosion, fatigue, fire and other damage mechanisms in steel and concrete structures. New methods for mitigation of these failure modes and hazards will be introduced, including new construction materials, structural designs and protection methods.

CEE 306. Computational Fracture Mechanics. 3 Units.

Brief review continuum mechanics; energy principles of mechanics; introduction to fracture mechanics; constrained problems; advanced finite element concepts like mixed, assumed, and enhanced strain methods; computational fracture strategies like cohesive finite elements, embedded and extended finite element methods. Prerequisite: CEE 281 or equivalent.

CEE 316. Sustainable Built Environment Research. 3 Units.

Intended for early stage Ph.D. students in Sustainable Design and Construction (SDC). Covers dominant methodological approaches at the intersection of engineering, social management science and computer science. Overviews an array of methods available for research, focusing on methods commonly used in SDC. Publications using various methods will be analyzed, and journal review processes will be discussed. Major deliverable is research proposal using one or more of the methods discussed. Students will gain familiarity with the array of methods available for SDC research, know how to apply the methods in their own research area, and receive guidance on publishing their research in scientific journals.

CEE 320. Integrated Facility Engineering. 1 Unit.

Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.

CEE 321. Formal Models for Design. 3 Units.

Theories, methods, and formal systems to support the design of buildings. Academic and industrial frameworks to represent and manage the products, organizations, and processes of building projects. May be repeated for credit.

CEE 322. Data Analytics for Urban Systems. 3 Units.

TBA.

CEE 323A. Infrastructure Finance and Governance. 1 Unit.

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

CEE 323B. Infrastructure Finance and Governance. 1 Unit.

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

CEE 323C. Infrastructure Finance and Governance. 1 Unit.

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

CEE 328A. Multidisciplinary Design and Simulation of Building Envelopes. 3 Units.

Curtain walls are a manufactured product ubiquitous in the world of architecture and engineering that must meet structural, thermal, acoustic, environmental, and economic performance requirements. This course focuses on design strategies for building envelopes and explores new design approaches including parametric 3D modeling, simulation, and Multidisciplinary Design Optimization (MDO) methods that leverage computation to augment human abilities to identify novel, high performing solutions. Prerequisite: CEE 220A or equivalent. Limited to 16 students.

CEE 342. Computational Modeling of Organizations. 4 Units.

For post-M.S. students interested in formal techniques for organization design. Computer simulations of organizations are used to conduct virtual experiments for developing organization theory or to analyze the performance of virtual organizations with different structures and decision support and communication technologies. Research on computational modeling and design of real-world organizations. Paper serves as a research proposal. Prerequisite: 242 or equivalent introductory organization design class.

CEE 345. Game Theory Modeling in Engineering. 2-3 Units.

Game theory involves the analysis of conflict, cooperation and communication, and is a novel and powerful tool for analyzing important issues in engineering management and engineering policy. Class will develop students' quest; game theory skills in an applied context. Learn how to set up and solve fundamental game models and apply these skills to building new theories in engineering management through game theory modeling. Class illustrates the arts of game modeling by applying game theory in: (1) contracting and opportunistic bidding; (2) renegotiation in public-private partnerships; (3) partner selection strategies in global projects; and (4) knowledge management and sharing. Students are encouraged to apply game theory to their own research issues or disciplines, and extend their term projects into research papers or theses. Limited class size. Priority for CEE, IPER and MS&E students.

CEE 361. Turbulence Modeling for Environmental Fluid Mechanics. 2-4 Units.

An introduction to turbulence and its modeling, including Reynolds-average and large-eddy simulation models. Derivation of closure approximations and models. Impact of numerical code truncation error on turbulence model value and accuracy. Discussion of typical models and their applications to turbulent flows in rivers, estuaries, the coastal ocean and the atmospheric boundary layer (e.g., wind turbines and weather models). Prerequisites: knowledge of hydrodynamics or atmosphere dynamics and the basics of transport and mixing in the environment; consent of instructor.

CEE 362. Numerical Modeling of Subsurface Processes. 3-4 Units.

Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater intrusion; upscaling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.

CEE 362G. Stochastic Inverse Modeling and Data Assimilation Methods. 3-4 Units.

Stochastic methods for the solution of inverse problems that are algebraically underdetermined or have solutions that are sensitive to data. Emphasis is on geostatistical methods that, in addition to using data, incorporate information about structure such as spatial continuity and smoothness. Methods for real-time processing of new data. Prerequisite: consent of instructor.

CEE 362H. Heterogeneity and Scale in Groundwater. 3-4 Units.

Geologic materials are complex and composite media, in the microscale, but modeled as continua at the macroscale. We examine how our understanding of processes and heterogeneity at the microscale support laws that describe fluxes and change of state variables at the macroscale. We study Darcy's law for porous media, Fickian dispersion, non-Fickian dispersion, dilution of solutes, and mixing of reactants under mass transfer (diffusional) limitations. We use mathematical tools such as homogenization theories and stochastic analysis to find relations among macroscopic quantities. To be taught in Winter, alternate years starting 2011-2012.

CEE 363A. Mechanics of Stratified Flows. 3 Units.

The effects of density stratification on flows in the natural environment. Basic properties of linear internal waves in layered and continuous stratification. Flows established by internal waves. Internal hydraulics and gravity currents. Turbulence in stratified fluids. Prerequisites: 262A,B, CME 204.

CEE 363C. Ocean and Estuarine Modeling. 3 Units.

Advanced topics in modeling for ocean and estuarine environments, including methods for shallow water, primitive, and nonhydrostatic equations on Cartesian, curvilinear, and unstructured finite-volume grid systems. Topics include free-surface methods, nonhydrostatic solvers, and advanced Eulerian and Lagrangian advection techniques. Focus is on existing techniques and code packages, and their methodologies, including POM, ROMS, TRIM, ELCOM, and SUNTANS. Prerequisites: CME 200, 206, or equivalents.

CEE 363F. Oceanic Fluid Dynamics. 3 Units.

Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

Same as: EESS 363F

CEE 363G. Field Techniques in Coastal Oceanography. 3 Units.

This course focuses on the design and implementation of coastal oceanographic field studies from implementation through analysis. A wide range of field instrumentation and techniques, including AUVs and scientific diving is covered. Field studies. Data collection and analysis under instructor guidance.

CEE 364F. Advanced Topics in Geophysical Fluid Dynamics. 2-3 Units.

A seminar-style class covering the classic papers on the theory of the large-scale ocean circulation. Topics include: wind-driven gyres, mesoscale eddies and geostrophic turbulence, eddy-driven recirculation gyres, homogenization of potential vorticity, the ventilated thermocline, subduction, and the abyssal circulation. Prerequisite: EESS 363F or CEE 363F. Recommended: EESS 246B.
Same as: EESS 364F

CEE 364Y. Advanced Topics in Coastal Oceanography. 1-2 Unit.

The dynamics and transport implications of features in estuaries and coastal oceans characterized by sharp gradients: fronts, interfaces, and layers. Analytic framework to describe the formation, maintenance, and dissipation of such features. Examples include tidal mixing fronts, buoyant plume fronts and tidal intrusions, biological thin layers, and axial convergent fronts. Second unit for students who give a presentation.

CEE 365A. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.

Students must obtain a faculty sponsor.

CEE 365B. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.

Students must obtain a faculty sponsor.

CEE 365C. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.

Students must obtain a faculty sponsor.

CEE 365D. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.

Students must obtain a faculty sponsor.

CEE 370A. Environmental Research. 5-6 Units.

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

CEE 370B. Environmental Research. 5-6 Units.

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

CEE 370C. Environmental Research. 5-6 Units.

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

CEE 370D. Environmental Research. 3-6 Units.

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

CEE 371. Frontiers in Environmental Research. 1-2 Unit.

How to evaluate environmental research.

CEE 371L. Helminthic Disease Monitoring and Control.. 5 Units.

Assessment will be based upon weekly written and/or oral reports, with a final written critical review due at the end of the quarter.

CEE 371M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.

Same as: CEE 271M

CEE 374A. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

CEE 374B. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

CEE 374C. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

CEE 374D. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.

Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

CEE 374S. Advanced Topics in Microbial Pollution. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CEE 374T. Advanced Topics in Coastal Pollution. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CEE 374U. Advanced Topics in Submarine Groundwater Discharge. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CEE 374V. Advanced Topics in Microbial Source Tracking. 1-5 Unit.

May be repeated for credit. Prerequisite: consent of instructor.

CEE 374W. Advanced Topics in Water, Health and Development. 1-12 Unit.

Advanced topics in water, health and development. Emphasis on low-and-middle-income countries. Class content varies according to interests of students. Instructor consent required.

CEE 374X. Advanced Topics in Multivariate Statistical Analysis. 1-6 Unit.

Analysis of experimental and non-experimental data using multivariate modeling approaches. May be repeated for credit. Permission of instructor required for enrollment.

CEE 375. Advanced Methods in Pathogen Detection. 2 Units.

Molecular and culture-based techniques for pathogen detection in water.

CEE 377. Research Proposal Writing in Environmental Engineering and Science. 1-3 Unit.

For first- and second-year post-master's students preparing for thesis defense. Students develop progress reports and agency-style research proposals, and present a proposal in oral form. Prerequisite: consent of thesis adviser.

CEE 378. Statistical Analysis of Environmental Data: Tools and Applications. 2-3 Units.

Preference to Environmental Engineering and Science Ph.D. students. Practical data analysis techniques applicable to environmental engineering. The role of statistics in data collection, experimental design, data exploration, and effective communication of results. Use of statistical packages such as Excel, Matlab, and R. Discussions partially based on student interest and available datasets. Topics may include summarizing data, hypothesis testing, nonparametric statistics, regression analysis, classification and regression trees, cluster analysis, and computationally intensive methods. Limited enrollment.

CEE 378D. Seminar of Statistical Analysis of Multidisciplinary Primary Data. 1-3 Unit.

Practical management and analysis techniques for primary data collected in multidisciplinary projects. Selection of appropriate statistical tests, interpretation of results, and effective communication of findings to lay audiences. Univariate, bivariate and multivariate techniques, including hypothesis testing, nonparametric statistics, regression analysis and matching. Use of SPSS statistical package. Limited enrollment. Prerequisite: consent of instructor.

CEE 381. Advanced Engineering Informatics. 1-4 Unit.**CEE 385. Performance-Based Earthquake Engineering. 3-4 Units.**

Synthesis and application of approaches to performance-based design and assessment that recently have been developed or are under development. Emphasis is on quantitative decision making based on life-cycle considerations that incorporate direct losses, downtime losses, and collapse, and the associated uncertainties. Hazard analysis, response simulation, damage and loss estimation, collapse prediction. Case studies. Prerequisites: 282, 287, and 288.

CEE 386. Fundamentals and Applications of Wind Engineering. 3 Units.

This course provides a basic understanding of how winds interact with the built environment. Knowledge of wind flow and the wind/structure interaction is introduced to understand the risks associated with extreme wind events (e.g., hurricanes, tornadoes, thunderstorm downbursts, etc.) and its application for design, damage mitigation, and risk management. In addition to providing an introduction to catastrophe risk modeling, this course will show how the principles of wind engineering are used to estimate the risk of the built environment subjected to catastrophic wind events. Prerequisites: undergraduate fluid mechanics, structural dynamics (CEE 283 or equiv), probability CEE 203.

CEE 398. Report on Civil Engineering Training. 1 Unit.

On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.

CEE 399. Advanced Engineering Problems. 1-10 Unit.

Individual graduate work under the direction of a faculty member on a subject of mutual interest. For Engineer Degree students and Pre-quals Doctoral students. Student must have faculty sponsor. May be repeated for credit.

CEE 400. Thesis. 1-15 Unit.

For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree. Same as: Ph.D. Degree

CEE 801. TGR Project. 0 Units.

Same as: Engineer Degree

CEE 802. TGR Dissertation. 0 Units.

Same as: PhD degree

Classics Courses

CLASSICS 1G. Beginning Greek. 5 Units.

(Formerly CLASSGRK 1.) No knowledge of Greek is assumed. Vocabulary and syntax of the classical language.

CLASSICS 1L. Beginning Latin. 5 Units.

(Formerly CLASSLAT 1.) Vocabulary and syntax of the classical language. No previous knowledge of Latin is assumed.

CLASSICS 2G. Beginning Greek. 5 Units.

(Formerly CLASSGRK 2.) Continuation of CLASSICS 1G. Vocabulary and syntax of the classical language.

CLASSICS 2L. Beginning Latin. 5 Units.

(Formerly CLASSLAT 2.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 1L or equivalent placement.

CLASSICS 3G. Beginning Greek. 5 Units.

(Formerly CLASSGRK 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2G or equivalent placement. CLASSICS 3G fulfills University language requirement.

CLASSICS 3L. Beginning Latin. 5 Units.

(Formerly CLASSLAT 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2L or equivalent placement. CLASSICS 3L fulfills the University language requirement.

CLASSICS 4L. Intensive Beginning Latin. 12 Units.

(Formerly CLASSLAT 10/210) Equivalent to a year of beginning Latin (three quarters; CLASSICS 1L, 2: and 3L), this course is designed to teach the fundamentals of the Latin language in eight weeks. We will focus primarily on acquiring the basics of Latin grammar, morphology, and vocabulary and developing basic reading skills. At the end of the course, students should be able to read easy Latin prose and poetry. We will be using Wheelock's Latin textbook and meeting three hours a day, four days a week. Grades will depend on class participation and on performance in weekly quizzes and in a final written exam. Classics majors and minors must take course for letter grade. CLASSICS 4L fulfills the University language requirement.

CLASSICS 6G. Biblical Greek. 3-5 Units.

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: JEWISHST 5, RELIGST 171A

CLASSICS 6L. Latin 500-1600 CE. 5 Units.

The aim of the course is to familiarize students with medieval Latin and neo-Latin through a reading of various short texts drawn from philosophical, religious, political, historical, and literary works. Students will devote most of their efforts to preparing translations for class. We shall also discuss some peculiarities of post-classical Latin grammar. Prerequisite: CLASSLAT 1, 2 & 3, or equivalent.

Same as: ENGLISH 113L, PHIL 113L, PHIL 213L, RELIGST 173X

CLASSICS 7G. Biblical Greek. 3-5 Units.

(Formerly CLASSGRK 6) This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G (Formerly CLASSGRK 5) or a similar introductory course in Ancient Greek.

Same as: JEWISHST 5B

CLASSICS 9G. Intensive Biblical Greek. 8 Units.

Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.

Same as: JEWISHST 5G, RELIGST 171X

CLASSICS 11G. Intermediate Greek: Prose. 5 Units.

(Formerly CLASSGRK 101.) Transition to reading narrative: Lucian, with selections from Plato and New Testament. Grammar review and vocabulary-building.

CLASSICS 11L. Intermediate Latin: Introduction to Literature. 5 Units.

(Formerly CLASSLAT 101.) Phonology, morphology, semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech.

CLASSICS 12G. Intermediate Greek: Herodotus - the father of history?. 5 Units.

(Formerly CLASSGRK 102.) Herodotus of Halicarnassus (ca. 484 - 426) has often been celebrated as the "father of history." But the promised "display of his research" owes much to the Homeric poems, contemporary tragedy, and the medical discourse, and it contains lengthy passages quite fabulous and mysterious. We will read sections of book 1 and 8 in Greek, review morphology and syntax as needed, and reflect on the Ionic enlightenment, Herodotus' role therein, and his status as a historian. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 12L. Intermediate Latin: Plautus. 5 Units.

(Formerly CLASSLAT 102.) A close study of two plays by the brilliant comic dramatist of the 2nd Century BC. The course will develop confidence and expertise in translating Latin, with special attention to syntax. Topics to be considered include the relation of Plautine comedy to Greek models, issues in performance, and socio-political contexts. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 13G. Intermediate Greek: Homer. 5 Units.

(Formerly CLASSGRK 103.) We will read selected episodes from the Odyssey in Greek, and the entirety of the poem in translation. Our primary goal will be to master Homeric Greek's syntax, morphology, vocabulary, and meter, though we will also discuss narrative technique, poetic style, and the history of the scholarship. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 13L. Intermediate Latin: Cicero and Catullus. 5 Units.

(Formerly CLASSLAT 103.) In this class you will practice with and reinforce the advanced vocabulary, forms, and syntax of classical Latin you have previously acquired by reading continuous works of Latin prose (Cicero) and poetry (Catullus). While the primary emphasis of this course is on developing fluency in reading Latin, you will have opportunities to discuss and research the biographical, political, and literary issues raised by the readings. Your knowledge of the content and syntax of the readings will be assessed by several short translation/grammar quizzes. You will also sit for mid-quarter and end-quarter tests. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 14. Greek and Latin Roots of English. 3 Units.

(Formerly CLASSGEN 9) Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the lexicon. Terminology used in medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.

CLASSICS 16N. Sappho: Erotic Poetess of Lesbos. 4-5 Units.

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.

Same as: FEMGEN 24N

CLASSICS 17N. To Die For: Antigone and Political Dissent. 4 Units.

(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta.

Same as: TAPS 12N

CLASSICS 18N. The Artist in Ancient Greek Society. 3 Units.

Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a maniquest; than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vases from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Ceramic sets with scenes of Dionysian excess were reserved for elite symposia from which those who potted and painted them were excluded. Sculptors were still regarded as "mechanics," with soft bodies and soft minds (Xenophon) "indifferent to higher things" (Plutarch). The seminar addresses these issues. Students will read and discuss texts, write response papers and present slide lectures and gallery talks on aspects of the artist's profession.

Same as: ARTHIST 100N

CLASSICS 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.

(Formerly CLASSART 21Q.) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.

CLASSICS 24N. What is a Map?. 4 Units.

Exploration of the nature of maps via an overview of premodern mapping practices, combining theory and history of maps. Hands-on research involving Stanford's rare and historical maps, and chance to create own maps.

CLASSICS 26N. The Roman Empire: Its Grandeur and Fall. 4 Units.

(Formerly CLASSHIS 24N.) Preference to freshmen. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?.

Same as: HISTORY 11N

CLASSICS 28N. Inequality: the Last 100,000 Years. 3 Units.

(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality.
Same as: HISTORY 15N

CLASSICS 31. Greek Mythology. 3-5 Units.

(Formerly CLASSGEN 18.) The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy. Weekly participation in a discussion section is required.

CLASSICS 32. Gender and Power in Ancient Greece. 4 Units.

(Formerly CLASSGEN 17.) Introduction to the sex-gender system of ancient Greece, with comparative material from modern America. How myths, religious rituals, athletics, politics and theater reinforced gender stereotypes and sometimes undermined them. Skills: finding clues, identifying patterns and making connections amongst the components of a strange and beautiful culture very different from our own. Weekly participation in a discussion section is required.
Same as: FEMGEN 17

CLASSICS 34. Ancient Athletics. 3-4 Units.

(Formerly CLASSGEN 34.) How the Olympic Games developed and how they were organized. Many other Greek festivals featured sport and dance competitions, including some for women, and showcased the citizen athlete as a civic ideal. Roman athletics in contrast saw the growth of large-scale spectator sports and professional athletes. Some toured like media stars; others regularly risked death in gladiatorial contests and chariot-racing. We will also explore how large-scale games were funded and how they fostered the development of sports medicine. Weekly participation in a discussion section is required; enroll in sections on coursework.

CLASSICS 35. Becoming Like God: An Introduction to Greek Ethical Philosophy. 3-5 Units.

(Formerly CLASSGEN 35.) This course investigates key ethical philosophies in classical Greece. After reading several Greek tragedies (representing traditional Greek values), we examine the Greek philosophers' rejection of this tradition and their radically new ethical theories. Socrates, Plato, and Aristotle offered different ethical theories, but they shared basic conceptions of goodness and happiness. They argue that we could "become like gods" by achieving philosophic wisdom. What kind of wisdom is this? How does it make us ethically good and supremely happy people?.

CLASSICS 36. Gender and Power in Ancient Rome. 3-5 Units.

(Formerly CLASSGEN 119.) Interactions of gender and power in ancient Roman politics, religion, spectacles, and daily life. Masculinity and femininity in founding legends and public rituals; the ambiguous status of Vestal Virgins; gendered behavior in the Roman Forum; the spatial logic of prostitution; sexual characterizations of good vs. bad emperors in ancient texts; gender and time in Roman houses; inversions of gender and space in early Christian martyr narratives. Readings include modern gender theory as well as ancient Roman texts and material culture.

CLASSICS 41. Herodotus. 4-5 Units.

For Ancient History field of study majors; others by consent of instructor. Close reading technique. Historical background to the Greco-Persian Wars; ancient views of empire, culture, and geography; the wars and their aftermath; ancient ethnography and historiography, including the first narrative of ancient Egypt.

CLASSICS 42. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English. Same as: COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

CLASSICS 51. Introduction to the Archaeology of Greece. 3-5 Units.

An introduction to the archaeology of ancient Greece, from the first city states through the cultural achievements of classical Athens to the conquest by Rome.
Same as: ARCHLGY 51

CLASSICS 52. Introduction to Roman Archaeology. 3-5 Units.

(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.
Same as: ARCHLGY 81

CLASSICS 54. Introduction to World Architecture. 5 Units.

This lecture course surveys the history of architecture and urbanism, from the first societies to the present, in Europe, West and East Asia, the Americas, and Africa. The course progresses by case studies of exemplary monuments and cities, and examines the built environment as both cultural artifact and architectural event. It considers the social and political circumstances of architectural invention as well as plumbing the depth of artistic context by which particular formal choices resonate with an established representational culture.
Same as: ARTHIST 3

CLASSICS 56. Introduction to the Visual Arts: Prehistoric through Medieval. 5 Units.

A survey of the art and architecture from the cave paintings of Lascaux to the Gothic Cathedrals of France; the material is organized both chronologically and thematically and covers a multiplicity of religions: pagan, Christian, and Islamic.
Same as: ARTHIST 1A

CLASSICS 76. Global History: The Ancient World. 3-5 Units.

This course examines the emergence of "world empires"-- the first way of constituting a world-- in four regions of the eastern hemisphere from the first millennium BCE to the year 900 CE. It will study the pivotal role of cities, the importance of rulers, the incorporation of diverse peoples, and how the states that followed their collapse constituted new world orders through combining imitation of the vanished empire with the elaboration of the new "world religions."
Same as: HISTORY 1A

CLASSICS 81. Ancient Empires: Near East. 4-5 Units.

Why do imperialists conquer people? Why do some people resist while others collaborate? This course tries to answer these questions by looking at some of the world's earliest empires. The main focus is on the expansion of the Assyrian and Persian Empires between 900 and 300 BC and the consequences for the ancient Jews, Egyptians, and Greeks. The main readings come from the Bible, Herodotus, and Assyrian and Persian royal inscriptions, and the course combines historical and archaeological data with social scientific approaches. Weekly participation in a discussion section is required.

Same as: HISTORY 117

CLASSICS 82. The Egyptians. 3-5 Units.

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Weekly participation in a discussion section is required. Same as: AFRICAAM 30

CLASSICS 83. The Greeks. 4-5 Units.

(Formerly CLASSHIS 101.) 250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened—in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required.

Same as: HISTORY 101

CLASSICS 84. The Romans. 3-5 Units.

(Formerly CLASSHIS 60.) How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework.

Same as: HISTORY 102A

CLASSICS 87. Egyptomania! The Allure of Ancient Egypt Over the Past 3,500 Years. 5 Units.

Why does Egypt fascinate us? From Napoleonic invasion to Katy Perry's latest music video, we have interpreted ancient Egyptian history and mythology for centuries; in fact, this obsession dates back to the Egyptians themselves. This seminar explores Egyptomania from the Pharaonic period to the 20th century. Topics include: ancient Egypt, Greek historians, medieval Arabic scholars, hieroglyphic decipherment, 19th century travel, 20th century pop culture, and how historians have interpreted this past over the centuries.

Same as: HISTORY 244

CLASSICS 88. Origins of History in Greece and Rome. 4-5 Units.

(Formerly CLASSHIS 117.) The beginnings and development of historical writing in the ancient world. Emphasis on major classical historians and various models of history they invented, from local to imperial, military, cultural, biographical, world history and church history. Focus on themes of power, war, loss, growth and decline, as put by the ancients into historical narrative forms and probed by way of historical questioning and explanation. Attention to how these models resonate still today. Readings in translation: Herodotus, Thucydides, Tacitus, Livy and others. Participation in a weekly discussion section is required.

Same as: HISTORY 114

CLASSICS 101G. Advanced Greek: Plato's Phaedrus. 3-5 Units.

(Formerly CLASSGRK 111.) The course will be an intensive and extensive reading of this intriguing dialogue. Focus will center on making sense of the Greek and polishing translation/grammar skills. However, the trees of language should not prevent us from gazing at the whole forest. As it is, the Phaedrus deals with the significant interplay between eros and logos; i.e. the far-reaching extents of a rhetoric on love. Topics opened by this vein of thought include: a unique pastoral setting, philosophy and myth, the origins of poetic creation, types of madness, maniqueism's relation to the divine, the nature of the soul, the art of writing as a cause of oblivion. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 101L. Advanced Latin. 3-5 Units.

(Formerly CLASSLAT 111.) Full description TBD. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 102G. Advanced Greek: Lyric Poetry. 3-5 Units.

(Formerly CLASSGRK 112.) Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 102L. Advanced Latin: Livy. 4-5 Units.

(Formerly CLASSLAT 112.) Livy's Book VI tells the history of Republican Rome from 390 to 367 BCE, years of profound change in Roman society, as the city is reconstructed after being sacked by the Gauls. How does Livy make his story lifelike and convincing? What is the role of individuals in this narrative? How do moral readings of past events balance political ones? How does Livy involve his readers in reconstructing Rome and its past? Close attention to language, style and narrative techniques. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 103G. Advanced Greek: Scientific Writing. 3-5 Units.

(Formerly CLASSGRK 113.) Euclid and Archimedes. Reading texts from Greek science. The relationship between form and meaning in the presentation of scientific information, introduction to Greek Paleography. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 103L. Advanced Latin: Latin Lovers. 3-5 Units.

(Formerly CLASSLAT 113.) Four brilliant writers composed poetry on the thrills and pangs of love and loss: they are known as the Roman elegists. We will look at some of their predecessors and read their own works in Latin in selection, reflect on their choice of life in the service of love, and review grammar and syntax as necessary. Classics majors and minors must take course for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 104A. Latin Syntax. 4 Units.

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.

Same as: CLASSICS 204A

CLASSICS 104B. Latin Syntax. 2 Units.

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.

Same as: CLASSICS 204B

CLASSICS 105A. Greek Syntax: Prose Composition. 2 Units.
(Formerly CLASSGRK 175A/275A.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.
Same as: CLASSICS 205A

CLASSICS 105B. Greek Syntax: Prose Composition. 4 Units.
(Formerly CLASSGRK 175B/275B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.
Same as: CLASSICS 205B

CLASSICS 112. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.
(Formerly CLASSGEN 110.) Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.
Same as: TAPS 167

CLASSICS 121. Ecology in Philosophy and Literature. 3-5 Units.
(Formerly CLASSGEN 116.) The basic principles of ecological thinking, exploring the ways that different writers represent and relate to the natural world. Some key questions: What is nature, and where do humans fit in the natural world? How exactly do humans differ from other animals? Do these differences make us superior beings? What are our ethical responsibilities towards the earth and its inhabitants? In what ways have the technologies of writing, television, and computers affected humankind's relationship to the natural world?.

CLASSICS 123. Ancient Medicine. 3-4 Units.
Contemporary medical practice traces its origins to the creation of scientific medicine by Greek doctors such as Hippocrates and Galen. Is this something of which modern medicine can be proud? The scientific achievements and ethical limitations of ancient medicine when scientific medicine was no more than another form of alternative medicine. Scientific medicine competed in a marketplace of ideas where the boundaries between scientific and social aspects of medicine were difficult to draw.

CLASSICS 124. Ancient and Modern Medicine. 3-4 Units.
Imagine a world where the Universe has a built-in purpose and point. How would this belief impact man's place in nature? Imagine a world where natural substances have "powers." How might this impact diet and pharmacology? Magical vs. scientific healing: a clear divide? Disease and dehumanization: epilepsy, rabies. Physical and mental health: black bile and melancholy. The ethical and scientific assumptions hidden in medical language and imagery. How ancient medicine and modern medicine (especially alternative medicine) illuminate each other.

CLASSICS 136. The Greek Invention of Mathematics. 3-5 Units.
(Formerly CLASSGEN 103.) How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.
Same as: MATH 163

CLASSICS 137. Ancient Dance and its Modern Legacy. 3-5 Units.
Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.
Same as: CLASSICS 237, TAPS 165C, TAPS 265C

CLASSICS 142. Emperor, Explorer, and God: Alexander the Great in the Global Imagination. 3 Units.
(Formerly CLASSGEN 109.) This course will survey the changing image of Alexander the Great from the Hellenistic world to the contemporary. We shall study the appropriation of his life and legend in a variety of cultures both East and West and discuss his reception as both a divine and a secular figure by examining a variety of media including texts (primary and secondary) and images (statues, coins, mosaics, illuminated manuscripts, film, and TV) in the Hellenistic, Roman, Byzantine, Jewish, Islamic, Medieval, Renaissance, and Early Modern contexts. In concluding the quarter, students will evaluate contemporary representations in film and popular culture, such as Alexander directed by Oliver Stone and Pop Art in order to better appreciate his enduring legacy.
Same as: RELIGST 109

CLASSICS 143. Images of Women in Ancient China and Greece. 3-5 Units.
(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.
Same as: CHINGEN 143, CHINGEN 243, CLASSICS 243

CLASSICS 145. Early Christian Gospels. 4 Units.
An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.
Same as: RELIGST 132D

CLASSICS 146. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.
Stretching from India to Ethiopia, the Persian Empire; the largest empire before Rome; has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West; and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.
Same as: CLASSICS 246, RELIGST 229, RELIGST 329

CLASSICS 147. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.
From India to the Levant and from the Caspian Sea to the Arabian Peninsula, the Sasanian Empire (224-651 CE) was the dominant power in the Middle East till the advent of Islam. Diverse religious institutions and social practices of the Zoroastrians, Manicheans, Jews, and Christians in late antique Iran. Complex relationships between the Zoroastrian priesthood, the Sasanian monarchs, and these minority religions within the context of imperial rule. Profound religious and social changes that occurred with the Islamic conquests of Iran as well as examine the rich cultural continuities that survived from the Pre-Islamic past.
Same as: CLASSICS 247, RELIGST 309

CLASSICS 148. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoeptic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 248, RELIGST 209E, RELIGST 309E

CLASSICS 150. Majors Seminar. 5 Units.

(Formerly CLASSGEN 176.) Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, editing, and writing. In-class and take-home writing and revising exercises. Final paper topic may be on any subject related to Classics. Fulfills WIM requirement for Classics.

CLASSICS 151. Ten Things: An Archaeology of Design. 3 Units.

(Formerly CLASSART 113/213.) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgwood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

Same as: ARCHLGY 151

CLASSICS 153. Ancient Urbanism. 5 Units.

(Formerly CLASSART 112/212.) Archaeology of Greek, Roman and early Islamic cities and urbanism in the Mediterranean and western Asia. Comparison and contrast of the shaping role of religion and politics; definitions of public and private space, monumental buildings, houses, streets, infrastructure. Special themes are city and country connections; the problems of giant cities; cities in the longue dureacute;e. Case studies include Athens, Olynthos, Rome, Pompeii, Constantinople, Damascus and Cairo.

Same as: ARCHLGY 153, URBANST 119

CLASSICS 154. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-4 Units.

(Formerly CLASSART 145.) Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.

Same as: ARCHLGY 145

CLASSICS 158. Iconoclasm. 5 Units.

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 258, REES 409

CLASSICS 159. Appropriations of Greek Art. 4-5 Units.

Upper division seminar. The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Enrollment limited to 6. Prerequisite: ARTHIST 102 or consent of instructor.

CLASSICS 161. Archaic Greek Art. 4 Units.

In the decades 480-460, just before work began on the Parthenon, the sculptor Myron, creator of the Discus-Thrower, was even more celebrated for his bronze cow. Ancient authors describe an image so palpably alive that shepherds threw stones at her, thinking that she had strayed from the herd, and bulls vied for her attention. A century later, the quest for mimesis prompted a contest between two artists. Zeuxis painted a bunch of grapes seductive enough to attract hungry birds; Parrhasios then added a linen curtain, which Zeuxis asked to be removed from his painting. Zeuxis conceded defeat since he had fooled only birds, whereas Parrhasios had deceived an artist. This course explores the art and culture of the ancestors of these men. The Greeks of the archaic period (1000-480) would have understood the painters' competitive zeal, but only toward the end of the period would they have recognized naturalism as an artistic aim. Earlier Greek art is more abstract than life-like, closer to Calder than Michelangelo. In the eighth century Homer's descriptions of the rippling muscles (and egos) of his heroes, and the grief of Achilles; horses, evoke living men and sentient animals, but his fellow sculptors and painters prefer abstraction. This changes in the seventh century as a result of commercial contacts with the Near East and Egypt. Imported bronzes, ivories and other Near Eastern exotica alerted Greek artists to a wider range of subjects, techniques and intentions, including naturalism. Later in the century, Greek expatriates learned the art of carving hard stone from Egyptian masters and soon marble sculpture and architecture spread throughout Greece. In the course of the sixth and early fifth centuries Greek artists assimilate what they had borrowed, compete with one another, obey and disobey their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. When the Persians invaded the Acropolis in 480 and 479, they encountered artifacts with little trace of alien influence or imprint and, at Salamis and Plataea, fought decisive battles in which the Greeks prevailed. In the aftermath of the war, as the Greeks rebuilt their cities and their lives, Myron's work reminded them of their debts to other cultures and their resolve to remain true to their own.

Same as: ARTHIST 101

CLASSICS 162. Empire and Aftermath: Greek Art from the Parthenon to Scopas. 4 Units.

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceed in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scared by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: ARTHIST 102, ARTHIST 302

CLASSICS 163. Greek Art In and Out of Context. 4-5 Units.

The seminar considers Greek artifacts in the context of Greek life (including the life of the workshop), and the endless ways in which craftsmen served the needs of Greek society. Their foundries, factories and ceramic studios produced the material goods that defined Greek life: temples, statues and other offerings for the gods; arms and armor for warriors; sporting equipment and prizes for athletes; houses, clothing and crockery for the family; ships and sailcloth, wagons and ploughs, wine and oil-presses for a thriving domestic and overseas economy; gravestones and funeral vases for the dead. (Formerly CLASSART 109.) Most of the antiquities exhibited in museums, or purchased by private collectors from galleries and auction houses, survive because they were buried with people who used and cherished them. The Greeks' quest; belief that the artifacts they valued in life would serve them in the afterlife informs the second part of the seminar, which is devoted to the recent history of tomb looting and the illicit trafficking in antiquities.

Same as: ARTHIST 203

CLASSICS 168. Engineering the Roman Empire. 4-5 Units.

(Formerly CLASSART 117.) Roman monuments and monumental space were designed to impress. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from arches, columns and domes to road networks, machines and landscape modification, we investigate not only the materials, methods, and knowledge behind Roman architectural innovation, but the communication of imperial messages through designed space.

Same as: ARCHLGY 118

CLASSICS 169. Archaeology of Britannia. 3-4 Units.

Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.

Same as: ARCHLGY 169

CLASSICS 171. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 106, ARTHIST 306

CLASSICS 172. Art & Architecture in the Medieval Mediterranean. 4 Units.

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 105, ARTHIST 305

CLASSICS 173. Hagia Sophia. 5 Units.

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208

CLASSICS 174. Art and Religious Experience in Byzantium and Islam. 5 Units.

This course presents a comparative study of Christian and Islamic paradigms (sixth to the thirteenth centuries) in the construction of religious experience through the material fabric of the building, the interior decor, objects, and rituals. We will read medieval ekphrastic texts and poetry, which stirred the viewer/participant to experience the building/object as animate. Among the sites we will study are: Hagia Sophia, the Ka'ba, the Dome of the Rock, the Mosque at Damascus and at Cordoba. We will read Byzantine and Arabic writers such as Paul the Silentiary, Patriarch Germanos, Maximus Confessor, Shahrawardi, and Ibn Arabi.

Same as: ARTHIST 209, ARTHIST 309

CLASSICS 175. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

CLASSICS 181. Classical Seminar: Origins of Political Thought. 4-5 Units.

(Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSICS 381, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

CLASSICS 183. Economy and Economics of Ancient Greece. 5 Units.

(Formerly CLASSHIS 114.) Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel.

Same as: ECON 114

CLASSICS 184. Ancient and Modern Slavery. 3-5 Units.

The ancient Greeks and Roman created the largest and most durable slave system in world history. It formed one of the foundations of classical civilization. While cruelty and exploitation were ever-present features, ancient slavery was not race-based and many slaves came to be freed and fully integrated into society. We will investigate this complex institution from a comparative perspective and in the context of the experience of modern colonial slavery.

CLASSICS 198. Directed Readings. 1-15 Unit.

(Formerly CLASSGEN 160.) May be repeated for credit.

Same as: Undergraduate

CLASSICS 199. Undergraduate Thesis: Senior Research. 2-10 Units.

(Formerly CLASSGEN 199.)

CLASSICS 201G. Survey of Greek Literature: Archaic Greek. 3-5 Units.

(Formerly CLASSGEN 208A.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 201L. Survey of Latin Literature: Literature of the Roman Republic. 3-5 Units.

(Formerly CLASSGEN 207A.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.

CLASSICS 202G. Survey of Greek Literature: Classical Greek. 3-5 Units.

(Formerly CLASSGEN 208B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 202L. Survey of Latin Literature: Augustan Age Latin. 3-5 Units.

(Formerly CLASSGEN 207B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Texts of Augustan literature required by the graduate syllabus, emphasizing poetry and major authors.

CLASSICS 203G. Survey of Greek Literature: Hellenistic and Late Greek. 3-5 Units.

(Formerly CLASSGEN 208C.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 203L. Survey of Latin Literature: Imperial Latin. 3-5 Units.

(Formerly CLASSGEN 207C.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 204A. Latin Syntax. 4 Units.

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.

Same as: CLASSICS 104A

CLASSICS 204B. Latin Syntax. 2 Units.

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.

Same as: CLASSICS 104B

CLASSICS 205A. Greek Syntax: Prose Composition. 2 Units.

(Formerly CLASSGRK 175A/275A.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.

Same as: CLASSICS 105A

CLASSICS 205B. Greek Syntax: Prose Composition. 4 Units.

(Formerly CLASSGRK 175B/275B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.

Same as: CLASSICS 105B

CLASSICS 206A. The Semantics of Grammar. 2 Units.

(Formerly CLASSGEN 205A.) Supplements CLASSICS 104A/204A. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

CLASSICS 206B. The Semantics of Grammar. 2 Units.

(Formerly CLASSGEN 205B.) Supplements CLASSICS 104B/204B. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

CLASSICS 213. Proseminar: Documentary Papyrology. 3-5 Units.

The focus will be on documentary papyrology. Students will be introduced to the basics of the discipline.

CLASSICS 215. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: DLCL 209, HISTORY 309G, RELIGST 204

CLASSICS 216. Advanced Paleography. 5 Units.

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: ENGLISH 300A, HISTORY 315, RELIGST 329X

CLASSICS 237. Ancient Dance and its Modern Legacy. 3-5 Units.

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, TAPS 165C, TAPS 265C

CLASSICS 243. Images of Women in Ancient China and Greece. 3-5 Units.

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.

Same as: CHINGEN 143, CHINGEN 243, CLASSICS 143

CLASSICS 244. Classical Seminar: Rethinking Classics. 4-5 Units.

Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.

Same as: DLCL 321

CLASSICS 246. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.

Stretching from India to Ethiopia, the Persian Empire; the largest empire before Rome; has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West; and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film *300* and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, REES 409

CLASSICS 298. Directed Reading in Classics. 1-15 Unit.

(Formerly CLASSGEN 260.)

Same as: Graduate Students

CLASSICS 301. Gateways to Classics. 1 Unit.

(Formerly CLASSGEN 300A.) Focus on skills, methodologies and approaches in the study of Classics topics, with attention both to histories of the disciplines and to new developments. Required for first-year Classics graduate students.

CLASSICS 302. Workshop on Teaching in Classics. 1 Unit.

Introduction to pedagogical theories and techniques relevant to careers as Classics instructors. Classics faculty and advanced graduate students will lead sessions on language instruction, class discussions, assignments and feedback, and course design. Participants will read selections from modern scholarship on teaching and learning and engage in hands-on exercises.

CLASSICS 304. Developing a Classics Dissertation Prospectus. 1-2 Unit.

This workshop concentrates on the development process of writing a successful dissertation proposal and clarifies expectations of the defense process. Includes peer reviews of draft proposals with an aim to present provisional proposals by the end of term. Highly recommended for current third-year Classics Ph.D. students.

CLASSICS 315. Aristotle and the Object of Mathematical Reasoning. 4 Units.

The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points.

In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they are obtained, and how they capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit.

Same as: PHIL 318

CLASSICS 318. Aristophanes: Comedy, and Democracy. 4-5 Units.

(Formerly CLASSGEN 304.) Intensive study of three plays in Greek (*Knights*, *Peace*, *Ecclesiazusae*) and the rest of the corpus in English, with reference to formal features and a focus on how Old Comedy related to the democratic practices of Athens.

CLASSICS 320. The Odes and Epodes of Horace. 3-5 Units.

Critical analysis of poetic texts, strengthening and updating the understanding of Latin language and style, and discussion of some of the most influential lyric poetry of all time. Topics include language, style and meter, and also poetics, historical context, gender, ethics, genre, and the history of Western lyric poetry. Classics undergraduates as well as graduate students familiar with other traditions of poetry are welcome.

CLASSICS 331. Words and Things in the History of Classical Scholarship. 4-5 Units.

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

Same as: HISTORY 303F

CLASSICS 335. Ekphrasis in Antiquity. 3-5 Units.

What is "ekphrasis"? How was it theorized and practiced in antiquity? Description, interpretation, and the senses; The relationship between the verbal and the visual in antiquity from Homer to Philostratus.

CLASSICS 336. Plato on Eros and Beauty. 3-5 Units.

We read Plato's *Symposium* and *Phaedrus*; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors.

Same as: PHIL 306C

CLASSICS 337. The Second Sophistic. 3-5 Units.

The class will introduce students to the most important aspects of the Second Sophistic: linguistic and literary classicism, rhetoric and performance, typical literary forms. Particular emphasis will be on the social and political background of the movement (Greek identity, social distinction, sophists and gender). For students who wish to take the class for 4 or 5 units, part of the readings will be in the original Greek.

CLASSICS 352. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.

Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world.

Same as: ARCHLGY 327

CLASSICS 353. Archaeology: Post-Humanist Agendas. 3-5 Units.

How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.

Same as: ARCHLGY 353

CLASSICS 367. Mediterranean Networks. 3-5 Units.

The ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functioned, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches--both broad theoretical network paradigms and specific network science methodologies--as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.

Same as: ARCHLGY 367

CLASSICS 373. Reception and Literacy in Roman Art. 5 Units.

(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.

Same as: ARTHIST 422

CLASSICS 376. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.

Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an.

How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance.

The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.

Same as: ARTHIST 405

CLASSICS 377. Animation, Performance, Presence in Medieval Art. 5 Units.

(Formerly CLASSART 311.) This course will explore concepts of animacy, performance, and presence in the art of Byzantium, focusing on the concept of image understood as the living bodies of the saints, the space of Hagia Sophia and its Eucharist ritual, the polymorphism of the mixed-media icon, and the interaction with these objects in prayer and recitation of epigrams.

Same as: ARTHIST 411

CLASSICS 381. Classical Seminar: Origins of Political Thought. 4-5 Units.

(Formerly CLASSHIS 133/333.) Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change.

Same as: CLASSICS 181, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

CLASSICS 382. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: POLISCI 231

CLASSICS 384A. Ancient Greek Economic Development. 4-5 Units.

(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430A

CLASSICS 384B. Ancient Greek Economic Development. 1-5 Unit.

(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430B

CLASSICS 391. Early Empires: Han and Rome. 4-5 Units.

(Formerly CLASSHIS 344.) This course systematically compares the Han Empire and the Roman Empire in order to provide insight into the distinctive features of the empires as a political and social type. Topics examined will include geographic frames, the nature of the ruler, the role of the city, the form and function of military forces, religious aspects, legal codes, structures of kinship, and the relation of these states to the outside world.

CLASSICS 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: DLCL 396, HISTORY 336E

CLASSICS 399. Dissertation Research in Classics. 1-10 Unit.

(Formerly CLASSGEN 360.)

CLASSICS 801. TGR M.A. Project. 0 Units.

(Formerly CLASSGEN 801.)

CLASSICS 802. TGR Ph.D. Dissertation. 0 Units.

(Formerly CLASSGEN 802.)

Communication Courses

COMM 1A. Mass Media, Society, and Democracy. 4-5 Units.

(Graduate students register for COMM 211.) Open to non-majors. This course examines the role of the news media in contemporary society, with particular attention to cross-national variation in the relationships between journalists, politicians, and citizens. We further consider the potentially transforming effects of technology on the media-politics nexus.

Same as: COMM 211

COMM 1B. Media, Culture, and Society. 5 Units.

The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity.

Same as: AMSTUD 1B

COMM 86SI. College Media Lab: digital and reporting skills for student journalists. 1-2 Unit.

Journalism, especially college journalism, is undergoing rapid change in the 21st century. As native digital users, we are uniquely positioned to create and innovate in the new media landscape. This class is designed to provide students with a hands-on education in digitally-fluent college media reporting. Topics include photo, video and data reporting, media rights and responsibilities, and communications careers outside of journalism. The 'basics' of writing, blogging, and reporting the news will be taught and applied throughout the quarter. Guest lectures from professional reporters, academics, and communications professionals. Work completed for this class can be submitted to The Stanford Daily for publication. Pizza provided.

COMM 100S. Self-Representation in Digital Media. 3 Units.

Digital media allows ordinary people to document, publicize and reinvent themselves in ways previously only available to the elite. In the first half of this course, we will examine how Westerners have represented themselves as individuals. We will focus on photography, as indicative of a shift in prevalence of self-representation to the masses. In the second half of the course, we will examine how the ways in which individuals are represented may affect their understanding of themselves. Students will experiment with self-representation in different media, including creating virtual representations (avatars) of themselves to be inhabited in immersive virtual reality in the Virtual Human Interaction Lab. In the process, they will learn how the shared digital world shadows, interprets and sometimes overwrites the physical world and day-to-day life.

COMM 101S. Growing up Digital: Technology's role in Cognitive and Social Development. 3 Units.

Interactive digital technology infiltrates homes, schools, and entertainment venues, changing how people think, and socialize. What is the impact of growing up with greater access? How might age influence its use? This course focuses on technology's role in cognitive and social development and how that impacts its design. Topics include brain development, social cognition, symbolic processing, media usage, and self-representation. Coursework includes interacting with digital technologies such as virtual reality and social networking websites and completing a design project.

COMM 102S. Political Communication and Social Media. 3 Units.

This course will explore how social media and mobile computing platforms affect the modern political landscape. Topics: how these technologies change the mix of news, information and campaign materials we get; structure our relationships with candidates and representatives; augment modern politicians' fundraising and campaign efforts; and make possible new forms of political organization and collective action. Possible case studies: the Obama campaign's successful use of social/mobile technology to campaign in 2008 and 2012; how constituents use social media to communicate with their representatives; and the role of social-mobile technologies in modern revolutionary movements.

COMM 103S. Media Entertainment. 3 Units.

The impact of media entertainment on individuals, social groups, and societies. Sources include a diverse cross-section of entertainment. Introduction to psychological and socio-psychological theories. Empirical findings relating to media entertainment as a stimulus and a reception phenomenon. What renders diverse genres of media content and format enjoyable? Why do individuals pursue entertainment experiences in ever-increasing numbers? What is the political impact of apolitical media entertainment?.

COMM 104W. Reporting, Writing, and Understanding the News. 5 Units.

Techniques of news reporting and writing. The value and role of news in democratic societies. Gateway class to journalism. Prerequisite for all COMM 177/277 classes. Limited enrollment. Preference to COMM majors.

COMM 105S. Media Power in American Culture. 3 Units.

An exploration of media power, focused on both digital and mass media. This course aims to interrogate what it means to claim that media are powerful, with an eye toward power dynamics in an era of Edward Snowden, National Security Agency surveillance of Americans, and constant online tracking by Internet companies. The objective of this course is to develop a framework and vocabulary for critically understanding media power and its role in setting the conditions of everyday life.

COMM 106. Communication Research Methods. 4-5 Units.

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. Same as: COMM 206

COMM 106S. Communication Research Methods. 3-5 Units.

An introduction to social science research methods for those who have little or no prior experience in statistics. Designed to provide students with a critical framework and a set of tools to examine social problems - especially those related to the area of communication and the media. Students will be guided through the process of formulating real-world research questions, parsing them into analyzable statements, engaging in systematic data collection and analysis, and finally, thinking about value and limits of its outcome. Hands-on research experience provided.

COMM 107S. Engendering Compassion with Interactive Digital Media. 3 Units.

This course will draw on research regarding behavioral, cognitive, and physiological indicators and predictors of compassion, as well as computer-mediated communication, intimate and ubiquitous computing, social networking, and multitasking to better understand how interactive digital media affects compassionate behaviors, including altruism and helping. For their final project, students will either (1) propose an experiment for future research investigating compassion in HCI, or (2) propose a design change for an extant technology to engender compassionate responses.

COMM 108. Media Processes and Effects. 4-5 Units.

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1. Same as: COMM 208

COMM 109S. Psychology of Technology & Human-Technology Interaction. 3 Units.

Products of design surround us, and shape our lives. This course will explore the human relationship with technology from a psychological point of view, and probe how technology can be designed to work in concert with those who use it. To survey this vast space, the course will cover seminal readings in the areas of human factors, human-computer interaction, product design, and psychology. The course will also delve into the area of design, with a collaborative final project integrating design and psychology.

COMM 111S. Creative Industries: The Business of Popular Culture. 3 Units.

Examines the processes, institutions and cultural forces that shape production in creative industries. Examines book publishing, journalism, music, video/film, and games. Explores how these industries are organized, how work is structured and how technology and social media affect the production, distribution and discovery of products (like books, songs and videos) and experiences (like concerts). Asks how user-created content, like fan fiction and youtube videos, affect existing media institutions, and asks how digital technologies change the way culture is made.

COMM 113. Computational Methods in the Civic Sphere. 4-5 Units.

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213). Same as: COMM 213

COMM 115S. Fun & Games: Motivational Design of User Experiences. 3-5 Units.

Various interventions are employing virtual rewards, teams, and badges to incentivize real world behavior ranging from commercial purchases to reductions in home energy use. These are examples of motivational design, in which the engaging qualities common to games and other enjoyable activities are leveraged to drive particular behaviors. Using scientific research and industry examples we will examine the key processes and concepts that make up such designs. Along the way we will compare different theoretical approaches to motivation, consider the potential application of emerging technologies for new motivational designs, and discuss the ethics of designing for behavior change.

COMM 116. Journalism Law. 4-5 Units.

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major. Same as: COMM 216

COMM 117. Digital Journalism. 4-5 Units.

(Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor. Same as: COMM 217

COMM 120W. Digital Media in Society. 4-5 Units.

(Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors. Same as: AMSTUD 120, COMM 220

COMM 121S. The Human Relationship with Machines. 3 Units.

This course will survey ways in which people have thought about machines, in social and moral terms, from the late 18th century to the mid-20th century. Students will read mostly primary and secondary historical sources, originally published among industrial countries including France, Holland, England, Germany, and the United States, that illustrate major points of contention between actors brought into contact with one another through machine technologies. By the end of the course, students will have a greater understanding of the particular stances taken toward machines throughout modernity, how communication between people during this period has been shaped and occasioned by machines, the variety of forms taken by that communication, and what this history could mean for the role played by machines in our own lives. Topics include the censorship of Julien Offray de la Mettrie, automata and industrialization in 18th century England, the English and French Luddite movements, the literary dystopias of Samuel Butler and Charles Dickens, the American machine breakers movement, Taylorism and technocracy, and the post-war perspectives of Norbert Wiener and Martin Heidegger.

COMM 122. Content Analysis: Studying Communication Artifacts. 4-5 Units.

An empirical and systematic investigation of documented messages in print, graphical, and audio-visual forms and observed human communication behaviors. Focuses on the design and execution of content analytic studies, including manifest vs. latent content, measurement issues, reliability and validity assessment, computer text analysis, and traditional human-coder techniques. Prerequisite: junior, senior or grad standing; COMM 106/206 or an equivalent course in basic social science research. Limited enrollment. Same as: COMM 222

COMM 123. Argumentation and Persuasion. 4-5 Units.

We all know that appeals based on logic and sound evidence often fail where less rational appeals that "shouldn't" work, succeed. This course examines persuasion, the influencing of attitudes, beliefs or behavior, and locates within that broad subject argumentation, the process of reasoning methodically from evidence. Argumentation, the socially acceptable method of persuasion, typically confines itself to the rules of logic and has as its goal the recognition of states and causal relationships held by the arguer to objectively exist. Other methods of persuasion can succeed while flouting those rules, but only within limits, as the story of the Emperor's New Clothes reminds us. This course will explore whether those limits be accounted for by the capacity limitations and heuristics and biases of human information processing. Topics to be covered include evolutionary explanations; the central and peripheral routes to persuasion; source, channel and receiver factors; attitude-behavior consistency; the roles of involvement, elaboration, affect and social influence; critical thinking skills and logical fallacies. Limited enrollment; preference to juniors, seniors and graduate students, and within these, to Communication majors. Same as: COMM 223

COMM 125. Perspectives on American Journalism. 4-5 Units.

(Graduate students register for COMM 225.) An examination of the practice of American journalism, focusing on the political, social, cultural, economic and technological forces that have shaped the U. S. press since the early 1800s. Aimed at consumers as well as producers of news, the objective of this course is to provide a framework and vocabulary for judging the value and quality of everyday journalism.

Same as: COMM 225

COMM 130N. The idea of a free press. 3-4 Units.

Preference to freshmen. An examination of the meaning of freedom of the press, tied to but not bound by various Supreme Court rulings on the scope and purpose of the First Amendment's speech and press clauses. Discussions will include a look at the recent and rapid computerization of communication and what it portends for the future of a free press.

COMM 131. Media Ethics and Responsibility. 4-5 Units.

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

Same as: COMM 231

COMM 133. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.

This seminar will examine the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making. A prime example: the torrent of secret NSA programs disclosed by Edward Snowden in newspapers and other media. Students will explore attitudes, practices and actions by the media and the government through a series of case studies and simulations. Former editors, reporters and government officials will appear as guest speakers. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society, especially in the management of national security affairs. For advanced undergraduate and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Please email Anne Stickells (annees7@stanford.edu) to request an application. Completed applications are due by 6pm on March 21, 2015. (Grad students register for COMM 233).

Same as: COMM 233

COMM 134. Public Participation and Public Policy. 4-5 Units.

Examines the role of public participation in public policy making. Around the world, policymakers seek to engage their publics. But, even though public participation is important, it is also problematic. Public meetings can become dysfunctional and turn into media spectacles instead of actually gathering the opinions of the public. The question becomes, when and how should the public be consulted in order to effectively impact public policies? There are consequences of engaging the public, and this seminar explores the methods used to engage publics around the world.

Same as: COMM 234

COMM 135. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. In spring quarter 2015, this course will have a special focus on deliberative democracy in the the Greater China region. The course will discuss whether a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age. What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Case studies from the Deliberative Polling method and other deliberation methods, its applications, defenders and critics, both normative and empirical, will provide a cases studies for discussion. Some course sessions will utilize the case method to examine public consultations, the media, and civil society. Throughout the course, students will address how public participation is currently conducted around the world. As we have all seen successful, but more likely unsuccessful attempts to consult the public and this course will examine the various ways of consulting the public and how governments, media, and the public have responded and used the results.

Same as: AMSTUD 135, COMM 235, COMM 335, POLISCI 234P, POLISCI 334P

COMM 137W. The Dialogue of Democracy. 4-5 Units.

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: AMSTUD 137, COMM 237, POLISCI 232T, POLISCI 332T

COMM 140. Digital Media Entrepreneurship. 3-5 Units.

(Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers. Prerequisite: Instructor consent/completed application. Application can be found at: <http://dme.stanford.edu>.

Same as: COMM 240

COMM 142W. Media Economics. 4-5 Units.

Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas.

Same as: COMM 242

COMM 143W. Communication Policy and Regulation. 4-5 Units.

Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time.

Same as: COMM 243

COMM 147. Modern History and Future of Journalism. 4-5 Units.

(Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?.

Same as: COMM 247

COMM 151. The First Amendment: Freedom of Speech and Press. 4-5 Units.

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 251, POLISCI 125P

COMM 160. The Press and the Political Process. 4-5 Units.

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.

Same as: COMM 260, POLISCI 323R

COMM 161. Research Seminar on Political Campaigns. 4 Units.

This seminar will provide students with the opportunity to design and implement a research project concerning the effects of campaigns on public opinion/voting preference. The first half of the course will expose students to principles of research design (including field experiments, surveys and content analysis) and major repositories of election and campaign data including the American National Election Studies, the Wisconsin Advertising Database, and other compilations of national and statewide polls. The second half of the course will cover recent scholarship into the effects of exposure to political campaigns on vote choice, turnout, polarization, and related outcomes. Prerequisite: COMM162/Polisci 120b.

COMM 162. Campaigns, Voting, Media, and Elections. 4-5 Units.

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.

Same as: COMM 262, POLISCI 120B

COMM 163. Running Time: Running and Winning Elections. 5 Units.

This course aims to teach you the nuts-n-bolts of political campaigning. How do campaign consultants organize a campaign, draft a strategy, come up with a theme, target voters, raise money, write and produce ads and get voters to the ballot? Drawing upon academic writings in the fields of political science and communication, articles by campaign consultants, TV ads, and documentaries, you will learn all about how elections are won and lost. You will master, and yet learn to be critical of, current electoral politics with their emphasis on money, polls, and sound bites. Finally, you will harness this new knowledge to do some good, by promoting a worthy cause.

Same as: POLISCI 229R

COMM 164. The Psychology of Communication About Politics in America. 4-5 Units.

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research. Same as: COMM 264, POLISCI 224L, PSYCH 170

COMM 166. Virtual People. 4-5 Units.

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 266

COMM 167. Advanced Seminar in Virtual Reality Research. 1-3 Unit.

Restricted to students with previous research experience in virtual reality. Experimental methods and other issues.

COMM 168. Experimental Research in Advanced User Interfaces. 1-5 Unit.

Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

Same as: COMM 268, COMM 368, ME 468

COMM 169. Computers and Interfaces. 4-5 Units.

(Graduate students register for COMM 269.) Interdisciplinary. Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate cognitive, emotional, and social responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of an interactive interface.

Same as: COMM 269

COMM 171. Moving Pictures: How the Web, Mobile and Tablets are Revolutionizing Video Journalism. 3-5 Units.

(Graduate students register for 271.) Examine the emerging role of video journalism across web, tablet and mobile platforms. What are the specific needs of these platforms? How can new reporting tools be integrated to efficiently produce video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism on these platforms. Students will produce video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.

Same as: COMM 271

COMM 172. Media Psychology. 4-5 Units.

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

Same as: COMM 272

COMM 176. Advanced Digital Media Production. 4-5 Units.

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.

Same as: COMM 276

COMM 177A. Computational Journalism. 4 Units.

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways. Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor. Same as: COMM 277A

COMM 177C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.

(Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from thayden@stanford.edu. Same as: COMM 277C, EARTHSYS 177C, EARTHSYS 277C, ENVRES 277C

COMM 177D. Specialized Writing and Reporting: Magazine Journalism. 4-5 Units.

(Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor. Same as: COMM 277D

COMM 177G. Specialized Writing and Reporting: Covering Silicon Valley. 4-5 Units.

(Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley's technology scene. Prerequisite: 104 or consent of instructor. Same as: COMM 277G

COMM 177I. Becoming a Watchdog: Investigative Reporting Techniques. 4-5 Units.

Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor. Same as: COMM 277I

COMM 177S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor. Same as: COMM 277S

COMM 177Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East and Asia. 4-5 Units.

(Graduate students register for COMM 277Y.) What's involved in working as a foreign correspondent in these important and volatile parts of the world, where in many cases journalists are not respected and may face danger -- taught by a journalist who has worked extensively in both regions. (no pre-requisites). Same as: COMM 277Y

COMM 182. Social Media Issues. 4-5 Units.

(Graduate students register for COMM 282.) Students will take away from this course a set of conceptual tools, a vocabulary, and an analytical framework with which to recognize, understand, and more effectively manage new social practices online, together with a familiarity with the literature regarding social media and identity, community, collective action, public sphere, social capital, networks, and social networks. Students will also develop skills at using online forums, blogs, microblogs, wikis for research, collaboration, and communication. Limited enrollment. Prerequisite: instructor consent. Please see <http://comm.stanford.edu/faculty-rheingold/> for application instructions. Contact instructor at: howard@rheingold.com. Same as: COMM 282

COMM 183. Social Media Literacies. 4-5 Units.

Today's personal, social, political, economic worlds are all affected by digital media and networked publics: viral videos, uprisings from Tahrir to #OWS, free search engines, abundant inaccuracy and sophisticated disinformation online, indelible, and searchable digital footprints, laptops in lecture halls and BlackBerries at the dinner table, 20-something social media billionaires, massive online university courses. Introduction to the literature about and direct experience of these new literacies: research foundations and practical methods to control attention, attitudes and tools necessary for critical consumption of information, best practices of individual digital participation and collective participatory culture, the use of collaborative media and methodologies, and the application of network know-how to life online. Contrasting perspectives through readings and classroom and online discussion. Students collaborate and cooperate in their learning during and between classes through small group discussions and face to face exercises, forums, blogs, mindmaps and wikis. Prerequisite: instructor consent. See <http://comm.stanford.edu/faculty-rheingold/> for application instructions; contact instructor at howard@rheingold.com. Same as: COMM 283

COMM 195. Honors Thesis. 5 Units.

Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.

COMM 199. Individual Work. 1-5 Unit.

For students with high academic standing. May be repeated for credit.

COMM 206. Communication Research Methods. 4-5 Units.

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. Same as: COMM 106

COMM 208. Media Processes and Effects. 4-5 Units.

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1. Same as: COMM 108

COMM 211. Mass Media, Society, and Democracy. 4-5 Units.

(Graduate students register for COMM 211.) Open to non-majors. This course examines the role of the news media in contemporary society, with particular attention to cross-national variation in the relationships between journalists, politicians, and citizens. We further consider the potentially transforming effects of technology on the media-politics nexus. Same as: COMM 1A

COMM 212. Models of Democracy. 3-5 Units.

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.

Same as: COMM 312

COMM 213. Computational Methods in the Civic Sphere. 4-5 Units.

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213).

Same as: COMM 113

COMM 216. Journalism Law. 4-5 Units.

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.

Same as: COMM 116

COMM 217. Digital Journalism. 4-5 Units.

(Graduate students register for COMM 217.) Seminar and practicum. The implications of new media for journalists. Professional and social issues related to the web as a case of new media deployment, as a story, as a research and reporting tool, and as a publishing channel. Prerequisite: Journalism M.A. student or consent of instructor.

Same as: COMM 117

COMM 220. Digital Media in Society. 4-5 Units.

(Graduate students register for 220.) Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to Juniors and Seniors.

Same as: AMSTUD 120, COMM 120W

COMM 222. Content Analysis: Studying Communication Artifacts. 4-5 Units.

An empirical and systematic investigation of documented messages in print, graphical, and audio-visual forms and observed human communication behaviors. Focuses on the design and execution of content analytic studies, including manifest vs. latent content, measurement issues, reliability and validity assessment, computer text analysis, and traditional human-coder techniques. Prerequisite: junior, senior or grad standing; COMM 106/206 or an equivalent course in basic social science research. Limited enrollment.

Same as: COMM 122

COMM 223. Argumentation and Persuasion. 4-5 Units.

We all know that appeals based on logic and sound evidence often fail where less rational appeals that "shouldn't" work, succeed. This course examines persuasion, the influencing of attitudes, beliefs or behavior, and locates within that broad subject argumentation, the process of reasoning methodically from evidence. Argumentation, the socially acceptable method of persuasion, typically confines itself to the rules of logic and has as its goal the recognition of states and causal relationships held by the arguer to objectively exist. Other methods of persuasion can succeed while flouting those rules, but only within limits, as the story of the Emperor's New Clothes reminds us. This course will explore whether those limits be accounted for by the capacity limitations and heuristics and biases of human information processing. Topics to be covered include evolutionary explanations; the central and peripheral routes to persuasion; source, channel and receiver factors; attitude-behavior consistency; the roles of involvement, elaboration, affect and social influence; critical thinking skills and logical fallacies. Limited enrollment; preference to juniors, seniors and graduate students, and within these, to Communication majors.

Same as: COMM 123

COMM 225. Perspectives on American Journalism. 4-5 Units.

(Graduate students register for COMM 225.) An examination of the practice of American journalism, focusing on the political, social, cultural, economic and technological forces that have shaped the U. S. press since the early 1800s. Aimed at consumers as well as producers of news, the objective of this course is to provide a framework and vocabulary for judging the value and quality of everyday journalism.

Same as: COMM 125

COMM 231. Media Ethics and Responsibility. 4-5 Units.

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism.

Same as: COMM 131

COMM 233. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.

This seminar will examine the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making. A prime example: the torrent of secret NSA programs disclosed by Edward Snowden in newspapers and other media. Students will explore attitudes, practices and actions by the media and the government through a series of case studies and simulations. Former editors, reporters and government officials will appear as guest speakers. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society, especially in the management of national security affairs. For advanced undergraduate and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Please email Anne Stickells (annees7@stanford.edu) to request an application. Completed applications are due by 6pm on March 21, 2015. (Grad students register for COMM 233).

Same as: COMM 133

COMM 234. Public Participation and Public Policy. 4-5 Units.

Examines the role of public participation in public policy making. Around the world, policymakers seek to engage their publics. But, even though public participation is important, it is also problematic. Public meetings can become dysfunctional and turn into media spectacles instead of actually gathering the opinions of the public. The question becomes, when and how should the public be consulted in order to effectively impact public policies? There are consequences of engaging the public, and this seminar explores the methods used to engage publics around the world.

Same as: COMM 134

COMM 235. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. In spring quarter 2015, this course will have a special focus on deliberative democracy in the Greater China region. The course will discuss whether a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age. What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Case studies from the Deliberative Polling method and other deliberation methods, its applications, defenders and critics, both normative and empirical, will provide a cases studies for discussion. Some course sessions will utilize the case method to examine public consultations, the media, and civil society. Throughout the course, students will address how public participation is currently conducted around the world. As we have all seen successful, but more likely unsuccessful attempts to consult the public and this course will examine the various ways of consulting the public and how governments, media, and the public have responded and used the results.

Same as: AMSTUD 135, COMM 135, COMM 335, POLISCI 234P, POLISCI 334P

COMM 237. The Dialogue of Democracy. 4-5 Units.

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 137W, POLISCI 232T, POLISCI 332T

COMM 240. Digital Media Entrepreneurship. 3-5 Units.

(Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers. Prerequisite: Instructor consent/completed application. Application can be found at: <http://dme.stanford.edu>. Same as: COMM 140

COMM 242. Media Economics. 4-5 Units.

Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas. Same as: COMM 142W

COMM 243. Communication Policy and Regulation. 4-5 Units.

Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time. Same as: COMM 143W

COMM 247. Modern History and Future of Journalism. 4-5 Units.

(Graduate students register for COMM 247.) The birth and evolution of local and national television news. The modern history of newspapers. Can they survive in the era of online journalism?. Same as: COMM 147

COMM 251. The First Amendment: Freedom of Speech and Press. 4-5 Units.

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 151, POLISCI 125P

COMM 260. The Press and the Political Process. 4-5 Units.

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.

Same as: COMM 160, POLISCI 323R

COMM 262. Campaigns, Voting, Media, and Elections. 4-5 Units.

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.

Same as: COMM 162, POLISCI 120B

COMM 264. The Psychology of Communication About Politics in America. 4-5 Units.

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research. Same as: COMM 164, POLISCI 224L, PSYCH 170

COMM 266. Virtual People. 4-5 Units.

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 166

COMM 268. Experimental Research in Advanced User Interfaces. 1-5 Unit.

Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

Same as: COMM 168, COMM 368, ME 468

COMM 269. Computers and Interfaces. 4-5 Units.

(Graduate students register for COMM 269.) Interdisciplinary. Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate cognitive, emotional, and social responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of an interactive interface.
Same as: COMM 169

COMM 271. Moving Pictures: How the Web, Mobile and Tablets are Revolutionizing Video Journalism. 3-5 Units.

(Graduate students register for 271.) Examine the emerging role of video journalism across web, tablet and mobile platforms. What are the specific needs of these platforms? How can new reporting tools be integrated to efficiently produce video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism on these platforms. Students will produce video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.
Same as: COMM 171

COMM 272. Media Psychology. 4-5 Units.

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.
Same as: COMM 172

COMM 273. Public Issues Reporting I. 3-4 Units.

Reporting and writing on government and public policies and issues; their implications for the people and the press. Required for journalism M.A. students.

COMM 273D. Public Affairs Data Journalism I. 4 Units.

Even before the ubiquity of Internet access and high-powered computers, public accountability reporting relied on the concerted collection of observations and analytical problem-solving. We study the methods, and the data, used to discover leads and conduct in-depth reporting on public affairs, including election finance and safety regulations. Students gain practical experience with the digital tools and techniques of computer-assisted reporting. Prerequisite: Journalism M.A. student.

COMM 274. Public Issues Reporting II. 3-4 Units.

Almost everything a journalist writes about involves government, either directly or indirectly. In this course we learn about the hidden forces that control government decisions: lobbying, campaign finance, budgets and more. Students write stories and do two accompanying multimedia pieces. Prerequisites: 273, Journalism M.A. student.

COMM 274D. Public Affairs Data Journalism II. 4 Units.

Learn how to find, create and analyze data to tell news stories with public service impact. Uses relational databases, advanced queries, basic statistics, and mapping to analyze data for storytelling. Assignments may include stories, blog posts, and data visualizations, with at least one in-depth project based on data analysis. Prerequisites: COMM 273D or Journalism M.A. student.

COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video. 3-4 Units.

Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Journalism M.A. student. Corequisite: COMM 273.

COMM 276. Advanced Digital Media Production. 4-5 Units.

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.
Same as: COMM 176

COMM 277A. Computational Journalism. 4 Units.

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways. Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor.
Same as: COMM 177A

COMM 277C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.

(Graduate students register for COMM / ENVRES 277C.) Practical, collaborative, writing-intensive course in science-based environmental journalism. Science and journalism students learn how to identify and write engaging stories about environmental issues and science, how to assess the quality and relevance of environmental news, how to cover the environment and science beats effectively, and how to build bridges between the worlds of journalism and science. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, ENVRES 200 or consent of instructor. Admissions by application only, available from thayden@stanford.edu. Same as: COMM 177C, EARTHSYS 177C, EARTHSYS 277C, ENVRES 277C

COMM 277D. Specialized Writing and Reporting: Magazine Journalism. 4-5 Units.

(Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.
Same as: COMM 177D

COMM 277G. Specialized Writing and Reporting: Covering Silicon Valley. 4-5 Units.

(Graduate students register for COMM 277G.) Business reporting basics in the context of Silicon Valley's technology scene. Prerequisite: 104 or consent of instructor.
Same as: COMM 177G

COMM 277I. Becoming a Watchdog: Investigative Reporting Techniques. 4-5 Units.

Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor.
Same as: COMM 177I

COMM 277S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor.

Same as: COMM 177S

COMM 277Y. Specialized Writing and Reporting: Foreign Correspondence in the Middle East and Asia. 4-5 Units.

(Graduate students register for COMM 277Y.) What's involved in working as a foreign correspondent in these important and volatile parts of the world, where in many cases journalists are not respected and may face danger -- taught by a journalist who has worked extensively in both regions. (no prerequisites).

Same as: COMM 177Y

COMM 278. Journalism and Imaginative Writing in America. 5 Units.

Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' quest; backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

Same as: AMSTUD 257

COMM 279. News Reporting & Writing Fundamentals. 3-4 Units.

Learn beat reporting and writing skills including source development, interviewing, and story structure for news and features. Emphasis on developing news judgment, clear writing skills, and an ability to execute stories on deadline. Exercises and assignments mimic a newsroom. Students pursue local beats with a focus on public issues and complement written pieces with relevant data analyses and multimedia components. Prerequisite: Journalism M.A. student. Corequisite: COMM 275.

COMM 282. Social Media Issues. 4-5 Units.

(Graduate students register for COMM 282.) Students will take away from this course a set of conceptual tools, a vocabulary, and an analytical framework with which to recognize, understand, and more effectively manage new social practices online, together with a familiarity with the literature regarding social media and identity, community, collective action, public sphere, social capital, networks, and social networks. Students will also develop skills at using online forums, blogs, microblogs, wikis for research, collaboration, and communication. Limited enrollment. Prerequisite: instructor consent. Please see <http://comm.stanford.edu/faculty-rheingold/> for application instructions. Contact instructor at: howard@rheingold.com.

Same as: COMM 182

COMM 283. Social Media Literacies. 4-5 Units.

Today's personal, social, political, economic worlds are all affected by digital media and networked publics: viral videos, uprisings from Tahrir to #OWS, free search engines, abundant inaccuracy and sophisticated disinformation online, indelible, and searchable digital footprints, laptops in lecture halls and BlackBerries at the dinner table, 20-something social media billionaires, massive online university courses. Introduction to the literature about and direct experience of these new literacies: research foundations and practical methods to control attention, attitudes and tools necessary for critical consumption of information, best practices of individual digital participation and collective participatory culture, the use of collaborative media and methodologies, and the application of network know-how to life online. Contrasting perspectives through readings and classroom and online discussion. Students collaborate and cooperate in their learning during and between classes through small group discussions and face to face exercises, forums, blogs, mindmaps and wikis. Prerequisite: instructor consent. See <http://comm.stanford.edu/faculty-rheingold/> for application instructions; contact instructor at howard@rheingold.com.

Same as: COMM 183

COMM 289. Journalism Master's Project. 4 Units.

.

COMM 289C. Projects for Publication. 2 Units.

In-depth journalism projects are not products of happenstance. They require thorough planning and coordination at every stage of the process -- from refinement of ideas, to the creation of "back-out" schedules and precise outlines, to strategies for pitching the story and its author to skeptical editors. In this course, students will workshop and pitch MA journalism projects for placement and publication. Required for MA Journalism students; registration Comm 289 required.

COMM 289P. Journalism Thesis. 4 Units.

MA thesis course. Focuses on development of in-depth journalism project, culminating in work of publishable quality.

COMM 290. Media Studies M.A. Project. 1-2 Unit.

Individual research for coterminial Media Studies students.

COMM 291. Graduate Journalism Seminar. 1 Unit.

Required of students in the graduate program in Journalism. Forum for current issues in the practice and performance of the press. The seminar frequently features Bay Area Journalists as guest speakers. May be repeated for credit.

COMM 299. Individual Work. 1-4 Unit.

.

COMM 301. Communication Research, Curriculum Development and Pedagogy. 1 Unit.

Designed to prepare students for teaching and research in the Department of Communication. Students will be trained in developing curriculum and in pedagogical practices, and will also be exposed to the research programs of various faculty members in the department. Required of all Ph.D. students.

COMM 307. Summer Institute in Political Psychology. 3 Units.

Lectures, discussion groups, and workshops addressing many applications of psychology to the analysis of political behavior. Public opinion, international relations, political decision-making, attitudes and beliefs, prejudice, social influence and persuasion, terrorism, news media influence, foreign policy, socialization, social justice.

COMM 308. Graduate Seminar in Political Psychology. 1-3 Unit.

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.

Same as: POLISCI 324

COMM 310. Method of Analysis Program in the Social Sciences. 1 Unit.

Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See <http://mapss.stanford.edu>. Same as: ANTHRO 446A

COMM 311. Theory of Communication. 1-5 Unit.

Basic communication theory for first-year Ph.D. students in the Department of Communication. Introduction to basic writings and concepts in communication research. The goal is an introduction to issues in the field that are common in communication research. First half of the class will emphasize classic literature about field organization, history and theory. Second half will emphasize contemporary theory in areas that students select.

COMM 312. Models of Democracy. 3-5 Units.

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.

Same as: COMM 212

COMM 314. Qualitative Social Science Research Methods. 1-5 Unit.

Part of the doctoral research methods sequence. Focus is on the logic of qualitative research methods and modes of inquiry relevant to the study of communication and meaning. Prerequisite: Communication Ph.D. student, or consent of instructor.

COMM 317. The Philosophy of Social Science. 1-5 Unit.

Approaches to social science research and their theoretical presuppositions. Readings from the philosophy of the social sciences. Research design, the role of experiments, and quantitative and qualitative research. Cases from communication and related social sciences. Prerequisite: consent of instructor.

COMM 318. Quantitative Social Science Research Methods. 1-5 Unit.

An introduction to a broad range of social science research methods that are widely used in PhD work. Prerequisite: consent of instructor.

COMM 320G. Advanced Topics in New Media and American Culture. 1-5 Unit.

This course deals with advanced issues in computing and American cultural history since World War II. Primarily for Ph.D. students. Prerequisite: 220 or consent of instructor.

COMM 325G. Comparative Studies of News and Journalism. 1-5 Unit.

Focus is on topics such as the roles and responsibilities of journalists, news as a genre of popular literature, the nexus between press and state, and journalism's commitment to political participation.

COMM 326. Advanced Topics in Human Virtual Representation. 1-5 Unit.

Topics include the theoretical construct of person identity, the evolution of that construct given the advent of virtual environments, and methodological approaches to understanding virtual human representation. Prerequisite: PhD student or consent of instructor.

COMM 331G. Communication and Media Ethics. 1-5 Unit.

Limited to Ph.D. students. Advanced topics in press ethics and responsibility. Prerequisite: 231 or consent of instructor.

COMM 335. Deliberative Democracy and its Critics. 3-5 Units.

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. In spring quarter 2015, this course will have a special focus on deliberative democracy in the the Greater China region. The course will discuss whether a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age. What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Case studies from the Deliberative Polling method and other deliberation methods, its applications, defenders and critics, both normative and empirical, will provide a cases studies for discussion. Some course sessions will utilize the case method to examine public consultations, the media, and civil society. Throughout the course, students will address how public participation is currently conducted around the world. As we have all seen successful, but more likely unsuccessful attempts to consult the public and this course will examine the various ways of consulting the public and how governments, media, and the public have responded and used the results.

Same as: AMSTUD 135, COMM 135, COMM 235, POLISCI 234P, POLISCI 334P

COMM 339. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: POLISCI 421K, PSYCH 231

COMM 360G. Political Communication. 1-5 Unit.

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor.

Same as: POLISCI 425

COMM 361. Regulation of the Political Process. 3-5 Units.

Combined with LAW 577. This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).

Same as: POLISCI 327C

COMM 362. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.

This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).

Same as: POLISCI 425S

COMM 368. Experimental Research in Advanced User Interfaces. 1-5 Unit.

Project-based course involves small (3-4) person teams going through all parts of the experimental process: question generation, experiment design, running, and data analysis. Each team creates an original, publishable project that represents a contribution to the research and practicum literatures. All experiments involve interaction between people and technology, including cars, mobile phones, websites, etc. Prerequisite: consent of instructor.

Same as: COMM 168, COMM 268, ME 468

COMM 372G. Seminar in Psychological Processing. 1-5 Unit.

Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor.

COMM 379. History of the Study of Communication. 1-5 Unit.

The origins of communication/media theory and research emphasizing the rise of communication as a separate field of study. The influence of schools of thought concerning the scope and purpose of the study of communication. Readings include foundational essays and studies. Prerequisite: Ph.D. student or consent of instructor.

COMM 380. Curriculum Practical Training. 1-5 Unit.

Practical experience in the communication industries. Prerequisite: consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. (Staff).

COMM 384. Media Technology Theory. 3-5 Units.

This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.

Same as: ARTHIST 465

COMM 397. Minor Research Project. 1-6 Unit.

Individual research for Ph.D. candidates. Course may be repeated for credit.

COMM 398. Major Research Project. 1-6 Unit.

Individual research for Ph.D. candidates.

COMM 399. Advanced Individual Work. 1-9 Unit.

.

COMM 801. TGR Project. 0 Units.

.

COMM 802. TGR Dissertation. 0 Units.

.

Comparative Literature Courses

COMPLIT 10N. Shakespeare and Performance in a Global Context. 3 Units.

Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater.

COMPLIT 10SC. The Cult of Happiness: Pursuing the Good Life in America and China. 2 Units.

The 2006 film *Pursuit of Happyness*, an unabashed celebration of the American Dream, was enthusiastically embraced by Chinese audiences. It seems that the pursuit of happiness has become truly globalized, even as the American Dream is slipping away for many. Are Americans still convinced that their conception of happiness is a self-evident truth and a universal gospel? Is there anything that Americans might learn about what it means to live a good life from not only the distant past, but also cultures in which happiness is conceptualized and sought after very differently? This course takes a multi-disciplinary approach to the question of happiness and invites undergraduate students to reflect on its relationship to virtue, wisdom, health, love, prosperity, justice, and solidarity. Giving equal weight to Chinese and Western sources, it seeks to defamiliarize some of the most deeply held ideas and values in American society through the lens of cross-cultural inquiry. During the summer, students will read a selection of novels, memoirs, and reflections by philosophers, psychologists, and sociologists. In September, we will review these texts and place them alongside movies, short fiction, news stories, and social commentary while we interrogate the chimera of happiness. In addition to daily seminars, we will experiment with meditation, short-form life writing, and service learning with participation of local elders. Furthermore, there will be at least three guest speakers, including a prominent Confucian philosopher and a Stanford alum now running a happiness-related enterprise. nSophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

Same as: CHINGEN 10SC

COMPLIT 11Q. Shakespeare, Playing, Gender. 3 Units.

Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender.

COMPLIT 11SC. Worlds (No Longer) Apart. 2 Units.

What (if anything) do supermall shoppers in the Philippines, a Filipino taxi driver in Paris, and television viewers in Nepal have to do with a legal case in Canada, two young Japanese on a pilgrimage to Graceland, and a South Asian lawyer/liquor store owner trying to reclaim his property in Uganda from where he lives, in Mississippi? This course uses literary narratives, films, and historical research to examine new textures of contemporary life, where "borders" seem hard-pressed to contain culture. Texts include Pico Iyer, *Video Night in Kathmandu*, Mira Nair's film *Mississippi Masala*, and M.G. Vassanji, *No New Land*. New forms of identity have emerged that reflect the cultural changes that have accompanied such movements. Nevertheless, we will not idealize such phenomena either; we will want also to carefully observe the binding power of nations. The result will be a finer-tuned sense of "globalization" and the "local" and the "global." The course emphasizes creative thinking and discussion. Students are expected to do the reading and be well prepared for every session with not only questions, but tentative answers. Each student will participate in one group presentation as their final project.

COMPLIT 13SC. Arabic in America: Language Immersion. 2 Units.

Do you speak Arabic at home? Are you studying Arabic at Stanford? Have you done a year of Arabic study elsewhere? If you answer yes to any one of these questions then "Arabic in America: Language Immersion" might be for you. Our intensive course is designed to improve your command of Arabic while living in an active community of Arabic speakers and learners. We will be talking about films, poetry, politics, religion, gender and much more—all the while practicing how to talk to people, read newspapers, recite poetry, write emails, all with the goal of communicating better in Arabic. Your three teachers will share their knowledge and love of Arabic literature, culture, and grammar with you while we engage with all kinds of Arabic, from the Quran and Pre-Islamic poetry to the colloquial Arabic spoken at barbecues (we will be grilling!). We will also be inviting guest speakers and taking class field trips to the Ba'th Party archives in the Hoover Library, mosques and churches in the Bay Area, Middle Eastern restaurants, and more. Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

COMPLIT 31SI. What is Neoconservatism? The Movement's History and Ideas. 2 Units.

Its thinking from its communist roots, through the changes of the 60s, the rise of conservatism in the 80s, and the invasion of Iraq. Readings include Irving Kristol, Jeane Kirkpatrick, Daniel P. Moynihan, and David Brooks. Guest lecturers from supporters and critics.

COMPLIT 37Q. Zionism and the Novel. 4 Units.

At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe.

Same as: JEWISHST 37Q

COMPLIT 38Q. Ethics of Jihad. 4 Units.

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Topics include jihad in the age of 1001 Nights, feminist jihad, jihad in Africa, al-Qaida and Hamas, and the hashtag #MyJihad. All readings and discussion in English.

COMPLIT 40Q. Aesthetics of Dissent: the Case of Islamic Iran. 2 Units.

Censorship, Borges tells us, is the mother of metaphors. The Islamic regime in Iran censors all aesthetic production in the country. But Iranian dissident artists, from film-makers and fiction writers to composers in a thriving under-ground musical scene, have cleverly found ways to fight these draconian measures. They have developed an impressive body of work that is as sophisticated in style as it is rich in its discourse of democracy and dissent. The purpose of the seminar is to understand the aesthetic tropes of dissent in Iran, and the social and theological roots of rules of censorship. Masterpieces of post-revolutionary film, fiction, and music will be discussed in the context of tumultuous history of dissent in Islamic Iran. Same as: INTNLREL 71Q

COMPLIT 41N. Borderlands of Literature and Culture. 3-4 Units.

Rather than try to examine the whole of such an extensive body of work by artists of Mexican descent living in Mexico and the United States, the focus will be on the transnational themes of border thinking, memory, and identity (both personal and collective). Looking at the foundational poetry, auto-ethnographies, and narratives by Américo Paredes and Gloria Anzaldúa and how their literary and ethnographic work laid the groundwork for subsequent imaginings in the narratives, poetry, and theory of border thinking and writing. We will explore the trans-frontier cultural conditions under which imaginative literary texts are produced, disseminated, and received. We will consider not only the historical transnational experiences that inform these borderlands texts but the potential futures of Mexico and the United States they imagine.

COMPLIT 41Q. Ethnicity and Literature. 5 Units.

Preference to sophomores. What is meant by ethnic literature? How is ethnic writing different from non-ethnic writing, or is there such a thing as either? How does ethnicity as an analytic perspective affect the way literature is read by ethnic peoples? Articles and works of fiction; films on ethnic literature and cultural politics. How ethnic literature represents the nexus of social, historical, political, and personal issues.

COMPLIT 51Q. Comparative Fictions of Ethnicity. 4 Units.

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"?.

Same as: AMSTUD 51Q, CSRE 51Q

COMPLIT 57. Human Rights and World Literature. 5 Units.

Human rights may be universal, but each appeal comes from a specific location with its own historical, social, and cultural context. This summer we will turn to literary narratives and films from a wide number of global locations to help us understand human rights; each story taps into fundamental beliefs about justice and ethics, from an eminently human and personal point of view. What does it mean not to have access to water, education, free speech, for example? This course has two components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second, and major component is comprised of novels and films that come from different locations in the world, each telling a compelling story. We will come away from this class with a good introduction to human rights history and philosophy and a set of insights into a variety of imaginative perspectives on human rights issues from different global locations. Readings include: Amnesty International, *Freedom: Stories Celebrating the Universal Declaration of Human Rights* Andrew Clapman, *Human Rights: A Very Short Introduction* James Dawes, *That the World May Know* Walter Echo-Hawk, *In the Light of Justice* Amitav Ghosh, *The Hungry Tiden* Bessie Head, *Marun* Ursula LeGuin, *The Word for World is Forest*.

COMPLIT 70N. Animal Planet and the Romance of the Species. 3-4 Units.

Preference to freshmen. This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century?.

Same as: CHINGEN 70N

COMPLIT 101. What is Comparative Literature?. 5 Units.

Introduction to theories about reading and theories about thinking. How should we best read novels, plays, short stories, poetry, and a variety of other forms of literary expression? Why compare texts to other texts? What is theory and how does it work? What has literature done and what should it do? Authors will include G.W.F. Hegel, Judith Butler, Jonathan Culler, Arabic Adab, and Gustave Flaubert. Fulfills the Writing in the Major requirement. Gateway to the Comparative Literature Major.

COMPLIT 110. Introduction to Comparative Queer Literary Studies. 3-5 Units.

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 310, FEMGEN 110X, FEMGEN 310X

COMPLIT 111. German Capstone: Reading Franz Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 311C, GERMAN 190, GERMAN 390, JEWISHST 147, JEWISHST 349

COMPLIT 112. Oscar Wilde and the French Decadents. 3-5 Units.

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé; Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde; Salomé; Picture of Dorian Gray, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 312, FRENCH 112, FRENCH 312

COMPLIT 114. Masterpieces: Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. Same as: GERMAN 150, JEWISHST 145

COMPLIT 115. Nabokov in the Transnational Context. 3-5 Units.

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original.

Same as: COMPLIT 315, SLAVIC 156, SLAVIC 356

COMPLIT 121. Poems, Poetry, Worlds. 5 Units.

What is poetry? How does it speak in many voices to questions of history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. Readings include: classical Chinese poetry, English Romantic poetry, and modern Arabic, American, Brazilian, Japanese, German, Spanish poetry, with specific attention to landscape, terrain, the environment, and the role of the poet.

COMPLIT 122. Literature as Performance: The Potentials of Theater. 5 Units.

An introduction to the "theatrical" dimensions of literature in different cultures based on a view of the staging arts as a specific segment within phenomena of "performance". Documentation and discussions of the history of western drama as a central axis within the debate about the cultural status of other forms of performance art that are normally not culturally canonized within this genre (eg. sports).

COMPLIT 123. The Novel, the Global South. 5 Units.

Literary inventiveness and social significance of novelistic forms from the Great Depression to the present.

Same as: ENGLISH 184

COMPLIT 125. Past Desire Made Present: The Traditions of Erotic Poetry in Medieval Iran and Europe. 3-5 Units.

Aims to make present and accessible, to our early 21st-century experience, convergences and differences between medieval Persian and medieval European love poetry. Poetry will be dealt with as a discursive and institutional means through which it is possible to make present and tangible that which is absent -- both in space and time. If we accept that medieval Persian and European love poetry conjured up moods of homo- and heteroerotic desire for contemporary audiences, then this desire can also become present for us today through a close reading of those same texts.

COMPLIT 125A. The Gothic Novel. 5 Units.

The Gothic novel and its relatives from its invention by Walpole in *The Castle of Otranto* of 1764. Readings include: *Northanger Abbey*, *The Italian*, *The Monk*, *Frankenstein*, *Jane Eyre*, *Great Expectations*, and *Dracula*. What defines the Gothic as it evolves from one specific novel to a mode that makes its way into a range of fictional types?.

COMPLIT 129A. Contemporary Persian Poetry: Encounter of a Thousand-Year-Old Classical Tradition with Modernity. 5 Units.

The primacy of poetic expression in Persian culture in the transition from tradition to modernity. Major 20th-century poets in relation to historical events and social change. Authors include: Nima Yushij, Ahmad Shamlou, Sohrab Sepehri, Mehdi Akhavan Sales, Forough Farokhzad, Nader Naderpour, Fereydoon Moshiri, Esma'il Kho'i, and Afghan and Tajik poets.

COMPLIT 132A. Dynasties, Dictators and Democrats: History and Politics in Germany. 3-5 Units.

Key moments in German history through documents: personal accounts, political speeches and texts, and literary works. The course begins with the Prussian monarchy and proceeds to the crisis years of the French Revolution. Documents from the 1848 revolution and the age of Bismarck and German unification follow. World War I and its impact on Germany, including the rise of Hitler, as well as the aftermath, divided Germany in the Cold War through the fall of the Berlin Wall. Taught in German.

Same as: GERMAN 132

COMPLIT 133. Gender and Modernism. 3-5 Units.

Gender and sexuality in trans-Atlantic modernist literature and culture from the 1880s-1930s. Topics include the 19th-century culture wars and the figures of the dandy and the New Woman; modernist critiques of Enlightenment rationality; impact of World War I on gender roles; gender and the rise of modern consumer culture, fashion, design; the modernist metropolis and gender/sexuality; the avant-garde and gender; literary first-wave feminism; homoerotic modernism; modernism in the context of current theories of gender and sexuality.

Same as: COMPLIT 333

COMPLIT 135. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required.

Same as: CHINLIT 190, CHINLIT 290

COMPLIT 141A. The Meaning of Arabic Literature: a seminar investigation into the nebulous concept of adab. 3-5 Units.

An investigation into the concept of literature in mediaeval Arabic. Was there a mediaeval Arabic way of thinking? We look to develop a translation for the word "adab," a concept that dominated mediaeval Arabic intellectual culture, and is related in some ways to what we mean today when we use the word literature. Our core text is a literary anthology from the 900s in Iraq and we try, together, to work out what literature meant for the author and his contemporaries. Readings, assignments and, class discussion all in English.

COMPLIT 142. The Literature of the Americas. 5 Units.

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other. Same as: AMSTUD 142, CSRE 142, ENGLISH 172E

COMPLIT 142B. Translating Japan, Translating the West. 3-4 Units.

Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary. Same as: JAPANGEN 121, JAPANGEN 221

COMPLIT 143A. Alla Turca Love: Tales of Romance in Turkish Literature. 3-5 Units.

An introduction to the theme of romantic love in Turkish literature, with particular attention to key classical and contemporary works that influenced the development of the Turkish literary tradition. Topics include close reading and discussion of folk tales, poems, short stories, and plays with particular attention to the characters of lover/beloved, the theme of romantic love, and the cultural and historical background of these elements. We will begin with essential examples of ghazels from Ottoman court poetry to explore the notion of "courtly love" and move to the most influential texts of 19th and 20th centuries. All readings and discussions will be in English; all student levels welcome. Same as: COMPLIT 342

COMPLIT 144A. Istanbul the Muse: The City in Literature and Film. 3-5 Units.

The multiple layers of culture and history in Istanbul, a city on two continents between East and West, wrapped in past and present have inspired great art and literature. The class explores how Istanbul inspired artists and writers, and focuses on the idea of "in-betweenness" through art, literature, music, and film seen chronologically. In addition to discussing literary, historical, and secondary texts we will explore visual genres such as film, painting, and photography. All readings, screenings, and discussions will be in English.

COMPLIT 145. Reflection on the Other: The Jew and the Arab in Literature. 3-5 Units.

How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music. Same as: AMELANG 126, JEWISHST 106

COMPLIT 145B. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacut;, Olinto), prose poetry (Ceacut;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Oulougum) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

COMPLIT 146. Asian American Culture and Community. 3-5 Units.

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once. Same as: AMSTUD 146, ASNAMST 146S, CSRE 146S

COMPLIT 146A. The Arab Spring in Arabic Literature. 3-5 Units.

An examination of the events of 2011 in the Middle East through literature. We will read short stories, poetry, graphic novels, and blogs in order to try and work out whether the revolution could have been predicted, and how it took place. Prerequisite: two years of Arabic at Stanford, or equivalent. Same as: COMPLIT 347

COMPLIT 147A. The Hebrew Bible in Literature. 3-5 Units.

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres. Same as: COMPLIT 347A, JEWISHST 147A, JEWISHST 347A

COMPLIT 148B. Indian Epics: Past and Present. 4 Units.

The Mahabharata and the Ramayana, the two great epics of India, have been crucial texts in South Asian literature and culture for millennia. In this course, we will explore the diverse forms and impacts of both epics from their Sanskrit versions, first composed more than 2,000 years ago, into retellings through newer media forms well into the twenty-first century. We begin with abridged translations of both the Mahabharata (including the Bhagavadgita) and the Ramayana. We will discuss the major literary, religious, and social themes of each text as well as subsequent retellings in Sanskrit and vernacular languages. Throughout the course we will also investigate the modern lives of the Indian epics, including their transformations into Indian television serials, film versions of both narratives (from India and America), and invocations of the epic stories in contemporary political disputes. In addition to gaining exposure to some of the foundational texts for the study of South Asia, students will cultivate the ability to fruitfully analyze texts and stories from different cultures. Same as: RELIGST 108

COMPLIT 149A. Classical Arabic Poetry: An Introduction. 3-5 Units.

The primary litmus test of proficiency in the Arabic language is, and has always been, a command of classical Arabic poetry. Study and memorize the great lines of Arabic poetry with a manual that has stood the pedagogical test of time from the eleventh century until today. Questions of literary merit, poetic technique, metaphor, and divine and human linguistic innovation are all raised by the text that we will read together. Readings in Arabic, assignments and discussion in English. Prerequisite: two years of Arabic at Stanford, or equivalent.

Same as: COMPLIT 346

COMPLIT 151A. Philosophies, Literatures, and Alternatives. 3-5 Units.

Aristotelian poetics and mediaeval Arabic literary theory. Nietzsche's irony and Philosophies and literatures, together and apart, dominate the last two millennia of human thought. How might they best be read? Are philosophy and literature two different ways of thinking, or are they just two separate institutional histories? This course starts with familiar Greeks, moves onto unfamiliar Arabs, confronts old Europe, and ends with contemporary Americans arguing.

Same as: COMPLIT 351A

COMPLIT 151B. Great Books: Dramatic Traditions. 4 Units.

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 351B, TAPS 151T, TAPS 351

COMPLIT 154A. Film & Philosophy. 4 Units.

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English.

Same as: FRENCH 154, ITALIAN 154, PHIL 193C, PHIL 293C

COMPLIT 154B. Poetic Thinking Across Media. 4 Units.

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include *Ecclesiastes*, *Zhaozhou Congshen*, *Montaigne*, *Nietzsche*, *Kafka*, *Benjamin*, *Arendt*, and *Sontag*. This course will also present poetic thinking in the visual arts--from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 354B, GERMAN 154, GERMAN 354, JEWISHST 144B

COMPLIT 157. Contemporary Turkish Cinema and Society. 3-5 Units.

This course is an examination of contemporary Turkish cinema in a social and political context. The course will focus on films and directors that revived Turkish cinema starting with the mid-1990s with a focus on key issues pertaining to belonging, denied identities, masculinity, nationalism, silencing of women, and urbanization. The course aims to provide an overview of contemporary Turkish cinema and society in cultural, political, and social framework. There will be approximately two hours of film screening and two hours of classroom discussion/seminar (in English) each week. All films are in Turkish with English subtitles.

Same as: COMPLIT 357

COMPLIT 160. The Literature of Dehumanization. 3-5 Units.

An examination of a constellation in Western literature that specifically deals with a borderline state between humanity and animality, showing different approaches to the problem of humanity and non-humanity through some of the major works in the modern Western literary canon. The class explores the different ways in which dehumanization takes place in these texts, and how these texts also suggest a regaining of one's lost humanity. Readings include: Ovid, Marie de France, Shakespeare, Hobbes, Heine, Baudelaire, Tolstoy, Nietzsche, Lautreamont, Kafka, Rilke, Celan, and more.

COMPLIT 161. Co-Existence in Hebrew Literature. 4-5 Units.

Is co-existence possible? Does pluralism require co-existence? Can texts serve as forms of co-existence? The class will focus on these and other questions related to coexistence and literature. Through reading works mostly by Jewish authors writing in Europe, Israel and the US we will explore attempts for complete equality, for a variety of hierarchical systems and for different kinds of co-dependence. Guest speaker: professor Anat Weisman, Ben Gurion University of the Negev.

Same as: AMELANG 175, JEWISHST 146

COMPLIT 162. American Poetry and Secular Prayer. 3-5 Units.

This course will explore the practice of "secular prayer" in early- and mid-20th Century North American poetry. We will look at diverse poetic examples of meditation, contemplation, exegesis and revelation in order to consider how and why poetry has maintained a particular relation to the sacred, even amidst a secular cultural and intellectual context. We'll also consider how this question has played out in several key strands of 20th century literary theory, with particular emphasis on New Criticism and Eco-Criticism. Primary readings will include the poetry of T.S. Eliot, Wallace Stevens, Audre Lorde, George Oppen, Robert Bly, Mary Oliver, Charles Wright and Jan Zwicky.

COMPLIT 168. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Authors read might include Cook, Equiano, and Steinbeck; Defoe, Verne, Stevenson, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Films by Painleveacute; and Bigelow. Seminar co-ordinated with a spring 2015 Cantor Arts Center public exhibition. Visits to Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park.

Same as: ENGLISH 168, FRENCH 168

COMPLIT 171. Ethics of Jihad. 5 Units.

Why choose jihad? An introduction to Islamic ethics. Focus on ways in which people have chosen, rejected, or redefined jihad. Evaluation of the norms in moments of ethical and political choice. Topics include jihad in the age of 1001 Nights, jihad in the Arab Renaissance, jihad in Bin Laden's sermons, and the hashtag #MyJihad. All readings and discussion in English.

Same as: ETHICSOC 102R

COMPLIT 181. Philosophy and Literature. 5 Units.

(Formerly CLASSGEN 81) Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track: majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature. Issues may include authorship, selfhood, truth and fiction, the importance of literary form to philosophical works, and the ethical significance of literary works. Texts include philosophical analyses of literature, works of imaginative literature, and works of both philosophical and literary significance. Authors may include Plato, Montaigne, Nietzsche, Borges, Beckett, Barthes, Foucault, Nussbaum, Walton, Nehamas, Pavel, and Pippin. Taught in English.

Same as: CLASSICS 42, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

COMPLIT 190. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).

Same as: COMPLIT 390, SLAVIC 190, SLAVIC 390

COMPLIT 194. Independent Research. 1-5 Unit.

(Staff).

COMPLIT 197. Designing a Digital Community: Human Rights. 2 Units.

This course will focus on helping to design, conceptualize, and populate an international human rights website. No knowledge of web design or of human rights is necessary to get started on this project. We have technical assistance available, though hopefully this course will attract students with those skills as well. Similarly, we will be learning about human rights as we build the site, explore and share resources and ideas, and reflect on the content. Preliminary site viewable at teachinghumanrights.org.

Same as: DLCL 197

COMPLIT 199. Senior Seminar: The Pleasures of Reading. 5 Units.

Senior seminar for Comp Lit Senior majors only.

COMPLIT 203. The Money Philosophers: Marx, Simmel, Keynes, Hayek. 3-5 Units.

In this course we will discuss selections from writings by Marx, Simmel, Keynes, and Hayek that focuses on money, a key but neglected aspect of their work. It is money that drives today's economies, rather than "business", the "market", "capital", or the "state". It is this exclusive concern with monetary phenomena that uniquely defines these authors and characterizes their work as philosophical rather than economic, sociological or anthropological.

COMPLIT 211A. Emile Zola. 3-5 Units.

A comprehensive introduction to and historical analysis of Emile Zola's literary work as foundational for the late-nineteenth century literary movement that we call "Naturalism." The analysis of Zola's novels will be embedded in the historical situation of France in the transition from the Second Empire to the Third Republic, with special emphasis on the epistemological situation of that time. Knowledge of French desirable but participation through English translations will be possible.

Same as: FRENCH 211

COMPLIT 213A. Martin Heidegger. 3-5 Units.

Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English.

Same as: COMPLIT 313A, GERMAN 282, GERMAN 382

COMPLIT 217. The Poetry of Friedrich Holderlin. 3-5 Units.

A working through of the complex prosodic forms, existential and political concerns, and poetological reflections of both the most past-oriented and most pathbreaking German poet of the late eighteenth and early nineteenth century. A comprehensive introduction that will attempt to develop an innovative view in which Holderlin will appear as one of the founding figures of literary Modernity. Knowledge of German desirable but participation through English translations will be possible.

Same as: GERMAN 217

COMPLIT 218. The work of Luis Martín Santos in Mid-Twentieth Century Spain. 3-5 Units.

First published in 1962, "Tiempo de Silencio" is the only book that the young psychiatrist Luis Martín Santos finished during his lifetime, and, although largely overlooked (even in Spain) until the present day, one of the great European novels of the 20th century. It brings to a complex convergence the evocation of Spain's decadent and run-down post-Civil War society with high-modernist literary procedures and (an implicit parody of) phenomenological analysis.

COMPLIT 219. Dostoevsky: Narrative Performance and Literary Theory. 3-5 Units.

In-depth engagement with a range of Dostoevsky's genres: early works (epistolary novella *Poor Folk* and experimental *Double*), major novels (*Crime and Punishment*, *The Idiot*), less-read shorter works ("A Faint Heart," "Bobok," and "The Meek One"), and genre-bending *House of the Dead* and *Diary of a Writer*. Course applies recent theory of autobiography, performance, repetition and narrative gaps, to Dostoevsky's transformations of genre, philosophical and dramatic discourse, and narrative performance. Slavic students read primary texts in Russian, other participants in translation. Course conducted in English. For graduate students; undergraduates with advanced linguistic and critical competence may enroll with consent of instructor.

Same as: SLAVIC 251

COMPLIT 221A. Courtly Love: Deceit and Desire in the Middle Ages. 3-5 Units.

A comparative seminar on medieval love books and their reception. We will examine and question the notion of "amour courtois," which arose in the lyrics and romances of medieval France and was codified in Romantic-era criticism. Primary readings will be enriched by thinking about this notion through the lens of modern theories of desire, such as those of Girard, Lacan, and Žižek. Conducted in English with readings in translation.

Same as: FRENCH 234, ITALIAN 234

COMPLIT 222A. German Literature 3: Myth and Modernity. 5-8 Units.

Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Doebelin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Undergraduates enroll in 222 for 5 units, graduate students enroll in 322 for 8 units.

Same as: GERMAN 222, GERMAN 322

COMPLIT 223. Literature and Human Experimentation. 3-5 Units.

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann* and Vivien Spitz's *Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, CSRE 123B, HUMBIO 175H, MED 220

COMPLIT 224. Literature in the Age of Digital Culture. 3-5 Units.

Study literary classics about readers and reading (by Austen, Dickinson, Wilde, Benjamin, Eliot, Orwell, Borges, Calvino, Bechdel, etc.) and compare with digital reading/writing today: fan fiction and online expansions of "the book", literary collaborations online, changing notions of "author", "reader", "work", literary-social interactions. Our literary close readings will also introduce some useful new digital tools and methods for literary studies (annotation, editing, and research tools, web-based public social interactions, innovative digital humanities projects in literary studies today). No technical prerequisites.

COMPLIT 224A. Genocide and The Humanities. 3-5 Units.

We will study the history and current instances of genocide and ways in which the humanities deal with these. Mass slaughter would seem to be opposed by the supposedly humane nature of the humanities. Yet each realm of the humanities has its own constraints. We will study historiography, memoirs, novels, and films in order to recognize ideologies of representation and signifying implications of structure. By discerning implicit values, students will gain tools they can use in working to eliminate genocide.

COMPLIT 225E. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 325E, ITALIAN 225, ITALIAN 325

COMPLIT 226A. Queer Literature and Film. 3-5 Units.

Close analysis of major works of LGBTQ literature, film, and visual art from the 1890s to today. Students will gain deeper knowledge and appreciation of historical and contemporary forms of queer representation in various national literatures, film, and visual art; understand relevant social and political debates; and gain a basic knowledge of feminist and queer theory. Course will include an optional online component to reach out to the public (class website queerlitfilm.wordpress.com, social media).

Same as: FEMGEN 226A

COMPLIT 227A. The Ballad Tradition. 3-5 Units.

This team-taught cross-disciplinary course traces the history and aesthetics of the ballad in German, English, and Scottish literature, from the 18th century to the early 20th century. No knowledge of German is required, but reading knowledge is a plus.

Same as: ENGLISH 383A, GERMAN 200

COMPLIT 228D. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option.

Same as: COMPLIT 338D, DLCL 228

COMPLIT 229. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.

Same as: AFRICAAM 229, AFRICAST 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

COMPLIT 230A. The Novel in Europe: The Age of Compromise, 1800-1848. 5 Units.

The novel after the French revolution and the industrial take-off. Novelistic form and historical processes; nation-building and the marriage market, political conservatism and the advent of fashion, aristocracy and bourgeoisie and proletariat...; focusing on how stylistic choices and plot structures offer imaginary resolutions to social and ideological conflicts. Authors will include Austen, Scott, Shelley, Stendhal, Puskin, Balzac, Bronte.

COMPLIT 233. Baroque and Neobaroque. 5 Units.

The literary, cultural, and political implications of the 17th-century phenomenon formed in response to the conditions of the 16th century including humanism, absolutism, and early capitalism, and dispersed through Europe, the Americas, and Asia. If the Baroque is a universal code of this period, how do its vehicles, such as tragic drama, Ciceronian prose, and metaphysical poetry, converse with one another? The neobaroque as a complex reaction to the remains of the baroque in Latin American cultures, with attention to the mode in recent Brazilian literary theory and Mexican poetry.

Same as: SPANLIT 293E

COMPLIT 236. Literature and Transgression. 3-5 Units.

Close reading and analysis of erotic-sexual and aesthetic-stylistic transgression in selected works by such authors as Baudelaire, Wilde, Flaubert, Rachilde, Schnitzler, Kafka, Joyce, Barnes, Eliot, Bataille, Burroughs, Thomas Mann, Kathy Acker, as well as in recent digital literature and online communities. Along with understanding the changing cultural, social, and political contexts of what constitutes "transgression" or censorship, students will gain knowledge of influential theories of transgression and conceptual limits by Foucault, Blanchot, and contemporary queer and feminist writers.

Same as: FEMGEN 236

COMPLIT 237C. Human Rights, Literature, Justice. 3-5 Units.

This course will have three components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second component will consist of readings from various global locations that involve human rights in various ways, predominantly as they interface with issues of environmental justice. Finally, this course will involve students in creating and populating a website that will be not only the archive of our work in class but also build a set of resources to be shared with others (we will be adding partners from different locations to speak to us online from their locations as well as to share resources and ideas). We will come away from this class with a good introduction to human rights history and philosophy; a set of insights into a variety of imaginative workings-out of human rights and environmental justice issues from different global locations, and a rich web resource.

COMPLIT 239B. Literature and Social Online Learning. 3-5 Units.

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors. Same as: CS 27, ENGLISH 239B

COMPLIT 240A. Introduction to Hebrew Literature. 3-5 Units.

The influence of biblical poetry, piyut, and medieval Hebrew poetry on the development of Modern Hebrew poetry. With focus on voice, space, lyrical Subjectivity, Intertextuality, and Poetic Forms. Guest Speakers include Tamar Zwi, Susan Einbinder, Berry Saharoff, and Raymond Scheindlin.

COMPLIT 242A. Short Stories from South Asia. 3-5 Units.

This course will explore how cultural identities of the nations in South Asia were re-defined after the Partition of India in 1947, the independence of Sri Lanka in 1948 and the formation of Bangladesh in 1971. Comparative/cross-cultural study of stories will be taken up for indepth analysis based on certain themes like partition and violence, myth and narrative, gender and narrative, music and narratology, familial patterns, etc.

COMPLIT 243B. Readings in Avicenna and al-Jurjani. 3-5 Units.

Classical Arabic reading course. Instructor approval required. Pre-requisite: minimum two years of Arabic at Stanford or equivalent.

COMPLIT 245. Introductory Ottoman Turkish. 1-3 Unit.

This course is an introduction to basic orthographic conventions and grammatical characteristics of Ottoman Turkish through readings in printed material from the 19th and 20th centuries. Selected readings will range from poetry to prose, from state documents, newspaper and journal articles to reference works. Course is open to both undergraduate and graduate students. Prior knowledge of modern Turkish is required (Completion of COMPLIT 248A, COMPLIT 248B Reading Turkish I&II and COMPLIT 248C Advanced Turkish OR AMELANG 184 & 185 First & Second Year Turkish OR a solid knowledge of Turkish grammar.) Please contact the instructor for more information.

COMPLIT 246B. Ottoman Translation Workshop. 1-2 Unit.

This course aims to provide students with training in reading printed Ottoman Turkish texts and translating them into English. Through translation we will explore not only syntactical and lexical problems, but also cultural history and politics as they relate to the texts. Open to undergraduate and graduate students. High intermediate or advanced level of modern Turkish and introductory level of Ottoman Turkish is required. Contact Burcu Karahan Richardson (bkarahan@stanford.edu) for more information.

COMPLIT 247. Bollywood and Beyond: An Introduction to Indian Film. 3-4 Units.

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms.

Same as: FILMSTUD 250B, GLOBAL 250

COMPLIT 247F. Beyond Casablanca: North African Cinema and Literature. 3-5 Units.

This course explores the emergence of Francophone cinema and literature from North Africa (Algeria, Tunisia, Morocco) in the post-independence era: aesthetics, exile, language message, race and gender relations, collective memory, parallax, nationalism, laïcité, religion, emigration and immigration, and the Arab Spring will be covered. Special attention will be given to judeo-maghrebi history, and to the notions of francophone / maghrebi / "beur" / diasporic cinema and literature. Readings from Frantz Fanon, Albert Memmi, Kateb Yacine, Albert Camus, Colette Fellous, Abdelkebir Khatibi, Leila Sebbar, Benjamin Stora, Lucette Valensi, Abdelwahab Meddeb. Movies include Viva Laldjeacutie;rie, Tenja, Le Chant des Marieacutie;es, Francedil;aise, Bled Number One, Omar Gatlato, Casanegra, La Saison des Hommes. Taught in French. Films in French and Arabic with English subtitles.

Same as: FRENCH 242, JEWISHST 242

COMPLIT 248A. Reading Turkish I. 2-4 Units.

Reading Turkish I is an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; since the goal is advanced reading level, the focus is mainly on grammar, reading comprehension, and translation. With full concentration on reading, we will be able to cover advanced material in a short amount of time. The course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. nnCOMPLIT 248A Reading Turkish I is followed by COMPLIT 248B Reading Turkish II in the Winter and COMPLIT 248C Advanced Turkish for Research in the Spring."

COMPLIT 248B. Reading Turkish II. 2-4 Units.

This course is the continuation of COMPLIT 248A Reading Turkish I, which served as an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; it focuses only on reading, and as a result we will be able to cover advanced material in a short amount of time. This course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class.nnCOMPLIT 248B is followed by COMPLIT 248C Advanced Turkish for Research in the Spring.

COMPLIT 248C. Advanced Turkish-English Translation. 2-4 Units.

This course is the continuation of COMPLIT 248A Reading Turkish I and COMPLIT 248B Reading Turkish II. Refining advanced grammar, reading, and translation skills in modern Turkish through intensive reading and translation from a variety of source texts. Emphasis on Turkish cultural, historical, literary, and political texts depending on students' academic interests. Prerequisites COMPLIT 248A & B or prior knowledge of Turkish and consultation with the instructor is necessary.

COMPLIT 249A. The Iranian Cinema: Image and Meaning. 1-3 Unit.

This course will focus on the analysis of ten Iranian films with the view of conducting a discourse on the semiotics of Iranian art and culture. Each session will be designated to the viewing of a film by a prominent Iranian film-maker. Students are expected to prepare for class by having previously examined other available films by the film-maker under consideration. Same as: GLOBAL 249A

COMPLIT 249B. Iranian Cinema in Diaspora. 1-3 Unit.

Despite enormous obstacles, immigrant Iranian Filmmakers, within a few decades (after the Iranian revolution), have created a slow but steady stream of films outside Iran. They were originally started by individual spontaneous attempts from different corners of the world and by now we can identify common lines of interest amongst them. There are also major differences between them. These films have never been allowed to be screened inside Iran, and without any support from the global system of production and distribution, as independent and individual attempts, they have enjoyed little attention. Despite all this, Iranian cinema in exile is in no sense any less important than Iranian cinema inside Iran. In this course we will view one such film, made outside Iran, in each class meeting and expect to reach a common consensus in identifying the general patterns within these works and this movement. Questions such as the ones listed below will be addressed in our meetings each week: What changes in aesthetics and point of view of the filmmaker are caused by the change in his or her work environment? Though unwantedly these films are made outside Iran, how related are they to the known (recognized) cinema within Iran? And in fact, to what extent do these films express things that are left unsaid by the cinema within Iran?

Same as: GLOBAL 249B

COMPLIT 249C. Contemporary Iranian Theater. 1-3 Unit.

Today Iranian plays - both in traditional and contemporary styles - are staged in theater festivals throughout the world play their role in forming a universal language of theater which combine the heritages from countries in all five continents. Despite many obstacles, some Iranian plays have been translated into English and some prominent Iranian figures are successful stage directors outside Iran. Forty-six years ago when "Theater in Iran" (a monograph on the history of Iranian plays) by Bahram Beyzaie was first published, it put the then contemporary Iranian theater movement--which was altogether westernizing itself blindly - face to face with a new kind of self-awareness. Hence in today's generation of playwrights and stage directors in Iran, all know something of their theatrical heritage. In this course we will spend some class sessions on the history of theater in Iran and some class meetings will be concentrating on contemporary movements and present day playwrights. Given the dearth of visual documents, an attempt will be made to present a picture of Iranian theater to the student. Students are expected to read the recommended available translated plays of the contemporary Iranian playwrights and participate in classroom discussions.

Same as: GLOBAL 249C

COMPLIT 250. Literature, History and Memory. 3-5 Units.

Analysis of literary works as historical narratives. Focus on the relationship history, fiction, and memory as reflected in Francophone literary texts that envision new ways of reconstructing or representing ancient or immediate past. Among questions to be raised: individual memory and collective history, master narratives and alternatives histories, the role of reconstructing history in the shaping or consolidating national or gender identities. Readings include fiction by Glissant, Kane, Condeacutec;, Schwarz-Bart, Djebbar, Perec, as well as theoretical texts by Ricoeur, de Certeau, Nora, Halbwachs, White, Echevarria. Taught in French. Same as: FRENCH 248

COMPLIT 252A. Classic Arabic Poetry. 3-5 Units.

Introduction to the canon of Classical Arabic Poetry and to the classics of Arabic poetry from the sixth to the twenty-first century. Focus on skills needed to read and understand, from syntax and morphology to dictionaries, encyclopedias, memorization, and the internet. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

COMPLIT 252B. Classic Arabic Prose. 3-5 Units.

Introduction to Classical Arabic Prose and to the classics of Arabic prose; from the 700s and the dawn of Islam to the 2010s and the Arab Spring. Focus on skills needed to read and understand, from syntax and morphology to dictionaries, encyclopedias, memorization, and the internet. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

COMPLIT 253. Honoré de Balzac. 3-5 Units.

Working through a selection of novels by the author widely considered as a founder of western (19th-century) "Literary Realism." Balzac's will be contextualized within his life and the French culture and literature of his time. We will also approach, from a philosophical point of view, the emergence and functions of "Literary Realism." Another focus will be Balzac's work as exemplary of certain traditions within Literary Criticism (particularly Marxist Literary Criticism). Taught in English. Same as: FRENCH 253

COMPLIT 254. Modern Chinese Novel: Theory, Aesthetics, History. 4 Units.

From the May Fourth movement to the 40s. Themes include enlightenment, democracy, women's liberation, revolution, war, urban culture, and love. Prerequisite: advanced Chinese.

Same as: CHINLIT 174, CHINLIT 274

COMPLIT 254A. Was Deconstruction an Illusion?. 3-5 Units.

A both systematic and historical presentation of "Deconstruction" as a philosophical and intellectual movement that dominated academic and general culture in many western societies during the final decades of the twentieth century, with special focus on the writings of Jacques Derrida and Paul de Man. Deconstruction's specific reception history obliges us to ask the question of whether the extremely high esteem that it enjoyed over two decades was intellectually justified or the result of a misunderstanding. Participation through English translations is possible. Same as: FRENCH 254

COMPLIT 262A. Explosions of Enlightenment. 3-5 Units.

Eighteenth-century culture seen as permeated by intellectual and artistic practices and plays pushing principles of reason and rationality to an extreme that becomes self-undercutting. Such obsessions and practices are becoming more visible and prominent now, as the traditional concept of "Enlightenment" (synonymous with the 18th century) is undergoing a profound transformation. Among the protagonists of this seminar will be: Diderot as a philosopher and novelist; Lichtenberg as a scientist and writer of everyday notes; Goya, accusing violence and obsessed with nightmarish visions; Mozart as the excessive master of repetition and variation. Same as: GERMAN 262A

COMPLIT 264. Walter Benjamin. 3-5 Units.

Walter Benjamin's work as cultural historian, critic, literary author and philosopher, seen from the trajectory of a German-Jewish intellectual life in the context of the first half of the 20th century. Providing such a historical perspective will be the condition for an actively critical reading of Benjamin's works; a reading that -- counter to the predominant Benjamin-reception -- will try to distinguish between works of purely biographical and historical interest and those Benjamin texts that prove to be of great and lasting intellectual value. Taught in English.

Same as: GERMAN 264A

COMPLIT 265. Histories and Futures of Humanistic Education: Culture and Crisis, Books and MOOCs. 5 Units.

Features of online education as they relate to the humanities and notions of engaged critical learning. Collaborative course, working in tandem with Professor Cathy Davidson's Duke course, The History and Future of High Education, using live chats, Google documents, and other forums to interact with students at Duke and other universities nationally. Each campus uses a syllabus linked to each instructor's angle into this general subject, but many readings and exercises in common. Seeing this as a critical moment in education, to connect this topic to its historical, cultural, political, and ethical implications. The Stanford course looks at early discussions about education and culture (Arnold's Culture and Anarchy) and then works through a key moment in the mid-20th century whose premises still have influence: the Two Cultures (humanities, sciences) debate. Radical responses to educational reform in France and the US in the late 60s, and the changing state of funding, value, and cultural critique in the late 20th and early 21st centuries. The idea of education as a personal, collective, and intellectual endeavor which is shaped by and shapes societies. Focus on the idea of the public good and the relation between education and a democratic society.

Same as: DLCL 265, EDUC 217X

COMPLIT 271A. Futurity: Why the Past Matters. 3-5 Units.

Drawing on literature, the arts, political discourse, museums, and new media, this course asks why and how we take interest in the watershed events of the modern era; how does contemporary culture engages with modern, made-made disasters such as the World Wars or 9/11? Readings and viewings include the literature of G. Grass, W. G. Sebald, Ian McEwan, Toni Morrison and Cormac McCarthy; the cinema of Kathryn Bigelow and Steven Spielberg; speeches by Barak Obama; and the theoretical writing of Walter Benjamin, Hayden White, Fredric Jameson, among others. Taught in English.

Same as: GERMAN 271

COMPLIT 275. Humanities Education in the Changing University. 3 Units.

Advanced study in the humanities faces changes within fields, the university and the wider culture. Considers the debate over the status of the humanities with regard to historical genealogies and current innovations. Particular attention on changes in doctoral education. Topics include: origins of the research university; disciplines and specialization; liberal education in conflict with professionalization; literature and literacy education; interdisciplinarity as a challenge to departments; education policy; digital humanities; accountability in education, assessment and student-centered pedagogies.

Same as: DLCL 320, GERMAN 250

COMPLIT 281. Visions of the Future in Literature. 4 Units.

Emphasis on personal and collective future as perceived and described in works translated from Hebrew or written originally in English. Focus on novels, short stories, poems and movies that deal both with the future of Israel and the Middle East and the future of individuals in the area. Guest speaker on Science Fiction and the Graphic Novel. The course is part of "The Future of Storytelling" activities organized by Taube Center for Jewish Studies.

COMPLIT 281E. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include The Late Mattia Pascal, Six Characters in Search of an Author, Henry IV; Nausea, No Exit, "Existentialism is a Humanism"; Molloy, Endgame, Krapp's Last Tape, Waiting for Godot. Taught in English.

Same as: COMPLIT 381E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

COMPLIT 283. Masterpieces of Hebrew Literature from the Bible to the Present. 3-5 Units.

This course presents and reflects on some of the canonical works of Hebrew literature, from biblical era to the present. Discussing works such as the Wisdom Books and selections from the Midrash; and reflecting on important periods such as the Golden Age of Jewish Culture in Spain, the Renaissance, and contemporary Israeli literature, we will highlight linguistic innovation, as well as crucial thematic and philosophical concerns. Readings include the Book of Job, Psalm, Ibn Gabirol, Mapu, Rachel, Goldbegr, Agnon, S. Yizhar, Amichai, Oz and more.

Same as: JEWISHST 243

COMPLIT 290. Ferguson in a Global Frame: Human Rights and the Arts. 3-5 Units.

This course introduces students to fundamental concepts of international human rights and uses these concepts to frame problems of inequality, marginality, exclusion and injustice that are chronic across the globe; including the United States. Focusing on Ferguson as a point of inflection, this course will consider police repression of political protest in a comparative context. The course will also use the lens of fundamental human rights to explore a state's failure to investigate and prosecute, and its failure to protect its citizens from violations committed by agents or from non-state agents. In each thematic unit, we will examine the United States in a comparative lens, and will consider how we understand, frame, mourn and contest the violations of rights in literature, the visual arts, and in social and political action. We will continuously examine the role of the arts in disseminating, shaping and deepening our understanding of multiple dimensions of human rights violations. At the same time, we will consider how these cultural products reflect on, illuminate, contest or problematize advocacy texts and sources of international law. We will examine texts from the United States, Brazil, South Africa, among other countries, as well as documents from international and regional human rights bodies.

Same as: AFRICAAM 290, CSRE 290

COMPLIT 303D. Thinking in Fiction. 5 Units.

Narrative and cognition in 18th-century fictional, philosophical, scientific, and cultural texts. Probable readings: Hobbes, Locke, Newton, Swift, Defoe, Hume, Lennox, Sterne, Adam Smith, Wollstonecraft, and Bentham.

COMPLIT 310. Introduction to Comparative Queer Literary Studies. 3-5 Units.

Introduction to the comparative literary study of important gay, lesbian, queer, bisexual, and transgender writers and their changing social, political, and cultural contexts from the 1880s to today: Oscar Wilde, Rachilde, Radclyffe Hall, Djuna Barnes, James Baldwin, Jean Genet, Audre Lorde, Cherrie Moraga, Jeanette Winterson, Alison Bechdel and others, discussed in the context of 20th-century feminist and queer literary and social theories of gender and sexuality.

Same as: COMPLIT 110, FEMGEN 110X, FEMGEN 310X

COMPLIT 311. Shakespeare, Islam, and Others. 5 Units.

Shakespeare and other early modern writers in relation to new work on Islam and the Ottoman Turk in early modern studies. *Othello*, *Twelfth Night*, *Titus Andronicus*, *The Merchant of Venice*, and other Shakespeare plays. Kyd's *Solyman and Perseda*, Daborne's *A Christian Turned Turk*, Massinger's *The Renegado*, Marlowe's *The Jew of Malta*, and literary and historical materials.

COMPLIT 311C. German Capstone: Reading Franz Kafka. 3-5 Units.

This class will address major works by Franz Kafka and consider Kafka as a modernist writer whose work reflects on modernity. We will also examine the role of Kafka's themes and poetics in the work of contemporary writers. (Meets Writing-in-the-Major requirement).

Same as: COMPLIT 111, GERMAN 190, GERMAN 390, JEWISHST 147, JEWISHST 349

COMPLIT 312. Oscar Wilde and the French Decadents. 3-5 Units.

Close reading of Oscar Wilde's work together with major texts and authors of 19th-century French Decadence, including Symbolism, l'art pour l'art, and early Modernism. Points of contact between Wilde and avant-garde Paris salons; provocative, creative intersections between (homo)erotic and aesthetic styles, transgression; literary and cultural developments from Baudelaire to Mallarmé; Huysmans, Flaubert, Rachilde, Lorrain, and Proust compared with Wilde; Salomé; Picture of Dorian Gray, and critical writings; relevant historical and philosophical contexts. All readings in English; all student levels welcome.

Same as: COMPLIT 112, FRENCH 112, FRENCH 312

COMPLIT 313A. Martin Heidegger. 3-5 Units.

Working through the most systematically important texts by Martin Heidegger and their historical moments and challenges, starting with *Being and Time* (1927), but emphasizing his philosophical production after World War II. The philological and historical understanding of the texts function as a condition for the laying open of their systematic provocations within our own (early 21st-century) situations. Satisfies the capstone seminar requirement for the major tracks in Philosophy and Literature. Taught in English.

Same as: COMPLIT 213A, GERMAN 282, GERMAN 382

COMPLIT 315. Nabokov in the Transnational Context. 3-5 Units.

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original.

Same as: COMPLIT 115, SLAVIC 156, SLAVIC 356

COMPLIT 317. João/Joyce: Guimarães Rosa and the World Novel. 3-5 Units.

A comparative analysis of João Guimarães Rosa's (1908-1967) work, with special attention to the novel *Grande Sertão-Veredas*, translated by a Stanford professor, launched by A. Knopf in 1963. Rosa's fiction disturbs gender, racial, and literary divisions by the creation of a Babelic Brazilian Portuguese language from the sertão. Students increase their literary vocabulary with new terms, *nonada* and *conversa*, and a gallery of Indigenous, Afro-Americans, mestizos, and foreigners' characters. Discussions in English; readings in Portuguese and Spanish.

Same as: ILAC 367

COMPLIT 320A. Epic and Empire. 5 Units.

Focus is on Virgil's *Aeneid* and its influence, tracing the European epic tradition (Ariosto, Tasso, Camões, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.

Same as: ENGLISH 314

COMPLIT 321A. German Literature 2: Selfhood and History. 3-8 Units.

How the literature of the period between 1750 and 1900 gives voice to new conceptions of selfhood and articulates the emergent self understanding of modernity. Responses to unprecedented historical experiences such as the French Revolution and the ensuing wars, changes in the understanding of nature, the crisis of foundations, and the persistence of theological motifs. Lessing, Herder, Goethe, Schiller, Holderlin, Kleist, Heine, Buchner, Keller, and Fontane. Taught in English, readings in German. (Note: Fulfills DLCL 325 for AY 1415 for the PhD Minor in the Humanities).

Same as: GERMAN 221, GERMAN 321

COMPLIT 321B. Anthropology and Literature: Problems of Representation, Power, and Textuality. 5 Units.

How are literary and social scientific forms of cultural description, evocation, and interpretation related? The seminar reads classic texts as well as recent experiments, addressing issues of genre, rhetoric, epistemology, translation, authority, and collaboration. The emphasis is on writing as a situated practice; embodied, relational, and historically circumscribed. Authors may include Malinowski, Mead, Benedict, Lévi-Strauss, Geertz, Taussig, Leiris, Conrad, Achebe, Said, Barthes, Kroeber, Le Guin, and selected contemporary ethnographies. Examples from film, visual culture, and performance art may also be included.

Same as: ANTHRO 321A

COMPLIT 324. Landscapes of the Sublime. 5 Units.

The modern notion of the sublime in philosophy, literature, and art, emphasizing its connection to space and landscape. Topics include: how global exploration contributed to the sublime in the late 17th and 18th centuries; the romantic interiorization of the sublime; and the sublime's connection to mimesis, power, work, and technology. Writers may include Milton, Burke, Kant, Deleuze and Guattari, Freud, the Shelleys, Coleridge, Hugo, Baudelaire, and Rimbaud; artists may include Géricault, Turner, Delacroix, and Friedrich.

COMPLIT 325. Rethinking Comparative Literary Study Outside of Academia. 2 Units.

This graduate seminar will serve three primary purposes: 1) we will create and inspire a dialogue to help us think through the application of comparative literary study in non-academic contexts, 2) we will refine our ideas by applying them in various exercises and settings, and, as a result, 3) we will need to investigate what is meant by the phrase "critical thinking." Broadly speaking, this seminar represents a forum for thinking creatively about the unique skills of a doctoral student as well as the specific challenges that await when pursuing career opportunities outside of academia. The goal is to come out of the seminar with a heightened appreciation of the humanities skill set in applications that may present new opportunities for the student. Texts will be highly cross-disciplinary, drawing from legal, financial, and technological traditions and mediums. No prerequisites required.

COMPLIT 325E. Petrarch & Petrarchism: Fragments of the Self. 3-5 Units.

In this course we will examine Francis Petrarch's book of Italian lyric poems, *Rerum vulgarium fragmenta*, and its reception in early modern France, England, and Spain. Readings from Petrarch's epistolary and ethical writings will contextualize historically and intellectually the aesthetics and ethics of the fragment in his poetry. With this foundation, we will investigate the long-lasting impact of Petrarch's work on Renaissance poetry and humanism, with attention to both the literary and the material aspects of its reception. Taught in English.

Same as: COMPLIT 225E, ITALIAN 225, ITALIAN 325

COMPLIT 327. Genres of the Novel. 5 Units.

Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukács, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. *PLEASE NOTE: Course for graduate students only.*

Same as: ENGLISH 327, FRENCH 327

COMPLIT 328. Literature, Narrative, and the Self. 3-5 Units.

The role of narrative in the well-lived life. Are narratives necessary? Can they, and should they, be literary? When might non-narrative approaches, whether literary or otherwise, be more relevant? Is unity of self something given, something to be achieved, or something to be overcome? Readings from Aristotle, Montaigne, Schopenhauer, Nietzsche, Camus, Sartre, MacIntyre, G. Strawson, Velleman; Ricoeur, Brooks; Shakespeare, Stendhal, Musil, Levi, Beckett, Morrison; film. Taught in English.

Same as: FRENCH 328, ITALIAN 328

COMPLIT 330. The Bourgeois. 5 Units.

Goal is to define the ruling class of modern times. Social history (Weber, Hirschmann, Marx); literary texts (Defoe, Goethe, Gaskell); and Henrik Ibsen who produced an intransigent criticism of the bourgeois ethos.

COMPLIT 332. The Transatlantic Renaissance. 5 Units.

The emergence of a transatlantic culture in the early modern period. How is the Renaissance of Europe and England fashioned in a conversation with the cultural forms and material realities of the colonial Americas? And how do colonial writings expand and complicate the available understanding of the Renaissance? Readings in Columbus, More, Hakluyt, Spenser, Shakespeare, the Inca Garcilaso de la Vega.

Same as: ENGLISH 310

COMPLIT 333. Gender and Modernism. 3-5 Units.

Gender and sexuality in trans-Atlantic modernist literature and culture from the 1880s-1930s. Topics include the 19th-century culture wars and the figures of the dandy and the New Woman; modernist critiques of Enlightenment rationality; impact of World War I on gender roles; gender and the rise of modern consumer culture, fashion, design; the modernist metropolis and gender/sexuality; the avant-garde and gender; literary first-wave feminism; homoerotic modernism; modernism in the context of current theories of gender and sexuality.

Same as: COMPLIT 133

COMPLIT 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.

Same as: ENGLISH 334B, MTL 334B

COMPLIT 335A. Materialism and Literature. 3-5 Units.

Exploration of vibrant materialism (Bennet, Latour) and historical materialism (critical theory) as a basis to approach Latin American commodity novels, i.e., those that revolve around bananas, coffee, etc. Literary works by J.E. Rivera, Garciaacute;a Maacute;rquez, Asturias, Neruda, Magnus, and others. Taught in Spanish.

Same as: ILAC 335

COMPLIT 338. The Gothic in Literature and Culture. 5 Units.

This course examines the Gothic as both a narrative subgenre and an aesthetic mode, since its 18th century invention. Starting with different narrative genres of Gothic expression such as the Gothic novel, the ghost tale, and the fantastic tale by writers such as Walpole, Radcliffe, Sade, Poe, and E.T.A. Hoffmann, the course goes on to ask how the Gothic sensibility permeates a wide range of 19th century cultural phenomena that explore the dark side of Enlightenment, from Romantic poetry and art to melodrama, feuilleton novels, popular spectacles like the wax museum and the morgue. If time permits, we will also ask how the Gothic is updated into our present in popular novels and cinema. Critical readings will examine both the psychology of the Gothic sensibility and its social context, and might be drawn from theorists such as Benjamin, Freud, Lacan, Kristeva, and Zizek.

Same as: ENGLISH 338, FRENCH 338

COMPLIT 338D. Introduction to Digital Humanities: Concepts, Technologies, Tools. 1-3 Unit.

In this course, we will explore the perspectives of scholars who have thought about what "digital humanities" means and the technologies and tools that are shaping new kinds of research, scholarship, and publishing. Topics will include history of the digital humanities, textual studies, electronic literature, computational and new media, and emerging work around text, image, and new media curation and visualization. This seminar is ideal for anyone interested in digital methods and digital in the humanities, teaching with new digital methods, or to learn about all the digital humanities projects at Stanford. This course is organized as a mix of seminar and workshop and will be featuring a new platform called "Lacuna Stories," designed for Stanford students, that presents multiple platforms, media, and texts to digitally engage with narratives surrounding 9/11; active engagement by all participants is expected. Students may contribute to the field with a creative final project that they develop over the course of the quarter if they select the 3-unit option.

Same as: COMPLIT 228D, DLCL 228

COMPLIT 342. Alla Turca Love: Tales of Romance in Turkish Literature. 3-5 Units.

An introduction to the theme of romantic love in Turkish literature, with particular attention to key classical and contemporary works that influenced the development of the Turkish literary tradition. Topics include close reading and discussion of folk tales, poems, short stories, and plays with particular attention to the characters of lover/beloved, the theme of romantic love, and the cultural and historical background of these elements. We will begin with essential examples of ghazels from Ottoman court poetry to explore the notion of "courtly love" and move to the most influential texts of 19th and 20th centuries. All readings and discussions will be in English; all student levels welcome.

Same as: COMPLIT 143A

COMPLIT 345B. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacute;, Olinto), prose poetry (Ceacute;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Oulogueum) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, CSRE 145B, FRENCH 145B, FRENCH 345B

COMPLIT 346. Classical Arabic Poetry: An Introduction. 3-5 Units.

The primary litmus test of proficiency in the Arabic language is, and has always been, a command of classical Arabic poetry. Study and memorize the great lines of Arabic poetry with a manual that has stood the pedagogical test of time from the eleventh century until today. Questions of literary merit, poetic technique, metaphor, and divine and human linguistic innovation are all raised by the text that we will read together. Readings in Arabic, assignments and discussion in English. Prerequisite: two years of Arabic at Stanford, or equivalent.

Same as: COMPLIT 149A

COMPLIT 347. The Arab Spring in Arabic Literature. 3-5 Units.

An examination of the events of 2011 in the Middle East through literature. We will read short stories, poetry, graphic novels, and blogs in order to try and work out whether the revolution could have been predicted, and how it took place. Prerequisite: two years of Arabic at Stanford, or equivalent.

Same as: COMPLIT 146A

COMPLIT 347A. The Hebrew Bible in Literature. 3-5 Units.

Close reading of major biblical stories and poems that influenced modern literature written in English and Hebrew. Hebrew texts will be read in translation to English. Each class will include a section from the Hebrew Bible as well as a modern text or film based on the biblical story/poem. Discussion of questions such as: the meaning and function of myths and the influence of the Hebrew Bible on the development of literary styles and genres.

Same as: COMPLIT 147A, JEWISHST 147A, JEWISHST 347A

COMPLIT 351A. Philosophies, Literatures, and Alternatives. 3-5 Units.

Aristotelian poetics and mediaeval Arabic literary theory. Nietzsche's irony and Philosophies and literatures, together and apart, dominate the last two millennia of human thought. How might they best be read? Are philosophy and literature two different ways of thinking, or are they just two separate institutional histories? This course starts with familiar Greeks, moves onto unfamiliar Arabs, confronts old Europe, and ends with contemporary Americans arguing.

Same as: COMPLIT 151A

COMPLIT 351B. Great Books: Dramatic Traditions. 4 Units.

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 151B, TAPS 151T, TAPS 351

COMPLIT 353A. Experiment and the Novel. 5 Units.

A double exploration of experiment in the novel from 1719 into the 19th century. Taking off from Zola's "The Experimental Novel," consideration of the novel's aspect as scientific instrument. Taking the idea of experimental fiction in the usual sense of departures from standard practice, consideration of works that seem to break away from techniques of "realism" devised prior to 1750, with "Robinson Crusoe" as the representative of that mode.. Texts by: Defoe, Sterne, Walpole, Godwin, Lewis, Goethe, and Shelley. Same as: ENGLISH 303

COMPLIT 354B. Poetic Thinking Across Media. 4 Units.

Even before Novalis claimed that the world must be romanticized, thinkers, writers, and artists wanted to perceive the human and natural world poetically. The pre- and post-romantic poetic modes of thinking they created are the subject of this course. Readings include Ecclesiastes, Zhaozhou Congshen, Montaigne, Nietzsche, Kafka, Benjamin, Arendt, and Sontag. This course will also present poetic thinking in the visual arts--from the expressionism of Ingmar Bergman to the neo-romanticism of Gerhard Richter.

Same as: COMPLIT 154B, GERMAN 154, GERMAN 354, JEWISHST 144B

COMPLIT 357. Contemporary Turkish Cinema and Society. 3-5 Units.

This course is an examination of contemporary Turkish cinema in a social and political context. The course will focus on films and directors that revived Turkish cinema starting with the mid-1990s with a focus on key issues pertaining to belonging, denied identities, masculinity, nationalism, silencing of women, and urbanization. The course aims to provide an overview of contemporary Turkish cinema and society in cultural, political, and social framework. There will be approximately two hours of film screening and two hours of classroom discussion/seminar (in English) each week. All films are in Turkish with English subtitles.

Same as: COMPLIT 157

COMPLIT 359A. Philosophical Reading Group. 1 Unit.

Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with H. U. Gumbrecht is required. May be repeated for credit. Taught in English.

Same as: FRENCH 395, ITALIAN 395

COMPLIT 360B. The Theory of the Novel. 5 Units.

Topics will include: theories of the novel's origin; novelistic subjectivity; voice and text; body and text; the problem of the quotidian; democracy, revolution and novelistic form; and the peculiar dynamic of the novelistic trinity (author, character, reader).

COMPLIT 363. Ecology, History, Exchange. 4-5 Units.

Readings of novels, ecocriticism. Ghosh, Gordimer, Coetzee, Al-Koni, Ondaatje, Silko.

COMPLIT 364. Style. 5 Units.

The return of a term that was central in 20th-century criticism, and has all but disappeared in recent decades. Focus is on looking at concepts of style from various branches of linguistic and literary theory, and examination of some revealing examples in novels and films. Team taught with D.A. Miller from U.C. Berkeley.

COMPLIT 368A. Imagining the Oceans. 5 Units.

How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painleveacute; and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.

Same as: ENGLISH 368A, FRENCH 368A

COMPLIT 369. Introduction to Graduate Studies: Criticism as Profession. 3 Units.

A history of literary theory for entering graduate students in national literature departments and comparative literature.

Same as: DLCL 369, FRENCH 369, GERMAN 369, ITALIAN 369

COMPLIT 371. Aesthetics, Politics, Modernity and China. 2-5 Units.

The making of global heroes--and the many bodies of Chairman Mao. This course explores a number of key motifs of critical theory relevant to Chinese studies. It introduces some seminal theories of visuality and the making of (global) heroes and problematizes the writing of visual histories and the uses of Digital Humanities for this purpose. Part of an ongoing research project which focuses on two hyper-visible male protagonists of the twentieth century--Mohandas Gandhi and Mao Zedong. How have these flesh and blood men been transformed through the work of visual imagery into globally recognizable, transcultural "bio-icons"? Prerequisite: CHINLIT 127/207 or consent of instructor.

Same as: CHINLIT 371

COMPLIT 376C. Tragic Form and Political Theory. 5 Units.

Tragic form and political theory have in common a profound interest in the conflictual foundation of human society. This course will explore how the two intellectual approaches define the actors of conflict, its causes, and its possible [or impossible] resolution.

Same as: ENGLISH 376C, PHIL 376C

COMPLIT 381E. Pirandello, Sartre, and Beckett. 3-5 Units.

In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include The Late Mattia Pascal, Six Characters in Search of an Author, Henry IV; Nausea, No Exit, "Existentialism is a Humanism"; Molloy, Endgame, Krapp's Last Tape, Waiting for Godot. Taught in English.

Same as: COMPLIT 281E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

COMPLIT 390. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units. Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).
Same as: COMPLIT 190, SLAVIC 190, SLAVIC 390

COMPLIT 396L. Pedagogy Seminar I. 2 Units. Required for first-year Ph.D students in English, Modern Thought and Literature, and Comparative Literature. Preparation for surviving as teaching assistants in undergraduate literature courses. Focus is on leading discussions and grading papers.
Same as: ENGLISH 396L

COMPLIT 398L. Literary Lab. 2-5 Units. Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.
Same as: ENGLISH 398L

COMPLIT 399. Individual Work. 1-15 Unit.

COMPLIT 802. TGR Dissertation. 0 Units.

Comparative Medicine Courses

COMP MED 10SC. Comparative Anatomy and Physiology of Mammals. 2 Units. This course introduces the student to common laboratory, domestic, and exotic mammals through lectures, dissection labs and student presentations. Using a comparative approach, investigates the unique adaptations of species in terms of their morphological, anatomical, and behavioral characteristics. Focus on how these species interact with their own and other species (including humans), discuss basic evolution, and the devastating impact of habitat destruction on wild animals. Class provides the student with a deeper appreciation for the diversity of the mammalian orders, along with the fundamentals of comparative anatomy, physiology, and basic dissection techniques. A large collection of skulls, bones and plastinated organs facilitate learning mammalian anatomy, and a field trip to a local zoo enables students to appreciate behavior and locomotion of assorted mammals in their iquest;nativeiquest; habitats.

COMP MED 11SC. Life in the Zoo: Behavior, Welfare and Enrichment. 2 Units. Emphasis is on how animal welfare sciences provide an evidence-based approach to optimize and balance each of these demands so that "good welfare is good business." Topics include how to apply principles of animal behavior to design environmental enrichments beneficial to both animals and complex mission of the zoo; assessing exhibits from the point of view of animal behavior and well-being, educational opportunities and guest experience; developing an enrichment plan; designing and building enrichments for animals; interacting with the public as docents; assessing overall effectiveness of new enrichment. Class includes experience at San Francisco Zoo.

COMP MED 80N. Introduction to Animal Behavior. 3 Units. Preference to freshman. Behavior is what makes animals special (thirsty plants don't walk to water), but why do animals behave the way they do? What does their behavior tell us about their inner lives, and about ourselves? What do lipstick and cuckoos and fireflies have in common? Why would nobody want to be a penguin? What do mice say to each other in their pee-mail? Learning how to think about questions like these gives us a unique perspective on the natural world. Format: Discussion and criticism of video examples, documentaries, and research papers. Topics: History and approaches to animal behavior; development of behavior, from genetics to learning; mechanisms of behavior, from neurons to motivation; function of behavior, from honest signals to selfish genes; the phylogeny of behavior, from domestication to speciation; and modern applications of behavior, from abnormal behavior, to conservation, to animal welfare, and animal consciousness.

COMP MED 81N. Comparative Anatomy and Physiology of Mammals. 3 Units. Preference to freshmen. Emphasis is on a comparative approach to anatomy and physiology of a wide range of mammals, the unique adaptations of each species in terms of its anatomical, and behavioral characteristics, and how these species interact with human beings and other animals. Dissection required. Class size is limited to 16.

COMP MED 84Q. Globally Emerging Zoonotic Diseases. 3 Units. Preference to sophomores. Infectious diseases impacting veterinary and human health around the world today. Mechanisms of disease, epidemiology, and underlying diagnostic, treatment and control principles associated with these pathogens.

COMP MED 85N. Animal Use in Biomedical Research. 3 Units. Preference to freshmen. How and why animals are used in biomedical science. Addresses human and animal disease entities and how animal research has contributed to the treatment and cure of disease. Significantnportions of this course are devoted to documenting the humane care and treatment of laboratory animals in research, including, but not limited to such topics as laws and ethics, animal behavior, animal modeling, and the animal activist movement. Course topics will also include: What advances have been made as a result of the use of animals in research? Who conducts animal research? Predominant animal species used in biomedical research, facts and myths; the regulation of biomedical research; housing and care of laboratory animals; why new drugs must be tested; animal use in stem cell research, cancer research and genetically engineered mice; career choices in biomedical research.

COMP MED 87Q. Introduction to the Mouse in Biomedical Research. 3 Units. Preference to sophomores. Focus is on the laboratory mouse, a widely used and important research model. Topics include the ethics of animal use in research; the natural history, origin and husbandry of the mouse; characteristics of key mouse strains; its anatomy and physiology; common diseases and their effects on research; coat color genetics relative to human diseases; immunodeficient mouse models; and genetic engineering of mice. The laboratory includes necropsy, handling, anesthesia, identification methods, and common research techniques using live and dead mice. Enrollment limited to 14 students.

COMP MED 88Q. Blood Cells- The Basics. 3 Units. Preference to sophomores. The essential and constant production of new blood cells by the bone marrow. Focus is on fundamentals of the three blood cell types along with white blood cell subtypes. Topics include the microscopic appearance of blood cells in mammalian and non-mammalian species, common morphologic abnormalities of blood cells, and shifts in blood cells that occur in several major diseases of humans and animals. Ideally suited for premed, prevet and Bio-X students, but no biology specialty background required.

COMP MED 89Q. Ouch it Hurts! The Comparative Neurobiology of Pain. 3 Units.

Preference to sophomores. Focus is on understanding the basic neurobiology of pain pathways. Topics include the physiology, pharmacology, and clinical aspects of effective pain management. In both humans and animals pain is part of the protective mechanisms that prevent further injury to the body. However, if the pain process continues unchecked, it can become extremely detrimental.

COMP MED 110. Pre-Vet Advisory. 1 Unit.

For students interested in a career in veterinary medicine. How to meet the academic and practical experience prerequisites for admission to veterinary school. Networking with other pre-vet students. Periodic group meetings with guest speakers presenting career options in veterinary medicine. Prerequisite: consent of instructor.

COMP MED 121. Imaging Anatomy in Animal Models. 3 Units.

(Same as RADO 121) Introduces engineering and physical science majors to the basic laboratory animal anatomy visualized and targeted with biomedical imaging. Topics include: various imaging modalities (PET, CT, Radiology, MRI, and other optical imaging) and associated depiction of normal organs and skeletal structures in pigs, dogs, rabbits and rodents. Course includes didactic lectures, discussion, imaging labs and gross cadaver examination.

COMP MED 198. Undergraduate Directed Reading in Comparative Medicine. 1-3 Unit.

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research.

COMP MED 199. Undergraduate Research. 1-3 Unit.

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

COMP MED 207. Comparative Brain Evolution. 4 Units.

Functional organization and evolution of the vertebrate nervous system. Topics include paleoneurology, cladistic analysis, allometry, mosaic versus concerted evolution, and evolution of brain region structure, connectivity, and neurons. Comparisons between structure and function of vertebrate forebrains including hippocampi. Evolution of the primate visual and sensorimotor central nervous system as related to vocalization, socialization, and intelligence.

COMP MED 215. Synaptic Properties and Neuronal Circuits. 2-3 Units.

Focus is on synapses and circuits in the central nervous system. Objective is to demonstrate how the specific properties of different synapses play a role in the function of neuronal circuits. The main types of synapses are covered, including both ionotropic and metabotropic-receptor-dependent synapses and their related circuits in the CNS. Lectures and student presentations. If taken for 3 units qualifies as a Core Course satisfying requirements in Cellular, Molecular & Developmental Neuroscience in the Neurosciences Graduate Program. Students enrolling for 3 units write an NIH-style proposal on a selected synapse, proposing a study of its properties and related function and presenting the proposal to the class for critique and discussion.

COMP MED 299. Directed Reading in Comparative Medicine. 1-18 Unit.

Prerequisite: consent of instructor. (Staff).

COMP MED 370. Medical Scholars Research. 4-18 Units.

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

COMP MED 399. Graduate Research. 1-18 Unit.

Investigations sponsored by individual faculty members. Opportunities are available in comparative medicine and pathology, immuno-histochemistry, electron microscopy, molecular genetics, quantitative morphometry, neuroanatomy and neurophysiology of the hippocampus, pathogenesis of intestinal infections, immunopathology, biology of laboratory rodents, anesthesiology of laboratory animals, gene therapy of animal models of neurodegenerative diseases, and development and characterization of transgenic animal models. Prerequisite: consent of instructor.

Comparative Studies in Race Ethnicity Courses

CSRE 1A. Meet the Profs: Conversations on Race and Ethnicity. 1-2 Unit.

This course meets once a week for one hour, over lunch (provided). Students will meet with CSRE faculty who will share their work, their life stories, their reasons for believing that race and ethnicity are of central concern to all members of our society. Diverse fields will be represented: sociology, history, literature, psychology and others. The course may be taken for either one or two units. Open to freshmen and sophomores only.

CSRE 11W. Service-Learning Workshop on Issues of Education Equity. 1 Unit.

Introduces students to a variety of issues at stake in the public education of at-risk high school youth in California. Participants will hear from some of the leading faculty in the School of Education as well as the Departments of Psychology, Sociology, and others, who will share perspectives on the problems and challenges of educating a diverse student body in the state's public school system. The service-learning component of the workshop is a mentoring project (Stanford Students for Educational Equity) with junior class history students from East Palo Alto Academy High School, a Stanford charter school.

Same as: HISTORY 11W

CSRE 14N. Growing Up Bilingual. 3 Units.

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.

Same as: CHILATST 14N, EDUC 114N

CSRE 16N. African Americans and Social Movements. 3 Units.

Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's rights, LGBT rights, environmental movement, and contemporary political conservatism.

Same as: AFRICAAM 16N, SOC 16N

CSRE 19N. "Land of Milk and Honey": Food, Justice, and Ethnic Identity in Jewish Culture. 3 Units.

Food is an essential aspect of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. This seminar examines Jewish culture and the food practices and traditions that have shaped and continue to shape it. Why has Jewish culture been centered around food practices? How have religious laws and rituals about food and food production shaped Jewish culture and vice versa? Dietary laws prescribe which animals are and are not "kosher" and what can be eaten with them, holidays are celebrated with traditional foods, and regional foods contribute to the formation of distinct Jewish ethnic identities. More recently, American Jews have begun to organize around issues of food justice, and joined the sustainability movement, adapting Jewish traditions about food production into their cause. What is the significance of animal welfare, environmental issues, and labor practices in Jewish culture? This multi-disciplinary seminar explores the connection between food practices and ethnic and religious identity(ies), the history of the dietary laws and their multiple interpretations, the cultural significance of the phenomenal success of kosher certification in the U.S. food market, and the rise of the Jewish food justice movement. These issues raise a multitude of comparative questions, and you are encouraged to engage in research into other religious and ethnic food cultures. Course materials include: biblical and later religious, legal, and philosophical texts; cook-books (as cultural and historical sources); literature (both fiction and academic); films; news media, and food experts. We will visit an urban farming community (Urban Adamah) to learn from those involved in the Jewish sustainability movement.

Same as: JEWISHST 19N, RELIGST 19N

CSRE 24D. Introduction to Dance in the African Diaspora. 4 Units.

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project.

Same as: AFRICAAM 24, DANCE 24, TAPS 152D

CSRE 28SI. What is Whiteness? Historical and Contemporary Definitions of White Racial Identity in the U.S.. 1-2 Unit.

This course will explore one central question: What does it mean to be White, and how has that changed over time and place? From Abigail Fisher to Kreyshawn to the Tsarnaev brothers, we will use narratives and experiences of Whiteness to illuminate historical and contemporary understandings of what it means to be White in 2013. Through this class, students will share their own encounters with Whiteness, and will develop tools and strategies for navigating privileged identities and engaging within Stanford's diverse student community.

CSRE 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: ANTHRO 32

CSRE 32A. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations. Same as: AFRICAAM 32, AMSTUD 32, EDUC 32X, EDUC 432X, TAPS 32

CSRE 34. Race, Policing, and Mass Incarceration. 1 Unit.

This course is a critical examination of the relationship between race, policing, and mass incarceration. Students will be reading the most important contemporary texts to discuss and deconstruct this relationship, as well as attending lectures and workshops by leading scholars and activists. The course will approach this critical nexus of concerns--race, policing, and mass incarceration--from social scientific, legal, theoretical and activist viewpoints.

Same as: AFRICAAM 34

CSRE 36. REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.. 5 Units.

Probably since the first audience formed for the first chalk scrawls in a cave, there have been storytellers to narrate that caveperson's art and life, and critics to troll that caveperson's choice and usage of color. And so it goes. This course is an exploration into how to cover race, culture, and identity in the arts in journalism, such as print, web, video, radio, and podcasting. It is also an arts journalism practicum. During the quarter, we will be working toward creating work that is publishable in various venues and outlets. In this course, we will be discussing exemplary arts writers and their works and interrogating critical questions around race, identity, representation, and ethics. Experienced journalists, editors, and experts from different platforms and backgrounds will also be imparting important skills and training that will help you to navigate today's working media and transmedia environments. Those who enroll in the class will be expected to produce quality content (e.g. articles, blog posts, video reports, podcasts) for media outlets. Some travel outside of class may be required for additional reporting and training. This seminar class will be By Instructor Approval Only. Please submit an application by February 22 at 11:59pm. Starred items are required. The app is available at: <http://bit.ly/RepresentClass36> Those selected for this class will be informed by March 2nd so that they may enroll in the course. Please do not apply for the course if you are unsure about completing it. If you have any questions, you may email the instructor at: jeffc410@stanford.edu.

Same as: AFRICAAM 36

CSRE 41A. Genes and Identity. 3 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race.

Same as: AFRICAAM 41, ANTHRO 41

CSRE 45Q. Understanding Race and Ethnicity in American Society. 4 Units.

Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16.

Same as: SOC 45Q

CSRE 51Q. Comparative Fictions of Ethnicity. 4 Units.

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"?.

Same as: AMSTUD 51Q, COMPLIT 51Q

CSRE 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.

In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society.

Same as: ASNAMST 52D

CSRE 53J. Love Notes: Queers of Color on Politics of the Heart. 3 Units.

This course unfolds in three ways. First, we will begin by examining theories of love by women of color feminists and queer theorists. Secondly, we will position these theories alongside art, literature, photography, comics, and film by and about queers of color who partake in the cultural representation of the love story. Finally, we will interrogate the aesthetic politics of each work in order engage with the ways that the writers, artists, and filmmakers contribute to the theorization of love.

Same as: CHILATST 53J

CSRE 54N. African American Women's Lives. 3-4 Units.

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, AMSTUD 54N, FEMGEN 54N, HISTORY 54N

CSRE 55M. MMUF Seminar. 1 Unit.

This seminar is designed to help MMUF honor students in the following ways: (1) developing and refining research paper topics, (2) learning about the various approaches to research and writing, and (3) connecting to Stanford University resources such as the library and faculty.

CSRE 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: AMSTUD 63N, FEMGEN 63N, HISTORY 63N

CSRE 64. Racial and Ethnic Diversity in Modern America. 4-5 Units.

How ethnicity influenced the American experience and how prevailing attitudes about racial and ethnic groups over time have affected the historical and contemporary reality of the nation's major minority populations. Focus is on the past two centuries.

Same as: HISTORY 64

CSRE 65. Nation in Motion: Film, Race and Immigration in Contemporary French Cinema. 3-5 Units.

An examination of the current debates in France regarding national identity, secularism, and the integration of immigrants, notably from the former colonies. Confronts films' and other media's visual and discursive rhetorical strategies used to represent ethnic or religious minorities, discrimination, citizens' resistance to government policies, inter-racial marriages, or women's rights within immigrant communities. By embodying such themes in stories of love, hardships, or solidarity, the motion pictures make the movements and emotions inherent to immigration tangible: to what effect? Taught in French. Films in French with English subtitles. Additional paper for students enrolled in 235.

Same as: FRENCH 122

CSRE 65M. Intimate Frontiers: Race, Gender, and Colonialism in the American West. 5 Units.

Historians have increasingly recognized the American West as a place of empire and settler colonialism. This course will explore the colonial dimensions of the 19th century American West through a variety of sources produced in the most "intimate" spaces on North America's multicultural frontier: in homes, missions, boardinghouses, schools, mining camps, courtrooms, and more. By examining how the intimate shaped everyday lives, we will pay special attention to how ambiguous concepts like race, gender, class, sexuality, and national identity coalesced. The course fulfills the departmental Sources and Methods requirement.

Same as: FEMGEN 65S, HISTORY 65S

CSRE 66S. The Americans are Coming!: The Cold War at Home and Abroad. 5 Units.

This course explores the relationship between U.S. foreign and domestic policy from 1945 to 1975. How did fighting the "Communist menace" shape notions of race, gender, and national identity within the United States? In what ways did nation-building abroad trigger clashes over the meaning of democracy at home? Using textual sources, photographs, films, and cartoons, students will examine notions of what it meant to be "American," both inside and outside the nation's borders, in a Cold War climate. The course fulfills the departmental Sources and Methods requirement.

Same as: HISTORY 66S

CSRE 84. Zionism. 3 Units.

(Same as HISTORY 184. History majors and others taking 5 units, register for 184.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: HISTORY 84, JEWISHST 84, REES 84

CSRE 102. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3-5 Units.

This interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples. Using an innovative combination of online lectures by Stanford faculty and students, and recorded interviews with Indigenous leaders, artists, performers, scholars and museum professionals, the seminar will explore and problematize: historic and contemporary understandings of "Indigenous cultural heritage" and the impact of colonialism, urbanization and other forces on Indigenous identity and cultural heritage; current and potential domestic and international legal and non-legal frameworks for Indigenous cultural heritage protection and repatriation; past and present museum approaches to Indigenous peoples and their cultural material; and optimal methods of resolving repatriation disputes. While the seminar will cover primarily the situation of Indigenous peoples in North America, comparisons will be drawn with other regions of the globe. The on-campus component of the seminar will involve directed discussions of the online content, the online forum, assigned readings and short writing assignments. Students can choose between a final exam, paper or video project. Lunch is provided.

Same as: ANTHRO 102C, ARCHLGY 101, ARCHLGY 202, NATIVEAM 102

CSRE 103B. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: AFRICAAM 106, EDUC 103B, EDUC 337

CSRE 103S. Native American Women, Gender Roles, and Status. 5 Units.

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: FEMGEN 103S, NATIVEAM 103S

CSRE 106A. Gang Colors: The Racialization of Violence and the American City. 5 Units.

Street gangs (e.g. Bloods, Crips, Mara Salvatrucha, M-18, etc.) serve as a window onto the experience of racial, ethnic and economic marginalization under late capitalism. This class explores the context that gives rise to gang violence through a combination of anthropological, sociological, and historical approaches. Students will be familiarized with the macro-social factors that shape both gangs and the politics of violence in the Americas, North and South.

Same as: ANTHRO 106A

CSRE 107. The Black Mediterranean: Greece, Rome and Antiquity. 4-5 Units.

Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole.

Same as: AFRICAAM 107C

CSRE 108. Introduction to Feminist Studies. 4-5 Units.

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, FEMGEN 101, TAPS 108

CSRE 108S. American Indian Religious Freedom. 5 Units.

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom.

Same as: NATIVEAM 108S

CSRE 109A. Federal Indian Law. 5 Units.

Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.

Same as: NATIVEAM 109A

CSRE 112X. Urban Education. 3-4 Units.

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, EDUC 112X, EDUC 212X, SOC 129X, SOC 229X

CSRE 117S. History of California Indians. 5 Units.

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system.

Same as: HISTORY 250A

CSRE 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.

Interpreting the past is no longer just for people like historians and archaeologists, and it is no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they are putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ANTHRO 118A, ASNAMST 118A

CSRE 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout.

Same as: NATIVEAM 121

CSRE 121L. Racial-Ethnic Politics in US. 5 Units.

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended.

Same as: AMSTUD 121L, POLISCI 121L, PUBLPOL 121L

CSRE 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

CSRE 122E. Art in the Streets: Identity in Murals, Site-specific works, and Interventions in Public Spaces. 4 Units.

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project.

Same as: AFRICAAM 122E

CSRE 123A. American Indians and the Cinema. 5 Units.

Hollywood and the film industry have had a major influence on American society for nearly a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood's Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. This course looks chronologically at cinematic interpretations and critically examines accurate portrayals of American Indians and of American history.

Same as: NATIVEAM 123A

CSRE 123B. Literature and Human Experimentation. 3-5 Units.

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann and Vivien Spitz's Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, COMPLIT 223, HUMBIO 175H, MED 220

CSRE 125V. The Voting Rights Act. 5 Units.

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: AFRICAAM 125V, POLISCI 125V

CSRE 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, EDUC 136B, EDUC 236B, PUBLPOL 126B

CSRE 127A. Can't Stop Won't Stop: A History Of The Hip-Hop Arts. 4 Units.

This course explores the history and development of the hip-hop arts movement, from its precursor movements in music, dance, visual arts, literature, and folk and street cultures to its rise as a neighborhood subculture in the Bronx in the early 1970s through its local, regional and global expansion and development. Hip-hop aesthetics, structures, and politics will be explored within the context of the movement; its rise as a post-multicultural form in an era of neoliberal globalization.

Same as: AFRICAAM 127A

CSRE 128. WHAT WE WANT IS WE: Identity in Visual Arts, Social Engagement, and Civic Propositions. 4 Units.

This studio practicum examines contemporary culture through case studies on visual art, race theory, urban studies, and resistance legacies. This class looks at strategies of socially engaged art practices, community building endeavors, and the complications peculiar to these projects. From these case studies, students will make public art/text/performance experiments and learn research and grant writing approaches for designing long-term political projects. Students will translate their research into grant proposals that will be judged by a professional panel during the final week. Course guests include granting agencies/arts foundations and international artists, curators, city planners, and activists (live/video conferences).

CSRE 129B. Literature and Global Health. 3-5 Units.

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with an introduction to global health ethics as a field rooted in philosophy and policy that address questions raised by practice in resource-constrained communities abroad. We will then spend the quarter understanding the way literature may deepen and even alter those questions. For instance: how have writers used scenes of practice in Africa, the Caribbean or South Asia to think through ideas of mercy, charity, beneficence and justice? How differently do they imagine such scenes when examining issues of autonomy, paternalism and language? To what extent, then, do novels and memoirs serve as sites of ethical inquiry? And how has literary study revealed the complexities of narrating care for underserved communities, and therefore presented close reading as a mode of ethics for global health? Readings will include prose fiction by Albert Camus, Joseph Conrad, Amitav Ghosh and Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese and Paul Farmer.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, FRENCH 229, HUMBIO 175L, MED 234

CSRE 130. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques. Prerequisite: graduate status or consent of instructor.

Same as: AFRICAAM 130, EDUC 123X, EDUC 322

CSRE 131. Genes and Identity. 5 Units.

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence; in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic family searching; in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational; pilot; ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: AFRICAAM 131, ANTHRO 131

CSRE 131C. Trauma, healing, and empowerment in Asian America. 3-5 Units.

This course will look at the ways in which Asian Americans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds.

Same as: ASNAMST 131

CSRE 132J. Sociology of Jewishness. 3-5 Units.

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.

Same as: JEWISHST 132D, SOC 132J

CSRE 133A. Anthropology of the Middle East. 3-5 Units.

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region.

Same as: ANTHRO 133A

CSRE 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: AFRICAST 133B, ANTHRO 133B

CSRE 134. Museum Cultures: Material Representation in the Past and Present. 5 Units.

Students will open the iquest;black boxquest; of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores iquest;museum culturesquest;: representations of iquest;selfquest; and iquest;otherquest; within museums and institutional cultures of the museum world itself.

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: ANTHRO 135H

CSRE 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: ANTHRO 135I

CSRE 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 138, ANTHRO 238

CSRE 140C. Stand Up Comedy and the "Great American Joke" Since 1945. 5 Units.

Development of American Stand Up Comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitlinquest; Circuit, the Cold War, censorship battles, Civil Rights and other social movements of the 60s and beyond. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques.

Same as: AMSTUD 140

CSRE 142. The Literature of the Americas. 5 Units.

A wide-ranging overview of the literatures of the Americas inncomparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other.

Same as: AMSTUD 142, COMPLIT 142, ENGLISH 172E

CSRE 142A. What is Hemispheric Studies?. 5 Units.

Will attempt to open up "America," beyond the United States. Have we reached the end of an era in our national literary imaginations? What is the utility and durability of the idea of the nation in a global era? New developments in hemispheric, Black Atlantic, and trans-american studies have raised questions about the very viability of US literary studies. Should we, as Franco Moretti suggests, map, count, and graph the relationships in our close (rhetorical) and "distant" readings of texts in the Americas? Topics include the definitions of concepts such as coloniality, modernity, time and the colonial difference, the encounters between world views of Europeans and indigenous Native American peoples, and the inventions of America, Latinamericanism, and Americanness.

CSRE 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders. Same as: ASNAMST 144, FEMGEN 144X

CSRE 145. Race and Ethnic Relations in the USA. 4 Units.

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements. Same as: SOC 145, SOC 245

CSRE 145B. Africa in Atlantic Writing. 3 Units.

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condeacute;, Olinto), prose poetry (Ceacute;saire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouloguem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, FRENCH 145B, FRENCH 345B

CSRE 145F. Race and Power. 5 Units.

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, ANTHRO 245

CSRE 146. Community Matters: Research and Service with Community Organizations. 2-4 Units.

(Taught in conjunction with URBANST 123B. Students participating in CRSI must enroll in CSRE 146. All others can enroll in either course.) This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CB(P)R project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). Students will leave the course with a plan for participating in a CBPR project.

CSRE 146S. Asian American Culture and Community. 3-5 Units.

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: AMSTUD 146, ASNAMST 146S, COMPLIT 146

CSRE 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).

Same as: AFRICAAM 19, AMSTUD 147J, MUSIC 147J, MUSIC 247J

CSRE 148. Comparative Ethnic Conflict. 4 Units.

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.

Same as: SOC 148, SOC 248

CSRE 150. Race and Political Sociology. 3 Units.

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.

Same as: SOC 150, SOC 250

CSRE 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, DANCE 151H, DANCE 251H, TAPS 151H, TAPS 351H

CSRE 152K. Mixed-Race Politics and Culture. 5 Units.

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, AMSTUD 152K, ENGLISH 152K

CSRE 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.

This course examines the significant role of drugs; play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, ANTHRO 254B

CSRE 154D. Law, Slavery, and Race. 5 Units.

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: AFRICAAM 254D, HISTORY 254D, HISTORY 354

CSRE 156J. Environment, Nature and Race. 3-5 Units.

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about "nature" and the "environment". This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is "natural"? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and "nature" interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology.

Same as: ANTHRO 156B

CSRE 157P. Allyship: Challenging Privilege and Doing Solidarity in Movements for Collective Liberation. 2-4 Units.

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, AMSTUD 157P, FEMGEN 157P

CSRE 159M. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose.

Same as: DANCE 23, TAPS 159M, TAPS 259M

CSRE 162. Women in Modern America. 4-5 Units.

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: AMSTUD 161, FEMGEN 161, HISTORY 161

CSRE 162A. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, Cesar Chavez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: RELIGST 162, URBANST 126

CSRE 163. Mindful Intelligence: Making Peace in Ourselves and in the World. 3-5 Units.

Our study explores the development of mindfulness and related abilities that lead to making peace in ourselves and in the world. We examine the intersection of race and ethnicity with the emerging field of contemplative studies through the teachings of leaders whose lives were dedicated to both contemplation and social action. Through self reflection, experiential learning, and creative expression we explore the personal as political. We aim to develop the capacity to move among worldviews, transcending particular identities while simultaneously honoring each of them, finding peace among the component parts of our own psyche, and possessing the inner resources to make peace in a multicultural society.

CSRE 164. Immigration and the Changing United States. 4 Units.

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CHILATST 164, SOC 164, SOC 264

CSRE 165. Race, Athletics and College Achievement. 3 Units.

How does racial group membership affect academic experiences, and how do race and athletic participation intersect with collegiate life? In this class, we will explore the relationships among race, athletic status, and academic experiences, with a focus on social science data and the specific experiences of Stanford students. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format with no prerequisites.

Same as: AFRICAAM 165, CTL 165

CSRE 166B. Immigration Debates in America, Past and Present. 3-5 Units.

Examines the ways in which the immigration of people from around the world and migration within the United States shaped American nation-building and ideas about national identity in the twentieth century. Focuses on how conflicting ideas about race, gender, ethnicity, and citizenship with respect to particular groups led to policies both of exclusion and integration. Part One begins with the ways in which the American views of race and citizenship in the colonial period through the post-Reconstruction Era led to the passage of the Chinese Exclusion Act in 1882 and subsequently to broader exclusions of immigrants from other parts of Asia, Southern and Eastern Europe, and Mexico. Explores how World War II and the Cold War challenged racial ideologies and led to policies of increasing liberalization culminating in the passage of the 1965 Immigration Act, which eliminated quotas based on national origins and opened the door for new waves of immigrants, especially from Asia and Latin America. Part Two considers new immigration patterns after 1965, including those of refugees, and investigates the contemporary debate over immigration and immigration policy in the post 9/11 era as well as inequalities within the system and the impact of foreign policy on exclusions and inclusions.

Same as: HISTORY 166B, HISTORY 366B

CSRE 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: ANTHRO 169A, CHILATST 168, FEMGEN 140H

CSRE 171H. Mexicans in the United States. 5 Units.

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: AMSTUD 271, CHILATST 171, HISTORY 271

CSRE 172. Out of Place: (W)riting Home. 4 Units.

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including iquest;the beginner iquest;s mind iquest; (as founded in Eastern spiritual practices); and, an indigenous approach to iquest;authenticity iquest; in one iquest;s work and one iquest;s words. Through w(riting), one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers. iquest;

Same as: TAPS 172, TAPS 272

CSRE 172H. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: AMSTUD 272E, CHILATST 172, FEMGEN 272E, HISTORY 272E, HISTORY 372E

CSRE 174S. When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness. 5 Units.

This is an exploration of the ways in which individuals construct whole selves in societies that fragment, label, and bind us in categories and boxes. We examine identities that overcome the destructive dichotomies of iquest;us iquest; and iquest;them, iquest; crossing borders of race, ethnicity, culture, nation, sex, and gender. Our focus is on the development of hybrid and synergistic forms of identity and mestiza consciousness in which the whole is greater than the sum of its parts.

CSRE 176S. Finding Meaning in Life's Struggles: Narrative Ways of Healing. 5 Units.

We can find meaning in life's struggles through narrative ways of healing. The self-reflective, dynamic process of finding, telling, and living our stories connects us with our whole selves as well as with others. We find our stories through vulnerability and courage; tell them with humility and honesty; and live them authentically and responsibly. Our shared stories will focus on gratitude, acceptance, reconciliation, forgiveness and compassion, empowering us to overcome personal, community, and historical traumas and wounds. In a respectful, caring community we will discover our hidden wholeness by improvising with various experiential and embodied means of finding our stories; telling our stories in diverse ways, including writing, storytelling, music, and art; and living our stories by putting values into action.

Same as: TAPS 176S

CSRE 177. Writing for Performance: The Fundamentals. 5 Units.

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: FEMGEN 177, TAPS 177, TAPS 277

CSRE 177B. Introduction to Dance on the Global Stage. 4 Units.

The course will examine and engage with dance cultures from around the world. Through historical and theoretical readings, film screenings, and viewing performances, this course aims to introduce students to a number of theoretical issues central to the study of dance across various disciplines. As a class we set out to explore how dance is more than a set of organized bodily movements, pleasurable to both do and watch. We will consider what cultural work dance performance accomplishes in the world.

Same as: DANCE 177

CSRE 177E. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177A, EDUC 177A, HUMBIO 29A

CSRE 177F. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177B, EDUC 177B

CSRE 177G. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.

Same as: CHILATST 177C, EDUC 177C

CSRE 178. Ethics and Politics of Public Service. 5 Units.

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]

Same as: ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

CSRE 178B. Intensive Playwriting. 5 Units.

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: TAPS 178B, TAPS 278

CSRE 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what is; the facts; can offer.

Same as: CSRE 279C, FEMGEN 179C, TAPS 179C, TAPS 279C

CSRE 179F. Flor y Canto: Poetry Workshop. 3-5 Units.

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlacut;n. Required 20-page poetry manuscript.

Same as: CHILATST 179F, TAPS 179F, TAPS 279F

CSRE 179G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 279G, FEMGEN 179G, TAPS 279G

CSRE 183. Re-Imagining American Borders. 5 Units.

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzalduacut;e;a's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: AMSTUD 183, FEMGEN 183

CSRE 184C. Zionism. 5 Units.

(Same as History 84.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: HISTORY 184, JEWISHST 184, REES 184

CSRE 187A. The Anthropology of Race, Nature, and Animality. 5 Units.

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism.

Same as: ANTHRO 187A

CSRE 188Q. Imagining Women: Writers in Print and in Person. 4-5 Units.

Gender roles, gender relations and sexual identity explored in contemporary literature and conversation with guest authors. Weekly meetings designated for book discussion and meeting with authors. Interest in writing and a curiosity about diverse women's lives would be helpful to students. Students will use such tools as close reading, research, analysis and imagination. Seminar requires strong voice of all participants. Oral presentations, discussion papers, final projects.

Same as: FEMGEN 188Q

CSRE 189W. Language and Minority Rights. 3 Units.

Language as it is implicated in migration and globalization. The effects of globalization processes on languages, the complexity of language use in migrant and indigenous minority contexts, the connectedness of today's societies brought about by the development of communication technologies. Individual and societal multilingualism; preservation and revival of endangered languages.

Same as: CHILATST 189W, EDUC 189X

CSRE 192E. Topics in the History of Sexuality: Sexual Violence in America. 4-5 Units.

This undergraduate/graduate colloquium explores recent historical interpretations of the history of sexuality, with a focus on sexual violence. The readings cover changing definitions and laws, cultural representations, and the role of gender, race, and age in the construction of rape and other forms of sexual violence. Topics include slavery; incest, seduction, and statutory rape reform; the racialization of rape and the anti-lynching movement; street harassment; men and boys as victims; war and conquest; and feminist responses to rape.

Same as: AMSTUD 258, FEMGEN 258, FEMGEN 358, HISTORY 258, HISTORY 358

CSRE 196C. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: ENGLISH 172D, PSYCH 155, SOC 146, TAPS 165

CSRE 198. Internship for Public Service. 1-5 Unit.

Students should consult with CCSRE Director of Service-Learning (nadiad@stanford.edu) to develop or sign-up for a community service internship. Group meetings may be required. May be repeated for credit. Service Learning Course (certified by Haas Center).

Same as: CHILATST 198

CSRE 200. Latin@ Literature. 3-5 Units.

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of latinidad. All share the historical experience of Spanish colonization and U.S. imperialism, yet their im/migration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.

Same as: CHILATST 200, ILAC 280, ILAC 382

CSRE 200R. Directed Research. 1-5 Unit.

.

CSRE 200W. Directed Reading. 1-5 Unit.

.

CSRE 200X. CSRE Senior Seminar. 5 Units.

Required for CSRE-related students, including those who opt to write honors theses in other departments and programs. Research and the writing of the senior honors thesis or senior paper under the supervision of a faculty project adviser. The process of research including conceptualization, development of prospectus, development of theses, research, analysis, and writing.

CSRE 200Y. CSRE Senior Honors Research. 1-10 Unit.

.

CSRE 200Z. CSRE Senior Honors Research. 1-10 Unit.

.

CSRE 201. Introduction to Public History and Public Service. 4-5 Units.

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

Same as: AFRICAAM 102, HISTORY 201, HISTORY 301

CSRE 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era. 5 Units.

How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.

Same as: CHILATST 201B

CSRE 201C. Critical Concepts in Chican@ Literature. 3-5 Units.

Combines primary texts of Chican@ literature with a metacritical interrogation of key concepts informing Chican@ literary criticism, the construction of Chican@ literary history, and a Chican@ literary canon. Interrogates the resistance paradigm and the "proper" subject of this literature, and critiques established genealogies and foundational authors and texts, as well as issues of periodization, including the notion of "emergence" (e.g. of feminist voices or dissident sexualities). Considers texts, authors and subjects that present alternatives to the resistance paradigm.

Same as: CHILATST 201C, ILAC 380E

CSRE 203A. The Changing Face of America: Building Leaders for Civil Rights and Education. 5 Units.

For students with leadership potential who have studied these topics in lecture format. Race discrimination strategies, their relation to education reform initiatives, and the role of media in shaping racial attitudes in the U.S. A service-learning component will be offered as an option in this course in partnership with East Palo Alto organizations. Application Required! Please apply here: http://bit.ly/CSRE_203A before 5pm on Friday, March 21st.

CSRE 216X. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: AFRICAAM 116, EDUC 216, HISTORY 255E

CSRE 220. Public Policy Institute. 3-5 Units.

Public Policy Institute serves to: provide students with information and perspectives on important public policy issues that have particular relevancy to matters of race and ethnicity in American society, past and present; expose students to faculty and other professionals working on public policy-related issues; and provide insight into the legislative process of public policy making at the state and local levels. Students are expected to conduct research necessary to write a policy brief on a particular issue, and make a presentation based on the policy brief. A field trip to Sacramento introduces students to policymakers and current policy matters of importance to marginalized communities in California.

CSRE 226. Race and Racism in American Politics. 5 Units.

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, POLISCI 226, POLISCI 326

CSRE 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: AMSTUD 226X, EDUC 226X

CSRE 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: AFRICAAM 233A, EDUC 233A

CSRE 243. Writing Across Languages and Cultures: Research in Writing and Writing Instruction. 3-5 Units.

Theoretical perspectives that have dominated the literature on writing research. Reports, articles, and chapters on writing research, theory, and instruction; current and historical perspectives in writing research and research findings relating to teaching and learning in this area.

Same as: EDUC 145, EDUC 243

CSRE 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

Same as: AFRICAAM 245, EDUC 245

CSRE 246. Constructing Race and Religion in America. 4-5 Units.

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time.

Same as: HISTORY 256G, HISTORY 356G, RELIGST 246, RELIGST 346

CSRE 260. California's Minority-Majority Cities. 4-5 Units.

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center).

Same as: HISTORY 260

CSRE 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what is requested; can offer.

Same as: CSRE 179C, FEMGEN 179C, TAPS 179C, TAPS 279C

CSRE 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, FEMGEN 179G, TAPS 279G

CSRE 289E. Queer of Color Critique: Race, Sex, Gender in Cultural Representations. 3-5 Units.

Examines major questions and issues that arise in considering race, sex, and gender together. Focus on critical and theoretical texts queering ethnic and diaspora studies and bringing race and ethnicity into queer studies. Close reading of texts in a variety of media negotiating racialized sexualities and sexualized identities. How is desire racialized? How is racial difference produced through sex acts? How to reconcile pleasure and desire with histories of imperialism and (neo)colonialism and structures of power?.

Same as: FEMGEN 389E, ILAC 389E

CSRE 290. Ferguson in a Global Frame: Human Rights and the Arts. 3-5 Units.

This course introduces students to fundamental concepts of international human rights and uses these concepts to frame problems of inequality, marginality, exclusion and injustice that are chronic across the globe; including the United States. Focusing on Ferguson as a point of inflection, this course will consider police repression of political protest in a comparative context. The course will also use the lens of fundamental human rights to explore a state's failure to investigate and prosecute, and its failure to protect its citizens from violations committed by agents or from non-state agents. In each thematic unit, we will examine the United States in a comparative lens, and will consider how we understand, frame, mourn and contest the violations of rights in literature, the visual arts, and in social and political action. We will continuously examine the role of the arts in disseminating, shaping and deepening our understanding of multiple dimensions of human rights violations. At the same time, we will consider how these cultural products reflect on, illuminate, contest or problematize advocacy texts and sources of international law. We will examine texts from the United States, Brazil, South Africa, among other countries, as well as documents from international and regional human rights bodies. Same as: AFRICAAM 290, COMPLIT 290

Computational Mathematical Engineering Courses

CME 20Q. Computational Modeling for Future Leaders. 3 Units.

Preference to sophomores. How can we harness and exploit the power of computational modeling? What responsibilities are there in developing and using computer models? In this course we will analyze fundamental issues inherent to computational modeling such as uncertainty, predictability, error, and resolution. We will furthermore examine the social context of computational modeling including the public perception of computational models, how computer modeling impacts politics and policy, and how politics and policy, in turn, influence computer modeling.

CME 100. Vector Calculus for Engineers. 5 Units.

Computation and visualization using MATLAB. Differential vector calculus: analytic geometry in space, functions of several variables, partial derivatives, gradient, unconstrained maxima and minima, Lagrange multipliers. Introduction to linear algebra: matrix operations, systems of algebraic equations, methods of solution and applications. Integral vector calculus: multiple integrals in Cartesian, cylindrical, and spherical coordinates, line integrals, scalar potential, surface integrals, Green's theorem, divergence, and Stokes' theorem. Examples and applications drawn from various engineering fields. Prerequisites: MATH 41 and 42, or 10 units AP credit. Note: Students enrolled in section 100-02 and 100A-02 are required to attend the discussion sections on Thursdays 5:15-6:45. Same as: ENGR 154

CME 100A. Vector Calculus for Engineers, ACE. 6 Units.

Students attend CME100/ENGR154 lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Enrollment by department permission only. Prerequisite: application at: http://soe.stanford.edu/current_students/edp/programs/ace.html.

CME 102. Ordinary Differential Equations for Engineers. 5 Units.

Analytical and numerical methods for solving ordinary differential equations arising in engineering applications: Solution of initial and boundary value problems, series solutions, Laplace transforms, and nonlinear equations; numerical methods for solving ordinary differential equations, accuracy of numerical methods, linear stability theory, finite differences. Introduction to MATLAB programming as a basic tool kit for computations. Problems from various engineering fields. Prerequisite: CME 100/ENGR 154 or MATH 51.

Same as: ENGR 155A

CME 102A. Ordinary Differential Equations for Engineers, ACE. 6 Units.

Students attend CME102/ENGR155A lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at: http://soe.stanford.edu/current_students/edp/programs/ace.html.

CME 103. Introduction to Matrix Methods. 4-5 Units.

Introduction to applied linear algebra with emphasis on applications. Vectors, norm, and angle; linear independence and orthonormal sets. Matrices, left and right inverses, QR factorization. Least-squares and model fitting, regularization and cross-validation, time-series prediction, and other examples. Constrained least-squares; applications to least-norm reconstruction, optimal control, and portfolio optimization. Newton methods and nonlinear least-squares. Prerequisites: MATH 51 or CME 100. Same as: EE 103

CME 104. Linear Algebra and Partial Differential Equations for Engineers. 5 Units.

Linear algebra: matrix operations, systems of algebraic equations, Gaussian elimination, undetermined and overdetermined systems, coupled systems of ordinary differential equations, eigensystem analysis, normal modes. Fourier series with applications, partial differential equations arising in science and engineering, analytical solutions of partial differential equations. Numerical methods for solution of partial differential equations: iterative techniques, stability and convergence, time advancement, implicit methods, von Neumann stability analysis. Examples and applications from various engineering fields. Prerequisite: CME 102/ENGR 155A. Same as: ENGR 155B

CME 104A. Linear Algebra and Partial Differential Equations for Engineers, ACE. 6 Units.

Students attend CME104/ENGR155B lectures with additional recitation sessions; two to four hours per week, emphasizing engineering mathematical applications and collaboration methods. Prerequisite: application at: http://soe.stanford.edu/current_students/edp/programs/ace.html.

CME 106. Introduction to Probability and Statistics for Engineers. 3-4 Units.

Probability: random variables, independence, and conditional probability; discrete and continuous distributions, moments, distributions of several random variables. Topics in mathematical statistics: random sampling, point estimation, confidence intervals, hypothesis testing, non-parametric tests, regression and correlation analyses; applications in engineering, industrial manufacturing, medicine, biology, and other fields. Prerequisite: CME 100/ENGR154 or MATH 51. Same as: ENGR 155C

CME 108. Introduction to Scientific Computing. 3-4 Units.

Introduction to Scientific Computing Numerical computation for mathematical, computational, physical sciences and engineering: error analysis, floating-point arithmetic, nonlinear equations, numerical solution of systems of algebraic equations, banded matrices, least squares, unconstrained optimization, polynomial interpolation, numerical differentiation and integration, numerical solution of ordinary differential equations, truncation error, numerical stability for time dependent problems and stiffness. Implementation of numerical methods in MATLAB programming assignments. Prerequisites: MATH 51, 52, 53; prior programming experience (MATLAB or other language at level of CS 106A or higher). Graduate students should take it for 3 units and undergraduate students should take it for 4 units. Same as: MATH 114

CME 151. Introduction to Data Visualization. 1 Unit.

Bring your data to life with beautiful and interactive visualizations. This course is designed to provide practical experience on combining data science and graphic design to effectively communicate knowledge buried inside complex data. Each lecture will explore a different set of free industry-standard tools, for example d3.js, three.js, ggplots2, and processing; enabling students to think critically about how to architect their own interactive visualization for data exploration, web, presentations, and publications. Geared towards scientists and engineers, and with a particular emphasis on web, this course assumes an advanced background in programming methodology in multiple languages (particularly R and Javascript). Assignments are short and focus on visual experimentation with interesting data sets or the students' own data. Topics: data, visualization, web. Prerequisites: some experience with general programming is required to understand the lectures and assignments.

CME 181. Projects in Applied and Computational Mathematics. 3 Units.

Teams of students use techniques in applied and computational mathematics to tackle problems of their choosing. Students will have the opportunity to pursue open-ended projects in a variety of areas: economics, physics, political science, operations research, etc. Projects can cover (but are not limited to!) topics such as mathematical modeling of real-world phenomena (population dynamics), data-driven applications (movie recommendations) or complex systems in engineering (optimal control). Each team will be paired with a graduate student mentor working in applied and computational mathematics. Limited enrollment. Prerequisites: CME 100/102/104 or equivalents, or instructor consent. Recommended: CME 106/108 and familiarity with programming at the level of CME 192/193.

CME 184. Startup Engineering. 3 Units.

Spiritual sequel to Peter Thiel's CS 183 course on startups. A new course that bridges the gap between academic computer science and production software engineering. Fast-paced introduction to key tools and techniques (command line, dotfiles, text editor, distributed version control, debugging, testing, documentation, reading code, deployments), featuring guest appearances by senior engineers from successful startups and large-scale academic projects including Uber, Square, Stripe, AirBnB, Twilio, Taskrabbit, Judicata, Counsyl, Asana, Heroku, and Twitter. Over the course of the class, students will build a command line application, expose it as a web service, and then link other students' applications and services together to build an HTML5 mobile app. General principles are illustrated through modern Javascript and the latest web technologies, including Node, Backbone, Coffeescript, Bootstrap, Git, and Github. Prerequisites: Basic computer science as per CS 106B. Recommended: some familiarity with HTML, CSS, and Javascript.

CME 192. Introduction to MATLAB. 1 Unit.

This short course runs for the first eight weeks of the quarter and is offered each quarter during the academic year. It is highly recommended for students with no prior programming experience who are expected to use MATLAB in math, science, or engineering courses. It will consist of interactive lectures and application-based assignments. The goal of the short course is to make students fluent in MATLAB and to provide familiarity with its wide array of features. The course covers an introduction of basic programming concepts, data structures, and control/flow; and an introduction to scientific computing in MATLAB, scripts, functions, visualization, simulation, efficient algorithm implementation, toolboxes, and more.

CME 193. Introduction to Scientific Python. 1 Unit.

This short course runs for the first eight weeks of the quarter and is offered each quarter during the academic year. It is recommended for students who want to use Python in math, science, or engineering courses and for students who want to learn the basics of Python programming. The goal of the short course is to familiarize students with Pythonic tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. Some prior programming experience is highly recommended. Topics covered include control flow, basic data structures, File I/O, and an introduction to NumPy/SciPy.

CME 194. Introduction to MPI. 1 Unit.

This short course runs for the first four weeks of the quarter. Recommended for students interested in writing parallel programs. Focus is on distributed memory programming via the Message Passing Interface (MPI). Topics include: parallel decomposition, basic communication primitives, collective operations, and debugging. Interactive lectures and homework assignments require writing software. Students should be comfortable and interested in writing software in C/C++ but no prior parallel programming experience is required.

CME 195. Introduction to R. 1 Unit.

This short course runs for the first four weeks of the quarter and is offered in fall and spring. It is recommended for students who want to use R in statistics, science, or engineering courses and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, graphs, control structures, etc, and some useful packages in R.

Same as: STATS 195

CME 196. Practical Fortran. 1 Unit.

A five-week short course presenting the use of the Fortran programming language in science and engineering. Topics covered: basic language elements; good programming practices; testing and debugging; verification and validation; differences between Fortran-77 and Fortran-90 (95, 03, 08); calling numerical software libraries such as LAPACK; calling Fortran routines from C or C++; performance considerations. The course will be centered around solving iquest;realquest; computational problems, emphasizing practice over theory. Programming proficiency in C/C++, or other modern compiled language, is required. Familiarity with the GNU development tools (compilers, debuggers, makefiles, etc.) is assumed. Prerequisites: CME 211 or equivalent.

CME 200. Linear Algebra with Application to Engineering Computations. 3 Units.

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51.

Same as: ME 300A

CME 204. Partial Differential Equations in Engineering. 3 Units.

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor.

Same as: ME 300B

CME 206. Introduction to Numerical Methods for Engineering. 3 Units.

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B.
Same as: AA 214A, ME 300C

CME 211. Introduction to Programming for Scientists and Engineers. 3 Units.

Basic usage of the Python and C/C++ programming languages are introduced and used to solve representative computational problems from various science and engineering disciplines. Software design principles including time and space complexity analysis, data structures, object-oriented design, decomposition, encapsulation, and modularity are emphasized. Usage of campus wide Linux compute resources: login, file system navigation, editing files, compiling and linking, file transfer, etc. Versioning and revision control, software build utilities, and the LaTeX typesetting software are introduced and used to help complete individual programming assignments and a final project. Prerequisite: Some previous experience with programming (does not need to be a formal course in programming).
Same as: EARTHSCI 211

CME 212. Advanced Programming for Scientists and Engineers. 3 Units.

Advanced topics in software programming, debugging, and performance optimization are covered. The capabilities and usage of common libraries and frameworks such as BLAS, LAPACK, FFT, PETSc, and MKL/ACML are reviewed. Computer representation of integer and floating point numbers, and interoperability between C/C++ and Fortran is described. More advanced software engineering topics including: representing data in files, application checkpoint/restart, signals, unit and regression testing, and build automation. The use of debugging tools including static analysis, gdb, and Valgrind are introduced. An introduction to computer architecture covering processors, memory hierarchy, storage, and networking provides a foundation for understanding software performance. Profiles generated using gprof and perf are used to help guide the performance optimization process. Computational problems from various science and engineering disciplines will be used in individual and group assignments. Prerequisites: CME 200/ME 300A and CME 211 or equivalent level of programming proficiency in Python and C/C++.
Same as: ENERGY 212

CME 213. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).
Same as: ME 339

CME 213B. Parallel Computing Projects. 3 Units.

Students will discuss, devise and implement parallel applications for a discipline of mutual interest. The parallel implementation will focus on the use of MPI for clusters, OpenMP for multicore processors, and/or CUDA for GPU processors. Instructors will help guide students to relevant literature and resources. A short introduction to MPI, OpenMP, and CUDA will be given at the beginning of the quarter. Hardware will be available for the duration of the quarter including NVIDIA Jetson TK1 development kits, and the ICME GPU cluster. Prerequisites: CME 211/212 or equivalent.

CME 214. Software Design in Modern Fortran for Scientists and Engineers. 3 Units.

This course introduces software design and development in modern Fortran. Course covers the functional, object-oriented-, and parallel programming features introduced in the Fortran 95, 2003, and 2008 standards, respectively, in the context of numerical approximations to ordinary and partial differential equations; introduces object-oriented design and design schematics based on the Unified Modeling Language (UML) structure, behavior, and interaction diagrams; cover the basic use of several open-source tools for software building, testing, documentation generation, and revision control. Recommended: Familiarity with programming in Fortran 90, basic numerical analysis and linear algebra, or instructor approval.
Same as: EARTHSCI 214

CME 215A. Advanced Computational Fluid Dynamics. 3 Units.

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
Same as: AA 215A

CME 215B. Advanced Computational Fluid Dynamics. 3 Units.

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent.
Same as: AA 215B

CME 232. Introduction to Computational Mechanics. 3 Units.

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches; providing an important connection between mechanics and computational methods.
Same as: ME 332

CME 239B. Workshop in Quantitative Finance. 1 Unit.

Topics of current interest. May be repeated for credit.
Same as: STATS 239B

CME 242. Mathematical and Computational Finance Seminar. 1 Unit.

Same as: STATS 239

CME 243. Financial Models and Statistical Methods in Active Risk Management. 2-4 Units.

(SCPD students register for 243P.) Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent.

Same as: STATS 243

CME 244. Project Course in Mathematical and Computational Finance. 1-6 Unit.

For graduate students in the MCF track; students will work individually or in groups on research projects.

CME 245. Topics in Mathematical and Computational Finance. 1 Unit.

Current topics for enrolled students in the MCF program; can be repeated up to three times.

CME 250. Introduction to Machine Learning. 1 Unit.

A short course presenting the principles behind when, why, and how to apply modern machine learning algorithms. We will discuss a framework for reasoning about when to apply various machine learning techniques, emphasizing questions of over-fitting/under-fitting, regularization, interpretability, supervised/unsupervised methods, and handling of missing data. The principles behind various algorithms--the why and how of using them--will be discussed, while some mathematical detail underlying the algorithms--including proofs--will not be discussed. Unsupervised machine learning algorithms presented will include k-means clustering, principal component analysis (PCA), and independent component analysis (ICA). Supervised machine learning algorithms presented will include support vector machines (SVM), classification and regression trees (CART), boosting, bagging, and random forests. Imputation, the lasso, and cross-validation concepts will also be covered. The R programming language will be used for examples, though students need not have prior exposure to R. Prerequisite: undergraduate-level linear algebra and statistics; basic programming experience (R/Matlab/Python).

CME 263. Introduction to Linear Dynamical Systems. 3 Units.

Applied linear algebra and linear dynamical systems with application to circuits, signal processing, communications, and control systems. Topics: least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm, and singular value decomposition. Eigenvalues, left and right eigenvectors, with dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input/multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, and state transfer; observability and least-squares state estimation. Prerequisites: linear algebra and matrices as in MATH 103; differential equations and Laplace transforms as in EE 102A.

Same as: EE 263

CME 291. Master's Research. 1-6 Unit.

Students require faculty sponsor. (Staff).

CME 292. Advanced MATLAB for Scientific Computing. 1 Unit.

Short course running first four weeks of the quarter (8 lectures) with interactive lectures and application based assignment. Students will be introduced to advanced MATLAB features, syntaxes, and toolboxes not traditionally found in introductory courses. Material will be reinforced with in-class examples, demos, and homework assignment involving topics from scientific computing. MATLAB topics will be drawn from: advanced graphics (2D/3D plotting, graphics handles, publication quality graphics, animation), MATLAB tools (debugger, profiler), code optimization (vectorization, memory management), object-oriented programming, compiled MATLAB (MEX files and MATLAB coder), interfacing with external programs, toolboxes (optimization, parallel computing, symbolic math, PDEs). Scientific computing topics will include: numerical linear algebra, numerical optimization, ODEs, and PDEs.

CME 300. First Year Seminar Series. 1 Unit.

Required for first-year ICME Ph.D. students; recommended for first-year ICME M.S. students. Presentations about research at Stanford by faculty and researchers from Engineering, H&S, and organizations external to Stanford. May be repeated for credit.

CME 302. Numerical Linear Algebra. 3 Units.

First in a three quarter graduate sequence. Solution of systems of linear equations: direct methods, error analysis, structured matrices; iterative methods and least squares. Parallel techniques. Prerequisites: CME 108, MATH 103 or 113.

CME 303. Partial Differential Equations of Applied Mathematics. 3 Units.

First-order partial differential equations; method of characteristics; weak solutions; elliptic, parabolic, and hyperbolic equations; Fourier transform; Fourier series; and eigenvalue problems. Prerequisite: foundation in multivariable calculus and ordinary differential equations.

Same as: MATH 220

CME 304. Numerical Optimization. 3 Units.

Solution of nonlinear equations; unconstrained optimization; linear programming; quadratic programming; global optimization; general linearly and nonlinearly constrained optimization. Theory and algorithms to solve these problems. Prerequisite: background in analysis and numerical linear algebra.

Same as: MSE 315

CME 305. Discrete Mathematics and Algorithms. 3 Units.

Topics: Basic Algebraic Graph Theory, Matroids and Minimum Spanning Trees, Submodularity and Maximum Flow, NP-Hardness, Approximation Algorithms, Randomized Algorithms, The Probabilistic Method, and Spectral Sparsification using Effective Resistances. Topics will be illustrated with applications from Distributed Computing, Machine Learning, and large-scale Optimization. Prerequisites: CS 261 is highly recommended, although not required.

Same as: MSE 316

CME 306. Numerical Solution of Partial Differential Equations. 3 Units.

Hyperbolic partial differential equations: stability, convergence and qualitative properties; nonlinear hyperbolic equations and systems; combined solution methods from elliptic, parabolic, and hyperbolic problems. Examples include: Burger's equation, Euler equations for compressible flow, Navier-Stokes equations for incompressible flow. Prerequisites: MATH 220A or CME 302.

Same as: MATH 226

CME 308. Stochastic Methods in Engineering. 3 Units.

Review of basic probability; Monte Carlo simulation; state space models and time series; parameter estimation, prediction, and filtering; Markov chains and processes; stochastic control; and stochastic differential equations. Examples from various engineering disciplines. Prerequisites: exposure to probability; background in real variables and analysis.

Same as: MATH 228

CME 309. Randomized Algorithms and Probabilistic Analysis. 3 Units. Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms. Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent.
Same as: CS 265

CME 321A. Mathematical Methods of Imaging. 3 Units. Image denoising and deblurring with optimization and partial differential equations methods. Imaging functionals based on total variation and l-1 minimization. Fast algorithms and their implementation.
Same as: MATH 221A

CME 321B. Mathematical Methods of Imaging. 3 Units. Array imaging using Kirchhoff migration and beamforming, resolution theory for broad and narrow band array imaging in homogeneous media, topics in high-frequency, variable background imaging with velocity estimation, interferometric imaging methods, the role of noise and inhomogeneities, and variational problems that arise in optimizing the performance of array imaging algorithms.
Same as: MATH 221B

CME 322. Spectral Methods in Computational Physics. 3 Units. Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability.
Same as: ME 408

CME 323. Distributed Algorithms and Optimization. 3 Units. The emergence of large distributed clusters of commodity machines has brought with it a slew of new algorithms and tools. Many fields such as Machine Learning and Optimization have adapted their algorithms to handle such clusters. Topics include distributed algorithms for: Optimization, Numerical Linear Algebra, Machine Learning, Graph analysis, Streaming and online algorithms, and other problems that are challenging to scale on a commodity cluster. Throughout the class, topics will be illustrated with hands-on exercises using the high-speed cluster programming framework, Spark, with computing resources provided by the instructor.

CME 325. Numerical Approximations of Partial Differential Equations in Theory and Practice. 1-2 Unit. Finite volume and finite difference methods for initial boundary value problems in multiple space dimensions. Emphasis is on formulation of boundary conditions for the continuous and the discrete problems. Analysis of numerical methods with respect to stability, accuracy, and error behavior. Techniques of treating non-rectangular domains, and effects of non-regular grids.

CME 326. Numerical Methods for Initial Boundary Value Problems. 3 Units.

Initial boundary value problems model many phenomena in engineering and science such as, fluid flow problems, wave propagation, fluid-structure interaction, conjugate heat transfer and financial mathematics. We discuss numerical techniques for such simulations and focus on the underlying principles and theoretical understanding. Emphasis is on stability, convergence and efficiency for methods applied to hyperbolic and parabolic initial boundary value problems.

CME 327. Numerical Methods for Stiff Problems. 3 Units. Focus is on analysis of numerical techniques for stiff ordinary differential equations, including those resulting from spatial discretization of partial differential equations. Topics include stiffness, convergence, stability, adaptive time stepping, implicit time-stepping methods (SDIRK, Rosenbrock), linear and nonlinear system solvers (Fixed Point, Newton, Multigrid, Krylov subspace methods) and preconditioning. Pre-requisites: CME200/ME300A or equivalent; or consent of instructor.

CME 328. Advanced Topics in Partial Differential Equations. 3 Units. Contents change each time and is taught as a topics course, most likely by a faculty member visiting from another institution. May be repeated for credit. Topic in 2012-13: numerical solution of time-dependent partial differential equations is a fundamental tool for modeling and prediction in many areas of science and engineering. In this course we explore the stability, accuracy, efficiency, and appropriateness of specialized temporal integration strategies for different classes of partial differential equations including stiff problems and fully implicit methods, operator splitting and semi-implicit methods, extrapolation methods, multirate time integration, multi-physics problems, symplectic integration, and temporal parallelism. Prerequisites: recommended CME303 and 306 or with instructor's consent.

CME 329. Top Ten Algorithms of the 20th Century. 3 Units. A high-level survey course covering one algorithm per week: metropolis, simplex method, conjugate gradient, QR, quicksort, fast fourier transform, maxcut, fast multipole method, integer relation detection, and convex/semi-definite programming.
Same as: MATH 310

CME 330. Applied Mathematics in the Chemical and Biological Sciences. 3 Units. Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.
Same as: CHEMENG 300

CME 334. Advanced Methods in Numerical Optimization. 3 Units. Topics include interior-point methods, relaxation methods for nonlinear discrete optimization, sequential quadratic programming methods, optimal control and decomposition methods. Topic chosen in first class; different topics for individuals or groups possible. Individual or team projects. May be repeated for credit.
Same as: MSE 312

CME 335. Advanced Topics in Numerical Linear Algebra. 3 Units. Possible topics: Approximate invariant subspaces and Krylov decompositions, modern interpretations of the Hessenberg QR algorithm, accurate symmetric factorizations (e.g., Bunch-Kaufman), low-rank modifications of factorizations, sparse-direct factorizations, and, if time permits, a small selection of topics chosen by the students. Prerequisite - CME 302: Numerical Linear Algebra.

CME 336. Linear and Conic Optimization with Applications. 3 Units.

Linear, semidefinite, conic, and convex nonlinear optimization problems as generalizations of classical linear programming. Algorithms include the interior-point, barrier function, and cutting plane methods. Related convex analysis, including the separating hyperplane theorem, Farkas lemma, dual cones, optimality conditions, and conic inequalities. Complexity and/or computation efficiency analysis. Applications to combinatorial optimization, sensor network localization, support vector machine, and graph realization. Prerequisite: MS&E 211 or equivalent.

Same as: MSE 314

CME 337. Spectral Graph Theory and Algorithmic Applications. 3 Units.

Brings students to the forefront of a very active area of research. Reviews classic results relating graph expansion and spectra, random walks, random spanning trees, and their electrical network representation. Covers recent progress on graph sparsification, Kadison-Singer problem and approximation algorithms for traveling salesman problems.

Same as: MSE 337

CME 338. Large-Scale Numerical Optimization. 3 Units.

The main algorithms and software for constrained optimization emphasizing the sparse-matrix methods needed for their implementation. Iterative methods for linear equations and least squares. The simplex method. Basis factorization and updates. Interior methods. The reduced-gradient method, augmented Lagrangian methods, and SQP methods. Prerequisites: Basic numerical linear algebra, including LU, QR, and SVD factorizations, and an interest in MATLAB, sparse-matrix methods, and gradient-based algorithms for constrained optimization. Recommended: MS&E 310, 311, 312, 314, or 315; CME 108, 200, 302, 304, 334, or 335. Same as: MSE 318

CME 342. Parallel Methods in Numerical Analysis. 3 Units.

Emphasis is on techniques for obtaining maximum parallelism in numerical algorithms, especially those occurring when solving matrix problems, partial differential equations, and the subsequent mapping onto the computer. Implementation issues on parallel computers. Topics: parallel architecture, programming models (MPI, GPU Computing with CUDA iquest; quick review), matrix computations, FFT, fast multiple methods, domain decomposition, graph partitioning, discrete algorithms. Prerequisites: 302 or 200 (ME 300A), 213 or equivalent, or consent of instructor. Recommended: differential equations and knowledge of a high-level programming language such as C or C++ (F90/95 also allowable).

CME 345. Model Reduction. 3 Units.

Model reduction is an indispensable tool for computational-based design and optimization, statistical analysis, embedded computing, and real-time optimal control. This course presents the basic mathematical theory for projection-based model reduction. Topics include: notions of linear dynamical systems and projection; projection-based model reduction; error analysis; proper orthogonal decomposition; Hankel operator and balancing of a linear dynamical system; balanced truncation method: modal truncation and other reduction methods for linear oscillators; model reduction via moment matching methods based on Krylov subspaces; introduction to model reduction of parametric systems and notions of nonlinear model reduction. Course material is complemented by a balanced set of theoretical, algorithmic and Matlab computer programming assignments. Prerequisites: CME 200 or equivalent, CME 263 or equivalent and basic numerical methods for ODEs.

CME 356. Engineering Functional Analysis and Finite Elements. 3 Units.

Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171. Same as: ME 412

CME 358. Finite Element Method for Fluid Mechanics. 3 Units.

Mathematical theory of the finite element method for incompressible flows; related computational algorithms and implementation details. Poisson equation; finite element method for simple elliptic problems; notions of mathematical analysis of non-coercive partial differential equations; the inf-sup or Babushka-Brezzi condition and its applications to the Stokes and Darcy problems; presentation of stable mixed finite element methods and corresponding algebraic solvers; stabilization approaches in the context of advection-diffusion equation; numerical solution of the incompressible Navier-Stokes equations by finite element method. Theoretical, computational, and MATLAB computer programming assignments. Prerequisites: foundation in multivariate calculus and ME 335A or equivalent.

CME 362. An Introduction to Compressed Sensing. 3 Units.

Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize).

Same as: STATS 330

CME 364A. Convex Optimization I. 3 Units.

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability.

Same as: CS 334A, EE 364A

CME 364B. Convex Optimization II. 3 Units.

Continuation of 364A. Subgradient, cutting-plane, and ellipsoid methods. Decentralized convex optimization via primal and dual decomposition. Monotone operators and proximal methods; alternating direction method of multipliers. Exploiting problem structure in implementation. Convex relaxations of hard problems. Global optimization via branch and bound. Robust and stochastic optimization. Applications in areas such as control, circuit design, signal processing, and communications. Course requirements include project. Prerequisite: 364A.

Same as: EE 364B

CME 371. Computational Biology in Four Dimensions. 3 Units.

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).

Same as: CS 371

CME 372. Applied Fourier Analysis and Elements of Modern Signal Processing. 3 Units.

Introduction to the mathematics of the Fourier transform and how it arises in a number of imaging problems. Mathematical topics include the Fourier transform, the Plancherel theorem, Fourier series, the Shannon sampling theorem, the discrete Fourier transform, and the spectral representation of stationary stochastic processes. Computational topics include fast Fourier transforms (FFT) and nonuniform FFTs. Applications include Fourier imaging (the theory of diffraction, computed tomography, and magnetic resonance imaging) and the theory of compressive sensing.

Same as: MATH 262

CME 375. Advanced Topics in Convex Optimization. 3 Units.

Modern developments in convex optimization: semidefinite programming; novel and efficient first-order algorithms for smooth and nonsmooth convex optimization. Emphasis on numerical methods suitable for large scale problems arising in science and engineering. Prerequisites: convex optimization (EE 364), linear algebra (Math 104), numerical linear algebra (CME 302); background in probability, statistics, real analysis and numerical optimization.

Same as: MATH 301

CME 390. Curricular Practical Training. 1 Unit.

May be repeated three times for credit.

CME 399. Special Research Topics in Computational and Mathematical Engineering. 1-15 Unit.

Graduate-level research work not related to report, thesis, or dissertation. May be repeated for credit.

CME 400. Ph.D. Research. 1-15 Unit.

.

CME 444. Computational Consulting. 1-3 Unit.

Advice by graduate students under supervision of ICME faculty. Weekly briefings with faculty adviser and associated faculty to discuss ongoing consultancy projects and evaluate solutions. May be repeated for credit.

CME 500. Departmental Seminar. 1 Unit.

Weekly research lectures by experts from academia, national laboratories, industry, and doctoral students. May be repeated for credit. In autumn and winter 2014-15, this seminar will predominantly feature current graduate students talking about their research.

CME 510. Linear Algebra and Optimization Seminar. 1 Unit.

Recent developments in numerical linear algebra and numerical optimization. Guest speakers from other institutions and local industry. Goal is to bring together scientists from different theoretical and application fields to solve complex scientific computing problems. May be repeated for credit.

CME 520. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences. Same as: SURG 253

CME 801. TGR Project. 0 Units.

.

CME 802. TGR Dissertation. 0 Units.

.

Computer Science Courses

CS 1C. Introduction to Computing at Stanford. 1 Unit.

For those with limited experience with computers or who want to learn more about Stanford's computing environment. Topics include: computer maintenance and security, computing resources, Internet privacy, and copyright law. One-hour lecture/demonstration in dormitory clusters prepared and administered weekly by the Resident Computer Consultant (RCC). Final project. Not a programming course.

CS 1U. Practical Unix. 1 Unit.

A practical introduction to using the Unix operating system with a focus on Linux command line skills. Class will consist of video tutorials and weekly hands-on lab sections. The time listed on AXESS is for the first week's logistical meeting only. Topics include: grep and regular expressions, ZSH, Vim and Emacs, basic and advanced GDB features, permissions, working with the file system, revision control, Unix utilities, environment customization, and using Python for shell scripts. Topics may be added, given sufficient interest. Course website: <http://cs1u.stanford.edu>.

CS 2C. Introduction to Media Production. 1-2 Unit.

Sound, image and video editing techniques and applications, including understanding file formats and publishing multimedia online. Topics include GarageBand, Photoshop, iMovie, and production best practices. Weekly lecture followed by lab section. Second unit for additional creative production assignments completed outside of class time and Final Project with group. Not a programming course, but will use computer multimedia applications heavily for editing.

CS 9. Problem-Solving for the CS Technical Interview. 1 Unit.

This course will prepare students to interview for software engineering and related internships and full-time positions in industry. Drawing on multiple sources of actual interview questions, students will learn key problem-solving strategies specific to the technical/coding interview. Students will be encouraged to synthesize information they have learned across different courses in the major. Emphasis will be on the oral and combination written-oral modes of communication common in coding interviews, but which are unfamiliar settings for problem solving for many students. Prerequisites: CS 106B or X.

CS 10SC. Great Ideas in Computer Science. 2 Units.

Computers have come to permeate many aspects of our lives, from how we communicate with each other to how we produce and consume information. And while it is all too easy to think of computing in terms of the products and applications we see emerging from technology companies, the intellectual foundations of computer science go much deeper. Indeed, beneath the surface of the tools we use, the social networks we engage in, and the web of information we search, lays a field rich with fascinating, intellectually exciting, and sometimes unexpectedly surprising ideas. In this seminar, we will explore several of the great ideas in computer science, looking at both challenging problems and their impact on real applications. From understanding how search engines on the Web work to looking at mathematical theories underlying social networks, from questioning whether a computer can be intelligent to analyzing the notion of what is even possible to compute, this seminar will take us on a series of intellectual excursions that will change the way you look at computers. No prior experience with computer science or programming is required, but a high school mathematics background, an interest in problem-solving, and a healthy curiosity will go a long way toward ensuring an enjoyable and enlightening experience. Students will work in small groups to research topics in computer science they find most intriguing. The course will also take advantage of Stanford's location in the heart of Silicon Valley by conducting field trips to a local company and the Computer History Museum. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

CS 12SC. Computational Decision Making. 2 Units.

Although we make decisions every day, many people base their decisions on initial reactions or gut feelings. There are, however, powerful frameworks for making decisions more effectively based on computationally analyzing the choices available and their possible outcomes. In this course we give an introduction to some of these frameworks, including utility theory, decision analysis, game theory, and Markov decision processes. We also discuss why people sometimes make seemingly reasonable, yet irrational, decisions. We begin the class by presenting some of the basics of probability theory, which serves as the main mathematical foundation for the decision making frameworks we will subsequently present. Although we provide a mathematical/computational basis for the decision making frameworks we examine, we also seek to give intuitive (and sometime counterintuitive) explanations for actual decision making behavior through in-class demonstrations. No prior experience with probability theory is needed (we'll cover what you need to know in class), but students should be comfortable with mathematical manipulation at the level of Math 41. Sophomore College Course: Application required, due noon, April 7, 2015. Apply at <http://soco.stanford.edu>.

CS 27. Literature and Social Online Learning. 3-5 Units.

Study, develop, and test new digital methods, games, apps, interactive social media uses to innovate how the humanities can engage and educate students and the public today. Exploring well-known literary texts, digital storytelling forms and literary communities online, students work individually and in interdisciplinary teams to develop innovative projects aimed at bringing literature to life. Tasks include literary role-plays on Twitter; researching existing digital pedagogy and literary projects, games, and apps; reading and coding challenges; collaborative social events mediated by new technology. Minimal prerequisites which vary for students in CS and the humanities; please check with instructors. Same as: COMPLIT 239B, ENGLISH 239B

CS 42. Callback Me Maybe: Contemporary Javascript. 2 Units.

Introduction to the JavaScript programming language with a focus on building contemporary applications. Course consists of in-class activities and programming assignments that challenge students to create functional web apps (e.g. Yelp, Piazza, Instagram). Topics include syntax/semantics, event-based programming, document object model (DOM), application programming interfaces (APIs), asynchronous JavaScript and XML (AJAX), jQuery, Node.js, and MongoDB. Prerequisite: CS 107.

CS 45N. Computers and Photography: From Capture to Sharing. 3-4 Units.

Preference to freshmen with experience in photography and use of computers. Elements of photography, such as lighting, focus, depth of field, aperture, and composition. How a photographer makes photos available for computer viewing, reliably stores them, organizes them, tags them, searches them, and distributes them online. No programming experience required. Digital SLRs and editing software will be provided to those students who do not wish to use their own.

CS 54N. Great Ideas in Computer Science. 3 Units.

Stanford Introductory Seminar. Preference to freshmen. Covers the intellectual tradition of computer science emphasizing ideas that reflect the most important milestones in the history of the discipline. No prior experience with programming is assumed. Topics include programming and problem solving; implementing computation in hardware; algorithmic efficiency; the theoretical limits of computation; cryptography and security; and the philosophy behind artificial intelligence.

CS 55N. Computer and Information Security. 3 Units.

Preference to freshmen. Why computer systems are vulnerable to attack. Common software bugs, how to exploit technology for blocking common attacks, cryptography, and legal issues.

CS 74N. Digital Dilemmas. 3 Units.

Preference to freshmen. Issues where policy decision making requires understanding computer and communications technology. Technology basics taught in non-technology terms. Topics include consumer privacy, government surveillance, file sharing and intellectual property, and electronic voting.

CS 75N. Cell Phones, Sensors, and You. 3 Units.

Focuses on the role of cell phones as the first prevalent wearable sensors that gather information about you that can be both useful and potentially harmful. Topics include the state of technology, sociological and privacy implications, potential governmental regulation, etc. Addresses omniscient "big brother" technology including radar guns and the recording devices that led to the Watergate scandal. Students will gather and compile information on topics and come to class ready to discuss and debate with formulated opinions.

CS 76N. Elections and Technology. 3 Units.

Freshmen Seminar. Since the disastrous Presidential election in Florida in 2000, problems with and worries about technology in elections have gained increasing attention. Are electronic voting machines secure? Are paper ballots secure? Why can't we just vote over our cell phones or the internet? Should voters have to show identification? How do legislators decide these things? How can technologists be heard? We'll look into these questions as we watch others struggle with them in the 2012 Presidential election.

CS 81N. Hackers and Heroes. 3 Units.

This course is about dreamers, role models, and the spirit of adventure. Hackers are said to be the soul of computing: playful programmers who think progress is best made by trial and error, guided by the "hacker ethic." Another view has hackers as nettlesome troublemakers -- "computer bums" at best, or maybe just plain criminals. In this class, you'll decide, by interviewing real hackers about their exploits and learning how to do your own hacks. We'll study major moments in the fifty-year history of hacking and read from texts including Steven Levy's "Hackers," John Markoff's "What the Dormouse Said," Andy Hertzfeld's "Revolution in The Valley," and Peter Seibel's "Coders at Work."

CS 91SI. Digital Canvas: Intro to Visual Design on the Web. 2 Units.

Introduction to visual design concepts with a focus on modern interfaces like web, mobile and app. Topics include visual design elements and principles such as color theory, layout and composition, typography, and aspects of communication. Students will analyze existing designs, and use various technical tools to implement their own designs. This course consists of a series of in-class activities, design projects, peer critique sessions, and guest speakers. Recommended prerequisites: some web programming experience. Application required.

CS 99SI. Callback Me Maybe: Contemporary JavaScript. 2 Units.

Introduction to the JavaScript programming language with a focus on building contemporary applications. Course consists of in-class activities and programming assignments that challenge students to create functional web apps (e.g. Yelp, Piazza, Instagram). Topics include syntax/semantics, event-based programming, document object model (DOM), application programming interfaces (APIs), asynchronous JavaScript and XML (AJAX), jQuery, Node.js, and Redis. Prerequisite: CS 107.

CS 101. Introduction to Computing Principles. 3-5 Units.

Introduces the essential ideas of computing: data representation, algorithms, programming "code", computer hardware, networking, security, and social issues. Students learn how computers work and what they can do through hands-on exercises. In particular, students will see the capabilities and weaknesses of computer systems so they are not mysterious or intimidating. Course features many small programming exercises, although no prior programming experience is assumed or required. CS101 is not a complete programming course such as CS106A. CS101 is effectively an alternative to CS105. A laptop computer is recommended for the in-class exercises.

CS 103. Mathematical Foundations of Computing. 3-5 Units.

Mathematical foundations required for computer science, including propositional predicate logic, induction, sets, functions, and relations. Formal language theory, including regular expressions, grammars, finite automata, Turing machines, and NP-completeness. Mathematical rigor, proof techniques, and applications. Prerequisite: 106A or equivalent.

CS 103A. Mathematical Problem-solving Strategies. 1 Unit.

Problem solving strategies and techniques in discrete mathematics and computer science. Additional problem solving practice for CS103. In-class participation required. Prerequisite: consent of instructor. Co-requisite: CS103.

CS 105. Introduction to Computers. 3-5 Units.

For non-technical majors. What computers are and how they work. Practical experience in programming. Construction of computer programs and basic design techniques. A survey of Internet technology and the basics of computer hardware. Students in technical fields and students looking to acquire programming skills should take 106A or 106X. Students with prior computer science experience at the level of 106 or above require consent of instructor. Prerequisite: minimal math skills.

CS 106A. Programming Methodology. 3-5 Units.

Introduction to the engineering of computer applications emphasizing modern software engineering principles: object-oriented design, decomposition, encapsulation, abstraction, and testing. Uses the Java programming language. Emphasis is on good programming style and the built-in facilities of the Java language. No prior programming experience required. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: ENGR 70A

CS 106B. Programming Abstractions. 3-5 Units.

Abstraction and its relation to programming. Software engineering principles of data abstraction and modularity. Object-oriented programming, fundamental data structures (such as stacks, queues, sets) and data-directed design. Recursion and recursive data structures (linked lists, trees, graphs). Introduction to time and space complexity analysis. Uses the programming language C++ covering its basic facilities. Prerequisite: 106A or equivalent. Summer quarter enrollment is limited. Priority given to Stanford students.

Same as: ENGR 70B

CS 106L. Standard C++ Programming Laboratory. 1 Unit.

Supplemental lab to 106B and 106X. Additional features of standard C++ programming practice. Possible topics include advanced C++ language features, standard libraries, STL containers and algorithms, object memory management, operator overloading, and inheritance. Prerequisite: consent of instructor. Corequisite: 106B or 106X.

CS 106X. Programming Abstractions (Accelerated). 3-5 Units.

Intensive version of 106B for students with a strong programming background interested in a rigorous treatment of the topics at an accelerated pace. Additional advanced material and more challenging projects. Prerequisite: excellence in 106A or equivalent, or consent of instructor. Same as: ENGR 70X

CS 107. Computer Organization and Systems. 3-5 Units.

Introduction to the fundamental concepts of computer systems. Explores how computer systems execute programs and manipulate data, working from the C programming language down to the microprocessor. Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, elements of code compilation, memory organization and management, and performance evaluation and optimization. Prerequisites: 106B or X, or consent of instructor.

CS 107E. Computer Systems from the Ground Up. 3-5 Units.

Introduction to the fundamental concepts of computer systems through bare metal programming on the Raspberry Pi. Explores how five concepts come together in computer systems: hardware, architecture, assembly code, the C language, and software development tools. Students do all programming with a Raspberry Pi kit and several add-ons (LEDs, buttons). Topics covered include: the C programming language, data representation, machine-level code, computer arithmetic, compilation, memory organization and management, debugging, hardware, and I/O. Prerequisite: 106B or X, and consent of instructor.

CS 108. Object-Oriented Systems Design. 3-4 Units.

Software design and construction in the context of large OOP libraries. Taught in Java. Topics: OOP design, design patterns, testing, graphical user interface (GUI) OOP libraries, software engineering strategies, approaches to programming in teams. Prerequisite: 107.

CS 109. Introduction to Probability for Computer Scientists. 3-5 Units.

Topics include: counting and combinatorics, random variables, conditional probability, independence, distributions, expectation, point estimation, and limit theorems. Applications of probability in computer science including machine learning and the use of probability in the analysis of algorithms. Prerequisites: 103, 106B or X, multivariate calculus at the level of MATH 51 or CME 100 or equivalent.

CS 109L. Statistical Computing with R Laboratory. 1 Unit.

Supplemental lab to CS109. Introduces the R programming language for statistical computing. Topics include basic facilities of R including mathematical, graphical, and probability functions, building simulations, introductory data fitting and machine learning. Provides exposure to the functional programming paradigm. Corequisite: CS109.

CS 110. Principles of Computer Systems. 3-5 Units.

Principles and practice of engineering of computer software and hardware systems. Topics include: techniques for controlling complexity; strong modularity using client-server design, virtual memory, and threads; networks; atomicity and coordination of parallel activities; security, and encryption; and performance optimizations. Prerequisite: 107.

CS 122. Artificial Intelligence: Philosophy, Ethics, & Impact. 3-4 Units.

Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems respect our ethical principles when they make decisions at speeds and for rationales that exceed our ability to comprehend? What, if any, legal rights and responsibilities should we grant them? And should we regard them merely as sophisticated tools or as a newly emerging form of life? The goal of this course is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines. Same as: SYMSYS 122

CS 124. From Languages to Information. 3-4 Units.

Extracting meaning, information, and structure from human language text, speech, web pages, genome sequences, social networks, or any less structured information. Methods include: string algorithms, edit distance, language modeling, naive Bayes, inverted indices, vector semantics. Applications such as question answering, sentiment analysis, information retrieval, text classification, social network models, machine translation, genomic sequence alignment, spell checking, speech processing. Prerequisite: CS103, CS107, CS109.

Same as: LINGUIST 180, LINGUIST 280

CS 131. Computer Vision: Foundations and Applications. 3-4 Units.

Robots that can navigate space and perform duties, search engines that can index billions of images and videos, algorithms that can diagnose medical images for diseases, or smart cars that can see and drive safely: Lying in the heart of these modern AI applications are computer vision technologies that can perceive, understand and reconstruct the complex visual world. This course is designed for students who are interested in learning about the fundamental principles and important applications of computer vision. Course will introduce a number of fundamental concepts in computer vision and expose students to a number of real-world applications, plus guide students through a series of well designed projects such that they will get to implement cutting-edge computer vision algorithms. Prerequisites: Students should be familiar with Matlab (i.e. have programmed in Matlab before) and Linux; plus Calculus & Linear Algebra.

CS 140. Operating Systems and Systems Programming. 3-4 Units.

Operating systems design and implementation. Basic structure; synchronization and communication mechanisms; implementation of processes, process management, scheduling, and protection; memory organization and management, including virtual memory; I/O device management, secondary storage, and file systems. Prerequisite: CS 110.

CS 142. Web Applications. 3 Units.

Concepts and techniques used in constructing interactive web applications. Browser-side web facilities such as HTML, cascading stylesheets, javascript, and the document object model. Server-side technologies such as sessions, templates, relational databases, and object-relational mapping. Issues in web security and application scalability. New models of web application deployment. Prerequisites: CS 107 and CS 108.

CS 143. Compilers. 3-4 Units.

Principles and practices for design and implementation of compilers and interpreters. Topics: lexical analysis; parsing theory; symbol tables; type systems; scope; semantic analysis; intermediate representations; runtime environments; code generation; and basic program analysis and optimization. Students construct a compiler for a simple object-oriented language during course programming projects. Prerequisites: 103 or 103B, and 107.

CS 144. Introduction to Computer Networking. 3-4 Units.

Principles and practice. Structure and components of computer networks, packet switching, layered architectures. Applications: web/http, voice-over-IP, p2p file sharing and socket programming. Reliable transport: TCP/IP, reliable transfer, flow control, and congestion control. The network layer: names and addresses, routing. Local area networks: ethernet and switches. Wireless networks and network security. Prerequisite: CS 110.

CS 145. Introduction to Databases. 3-4 Units.

The course covers database design and the use of database management systems for applications. It includes extensive coverage of the relational model, relational algebra, and SQL. It also covers XML data including DTDs and XML Schema for validation, and the query and transformation languages XPath, XQuery, and XSLT. The course includes database design in UML, and relational design principles based on dependencies and normal forms. Many additional key database topics from the design and application-building perspective are also covered: indexes, views, transactions, authorization, integrity constraints, triggers, on-line analytical processing (OLAP), JSON, and emerging NoSQL systems. Class time will include guest speakers from industry and additional advanced topics as time and class interest permits. Prerequisites: 103 and 107 (or equivalent).

CS 147. Introduction to Human-Computer Interaction Design. 3-4 Units.

Introduces fundamental methods and principles for designing, implementing, and evaluating user interfaces. Topics: user-centered design, rapid prototyping, experimentation, direct manipulation, cognitive principles, visual design, social software, software tools. Learn by doing: work with a team on a quarter-long design project, supported by lectures, readings, and studios. Prerequisite: 106B or X or equivalent programming experience.

CS 148. Introduction to Computer Graphics and Imaging. 3-4 Units.

Introductory prerequisite course in the computer graphics sequence introducing students to the technical concepts behind creating synthetic computer generated images. Focuses on using OpenGL to create visual imagery, as well as an understanding of the underlying mathematical concepts including triangles, normals, interpolation, texture mapping, bump mapping, etc. Course will cover fundamental understanding of light and color, as well as how it impacts computer displays and printers. Class will discuss more thoroughly how light interacts with the environment, constructing engineering models such as the BRDF, plus various simplifications into more basic lighting and shading models. Also covers ray tracing technology for creating virtual images, while drawing parallels between ray tracers and real world cameras to illustrate various concepts. Anti-aliasing and acceleration structures are also discussed. The final class mini-project consists of building out a ray tracer to create visually compelling images. Starter codes and code bits will be provided to aid in development, but this class focuses on what you can do with the code as opposed to what the code itself looks like. Therefore grading is weighted toward in person "demos" of the code in action - creativity and the production of impressive visual imagery are highly encouraged. Prerequisites: CS 107, MATH 51.

CS 149. Parallel Computing. 3-4 Units.

This course is an introduction to parallelism and parallel programming. Most new computer architectures are parallel; programming these machines requires knowledge of the basic issues of and techniques for writing parallel software. Topics: varieties of parallelism in current hardware (e.g., fast networks, multicore, accelerators such as GPUs, vector instruction sets), importance of locality, implicit vs. explicit parallelism, shared vs. non-shared memory, synchronization mechanisms (locking, atomicity, transactions, barriers), and parallel programming models (threads, data parallel/streaming, futures, SPMD, message passing, SIMT, transactions, and nested parallelism). Significant parallel programming assignments will be given as homework. The course is open to students who have completed the introductory CS course sequence through 110 and have taken CS 143.

CS 154. Introduction to Automata and Complexity Theory. 3-4 Units.

This course provides a mathematical introduction to the following questions: What is computation? Given a computational model, what problems can we hope to solve in principle with this model? Besides those solvable in principle, what problems can we hope to efficiently solve? In many cases we can give completely rigorous answers; in other cases, these questions have become major open problems in computer science and mathematics. By the end of this course, students will be able to classify computational problems in terms of their computational complexity (Is the problem regular? Not regular? Decidable? Recognizable? Neither? Solvable in P? NP-complete? PSPACE-complete?, etc.). Students will gain a deeper appreciation for some of the fundamental issues in computing that are independent of trends of technology, such as the Church-Turing Thesis and the P versus NP problem. Prerequisites: CS 103 or 103B.

CS 155. Computer and Network Security. 3 Units.

For seniors and first-year graduate students. Principles of computer systems security. Attack techniques and how to defend against them. Topics include: network attacks and defenses, operating system security, application security (web, apps, databases), malware, privacy, and security for mobile devices. Course projects focus on building reliable code. Prerequisite: 110. Recommended: basic Unix. Same as: EE 287A

CS 157. Logic and Automated Reasoning. 3 Units.

An elementary exposition from a computational point of view of propositional and predicate logic, axiomatic theories, and theories with equality and induction. Interpretations, models, validity, proof, strategies, and applications. Automated deduction: polarity, skolemization, unification, resolution, equality. Prerequisite: 103 or 103B.

CS 161. Design and Analysis of Algorithms. 3-5 Units.

Worst and average case analysis. Recurrences and asymptotics. Efficient algorithms for sorting, searching, and selection. Data structures: binary search trees, heaps, hash tables. Algorithm design techniques: divide-and-conquer, dynamic programming, greedy algorithms, amortized analysis, randomization. Algorithms for fundamental graph problems: minimum-cost spanning tree, connected components, topological sort, and shortest paths. Possible additional topics: network flow, string searching. Prerequisite: 103 or 103B; 109 or STATS 116.

CS 164. Computing with Physical Objects: Algorithms for Shape and Motion. 3 Units.

Algorithms and data structures dealing with the representation and manipulation of physical objects and entities in the computer. Computational structures for shape and motion, shape fitting and matching, triangulations and other spatial subdivisions, and low-dimensional search and optimization. Examples relevant to computer graphics, computer vision, robotics and geometric computation emphasizing algorithmic paradigms applicable to multidimensional data. Prerequisites: CS 103 or 103B, and CS 109 or STATS 116, and CS 106B/X or consent of instructor.

CS 168. The Modern Algorithmic Toolbox. 3-4 Units.

This course will provide a rigorous and hands-on introduction to the central ideas and algorithms that constitute the core of the modern algorithms toolkit. Emphasis will be on understanding the high-level theoretical intuitions and principles underlying the algorithms we discuss, as well as developing a concrete understanding of when and how to implement and apply the algorithms. The course will be structured as a sequence of one-week investigations; each week will introduce one algorithmic idea, and discuss the motivation, theoretical underpinning, and practical applications of that algorithmic idea. Each topic will be accompanied by a mini-project in which students will be guided through a practical application of the ideas of the week. Topics include hashing, dimension reduction and LSH, boosting, linear programming, gradient descent, sampling, and basic data representation and coding. Prerequisites: CS107 and CS161, or permission from the instructor.

CS 170. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit.

Same as: MUSIC 128

CS 173. A Computational Tour of the Human Genome. 3 Units.

(Only one of 173 or 273A counts toward any CS degree program.)

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing; functional landscape of the human genome (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures on current genomic research topics. Class will be similar in spirit to CS273A, which will not be offered this year. Prerequisites: CS107 or equivalent background in programming.

CS 178. Digital Photography. 3-5 Units.

Scientific, artistic, and computing aspects of digital photography. Topics: lenses and optics, light and sensors, optical effects in nature, perspective and depth of field, sampling and noise, the camera as a computing platform, image processing and editing, history of photography, computational photography. Counts as a CS elective in the Graphics track. Prerequisites: introductory calculus; students must have a digital camera with manual control over shutter speed and aperture. Loaner cameras may be available. No programming experience required. GER:DB-EngrAppSci.

CS 181. Computers, Ethics, and Public Policy. 4 Units.

(Formerly 201.) Primarily for majors entering computer-related fields. Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106B or X.

CS 181W. Computers, Ethics, and Public Policy. 4 Units.

Writing-intensive version of CS181. Satisfies the WIM requirement for Computer Science and Computer Systems Engineering undergraduates. Same as: WIM

CS 183B. How to Start a Startup. 2 Units.

The course is designed to be a one-class practical MBA equivalent for engineers that want to start startups. We'll try to cover everything you need to know other than how to build a product. Topics include: having ideas, getting users, company culture, fundraising, hiring, operations, managements, and more. The format of the class will be guest lectures from experts in each subject. The class will focus more on practical advice than theory, although many speakers will also tell personal stories.

CS 190. Software Design Studio. 3 Units.

This course will teach the art of software design: how to decompose large complex systems into classes that can be implemented and maintained easily. Topics include information hiding, thick classes, API design, managing complexity, and how to write in-code documentation. The class will involve significant system software implementation and will use an iterative approach consisting of implementation, review, and revision. The course will be taught in a studio format with in-class discussions and code reviews in addition to lectures. Prerequisites: CS 140.

CS 191. Senior Project. 1-6 Unit.

Restricted to Computer Science and Computer Systems Engineering students. Group or individual projects under faculty direction. Register using instructor's section number. A project can be either a significant software application or publishable research. Software application projects include substantial programming and modern user-interface technologies and are comparable in scale to shareware programs or commercial applications. Research projects may result in a paper publishable in an academic journal or presentable at a conference. Required public presentation of final application or research results.

CS 191W. Writing Intensive Senior Project. 3-6 Units.

Restricted to Computer Science and Computer Systems Engineering students. Writing-intensive version of CS191. Register using the section number of an Academic Council member.

Same as: WIM

CS 192. Programming Service Project. 1-4 Unit.

Restricted to Computer Science students. Appropriate academic credit (without financial support) is given for volunteer computer programming work of public benefit and educational value.

CS 193A. Android Programming. 1 Unit.

Introduction to building applications for Android platform. Examines key concepts of Android programming: tool chain, application life-cycle, views, controls, intents, designing mobile UIs, networking, threading, and more. Features ten weekly lectures and a series of small programming projects. Phone not required, but a phone makes the projects more engaging. Prerequisites: 106B or Java experience at 106B level.

CS 193C. Client-Side Internet Technologies. 3 Units.

Client-side technologies used to create web sites such as sophisticated Web 2.0 interfaces similar to Google maps. XHTML, CSS, JavaScript, document object model (DOM), AJAX, and Flash. Prerequisite: programming experience at the level of 106A.

CS 193P. iPhone and iPad Application Programming. 3 Units.

Tools and APIs required to build applications for the iPhone and iPad platforms using the iOS SDK. User interface design for mobile devices and unique user interactions using multi-touch technologies. Object-oriented design using model-view-controller paradigm, memory management, Objective-C programming language. Other topics include: object-oriented database API, animation, mobile device power management, multi-threading, networking and performance considerations. Prerequisites: C language and object-oriented programming experience exceeding 106B or X level. Previous completion of any one of the following is required: CS 107, 108 (preferred) or 110. Recommended: UNIX, graphics, databases.

CS 193W. Apple Watch Programming. 2 Units.

The technologies behind building Apple Watch applications. Student teams will build an Apple Watch application and containing iPhone application with supervision of the instructor. Students must have access to a Macintosh computer. iPhone and Apple Watch are not required, but recommended. Prerequisite: CS193P.

CS 194. Software Project. 3 Units.

Design, specification, coding, and testing of a significant team programming project under faculty supervision. Documentation includes a detailed proposal. Public demonstration of the project at the end of the quarter. Prerequisites: CS 110 and CS 161.

CS 194H. User Interface Design Project. 3-4 Units.

Advanced methods for designing, prototyping, and evaluating user interfaces to computing applications. Novel interface technology, advanced interface design methods, and prototyping tools. Substantial, quarter-long course project that will be presented in a public presentation. Prerequisites: CS 147, or permission of instructor.

CS 194W. Software Project. 3 Units.

Restricted to Computer Science, Computer Systems Engineering, and Electrical Engineering undergraduates. Writing-intensive version of CS194. Same as: WIM

CS 196. Computer Consulting. 2 Units.

Focus is on Macintosh and Windows operating system maintenance and troubleshooting through hardware and software foundation and concepts. Topics include operating systems, networking, security, troubleshooting methodology with emphasis on Stanford's computing environment. Not a programming course. Prerequisite: 1C or equivalent.

CS 198. Teaching Computer Science. 3-4 Units.

Students lead a discussion section of 106A while learning how to teach a programming language at the introductory level. Focus is on teaching skills, techniques, and course specifics. Application and interview required; see <http://cs198.stanford.edu>.

CS 199. Independent Work. 1-6 Unit.

Special study under faculty direction, usually leading to a written report. Letter grade; if not appropriate, enroll in 199P.

CS 199P. Independent Work. 1-6 Unit.

(Staff).

CS 200. Care and Feeding of Large-Scale Web Services. 1 Unit.

Advances in cloud technologies are making it easier than ever to build web services. Today, one can choose from a number of cloud providers to build web sites, mobile and web apps. Successful scaling of such services, however, is far from trivial. This course discusses technologies that are critical to successful operation of large-scale web services: Global load balancing via DNS, and Comparison of CDNs; Understanding TCP's impact on global client-side latency; Effect of tags and local storage on client-side latency; Backend servers: RPCs, server threading architecture and cluster management; Data storage alternatives: SQL and NoSQL; Faster access to data: Memcached and 20 years of RDMA; Flash's Role in Large Scale Distributed Systems; Cloud: Public, Private and Hybrid; Log processing: Hive and Dremel. The goal is to equip students with a good understanding of challenges and current solutions for service scaling. There is no homework. Instead, students are expected to read background materials and attend class discussions.

CS 202. Law for Computer Science Professionals. 1 Unit.

Intellectual property law as it relates to computer science including copyright registration, patents, and trade secrets; contract issues such as non-disclosure/non-compete agreements, license agreements, and works-made-for-hire; dispute resolution; and principles of business formation and ownership. Emphasis is on topics of current interest such as open source and the free software movement, peer-to-peer sharing, encryption, data mining, and spam.

CS 204. Legal Informatics. 3 Units.

Legal informatics based on representation of regulations in computable form. Encoding regulations facilitate creation of legal information systems with significant practical value. Convergence of technological trends, growth of the Internet, advent of semantic web technology, and progress in computational logic make computational law prospects better. Topics: current state of computational law, prospects and problems, philosophical and legal implications. This course is *Cross* listed with LAW 729. Prerequisite: basic concepts of programming.

CS 205A. Mathematical Methods for Robotics, Vision, and Graphics. 3 Units.

Continuous mathematics background necessary for research in robotics, vision, and graphics. Possible topics: linear algebra; the conjugate gradient method; ordinary and partial differential equations; vector and tensor calculus. Prerequisites: 106B or X; MATH 51; or equivalents.

CS 205B. Mathematical Methods for Fluids, Solids, and Interfaces. 3 Units.

Numerical methods for simulation of problems involving solid mechanics and fluid dynamics. Focus is on practical tools needed for simulation, and continuous mathematics involving nonlinear hyperbolic partial differential equations. Possible topics: finite element method, highly deformable elastic bodies, plasticity, fracture, level set method, Burgers' equation, compressible and incompressible Navier-Stokes equations, smoke, water, fire, and solid-fluid coupling. Prerequisite: 205A or equivalent.

CS 207. The Economics of Software. 2 Units.

How businesses move software products into the marketplace and how the associated intellectual capital is exploited. The value of creators and managers. Concepts that are outside of the common knowledge of computer scientists such as business terms and spreadsheet computations to quantitatively compare alternatives. Goal is to contribute to informed decision making in high-tech product design, acquisition, production, marketing, selection of business structures, outsourcing, and impact of taxation policies. No specific background required. External experts complement class presentations.

CS 210A. Software Project Experience with Corporate Partners. 3-4 Units.

Two-quarter project course. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real-world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 109 and 110.

CS 210B. Software Project Experience with Corporate Partners. 3-4 Units.

Continuation of CS210A. Focus is on real-world software development. Corporate partners seed projects with loosely defined challenges from their R&D labs; students innovate to build their own compelling software solutions. Student teams are treated as start-up companies with a budget and a technical advisory board comprised of the instructional staff and corporate liaisons. Teams will typically travel to the corporate headquarters of their collaborating partner, meaning some teams will travel internationally. Open loft classroom format such as found in Silicon Valley software companies. Exposure to: current practices in software engineering; techniques for stimulating innovation; significant development experience with creative freedoms; working in groups; real world software engineering challenges; public presentation of technical work; creating written descriptions of technical work. Prerequisites: CS 210A.

CS 210L. Introducing Software through Video Stories. 1 Unit.

In this one-unit lab where coding meets film, software development teams from CS210 are paired with film students. This resulting cross-disciplinary group will create a short video that tells an engaging and creative story about the software developed by the team in CS210. The class will introduce students to principles of short form narrative storytelling and the visual language of film, as well as cover the technical principles of DSLR cinematography and non-linear editing. This course will offer students the experience of creating a film in partnership with a producing team.

CS 211. Content Creation in Virtual Reality. 3-4 Units.

Students are immersed in a cutting edge virtual reality development environment consisting of both hardware and software elements. Students will progress from configuring a comprehensive development environment to designing and implementing networked content in VR. The deep development focus is overlaid with a discussion series with leaders in the VR space to provide both breadth and depth to a student's quest; understanding of the VR space. Prerequisites: CS 107 or equivalent. A strong software development background is required that includes comfort with C++. Design experience a plus.

CS 221. Artificial Intelligence: Principles and Techniques. 3-4 Units.

Artificial intelligence (AI) has had a huge impact in many areas, including medical diagnosis, speech recognition, robotics, web search, advertising, and scheduling. This course focuses on the foundational concepts that drive these applications. In short, AI is the mathematics of making good decisions given incomplete information (hence the need for probability) and limited computation (hence the need for algorithms). Specific topics include search, constraint satisfaction, game playing, Markov decision processes, graphical models, machine learning, and logic. Prerequisites: CS 103 or CS 103B/X, CS 106B or CS 106X, CS 107, and CS 109 (algorithms, probability, and programming experience).

CS 222. Rational Agency and Intelligent Interaction. 3 Units.

For advanced undergraduates, and M.S. and beginning Ph.D. students. Logic-based methods for knowledge representation, information change, and games in artificial intelligence and philosophy. Topics: knowledge, certainty, and belief; time and action; belief dynamics; preference and social choice; games; and desire and intention. Prerequisite: propositional and first-order logic.

Same as: PHIL 358

CS 223A. Introduction to Robotics. 3 Units.

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra.

Same as: ME 320

CS 224D. Deep Learning for Natural Language Processing. 3-4 Units.

Deep learning approaches have obtained very high performance across many different natural language processing tasks. In this class, students will learn to understand, implement, train, debug, visualize and potentially invent their own neural network models for a variety of language understanding tasks. The course provides a deep excursion from early models to cutting-edge research. Applications will range across a broad spectrum: from simple tasks like part of speech tagging, over sentiment analysis to question answering and machine translation. The final project will involve implementing a complex neural network model and applying it to a large scale NLP problem. Prerequisites: programming abilities (python), linear algebra, Math 21 or equivalent, machine learning background (CS 229 or similar) Recommended: machine learning (CS 229, CS 228), CS 224N, EE364a (convex optimization), CS 231N.

CS 224M. Multi-Agent Systems. 3 Units.

For advanced undergraduates, and M.S. and beginning Ph.D. students. The course serves primarily as an introduction to game theory, including computational aspects. Topics: basic game representations and solution concepts, social choice and mechanism design, multi-agent learning, communication. Applications discussed as appropriate; emphasis is on conceptual matters and theoretical foundations. Prerequisites: very basic probability theory and optimization.

CS 224N. Natural Language Processing. 3-4 Units.

Methods for processing human language information and the underlying computational properties of natural languages. Syntactic and semantic processing from linguistic and algorithmic perspectives. Focus is on modern quantitative techniques in NLP: using large corpora, statistical models for acquisition, translation, and interpretation; and representative systems. Prerequisites: CS124 or CS121/221.

Same as: LINGUIST 284

CS 224S. Spoken Language Processing. 2-4 Units.

Introduction to spoken language technology with an emphasis on dialogue and conversational systems. Automatic speech recognition, extraction of affect and social meaning from speech, speech synthesis, dialogue management, and applications to digital assistants, search, and recommender systems. Prerequisites: CS 124, 221, 224N, or 229.

CS 224U. Natural Language Understanding. 3-4 Units.

Project-oriented class focused on developing systems and algorithms for robust machine understanding of human language. Draws on theoretical concepts from linguistics, natural language processing, and machine learning. Topics include lexical semantics, distributed representations of meaning, relation extraction, semantic parsing, sentiment analysis, and dialogue agents, with special lectures on developing projects, presenting research results, and making connections with industry. Prerequisites: one of LINGUIST 180, CS 124, CS 224N, CS224S, or CS221; and logical/ semantics such as LINGUIST 130A or B, CS 157, or PHIL 150.

Same as: LINGUIST 188, LINGUIST 288

CS 224W. Social and Information Networks. 3-4 Units.

(Formerly 322) How do diseases spread? Who are the influencers? How can we predict friends and enemies in a social network? How information flows and mutates as it is passed through networks? Behind each of these questions there is an intricate wiring diagram, a network, that defines the interactions between the components. And we will never understand these questions unless we understand the networks behind them. The course will cover recent research on the structure and analysis of such large social and information networks and on models and algorithms that abstract their basic properties. Class will explore how to practically analyze large-scale network data and how to reason about it through models for network structure and evolution. Topics include methods for link analysis and network community detection, diffusion and information propagation on the web, virus outbreak detection in networks, and connections with work in the social sciences and economics.

CS 225A. Experimental Robotics. 3 Units.

Hands-on laboratory course experience in robotic manipulation. Topics include robot kinematics, dynamics, control, compliance, sensor-based collision avoidance, and human-robot interfaces. Second half of class is devoted to final projects using various robotic platforms to build and demonstrate new robot task capabilities. Previous projects include the development of autonomous robot behaviors of drawing, painting, playing air hockey, yoyo, basketball, ping-pong or xylophone. Prerequisites: 223A or equivalent.

CS 225B. Robot Programming Laboratory. 3-4 Units.

For robotics and non-robotics students. Students program mobile robots to exhibit increasingly complex behavior (simple dead reckoning and reactivity, goal-directed motion, localization, complex tasks). Topics: motor control and sensor characteristics; sensor fusion, model construction, and robust estimation; control regimes (subsumption, potential fields); probabilistic methods, including Markov localization and particle filters. Student programmed robot contest. Programming is in C++ on Unix machines, done in teams. Prerequisite: programming at the level of 106B, 106X, 205, or equivalent.

CS 226. Statistical Techniques in Robotics. 3 Units.

Theory and practice of statistical techniques used in robotics and large-scale sensor-based systems. Probabilistic state estimation, Bayes, Kalman, information and particle filters. Simultaneous localization and mapping techniques, and multi-robot sensor fusion. Markov techniques for making decisions under uncertainty, and probabilistic control algorithms and exploration.

CS 227B. General Game Playing. 3 Units.

A general game playing system accepts a formal description of a game to play it without human intervention or algorithms designed for specific games. Hands-on introduction to these systems and artificial intelligence techniques such as knowledge representation, reasoning, learning, and rational behavior. Students create GGP systems to compete with each other and in external competitions. Prerequisite: programming experience. Recommended: 103 or equivalent.

CS 228. Probabilistic Graphical Models: Principles and Techniques. 3-4 Units.

Probabilistic graphical modeling languages for representing complex domains, algorithms for reasoning using these representations, and learning these representations from data. Topics include: Bayesian and Markov networks, extensions to temporal modeling such as hidden Markov models and dynamic Bayesian networks, exact and approximate probabilistic inference algorithms, and methods for learning models from data. Also included are sample applications to various domains including speech recognition, biological modeling and discovery, medical diagnosis, message encoding, vision, and robot motion planning. Prerequisites: basic probability theory and algorithm design and analysis.

CS 229. Machine Learning. 3-4 Units.

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics.

CS 229T. Statistical Learning Theory. 3 Units.

(Same as STATS 231) How do we formalize what it means for an algorithm to learn from data? This course focuses on developing mathematical tools for answering this question. We will present various common learning algorithms and prove theoretical guarantees about them. Topics include online learning, kernel methods, generalization bounds (uniform convergence), and spectral methods. Prerequisites: A solid background in linear algebra and probability theory, statistics and machine learning (STATS 315A or CS 229). Convex optimization (EE 364a) is helpful but not required.

Same as: STATS 231

CS 231A. Computer Vision: From 3D Reconstruction to Recognition. 3-4 Units.

(Formerly 223B) An introduction to the concepts and applications in computer vision. Topics include: cameras and projection models, low-level image processing methods such as filtering and edge detection; mid-level vision topics such as segmentation and clustering; shape reconstruction from stereo, as well as high-level vision tasks such as object recognition, scene recognition, face detection and human motion categorization. Prerequisites: linear algebra, basic probability and statistics.

CS 231B. The Cutting Edge of Computer Vision. 3 Units.

(Formerly 223C) More than one-third of the brain is engaged in visual processing, the most sophisticated human sensory system. Yet visual recognition technology has fundamentally influenced our lives on the same scale and scope as text-based technology has, thanks to Google, Twitter, Facebook, etc. This course is designed for those students who are interested in cutting edge computer vision research, and/or are aspiring to be an entrepreneur using vision technology. Course will guide students through the design and implementation of three core vision technologies: segmentation, detection and classification on three highly practical, real-world problems. Course will focus on teaching the fundamental theory, detailed algorithms, practical engineering insights, and guide them to develop state-of-the-art systems evaluated based on the most modern and standard benchmark datasets. Prerequisites: CS2223B or equivalent and a good machine learning background (i.e. CS221, CS228, CS229). Fluency in Matlab and C/C++.

CS 231M. Mobile Computer Vision. 3-4 Units.

The course surveys recent developments in computer vision, graphics and image processing for mobile application. Topics of interest include: feature extraction, image enhancement and digital photography, 3D scene understanding and modeling, virtual augmentation, object recognition and categorization, human activity recognition. As part of this course, students will familiarize with a state-of-the-art mobile hardware and software development platform: an NVIDIA Tegra-based Android tablet, with relevant libraries such as OpenCV and FCam. Tablets will be available for each student team. Prerequisites: Knowledge of linear algebra, probability, as well as concepts introduced in either CS131A or CS231A and CS232 (or equivalent) are necessary for understanding the material covered in this class. C++ (or Java) programming experience is expected.

CS 231N. Convolutional Neural Networks for Visual Recognition. 3-4 Units.

Computer Vision has become ubiquitous in our society, with applications in search, image understanding, apps, mapping, medicine, drones, and self-driving cars. Core to many of these applications are the tasks of image classification, localization and detection. This course is a deep dive into details of neural network architectures with a focus on learning end-to-end models for these tasks, particularly image classification. During the 10-week course, students will learn to implement, train and debug their own neural networks and gain a detailed understanding of cutting-edge research in computer vision. The final assignment will involve training a multi-million parameter convolutional neural network and applying it on the largest image classification dataset (ImageNet). We will focus on teaching how to set up the problem of image recognition, the learning algorithms (e.g. backpropagation), practical engineering tricks for training and fine-tuning the networks and guide the students through hands-on assignments and a final course project. Much of the background and materials of this course will be drawn from the ImageNet Challenge: <http://image-net.org/challenges/LSVRC/2014/index>. Prerequisites: Proficiency in Python; familiarity with C/C++; CS 131 and CS 229 or equivalents; Math 21 or equivalent, linear algebra.

CS 232. Digital Image Processing. 3 Units.

Image sampling and quantization color, point operations, segmentation, morphological image processing, linear image filtering and correlation, image transforms, eigenimages, multiresolution image processing, noise reduction and restoration, feature extraction and recognition tasks, image registration. Emphasis is on the general principles of image processing. Students learn to apply material by implementing and investigating image processing algorithms in Matlab and optionally on Android mobile devices. Term project. Recommended: EE261, EE278. Same as: EE 368

CS 238. Decision Making under Uncertainty. 3-4 Units.

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language. Same as: AA 228

CS 239. Advanced Topics in Sequential Decision Making. 3-4 Units.

Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221. Same as: AA 229

CS 240. Advanced Topics in Operating Systems. 3 Units.

Recent research. Classic and new papers. Topics: virtual memory management, synchronization and communication, file systems, protection and security, operating system extension techniques, fault tolerance, and the history and experience of systems programming. Prerequisite: 140 or equivalent.

CS 242. Programming Languages. 3 Units.

Central concepts in modern programming languages, impact on software development, language design trade-offs, and implementation considerations. Functional, imperative, and object-oriented paradigms. Formal semantic methods and program analysis. Modern type systems, higher order functions and closures, exceptions and continuations. Modularity, object-oriented languages, and concurrency. Runtime support for language features, interoperability, and security issues. Prerequisite: 107, or experience with Lisp, C, and an object-oriented language.

CS 243. Program Analysis and Optimizations. 3-4 Units.

Program analysis techniques used in compilers and software development tools to improve productivity, reliability, and security. The methodology of applying mathematical abstractions such as graphs, fixpoint computations, binary decision diagrams in writing complex software, using compilers as an example. Topics include data flow analysis, instruction scheduling, register allocation, parallelism, data locality, interprocedural analysis, and garbage collection. Prerequisites: 103 or 103B, and 107.

CS 244. Advanced Topics in Networking. 3-4 Units.

Classic papers, new ideas, and research papers in networking. Architectural principles: naming, addressing, routing; congestion control, traffic management, QoS; wireless and mobility; overlay networks and virtualization; network security; switching and routing; content distribution; and proposals for future Internet structures. Prerequisite: 144 or equivalent. Same as: EE 284B

CS 244B. Distributed Systems. 3 Units.

Distributed operating systems and applications issues, emphasizing high-level protocols and distributed state sharing as the key technologies. Topics: distributed shared memory, object-oriented distributed system design, distributed directory services, atomic transactions and time synchronization, application-sufficient consistency, file access, process scheduling, process migration, and storage/communication abstractions on distribution, scale, robustness in the face of failure, and security. Prerequisites: CS 144 and CS 249A.

CS 244C. Readings and Projects in Distributed Systems. 3-6 Units.

Companion project option for 244B. Corequisite: 244B.

CS 244E. Networked Wireless Systems. 3 Units.

Design and implementation of wireless networks and mobile systems. The course will commence with a short retrospective of wireless communication and initially touch on some of the fundamental physical layer properties of various wireless communication technologies. The focus will then shift to design of media access control and routing layers for various wireless systems. The course will also examine adaptations necessary at transport and higher layers to cope with node mobility and error-prone nature of the wireless medium. Finally, it will conclude with a brief overview of other related issues including emerging wireless/mobile applications. Prerequisites: EE 284. Same as: EE 384E

CS 245. Database Systems Principles. 3 Units.

File organization and access, buffer management, performance analysis, and storage management. Database system architecture, query optimization, transaction management, recovery, concurrency control. Reliability, protection, and integrity. Design and management issues. Prerequisites: 145, 161.

CS 246. Mining Massive Data Sets. 3-4 Units.

The course will discuss data mining and machine learning algorithms for analyzing very large amounts of data. The emphasis will be on Map Reduce as a tool for creating parallel algorithms that can process very large amounts of data. Topics include: Frequent itemsets and Association rules, Near Neighbor Search in High Dimensional Data, Locality Sensitive Hashing (LSH), Dimensionality reduction, Recommender Systems, Clustering, Link Analysis, Large-scale machine learning, Data streams, Analysis of Social-network Graphs, and Web Advertising. Prerequisites: At least one of CS107 or CS145; At least one of CS109 or STAT116, or equivalent.

CS 246H. Mining Massive Data Sets Hadoop Lab. 1 Unit.

Supplement to CS 246 providing additional material on Hadoop. Students will learn how to implement data mining algorithms using Hadoop, how to implement and debug complex MapReduce jobs in Hadoop, and how to use some of the tools in the Hadoop ecosystem for data mining and machine learning. Topics: Hadoop, MapReduce, HDFS, combiners, secondary sort, distributed cache, SQL on Hadoop, Hive, Cloudera ML/Oryx, Mahout, Hadoop streaming, implementing Hadoop jobs, debugging Hadoop jobs, TF-IDF, Pig, Sqoop, Oozie, HBase, Impala. Prerequisite: CS 107 or equivalent.

CS 247. Human-Computer Interaction Design Studio. 3-4 Units.

Project-based focus on interaction design process, especially early-stage design and rapid prototyping. Methods used in interaction design including needs analysis, user observation, sketching, concept generation, scenario building, and evaluation. Prerequisites: 147 or equivalent background in design thinking; 106B or equivalent background in programming.

CS 247L. Human Computer Interaction Technology Laboratory. 1 Unit.

Hands-on introduction to contemporary HCI technologies. Interaction design with Adobe Flash, mobile development, physical computing, and web applications. Corequisite: 247.

CS 248. Interactive Computer Graphics. 3-4 Units.

This is the second course in the computer graphics sequence, and as such it assumes a strong familiarity with rendering and image creation. The course has a strong focus on computational geometry, animation, and simulation. Topics include splines, implicit surfaces, geometric modeling, collision detection, animation curves, particle systems and crowds, character animation, articulation, skinning, motion capture and editing, rigid and deformable bodies, and fluid simulation. As a final project, students implement an interactive video game utilizing various concepts covered in the class. Games may be designed on mobile devices, in a client/server/browser environment, or on a standard personal computer. Prerequisite: CS148.

CS 249A. Object-Oriented Programming from a Modeling and Simulation Perspective. 3 Units.

Topics: large-scale software development approaches for complex applications, class libraries and frameworks; encapsulation, use of inheritance and dynamic dispatch, design of interfaces and interface/implementation separation, exception handling, smart pointers and reference management, minimalizing dependencies and value-oriented programming. Inheritance: when and why multiple inheritance naming, directories, manager, and disciplined use of design patterns including functors, event notification and iterators. Prerequisites: C, C++, and programming methodology as developed in 106B or X, and 107 (107 may be taken concurrently). Recommended: 193D.

CS 249B. Large-scale Software Development. 3 Units.

Software engineering of high quality large-scale complex software with a focus on evolvability, performance and cost. Software development processes, people and practice; audit: integrating invariant checks with production software; concurrency with modular object-oriented programming; collection implementation; generic programming and templates; design of value types; named descriptions for large value types; memory management; controlling placement, locality and consumption; run-time vs. static type checking and identification.

CS 254. Computational Complexity. 3 Units.

An introduction to computational complexity theory. Topics include the P versus NP problem; diagonalization; space complexity: PSPACE, Savitch's theorem, and NL=coNL; counting problems and #P-completeness; circuit complexity; pseudorandomness and derandomization; complexity of approximation; quantum computing; complexity barriers. Prerequisites: 154 or equivalent; mathematical maturity.

CS 255. Introduction to Cryptography. 3 Units.

For advanced undergraduates and graduate students. Theory and practice of cryptographic techniques used in computer security. Topics: encryption (symmetric and public key), digital signatures, data integrity, authentication, key management, PKI, zero-knowledge protocols, and real-world applications. Prerequisite: basic probability theory.

CS 259D. Data Mining for Cyber Security. 3-4 Units.

The massive increase in the rate of novel cyber attacks has made data-mining-based techniques a critical component in detecting security threats. The course covers various applications of data mining in computer and network security. Topics include: Overview of the state of information security; malware detection; network and host intrusion detection; web, email, and social network security; authentication and authorization anomaly detection; alert correlation; and potential issues such as privacy issues and adversarial machine learning. Prerequisites: Data mining / machine learning at the level of CS 246 or CS 229; familiarity with computer systems and networks at least at the level of CS 110; CS 140 and CS 144 strongly recommended; CS 155 recommended but not required.

CS 261. Optimization and Algorithmic Paradigms. 3 Units.

Algorithms for network optimization: max-flow, min-cost flow, matching, assignment, and min-cut problems. Introduction to linear programming. Use of LP duality for design and analysis of algorithms. Approximation algorithms for NP-complete problems such as Steiner Trees, Traveling Salesman, and scheduling problems. Randomized algorithms. Introduction to online algorithms. Prerequisite: 161 or equivalent.

CS 262. Computational Genomics. 3 Units.

Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics. Same as: BIOMEDIN 262

CS 263. Algorithms for Modern Data Models. 3 Units.

We traditionally think of algorithms as running on data available in a single location, typically main memory. In many modern applications including web analytics, search and data mining, computational biology, finance, and scientific computing, the data is often too large to reside in a single location, is arriving incrementally over time, is noisy/uncertain, or all of the above. Paradigms such as map-reduce, streaming, sketching, Distributed Hash Tables, Bulk Synchronous Processing, and random walks have proved useful for these applications. This course will provide an introduction to the design and analysis of algorithms for these modern data models. Prerequisite: Algorithms at the level of CS 261. Same as: MSE 317

CS 264. Beyond Worst-Case Analysis. 3 Units.

This course is motivated by problems for which the traditional worst-case analysis of algorithms fails to differentiate meaningfully between different solutions, or recommends an intuitively "wrong" solution over the "right" one. This course studies systematically alternatives to traditional worst-case analysis that nevertheless enable rigorous and robust guarantees on the performance of an algorithm. Topics include: instance optimality; smoothed analysis; parameterized analysis and condition numbers; models of data (pseudorandomness, locality, diffuse adversaries, etc.); average-case analysis; robust distributional analysis; resource augmentation; planted and semi-random graph models. Motivating problems will be drawn from online algorithms, online learning, constraint satisfaction problems, graph partitioning, scheduling, linear programming, hashing, machine learning, and auction theory. Prerequisites: CS161 (required). CS261 is recommended but not required.

CS 265. Randomized Algorithms and Probabilistic Analysis. 3 Units. Randomness pervades the natural processes around us, from the formation of networks, to genetic recombination, to quantum physics. Randomness is also a powerful tool that can be leveraged to create algorithms and data structures which, in many cases, are more efficient and simpler than their deterministic counterparts. This course covers the key tools of probabilistic analysis, and application of these tools to understand the behaviors of random processes and algorithms. Emphasis is on theoretical foundations, though we will apply this theory broadly, discussing applications in machine learning and data analysis, networking, and systems. Topics include tail bounds, the probabilistic method, Markov chains, and martingales, with applications to analyzing random graphs, metric embeddings, random walks, and a host of powerful and elegant randomized algorithms. Prerequisites: CS 161 and STAT 116, or equivalents and instructor consent. Same as: CME 309

CS 266. Parameterized Algorithms and Complexity. 3 Units. An introduction to the area of parameterized algorithms and complexity, which explores multidimensional methods for measuring the difficulty and feasibility of solving computational problems. Topics include: fixed-parameter tractability (FPT) and its characterizations, FPT algorithms for hard problems, the W-hierarchy ($W[1]$, $W[2]$, $W[P]$, and complete problems for these classes), and the relationships between parameterized questions and classical theory questions. Prerequisites: CS 154 and 161 or the equivalent mathematical maturity.

CS 267. Graph Algorithms. 3 Units. An introduction to advanced topics in graph algorithms. Focusing on a variety of graph problems, the course will explore topics such as small space graph data structures, approximation algorithms, dynamic algorithms, and algorithms for special graph classes. Topics include: approximation algorithms for shortest paths and graph matching, distance oracles, graph spanners, cliques and graph patterns, dynamic algorithms, graph coloring, algorithms for planar graphs. Prerequisites: 161 or the equivalent mathematical maturity.

CS 268. Geometric Algorithms. 3 Units. Techniques for design and analysis of efficient geometric algorithms for objects in 2-, 3-, and higher dimensions. Topics: convexity, triangulations and simplicial complexes, sweeping, partitioning, and point location. Voronoi/Delaunay diagrams and their properties. Arrangements of curves and surfaces. Intersection and visibility problems. Geometric searching and optimization. Random sampling methods. Impact of numerical issues in geometric computation. Example applications to robotic motion planning, visibility preprocessing and rendering in graphics, model-based recognition in computer vision, and structural molecular biology. Prerequisite: discrete algorithms at the level of 161. Recommended: 164.

CS 270. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving. 3 Units. Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology. Same as: BIOMEDIN 210

CS 272. Introduction to Biomedical Informatics Research Methodology. 3 Units. Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor. Same as: BIOE 212, BIOMEDIN 212, GENE 212

CS 273A. A Computational Tour of the Human Genome. 3 Units. Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>. Same as: BIOMEDIN 273A, DBIO 273A

CS 274. Representations and Algorithms for Computational Molecular Biology. 3-4 Units. Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units. Same as: BIOE 214, BIOMEDIN 214, GENE 214

CS 275. Translational Bioinformatics. 4 Units. Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology. Same as: BIOMEDIN 217

CS 275A. Symbolic Musical Information. 2-4 Units. Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files. Same as: MUSIC 253

CS 275B. Music Query, Analysis, and Style Simulation. 2-4 Units. Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: MUSIC 254

CS 276. Information Retrieval and Web Search. 3 Units.

Text information retrieval systems; efficient text indexing; Boolean, vector space, and probabilistic retrieval models; ranking and rank aggregation; evaluating IR systems. Text clustering and classification: classification algorithms, latent semantic indexing, taxonomy induction; Web search engines including crawling and indexing, link-based algorithms, and web metadata. Prerequisites: CS 107, CS 109, CS 161.

Same as: LINGUIST 286

CS 277. Experimental Haptics. 3 Units.

Computer haptics is the discipline of synthesizing touch feedback in simulated or virtual environments. Course objective is to study and develop computational methods for generating force feedback through haptic interfaces. Theoretical topics: haptic rendering in 3-D virtual environments, simulation of haptic interaction with rigid and deformable objects, haptic interfaces, psychophysics of touch. Applied topics: CHAI3D haptic library, implementation of algorithms for haptic rendering, collision detection, and deformable body simulation. Guest speakers; Lab/programming exercises; open-ended final project. Enrollment limited to 20. Prerequisite: experience with C++. Recommended: 148 or 248, 223A.

CS 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulations and computational analysis of experimental data, at scales ranging from individual molecules to multiple cells. Prerequisites: elementary programming background (106A or equivalent) and an introductory course in biology or biochemistry.

CS 294A. Research Project in Artificial Intelligence. 3 Units.

Student teams under faculty supervision work on research and implementation of a large project in AI. State-of-the-art methods related to the problem domain. Prerequisites: AI course from 220 series, and consent of instructor.

CS 294H. Research Project in Human-Computer Interaction. 3 Units.

Student teams under faculty supervision work on research and implementation of a large project in HCI. State-of-the-art methods related to the problem domain. Prerequisites CS 377, 147, 247, or permission from instructor.

CS 294S. Research Project in Software Systems and Security. 3 Units.

Topics vary. Focus is on emerging research themes such as programmable open mobile Internet that spans multiple system topics such as human-computer interaction, programming systems, operating systems, networking, and security. May be repeated for credit. Prerequisites: CS 103 and 107.

CS 294W. Writing Intensive Research Project in Computer Science. 3 Units.

Restricted to Computer Science and Computer Systems Engineering undergraduates. Students enroll in the CS 294W section attached to the CS 294 project they have chosen.

CS 295. Software Engineering. 2-3 Units.

Software specification, testing, and verification. Emphasis is on current best practices and technology for developing reliable software at reasonable cost. Assignments focus on applying these techniques to realistic software systems. Prerequisites: 108. Recommended a project course such as 140, 143, or 145.

CS 298. Seminar on Teaching Introductory Computer Science. 1 Unit.

Faculty, undergraduates, and graduate students interested in teaching discuss topics raised by teaching computer science at the introductory level. Prerequisite: consent of instructor.

Same as: EDUC 298

CS 300. Departmental Lecture Series. 1 Unit.

Priority given to first-year Computer Science Ph.D. students. CS Masters students admitted if space is available. Presentations by members of the department faculty, each describing informally his or her current research interests and views of computer science as a whole.

CS 309. Industrial Lectureships in Computer Science. 1 Unit.

Guest computer scientist. By arrangement. May be repeated for credit.

CS 309A. Cloud Computing. 1 Unit.

For science, engineering, business, medicine, and law students. Cloud computing is bringing information systems out of the back office and making it core to the entire economy. This class is intended for all students who want to begin to understand the implications of this shift in technology. Guest industry experts are public company CEOs who are delivering application, software development, operations management, compute, storage & data center, and network cloud services.

CS 315A. Parallel Computer Architecture and Programming. 3 Units.

The principles and tradeoffs in the design of parallel architectures. Emphasis is on naming, latency, bandwidth, and synchronization in parallel machines. Case studies on shared memory, message passing, data flow, and data parallel machines illustrate techniques. Architectural studies and lectures on techniques for programming parallel computers. Programming assignments on one or more commercial multiprocessors. Prerequisites: EE 282, and reasonable programming experience.

CS 316. Advanced Multi-Core Systems. 3 Units.

In-depth coverage of the architectural techniques used in modern, multi-core chips for mobile and server systems. Advanced processor design techniques (superscalar cores, VLIW cores, multi-threaded cores, energy-efficient cores), cache coherence, memory consistency, vector processors, graphics processors, heterogeneous processors, and hardware support for security and parallel programming. Students will become familiar with complex trade-offs between performance-power-complexity and hardware-software interactions. A central part of CS316 is a project on an open research question on multi-core technologies. Prerequisites: EE 108B. Recommended: CS 149, EE 282.

Same as: EE 382E

CS 319. Topics in Digital Systems. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 323. Automated Reasoning: Theory and Applications. 3-4 Units.

Intelligent computer agents must reason about complex, uncertain, and dynamic environments. This course is a graduate level introduction to automated reasoning techniques and their applications, covering logical and probabilistic approaches. Topics include: logical and probabilistic foundations, backtracking strategies and algorithms behind modern SAT solvers, stochastic local search and Markov Chain Monte Carlo algorithms, variational techniques, classes of reasoning tasks and reductions, and applications.

CS 327A. Advanced Robotic Manipulation. 3 Units.

Advanced control methodologies and novel design techniques for complex human-like robotic and bio mechanical systems. Class covers the fundamentals in operational space dynamics and control, elastic planning, human motion synthesis. Topics include redundancy, inertial properties, haptics, simulation, robot cooperation, mobile manipulation, human-friendly robot design, humanoids and whole-body control. Additional topics in emerging areas are presented by groups of students at the end-of-quarter mini-symposium. Prerequisites: 223A or equivalent.

CS 328. Topics in Computer Vision. 3 Units.

Fundamental issues of, and mathematical models for, computer vision. Sample topics: camera calibration, texture, stereo, motion, shape representation, image retrieval, experimental techniques. May be repeated for credit. Prerequisites: 205, 223B, or equivalents.

CS 329. Topics in Artificial Intelligence. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 331A. Advanced Reading in Computer Vision. 3 Units.

(Formerly CS323) The field of computer vision has seen an explosive growth in past decade. Much of recent effort in vision research is towards developing algorithms that can perform high-level visual recognition tasks on real-world images and videos. With development of Internet, this task becomes particularly challenging and interesting given the heterogeneous data on the web. Course will focus on reading recent research papers that are focused on solving high-level visual recognition problems, such as object recognition and categorization, scene understanding, human motion understanding, etc. Project required. Prerequisite: some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

CS 331B. 3D Representation and Recognition. 3 Units.

The course surveys recent developments in high level and 3D computer vision and will focus on reading recent research papers on topics related to 3D object recognition and representation, spatial inference, activity understanding, human vision and 3D perception. The course is inspired by a famous series of workshops (called 3d-RR) which have been offered during the International Conference in Computer Vision (ICCV) since 2007. Prerequisites - Some experience in research with one of the following fields: computer vision, image processing, computer graphics, machine learning.

CS 334A. Convex Optimization I. 3 Units.

Convex sets, functions, and optimization problems. The basics of convex analysis and theory of convex programming: optimality conditions, duality theory, theorems of alternative, and applications. Least-squares, linear and quadratic programs, semidefinite programming, and geometric programming. Numerical algorithms for smooth and equality constrained problems; interior-point methods for inequality constrained problems. Applications to signal processing, communications, control, analog and digital circuit design, computational geometry, statistics, machine learning, and mechanical engineering. Prerequisite: linear algebra such as EE263, basic probability. Same as: CME 364A, EE 364A

CS 340. Topics in Computer Systems. 3-4 Units.

Topics vary every quarter, and may include advanced material being taught for the first time. May be repeated for credit.

CS 341. Project in Mining Massive Data Sets. 3 Units.

Team project in data-mining of very large-scale data, including the problem statement and implementation and evaluation of a solution; some lectures on relevant materials will be given: Hadoop, Hive, Amazon EC2; other topics of possible relevance to some projects: computational advertising and the adwords problem; graph partitioning and community detection; extracting relations from the Web; stream data processing.

CS 344. Topics in Computer Networks. 3 Units.

High-performance embedded system design. Student teams of two software engineers (C experience required) and one hardware engineer (Verilog experience required) build a fully functioning Internet router. Work in teams of three. How router interoperates with others in class. Open-ended design challenge judged by panel of industry experts. Prerequisites: CS 144, 244, or network programming experience.

CS 344E. Advanced Wireless Networks. 3 Units.

Networking research in wireless systems. Topics include: multi-channel/multi-radio systems, routing, coding, physical layer hints, low power, mesh networking, interference cancellation, technological trends, and protocol design. Students implement and test research ideas on SWAN, a WiFi testbed.

CS 344G. (Your) Great Ideas for Networked Applications. 3 Units.

Graduate project class on computer networking, emphasizing end-to-end applications and protocols. Students will propose and execute an original project in teams of 2-3, culminating in a final writeup and presentation/demonstration. Each week, students will read, present, and lead a discussion about a seminal paper or system. Prerequisites: programming experience; CS 244 recommended but not required.

CS 346. Database System Implementation. 3-5 Units.

A major database system implementation project realizes the principles and techniques covered in earlier courses. Students independently build a complete database management system, from file structures through query processing, with a personally designed feature or extension. Lectures on project details and advanced techniques in database system implementation, focusing on query processing and optimization. Guest speakers from industry on commercial DBMS implementation techniques. Prerequisites: 145, 245, programming experience in C++.

CS 347. Parallel and Distributed Data Management. 3 Units.

The principles and system organization of distributed and parallel databases. Data fragmentation and distribution, distributed database design, query processing and optimization, distributed concurrency control, reliability and commit protocols, and replicated data management. Data management in peer-to-peer systems. Data management in the "cloud" using map-reduce and other massive parallelism techniques.

CS 348B. Computer Graphics: Image Synthesis Techniques. 3-4 Units.

Intermediate level, emphasizing high-quality image synthesis algorithms and systems issues in rendering. Topics include: Reyes and advanced rasterization, including motion blur and depth of field; ray tracing and physically based rendering; Monte Carlo algorithms for rendering, including direct illumination and global illumination; path tracing and photon mapping; surface reflection and light source models; volume rendering and subsurface scattering; SIMD and multi-core parallelism for rendering. Written assignments and programming projects. Prerequisite: 248 or equivalent. Recommended: Fourier analysis or digital signal processing.

CS 349. Topics in Programming Systems. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 349C. Topics in Programming Systems: Readings in Distributed Systems. 1-3 Unit.

Discussion of research publications that are of current interest in distributed systems. Students are expected to read all papers, and sign up for presentation of one paper. The course itself is 1 unit. Those interested in working on a project along with the readings should enroll for 3 units.

CS 358. Topics in Programming Language Theory. 3 Units.

Topics of current research interest in the mathematical analysis of programming languages, structured operational semantics, domain theory, semantics of concurrency, rich type disciplines, problems of representation independence, and full abstraction. See Time Schedule or Axxess for current topics. May be repeated for credit. Prerequisites: 154, 157, 258, or equivalents. (Staff).

CS 359. Topics in the Theory of Computation. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 361A. Advanced Algorithms. 3 Units.

Advanced data structures: union-find, self-adjusting data structures and amortized analysis, dynamic trees, Fibonacci heaps, universal hash function and sparse hash tables, persistent data structures. Advanced combinatorial algorithms: algebraic (matrix and polynomial) algorithms, number theoretic algorithms, group theoretic algorithms and graph isomorphism, online algorithms and competitive analysis, strings and pattern matching, heuristic and probabilistic analysis (TSP, satisfiability, cliques, colorings), local search algorithms. May be repeated for credit. Prerequisite: 161 or 261, or equivalent.

CS 361B. Advanced Algorithms. 3 Units.

Topics: fundamental techniques used in the development of exact and approximate algorithms for combinatorial optimization problems such as generalized flow, multicommodity flow, sparsest cuts, generalized Steiner trees, load balancing, and scheduling. Using linear programming, emphasis is on LP duality for design and analysis of approximation algorithms; interior point methods for LP. Techniques for development of strongly polynomial algorithms. Prerequisites: 161 or 261, or equivalent.

CS 364A. Algorithmic Game Theory. 3 Units.

Topics at the interface of computer science and game theory such as: algorithmic mechanism design; combinatorial auctions; computation of Nash equilibria and relevant complexity theory; congestion and potential games; cost sharing; game theory and the Internet; matching markets; network formation; online learning algorithms; price of anarchy; prior-free auctions; selfish routing; sponsored search. Prerequisites: 154N and 161, or equivalents.

CS 369. Topics in Analysis of Algorithms. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 369E. Topics in Analysis of Algorithms: Communication Complexity. 3 Units.

Fundamentals of communication complexity, with a strong emphasis on applications to proving lower bounds in important computational models. Application areas include data stream algorithms, data structures, extended formulations of linear programs, and combinatorial auctions. Same as: for Algorithm Designers

CS 371. Computational Biology in Four Dimensions. 3 Units.

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course). Same as: CME 371

CS 373. Statistical and Machine Learning Methods for Genomics. 3 Units.

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets. Same as: BIO 268, BIOMEDIN 245, GENE 245, STATS 345

CS 374. Algorithms in Biology. 2-3 Units.

Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents. Same as: BIOMEDIN 374

CS 376. Human-Computer Interaction Research. 3-4 Units.

Prepares students to conduct original HCI research by reading and discussing seminal and cutting-edge research papers. Main topics are ubiquitous computing, social computing, and design and creation; breadth topics include HCI methods, programming, visualization, and user modeling. Student pairs perform a quarter-long research project. Prerequisites: For CS and Symbolic Systems undergraduates/masters students, CS 147 or CS 247. No prerequisite for PhD students or students outside of CS and Symbolic Systems.

CS 377. Topics in Human-Computer Interaction. 2-3 Units.

Contents change each quarter. May be repeated for credit. See <http://hci.stanford.edu/academics> for offerings.

CS 377D. Topics in Learning and Technology: d.compress - Designing Calm. 3 Units.

Contents of the course change each year. The course can be repeated. Stress silently but steadily damages physical and emotional well-being, relationships, productivity, and our ability to learn and remember. This highly experiential and project-oriented class will focus on designing interactive technologies to enable calm states of cognition, emotion, and physiology for better human health, learning, creativity and productivity. Same as: EDUC 328A

CS 377E. Designing Solutions to Global Grand Challenges. 3-4 Units.

In this course we will creatively apply information technologies to collectively attack Global Grand Challenges (e.g., global warming, rising healthcare costs and declining access, and ensuring quality education for all). Interdisciplinary student teams will carry out needfinding within a target domain, followed by brainstorming to propose a quarter long project. Teams will spend the rest of the quarter applying user-centered design methods to rapidly iterate through design, prototyping, and testing of their solutions. This course will interleave a weekly lecture with a weekly studio session where students apply the techniques hands-on in a small-scale, supportive environment.

CS 377W. HCI Issues in Wearable Computing. 3 Units.

With devices like Pebble and Google Glass moving from labs to consumer use, Wearable Computing represents the forefront of HCI innovation. In this course, students will engage with a broad range of issues around the design and development of wearable devices and systems and develop their own wearable interaction. The course begins with use, analysis, and redesign of an existing wearable, followed by a larger group project integrating concepts from the course to prototype a novel wearable interaction. Students work in project teams, prototyping their wearable concept and communicating their progress through demonstration, final report, and presentation. Google Glass will be available for students interested in experimenting with this platform. Prerequisites: One of the following: CS 147 or CS 247.

CS 379. Interdisciplinary Topics. 3 Units.

Advanced material is often taught for the first time as a topics course, perhaps by a faculty member visiting from another institution. May be repeated for credit.

CS 379C. Computational Models of the Neocortex. 3 Units.

Repraisal of course offered spring 2012 of the same name ; see <http://www.stanford.edu/class/cs379c/> for more detail ; which emphasized scaling the technologies of systems neuroscience to take advantage of the exponential trend in computational power known as Moore's Law. Course covers many of the same topics but will focus on the near-term prospects for practical advances in health care, prosthetic augmentation, and artificial intelligence inspired by biological systems. Graded pass / no credit on the basis of class participation, a midterm white paper or business prospectus and a final technical report evaluating an appropriate technology selected in collaboration with the instructor. Focus will be on examining the assumptions underlying current claims for realizing the potential benefits of research in neuroscience and identifying real business opportunities, disruptive new technologies and advances in medicine that could substantially benefit patients within the next decade. Technology-minded critical thinkers seriously interested in placing their bets and picking careers in related areas of business, technology and science are welcome. Prerequisites: basic probability theory, algorithms, and statistics.

CS 379L. Designing Liberation Technology. 3-4 Units.

Small project teams work with NGOs to design new technologies for promoting development and democracy. Students conduct observations to identify needs, generate concepts, create prototypes, and test their appropriateness. Some projects may continue past the quarter toward full-scale implementation. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s). Design Institute class; see <http://dschool.stanford.edu>. Same as: POLISCI 337T

CS 390A. Curricular Practical Training. 1 Unit.

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390 A, B, and C may each be taken once.

CS 390B. Curricular Practical Training. 1 Unit.

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

CS 390C. Curricular Practical Training. 1 Unit.

Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. 390A,B,C may each be taken once.

CS 390P. Part-time Curricular Practical Training. 1 Unit.

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

CS 390Q. Part-Time Curricular Practical Training. 1 Unit.

For qualified computer science PhD students only. Permission number required for enrollment; see the CS PhD program administrator in Gates room 196. May be taken just once; not repeatable. Educational opportunities in high technology research and development labs in the computing industry. Qualified computer science students engage in research and integrate that work into their academic program. Students register during the quarter they are employed and complete a research report outlining their work activity, problems investigated, results, and follow-on projects they expect to perform. Students on F1 visas should be aware that completing 12 or more months of full-time CPT will make them ineligible for Optional Practical Training (OPT).

CS 393. Computer Laboratory. 1-9 Unit.

For CS graduate students. A substantial computer program is designed and implemented; written report required. Recommended as a preparation for dissertation research. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

CS 395. Independent Database Project. 1-6 Unit.

For graduate students in Computer Science. Use of database management or file systems for a substantial application or implementation of components of database management system. Written analysis and evaluation required. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

CS 399. Independent Project. 1-9 Unit.

Letter grade only.

CS 399P. Independent Project. 1-9 Unit.

Graded satisfactory/no credit.

CS 402. Beyond Bits and Atoms: Designing Technological Tools. 3-4 Units.

Practicum in designing and building technology-enabled curricula and hands-on learning environments. Students use software toolkits and state-of-the-art fabrication machines to design educational software, educational toolkits, and tangible user interfaces. The course will focus on designing low-cost technologies, particularly for urban school in the US and abroad. We will explore theoretical and design frameworks from the constructionist learning perspective, critical pedagogy, interaction design for children. Same as: EDUC 236X

CS 402L. Beyond Bits and Atoms - Lab. 1-3 Unit.

This course is a hands-on lab in the prototyping and fabrication of tangible technologies, with a special focus in learning and education. We will learn how to use state-of-the-art fabrication machines (3D printers, 3D scanners, laser cutters, routers) to design educational toolkits, educational toys, science kits, and tangible user interfaces. A special focus of the course will be to design low-cost technologies, particularly for urban school in the US and abroad.

Same as: EDUC 211X

CS 424M. Learning Analytics and Computational Modeling in Social Science. 3-4 Units.

Computational modeling and data-mining are dramatically changing the physical sciences, and more recently also the social and behavioral sciences. Traditional analysis techniques are insufficient to investigate complex dynamic social phenomena as social networks, online gaming, diffusion of innovation, opinion dynamics, classroom behavior, and other complex adaptive systems. In this course, we will learn about how modeling, network theory, and basic data-mining can support research in cognitive, and social sciences, in particular around issues of learning, cognitive development, and educational policy. Same as: EDUC 390X

CS 427. Hero's Journey: AI and Game Theory in 3D Real-time Storytelling. 3-4 Units.

In the Heroquest; Journey course, the students create a third person game by focusing on creating stories from interactions between the 3D characters and their environment. Each story is auto-generated depending on the narrative framework implemented, and the actions each of the characters decide to take. The focus is creating heroquest;s that act and react in a believable manner in a dynamic environment.

CS 431. High-Level Vision: Object Representation. 3 Units.

(Formerly CS423 High-Level Vision: Behaviors, Neurons, and Computational Models) Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations. Same as: PSYCH 250

CS 442. High Productivity and Performance with Domain-specific Languages in Scala. 3 Units.

Introduction to developing domain specific languages (DSLs) for productivity and performance using the Scala programming language. Goal is to equip students with the knowledge and tools to develop DSLs that can dramatically improve the experience of using high performance computation in important scientific and engineering domains. Aimed at two sorts of students: domain experts who can define key domain specific language elements that capture domain knowledge, and computer scientists who can implement these DSLs using a new DSL framework in Scala. First half of the course will focus on understanding the infrastructure for implementing DSLs in Scala and developing techniques for defining good DSLs. Second half of the course will focus on example DSLs that provide both high-productivity and performance. During the second half of the course groups of students will develop and implement their own DSLs using the Delite DSL process of implementing DSLs for parallel computation. Prerequisites: Systems course such as CS140, CS143 or CS149, and expertise is a particular domain and desire to improve productivity and performance of computation.

CS 448. Topics in Computer Graphics. 3-4 Units.

Topic changes each quarter. Recent topics: computational photography, datannvisualization, character animation, virtual worlds, graphics architectures, advanced rendering. See <http://graphics.stanford.edu/courses> for offererings and prerequisites. May be repeated for credit.

CS 448B. Data Visualization. 3 Units.

Techniques and algorithms for creating effective visualizations based on principles from graphic design, visual art, perceptual psychology, and cognitive science. Topics: graphical perception, data and image models, visual encoding, graph and tree layout, color, animation, interaction techniques, automated design. Lectures, reading, and project. Prerequisite: one of 147, 148, or equivalent.

CS 448I. Computational Imaging and Display. 3 Units.

Spawned by rapid advances in optical fabrication and digital processing power, a new generation of imaging technology is emerging: computational cameras at the convergence of applied mathematics, optics, and high-performance computing. Similar trends are observed for modern displays pushing the boundaries of resolution, contrast, 3D capabilities, and immersive experiences through the co-design of optics, electronics, and computation. This course serves as an introduction to the emerging field of computational imaging and displays. Students will learn to master bits and photons.

Same as: EE 367

CS 448X. Math and Computer Science behind Special Effects. 3 Units.

Course will focus on a number of case studies of special effects work in feature films, with the aim of elucidating the underlying technical challenges from the standpoint of mathematics and computer science. As a project based class, individuals may more deeply focus on the individual aspects of most interest to them be it rendering, computational geometry, computer vision, physical simulation, or character animation. Guests from industry will speak about effects work they and their colleagues have been involved in as well as discuss some current challenges in the industry. Students will be asked to submit some current challenges either alone or in an appropriate group. Since course may be taken multiple times for credit, and will be open to both undergraduate and graduate students with varied backgrounds and interests, grading will be based on individual effort relative to preparation. As such currently there are no prerequisites enforced.

CS 476A. Music, Computing, and Design I: Software Paradigms for Computer Music. 1-4 Unit.

Software design and implementation for computer audio. Strategies, best practices, and tradeoffs in building audio software systems of various sizes (S, M, L, XL), with a focus on interactive (real-time) systems. Lectures examine high-level designs as well as dissect code in a hands-on manner. Course work includes small programming assignments and a final software project. This course is the prerequisite for MUSIC 256B. Prerequisite: experience in C/C++ and/or Java.

Same as: MUSIC 256A

CS 476B. Music, Computing, Design II: Mobile Music. 1-4 Unit.

Aesthetic, design, and implementation of mobile music, centered around the modern super smartphones such as the iPhone). Similarities and intrinsic differences between mobile and traditional computing and design for music. Topics include mobile software design, social and cloud computing, mobile interface design, and programming phones, in the service of music. Prerequisite: MUSIC 256A.

Same as: MUSIC 256B

CS 499. Advanced Reading and Research. 1-15 Unit.

Letter grade only. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

CS 499P. Advanced Reading and Research. 1-15 Unit.

Graded satisfactory/no credit. Advanced reading and research for CS graduate students. Register using the section number associated with the instructor. Prerequisite: consent of instructor.

CS 545. Information and Data Analytics Seminar. 1 Unit.

Seminar features leading industrial and academic experts on big data analytics, information management, data mining, machine learning, and large-scale data processing.
