

STANFORD UNIVERSITY

STANFORD BULLETIN 2014-15

ACCREDITATION

Stanford University is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar.

STATEMENT OF NONDISCRIMINATORY POLICY

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

GOVERNING DOCUMENT/RESERVATION OF RIGHTS

Every effort is made to ensure that the degree requirement and course information, applicable policies, and other materials contained in the Stanford Bulletin are accurate and current. The University reserves the right to make changes at any time without prior notice. The Bulletin in the form as it exists online at Stanford Bulletin web site and ExploreCourses web site is therefore the governing document, and contains the then currently applicable policies and information. The University no longer produces an official hard copy version of the Bulletin.

ADDITIONAL INFORMATION

Additional information on Stanford University can be obtained through Stanford's web site at <http://www.stanford.edu>.

Academic Calendar

This calendar is also available at the University Registrar's web site (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). All dates are subject to change at the discretion of the University.

Autumn Quarter 2014-15

Date(s)	Day/Time	Description
August 1	Fri	Axess opens for course enrollment.
August 25	Mon	1st-year M.D. instruction begins.
August 28	Thu	2nd-year M.D. instruction begins.
September 2	Tue	Law School instruction begins for 1st-year J.D. students.
September 12	Fri, 5:00 p.m.	At-status enrollment deadline in order to receive stipend or financial aid refund by first day of term.
September 15	Mon	MBA first-year instruction begins.
September 16	Tue	New undergraduates arrive; Convocation.
September 18	Thu	Undergraduate housing opens for returning students.
September 22	Mon	First day of quarter; instruction begins.
September 22	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status. The late study list fee is \$200.
September 22	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
September 22	Mon	Law School instruction begins for 2nd- & 3rd-year J.D. & advanced degree students.
September 25	Thu	Conferral of degrees, Summer Quarter, 2012-13
September 26	Fri	GSB course add/drop deadline (GSB courses only).
October 10	Fri, 5:00 p.m.	Final Study List deadline. Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
November 5	Wed, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
November 14	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB.
November 14	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
November 14	Fri, 5:00 p.m.	Application deadline for Autumn Quarter degree conferral.
November 24-28	Mon-Fri	Thanksgiving Recess (no classes).
December 1-7	Mon-Sun	End-Quarter Period.
December 5	Fri	Last day of classes (unless class meets on Sat.)
December 5	Fri	Last opportunity to arrange Incomplete in a course, at last class.

December 5	Fri, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
December 5	Fri, 5:00 p.m.	Late application deadline for Autumn Quarter degree conferral (\$50 fee).
December 5-12	Fri-Fri	Law School examinations.
December 8-12	Mon-Fri	End-Quarter examinations.
December 13	Sat, noon	Undergraduate housing closes for Winter Break.
December 16	Tue, 11:59 p.m.	Grades due.
January 8	Thu	Conferral of degrees, Autumn Quarter.

Winter Quarter 2014-15

Date(s)	Day/Time	Description
October 26	Sun	Axess opens for course enrollment.
December 26	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund by first day of term.
January 3	Sat, 8:00 a.m.	Undergraduate housing opens for Winter Quarter.
January 5	Mon	First day of quarter; instruction begins for all students.
January 5	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status.
January 5	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
January 9	Fri	GSB course add/drop deadline (GSB courses only).
January 19	Mon	Martin Luther King, Jr., Day (holiday, no classes).
January 23	Fri, 5:00 p.m.	Final Study List deadline. Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
February 16	Mon	Presidents' Day (holiday, no classes; Law School does hold classes).
February 19	Thu, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
February 27	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB.
February 27	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
February 27	Fri, 5:00 p.m.	Application deadline for Winter Quarter degree conferral.
March 9-15	Mon-Sun	End-Quarter Period.
March 13	Fri	Last day of classes (unless class meets on Sat.)
March 13	Fri	Last opportunity to arrange Incomplete in a course, at last class.
March 13	Fri, noon	University thesis, D.M.A. final project, Ph.D. dissertation, last day to submit.

March 13	Fri, 5:00 p.m.	Late application deadline for Winter Quarter degree conferral (\$50 fee).
March 13-20	Fri-Fri	Law School examinations.
March 16-20	Mon-Fri	End-Quarter examinations.
March 21	Sat	Undergrad housing move-out (if depending Winter Quarter).
March 24	Tue, 11:59 p.m.	Grades due.
April 2	Thu	Conferral of degrees, Winter Quarter.

Spring Quarter 2014-15

Date(s)	Day/Time	Description
February 8	Sun	Axess opens for course enrollment.
March 20	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund by first day of term.
March 28	Sat	Undergraduate housing move-in date for Spring Quarter.
March 30	Mon	First day of quarter; instruction begins.
March 30	Mon, 5:00 p.m.	Preliminary Study List deadline. Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Special Registration Status.
March 30	Mon, 5:00 p.m.	Deadline to submit Leave of Absence for full refund.
April 2	Thu	MBA first-year instruction begins.
April 7	Tue	GSB course add/drop deadline (GSB courses only).
April 10	Fri, 5:00 p.m.	Application deadline for Spring Quarter degree conferral.
April 17	Fri, 5:00 p.m.	Final Study List deadline. Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
May 12	Tue, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
May 22	Fri, 5:00 p.m.	Change of grading basis deadline, except GSB..
May 22	Fri, 5:00 p.m.	Course withdrawal deadline, except GSB, Law, and M.D.
May 25	Mon	Memorial Day (holiday, no classes).
May 29	Fri	Last day of Law classes.
May 29-June 4	Fri-Thu	End-Quarter Period.
June 1-5	Mon-Fri	Law School examinations.
June 3	Wed	Last day of classes.
June 3	Wed	Last opportunity to arrange Incomplete in a course, at last class.
June 3	Wed, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
June 3	Wed, 5:00 p.m.	Late application deadline for Spring Quarter degree conferral (\$50 fee).
June 4	Thu	Day before finals, no classes.
June 5-10	Fri-Wed	End-Quarter examinations.

June 11	Thu, noon	Grades for graduating students due.
June 12	Fri	Undergraduate housing move-out date (for all students not involved in Commencement).
June 13	Sat	Senior Class Day.
June 13	Sat	Baccalaureate Saturday.
June 14	Sun	Commencement. Conferral of degrees, Spring Quarter.
June 15	Mon	Undergraduate Housing move-out date (for graduates and others involved in Commencement with permission).
June 16	Tue, 11:59 p.m.	Grades for non-graduating students due.

Summer Quarter 2014-15

Date(s)	Day/Time	Description
April 12	Sun	Axess opens for course enrollment.
June 12	Fri	At-status enrollment deadline in order to receive stipend or financial aid refund by first day of term.
June 22	Mon	First day of quarter; instruction begins.
June 22	Mon, 5:00 p.m.	Preliminary Study List deadline.
June 22	Mon	Deadline to submit Leave of Absence for full refund.
July 3	Fri	Independence Day celebrated (holiday, no classes).
July 6	Mon, 5:00 p.m.	Final Study List deadline. Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.
July 24	Fri, 5:00 p.m.	Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.
July 31	Fri, 5:00 p.m.	Change of grading basis deadline.
July 31	Fri, 5:00 p.m.	Course withdrawal deadline.
July 31	Fri, 5:00 p.m.	Application deadline for Summer Quarter degree conferral.
August 8-13	Sat-Thu	End-Quarter Period.
August 13	Thu	Last day of classes.
August 13	Thu	Last opportunity to arrange Incomplete in a course, at last class.
August 15-16	Fri-Sat	End-Quarter examinations.
August 18	Tue, 11:59 p.m.	Grades due.
August 28	Fri, noon	University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.
August 28	Fri, 5:00 p.m.	Late application deadline for Summer Quarter degree conferral (\$50 fee).
September 24	Thu	Conferral of degrees, Summer Quarter.

Academic Calendar 2015-16

First day of classes and last day of finals

- Autumn 2015-16: September 21 and December 11
- Winter 2015-16: January 4 and March 18

- Spring 2015-16: March 28 and June 8 (Commencement June 12)
- Summer 2015-16: June 20 and August 13

Stanford University

The Stanford Bulletin is Stanford University's official catalog of courses, degrees, policies, and University and degree requirements.

- **ExploreDegrees** publishes degree requirements, University requirements, and academic and nonacademic policies and regulations, as well as information on Stanford's schools, departments, and interdisciplinary programs.
- **ExploreCourses** publishes courses and class scheduling for the entire University.

Use the links in the Table of Contents on the left to navigate through the bulletin. Or use the search box to look for specific material.

- For degree requirements in the Graduate School of Business, see the GSB web site (<http://www.gsb.stanford.edu>).
- For M.D. programs in the School of Medicine, see the School of Medicine web site (<http://med.stanford.edu/education>).
- For Law degree programs, see the School of Law web site (<http://www.law.stanford.edu/program/degrees>).

The material presented here was initially published on August 1, 2014.

Governing Document/ Reservation of Rights

Every effort is made to ensure that the degree requirement and course information, applicable policies, and other materials contained in the Stanford Bulletin are accurate and current. The University reserves the right to make changes at any time without prior notice. The Bulletin in the form as it exists online at Stanford Bulletin (<http://bulletin.stanford.edu>) web site and ExploreCourses (<http://explorecourses.stanford.edu>) web site is therefore the governing document, and contains the then currently applicable policies and information. The University no longer produces an official hard copy version of the Bulletin.

Courses of Instruction are available at the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site.

Your feedback is valuable. Send email to reg-webmaster@stanford.edu.

Stanford Bulletins from Earlier Years

See the Previous Stanford Bulletins (<http://exploreddegrees.stanford.edu/archive/#text>) page for Bulletins prior to 2015-16.

Accreditation

Stanford University (<http://www.stanford.edu>) is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar (<http://studentaffairs.stanford.edu/registrar>).

Stanford University is committed to complying with the following requirements enumerated by the Western Association of Schools and Colleges (WASC) in its accreditation process:

"Core Commitment to Institutional Capacity

"The institution functions with clear purposes, high levels of institutional integrity, fiscal stability, and organizational structures to fulfill its purposes.

"Commitment to Educational Effectiveness

"The institution evidences clear and appropriate educational objectives and design at the institutional and program level. The institution employs processes of review, including the collection and use of data, which ensure delivery of programs and learner accomplishments at a level of performance appropriate for the degree or certificate awarded."

For more information, see the University's WASC Accreditation (<http://wasc.stanford.edu>) web site.

Also, see President Hennessy's statement (<http://exploreddegrees.stanford.edu/%20https://sites.stanford.edu/wasc2011/system/files/Institutional%2520Stipulations.pdf>) (pdf) on Stanford's fulfillment of the Core Commitments to Institutional Capacity and Educational Effectiveness.

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Honor Code and Fundamental Standard

Student life at Stanford is governed by the Honor Code and the Fundamental Standard. More information on these policies is available from the Office of Community Standards (<http://studentaffairs.stanford.edu/communitystandards>) and in the Student Affairs (p.) section of this bulletin.

Honor Code

"1. The Honor Code is an undertaking of the students, individually and collectively:

- a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
- b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

Fundamental Standard

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

Registrar's Office

The Stanford Bulletin is an online publication of the Office of the University Registrar (<http://registrar.stanford.edu>), Stanford University.

Address:

Office of the University Registrar
482 Galvez Mall, Suite 120
Stanford University
Stanford, California 94305-6032

Students with questions or issues should contact the Student Services Center (<http://studentservicescenter.stanford.edu>) or file a help ticket (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=ssc>) with Stanford's HelpSU system. Alumni, staff, or the general public may also file a help ticket (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=ssc>) to request the Registrar's Office assistance or to ask for information.

Additional information on Stanford University can be obtained through Stanford's (<http://www.stanford.edu>) web site.

Telephone number for all University departments: Area code: (650) 723-2300.

Stanford's Mission

The Stanford University Founding Grant (https://wasc.stanford.edu/system/files/FoundingGrant_2.pdf) (pdf), dated November 11, 1885, outlines the founding principles of the University. The Founding Grant describes the "Nature, Object, and Purposes of the Institution" founded by Leland Stanford and Jane Lathrop Stanford in these terms:

Its nature, that of a university with such seminaries of learning as shall make it of the highest grade, including mechanical institutes, museums, galleries of art, laboratories, and conservatories, together with all things necessary for the study of agriculture in all its branches, and for mechanical training, and the studies and exercises directed to the cultivation and enlargement of the mind;

Its object, to qualify its students for personal success, and direct usefulness in life;

And its purposes, to promote the public welfare by exercising an influence in behalf of humanity and civilization, teaching the blessings of liberty regulated by law, and inculcating love and reverence for the great principles of government as derived from the inalienable rights of man to life, liberty, and the pursuit of happiness.

Each of Stanford's seven schools has its own mission statement and those can be found by following the links below:

- School of Earth Sciences Mission Statement (<http://pangea.stanford.edu/about>)
- Graduate School of Business Mission Statement (<http://www.gsb.stanford.edu/about/mission.html>)
- School of Humanities and Sciences Mission Statement (<http://www.stanford.edu/dept/humsci/external/about>)
- School of Engineering Mission Statement (<http://soe.stanford.edu/about>)
- School of Medicine Mission Statement (<http://med.stanford.edu/about/vision.html>)

- Graduate School of Education Mission Statement (<http://ed.stanford.edu/suse/aboutsuse/mission.html>)
- Stanford Law School Mission Statement (<http://www.law.stanford.edu/school>)

A Brief History of Stanford

On October 1, 1891, more than 400 enthusiastic young men and women were on hand for opening day ceremonies at Leland Stanford Junior University. They came from all over: many from California, some who followed professors hired from other colleges and universities, and some simply seeking adventure in the West. They came to seize a special opportunity, to be part of the pioneer class in a brand new university. They stayed to help turn an ambitious dream into a thriving reality. As a pioneer faculty member recalled, "Hope was in every heart, and the presiding spirit of freedom prompted us to dare greatly."

For Leland and Jane Stanford on that day, the University was the realization of a dream and a fitting tribute to the memory of their only son, who died of typhoid fever weeks before his 16th birthday, at an age when many young men and women were planning their college education.

From the beginning, it was clear that Stanford would be different. It was coeducational at a time when single-sex colleges were the norm. It was non-sectarian when most private colleges were still affiliated with a church. And it offered a broad, flexible program of study while most schools insisted on a rigid curriculum of classical studies. Though there were many difficulties during the first months (housing was inadequate, microscopes and books were late in arriving from the East), the first year foretold greatness. As Jane Stanford wrote in the summer of 1892, "Even our fondest hopes have been realized."

What manner of people were this man and this woman who had the intelligence, the means, the faith, and the daring to plan a major university in Pacific soil, far from the nation's center of culture?

Leland and Jane Stanford

Although he was trained as a lawyer, Leland Stanford came to California in 1852 to join his five brothers in their mercantile business in the gold fields; Jane Stanford followed in 1855. They established large-scale operations in Sacramento, where Mr. Stanford became a leading figure in California business and politics. One of the "Big Four" who built the western link of the first transcontinental railroad, he was elected Governor of California and later United States Senator. One of the founders of the Republican Party in California, he was an ardent follower of Abraham Lincoln and is credited with keeping California in the Union during the Civil War.

The Case for a Liberal Education

Despite the enormous success they achieved in their lives, Governor and Mrs. Stanford had come from families of modest means and rose to prominence and wealth through a life of hard work. So it was natural that their first thoughts were to establish an institution where young men and women could "grapple successfully with the practicalities of life." As their thoughts matured, however, these ideas of "practical education" enlarged to the concept of producing cultured and useful citizens who were well prepared for professional success. In a statement of the case for liberal education that was remarkable for its time, Leland Stanford wrote, "I attach great importance to general literature for the enlargement of the mind and for giving business capacity. I think I have noticed that technically educated boys do not make the most successful businessmen. The imagination needs to be cultivated and developed to assure success in life. A man will never construct anything he cannot conceive."

Stanford Lands and Architecture

The campus occupies what was once Leland Stanford's Palo Alto Stock Farm and the favorite residence of the Stanford family. The Stanfords purchased an existing estate in 1876 and later acquired much of the land in the local watershed for their stock farm, orchards, and vineyards.

The name of the farm came from the tree El Palo Alto, a coast redwood (*Sequoia sempervirens*), that still stands near the northwest corner of the property on the edge of San Francisquito Creek. Many years ago, one of the winter floods that periodically rushed down the arroyo tore off one of its twin trunks, but half of the venerable old tree lives on, a gaunt and time-scared monument. Named in 1769 by Spanish explorers, El Palo Alto has been the University's symbol and the centerpiece of its official seal.

The Stanfords gave their farm to the University in the Founding Grant of 1885. They personally financed the entire cost of the construction and operation of the University until 1903, when surviving founder Jane Stanford, who performed heroically in keeping the University functioning during difficult times following Leland Senior's death in 1893, turned over control to the Board of Trustees. The founding gift has been estimated at \$25 million, not including the land and buildings.

The general concept for the University grounds and buildings was conceived by Frederick Law Olmsted, the designer of Central Park in New York. A brilliant young Boston architect, Charles Allerton Coolidge, further developed the concept in the style of his late mentor, Henry Hobson Richardson. The style, called Richardsonian Romanesque, is a blend of Romanesque and Mission Revival architecture. It is characterized by rectilinear sandstone buildings joined by covered arcades formed of successive half-circle arches, the latter supported by short columns with decorated capitals.

More than one hundred years later, the University still enjoys 8,180 acres (almost 13 square miles) of grassy fields, eucalyptus groves, and rolling hills that were the Stanfords' generous legacy, as well as the Quadrangle of "long corridors with their stately pillars" at the center of campus. It is still true, as the philosopher William James said, during his stint as a visiting professor, that the climate is "so friendly . . . that every morning wakes one fresh for new amounts of work."

Current Perspectives

In other ways, the University has changed tremendously on its way to recognition as one of the world's great universities. At the hub of a vital and diverse Bay Area, Stanford is less than an hour's drive or Caltrain trip south of San Francisco and just a few miles north of Silicon Valley, an area dotted with computer and high technology firms largely spawned by the University's faculty and graduates. On campus, students and faculty enjoy new libraries, modern laboratories, sports facilities, and comfortable residences. Contemporary sculpture, as well as pieces from the Iris and B. Gerald Cantor Center for Visual Arts (<http://museum.stanford.edu>) at Stanford University's extensive collection of sculpture by Auguste Rodin, can be found throughout the campus, providing unexpected pleasures at many turns.

The Cantor Center opened in January 1999. The center includes the historic Leland Stanford Junior Museum building, the Rodin Sculpture Garden and a new wing with spacious galleries, auditorium, cafe, and bookshop. At the Stanford University Medical Center (<http://stanfordmedicine.org>), world-renowned for its research, teaching, and patient care, scientists and physicians are searching for answers to fundamental questions about health and disease. Ninety miles down the coast, at Stanford's Hopkins Marine Station (<http://hopkins.stanford.edu>) on the Monterey Bay, scientists are working to better understand the mechanisms of evolution and ecological systems.

The University is organized into seven schools: Earth Sciences, Education, Engineering, the Graduate School of Business, Humanities and Sciences, Law, and Medicine. In addition, there are more than 30 interdisciplinary centers, programs, and research laboratories (p.) including: the Hoover Institution on War, Revolution and Peace (<http://www.hoover.org>); the Freeman Spogli Institute for International Studies (<http://fsi.stanford.edu>); the Woods Institute for the Environment (<http://woods.stanford.edu>); the SLAC National Accelerator Laboratory (<http://www.slac.stanford.edu>); and the Stanford Program for Bioengineering, Biomedicine, and Biosciences (Bio-X) (<http://biox.stanford.edu>), where faculty from many fields bring different perspectives to bear on issues and problems. Stanford's Bing Overseas Studies Program (<http://bosp.stanford.edu>) offers undergraduates in all fields remarkable opportunities for study abroad, with campuses in Australia, Barcelona, Beijing, Berlin, Cape Town, Florence, Kyoto, Madrid, Oxford, Paris, and Santiago.

Stanford People

By any measure, Stanford's faculty, which numbers more than 2,000, is one of the most distinguished in the world. It includes 22 living Nobel laureates, 5 Pulitzer Prize winners, 20 National Medal of Science winners, 158 members of the National Academy of Sciences, 277 members of the American Academy of Arts and Sciences, 104 members of the National Academy of Engineering, and 32 members of the National Academy of Education. Yet beyond their array of honors, what truly distinguishes Stanford faculty is their commitment to sharing knowledge with their students. The great majority of professors teach undergraduates both in introductory lecture classes and in small freshman, sophomore, and advanced seminars.

Enrollment in Autumn Quarter 2013 totaled 15,877, of whom 6,980 were undergraduates and 8,897 were graduate students. Like the faculty, the Stanford student body is distinguished. Approximately 17 people apply to Stanford for every student who enters the freshman class. 112 Stanford students have been named Rhodes Scholars and 86 have been named Marshall Scholars. The six-year graduation rate for freshmen who entered Stanford University full-time in 2008 was 90.8 percent. Stanford awarded 5,025 degrees in 2012-13, of which 1,660 were baccalaureate and 5,025 were advanced degrees.

Stanford students also shine in an array of activities outside the classroom, from student government to music, theater, and journalism. Through the Haas Center for Public Service, students participate in dozens of community service activities, such as tutoring programs for children in nearby East Palo Alto, the Hunger Project, and the Arbor Free Clinic.

In the athletic arena, Stanford students have enjoyed tremendous success as well. Stanford fields teams in 36 Division I varsity sports. The Cardinal has won at least one national team championship 37 consecutive years, which leads the NCAA. Stanford has won the Director's Cup, which honors the most successful program in NCAA Division I sports, the last 18 years. Stanford scholar-athletes have earned 151 NCAA Postgraduate Scholarships—a national best.

Stanford graduates can be found in an extraordinary variety of places: in space (the late Sally Ride, '73, Ph.D. '78, was the first American woman in space); on the news (Ted Koppel, M.A. '62, created the successful program Nightline); Broadway (David Henry Hwang, '79, received a Tony Award for his celebrated work, *M. Butterfly*); in San Francisco live theater (Carey Perloff, '80, artistic director of the American Conservatory Theater); at the helm of major corporations (Scott McNealy, '80, founded Sun Microsystems, Sergey Brin, M.S. '95, and Larry Page, M.S. '98, founded Google, and Chih-yuan (Jerry) Yang, '94, and David Filo, '90, founded Yahoo); and on the U.S. Supreme Court (two Stanford graduates, Anthony Kennedy, '58, and Stephen Breyer, '59, currently sit on the high court; Sandra Day O'Connor, '50, J.D. '52, recently retired from the high court, and William Rehnquist, '48, J.D. '52, served until his death in 2005).

Looking Ahead

In her address to the Board of Trustees in July 1904, Jane Stanford said, "Let us not be afraid to outgrow old thoughts and ways, and dare to think on new lines as to the future of the work under our care." Her thoughts echo in the words of Stanford President John Hennessy, who said in his message in the 2002 Annual Report, "Our bold entrepreneurial spirit has its roots in the founders and our location in the pioneering West. In 1904, Jane Stanford defined the challenge for the young University ... Each generation at Stanford has taken this to heart and boldly launched new efforts, from the classroom to the laboratory ... We will continue to innovate and invest in the future ... The pioneering spirit that led the founders and early leaders to 'dare to think on new lines' continues to guide us."

University Governance and Organization

Web Sites: <http://www.stanford.edu/about/administration/> and <http://facts.stanford.edu/administration/>

Stanford University is a trust with corporate powers under the laws of the State of California. The University is a tax-exempt entity under section 501(c)3 of the Internal Revenue Code. Under the provisions of the Founding Grant, the Board of Trustees (with a maximum membership of 38) is custodian of the endowment and all the properties of Stanford University. The board administers the invested funds, sets the annual budget and determines policies for operation and control of the university. Among the powers given to the trustees by the Founding Grant is the power to appoint a president. The board delegates broad authority to the president to operate the university and to the faculty on certain academic matters. The formal legal name is "The Board of Trustees of the Leland Stanford Junior University."

Accreditation

Stanford University is accredited by the Accrediting Commission of Senior Colleges and Universities of the Western Association of Schools and Colleges. (<http://directory.wascenior.org/stanford-university/#zoom=15&lat=3742964&lon=-12217294&layers=TF0BT>)

Executive Officers

Stanford Administration

- John Hennessy, President
- John Etchemendy, Provost
- David Demarest, Vice President for Public Affairs
- David A. Jones, Vice President for Human Resources
- Randall S. Livingston, Vice President for Business Affairs and Chief Financial Officer
- William J. Madia, Vice President, SLAC National Accelerator Laboratory
- Robert Reidy, Vice President for Land, Buildings and Real Estate
- Martin Shell, Vice President for Development
- Howard Wolf, Vice President for Alumni Affairs and President, Stanford Alumni Association
- Debra Zumwalt, Vice President and General Counsel

Cabinet

- Ann Arvin, Vice Provost and Dean of Research
- Harry Elam, Vice Provost for Undergraduate Education
- Chi-Chang Kao, Director, SLAC National Accelerator Laboratory
- Patricia Gumpert, Vice Provost for Graduate Education
- M. Elizabeth Magill, Dean, School of Law
- Pamela Matson, Dean, School of Earth Sciences
- Lloyd Minor, Dean, School of Medicine
- John Mitchell, Vice Provost for Online Learning
- Persis Drell, Dean, School of Engineering
- John Raisian, Director, Hoover Institution on War, Revolution and Peace
- Richard Saller, Dean, School of Humanities and Sciences
- Garth Saloner, Dean, Graduate School of Business
- Deborah Stipek, Dean, Graduate School of Education

The Board of Trustees Powers and Duties

The Board of Trustees is custodian of the endowment and all properties of the University. The Board administers the invested funds, sets the annual budget, and determines policies for the operation and control of the University. The powers and duties of the Board of Trustees derive from the Founding Grant, amendments, legislation, and court decrees. In addition, the Board operates under its own bylaws and a series of resolutions on major policy.

Membership

Board membership is set at 38, including the President of the University who serves ex officio and with vote. Trustees serve a five-year term and are eligible for appointment to one additional five-year term. At the conclusion of that term, a Trustee is not eligible for reelection until after a lapse of one year. Eight of the Trustees are elected or appointed in accordance with the Rules Governing the Election or Appointment of Alumni Nominated Trustees. They serve a five-year term.

Officers of the Board

The officers of the board are a chair, one or more vice chairs, a secretary, and an associate secretary. Officers are elected to one-year terms at the annual meeting in June, with the exception of the chair, who serves a two-year term. Their terms of office begin July 1.

Committees

Standing committees of the Board are Academic Policy, Planning, and Management; Alumni and External Affairs; Audit and Compliance; Development; Finance; Land and Buildings; the Medical Center; and Trusteeship. Special committees include Athletics, Compensation, Investment Responsibility, and Litigation.

Meetings

The Board generally meets five times each year.

Members of the Board of Trustees as of December 1, 2014

- Fred W. Alvarez, Partner, Jones Day, Palo Alto, CA
- Robert M. Bass, President, Keystone Group LP, Fort Worth, TX
- Brook H. Byers, Partner, Kleiner Perkins Caufield & Byers, Menlo Park, CA
- James E. Canales, President, Barr Foundation, Boston, MA
- Bret E. Comolli, Chairman, Asurion Corporation, Atherton, CA
- RoAnn Costin, President, Wilderness Point Investments, Boston, MA
- James G. Coulter, Founding Partner, TPG Capital, LP, San Francisco, CA
- Deborah A. DeCotis, Private Investor, D Squared Holdings LLC, New York, NY
- Steven A. Denning, Chairman, General Atlantic LLC, Greenwich, CT
- Bruce W. Dunlevie, General Partner, Benchmark Capital, Woodside, CA
- Angela S. Filo, Co-Founder, Yellow Chair Foundation, Palo Alto, CA
- Armando Garza, Chairman, Alfa, Garza Garcia, NL, MX
- John A. Gunn, Chairman Emeritus and Director, Dodge and Cox, San Francisco, CA
- Gail B. Harris, Retired Partner, Simpson Thacher & Bartlett LLP, New York, NY
- Christine U. Hazy, Co-Founder and Managing Director, Sketch Foundation, Los Angeles, CA
- John L. Hennessy, President, Stanford University, Stanford, CA
- Ronald B. Johnson, Founder & CEO, Enjoy, Menlo Park, CA
- Tonia G. Karr, San Francisco, CA
- Frank D. Lee, CEO, Dragonfly Sciences, Inc., Wellesley, MA
- Bernard Liautaud, General Partner, Balderton Capital, London, UK
- Susan R. McCaw, President, COM Investments, Santa Barbara, CA
- Lloyd M. Metz, Managing Director, ICV Partners, New York, NY
- Hamid R. Moghadam, Chairman & CEO, Prologis, Inc., San Francisco, CA
- Kenneth E. Olivier, Chairman Emeritus, Dodge and Cox, San Francisco, CA
- Paul A. Ormond, Chairman, President, CEO, HCR ManorCare, Inc., Toledo, OH
- Ruth M. Porat, Exec. Vice President & Chief Financial Officer, Morgan Stanley, New York, NY
- Laurene Powell Jobs, Founder/Chair, Emerson Collective, Palo Alto, CA
- Jeffrey S. Raikes, Co-Founder, the Raikes Foundation, Seattle, WA
- Mindy B. Rogers, Atherton, CA
- Victoria B. Rogers, President, Rose Hills Foundation, Los Angeles, CA
- Kavitar Ram Shriram, Founder, Sheralo Ventures, Menlo Park, CA
- Ronald P. Spogli, Founding Partner, Freeman Spogli & Co., Los Angeles, CA
- Srinija Srinivasan, Palo Alto, CA
- Isaac Stein, President, Waverley Associates, Atherton, CA
- Thomas F. Steyer, Founder & CEO, NextGen Action, San Francisco, CA
- Gene T. Sykes, Global Co-Head of M&A & Chairman, Goldman Sachs Group, Inc., Los Angeles, CA

- Vaughn C. Williams, Of Counsel, Skadden Arps Slate Meagher & Flom, New York, NY
- Jerry Yang, AME Cloud Ventures, Palo Alto, CA

The President

The Founding Grant prescribes that the Board of Trustees shall appoint the President of the University and that the Board shall give to the President the following powers:

- To prescribe the duties of the professors and teachers.
- To prescribe and enforce the course of study and the mode and manner of teaching.
- Such other powers as will enable the President to control the educational part of the University to such an extent that the President may justly be held responsible for the course of study therein and for the good conduct and capacity of the professors and teachers.

The President is also responsible for the management of financial and business affairs of the University, including operation of the physical plant.

The President is responsible for the safety of the campus and may take reasonable steps to protect the University including, but not limited to, barring people from campus who disrupt the normal business operations of the University or who present a threat to the safety of the University community. In extraordinary circumstances, the President may permanently discontinue students who present a threat to the health and safety of the University community.

The President appoints the following, subject to confirmation by the Board: Provost, Vice President for Business Affairs and Chief Financial Officer, Chief Executive Officer of Stanford Management Company, Vice President for Alumni Affairs and President of Stanford Alumni Association, Vice President for Development, Vice President for Public Affairs, Vice President and General Counsel, Vice President for the SLAC National Accelerator Laboratory, and Vice President for Land, Buildings, and Real Estate.

For additional information, see the Office of the President web (<http://www.stanford.edu/dept/president>) site.

Committees and Panels Appointed by the President

University Committees are appointed by and are primarily responsible to the President. Such committees deal with matters on which the responsibility for recommendation or action is clearly diffused among different constituencies of the University. In accordance with the Report on the Committee Structure of the University, Academic Council members are appointed to University Committees on nomination of the Senate Committee on Committees and student members on nomination of the Associated Students of Stanford University (ASSU) Committee on Nominations. The President takes the initiative in the appointment of staff members to such committees. Although immediately responsible to the President, University Committees may be called upon to report to the Senate of the Academic Council or the ASSU. Charges to such committees are set by the President on recommendation of the Committee on Committees and others. There are five University Committees, as follows:

- Advisory Panel on Investment Responsibility and Licensing (APIR-L)
- Committee on Athletics, Physical Education, and Recreation (C-APER)
- Committee on Environmental Health and Safety (C-EH&S)
- Committee on Faculty Staff Human Resources (C-FSHR)
- Panel on Outdoor Art (P-OA)

Additionally there are eleven standing administrative panels which are appointed by the Vice Provost and Dean of Research, and which report through him/her to the President:

- Administrative Panel on Biosafety
- Administrative Panel on Human Subjects in Medical Research-01
- Administrative Panel on Human Subjects in Medical Research-03
- Administrative Panel on Human Subjects in Medical Research-04
- Administrative Panel on Human Subjects in Medical Research-05
- Administrative Panel on Human Subjects in Medical Research-06
- Administrative Panel on Human Subjects in Medical Research-07
- Administrative Panel on Human Subjects in Medical Research-08
- Administrative Panel on Human Subjects in Non-Medical Research-02
- Administrative Panel on Laboratory Animal Care
- Administrative Panel on Radiological Safety

The Provost

The Provost, as the chief academic and budget officer, administers the academic program (instruction and research in schools and other academic units) and University services in support of the academic program (including budgeting and planning, land and buildings, libraries and information resources, and student affairs). In the absence or inability of the President to act, the Provost becomes the Acting President of the University. The Provost shares with the President conduct of the University's relations with other educational institutions, groups, and associations.

Schools of the University

The program of instruction in the University is organized into seven schools:

- Graduate School of Business
- School of Earth Sciences
- Graduate School of Education
- School of Engineering
- School of Humanities and Sciences
- Stanford Law School
- School of Medicine

The deans of the schools report to the Provost.

The Academic Council

Stanford Academic Council (<http://academiccouncil.stanford.edu>) web site.

According to the Articles of Organization of the Faculty, originally adopted by the Board of Trustees in 1904 and revised in 1977, the powers and authority of the faculty are vested in the Academic Council consisting of:

1. the President of the University
2. tenure-line faculty: Assistant, Associate, and Full Professor
3. nontenure-line faculty: Associate and Full Professor followed by the parenthetical notation (Teaching), (Performance), (Applied Research), or (Clinical)
4. nontenure-line research faculty: Assistant Professor (Research), Associate Professor (Research), Professor (Research)
5. Senior Fellows in specified policy centers and institutes
6. certain specified officers of academic administration.

In the Spring of 1968, the Academic Council approved the charter for a Senate to be composed of 55 representatives elected by the Hare System of Proportional Representation and, as ex officio nonvoting members, deans of the academic schools and certain major officers of academic administration.

In the allocation of representation, each school constitutes a major constituency. The Senate may create from time to time other major constituencies as conditions warrant. Approximately one-half of the representatives are allocated to constituencies on the basis of the number of students in those constituencies and the remainder on the basis of the number of members of the Academic Council from each constituency.

Committees of the Academic Council

Committees of the Academic Council are created by and responsible to the Senate of the Academic Council and are appointed by the Committee on Committees of the Senate. Such committees deal with academic policy matters on which the primary responsibility for action and decision lies with the Academic Council or, by delegation, the Senate. Pursuant to the Senate's acceptance on September 25, 1969 of the Report from the Committee on Committees on the Committee Structure of the University and subsequent Senate action, the Senate has established seven standing Committees of the Academic Council, as follows:

- Committee on Academic Computing and Information Systems (C-ACIS)
- Committee on Graduate Studies (C-GS)
- Committee on Libraries (C-Lib)
- Committee on Research (C-Res)
- Committee on Review of Undergraduate Majors (C-RUM)
- Committee on Undergraduate Admissions and Financial Aid (C-UAFA)
- Committee on Undergraduate Standards and Policy (C-USP)

The Senate has also created a Planning and Policy Board of the Senate to consider long-range strategic issues of concern to the faculty. Information regarding charges to these committees is available from the Office of the Academic Secretary to the University.

Associated Students of Stanford University (ASSU)

Web Site: <http://assu.stanford.edu>

All registered undergraduates and graduate students are members of the ASSU. They are governed by the ASSU Constitution and Bylaws, which was last revised and approved by student vote in April 2013.

Executive

The President and Vice President serve as the chief executives and representatives for the Association. The Financial Manager acts as business manager of the ASSU, CEO of Stanford Student Enterprises (SSE), and controller of the Students' Organizations Fund in which ASSU and student organization funds are deposited.

Legislative

There are two legislative bodies, an Undergraduate Senate and a Graduate Student Council, that work together to determine the Association's budgetary, financial, investment, business, and operating policies. In addition, each entity provides funding for student organizations, participates in recommending student appointments to University Committees and advocates on behalf of its constituents. Each body has 15 elected representatives and an elected chair. Both meet regularly to conduct Association business and discuss and act on issues pertinent to student life at Stanford.

University Requirements

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding. Additionally, by accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

Admission and Financial Aid

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex,

age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Visas

In order to register as students, Stanford University requires that all those who are not U.S. citizens or U.S. registered permanent residents must obtain and maintain an appropriate visa status for their stay in the United States. The types of student visas sponsored by Stanford include the following:

1. Student Visa (F-1), obtained with an I-20 Certificate of Eligibility issued by Stanford University. The graduate student on an F-1 visa must enroll in a full course of study. The accompanying spouse or child enters on an F-2 visa. F-2 visa holders may not hold employment or engage in business under any circumstances. The F-2 spouse of an F-1 student may not engage in full-time study, and the F-2 child may only engage if the study is in an elementary or secondary school (kindergarten through twelfth grade). The F-2 spouse and child may engage in study that is avocational or recreational in nature.
2. Exchange Visitor Visa (J-1), obtained with a DS-2019 Certificate of Eligibility issued by Stanford University or a sponsoring agency. This visa is required for graduate students sponsored by certain agencies, foundations, and governments. In some cases, exchange visitors must leave the United States at the conclusion of their programs, may not change to non-student visa status, and may not apply for permanent residency in the United States until they have returned to their home countries for at least two years. The accompanying spouse or child of an exchange visitor enters on a J-2 visa and may, in some cases, obtain permission to work. J-2 dependents can apply for an Employment Authorization document from U.S. Citizenship and Immigration Services in order to be employed in the U.S. There is no regulatory restriction on study for J-2 dependents.

The Certificate of Eligibility (I-20/DS-2019) is issued to an admitted student after receipt of certification of adequate financial support. An F-1 student transferring from another U.S. school must obtain a new I-20 document from Stanford and complete a transfer process at the Bechtel International Center no later than 15 days after the effective date of the transfer. A J-1 student transferring from another U.S. school must obtain a new DS-2019 document from Stanford and complete a transfer process at the Bechtel International Center no later than 30 days after the effective date of the transfer.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Rescission

By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is their own work and, to the best of their knowledge, is complete and accurate. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including:

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant's current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in or a violation of any of the terms of the application process; or
3. if the University learns that an applicant has engaged in behavior prior to the first day of Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an applicant's admission at any time, including after attendance and after degree conferral, if it determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information or has withheld requested information. The University further reserves the right to require applicants to provide additional information and/or authorization for the release of information about any such matter, and to place a hold on registration and/or the conferral of a degree during the investigation into any such matter.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford's Honor Code requiring academic honesty and integrity. The University reserves the right to rescind any degree or honors designation (even after conferral) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Holds

Students with unmet financial (or other University) obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released; as a condition of attending Stanford, students accept this provision.

Undergraduate Admission

Stanford's undergraduate community is drawn from throughout the United States and the world. It includes students whose abilities, intellectual interests, and personal qualities allow them to benefit from and contribute to the University's wide range of teaching and research programs in the humanities, natural sciences, social sciences, and engineering. The University admits students who derive pleasure from learning for its own sake; who exhibit energy, creativity, and curiosity; and who have distinguished themselves in and out of the classroom.

Stanford welcomes a diverse community that cuts across many dimensions. The University does not use quotas of any kind in its admission process: it does not favor particular schools or types of schools, nor any geographic region, nor does it have any racial, religious, ethnic, or gender-related quotas. The University believes that a student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experiences, skills, and interests is essential to the educational process. Applications are encouraged from those who would take the initiative and responsibility for their own education and who would provide additional dimensions to the University and its programs.

In order to preserve the residential character of the University and to maintain a favorable student-faculty ratio, Stanford has a limited undergraduate enrollment. The anticipated size of the freshman class is approximately 1,600-1,700 students who are admitted for Autumn Quarter enrollment. Approximately 20-40 transfer students, entering either the sophomore or junior class, are also typically admitted for Autumn

enrollment if space allows. Each year, the University receives many more applications from qualified students than there are places available.

Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant's financial status, except in the case of international students who are neither U.S. citizens nor U.S. registered permanent residents.

Application procedures, requirements, and deadlines vary from year to year. See the Undergraduate Admission (<http://admission.stanford.edu>) web site for the most recent information and to begin an application online; or call the Office of Undergraduate Admission at (650) 723-2091.

Nonmatriculated Study (Undergraduate)

Permission to enroll at Stanford as a nonmatriculated student during Autumn, Winter, and Spring quarters is not routinely approved except under extenuating circumstances. Nonmatriculated students authorized to enroll at Stanford University are not admitted to any Stanford degree program and are permitted to register for a specific period, usually one, two, or three quarters. Financial assistance from Stanford University is not available. Permission to enroll as a nonmatriculated student does not imply subsequent admission as a matriculated student.

Nonmatriculated status is a privilege and not a right. The University reserves the right, at its discretion, to withhold registration from, or require withdrawal for the program by, any student or applicant. In addition, nonmatriculated status may be revoked at the University's discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Students interested in nonmatriculated status during the Autumn, Winter, and Spring quarters should contact the Office of the University Registrar, not the Office of Undergraduate Admission. Note: newly admitted Stanford students (that is, those admitted to a Stanford degree program) are not eligible to enroll for nonmatriculated study for any quarter, except with the permission of the Vice Provost for Undergraduate Education (or his or her designee) under extenuating circumstances.

High School Nonmatriculated Students

Local high school students are eligible to be considered to attend Stanford as nonmatriculated students on a limited basis when they have exhausted all of the courses in a given discipline offered by their high school. Nonmatriculated high school students are permitted to enroll in one course per quarter and are required to pay the applicable tuition. Permission from the academic department and the University Registrar is required. The Language Center does not allow high school students to enroll in language courses during the academic year. High school students who are accepted to participate in High School Summer College may enroll in language courses as part of Summer Session, space permitting.

Summer Session

Students wishing to enroll as nonmatriculated students during Summer Quarter should contact the Summer Session Office (<http://summer.stanford.edu>) for more information about the Summer Visitor Program (<http://summer.stanford.edu/programs/program/undergraduate-graduate-students-from-other-universities>). Admission to the Summer Visitor Program does not imply regular admission to Stanford for subsequent quarters or to one of Stanford's regular degree programs.

Graduate Admission Matriculated Study (Graduate Students)

Applicants from colleges and universities of recognized standing who hold a U.S. bachelor's degree or its equivalent are eligible to be considered for admission for graduate study. Details regarding degrees offered in specific departments are given on the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. The number of applicants who can be admitted for work in a particular field of study at any time is limited by the facilities and programs of the school or department and by the number of matriculated students who continue their work in that field.

As with its undergraduate program, Stanford believes that a graduate student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experience, skills, and interests is essential to the graduate educational process. It particularly welcomes applications from African Americans, Latinos, and Native Americans, as well as from others whose backgrounds and experiences would add additional dimensions to the University's educational programs.

Honors Cooperative Program

The Honors Cooperative Program (HCP) is a part-time graduate program offered by Stanford University. It allows working professionals, who may be eligible for tuition support through their employer, an opportunity to earn a graduate degree in any of the engineering programs, applied physics, statistics, or biomedical informatics, on a part-time basis.

Prospective HCP students apply to the department in which they would like to pursue a graduate degree through the normal graduate admissions process, and compete with all other applicants for admission to the program. Once admitted, HCP students arrange their part-time status and tuition payment options through the Stanford Center for Professional Development (SCPD). Courses are delivered online and broadcast locally. HCP students are also welcome to attend certain classes on campus, and some on-campus attendance may be required depending on the degree track.

To participate, HCP students must have the support of their employer as a participating company of the Stanford Center for Professional Development. For more information, see <http://scpd.stanford.edu>, or phone (650) 725-3000.

The Coterminal Degree Program

This program permits matriculated Stanford undergraduates to study for bachelor's and master's degrees simultaneously in the same or different departments. Application policies and procedures are established by each master's department. Applicants must have earned a minimum of 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. This is normally the Winter Quarter prior to Spring Quarter graduation. Interested Stanford undergraduates should contact directly the department in which they wish to pursue a master's degree and must adhere to the application deadlines. Students who decide to apply for admission to master's programs after these deadlines are not eligible for the coterminal program and must apply through the regular graduate admission process. For more information, see the Coterminal Degrees (p. 41) section of this bulletin.

Application Process

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed on the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Graduate fellowship funds and assistantships are generally committed in March for the entire period comprising Autumn, Winter, and Spring quarters of the next academic year. Awards are seldom made to students who enter the University in Winter, Spring, and Summer quarters; such applicants must meet the same financial aid application requirements as those entering in Autumn Quarter.

Applications are to be submitted electronically for graduate programs in the schools of Business, Earth Sciences, Education, Engineering, Humanities and Sciences, and the Biosciences (non-M.D. programs in Medicine). Application instructions may be found at the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

For admission to the following programs, apply directly via the web sites below.

Business

Admission information is available for the M.B.A., MSx Program, and Ph.D. programs at the Stanford Graduate School of Business Admissions (<http://www.gsb.stanford.edu/admissions>) web site. All applications must be submitted electronically.

Law

Applicants for the JD degree should see the Law School Admissions (http://www.law.stanford.edu/program/degrees/jd/jd_application) web site. Applicants for LLM, JSM, JSD, and MLS degrees can find instructions at the Advanced Degree Programs (<http://www.law.stanford.edu/program/degrees/advanced/application>) web site. These applications are submitted to the Director of Admissions, School of Law, Stanford University, Stanford, CA 94305-8610. The Law School Admissions Test is required.

M.D. Program

Applicants should see the M.D. admissions (<http://med.stanford.edu/md/admissions>) web site or, for additional information about the M.D. program, write to Stanford University School of Medicine, Office of M.D. Admissions, 251 Campus Drive, MSOB X3C01, Stanford, CA 94305-5404. The American Medical College Application Service (AMCAS) application is available at the AMCAS (<http://aamc.org>) web site. Applications and transcripts must be received by AMCAS by October 15. The Medical College Admissions Test is required.

Rescission

By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is their own work and, to the best of their knowledge, is complete and accurate. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including:

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant's current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in or a violation of any of the terms of the application process; or
3. if the University learns that an applicant has engaged in behavior prior to the first day of Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an applicant's admission at any time, including after attendance and after degree conferral, if it

determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information or has withheld requested information. The University further reserves the right to require applicants to provide additional information and/or authorization for the release of information about any such matter, and to place a hold on registration and/or the conferral of a degree during the investigation into any such matter.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford's Honor Code requiring academic honesty and integrity. The University reserves the right to rescind any degree or honors designation (even after conferral) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Holds

Students with unmet financial (or other University) obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released; as a condition of attending Stanford, students accept this provision.

Nonmatriculated Study (Graduate Students)

Eligibility for consideration for nonmatriculated enrollment is restricted to two groups of applicants:

1. Stanford alumni who wish to return to Stanford to take courses that are prerequisites for Medical School admission, such as undergraduate Biology or Chemistry courses, are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, and three letters of recommendation are required. The decision to admit or deny is made by the Director of Graduate Admissions on the basis of relevant factors, including a 3.0 GPA and positive letters of recommendation.
 - a. Applicants who graduated from other universities are not eligible to take the prerequisites for Medical School at Stanford.
2. Individuals who hold a bachelor's degree or equivalent and wish to take courses in a specific department that allows non-degree students are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, original transcripts, and three letters of recommendation are required. The decision to admit or deny is made by the chair of the department in which they wish to take courses and conveyed in writing to the Graduate Admissions Office. Applicants are notified of the decision by Graduate Admissions in the Office of the University Registrar.

Students who are granted nonmatriculated status are charged the 8-10 unit rate for each quarter in which they are enrolled, and may enroll for a maximum of a total of one academic year. Nonmatriculated status is a privilege and not a right; the nonmatriculated status may be revoked at the University's discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Nonmatriculated students are not permitted to enroll in certain courses, such as those in the following departments or programs: film and broadcasting courses in Art; all courses in Computer Science, Economics, Electrical Engineering, International Policy Studies, and the School of Medicine. Nonmatriculated students must limit their enrollment to classes in the

department in which they have been admitted. Nonmatriculated students receive academic credit for courses satisfactorily completed and may obtain an official transcript. As a general proposition, they may use University facilities and services. In classes of limited enrollment, students in degree programs have priority. Nonmatriculated students may apply for housing but have a low priority for assignment and are not guaranteed housing. No fellowships, assistantships, or Stanford loans are available for nonmatriculated students. Nonmatriculated students are not eligible for a leave of absence.

Nonmatriculated students who later apply for admission to a degree program must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a degree program may apply a maximum of 15 units of nonmatriculated study toward the residency requirement for a master's degree and 30 units for the Engineer or Ph.D. degree, subject to the approval of the degree granting department.

Application forms for nonmatriculated status during the regular academic year are available from Graduate Admissions (<https://studentaffairs.stanford.edu/gradadmissions/programs/nondegree>), Office of the University Registrar. Deadlines for applying are included with the forms and are generally required two months before the start of the quarter.

Applicants interested in nonmatriculated student status for the Summer Quarter only should explore the Summer Session website (<http://summer.stanford.edu>).

Non-Degree-Granting Programs

Stanford University has established a limited number of formal non-degree-granting programs within individual departments. These include the Knight Fellowship Program for mid-career journalists (Communication Department), and the Stegner Fellows Program for selected authors (Creative Writing Program, within the English Department).

Individuals may apply to these programs directly. Application requirements, admissions decisions, tuition requirements and financial support are all handled by the specific program. Individuals who are admitted to these programs will be registered at Stanford as nonmatriculated graduate students in the appropriate program. Upon completion of their program, they will receive a transcript and certificate of program completion.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

Stanford Center for Professional Development

Qualified individuals may pursue graduate and professional certificates or take individual graduate and professional courses through the Stanford Center for Professional Development. Nonmatriculated students taking individual graduate courses for credit, or towards earning a graduate certificate, are charged tuition on a per-unit basis. For more information on available courses, applications, and deadlines visit <http://scpd.stanford.edu> or phone (650) 725-3000.

Postdoctoral Scholars

Postdoctoral scholars are trainees in residence at Stanford University pursuing advanced studies beyond the doctoral level in preparation for an independent career. Postdoctoral scholars are appointed for a limited period of time and may participate in Stanford research projects and/or may be supported by external awards or fellowships. In all cases, their appointment

at Stanford is for the purpose of advanced studies and training under the sponsorship of a Stanford faculty member.

Postdoctoral appointments require initial full-time engagement in the designated research or study and are generally restricted to those who have earned a terminal degree such as Ph.D. or J.D. within the last three years or a medical degree such as M.D., M.B.B.S., or D.D.S. within the last six years. Requests for exceptions for individuals who are beyond these limits, or have not been actively engaged in research as their primary effort, must include a written statement from the sponsoring faculty member indicating what additional training outside the primary area of effort the individual plans to receive, and the reasons for which the exception is requested. Postdoctoral scholars are appointed at Stanford for fixed terms, typically one year but that may eventually total up to four years, and are subject to a strict five-year rule (that is, that the total postdoctoral appointment period is not to exceed a total of five years of postdoctoral research experience at all institutions combined). In cases of combined training, only the years of active research at the postdoctoral level are counted for salary and other purposes. Postdoctoral scholars who begin a second postdoctoral appointment in a new field may have training extended to a maximum total of up to six years. Postdoctoral scholars may request temporary reductions in effort and pay due to temporary family or other conditions.

All postdoctoral scholars appointed at Stanford must be supported by Stanford grants and contracts, training grants, departmental or school fellowship funds, or external fellowships, or by a combination of these sources. Scholars may not be self-supporting. In addition, all postdoctoral scholars are eligible for a benefits package including medical, dental, life, and disability insurance. Postdoctoral scholars are normally appointed for 100% time.

Postdoctoral scholars must be registered at Stanford during every academic quarter of their appointment. Registration entails payment of a quarterly postdoctoral fee by the academic department or school appointing the scholar.

Prospective postdoctoral scholars should write directly to the department in which they wish to study or check for postdoctoral openings at <http://postdocs.stanford.edu/prospects/index.html>. For more information, see <http://postdocs.stanford.edu>.

Visiting Student Researchers

In limited instances, it is to the benefit of Stanford faculty to permit graduate students who have not yet obtained a Ph.D. (or its foreign equivalent) to engage in research on the Stanford campus. This could include students from other universities who are engaged in graduate-level research in a field of interest to the faculty member, or students doing a research rotation as part of a larger research study or grant.

These students must be registered as Visiting Student Researchers if they are in residence at Stanford for more than 30 days; they may be registered as Visiting Student Researchers if they are in residence for fewer than 30 days in order to receive the services available to Visiting Student Researchers. Visiting Student Researcher appointments are limited to one year in duration. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford graduate students, and the research must be of benefit to Stanford as well as to the visitor. Forms for the appointment of Visiting Student Researchers are submitted to Graduate Admissions, Office of the University Registrar by the department issuing the invitation.

Under limited circumstances, the faculty sponsor may request an extension of the Visiting Student Researcher's appointment beyond one year. Such extensions require the concurrence of the student's home institution. Extensions beyond the second year are extremely rare, and require approval in advance from the office of the Vice Provost for Graduate Education

Visiting Student Researchers are charged a monthly Visiting Student Researcher fee for each month in which they hold this appointment at Stanford, including partial months. They may waive the University's student medical insurance plan only if they have comparable coverage with another carrier and submit proof of the comparable coverage prior to the term start date. Visiting Student Researchers are not entitled to any financial support from Stanford University. They may not be appointed to any assistantship positions nor hold any named Stanford fellowships. Funds intended for the support of matriculated Stanford students may not be used to support Visiting Student Researchers. Stanford cannot certify visiting researchers for deferment of U.S. educational loans.

Visiting Student Researchers are not permitted to enroll in or audit any courses, but in quarters in which they are registered as Visiting Student Researchers, they are eligible for the usual student benefits of nonmatriculated student status. Students in this status are eligible for graduate on-campus housing on a space-available basis. They are also eligible for participation in the programs offered by the Graduate Life Office (<http://studentaffairs.stanford.edu/glo>).

Visiting Student Researchers are subject to the rules and regulations of Stanford University. These include:

- *Intellectual Property*—Visiting Student Researchers are required to sign an SU-18 Stanford Patent and Copyright Agreement
- *The Honor Code and Fundamental Standard*—Visiting Student Researchers who commit violations of these behavioral standards as reasonably determined by the sponsoring department are subject to termination of their Stanford appointment
- *Required Training*—The faculty member who invited the Visiting Student Researcher is responsible to assure that they receive any required training in order to be able to carry out their research at Stanford, including appropriate privacy and data security training for the protection of personally identifying information and Stanford data, health and safety training, instruction in the protection of human subjects, or any other instruction required by the work that the student will do here.

Citizens of other countries who enter the United States to be Visiting Student Researchers at Stanford must have a DS-2019 Certificate (to apply for a J-1 visa) issued by the Bechtel International Center and must be registered each quarter, including Summer Quarter, to maintain their visa status.

See also the Graduate Academic Policies and Procedures Handbook, Activating Nonmatriculated Graduate Students (GAP 2.3 (<http://gap.stanford.edu/2-3.html>)) and the Research Policy Handbook, Section 10.7 (<http://doresearch.stanford.edu/policies/research-policy-handbook/non-faculty-research-appointments/procedures-appointing-visiting>).

Students of New Faculty

Faculty who are being hired by Stanford University, and who are currently advising doctoral students in advanced stages of degree completion at their home university, may appoint one or more of these students as Students of New Faculty, a nonmatriculated graduate status, for the purpose of facilitating the completion of the student's doctoral research with their faculty adviser. To be eligible for this status, the student must:

- have completed at their home institution all degree requirements equivalent to those required for Stanford's TGR status (i.e., completed all curricular requirements, candidacy, and residency), and
- be in good academic standing at their home institution, and remain so while at Stanford, and
- demonstrate agreement to the terms and conditions for this appointment by signing the Students of New Faculty Representations.

Appointment of these students into nonmatriculated Stanford graduate status requires the approval of the incoming faculty member, that faculty member's Stanford department chair and school dean, and Stanford's office

of the Vice Provost for Graduate Education, as well as of the appropriate office at the student's home institution.

Approval for these appointments is documented by means of an Affiliation Agreement between Stanford and the student's home institution, identifying the student(s) and describing the arrangements for their appointment at Stanford. Attachments to this agreement specify the timing of the appointment and the sources of financial support, if any, for each student.

Students are appointed into this status for one year at a time, up to a limit of three years. The Stanford department may request extensions beyond the third year. Approval for extensions requires the concurrence of the Stanford school dean's office and the Vice Provost for Graduate Education, along with the appropriate office(s) at the student's home institution.

Students of New Faculty must enroll in the appropriate TGR course during each quarter of the academic year while they are at Stanford, and will be charged TGR tuition during each enrolled quarter. Summer enrollment is optional subject to the relevant policies of Stanford and of the home institution. Students of New Faculty may be appointed and paid as Research Assistants. For more information, see GAP 2.4 (<http://gap.stanford.edu/2-4.html>).

Undergraduate Financial Aid

The University has a comprehensive need-based financial aid program for its undergraduates who meet various conditions set by federal and state governments, the University, and other outside agencies. Students are admitted without consideration of their financial circumstances, except in the case of international students.

In awarding its own funds, the University assumes that students and their parents accept the first and primary responsibility for meeting educational costs. Stanford's policy generally is to exclude undergraduates from being considered financially independent of their parents for University-administered scholarship aid unless a student is an orphan, a ward of the court, or at least 25 years of age. Spouses of married undergraduate students share in the responsibility to meet educational costs.

Stanford expects financial aid applicants to apply for and use resources from state, federal, and private funding sources, contribute from their earnings during nonenrollment periods (for example, summer), and use earnings from part-time employment during the academic year to meet educational expenses. If Stanford determines that an applicant and his or her family cannot meet these expenses, the University may offer financial aid funds to help meet these costs.

The amount of scholarship or grant funds offered to students is determined by the difference between the comprehensive cost of attendance (including tuition, fees, room, board and allowances for books, supplies, personal expenses, and travel) and the amount the student and parents can reasonably be expected to contribute toward educational costs based on family financial circumstances. Scholarships from outside sources may change the University's financial aid award. When a student receives outside scholarships, these funds reduce or eliminate the student's responsibility to contribute from job earnings. If the total in outside scholarships exceeds the student's responsibility, the University then reduces institutional scholarship, dollar for dollar, by any additional amount.

Students are considered for University scholarship eligibility during their first four years of undergraduate enrollment. The Financial Aid Office (FAO) considers applicants for University scholarship eligibility beyond the twelfth quarter only if enrollment is essential in order to complete the minimum requirements for the first baccalaureate degree or major. Students who enroll for a fifth year in pursuit of a coterminal program, a minor, a second major, a second degree, or the B.A.S. degree are not eligible for University scholarship consideration but may apply for student loans and federal grants. Eligibility for federal student aid is limited to the equivalent of 18 quarters of full-time undergraduate enrollment, including course

work taken at other colleges and universities. Students must also maintain satisfactory academic progress to retain financial aid eligibility.

For additional detailed information, refer to the FAO (<http://financialaid.stanford.edu>) web site.

Graduate Financial Aid

Graduate students at Stanford receive funding from a variety of sources. University fellowships, research assistantships, and teaching assistantships are offered primarily to doctoral students. In some cases, master's students also may receive fellowships and assistantships. In addition, outside agencies provide fellowships to many graduate students at Stanford. Students without fellowships or assistantships, and those whose funding does not cover all of their costs, may need to use student loans, savings, other personal assets, a spouse's earnings, or parental support to meet their educational expenses.

Veterans' Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans' benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Student (p. 50)s" section of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of \$3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution, so the student receives a combined total of \$6,000 in additional funds. Certain matriculated graduate students may be eligible for the Yellow Ribbon provision, and the amount of institutional contribution varies by school and program at the graduate level.

See the Office of Military Affiliated Communities (OMAC) web site (<https://military.stanford.edu/gi-bill-benefits>) for additional information about veterans' educational benefits..

Tuition, Fees, and Housing

University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding. Additionally, by accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

Regular quarterly tuition for the 2014-15 academic year, payable Autumn, Winter, and Spring quarters, is as follows:

Type	Fee
Undergraduate	\$14,728
Graduate 11-18 units	\$14,728
Graduate 8-10 units	\$9,570
Graduate Engineering 11-18 units	\$15,691
Graduate Engineering 8-10 units	\$10,200
Graduate School of Business, first year MBA	\$20,625
Graduate School of Business, second year MBA	\$19,850
School of Medicine (M.D. Program) 1	\$16,905
Stanford Law School	\$17,450
Law/Business Joint Program	\$18,277
Permit to Attend for Services Only (PSO)	\$4,455
Terminal Graduate Registration (TGR)	\$2,871
Medical School Research Rate	\$3,380

¹ Ph.D. students in the Biomedical Sciences and in the Graduate School of Business are assessed the regular graduate tuition rate.

For complete tuition information, see the Registrar's tuition (http://studentaffairs.stanford.edu/registrar/students/tuition-fees_14-15) web site.

Regular tuition fees apply to the undergraduate Overseas Studies and Stanford in Washington programs.

A coterminal student is subject to graduate tuition assessment and adjustment policies once graduate standing is reached. Coterminal students should see the student policies and procedures for tuition assessment, as

described under in the "Coterminal Degrees (p. 41)" section of this bulletin.

Eligibility for registration at reduced tuition rates is described below. Tuition exceptions may also be made for illness, disability, pregnancy, new-parent relief, or other instances at the discretion of the University. No reduction in tuition charges is made after the first two weeks of the quarter.

All students are advised, before registering at less than the regular full-tuition rate, to consider the effects of that registration on their degree progress and on their eligibility for financial aid and awards, visas, deferment of student loans, and residency requirements.

The University reserves the right to change at any time, without prior notice, tuition, room fees, board fees, or other charges.

Undergraduate Student Tuition

During Autumn, Winter, and Spring quarters, undergraduates are expected to register at the regular full-tuition rate.

During Summer Quarter, Stanford undergraduates may register on a unit-basis (minimum 3 units). For Summer Quarter tuition rates and policies, see the Registrar's summer tuition (http://studentaffairs.stanford.edu/registrar/students/summer-tuition_14-15) web site (https://studentaffairs.stanford.edu/registrar/students/summer-tuition_14-15).

The following reduced-tuition categories can be requested by matriculated undergraduate students in the final stages of their degree program:

1. Permit to Attend for Services Only (PSO)

Undergraduates completing honors thesis, clearing incompletes, or requiring a registration status, and who meet the PSO conditions listed in the "Special Registration Statuses (Undergraduate) (p. 34)" section of this Bulletin, may petition for PSO status one time only in their terminal quarter.

2. 13th Quarter

Undergraduates who meet the 13th Quarter conditions listed in the "Special Registration Statuses (Undergraduate) (p. 34)" section of this Bulletin may petition one time only to register for a minimum of eight units. For per-unit tuition rates, see the Registrar's tuition web site.

3. Graduation Quarter

Undergraduates may petition to register for Graduation Quarter registration status in the quarter in which they are receiving a degree if they are not using any University resources (including housing), have completed all University requirements, and meet the Graduation Quarter conditions listed in the "Special Registration Statuses (Undergraduate) (p. 34)" section of this bulletin. Graduation Quarter may be permitted one time only. The tuition per quarter is \$100 in 2014-15.

Graduate Student Tuition

Matriculated graduate students are expected to enroll for at least eight units during the Autumn, Winter, and Spring quarters. Schools and departments may set a higher minimum. During the Autumn, Winter, and Spring quarters, matriculated graduate students in most departments may register at the reduced 8-, 9-, or 10-unit tuition rate if their enrollment plans are accepted by their departments. Students in the Stanford Law School, the MBA program in the Graduate School of Business, or the M.D. program in the School of Medicine, should consult appropriate school officers about tuition reduction eligibility.

Graduate students who are enrolled in more than one graduate degree at Stanford, where each program charges a different tuition, are charged:

1. the tuition associated with a degree in the doctoral/professional category, if the other degree is in the master's category. Those degrees in the doctoral or professional category for tuition purposes are the Ph.D., D.M.A., J.S.D., M.D., and J.D. degrees. Those degrees in the master's category for tuition purposes are the Engineer, M.A., M.S., M.P.P., M.B.A., M.F.A., L.L.M., M.L.S., and J.S.M. degrees.
2. the higher tuition rate, if both degrees are in the same category.
3. a University-approved tuition rate if the student is in a special program for which specific tuition agreements have been approved by the Faculty Senate (e.g., all joint degree programs (JDPs) or the Master of Science in Medicine program).

As a general proposition, during the Summer Quarter registration is not required by Stanford University and does not substitute for registration during the academic year. Students are required to be enrolled Summer Quarter if, during that quarter, they will meet any of the criteria listed in the "Enrollment Requirements (p.)" section of the "Graduate Degrees" section of this bulletin. Graduate students who do enroll Summer Quarter may reduce their enrollment to a minimum of one unit (charged on a per-unit basis, with a minimum tuition charge at the 1-3 unit rate) unless the terms of a fellowship or other financial support, or of their particular degree program, require a higher level of enrollment. TGR students who enroll in summer pay the TGR rate and must enroll in the required zero-unit course. Students in the schools of Law, Business, or the M.D. program should consult appropriate school officers regarding summer enrollment requirements. Students possessing an F1 or J1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

Honors Cooperative students register at the per-unit rate. Graduate students who are faculty spouses, regular Stanford employees, or full-time educators in the Bay Area may also register at the per-unit rate.

Nonmatriculated graduate students pay the same tuition rates as matriculated students, but must register for at least 8 units. Visiting Student Researchers pay a monthly fee; they may not enroll in or audit courses. Within certain restrictions, postdoctoral scholars may enroll in courses if the appropriate unit rate for tuition is paid.

The following reduced-tuition categories can be requested by matriculated graduate students in the final stages of their degree programs:

1. Terminal Graduate Registration (TGR)

Doctoral students, master's students, and students pursuing Engineer degrees who have completed all degree requirements other than the University oral exam and dissertation (doctoral students) or a required project or thesis (Engineer or master's students) and meet the conditions listed in the "TGR (p.)" section of this bulletin may request Terminal Graduate Registration tuition status.

Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate: \$2,871 per quarter in 2014-15. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status.

2. Graduate Tuition Adjustment

Graduate students who need only 3 to 7 remaining units to complete degree requirements or to qualify for TGR status may apply to register for one quarter only on a unit basis (3 to 7 units) to cover the deficiency. Students with disabilities covered under the Americans with Disabilities Act that have an approved reduced course load (RCL) recommended by the Office of Accessible Education (OAE) (<http://studentaffairs.stanford.edu/oae>) may also request a tuition adjustment for *each* quarter in which they take a RCL. For per-unit tuition rates, see the Registrar's tuition (http://studentaffairs.stanford.edu/registrar/students/tuition-fees_14-15) web site.

3. Graduation Quarter

Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet the conditions listed in the "Graduation Quarter (p.)" section of this bulletin are eligible to be assessed a special tuition rate of \$100 for the quarter in which they are receiving a degree.

International Students

F-1 or J-1 visas are required by the U.S. Department of Homeland Security. International students must be registered as full-time students during the academic year. Summer Quarter registration is not required unless the I-20/DS-2019 notes the Summer Quarter as the start date. International graduate students comply with immigration regulations while enrolled for partial tuition if their Stanford fellowships or assistantships require part-time enrollment, if they are in TGR status, or if they are in the final quarter of a degree program. Nonmatriculated graduate students who are international students must register for at least 8 units.

Application Fee

Contact the Undergraduate Admission Office (<http://admission.stanford.edu>) for information about the undergraduate application fee and the Graduate Admission (<http://gradadmissions.stanford.edu>) section of the Office of the University Registrar for the current graduate application fee. Application fees for the School of Law, the School of Medicine, and the Graduate School of Business vary by program. Fees are payable at the time of application and are not refundable.

ASSU Fees

The Associated Students of Stanford University (ASSU) fees are established by student vote in Spring Quarter. Fees directly fund activities of student organizations and not operations of ASSU. The 2014-15 fees are:

- Undergraduates—\$150 per quarter
- Graduate Students—\$33 per quarter

ASSU fees are assessed in Autumn, Winter and Spring terms and can be waived subject to certain conditions. Waivers can be requested during the first two weeks of each quarter on the ASSU waiver (<http://waivers.stanford.edu>) web site. Waivers granted result in a credit to the student's University bill.

Document Fee

Stanford charges a one-time Document Fee to all students admitted to new degree or non-degree programs. The fee is paid once only, regardless of the number of degrees a student may ultimately pursue. It covers the cost of a variety of University administrative services such as enrollment and degree certification, course drops and adds done in Axess before published deadlines, diplomas, and official transcripts and their production.

The document fee for students admitted to new degree or non-degree programs in 2014-15 is \$200.

Campus Health Service Fee

All students enrolled on the main Stanford campus are required to pay the Campus Health Service Fee. The Campus Health Service Fee covers most of the services provided by Vaden Health Center, including primary care medical visits, psychological evaluation and short-term therapy at Counseling and Psychological Services (CAPS), and health and wellness programs. The services provided by Vaden Health Center are not covered by Cardinal Care or a student's private health insurance. More information and answers to questions about the fee can be found at the Campus Health Service Fee (<http://vaden.stanford.edu/fees/campus-health-fee>) web site. The fee for 2014-15 is \$191 per quarter.

Health Insurance

The University requires all registered students to carry medical insurance to provide coverage for services not provided by Vaden Health Center. Students are enrolled in and charged for the Stanford student health insurance plan, Cardinal Care, unless they have completed waiver procedures by the waiver deadline.

For complete information on health insurance, see the Vaden Health Center Insurance (<http://vaden.stanford.edu/insurance>) web site.

Those who carry medical insurance through an alternate carrier are generally eligible for waiver of the Stanford student health insurance plan. For information on waiver procedures, see the Vaden Health Center Insurance Waiver (http://vaden.stanford.edu/insurance/using_your_own.html#wave) web site.

Special Fees

New Student Orientation Fee

A fee is charged to all entering undergraduates for the costs of orientation, including room and board, and for the cost of class dues to provide funds for later activities of the class.

Law Student Services Fee

A fee is charged each quarter to School of Law students for supplementary course materials.

Graduate School of Business M.B.A. Course Reader Fee

A fee is charged each quarter to M.B.A. students in the Graduate School of Business to cover the cost of in-class handouts and licensing fees.

Late Study List Fees

Charges are imposed for late submission of study lists. The amount is \$200.

Laboratory Fee

Students in chemistry laboratory courses are charged a nonrefundable fee.

Music Practice; Athletics, Physical Education, Recreation; and Dance

Courses for which special fees are charged are indicated in the notes of the scheduled class on Axess (<http://axess.stanford.edu>) or ExploreCourses (<http://explorecourses.stanford.edu>).

Dissertation Fee

Each Ph.D. and D.M.A. candidate has the option to either submit electronically or on paper. Electronic submission is free. Students who choose to submit on paper are charged a fee to cover the cost of microfilming and binding the dissertation and the cost of publishing the abstract.

International Scholar Service Fee

A one-time fee for visa authorization documents is charged to international postdoctoral and visiting scholars.

Housing

University housing is available to enrolled Stanford degree-seeking undergraduates and graduate students as space permits and according to policies described on the R&DE Student Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing>) web site. Residential and Dining Enterprises (R&DE) Student Housing is responsible for: managing and maintaining student residences; assigning students to housing; and operating the regional housing front desks. Information on University housing assignments, options, policies, application procedures, and deadlines may be obtained on the R&DE Student Housing (<http://studenthousing.stanford.edu>) web site, by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 725-2810, or by email at studenthousing@stanford.edu (housingassignments@lists.stanford.edu). Current and prospective students may also contact R&DE Student Housing by filing a HelpSU request. Information regarding off-campus housing may be obtained from Community Housing on the R&DE Student Housing (<http://offcampus.stanford.edu>) web site, by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 723-3906, or by email at communityhousing@lists.stanford.edu. For other housing related information, email studenthousing@lists.stanford.edu or phone the main R&DE Student Housing office at (650) 725-1600.

The department of Residential Education (<http://www.stanford.edu/dept/resed>) (650-725-2800) and the Graduate Life Office (<http://www.stanford.edu/group/glo>) (650-723-1171) are responsible for residential staff, educational programs, counseling, and crisis intervention.

Housing Rates

Complete information on housing is available on the R&DE Student Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing>) web site. Campus housing rates are generally below local area market rents.

- See Apply for Housing (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/apply/apply-housing>) to apply for upperclass undergraduate, single graduate, couple without children, or student with children housing.
- Rates for 2014-15 are posted online: undergraduate residence rates chart (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/charts/undergraduate-residences-rates-chart-2014-15>), graduate residence

rates chart (http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/sites/default/files/pdfs/2014-15_Grad_RatesChart.pdf).

All on-campus rates are per student and include utilities and coinless laundry. Room rates are charged quarterly on the University bill. Information on payment options and procedures is discussed in assignment information sent out by R&DE Student Housing and in the Payments section of the Stanford Bulletin.

House Dues

A quarterly house dues fee for students is generally determined by the local residence staff and/or residents of each house and may be included with room and board charges on the University bill.

Communications Fee

Students who live in housing are automatically assessed a communications fee on their University bill that covers in-room network connections and a land-line phone with basic telephone service.

Undergraduate Residences

Approximately 96 percent of undergraduates live in University housing, not counting students studying abroad during the academic year. All freshmen and transfers (for their first year) are required to live in University residences for educational reasons and are automatically assigned housing following admission. Because freshmen must live in campus housing, losing eligibility for University housing will also likely lead to a loss of student status until the student has returned to University housing, unless an extraordinary exemption is granted from the office of the Vice Provost for Undergraduate Education.

Residence assignments for continuing undergraduates are made on the basis of an annual lottery, called the Draw, and quarterly waiting lists. Undergraduates are guaranteed four years of University housing (two or three years for transfer students based on their entering class standing) if:

1. they are in compliance with the University housing agreement and University policies;
2. they apply by the appropriate Draw deadlines; and,
3. they are willing to live anywhere on campus.

Undergraduate residences include traditional residence halls, language and culture theme houses, cross-cultural theme houses, student-managed and cooperative houses, apartments, suites, fraternities, and sororities.

Graduate Residences

Approximately 57 percent of matriculated graduate students live in R&DE Student Housing at Stanford. Residence assignments are made on the basis of an annual lottery and quarterly waiting lists. New matriculated students are guaranteed University housing if:

1. they are in compliance with the University housing agreement and University policies;
2. they apply by the first round application deadline for the Autumn term; and
3. they are willing to live in any residence for which they are eligible

At Stanford University, new matriculated students are students who are in a graduate program for the first time. Students starting a second graduate degree are not considered new students and therefore are not guaranteed housing.

Coterminal students who opt to live on campus are required to live in undergraduate housing for the duration of their four years of guaranteed undergraduate housing regardless of their student status. Once these four years have been used, students can apply in the annual Spring lottery for graduate housing, where they apply with a coterm priority. Coterminal students are not guaranteed housing and are assigned after all new first-

year graduate students who are guaranteed housing, but before continuing graduate students.

After the first year, continuing matriculated graduate students are provided are given five additional years of limited priority for housing. Limited priority years are not automatically cumulative, so students do not receive additional years of limited priority for subsequent degrees. Students who live in residences that are open year-round and who remain in continuous occupancy in their rooms or apartments may renew their contracts annually if they meet certain eligibility requirements. Students who live in residences that are open only during the academic year, or who want to change residences, re-enter the lottery each year. Stanford also offers subsidized off-campus apartments as part of the first year guarantee. Students apply for these through the graduate housing application process.

Single graduate students may request assignment to furnished graduate apartments in a variety of configurations. Studios, efficiency two-bedroom units (shared kitchen and bath), junior studios (private bedroom and bath with shared kitchen), two-, three- and four-bedroom apartments are available.

Couples without children may request assignment to furnished studios or one-bedroom apartments. Couples housing is available to students who are married and to students who have a same-sex or opposite-sex domestic partner. At Stanford University, a domestic partnership is defined as an established, long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

Furnished one-, two-, and three-bedroom apartments are available for students with children, based on the number of dependents. Housing for students with children is available to married couples, domestic partners, and single parents who have dependent children living with them. Housing is not provided for extended families, including the parents and siblings of students, or live-in day care staff.

Community Housing

Community Housing maintains computerized listings of private rooms, houses, and apartments in surrounding communities that are available to students who want to live off-campus. Students must make rental arrangements directly with landlords. An online listing service (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/housing/community-housing/community-housing>) facilitates the process of making connections. Information on community housing may be obtained from the Community Housing web site (<http://offcampus.stanford.edu>), by mail or in person at 482 Galvez Mall, Suite 110, Stanford University, Stanford, CA 94305-6034, by telephone at (650) 723-3906, or by email at communityhousing@lists.stanford.edu.

During mid-August to mid-September, temporary accommodations are available in student residence halls at a modest charge for students searching for off-campus housing for Autumn Quarter. Contact Stanford Conferences (<http://www.stanford.edu/dept/rde/cgi-bin/drupal/conferences>) for more information at (650) 725-1429.

Note that Stanford University does not investigate, endorse, or guarantee the accuracy of the information provided by any listing, or the condition of the accommodation. Furthermore, the University assumes no responsibility for housing arrangements made by persons using any of these services.

Meal Plans

For information on meal plans, see the R&DE Stanford Dining web site (<http://dining.stanford.edu>) and its meal plan rate page (http://www.stanford.edu/dept/rde/dining/meal_plans.htm).

Stanford University's Residential Education program promotes the philosophy that living and learning are integrated and that formal teaching, informal learning, and personal support in residences are integral to a Stanford education. Meals play a key role in this mission of community

building, leading, and learning. Therefore, residents of specially designated University residence halls (Branner, Crothers/Crothers Memorial, Florence Moore, Lakeside, Manzanita, Ricker, Stern, Toyon, Wilbur, Yost, Murray, and EAST) are required to participate in an R&DE Stanford Dining meal plan. R&DE Stanford Dining is committed to excellence by providing meal plans that offer significant value, the highest quality, and maximum flexibility of dining across campus.

Payments

By accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Charges and credits from offices within the University are aggregated in a student's individual account and presented on the University bill. Student Financial Services sends the University bill electronically to students monthly via Stanford ePay. Students may designate 'Authorized Payers' via Stanford ePay to allow others to view the student account and make payment. Students and Authorized Payers may view the student account online 24 hours a day, seven days a week, via Stanford ePay (<http://studentaffairs.stanford.edu/sfs/bill/resources-epay>). Payments should be made online through Stanford ePay. If necessary, the student or Authorized Payer may print a bill or receipt from Stanford ePay.

A list of payment due dates throughout the academic year is available on the Student Financial Services website (<http://studentaffairs.stanford.edu/sfs/bill/overviews-bill/#due>). To avoid late payment penalties, online payments via Stanford ePay can be made up to midnight PST on the 15th of the month; mailed payments must be postmarked by 5:00 p.m. on the 15th of the month.

After the start of the term, adding units may result in additional tuition charges. Other fees, such as room damage repair charges, petition fees, late fees, lab fees, library fees, and other miscellaneous fees or charges are due on the 15th of the month after which they are billed.

Stanford offers an installment payment plan for undergraduates. See Installment Payment Plan (<http://studentaffairs.stanford.edu/sfs/bill/IPP>) for information.

Forms of Payment

Stanford's standard method of payment is the online service, Stanford ePay, which includes electronic check (eCheck) and an International Funds Transfer option. No fee is associated with ePay payments. See the eCheck via Stanford ePay information (<http://studentaffairs.stanford.edu/sfs/bill/overviews-payment/#echeck>) web site. International students wishing to pay in foreign currencies should consider using the International Funds Transfer option within ePay, which allows students to arrange for payment in foreign currencies via Western Union. This electronic option offers students favorable exchange rates and eliminates bank fees typically charged for wire transfer.

Alternative methods of payment are available if Stanford ePay is not possible. See University Bill Payment Methods (<http://studentaffairs.stanford.edu/content/university-bill-payment-methods>) for information. Stanford does not accept cash, credit cards or postdated checks for payments to the University bill.

Credit Balances

Stanford uses Direct Deposit to refund credit balances to students. See the Direct Deposit enrollment instructions (<http://studentaffairs.stanford.edu/sfs/bill/steps-direct-deposit>) web site. Students are expected to enroll in Direct Deposit at the beginning of their Stanford career or as soon as possible thereafter. Direct Deposits reach the bank within 24-48 hours of

processing. Receipt of funds will not be delayed by mail time, lost checks, or the need to go to the bank as is the case with paper checks.

Generally credit balances resulting from financial aid are refunded automatically every Monday, Wednesday and Friday. Credit balances resulting from an overpayment of cash (e.g. ePayment, wire, check) remain on the student account to be applied to future charges. A refund of a cash overpayment may be provided at any time upon student request. Annually, in August, Student Financial Services will refund any remaining overpayment of cash from the prior academic year to the student.

Account Fees and Actions

Late Payment Fees

The University must receive the full amount due on or before the due date indicated on the bill. If full payment is not received by the due date, a late fee of 1% of the amount past due may be assessed. Anticipated aid (aid that has been accepted but not disbursed and is shown on the student account) reduces the total amount due prior to late fees being applied.

Holds

Accounts that become past due more than 30 days are subject to financial holds. A financial hold blocks transcripts, diplomas, and enrollment eligibility.

Insufficient Funds

A non-refundable \$25.00 administrative fee may be assessed for checks or eCheck payments returned due to insufficient funds. In addition, student accounts are subject to holds, and late payment penalties may apply.

Delinquent Accounts

Delinquent accounts may be reported to one or more of the national credit reporting agencies. Severely delinquent accounts may be referred to a collection agency and/or placed in litigation in accordance with state and federal laws. Students with delinquent accounts may be held responsible for collection costs, attorney fees, and court costs. Stanford may consider past delinquent accounts in determining whether to provide Stanford loans.

Refunds

Students who withdraw from the University before the end of a term may be eligible to receive refunds of portions of their tuition under certain limited circumstances.

See the Registrar's Tuition page for 2014-15 for a schedule of refunds (http://studentaffairs.stanford.edu/registrar/students/tuition-fees_14-15).

Annulled Registration

Students who take a leave of absence or summer annulment from the University voluntarily before the first day of instruction may have their registrations annulled. Tuition is refunded in full if the student never attended. Such students are not included in University records as having registered for the term and new students do not secure any privileges for admission for any subsequent quarter as returning students. A leave of absence or summer annulment does not automatically cancel health coverage (both Cardinal Care and the Campus Health Services Fee) unless the leave of absence or summer annulment is granted before the first day of instruction. Financial aid recipients should be aware that a proportion of any refund is returned to the various sources of aid.

Cancellation of Registration or Suspension

Students who have their registrations canceled or are suspended from the University generally receive refunds on the same basis as those receiving

leaves of absence unless otherwise specified. A student whose registration is canceled less than one week after the first day of instruction for an offense committed during a preceding quarter receives a full refund of tuition fees.

Institutional Interruption of Instruction

It is the University's intention to avoid the necessity of taking the actions described in this paragraph. However, should the University determine that continuation of some or all academic and other campus activities is impracticable, or that their continuation involves a high degree of physical danger to persons or property, activities may be curtailed and students requested or required to leave the campus. In such an event, arrangements are made as soon as practical to offer students the opportunity to complete their courses, or substantially equivalent work, so that appropriate credit may be given. Alternatively, the University may determine that students receive refunds on the same basis as those receiving leaves of absence, or on some other appropriate basis.

Leaves of Absence

A student in good standing who desires or is required to take a leave of absence from the University after the first day of instruction, but before the end of the first 60 percent of the quarter (term withdrawal deadline), may file a petition for a leave of absence and tuition refund. Graduate students submit the completed leave of absence form to the Student Services Center (<http://studentservicescenter.stanford.edu>). Undergraduates who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a Leave of Absence Petition (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/leaveofabsence.pdf>) with and receive approval from the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. A voluntary leave of absence after the first 60 percent of the quarter (term withdrawal deadline) is only granted for approved health and emergency reasons. For more information on leaves of absence, undergraduates should see the "Leaves of Absence and Reinstatement (Undergraduate) (p. 35)" section of this bulletin, and graduate students should see the "Leaves of Absence (Graduate) (p. 51)" section of this bulletin.

Room and Meal Plan Refunds

Students assigned to a University residence are subject to the terms of the University Residence Agreement, and are required to live in University Housing for the full duration of their signed contract. The text of the University Residence Agreement is available at the Residence Agreement (http://www.stanford.edu/dept/rde/shs/res_agree.htm) web site.

Room refunds are made only when students move out of the residence system and graduate from or cease to be enrolled at the University. Eligibility for refunds is listed in the Residence Agreement. Termination of Occupancy is filed in Axess. Filing a termination of occupancy form and moving out of Student Housing does not necessarily entitle a student to a refund. Students in greek letter houses are billed directly by the fraternity or sorority, and refunds are arranged between the student and the fraternity or sorority.

A meal plan refund is based on the date when a student moves out of University residence and is approved under conditions as specified in the Residence Agreement. If a student uses the meal plan after that date, an additional daily charge incurs.

Any decision to refund prepaid room and meal plan charges or to waive liability for deferred charges is made at the sole discretion of the University. Students with questions about refunds should contact Housing Assignments

for room refunds or the central office of Stanford Dining for residential meal plan refunds.

Undergraduate Degrees and Programs

Degree Requirements A Liberal Education

As do all major universities, Stanford provides the means for its undergraduates to acquire a liberal education, an education that broadens the student's knowledge and awareness in each of the major areas of human knowledge, that significantly deepens understanding of one or two of these areas, and that prepares him or her for a lifetime of continual learning and application of knowledge to career and personal life.

The undergraduate curriculum at Stanford allows considerable flexibility. It permits each student to plan an individual program of study that takes into account personal educational goals consistent with particular interests, prior experience, and future aims. All programs of study should achieve some balance between depth of knowledge acquired in specialization and breadth of knowledge acquired through exploration. Guidance as to the limits within which that balance ought to be struck is provided by the University's General Education Requirements and by the requirements set for major fields of study.

These educational goals are achieved through study in individual courses that bring together groups of students examining a topic or subject under the supervision of scholars. Courses are assigned credit units. To earn a bachelor's degree, the student must complete at least 180 allowable units and, in so doing, also complete the Writing Requirement, the General Education Requirements, the Language Requirement, and the requirements of a major.

The purpose of the Writing Requirement is to promote effective communication by ensuring that every undergraduate can write clear and effective English prose. Words are the vehicles for thought, and clear thinking requires facility in writing and speech.

The Language Requirement ensures that every student gains a basic familiarity with a foreign language. Foreign language study extends the student's range of knowledge and expression in significant ways, providing access to materials and cultures that otherwise would be out of reach.

The General Education Requirements provide guidance toward the attainment of breadth and stipulate that a significant share of a student's work must lie outside an area of specialization. These requirements ensure that every student is exposed to different ideas and different ways of thinking. They enable the student to approach and to understand the important ways of knowing how to assess their strengths and limitations, their uniqueness, and, no less important, what they have in common with others.

Depth, the intensive study of one subject or area, is provided through specialization in a major field. The major relates more specifically to a student's personal goals and interests than do the general requirements outlined above. Stanford's curriculum provides a wide range of standard majors through its discipline-oriented departments, a number of interdisciplinary majors in addition to department offerings, and the opportunity for students to design their own major programs.

Elective courses, which are not taken to satisfy requirements, play a special role in tailoring the student's program to individual needs. For most students, such courses form a large portion of the work offered for a degree. Within the limitations of requirements, students may freely choose any course for which previous studies have prepared them.

This section provides more detailed descriptions of these various requirements and the rationales upon which they are based.

Bachelor of Arts (B.A.), Bachelor of Science (B.S.)

Stanford University confers the degree of Bachelor of Arts (B.A.) or the degree of Bachelor of Science (B.S.) on those candidates who have been recommended by the Committee on Undergraduate Standards and Policy (C-USP), who have applied in advance for conferral of the degree, and who have fulfilled the following requirements:

1. A minimum of 180 units of allowable University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 180-unit minimum.)
2. The Writing, General Education, and Language Requirements (see below).
3. Curricular requirements of at least one major department or program and the recommendation of the department(s). (Descriptions of curricular and special degree requirements are included in each department's section of this bulletin.)
4. Students admitted as freshmen—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/last_units_out_of_residence.pdf) petition.
5. Students admitted as transfers—A minimum of 90 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 90 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/last_units_out_of_residence.pdf) petition.

Stanford confers the Bachelor of Science degree on candidates who fulfill these requirements in the School of Earth Sciences, in the School of Engineering, or in the departments of Applied Physics, Biology, Chemistry, Mathematics, or Physics in the School of Humanities and Sciences. The University also awards B.S. degrees to candidates in the Program in Science, Technology, and Society; in the Program in Mathematical and Computational Science; in the Program in Symbolic Systems; and, when appropriate, in the Program for Individually Designed Majors. Candidates who fulfill these requirements in other schools or departments receive the Bachelor of Arts degree.

Students who complete the requirements for two or more majors, which ordinarily would lead to the same degree (B.A. or B.S.), should review "The Major" section of this bulletin to ensure that they have an understanding of the requirements for multiple or secondary majors.

Bachelor of Arts and Science (B.A.S.)

The University confers the degree of Bachelor of Arts and Science (B.A.S.) on candidates who have completed the following:

1. with no overlapping courses, the curricular requirements of two majors which ordinarily would lead to different bachelor's degrees (that is, a Bachelor of Arts degree and a Bachelor of Science).

2. These students must have applied in advance for graduation with the B.A.S. degree instead of the B.A. or B.S. degree, been recommended by the Committee on Undergraduate Standards and Policy (C-USP),
3. Fulfilled a minimum of 180 units of University work described in point 1 of the "Bachelor of Arts (B.S.), Bachelor of Science (B.S.)" section.
4. The requirements of each major without applying any course towards the requirements of more than one major, according to "Multiple Majors" section of this bulletin. The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with the B.A.S. degree.
5. The Writing, General Education, and Language requirements.
6. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.
7. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement with no overlapping courses,

Students who cannot meet the requirements for both majors without overlapping courses are not eligible for the B.A.S., but may apply to have a secondary major recorded on their transcripts. (See "The Major" in the "Undergraduate Degrees and Programs" section of this bulletin.)

Dual Bachelor's Degrees (Concurrent B.A. and B.S.)

A Stanford undergraduate may work concurrently toward both a B.A. and a B.S. degree. To qualify for both degrees, a student must complete:

1. A minimum of 225 units of University work. Units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 225 minimum.
2. The requirements of each major without applying any course towards the requirements of more than one major, according to "Multiple Majors" section of this bulletin. The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with dual degrees.
3. The Writing, General Education, and Language requirements.
4. The curricular requirements of two majors (one of which leads to a Bachelor of Arts degree and the other to a Bachelor of Science degree).
5. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.
6. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement.

A student interested in dual bachelor's degrees should declare them in Axess no later than two quarters in advance of completing the program.

Students who do not meet the higher unit and residence requirements of the dual degree option may be eligible instead for the B.A.S. degree as described above.

Second Bachelor's Degree

Stanford does not award a second Bachelor of Arts degree to an individual who already holds a Bachelor of Arts, nor a Bachelor of Science degree to an individual who already holds a Bachelor of Science degree. However,

the holder of a Bachelor of Arts degree from Stanford may apply to the C-USP Subcommittee on Academic Standing for admission to candidacy for a Bachelor of Science degree, and the holder of a Bachelor of Science degree from Stanford may apply for candidacy for a Bachelor of Arts degree. The C-USP Subcommittee on Academic Standing determines whether the application for a second degree may be approved and/or the conditions a student must meet in order to be allowed to earn a second degree. A recommendation of the major department for the second bachelor's degree must accompany the application.

Generally, a holder of a B.A. or B.S. degree may not apply for the Bachelor of Arts and Sciences degree, although a student may submit a petition for exception. The office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall, reviews these petitions. A student approved for this program may register as an undergraduate and is subject to the current rules and regulations affecting undergraduates. Requirements for a second Stanford bachelor's degree are the same as those described above for dual bachelor's degrees.

Approvals or denials of applications under this section are in the discretion of the University.

Coterminal Bachelor's and Master's Degrees

See the "Coterminal Degrees (p. 41)" section of this Bulletin.

The Major

The primary purpose of the major is to encourage each student to explore a subject area in considerable depth. This in-depth study complements the breadth of study promoted by the General Education Requirements and, in many cases, by a student's choice of electives. Work in depth permits practice in critical analysis and the solving of problems. Because of its depth, such study also provides a sense of how knowledge grows and is shaped by time and circumstances.

The structure of a major should be a coherent reflection of the logic of the discipline it represents. Ideally, the student should be introduced to the subject area through a course providing a general overview, and upper-division courses should build upon lower-division courses. The course of study should, if feasible, give the student the opportunity and responsibility of doing original, creative work in the major subject. Benefits of the major program are greatest when it includes a culminating and synthesizing experience such as a senior seminar, an undergraduate thesis, or a senior project.

Degree Requirements

Undergraduates must select a major by the end of their sophomore year. All undergraduate major programs listed in this bulletin, except for certain honors degree programs that require application and admission in advance, are open to all students. Students may use Axess to declare, drop, or change a major. In some departments or programs, though, a late change could easily result in extending the period of undergraduate study. Students who have applied to graduate or who wish to declare an individually designed major must use the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) to select or change a major. Students requiring assistance should contact the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>). For academic advising regarding majors, students should consult the office (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai) of Undergraduate Advising and Research (UAR).

Check individual department or program listings in this bulletin for the undergraduate degrees offered and for specific major requirements. If an

area of study has no baccalaureate degree, that discipline is not available as a regular undergraduate major.

Faculty set the minimum requirements for the major in each department. These requirements usually allow latitude for tailoring a major program to a student's specific educational goals. The responsibility for developing a major program within department or program requirements lies ultimately with the individual student working in consultation with the major adviser.

Limits of the Major

In order to achieve the values of study in depth, a well-structured major should constitute at least one-third of a student's program (55-65 units). To ensure the values of breadth, a major should comprise no more than two-thirds of a student's program (115-125 units); and, to avoid intellectual parochialism, a major program should not require a student to take more than about one-third of his or her courses from within a single department.

Major requirements in cognate subjects essential to the structure of a given major should be counted as part of the major program in applying these guidelines. Department or school requirements designed to provide extra disciplinary breadth should not be counted.

For a limited number of qualified students, many departments and programs offer special programs leading to degrees with honors. A student may apply to the major department or program for acceptance into the honors program. Demands on the student may vary, but all honors programs encourage creative, independent work at an advanced level in addition to the major requirements.

The guidelines set forth here are deliberately general; implementation must take into account the specific needs of a student's program and the nature of the discipline or disciplines involved. The exercise of responsibility in achieving the desired educational balance belongs first with the student, who, after all, has the strongest interest in the value of his or her education. It belongs secondarily to departments and major programs, which must set the requirements of competence in the many majors offered.

Multiple Majors

Although most students declare only one major, a student may formally declare more than one major within a single bachelor's degree (B.A., B.S., or B.A.S.) program. The student may do that either at the time of initial major declaration or, as may be more advisable given the planning required to complete more than one major, by amending the original declaration. The student's major departments or programs have access routinely to all information pertinent to that student's academic record (for example, course and grade information), and each is expected to provide advising and other assistance. Students may pick up appropriate information regarding major declarations from the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>). To be awarded a bachelor's degree with multiple majors, the student must fulfill the following requirements:

1. Formally declare all majors through Axess to the Office of the University Registrar.
2. Satisfy the requirements of each major without applying any course towards the requirements of more than one major or any minor unless:
 - a. overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language);
 - b. overlapping courses enable the student to meet school requirements (for example, for two majors within the School of Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Students pursuing multiple majors must complete a multiple major program form indicating which courses they plan to apply toward each major and any minor(s). Departments must certify that the plan of study meets all requirements for the majors and any minor(s) without unallowable overlaps in course work; the School of Engineering Dean's office certifies this information in any case involving an Engineering

major or minor. To facilitate advance planning, multiple major program forms are available at any time from the Registrar's forms web site (<http://studentaffairs.stanford.edu/registrar/forms>). The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with multiple majors or a minor. The form should be submitted to the Student Services Center (<http://www.stanford.edu/group/student-services-center>) by the Final Study List deadline of the quarter of intended graduation.

If the pursuit of multiple majors (or joint majors or secondary majors, or minors) unduly delays an undergraduate's progress through Stanford, the University reserves the right to limit a student to a single major, and/or to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

When students cannot meet the requirements of multiple majors without overlaps, the secondary major (<http://stanford.edu/dept/registrar/bulletin/4894.htm>), may be relevant.

Secondary Major

In some cases, students may complete course requirements for more than one major, but they may not meet the requirements outlined for the multiple major option. For example, the student may develop a course plan in which courses requisite for one major overlap with requirements for another. In these cases, the student may declare a secondary major which results in the transcript bearing an annotation that the course requirements for that major have also been met. Secondary majors are not listed on the diploma. Students declare secondary majors through the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program . (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf)

Joint Major Program

A joint major differs from a multiple major in that 1-2 fewer optional courses are required for each major, while an integrative senior capstone experience is required for all students in the program. Ten joint major programs have been approved for a six-year pilot beginning in Autumn Quarter, 2014-15. See the "Joint Major (p. 26)" section of this bulletin for details.

Foreign Language Proficiency

The notation "proficiency in (language)" appears on the official transcripts of those students whose levels of achievement are found by procedures established by the Language Center to be roughly equivalent to knowledge an excellent student can be expected to demonstrate late in the third quarter of the third year of study in that language.

The Joint Major Program (JMP)

Effective Autumn Quarter 2014-15, the University is offering a joint major program (JMP) aimed at integrating the Humanities and Computer Science while providing students with unique educational experiences. This experimental program was approved by the Academic Senate for a six-year pilot. All of these joint major programs involve Computer Science along with one humanities major chosen from among ten approved majors.

Each of the new joint major programs leads to conferral of a B.A.S. (Bachelor of Arts and Sciences), and are distinct from multiple degrees in

which a student may formally declare more than one major within a single bachelor's degree (B.A., B.S., or B.A.S.) program.

The ten joint major programs approved for 2014-15 are (each major is linked to the department's bulletin site with specific information for that major):

- Computer Science (p. 229) and Classics (p. 375)
- Computer Science (p. 229) and English (p.)
- Computer Science (p. 229) and French (p. 465)
- Computer Science (p. 229) and German Studies (p. 479)
- Computer Science (p. 229) and History (p. 495)
- Computer Science (p. 229) and Italian (p. 465)
- Computer Science (p. 229) and Linguistics (p. 543)
- Computer Science (p. 229) and Music (p. 560)
- Computer Science (p. 229) and Philosophy (p. 571)
- Computer Science (p. 229) and Slavic Languages and Literatures (p. 622)

Only a limited number of joint majors has been approved by the Academic Senate. Assessment of the joint major program will continue throughout the duration of the six-year pilot, and decisions will be made about continuation, termination, and/or expansion of the program at the end of the pilot. The School of Humanities and Sciences is limiting participation in the pilot to Humanities departments that wish to propose a joint major with Computer Science. Only approved joint majors as listed in this bulletin are available. Other combinations of majors may be taken as a multiple major, but are not part of the joint major program with its special rules and requirements.

Requirements for Joint Majors

Typically a student in a joint major program will have an adviser in each major.

Graduation with a joint major requires the completion of a minimum of 180 units, of which at least 135 must be completed at Stanford. The specific number of units required for each major is specific to that major. It is not possible to give a single absolute number of units that a student might require in order to graduate with a joint major.

A student who declares a joint major completes the degree requirements for each of the majors. However, each of the majors in a joint major program typically requires 1-2 fewer optional courses; see the "Joint Major" sections of the respective departments for details. This course reduction in the joint major program differs from a multiple major in which all courses in both majors must be completed.

Because the joint major programs are designed to allow a student to pursue a course of study leading to mastery in two fields by blending the intellectual traditions of two Stanford departments, students in a joint major program take a senior capstone experience such as a course or project that is integrative in nature. Although the integrative capstone experience may fulfill the requirement for a capstone experience for both majors, the units may only be counted toward the required total units in one of the majors.

It is possible, with approval of both departments, to use one course to fulfill a requirement for each major in a joint major program. University policy prohibits double counting of courses in multiple programs except in specific cases such as introductory skill requirements or overlapping courses that enable a student to meet University requirements such as GERs. Therefore, when a single course fulfills requirements in both majors, a student may apply the units associated with the course to the total units requirement of only one of the majors and then must work with the other major to identify another course that would benefit the academic plan and whose associated units may be applied to that major's total units requirement.

Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with a joint major.

Dropping a Joint Major Program

Information about dropping a joint major program is still being developed. This bulletin will be updated when that information is available. Student may consult the Student Services Center (<http://studentaffairs.stanford.edu/studentsservicescenter>) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

Undergraduate Minor

Students completing a bachelor's degree may elect to complete one or more minors in addition to the major. Minors must be officially declared by students no later than the deadline for their application(s) to graduate, according to declaration procedures developed and monitored by the Registrar. Earlier deadlines for declaration of the minor may be set by the offering school or department. Satisfactory completion of declared minors is noted on the student's transcript after degree conferral.

A minor is a coherent program of study defined by the department or degree program. It may be a limited version of a major concentration or a specialized subset of a field. A minor consists of no fewer than six courses of 3 or more units to a maximum of 36 units of letter-graded work, except where letter grades are not offered. Departments and degree programs establish the structure and requirements of each minor in accordance with the policy above and within specific guidelines developed by the deans of schools. Programs which do not offer undergraduate degrees may also make proposals to their cognizant deans to establish a minor. Requirements for each minor are described in the individual department or program listings in this bulletin.

Students may not overlap (double-count) courses for completing major and minor requirements, unless:

1. Overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language), or
2. Overlapping courses enable the student to meet school requirements (for example, for a major within the School of Engineering and a minor). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Undergraduates use Axess to declare or drop a minor. The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) is required for graduation for students with a minor. The form should be submitted to the Student Services Center (<http://www.stanford.edu/group/studentsservicescenter>) by the final study list deadline of the quarter of intended graduation.

Students with questions about declaring minors or double-counting courses towards combinations of majors and/or minors should consult with the departments or programs involved or the Student Services Center. For academic advising regarding minors, students should consult the Undergraduate Advising and Research Office (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual) (UAR).

Baccalaureate Honors With Distinction

In recognition of high scholastic attainment, the University, upon recommendation of a major department or program, awards the Bachelor's Degree with Distinction. Distinction is awarded to 15% of the graduating class based on cumulative grade point averages. GPA for Distinction purposes is calculated through Winter Quarter for each graduating class. Distinction is awarded at the end of the Spring Quarter for graduates of the Spring Quarter and prior Summer, Autumn, Winter quarters. Students are notified of Distinction on their diploma. Students who are granted Distinction, and already received their diploma in a prior quarter, will be mailed an updated diploma. The Distinction notation will show on official transcripts after Spring Commencement.

Students are also urged to consider the departmental honors programs that may give depth to their major study and to consider, as well, how the interdisciplinary honors programs might contribute to the quality of their undergraduate education.

Departmental Honors Programs

In recognition of successful completion of special advanced work, departments may recommend their students for honors in the major. Departmental honors programs demand independent creative work at an advanced level in addition to major requirements. If approved for departmental honors, the student should declare the Honors degree through Axess.

Interdisciplinary Honors Programs

In recognition of successful completion of honors program requirements, the following interdisciplinary programs can recommend students majoring in any field for honors in their program:

- Arts (<http://artsinstitute.stanford.edu/programs/honors-in-the-arts-program>)
- Comparative Studies in Race and Ethnicity (<http://csre.stanford.edu/honors.php>)
- Democracy, Development, and the Rule of Law (http://cddrl.stanford.edu/fellowships/cddrl_undergraduate_honors_program) (CDDRL)
- Education (<https://ed.stanford.edu/academics/undergraduate/honors>)
- Environmental Science, Technology, and Policy (<http://woods.stanford.edu/educating-leaders/education/goldman-honors-program>)
- Ethics in Society (<https://ethicsinsociety.stanford.edu/undergraduate-ethics/undergraduate-honors-program>)
- Feminist, Gender, and Sexuality Studies (<https://feminist.stanford.edu/undergraduates/honors-program>)
- International Security Studies (http://cisac.stanford.edu/docs/undergraduate_honors_program) (CISAC)
- Latin American Studies (<http://las.stanford.edu/programs/undergraduate-honors>)

The interdisciplinary honors programs are designed to complement study in a department major. The requirements for these honors programs are described in the department sections of this bulletin. If approved for interdisciplinary honors, the student should submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) to the Student Services Center (<http://www.stanford.edu/group/studentsservicescenter>) to declare the Interdisciplinary Honors Program.

General Education Requirements

Effective for undergraduates admitted in 2013-14, a new General Education Requirements policy is in place. Students admitted in earlier years should consult the "General Education Requirements through 2012-13" section below.

In order to graduate, undergraduates must complete the following General Education Requirements:

- Thinking Matters Requirement
- Ways of Thinking/Ways of Doing Requirement
- Writing and Rhetoric Requirement
 - Program in Writing and Rhetoric (2 courses required, PWR 1 and PWR 2)
 - Writing in the Major
- Language Requirement

Purpose

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is to introduce students to the intellectual life of the University, to foreground important questions, and to illustrate how they may be approached from multiple perspectives. They are intended to develop a broad set of essential intellectual and social competencies of enduring value no matter what field a student eventually pursues. Students have flexibility to select topics that appeal to them while building critical skills, exploring interests, forming relationships with faculty and peers, and forging connections between educational experiences in many spheres. Together with the major, the requirements serve as the nucleus around which students build their four years at Stanford.

General Education requirement courses must be taken for a letter grade and a minimum of 3 units of credit, with the exception of courses taken to fulfill the Language requirement, which may be taken for credit/no credit. Additionally, a course taken to satisfy the Creative Expression Way (Way-CE) may be taken for a minimum of 2 units and/or may be taken satisfactory/no credit at the instructor's discretion.

Credit Transfer

GERs: Students subject to General Education Requirements (GERs) through 2012-13 may propose that work taken at another accredited college or university be accepted in fulfillment of a GER. In such cases, the Office of the University Registrar determines, after appropriate faculty consultation, whether the work is comparable to any of the specifically certified courses or course sequences. To fulfill GER requirements through transfer work, the course must match a specific Stanford course that fulfills the same GER requirement, be a minimum of three quarter units, and be taken for a letter grade. For more information, see the Transfer Work (p.) section of this Bulletin.

WAYS: Students admitted in 2013-14 or later may propose that work taken at another accredited college or university be accepted in fulfillment of a Ways of Thinking/Ways of Doing (WAYS) breadth area. In such cases, the Office of Undergraduate Advising and Research facilitates the evaluation of the course materials. If faculty review determines that the work fulfills

the WAYS requirement, transfer credit is issued. To fulfill a WAYS requirement through transfer work, the course must be a minimum of three quarter units, except for Creative Expression which is a minimum of two units, and be taken for a letter grade. For more information, see the Transfer Work (p.) section of this Bulletin.

Students seeking transfer credit, please see the Transfer Credit Procedures (<https://studentaffairs.stanford.edu/registrar/students/transfer-credit/procedures>) on the Office of the Registrar site.

Thinking Matters

Students are required to take one Thinking Matters (THINK) course during their freshman year. Most students take one stand-alone course selected from approximately eight courses offered each quarter.

- THINK courses for 2013-14

Alternatively, students may take one of three residence-based, year-long programs:

- Immersion in the Arts: Living in Culture (ITALIC (<http://explorecourses.stanford.edu/search?q=ITALIC&view=catalog&page=0&academicYear=20132014&collapse=&filter-coursestatus-Active=on&filter-departmentcode-ITALIC=on>))
- Science in the Making Integrated Learning Environment (SIMILE (<http://explorecourses.stanford.edu/search?q=SIMILE&filter-departmentcode-SiMILE=on&filter-coursestatus-Active=on&academicYear=20132014>))
- Structured Liberal Education (SLE (<http://explorecourses.stanford.edu/search?filter-departmentcode-SLE=on&q=SLE&filter-coursestatus-Active=on&filter-catalognumber-SLE=on&academicYear=20132014>))
 - Each of these also satisfies at least part of the Writing and Rhetoric Requirement as well as several Ways requirements.)

Another option, in Autumn Quarter only, allows students to enroll in Education as Self-Fashioning (ESF (<http://explorecourses.stanford.edu/search?q=ESF&filter-coursestatus-Active=on&filter-departmentcode-ESF=on&academicYear=20132014>)) that satisfies the Thinking Matters requirement as well as PWR 1.

Ways of Thinking/Ways of Doing (WAYS)

In Autumn of 2013, Stanford introduced the Ways of Thinking/Ways of Doing (WAYS) general education breadth system. WAYS is a capacity-based approach to fostering breadth in general education rather than a discipline-based approach.

Beginning Autumn Quarter 2013-14, entering first-year students must satisfy the WAYS requirement. New transfer students must satisfy the WAYS requirement effective Autumn Quarter 2014-15.

These courses provide students with educational breadth by giving instruction in essential skills and capacities in the areas of:

- WAY-A-II: Aesthetic and Interpretive Inquiry (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYAII=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)
- WAY-AQR: Applied Quantitative Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYAQR=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-CE: Creative Expression (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYCE=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-ED: Engaging Diversity (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYED=on&collapse=,5,&filter-coursestatus-Active=on>)

- WAY-ER: Ethical Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYER=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-FR: Formal Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYFR=on&collapse=,5,&filter-coursestatus-Active=on>)
- WAY-SI: Social Inquiry (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYSI=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)
- WAY-SMA: Scientific Method and Analysis (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=&filter-ger-WAYSMA=on&collapse=,5,&filter-coursestatus-Active=on>) (2 courses)

Students are required to take eleven certified WAYS courses, with two courses in WAY-AII, WAY-SI, and WAY-SMA, and one course in each of the remaining five WAYS.

Although courses may be certified to fulfill two WAYS, you may only count a course toward one WAY in your program of study. Thinking Matters courses typically satisfy a WAY. Courses may also count both for major and General Education requirements.

Changing from GERs to WAYS Breadth Requirement

Students admitted prior to Autumn Quarter 2012-13 are eligible to change to the new WAYS breadth requirement. In order to change to the new WAYS system, students must submit the GER to WAYS General Education Requirement Change Request (<https://stanford.app.box.com/profile/214550459/page/0/1/19459877153>).

Students requesting a change to the new WAYS requirement continue to fulfill the other general education requirements in effect at the time of matriculation; specifically, this includes Thinking Matters or IHUM as relevant to the term of matriculation, writing and rhetoric requirements, and the language requirement. Students who change to the new WAYS breadth requirement may not revert to the old GER system.

Additional information on the WAYS requirement is available on the Stanford Undergrad (<https://undergrad.stanford.edu/programs/ways>) site.

Language Requirement

To fulfill the Language Requirement, undergraduates are required to complete one year of college-level study or the equivalent in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies. Language courses at Stanford may be taken with the Credit/No Credit grading basis, if so offered, to fulfill the requirement.
2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.
3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:

Test Subject	Score
Chinese	630
French	640
German	630
Latin	630
Spanish	630
Italian	630

Japanese	620
Korean	630
Hebrew	540

5. Take a diagnostic test in a particular language which either:
 - a. Places them out of the requirement, or
 - b. Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the "Language Center" section of this bulletin under the school of Humanities and Sciences.

Writing and Rhetoric Requirement

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor's degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually reviewed at the time of matriculation by the Office of the University Registrar's Degree Progress section and, if necessary, the Program in Writing and Rhetoric (PWR) as to their status with regard to the requirement.

The Writing and Rhetoric requirement includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of five ways:

1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. ESF: writing instruction in connection with the Education as Self-Fashioning Thinking Matters course.
4. ILEs: writing instruction in connection with either the SIMILE or ITALIC Integrated Learning Environment courses.
5. Transfer credit approved by the Office of the University Registrar for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:

1. PWR 2, a course emphasizing writing, research, and oral presentation of research.
2. SLE: writing and oral presentation instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses are designated as Write-2.
4. Transfer credit approved by the Office of the University Registrar for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site, and at the PWR office in Sweet Hall, Third Floor. Complete listings of PWR

2 and Write-2 courses are available to students on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the "Writing and Rhetoric (p. 89)" section of this bulletin under the Vice Provost of Undergraduate Education.

Students who matriculated prior to Autumn 2003 should consult previous issues of the Stanford Bulletin or the PWR office to determine what requirements apply.

General Education Requirements through 2012-13

Undergraduates fulfill their General Education Requirements through the policy in effect at the time of their admission to Stanford.

- Undergraduates who matriculated in Autumn 2012, follow the Thinking Matters requirement as described above and the GERs, including Language and Writing and Rhetoric requirements, as below.
- Undergraduates who matriculated in Autumn 2011 or earlier follow the freshman IHUM requirement rather than the Thinking Matters requirement and should consult the relevant Bulletin from the year in which they began study at Stanford (http://www.stanford.edu/dept/registrar/bulletin_past) to determine the requirements applying to them. They follow the GER requirements, including Language and Writing and Rhetoric requirements, as below.
- Undergraduates who matriculated prior to Autumn 2003 should consult previous issues of the Stanford Bulletin to determine what requirements apply.

Students may elect to change to the new system described above. The following description applies to students under the GER policy effective through 2012-13.

Purpose

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is:

1. to introduce students to a broad range of fields and areas of study within the humanities, social sciences, natural sciences, applied sciences, and technology; and
2. to help students prepare to become responsible members of society.

Whereas the concentration of courses in the major is expected to provide depth, the General Education Requirements have the complementary purpose of providing breadth to a student's undergraduate program. The requirements are also intended to introduce students to the major social, historical, cultural, and intellectual forces that shape the contemporary world.

Fulfillment of the General Education Requirements in itself does not provide a student with an adequately broad education any more than acquiring the necessary number of units in the major qualifies the student as a specialist in the field. The major and the General Education Requirements are meant to serve as the nucleus around which the student is expected to build a coherent course of study by drawing on the options available among the required and elective courses.

Information regarding courses that have been certified to fulfill the General Education Requirements, and regarding a student's status in meeting these requirements, is available at the Student Services Center. Course planning and advising questions related to the General Education Requirements should be directed to Undergraduate Advising and Research.

It is the responsibility of each student to ensure that he or she has fulfilled the requirements by checking in Axess. This should be done at least two quarters before graduation.

Students should be very careful to note which set of General Education Requirements apply to them. The date of matriculation at Stanford determines which requirements apply to an individual student.

Area Requirements Disciplinary Breadth

This requirement is satisfied by completing five courses of which one course must be taken in each subject area.

Disciplinary Breadth gives students educational breadth by providing experience in the following areas. Each area is linked to a comprehensive list of courses on ExploreCourses.

- Engineering and Applied Science (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBEngrAppSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Humanities (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-term-Summer=on&page=0&q=%25&filter-ger-GERDBHum=on&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=%2C5%2C&filter-term-Winter=on&catalog=71>)
- Mathematics (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBMath=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Natural Sciences (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBNatSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Social Sciences (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERDBSocSci=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

Education for Citizenship

This requirement is requirement satisfied by completing two courses in different subject areas; or completing two Disciplinary Breadth courses which also satisfy different Education for Citizenship subject areas.

Education for Citizenship provides students with some of the skills and knowledge that are necessary for citizenship in contemporary national cultures and participation in the global cultures of the 21st century.

Education for Citizenship is divided into four subject areas. Each area is linked to a comprehensive list of courses on ExploreCourses. Further explanation of the purposes of Education for Citizenship requirements follows below.

- Ethical Reasoning (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERECEthicReas=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- Global Community (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERECGlobalCom=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)
- American Cultures (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERECGlobalCom=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

term=Summer=on&filter-ger-GERECAmerCul=on&filter-coursestatus-Active=on&collapse=%2C5%2C)

- Gender Studies (<https://explorecourses.stanford.edu/search?q=%25&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-ger-GERECGender=on&filter-coursestatus-Active=on&collapse=%2C5%2C>)

Ethical Reasoning

Courses introduce students to the pervasiveness, complexity, and diversity of normative concepts and judgments in human lives, discuss skeptical concerns that arise about normative practices, review ways in which people have engaged in ethical reflection, and consider ethical problems in light of diverse ethical perspectives.

The Global Community

Courses address the problems of the emerging global situation. They may compare several societies in time and space or deal in depth with a single society, either contemporary or historical, outside the U.S. Challenges of note: economic globalization and technology transfer; migration and immigration; economic development, health; environmental exploitation and preservation; ethnic and cultural identity; and international forms of justice and mediation.

American Cultures

Courses address topics pertaining to the history, significance, and consequences of racial, ethnic, or religious diversity in the culture and society of the U.S. Challenges of note: equity in education; employment and health; parity in legal and social forms of justice; preserving identity and freedom within and across communities.

Gender Studies

Courses address gender conceptions, roles, and relations, and sexual identity in a contemporary or historical context; they critically examine interpretations of gender differences and relations between men and women. Challenge of note: changing sexual and physiological realities in contemporary and historical perspective.

Courses certified as meeting the General Education Requirements must be taken for a letter grade and a minimum of 3 units of credit. A single course may be certified as fulfilling only one subject area within the General Education Requirements; the one exception is that a course may be certified to fulfill an Education for Citizenship subject area in addition to a Disciplinary Breadth subject area.

Notational Symbols

Courses that have been certified as meeting the requirements are identified throughout ExploreCourses with the notational symbols listed below.

Notational symbol	Area
Thinking Matters	
THINK	Freshman Year
Disciplinary Breadth	
DB-EngrAppSci	Engineering and Applied Sciences
DB-Hum	Humanities
DB-Math	Mathematics
DB-NatSci	Natural Sciences
DB-SocSci	Social Sciences
Education for Citizenship	
EC-AmerCul	American Cultures
EC-GlobalCom	Global Communities
EC-Gender	Gender Studies
EC-EthicReas	Ethical Reasoning

Language Requirement

To fulfill the Language Requirement, undergraduates are required to complete one year of college-level study or the equivalent in a foreign language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies. Language courses at Stanford may be taken with the Credit/No Credit grading basis, if so offered, to fulfill the requirement.
 2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.
 3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:
- | Test Subject | Score |
|--------------|-------|
| Chinese | 630 |
| French | 640 |
| German | 630 |
| Latin | 630 |
| Spanish | 630 |
| Italian | 630 |
| Japanese | 620 |
| Korean | 630 |
| Hebrew | 540 |
5. Take a diagnostic test in a particular language which either:
 - a. Places them out of the requirement, or
 - b. Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the "Language Center" section of this bulletin under the school of Humanities and Sciences.

Writing and Rhetoric Requirement

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor's degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually reviewed at the time of matriculation by the Office of the University Registrar's Degree Progress section and, if necessary, the Program in Writing and Rhetoric (PWR) as to their status with regard to the requirement.

The Writing and Rhetoric requirement includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of five ways:

1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. ESF: writing instruction in connection with the Education as Self-Fashioning Thinking Matters course.
4. ILEs: writing instruction in connection with either the SIMILE or ITALIC Integrated Learning Environment courses.
5. Transfer credit approved by the Office of the University Registrar for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:

1. PWR 2, a course emphasizing writing, research, and oral presentation of research.
2. SLE: writing and oral presentation instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses are designated as Write-2.
4. Transfer credit approved by the Office of the University Registrar for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site, and at the PWR office in Sweet Hall, Third Floor. Complete listings of PWR 2 and Write-2 courses are available to students on the PWR (<https://undergrad.stanford.edu/programs/pwr>) web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the "Writing and Rhetoric (p. 89)" section of this bulletin under the Vice Provost of Undergraduate Education.

Students who matriculated prior to Autumn 2003 should consult previous issues of the Stanford Bulletin or the PWR office to determine what requirements apply.

Credit Activity Courses

For undergraduates, a maximum of 8 units of credit earned in activity courses, regardless of the offering department or if accepted as transfer units, count towards the 180 (225 if dual degrees are being pursued) units required for the bachelor's degree. All activity courses are offered on a satisfactory/no credit basis.

Courses Taken on Satisfactory/No Credit or Credit/No Credit Basis

A maximum of 36 units of credit (including activity courses) taken at Stanford or its overseas campuses for a "CR" or "S" grade may be applied towards the 180 (225 if dual degrees are being pursued) units required for the bachelor's degree. The maximum for transfer students is 27 units.

Departments may also limit the number of satisfactory or credit courses accepted towards the requirements for a major. Satisfactory/Credit courses applied towards a minor may be similarly limited. Courses not letter-graded are not accepted in fulfillment of the General Education Requirements. Writing in the Major courses are usually offered letter grade only. In those instances where the course is offered for a letter grade or CR/NC, the

course must be taken for a letter grade to fulfill the Writing in the Major requirement.

Internship Guidelines

Undergraduate internships should not by themselves carry any credit. However, an individual student may arrange with a faculty member for a research or other academic project to be based on the internship. Arrangements between students and faculty regarding credit are expected to be made well in advance of the internship. Credit should be arranged within departmental rules for directed reading or independent study and should meet the usual department standards. No transfer credit is awarded for internships.

Last Units out of Residence

Students may petition to complete their final 15 units out of residence to complete their degree requirements. The final 15 units of transfer credit must meet the criteria in the undergraduate "Transfer Work (<https://exploreddegrees-nextyear.stanford.edu/undergraduatedegreesandprograms/#transferworktext>)" section of this bulletin. Students must submit the Request for Last Units Out of Residence Petition (<http://studentaffairs.stanford.edu/registrar/forms>) to determine eligibility and to request pre-approval of the transfer work. A registration status is required to graduate. Students should select either the Graduation Quarter or the Permit for Services Only special registration status on the Last Units Out of Residence petition. Refer to the Special Registration Status section of the bulletin for a description of these statuses. An application to graduate should be submitted through Axess.

Concurrent Enrollment (Undergraduate)

Undergraduates may enroll concurrently at Stanford and at another college or university. The following policies apply to concurrent enrollment:

1. Students may not exceed 20 quarter units between both schools. This is the same unit maximum for undergraduates at Stanford. (One semester credit or hour generally equals 1.5 quarter units.)
2. Satisfactory academic progress is determined only by Stanford courses and units. Transfer work completed at other institutions is not considered in this calculation.
3. Students are expected to submit a Request for Transfer Credit Evaluation (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/xfer_credit_request.pdf) for pre-approval of transfer credit prior to enrolling in the transfer institution.

Advanced Placement

Stanford University allows up to 45 units of external credit (90 units for transfer students) toward graduation including work completed in high school as part of the College Board Advanced Placement curriculum. The awarding of such credit is based on Advanced Placement test scores and is subject to University and department approval.

The faculty of a given department determine whether any credit toward the 180-unit requirement can be based on achievement in the College Board Advanced Placement Program in their discipline. Stanford departments electing to accept the Advanced Placement (AP) credit are bound by these University policies:

1. Credit is usually granted for an AP score of 4 or 5. Usually, 10 quarter units are awarded (but occasionally fewer than 10). No more than 10 quarter units may be given for performance in a single examination.
2. Whether credit is to be given for an AP score of 3 is a matter for departmental discretion; up to 10 units may be awarded.
3. No credit may be authorized for an AP score lower than 3.

Performance on an AP exam can indicate the appropriate placement for continuing course work in that subject at Stanford. If students enroll in courses at Stanford for which they received equivalent AP credit, the duplicating AP credit will be removed. The chart below shows the current AP credit and placement policies.

A maximum of 45 quarter units of Advanced Placement (AP), transfer credit, and/or other external credit (such as International Baccalaureate) may be applied toward the undergraduate degree. More than 45 units of AP, transfer, and other external credit may appear on the Stanford University transcript; however, only 45 units can be applied to the minimum units required for the undergraduate degree. Once credit has been posted it cannot be removed from the student record. Stanford University policies on AP and other external credit are subject to review and change on an annual basis. Subjects not listed on this chart are not eligible for AP credit at Stanford University. Students may only receive AP credit for the AP policies that were effective during their matriculation year at Stanford.

Further information is available from the Student Services Center (<http://studentaffairs.stanford.edu/studentsservicescenter>) or on the Registrar's (<http://studentaffairs.stanford.edu/registrar/students/ap>) web site.

AP Scores and Placement

Test Subject	Score	Placement	Quarter Units
Calculus AB (or AB subscore)	5	MATH 51	10
Calculus AB (or AB subscore)	4	MATH 42	5
Calculus BC	4,5	MATH 51	10
Calculus BC	3	MATH 42	5
Chemistry	5	CHEM 33 or above	5
Chinese (Language and Culture)1	5	Take placement exam if continuing in this language	10
Computer Science A	4,5	CS 106B or 106X	5
Computer Science AB	4,5	CS 106B, 106X, or 107	5
French (Language)1	5	Take placement exam if continuing in this language	10
German (Language)1	5	Take placement exam if continuing in this language	10
Japanese (Language and Culture)1	5	Take placement exam if continuing in this language	10
Latin (Literature or Virgil)1	4,5	Take placement exam if continuing in this language	10
Physics B	5	PHYSICS 25	8
Physics B	4	PHYSICS 23 and 25	4
Physics C Mechanics only	4,5	PHYSICS 43 and 45 or PHYSICS 23 and 25	5
Physics C Mechanics only	3	PHYSICS 41,43 and 45 or PHYSICS 23 and 25	4
Physics C E&M only	4,5	PHYSICS 41 and 45 or PHYSICS 21 and 25	5
Physics C E&M only	3	PHYSICS 41,43 and 45 or PHYSICS 21 and 25	4

Physics C Both Parts	4,5	PHYSICS 45 or PHYSICS 25	10
Physics C Both Parts	3	PHYSICS 41,43 and 45 or PHYSICS 25	8
Spanish (Language)1	5	Take placement exam if continuing in this language	10

¹ A score of 4 or 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

International Baccalaureate (IB) Transfer Credit

Stanford University awards advanced placement credit for certain International Baccalaureate (IB) and international advanced placement subject examinations. The international test subjects must match the content of the College Board Advanced Placement test subjects that receive advanced placement credit. See the Registrar's web site for detailed information (<https://studentaffairs.stanford.edu/registrar/students/baccalaureate-credit>).

A maximum of 45 quarter units of transfer and test credit may be applied toward the undergraduate degree. Only higher level IB exams with scores of 5 or higher, in the subjects listed below, are eligible for credit. Subjects not listed on this chart are not eligible for IB credit. Scores of 5 or higher on language IB exams fulfill the language requirement. If Stanford courses are taken below the level of the placement course, the duplicating IB units will be removed.

Test Subject	Score	Placement	Quarter Units
Chemistry	5	CHEM 35 or CHEM 135	10
Chinese A1*	5	Take placement exam if continuing in this language	10
Computer Science	4,5	CS 106B or 106X	5
French A1, A2, or B*	5	Take placement exam if continuing in this language	10
German A1, A2, or B*	5	Take placement exam if continuing in this language	10
Japanese A1*	5	Take placement exam if continuing in this language	10
Korean A1*	4,5	Take placement exam if continuing in this language	10
Mathematics	5	MATH 51	10
Physics	6 or higher	PHYSICS 25	8
Physics	5	PHYSICS 23, PHYSICS 25	4
Portuguese A1*	5	Take placement exam if continuing in this language	10
Russian B1*	5	Take placement exam if continuing in this language	10
Spanish A1, A2, or B*	5	Take placement exam if continuing in this language	10

- ¹ A score of 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor's degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor's degree, subject to the approval of the credit evaluator and the appropriate departments.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.
5. Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
6. Course work cannot duplicate, overlap, or regress previous work.
7. Transfer course work cannot count towards secondary school diploma and/or graduation requirements.
8. For students who want to fulfill general education requirements through transfer work and who are subject to the GER system in place prior to Autumn 2013-14, a proposed transfer course must match a specific Stanford course that fulfills the same GER requirement; it must be a minimum of 3 quarter units and have been taken for a letter grade.

For students who want to fulfill general education requirements through transfer work and who are subject to the Ways of Thinking/Doing breadth requirement (instituted in Autumn 2013-14 for incoming first-year students and 2014-15 for incoming transfer students), transfer courses are reviewed to determine if courses can be certified to fulfill WAYS requirements. Courses must be a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must have been taken for a letter grade.

9. Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. Departments determine if approved transfer work can be used to satisfy a department major or minor requirement.
10. The credit allowed at Stanford for one quarter's work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
11. Credit is allowed at Stanford for work graded 'A,' 'B,' 'C,' or 'Pass' (where 'Pass' is equivalent to a letter grade of 'C' or above), but not for work graded 'D' or below.
12. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor's degree at Stanford (including advance placement test credit).
13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor's degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses.

14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

Special Registration Statuses (Undergraduate)

The following reduced-tuition categories can be requested by undergraduates in the final stages of their degree program:

Permit to Attend for Services Only (PSO)

Undergraduates in their terminal quarter who are completing honors theses, clearing incomplete grades, or have completed all requirements and are requiring a registration status to utilize university resources, may petition one time only for PSO status. PSO does not permit any course enrollment. Students should apply to graduate through Axxess if applying for the PSO special registration status. The deadline for the completed PSO petition (<http://studentaffairs.stanford.edu/registrar/forms>) is the Preliminary Study List (<http://studentaffairs.stanford.edu/registrar/students/prelim-study-list>) deadline of the applicable quarter.

13th Quarter

Undergraduates who have completed at least twelve full-time quarters may petition to register for 13th Quarter registration status at a reduced tuition rate for their final quarter, but must register for at least eight units. Undergraduate dual degree students must complete at least fifteen full-time quarters before petitioning for reduced tuition in their final quarter. Students receiving financial aid should check with the Financial Aid Office for eligibility if they are seeking aid beyond 12 quarters of enrollment. Undergraduates should apply to graduate through Axxess if applying for the 13th-quarter special registration status.

Graduation Quarter

Undergraduates may petition one time only for Graduation Quarter in their terminal quarter only if:

1. filing a Request for Last Units Out of Residence (<http://studentaffairs.stanford.edu/registrar/forms>) in order to complete up to 15 final units at another institution; or
2. returning from a discontinued status and filing a Request to Return and Register in Undergraduate Study (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/RR_petitions_returningtostanford.html) in order to confer their degree; or
3. if all degree requirements, including honors theses, have been completed and student requires a registration status to graduate, but will not be using University resources or housing.

Coterm students are only eligible for the Graduation Quarter special registration status if they are conferring both the undergraduate and graduate degree in the same quarter. Undergraduates may be eligible for Graduation Quarter status in these three situations only if the student has completed all graduation requirements and will not be utilizing University resources, including housing. The deadline for the completed Graduation Quarter petition (<http://studentaffairs.stanford.edu/registrar/forms>) is the Preliminary Study List (<http://studentaffairs.stanford.edu/registrar/students/prelim-study-list>) deadline of the applicable quarter.

Minimum Progress for Undergraduates

Undergraduates are expected to finish their degree requirements in a timely fashion. In addition to maintaining academic standing obligations,

students are expected to take courses to progress towards a Bachelor of Arts or a Bachelor of Science. If after 12 quarters, an undergraduate is not on track to complete degree requirements and graduate within the next two quarters, the University may impose requirements with deadlines on a student's course of study. Further, if a student fails to meet those imposed requirements and/or has not after 18 quarters completed all degree requirements, the University may discontinue the student for failure to progress.

Leaves of Absence and Reinstatement (Undergraduate)

Undergraduates are admitted to Stanford University with the expectation that they will complete their degree programs in a reasonable amount of time, usually within four years.

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period. Students on leave may complete course work for which an 'Incomplete' grade was awarded in a prior term and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes.

Leaves of absence for undergraduates may not exceed a cumulative total of two years (eight quarters including Summer Quarters).

Voluntary Leave

Students have the option of taking a voluntary leave of absence for up to one year, or four quarters, upon filing a Leave of Absence form with the Office of the University Registrar and receiving approval. Except where unexpected circumstances necessitate an immediate leave, students are expected to file for a voluntary leave of absence 30 days prior to the quarter in which the leave will begin. The leave may be extended for up to one additional year, or four quarters, provided the student files (before the end of the initial one-year leave) a Leave of Absence form for the leave extension with the Office of the University Registrar and receives approval. Leaves requested for a longer period than one year, or four quarters, are approved only in exceptional circumstances (for example, mandatory military service). Leaves of absence for undergraduate students may not exceed a cumulative total of two years (eight quarters including summer quarters).

Undergraduates who take an approved leave of absence while in good standing may enroll in the University for the subsequent quarter with the privileges of a returning student. However, the University may condition its approval of a petition for leave of absence on the student's meeting such requirements as the University deems appropriate in the individual case for the student to be eligible to return (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a provider at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee).

New freshmen and transfers are required to register in Autumn Quarter and may not take a leave of absence prior to or during their first quarter, except with the permission of the Vice Provost for Undergraduate Education (or his or her designee) under rare and exceptional circumstances. However, new Stanford students may request a deferment from the Office of Undergraduate Admission.

Undergraduates who wish to withdraw from the current quarter, or from a quarter for which they have registered in advance and do not wish to attend, must file a leave of absence petition (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/leaveofabsence.pdf>) with and receive approval from the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall.

Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin. For a full refund, petitions must be received by the Office of the University Registrar no later than the first day of classes for the quarter.

Mandatory Leave

A mandatory leave of absence can be imposed in circumstances in which a student:

- presents a substantial risk of harm to self or others or is failing to carry out substantial self-care obligations; or
- significantly disrupts the educational or other activities of the University community; or
- is unable to participate meaningfully in educational activities; or
- requires a level of care from the University community that exceeds the resources and staffing that the University can reasonably be expected to provide for the student's well-being.

Students whose circumstances warrant a review under the Dean's Mandatory Leave of Absence Policy, will be apprised, in writing, of University concerns by the Dean of Student Life and will be provided an opportunity to respond to concerns in writing or in person or via telephone before a review committee convened by the Dean of Student Life. Students placed on involuntary leave of absence can appeal an unfavorable decision to the Vice Provost for Student Affairs. The University can condition a student's return to registered student status on such requirements as the University deems appropriate in the individual case (such as, in the case of a leave for medical reasons, proof of treatment of an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee). The Dean of Student Life publishes the full Dean's Mandatory Leave of Absence Policy (<http://studentaffairs.stanford.edu/studentlife/involuntary-leave>) on its web site.

When a student is granted or placed on a leave of absence after the beginning of the term, courses in which the student was enrolled after the final study list deadline appear on the student's transcript and show the symbol 'W' (withdraw). For additional information regarding satisfactory academic progress, refer to the "Academic Standing" section of this bulletin. Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin.

Discontinuation and Reinstatement

A student's academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates undergraduate studies; or
- is dismissed for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline, or have exceeded their eight quarters of approved leave, or who fail to submit a Leave of Absence petition by the published deadline, must apply for reinstatement through the Request to Return and Register in Undergraduate Study. The University is not obliged to approve reinstatements of students. Applications for reinstatement are reviewed by the Vice Provost for Undergraduate Education and are subject to the approval of the Faculty Senate Committee on Undergraduate Standards and Policy or its designees. The Committee or its designees may determine whether the application for reinstatement will be approved or not, and/or the conditions a student must meet in order to be reinstated. Reinstatement decisions are in the discretion of the University and may be based on the applicant's status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, as well as any

other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education or the Committee.

Applications for reinstatement through the Request to Return and Register in Undergraduate Study, must be submitted eight weeks prior to the start of the term in which the student seeks to enroll in classes. Information and instructions may be obtained by contacting the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising Research (UAR), Sweet Hall.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

Leaves of absence and reinstatement of graduate students are addressed in the "Graduate Degrees (p. 43)" section of this bulletin.

Conferral of Degrees

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Undergraduate Standards and Policy, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer quarters. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar's Office (<http://studentaffairs.stanford.edu/registrar/students/diplomas>) web site.

Students must apply for conferral of an undergraduate or graduate degree by filing an Application to Graduate through Axxess by the deadline for each term. The deadlines are published in the Academic Calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A separate application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student's department, to verify completion of degree requirements. Registration is required in the conferral term. Students with unmet financial or other University obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released. An academic record where no other degree objective is being pursued is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate during the term in which they expect to be awarded a degree. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>) in writing through the Withdrawal of Application to Graduate Form (<http://studentaffairs.stanford.edu/registrar/forms>) by the late application to graduate deadline on the academic calendar. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.

Undergraduate Major Unit Requirements

Undergraduate Major Unit Requirements

The Writing in the Major (WIM) courses listed below reflect courses, offered in past or present years, which satisfy the WIM requirement for majors applying to graduate in the current academic year. Such WIM courses may or may not be offered in the current year. Consult the applicable department section of the Bulletin or ExploreCourses (<http://explorecourses.stanford.edu>) for more information.

section of this bulletin. For University application forms, see the Coterminal Forms (<http://studentaffairs.stanford.edu/registrar/forms/coterm>) web page.

Coterminal Programs Residency Requirement

The University minimum requirements for the coterminal bachelor's/master's program are as follows:

1. 180 units for the bachelor's degree plus 45 (or higher departmental requirement, as determined by each graduate department) unduplicated units for the master's degree.
2. The requirements for the coterminal program with dual undergraduate degrees are 225 units for the two bachelor's degrees, and 45 units for the master's degree.

For the 45-unit University minimum for the master's degree, all courses must be at or above the 100 level and 50 percent must be courses designated primarily for graduate students (typically at least at the 200 level). Department requirements may be higher. Units for a given course may not be counted to meet the requirements of more than one degree, that is, no units may be double-counted. No courses taken more than two quarters prior to admission to the coterminal master's program may be used to meet the 45-unit University minimum requirement for the master's degree. Master's degrees may not be conferred with fewer than 45 units.

Application and Admission Application

Effective Autumn Quarter 2013-14, students who accept an offer of admission and are matriculated into the program are assessed a \$125 coterm application fee.

Applications for admission to a coterminal program must fulfill the following conditions:

- Applicants must have earned a minimum of 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. This includes allowable Advanced Placement (AP) and transfer credit.
- Applicants must submit their application and, if admitted, respond to the offer of admission no later than the quarter prior to the expected completion of their undergraduate degree. This is normally the Winter quarter prior to Spring quarter graduation.
- Applicants must meet the requirements and deadlines established by the department or program to which they are applying.
- Applicants are only permitted to apply to one coterminal program per term.
- Coterminal students must have the bachelor's degree conferred before adding a second advanced degree program.

To apply for admission to a coterminal master's program, students must submit to the prospective graduate department the following:

- Application for Admission to Coterminal Masters' Program (<http://registrar.stanford.edu/pdf/CotermApplic.pdf>),
- statement of purpose,
- preliminary program proposal,
- two letters of recommendation from Stanford professors,
- and a current Stanford transcript.

Graduate Record Examination (GRE) scores or other requirements may be specified by the prospective department.

Admission

Each master's department is responsible for admissions/acceptance decisions for coterminal applicants. Departments or programs must admit

Coterminal Bachelor's and Master's Degrees

Coterminal Degrees

The coterminal degree program allows undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. Undergraduates with strong academic records may apply for admission to a coterminal master's program upon completion of 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree. Full-time enrollment during Summer Quarters, as well as allowable undergraduate transfer credit, are also counted towards quarters of undergraduate study. Students who wish to apply for a master's program after these deadlines must apply through the regular graduate admissions process.

The specific University residency, unit requirement, and additional policies for a bachelor's/master's program are described under the Graduate Degrees

coterminal applicants and submit the completed and approved application for admission to the Office of the Registrar no later than the quarter prior to the expected completion of the undergraduate degree. This is normally the last day of classes in Winter quarter prior to Spring quarter graduation.

Students may defer admission to the coterminal program to a later quarter as long as they still meet all University and departmental requirements for coterminal admission, and the coterminal application has not yet been processed. This may require postponement of conferral of the undergraduate degree.

Admitted students must have one quarter of overlap in the undergraduate and graduate career prior to conferring their undergraduate degree. For example, if the admit term for the coterminal program is Autumn quarter then the earliest that the undergraduate degree can be conferred is Autumn quarter.

Tuition

For coterminal students, the quarter following completion of 12 full-tuition undergraduate quarters is identified as the first graduate quarter for tuition assessment. Beginning with this quarter (13th quarter), coterminal students are subject to graduate student policies and procedures (including those described in the "Graduate Degrees" section of this bulletin) in addition to undergraduate minimum progress standards. These policies include continuous registration or leaves of absence for quarters not enrolled and minimum progress guidelines. Tuition and Fee information for 2013-14 (http://studentaffairs.stanford.edu/registrar/students/tuition-fees_13-14) is available on The Office of the University Registrar web site.

Undergraduate Tuition Assessment

Students will normally remain in the undergraduate coterminal student group until the completion of 12 undergraduate quarters.

- Students in the undergraduate coterminal student group are assessed the undergraduate tuition rate, and are subject to the 20-unit maximum enrollment per quarter. Students enrolled in over 20 units are subject to an enrollment hold effective the following quarter.
- Students in the undergraduate coterminal group who have fewer than 12 quarters at Stanford but who want to enroll at the 8, 9, 10 unit graduate or graduate Engineering tuition rate may request to be moved to the graduate coterminal student group under the following conditions
 - They must have completed 180 undergraduate units. This includes transfer credit but not AP and other external test credit.
 - Once students have moved to the graduate coterminal student group, they may not move back to the undergraduate coterminal student group.

Graduate Tuition Assessment

For coterminal students, the quarter following completion of 12 full-tuition undergraduate quarters is identified as the first graduate quarter for tuition assessment. Thus, coterminal students are changed from the undergraduate to the graduate coterminal student group in the 13th quarter and are then assessed either the regular graduate tuition rate or the graduate Engineering tuition rate.

- Students in the graduate coterminal student group are assessed the graduate tuition rate, and are subject to the 24-unit maximum enrollment per quarter. Students enrolled in over 24 units are subject to an enrollment hold effective the following quarter.
- For coterminal students with two undergraduate degrees, the quarter following completion of 15 full-tuition undergraduate quarters is identified as the first graduate quarter for tuition assessment. Thus,

coterminal students are changed from the undergraduate to the graduate coterminal student group in the 16th quarter and are then assessed either the regular graduate tuition rate or the graduate Engineering tuition rate.

- Beginning with the first graduate coterminal student group quarter, coterminal students are subject to graduate student policies and procedures (including those described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4902.htm>)" section of the *Stanford Bulletin*) in addition to undergraduate minimum progress standards. These policies include continuous registration or leaves of absence for quarters not enrolled and minimum progress guidelines.
- Once students have moved to the graduate coterminal student group, they may not move back to the undergraduate student group.
- Coterminal students are not eligible for reduced graduate tuition rates below 8 units prior to conferral of the undergraduate degree.
- Students in the graduate coterminal student group are assessed additional graduate or Engineering tuition on a per-unit basis beginning with the 19th unit.

Assistantships

Students who receive Research Assistant (RA) or Teaching Assistant (CA/TA) appointments from the department prior to the 13th quarter (or 16th quarter for students completing two undergraduate degrees) are changed to the graduate coterminal student group and assessed the applicable graduate tuition rate for the quarter in which they hold the assistantship appointment. Student or department must notify Student Services Center through a HelpSU ticket to change to graduate or graduate Engineering tuition. The following conditions must apply:

- Students must have completed 180 undergraduate units (or 225 for students completing two undergraduate degrees) to be eligible for research or teaching assistantships. Advanced placement and transfer units may be used towards the 180 units (or 225 for students completing two undergraduate degrees), subject to university policies regarding the acceptance of external credit.
- Once students have moved to the graduate coterminal student group, they may not move back to the undergraduate coterminal student group even if they no longer hold an assistantship appointment.
- Student or department should submit a HelpSU (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=StuAcct&dtag=10772>) ticket to request to be moved to graduate billing.

Graduate Tuition Option

Students who have fewer than 12 quarters at Stanford but who want to enroll at the 8, 9, 10 unit graduate or graduate Engineering tuition rate may request to the Student Services Center to be moved to the graduate coterminal student group under the following conditions:

- They must have completed 180 units. This includes transfer credit but not AP and other external test credit.
- Once students have moved to the graduate coterminal student group, they may not move back to the undergraduate coterminal student group.
- Coterminal students should submit a HelpSU (<https://remedyweb.stanford.edu/helpsu/helpsu?pcat=StuAcct&dtag=10772>) ticket to request to be moved to graduate billing.

Degree Progress Academic Progress

Once the student is in the Graduate Coterminal Student Group (for tuition purposes), coterminal students are subject to graduate student policies and procedures, as described in the "Graduate Degrees" section of the *Stanford Bulletin*, in addition to undergraduate minimum progress standards.

Up until the conferral of the undergraduate degree(s), coterminal students' academic progress is monitored by the Undergraduate Advising and Research Office (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/NBY_Coterm.html) (UAR, part of the office of the Vice Provost for Undergraduate Education) in conjunction with the graduate department. After the conferral of the undergraduate degree, the students' degree progress is evaluated using the graduate degree progress standards and monitored by the adviser and graduate department.

Once the coterminal student is subject to graduate degree progress standards, all courses taken during a quarter, whether enrolled in the undergraduate or graduate career, are used to evaluate graduate minimum progress.

Coterminal Course Transfer

Coterminal students are permitted to count coursework taken in the two quarters immediately prior to their first graduate quarter toward their graduate degree (Summer quarter is not included in the two quarter back count). However, if a student is on an approved leave of absence in the two quarters prior to the admit term, the course transfer option may not be applicable. All course transfer requests should be submitted no later than the Final Study List Deadline of the intended degree conferral quarter. Course work cannot be transferred once the undergraduate degree is conferred.

Advising and Time Limit

In the first graduate quarter, a coterminal student is assigned an adviser in the master's department for assistance in planning a program of study to meet the requirements for the master's degree. The plan is outlined on the Program Proposal for a Master's Degree, which is approved by the master's department by the end of the first graduate quarter. Authorizations for master's programs expire three calendar years from the first graduate quarter. An extension requires review of academic performance by the department, and is in the discretion of the department.

Degree Conferral

Conferral of each degree is applied for separately by the deadlines given in the Academic Calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>) web site. The master's degree must be conferred simultaneously with, or after, the bachelor's degree.

Coterminal students must have the bachelor's degree conferred before adding a second advanced degree program. Courses may not be transferred between undergraduate and graduate careers once the undergraduate degree is conferred.

Graduate Degrees

General Requirements

For each Stanford advanced degree, there is an approved course of study that meets University and department requirements. The University's general requirements, applicable to all graduate degrees at Stanford, are described below. University requirements pertaining to only a subset of advanced degrees are described in the "Degree-Specific Requirements, Master's Degrees (p. 44)" and "Degree-Specific Requirements, Doctoral Degrees (p. 45)" sections.

See the "Graduate Programs" section of each department's listing for specific department degree requirements. Additional information on professional school programs is available in the bulletins of the Graduate School of Business, the School of Law, and the School of Medicine.

Enrollment Requirements

Graduate education at Stanford is a full-time commitment requiring full-time enrollment, typically at least 8 units. For a complete definition of full-time enrollment, see the "Certification of Enrollment or Degrees (p. 64)" section of this bulletin. Unless permission is granted by the department (for example for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

Requests to enroll for fewer than 8 units during the academic year are approved only in specific circumstances. Students enrolled in the Honors Cooperative or the Master of Liberal Arts programs are permitted part-time enrollment on a regular basis. Graduate students who need only a few remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency (see the "Graduate Tuition Adjustment (p. 18)" section of this bulletin). Students with disabilities covered under the Americans with Disabilities Act may enroll in a reduced course load (RCL) as recommended by the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) (OAE). Women students may request up to two quarters of part-time enrollment for an approved Childbirth Academic Accommodation; see the "Childbirth Accommodation Policy (p.)" section of this bulletin and the GAP 5.9, Childbirth Accommodation (<http://gap.stanford.edu/5-9.html>).

Graduate students must enroll in courses for all terms of each academic year (Autumn, Winter, and Spring quarters) from the admission term until conferral of the degree. The only exception to this requirement occurs when the student is granted an official leave of absence. Failure to enroll in courses for a term during the academic year without taking a leave of absence (p. 51) results in denial of further enrollment privileges unless and until reinstatement to the degree program is granted and the reinstatement fee paid. As a general proposition, registration in Summer Quarter is not required and does not substitute for registration during the academic year. Students possessing an F-1 or J-1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

In addition to the above requirement for continuous registration during the academic year, graduate students are required by the University to be registered:

1. In each term during which any official department or University requirement is fulfilled, including qualifying exams or the University oral exam. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term, with the option of considering the two weeks preceding the start of Autumn Quarter as part of Autumn Quarter (rather than as part of Summer Quarter). See details below.
2. In any term in which a University dissertation/thesis is submitted or at the end of which a graduate degree is conferred.
3. Normally, in any term in which the student receives financial support from the University.
4. In any term for which the student needs to use University facilities.
5. For international students, in any term of the academic year (summer may be excluded) for which they have non-immigrant status (i.e., a J-1 or F-1 visa).

Individual students may also find themselves subject to the registration requirements of other agencies (for example, external funding sources such as federal financial aid). Course work and research are expected to be done on campus unless the department gives prior approval.

Degree programs have the option to include the two weeks before the start of Autumn Quarter as part of Autumn Quarter for the purposes of completing milestones and departmental requirements. The following considerations apply to this exception:

1. The student must enroll in the subsequent Autumn Quarter in the applicable standard enrollment category prior to the completion of the milestone; a leave of absence is not permitted for that Autumn Quarter.
2. A student exercising this option will not be eligible for Graduation Quarter status until the following Winter Quarter at the earliest.
3. This exception is permitted only for milestones administered by the department, such as qualifying examinations or University oral examinations.
4. This exception does not apply to deadlines administered through Stanford University, such as filing the Application to Graduate, or Dissertation/Thesis submission.
5. Degree programs are not obligated to exercise this option solely because a student requests it.

Degree-Specific Requirements (Master's Degrees)

Master of Arts and Master of Science

In addition to completing the general requirements for advanced degrees and the specified program requirements, candidates for the degree of Master of Arts (M.A.) or Master of Science (M.S.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

Master's Program Proposal

Students pursuing an M.A., M.F.A., M.S., or M.P.P. degree are required to submit an acceptable program proposal to their department during the first quarter of enrollment. Coterminal students must submit the proposal during the first quarter after admission to the coterminal program. The program proposal establishes a student's individual program of study to meet University and department degree requirements. Students must amend the proposal formally if their plans for meeting degree requirements change.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master's degree will be met through the proposed program of study. Students who fail to submit an acceptable proposal may be dismissed.

Time Limit for Completion of the Master's Degree

All requirements for a master's degree must be completed within three years after the student's first term of enrollment in the master's program (five years for Honors Cooperative students). Students pursuing a coterminal master's degree must complete their requirements within three years of their first quarter of graduate standing.

The time limit is not automatically extended by a student's leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program's time limit. Departments are not obliged to grant an extension. The maximum extension is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department, and approval by the department; such approval is at the department's discretion.

Master of Public Policy

The degree of Master of Public Policy (M.P.P.) is a two-year program leading to a professional degree. Enrollment in the M.P.P. program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates. In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Public Policy (<http://stanford.edu/dept/registrar/bulletin/6616.htm>)" section of this bulletin, candidates for the degree of Master of Public Policy (M.P.P.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

Master of Business Administration

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found on the M.B.A. program web site of the Graduate School of Business (<http://www.gsb.stanford.edu/mba/academics>). The M.B.A. must be completed within the time limit for completion of the master's degree.

Master of Fine Arts

In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Art and Art History (<http://stanford.edu/dept/registrar/bulletin/7148.htm>)" section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

Master of Liberal Arts

The Master of Liberal Arts (M.L.A.) program is a part-time interdisciplinary master's program in the liberal arts for returning adult students. In addition to completing the general requirements for advanced degrees, candidates for the degree of Master of Liberal Arts (M.L.A.) must complete their degrees within five years, an exception to the rule specified above.

Engineer

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

Candidacy

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

Thesis

A University thesis is required for the Engineer degree. Students have the option of submitting the thesis electronically or via the paper process. Standards for professional presentation of the thesis have been established by the Committee on Graduate Studies. Directions for preparation of the thesis for electronic or paper submission are available at the Office of the University Registrar dissertation/thesis (<http://studentaffairs.stanford.edu/registrar/students/dissertation-thesis>) web site.

The deadline for submission of theses for degree conferral in each term is specified by the University academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). If submitting via the paper process, three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Office of the University Registrar before the quarterly deadline listed on the University academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A fee is charged for binding copies of the paper thesis. If submitting via the electronic process the signed thesis signature page and title page must be submitted to the Student Services Center (<http://www.stanford.edu/group/student-services-center>) and one final copy of the thesis must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). There is no fee charged for the electronic submission process.

Students must be registered or on graduation quarter in the term in which they submit the thesis; see "Graduation Quarter (<http://stanford.edu/dept/registrar/bulletin/4941.htm>)" section of this bulletin for additional information. At the time the thesis is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

Master of Legal Studies

The Master of Legal Studies degree (M.L.S.), a nonprofessional degree, is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School Student Handbook (pdf) provides detailed information on degree requirements.

Master of Laws

The degree of Master of Laws (L.L.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School.

The degree is designed for foreign graduate students trained in law and is available only to students with a primary law degree earned outside the United States. The L.L.M. program offers students a choice of three areas of specialization: Corporate Governance and Practice; Law, Science, and Technology; or International Economic Law, Business, and Policy. The Stanford Law School Student Handbook (http://www.law.stanford.edu/experience/studentlife/SLS_Student_Handbook2011.pdf) (pdf) provides detailed information on degree requirements.

Master of the Science of Law

The degree of Master of the Science of Law (J.S.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School.

The degree is primarily designed for those qualified students who hold a J.D. or its equivalent and who are at the Stanford Law School for independent reasons (for example, as teaching fellows) and who wish to combine work toward the degree with their primary academic activities. Specially qualified lawyers, public officials, academics, and other professionals who have worked outside the United States may apply for the degree through the Stanford Program in International Legal Studies (SPILS). The Stanford Law School Student Handbook (<http://www.law.stanford.edu/experience/studentlife/>

(http://www.law.stanford.edu/experience/studentlife/SLS_Student_Handbook2011.pdf) (pdf) provides detailed information on degree requirements.

Degree-Specific Requirements (Doctoral Degrees)

Doctor of Jurisprudence

The degree of Doctor of Jurisprudence (J.D.) is conferred on candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than three academic years and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School web site (<http://www.law.stanford.edu/degrees>) provides detailed information on degree requirements.

Doctor of the Science of Law

The degree of the Doctor of the Science of Law (J.S.D.) is conferred upon candidates who hold a J.D. or its equivalent, who complete one academic year in residence, and who, as a result of independent legal research, present a dissertation that is, in the opinion of the faculty of the Stanford Law School a contribution to knowledge. Such work and dissertation must conform to the rules of the Stanford Law School and the University for the dissertation and the University Oral Examination, as described in the "Doctor of Philosophy" section of this bulletin.

Candidacy is limited to students of exceptional distinction and promise. The Stanford Law School web site (<http://www.law.stanford.edu/degrees/jd>) provides detailed information on degree requirements.

Doctor of Musical Arts

The degree of Doctor of Musical Arts (D.M.A.) is conferred on candidates who have satisfied the general requirements for advanced degrees, the program requirements specified in the "Music (<http://stanford.edu/dept/registrar/bulletin/7094.htm>)" section of this bulletin, and the candidacy requirement as described in the "Doctor of Philosophy" section.

Doctor of Medicine

Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. The requirements for the M.D. degree are detailed online at <http://med.stanford.edu/md>.

Doctor of Philosophy

The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have demonstrated to the satisfaction of their department or school substantial scholarship, high attainment in a particular field of knowledge, and the ability to do independent investigation and present the results of such research. They must satisfy the general requirements for advanced degrees, the program requirements specified by their departments, and the doctoral requirements described below. The option for a Ph.D. minor is also described below, though it is not a Ph.D. requirement.

Candidacy

Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student's potential to successfully complete the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy by the end of their second year in the Ph.D. program. Honors Cooperative students must apply by the end of their fourth year. A Pregnancy or Parental Leave of Absence automatically extends the pre-

candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent.

Admission to candidacy for the doctoral degree is granted by the major department following a student's successful completion of qualifying procedures as determined by the department. Departmental policy determines procedures for subsequent attempts to become advanced to candidacy in the event that the student does not successfully complete the procedures. Failure to advance to candidacy results in the dismissal of the student from the doctoral program; see "Guidelines for Dismissal of Graduate Students for Academic Reasons (p. 48)" section of this bulletin.

The Application for Candidacy specifies a departmentally approved program of study to fulfill degree requirements, including required course work, language requirements, teaching requirements, dissertation (final project and public lecture-demonstration for D.M.A.), and University oral examination (for Ph.D.). Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members. To reiterate, however, a student will only be admitted to candidacy if, in addition to the student's fulfilling departmental prerequisites, the faculty makes the judgment that the student has the potential to successfully complete the requirements of the degree program.

If the Ph.D. student is pursuing a minor, approval by the department awarding the minor is also required on the Application for Candidacy.

Time Limit for Completion of a Degree with Candidacy

Students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. Candidacy is valid for five years unless terminated by the department (for example, for unsatisfactory progress). The time limit is not automatically extended by a student's leave of absence. A Pregnancy or Parental Leave of Absence automatically extends the candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent.

Failure to make minimum progress or complete university, department, and program requirements in a timely or satisfactory manner may lead to dismissal; see Guidelines for Dismissal of Graduate Students for Academic Reasons (p.) section of this bulletin.

All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program's time limit. Departments are not obligated to grant an extension. Students may receive a maximum of one additional year of candidacy per extension. Extensions require review by the department of a dissertation progress report, a timetable for completion of the dissertation, any other factors regarded as relevant by the department, and approval by the department; such approval is at the department's discretion.

Teaching and Research Requirements

A number of departments require their students to teach (serving as a teaching assistant) or assist a faculty member in research (serving as a research assistant) for one or more quarters as part of their doctoral programs. Detailed information is included in the department sections of this bulletin.

Foreign Language Requirement

Some departments require a reading knowledge of one or more foreign languages as indicated in department sections of this bulletin. Fulfillment

of language requirements must be endorsed by the chair of the major department.

University Oral Examination

Passing a University oral examination is a requirement of the Ph.D. and J.S.D. degrees. The purpose of the examination is to test the candidate's command of the field of study and to confirm fitness for scholarly pursuits. Departments determine when, after admission to candidacy, the oral examination is taken and whether the exam will be a test of knowledge of the field, a review of a dissertation proposal, or a defense of the dissertation. The chairperson of a Stanford oral examination is appointed for this examination only, to represent the interests of the University for a fair and rigorous process.

Students must be registered in the term in which the University oral examination is taken. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term. Candidacy must also be valid.

The University Oral Examination Committee consists of at least five Stanford faculty members: four examiners; and the committee chair from another department. All committee members are normally members of the Stanford University Academic Council, and the chair must be a member of the Stanford University Academic Council. Emeritus faculty are also eligible to serve as examiners or chair of the committee.

A petition for appointment of an examining committee member who is neither a current or emeritus member of the Academic Council may be approved by the chair of the department if that person contributes an area of expertise that is not readily available from the faculty and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the Ph.D. or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student's department chair. The majority of the examiners must be current or emeritus Academic Council members; more specifically, one of four or five examiners or two of six or seven examiners may be appointed to the Oral Examination Committee by means of this petition.

The chair of the examining committee may not have a full or joint appointment in the adviser's or student's department, but may have a courtesy appointment in the department. The chair can be from the same department as any other member(s) of the examination committee and can be from the student's minor department provided that the student's adviser does not have a full or joint appointment in the minor department.

For Interdisciplinary Degree Programs (IDPs), the chair of the examining committee may not have a full or joint appointment in the primary adviser's major department and must have independence from the student and adviser.

The University Oral Examination form must be submitted to the department graduate studies administrator at least two weeks prior to the proposed examination date. The examination is conducted according to the major department's adopted practice, but it should not exceed three hours in length, and it must include a period of private questioning by the examining committee.

Responsibility for monitoring appointment of the oral examination chair rests with the candidate's major department. Although the department cannot require the candidate to approach faculty members to serve as chair, many departments invite students and their advisers to participate in the process of selecting and contacting potential chairs.

The candidate passes the examination if the examining committee casts four favorable votes out of five or six, five favorable votes out of seven, or six favorable votes out of eight. Five members present and voting constitute a quorum. If the committee votes to fail a student, the committee chair sends within five days a written evaluation of the candidate's performance to the major department and the student. Within 30 days and after review of the examining committee's evaluation and recommendation, the chair of

the student's major department must send the student a written statement indicating the final action of the department.

Dissertation

An approved doctoral dissertation is required for the Ph.D. and J.S.D. degrees. The doctoral dissertation must be an original contribution to scholarship or scientific knowledge and must exemplify the highest standards of the discipline. If it is judged to meet this standard, the dissertation is approved for the school or department by the doctoral dissertation reading committee. Each member of the reading committee signs the signature page of the dissertation to certify that the work is of acceptable scope and quality. These signatures must be in ink; proxy or electronic signatures are not permitted. One reading committee member reads the dissertation in its final form and certifies on the Certificate of Final Reading that department and University specifications have been met.

Dissertations must be in English. Approval for writing the dissertation in another language is normally granted only in cases where the other language or literature in that language is also the subject of the discipline. Such approval is routinely granted for dissertations in the Division of Literatures, Cultures, and Languages, in accordance with the policy of the individual department. Approval is granted by the school dean upon a written request from the chair of the student's major department. Dissertations written in another language must include an extended summary in English.

Students have the option of submitting the dissertation electronically or via the paper process. Directions for preparation of the dissertation for electronic or paper submission are available at the Office of the University Registrar dissertation (<http://studentaffairs.stanford.edu/registrar/students/dissertation-thesis>) web site. If submitting via the paper process, the signed dissertation copies and accompanying documents must be submitted to the Office of the University Registrar on or before the quarterly deadline indicated in the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A fee is charged for the microfilming and binding of the paper dissertation copies. If submitting via the electronic process the signed dissertation signature page and title page must be submitted to the Student Services Center (<http://www.stanford.edu/group/studentsservicescenter>) and one final copy of the dissertation must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University's academic calendar (<http://www.stanford.edu/group/studentsservicescenter>). There is no fee charged for the electronic submission process.

Students must either be registered or on graduation quarter in the term they submit the dissertation; see "Graduation Quarter" in the "Graduate Degrees" (<http://stanford.edu/dept/registrar/bulletin/4901.htm>) section of this Bulletin for additional information. At the time the dissertation is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

Doctoral Dissertation Reading Committee

The doctoral dissertation reading committee consists of the principal dissertation adviser and, typically, two other readers. The doctoral dissertation reading committee must have three members and may not have more than five members. All members of the reading committee approve the dissertation. At least one member must be from the student's major department. Normally, all committee members are members of the Stanford University Academic Council or are emeritus Academic Council members. The student's department chair may, in some cases, approve the appointment of a reader who is not a current or emeritus member of the Academic Council, if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the PhD

or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student's department chair. Former Stanford Academic Council members and non-Academic Council members may thus on occasion serve on a reading committee. A non-Academic Council member (including former Academic Council members) may replace only one of three required members of dissertation reading committees. If the reading committee has four or five members, at least three members (comprising the majority) must be current or emeritus members of the Academic Council.

Any member of the Academic Council may serve as the principal dissertation adviser. If former Academic Council members, emeritus Academic Council members, or non-Academic Council members are to serve as the principal dissertation adviser, the appointment of a co-advisor who is currently on the Academic Council is required. This is to ensure representation for the student in the department by someone playing a major adviser role in completion of the dissertation. However, a co-advisor is not required during the first two years following retirement for emeritus Academic Council members who are recalled to active service.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on the Doctoral Dissertation Reading Committee form. This form must be submitted before approval of Terminal Graduate Registration (TGR) status or before scheduling a University oral examination that is a defense of the dissertation. The reading committee may be appointed earlier, according to the department timetable for doctoral programs. All subsequent changes to the reading committee must be approved by the chair of the major department. The reading committee must conform to University regulations at the time of degree conferral.

Ph.D. Minor

Students pursuing a Ph.D. may pursue a minor in another department or program to complement their Ph.D. program. This option is not available to students pursuing other graduate degrees. Ph.D. candidates cannot pursue a minor in their own major department or program. In rare cases, a Ph.D. student may complete the requirements for more than one minor. In that case, 20 unduplicated units must be completed for each minor.

Only departments that offer a Ph.D. may offer a minor, and those departments are not required to do so. Interdisciplinary Ph.D. minors, administered by a designated academic department, may be approved by the Faculty Senate. The minor should represent a program of graduate quality and depth, including core requirements and electives or examinations. The department offering the minor establishes the core and examination requirements. Elective courses are planned by the students in conjunction with their minor and Ph.D. departments.

The minimum University requirement for a Ph.D. minor is 20 units of course work at the graduate level (typically courses numbered 200 and above). If a minor department chooses to require those pursuing the minor to pass the Ph.D. qualifying or field examinations, the 20-unit minimum can be reduced. All of the course work for a minor must be done at Stanford.

Units taken for the minor can be counted as part of the overall requirement for the Ph.D. of 135 units of graduate course work done at Stanford. Courses used for a minor may not be used also to meet the requirements for a master's degree.

An Application for Ph.D. Minor (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf) outlining a program of study must be approved by the major and minor departments and submitted to the Student Services Center. This form is submitted at the time of admission to candidacy and specifies whether representation from the minor department on the University oral examination committee is required.

Joint Degree Programs

A Joint Degree Program (JDP) is a specified combination of degree programs or degree types in which a student is enrolled in two graduate degree programs concurrently. JDPs are developed and proposed by the relevant academic units with agreement of the deans of the schools affected.

An approved JDP includes a set of agreements between the participating programs and schools about matters such as admissions, advising, curricula, and tuition. In a JDP, a specified number of units may be double-counted toward the minimum University residency requirements for both degrees, reducing the total number of residency units required to complete both degrees. Students pursuing a Joint Degree that includes a Ph.D. may not also count a Stanford master's degree or transfer units towards residency for the Ph.D. degree. Application deadlines for each program or degree apply. Students must be admitted to the JDP no later than the study list deadline of the term prior to the term of expected degree conferral. In a JDP, both degrees are conferred concurrently since the units required for each degree are linked to the completion of both degrees. The sole exception is the J.D. degree which may be awarded prior to the second degree.

The following Joint Degree Programs, permitting students to complete requirements for two degrees with a reduced number of total residency units, are offered:

- Juris Doctor with a Master of Arts in Economics, Education, History, Public Policy, or the Division of International Comparative and Area Studies: African Studies, East Asian Studies, International Policy Studies, Latin American Studies, and Russian, East European and Eurasian Studies (J.D./M.A.)
- Juris Doctor with a Master of Science in Bioengineering, Computer Science, Electrical Engineering, Environment and Resources, Health Research and Policy, or Management Science and Engineering (J.D./M.S.)
- Juris Doctor with a Master of Public Policy (J.D./M.P.P.)
- Juris Doctor with a Doctor of Philosophy in Bioengineering, Economics, Environment and Resources, History, Management Science and Engineering, Philosophy, Political Science, Psychology, or Sociology (J.D./Ph.D.)
- Juris Doctor with a Master of Business Administration (J.D./M.B.A.)
- Master of Business Administration with a Master of Arts in Education (M.B.A./M.A.)
- Master of Business Administration with a Master of Science in Computer Science, Electrical Engineering, and Environment and Resources (M.B.A./M.S.)
- Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.)
- Master of Arts in Education or International Policy Studies with a Master of Public Policy (M.A./M.P.P.)
- Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.)
- Doctor of Philosophy in Economics, Education, Management Science and Engineering, Psychology, Sociology, or Structural Biology with a Master of Public Policy (Ph.D./M.P.P.)
- Juris Doctor with a Doctor of Medicine (J.D./M.D.)
- Master of Public Policy with a Doctor of Medicine (M.P.P./M.D.)

Specific requirements for the joint degree programs are available from the participating departments and schools and at Registrar's (<http://studentaffairs.stanford.edu/registrar/students/jdp-information>) web site.

Creation of additional Joint Degree Programs that are combinations of J.D./M.A., J.D./M.S., and Ph.D./M.P.P. degrees have been authorized by the Faculty Senate. New JDPs from among these combinations may double-count up to 45 units towards residency requirements. JDPs from these combinations are proposed by the coordinating programs and schools. Once

approvals from the chairs of the programs and deans of the relevant schools are obtained, approval on behalf of the Committee on Graduate Studies is granted by the Office of the Vice Provost for Graduate Education, and final approval is granted by the Office of the University Registrar. JDPs combining other degree types or programs may be proposed, but require review by the Faculty Senate Committee on Graduate Studies and must be approved by the Faculty Senate.

Minimum Progress Requirements for Graduate Students

The academic requirements for graduate students include completion of University, department, and program requirements, such as admission to candidacy, successful completion of qualifying exams, and so on in a timely and satisfactory manner. Graduate students must also meet the following standards of minimum progress as indicated by units and grades. (These standards apply to all advanced degree programs except the School of Business Ph.D., and the M.B.A., J.D., L.L.M., J.S.M., J.S.D., M.D., and M.L.A., which follow guidelines issued by the respective schools and are described in their respective school bulletins.)

Graduate students enrolled for 11 or more units must pass at least 8 units per term by the end of each term. Those registered for fewer than 11 units must pass at least 6 units per term by the end of each term, unless other requirements are specified in a particular case or for a particular program.

In addition, graduate students must maintain a 3.0 (B) grade point average overall in courses applicable to the degree.

Department requirements for minimum progress that set a higher standard for units to be completed, or a higher or lower standard for grade point average to be maintained, take precedence over the University policy; any such different standards must be published in the Stanford Bulletin.

Students identified as not meeting the requirements for minimum progress and timely and satisfactory completion of requirements are reviewed by their departments to determine whether the problem lies with administrative matters such as reporting of grades or with academic performance. Students have the opportunity to explain any special circumstances. Approval for continuation in the degree program is contingent on agreement by the student and department to a suitable plan to maintain appropriate progress in subsequent quarters. Dismissal of graduate students is addressed in separate guidelines.

Graduate students who have been granted Terminal Graduate Registration (TGR) status must enroll each term in the TGR course (801 for master's and Engineer programs or 802 for doctoral programs) in their department in the section appropriate for the adviser. An 'N' grade signifying satisfactory progress must be received each quarter to maintain registration privileges. An 'N-' grade indicates unsatisfactory progress. The first 'N-' grade constitutes a warning. A second consecutive 'N-' grade normally causes the department to deny the student further registration until a written plan for completion of degree requirements has been approved by the department. Subsequent 'N-' grades are grounds for dismissal from the program.

Students receiving federal student aid funds, including student loans, must maintain satisfactory academic progress standards that may be stricter than departmental standards. See the Financial Aid Office (<http://financialaid.stanford.edu>) web site for details.

Graduate Units Requirements

The University's expectation is that the units counted towards all graduate degrees are primarily in graduate courses. The University has set specific requirements for units applied to the minimum requirement for the M.A., M.S., and M.F.A. degrees: All units must be in courses at or above the 100 level and at least 50 percent of those must be courses designated primarily

for graduate students (typically at least the 200 level). Units earned in courses below the 100 level may not be counted towards the minimum unit requirement for the master's degree. Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications.

Changes of Degree Programs

Graduate students are admitted to Stanford for a specific degree program. Students who have attended Stanford for at least one term and who are currently enrolled may submit a Graduate Program Authorization Petition to make one of the following changes:

1. change to a new degree program in the same department;
2. change to a new degree program in a different department;
3. add a new degree program in the same or a different department to be pursued with the existing program. Coterminal students must have the bachelor's degree conferred before adding a second advanced degree program. Summer term enrollment is optional for students beginning a new degree program in the Autumn term provided that they have been enrolled the prior Spring term.

It is important that the attempt to add or change degree programs be made while enrolled. Otherwise, a new Application for Graduate Admission must be submitted and an application fee paid. The Graduate Program Authorization Petition is submitted electronically through Axxess to the department in which admission is requested. If applying for a higher degree program, students may also be required to submit other application materials such as GRE Subject Test scores, a statement of purpose, or new letters of recommendation. Decisions on the petitions are made by the programs or departments to which they are directed, and are at the discretion of those programs or departments.

International students changing departments or degree programs must also obtain the approval of the Foreign Student Adviser at the Bechtel International Center. If the requested change lengthens their stay, they also are required to submit verification of sufficient funding to complete the new degree program.

Students who wish to terminate study in a graduate program should submit a properly endorsed Request to Permanently Withdraw from Degree Program form (<http://studentaffairs.stanford.edu/registrar/forms>) to the Student Services Center (<http://www.stanford.edu/group/student-services-center>). To return to graduate study thereafter, the student is required to apply for reinstatement (if returning to the same degree program) or admission (if applying to a different program). Both applications require payment of a fee.

Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons

Admission to graduate programs at Stanford is highly selective. It is anticipated that every admitted student will be able to fulfill the requirements for the advanced degree. This document provides guidelines to be used in the unusual circumstance that a department must consider dismissal of a graduate student for academic reasons. These guidelines apply to all advanced degree programs except those in the schools of Law and Business, the STEP program in the Graduate School of Education, and the M.D. program in the School of Medicine, which follow guidelines issued by the respective schools.

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the University, department, and program requirements for the degree, fulfillment of minimum progress requirements, and meeting standards of professional behavior. The

guidelines that follow specify procedures for dismissal of graduate students who are not meeting these conditions. In such cases, a departmental committee (hereafter "the committee"), whether the department's committee of the faculty or other committee authorized to act on the department's behalf such as the departmental graduate studies committee, will:

1. Where possible and as early as possible, warn the student, in writing, of the situation and deficiency. A detailed explanation of the reason for the warning should be provided.
2. Consider extenuating circumstances communicated by the student.
3. Decide the question of dismissal by majority vote of the committee (with at least three faculty members participating in the committee's deliberation), and communicate the decision to the student in writing.
4. Place a summary of department discussions, votes, and decisions in the student's file.
5. Provide students the opportunity to examine their department files, if requested.
6. Provide students with information on their rights to appeal under the Student Academic Grievance Procedure. See the "Student Academic Grievance Procedure (p. 66)" section of this bulletin.

Careful records of department decisions safeguard the rights of both students and faculty.

Guidelines for Addressing Graduate Student Professional Conduct

The success of any academic institution depends on a shared willingness to discharge the ethical obligations that bind students, staff and faculty together in a system of mutually supporting professional roles. Stanford University is no exception. (Administrative Guide, 1.1.1 Code of Conduct (<https://adminguide.stanford.edu/chapter-1/subchapter-1/policy-1-1-1>)). The relevant ethical obligations are clearly defined for faculty in the Faculty Handbook: "In order to maintain the integrity of its teaching and research and to preserve academic freedom, Stanford University demands high standards of professional conduct from its faculty." (Faculty Handbook 4.3.A (<http://facultyhandbook.stanford.edu/ch4>)). The purpose of this policy is to similarly define the professionalism expectations for graduate students as they prepare to be responsible members of professional communities.

Graduate students are expected to meet standards of professional behavior, including: being present on campus to meet the academic and research expectations of the school or department; communicating in a timely, respectful and professional manner; complying with institutional policies and procedures; and participating appropriately in the program's community. Graduate students are expected to familiarize themselves with applicable University policy and degree program requirements. Failure to meet these standards may be grounds for dismissal.

Information about degree program requirements is available from departments; students are encouraged to consult with faculty and staff in those programs should they have questions about local requirements.

When the University has professionalism concerns about a graduate student, the University will manage the concern utilizing the Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons (above).

Additional Specifics for Degrees with Candidacy Before Candidacy

The committee, before review for admission to candidacy, may vote to dismiss a student who is not making minimum progress or completing requirements in a timely and satisfactory way or meeting standards of

professional behavior. Before considering dismissal, the committee should communicate with the student (which may include a meeting with the student) concerning his or her academic or professional performance and how to correct deficiencies, where such deficiencies are deemed correctable.

At the Review for Candidacy

In a review for admission to candidacy, if the committee votes not to recommend the student for admission to candidacy, the vote results in the dismissal of the student from the program. The department chair, or Director of Graduate Studies, or the student's adviser shall communicate the department's decision to the student in writing and orally. The student may submit a written request for reconsideration. The committee shall respond in writing to the request for reconsideration; it may decline to reconsider its decision.

During Candidacy

When a student admitted to candidacy is not making minimum progress, or not meeting standards of professional performance, or not completing University, department, or program requirements in a timely and satisfactory manner, the student's adviser, the Director of Graduate Studies, or department chair, and other relevant faculty should meet with the student. A written summary of these discussions shall be sent to the student and the adviser and added to the student's department file. The summary should specify the student's academic or professional deficiencies, the steps necessary to correct them (if deemed correctable), and the period of time that is allowed for their correction (normally one academic quarter). At the end of the warning period, the committee should review the student's progress and notify the student of its proposed actions. If the student has corrected the deficiencies, he or she should be notified in writing that the warning has been lifted.

If the deficiencies are not deemed correctable by the committee (for example, the failure of a required course or examination, or a pattern of unsatisfactory behavior or performance) or if, at the end of the warning period, the student has not in the view of the committee corrected the deficiencies, the committee may initiate proceedings for dismissal. The student shall be notified, in writing, that the case of dismissal will be considered at an impending committee meeting. The student has the right to be invited to attend a portion of the scheduled meeting to present his or her own case; a student may also make this case to the committee in writing.

After full discussion at the committee meeting, the committee, without the student present, shall review the case and vote on the issue of dismissal. The student shall be sent a written summary of the discussion, including the committee's decision and the reasons for it. The student may submit a written request for reconsideration. The committee's response to the request for reconsideration shall be made in writing; it may decline to reconsider its decision.

Childbirth Accommodation Policy

A Childbirth Accommodation is designed to make it possible to maintain the mother's full-time, registered student status, and to facilitate her return to full participation in classwork, and, where applicable, research, teaching, and clinical training in a seamless manner. Women graduate students, including students in professional schools, anticipating or experiencing a birth are eligible for an academic accommodation period of up to two consecutive academic quarters (in total), before and after the birth, during which the student may postpone course assignments, examinations, and other academic requirements. During this period, they are eligible for full-time enrollment and retain access to Stanford facilities, Cardinal Care, and Stanford housing. Such students are granted an automatic one quarter extension of University and departmental requirements and academic milestones, with the possibility of up to three quarters by petition under unusual circumstances. Women graduate students supported

by fellowships, teaching assistantships, and/or research assistantships are excused from regular TA or RA duties for a period of six weeks during which they continue to receive support. Students do not receive a stipend or salary if none was received previously, but are eligible for the academic accommodation period and the one quarter extension of academic milestones.

Stanford University prohibits discrimination on the basis of any characteristic protected by applicable law, including discrimination on the basis of pregnancy, in the administration of its programs and activities. Stanford will neither require nor prohibit leaves of absence for reason of pregnancy or childbirth-related concerns. Pregnant women and non-birth parents are eligible for Pregnancy and Parental Leaves of Absence.

For more information and a complete statement of the policies, see the policy on Pregnancy, Childbirth and Adoption (<http://stanford.edu/group/gap/5-9>).

Residency Policy for Graduate Students

Each type of graduate degree offered at Stanford (for example, Master of Science, Doctor of Philosophy) has a residency requirement based on the number of academic units required for the degree. These residency requirements and the maximum allowable transfer units for each degree type are listed below. Unless permission is granted by the department (for example, for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

The unit requirements for degrees can represent solely course work required for the degree or a combination of course work, research, and a thesis or dissertation. Academic departments and schools offering degrees may establish unit requirements that are higher than the minimum University residency requirement, but they may not have a residency requirement that is lower than the University standard. In addition to the University's residency requirement based on a minimum number of units for each degree, the School of Medicine and the Graduate School of Business may establish residency requirements based on the number of quarters of full-time registration in which students are enrolled to earn a degree. However, in no case may a student earn fewer units than the University minimum for each degree. All residency requirements are published in the Stanford Bulletin. Students should consult the Stanford Bulletin or their academic department to determine if their degree program has residency requirements that exceed the minimum.

Students eligible for Veterans Affairs educational benefits should refer to the "Veterans' Educational Benefits (p. 55)" section of this bulletin.

It is Stanford University's general policy that units are applicable toward only one degree. Units may not normally be duplicated or double-counted toward the residency requirement for more than one degree, with the exception that up to 45 units of a Stanford M.A. or M.S. degree may be applied to the residency requirement for the Ph.D., D.M.A., or Engineer degrees. Other exceptions to this general policy for specified combinations of degree types, known as Joint Degree Programs, may be approved by agreement of the Faculty Senate and the deans of the schools affected, with review by the Committee on Graduate Studies. Students pursuing a Joint Degree that includes a Ph.D. may not also count a Stanford master's degree or transfer units towards residency for the Ph.D. degree. See the "Joint Degree Programs (p. 47)" section of this bulletin for additional information.

Only completed course units are counted toward the residency requirement. Courses with missing, incomplete, in progress, or failing grades do not count toward the residency requirement. Courses from which a student has formally withdrawn do not count toward the residency requirement.

Terminal Graduate Registration (TGR) is available to graduate students who have met all of the conditions listed in the "TGR (p.)" section of this bulletin.

University Minimum Residency Requirements for Graduate Degrees ¹

Degree Type	Minimum # of Units	Maximum Allowable External Transfer Units
M.A., M.S., M.F.A., M.L.A.	45	0 (see note 4)
Engineer (see note 2)	90	45
M.B.A., M.P.P. (see note 3)	90	0 (see note 4)
Ph.D., D.M.A. (see note 5)	135	45
M.D.	235	90
J.D. (see notes 6,7)	109	45
M.L.S., L.L.M., J.S.M. (see note 6)	35	0 (see note 4)
J.S.D. (see note 6)	44	0 (see note 4)

- ¹ The University has authorized the granting of the M.A.T., Ed.S. and Ed.D degrees, but they are not being offered.
- ² Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, in an Engineering discipline may be used toward the 90 unit residency requirement for the Engineer degree. At least 45 units of work at Stanford are necessary to complete the 90 residency units for the Engineer degree.
- ³ Enrollment in the M.P.P. degree program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates.
- ⁴ Students eligible for Veterans Affairs educational benefits should refer to the Veterans Benefits section of "Admissions and Financial Aid (<http://stanford.edu/dept/registrar/bulletin/4815.htm>)" in this bulletin.
- ⁵ Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, may be used toward the 135 unit residency requirement for the Ph.D. or D.M.A. degree. At least 90 units of work at Stanford are necessary to complete the 135 residency units for the Ph.D. or D.M.A. degree.
- ⁶ The Academic Senate approved these residency requirements on February 4, 2010, effective for the 2009-10 academic year.
- ⁷ J.D. students entering prior to the Autumn Quarter 2009-10 must take the equivalent of 86 semester units.

University Minimum Residency Requirements for Graduate Degree Combinations

Students with multiple degree programs must complete the residency requirements for all their degrees types. Students enrolled in a Joint Degree Program should see the "Joint Degree Program (p. 47)" section of this Bulletin.

A table of these residency requirements is available on the Registrar's web site (<http://studentaffairs.stanford.edu/registrar/students/graduate-residency>); this table will be available on this page shortly.

Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at

another institution. Engineer candidates who also earned their master's at Stanford are not eligible for transfer residency credit, nor are any master's degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student's department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.
2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is 12 units. No transfer credit is given for online or correspondence work.
3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.
4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is 'B' quality work.
5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.

Leaves of Absence (Graduate)

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period.

Leaves do not delay candidacy or master's program expiration dates.

Students on leave may complete course work for which an 'Incomplete' grade was awarded in a prior term and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes. Students with extenuating circumstances that may warrant an exception to academic policy should discuss the need for an extension to the time limit with their adviser and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students) (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_crse_enroll.pdf).

When a student is granted (or placed on) a leave of absence after the beginning of the term, courses in which the student was enrolled after the drop deadline appear on the student's transcript and show the symbol 'W' (Withdraw).

Voluntary Leaves of Absence

Graduate students who do not meet the requirement for continuous registration during the academic year must obtain an approved leave of absence, in advance, for the term(s) they will not be registered. The leave of absence must be reviewed for approval by the chair or director of graduate studies of the student's major department and, if the student is in the United States on a foreign student visa, by the Bechtel International Center (<http://icenter.stanford.edu>). Except in the case of pregnancy or parental leaves, the granting of a leave of absence is at the discretion of the department and subject to review by the Office of the University Registrar. The University may condition its approval of a petition for leave of absence on the student's meeting such requirements as the University deems appropriate in the individual case for the student to be eligible to return (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee).

New graduate students and approved coterminal students may not take a leave of absence during their first quarter. Coterminal students are required to register their first graduate quarter. However, new Stanford students may request a deferment from the department.

Leaves of absence are granted for a maximum of one calendar year, or four quarters. Leaves requested for a longer period are approved only in exceptional circumstances (for example, mandatory military service). An extension of leave, for a maximum of one year or four quarters, is approved only in unusual circumstances. Extension requests must be made before the expiration of the original leave of absence. Leaves of absence for graduate students may not exceed a cumulative total of two years (eight quarters including summer quarters).

Any pregnant graduate student may request a Pregnancy Leave of Absence in order to suspend her student enrollment around the time of the birth. Alternatively, she may choose to remain enrolled and to request a Childbirth Accommodation. Non-birth parents may request a Parental Leave of Absence. Non-birth parents include: spouses/partners of women (who do not have to be Stanford students) anticipating or recently experiencing the birth of a child, parents who adopt a child, and parents by means of surrogacy.

In the case of Pregnancy and Parental Leaves of Absence, all provisions of the policy for Voluntary Leaves of Absence, defined above, will apply, except:

- Any matriculated pregnant student requesting a Pregnancy Leave of Absence will automatically be approved for a leave period of four quarters (12 months).
- Non-birth parents who request a Parental Leave of Absence will automatically be approved for a leave period of one academic quarter.
- Any student on a Pregnancy Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by 12 months (four quarters). If she has been admitted to candidacy, the candidacy period will be automatically extended by 12 months (four quarters). The 12-month extension of pre-candidacy or candidacy will be applicable whether the student takes a full year of leave or returns in less than one year.
- Any student on a Parental Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by three months (one quarter). If he or she has been admitted to candidacy, the candidacy period will be automatically extended by three months (one quarter).
- In the case where a Pregnancy or Parental Leave of Absence would extend the student's cumulative total beyond 8 quarters, that extension

will be permitted so that the student may return to his or her program. The student will then be considered to have reached his or her maximum cumulative leave.

Mandatory Leaves of Absence

A mandatory leave of absence can be imposed in circumstances in which a student:

- presents a substantial risk of harm to self or others or is failing to carry out substantial self-care obligations; or
- significantly disrupts the educational or other activities of the University community; or
- is unable to participate meaningfully in educational activities; or
- requires a level of care from the University community that exceeds the resources and staffing that the University can reasonably be expected to provide for the student's well-being.

Students whose circumstances warrant a review under the Dean's Mandatory Leave of Absence Policy (<http://studentaffairs.stanford.edu/studentlife/involuntary-leave>) will be apprised, in writing, of University concerns and will be provided an opportunity to respond to concerns in writing or in person or via telephone before a review committee convened by the Dean of Student Life. Students placed on mandatory leave of absence can appeal an unfavorable decision to the Vice Provost for Student Affairs. The University can condition a student's return to registered student status on such requirements as the University deems appropriate in the individual case (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (<http://vaden.stanford.edu>) or Counseling and Psychological Services (<http://vaden.stanford.edu/caps>) or its designee). The Dean of Student Life publishes the full Dean's Mandatory Leave of Absence Policy (<http://studentaffairs.stanford.edu/studentlife/involuntary-leave>) on its web site. Information on tuition refunds is available in the "Refunds (p. 22)" section of this bulletin.

Discontinuation and Reinstatement

A student's academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates graduate studies; or
- is dismissed from graduate studies for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline or approved for a leave of absence by the start of a term or after a voluntary withdrawal are required to apply for reinstatement (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/appgradreinststate.pdf>) through the Graduate Admissions office before they can return to the same degree program. Students whose master's program or doctoral candidacy has expired must petition to have extensions of their programs or candidacy approved by their departments before reinstatement may be approved.

The decision to approve or deny reinstatement is made by the student's department or program. Departments are not obliged to approve reinstatements of students. Reinstatement decisions are made at the discretion of the department or the program and may be based on the applicant's academic status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, and the ability of the department to support the student both academically and financially, as well as any other factors or considerations regarded as relevant by the department or program.

Reinstatement information is available from the Graduate Admissions office (<https://studentaffairs.stanford.edu/gradadmissions/applying/current-graduate>). Successful applicants are billed. Department-approved reinstatement applications must be submitted prior to the first day of the term for which re-enrollment is requested if the student is registering for courses. International students must submit reinstatement applications early enough to allow time for I-20 or DS-2019 production, visa interview, etc.

In the rare circumstance where a student who had been dismissed for academic reasons wishes to return to the same degree program, and where reinstatement was not precluded at the time of the dismissal, the student should request reinstatement as described above. In this circumstance, the degree program may review such relevant information as course work completed elsewhere or any other factors deemed to be appropriate for consideration.

Conditions for reinstatement may be established at the discretion of the program. The decision to approve or deny reinstatement is made by the department or program to which the student is seeking reinstatement, and is in its discretion. In addition, the department or program retains the right to condition reinstatement on such academic or other conditions as it deems appropriate.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

Terminal Graduate Registration (TGR)

Doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, completed 135 units or 10.5 quarters of residency (if under the old residency policy), and submitted a Doctoral Dissertation Reading Committee form, may request Terminal Graduate Registration status to complete their dissertations. Students pursuing Engineer degrees may apply for TGR status after admission to candidacy, completion of all required courses, and completion of 90 units or six quarters of residency (if under the old residency policy). Students enrolled in master's programs with a required project or thesis may apply for TGR status upon completion of all required courses and completion of 45 units. Students with more than one active graduate degree program must be TGR-eligible in all programs in order to apply for TGR status.

The TGR Final Registration status may also be granted for one quarter only to a graduate student who is returning after reinstatement, working on incompletes in his or her final quarter, or registering for one final term after all requirements are completed when Graduation Quarter is not applicable. TGR requirements above apply. Doctoral students under the term-based residency policy need nine quarters of residency to qualify for TGR Final Registration Status.

Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate. Students in TGR status enrolled in a course numbered 801 or 802 are certified as enrolled full time. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status. See the "Minimum Progress Requirements for Graduate Students (p.)" of this bulletin for information about satisfactory progress requirements for TGR students.

Graduate Tuition Adjustment (Reduced Enrollment)

Requests to enroll for fewer than eight units during the academic year are approved only in specific circumstances. Graduate students who need fewer than 8 remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency. This status may be used only once during a degree program. Students with disabilities covered under the Americans with Disabilities Act may enroll in an approved reduced course load (RCL) as recommended by the Office of Accessible Education (OAE) (<http://studentaffairs.stanford.edu/oea>). Women students may request up to two quarters of part-time enrollment for an approved Childbirth Academic Accommodation; see the "Childbirth Accommodation Policy (<https://exploreddegrees-nextyear.stanford.edu/graduatedegrees/#degreeprogress-text-chilaccopoli>)" section of this bulletin and the GAP 5.9, Childbirth Accommodation (<http://gap.stanford.edu/5-9.html>).

All students requesting reduced enrollment need to complete and file the Request for Graduate Tuition Adjustment (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/tuitadjreq.pdf>) form.

Graduation Quarter Status

Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet all the following conditions are eligible to be assessed a special tuition rate for the quarter in which they are receiving a degree:

1. All course work, degree requirements, oral exams, and residency requirements for all graduate degree programs, including joint degree programs, have been completed prior to the start of the requested Graduation Quarter.
2. A graduate or professional student must have been enrolled or have been on an approved leave of absence in the term immediately preceding the term chosen as the graduation quarter. Summer term enrollment is optional for students on graduation quarter in the Autumn term provided that they have been enrolled the prior Spring term.
3. The student has formally applied to graduate in Axxess.
4. The student has only to submit the dissertation, project, or master's thesis by the deadline for submission in the term designated as the graduation quarter.
5. The student has filed all necessary forms regarding graduation quarter before the first day of the term chosen as graduation quarter.

Students on graduation quarter are registered at Stanford and, therefore, have the rights and privileges of registered students. Graduation Quarter status may be used only once during a degree program. There is a tuition rate of \$100 for the graduation quarter. Students in Graduation Quarter status and enrolled in a course numbered 801 or 802 are certified as enrolled full time.

Conferral of Degrees

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Graduate Studies, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer terms. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar's Office (<http://studentaffairs.stanford.edu/registrar/students/diplomas>) web site.

Students must apply for conferral of a graduate degree by filing an Application to Graduate in Axxess by the deadline for each term. The deadlines are available in the Academic Calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>). A separate

application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student's department to verify completion of degree requirements. Students must be registered in the term of degree conferral. Students with unmet financial obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by the Office of Student Financial Services. An academic record where no other degree objective is being pursued is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate during the term in which they expect to be awarded a degree. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should submit the Withdrawal of Application to Graduate form (<http://studentaffairs.stanford.edu/registrar/forms>) to the Student Services Center (<http://www.stanford.edu/group/student-services-center>) by the late application to graduate deadline. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.

Advising and Credentials

Advising

By the start of their first term, students should be paired by the department with faculty advisers who assist them in planning a program of study to meet degree requirements. The department should also inform doctoral students in a timely fashion about procedures for selecting a dissertation adviser, reading committee members, and orals committee members. Departments should make every effort to assist doctoral students who are not yet admitted to candidacy in finding an appropriate adviser.

Students are obliged to follow department procedures for identifying advisers and committee members for their dissertation reading and university oral examinations.

Occasionally, a student's research may diverge from the area of competence of the adviser, or irreconcilable differences may occur between the student and the faculty adviser. In such cases, the student or the faculty adviser may request a change in assignment. If the department decides to grant the request, every reasonable effort must be made to pair the student with another suitable adviser. This may entail some modification of the student's research project.

In the rare case where a student's dissertation research on an approved project is in an advanced stage and the dissertation adviser is no longer available, every reasonable effort must be made to appoint a new adviser, usually from the student's reading committee. This may also require that a new member be added to the reading committee before the draft dissertation is evaluated, to keep the reconstituted committee in compliance with the University requirements for its composition.

Teaching Credentials

Stanford University is accredited by the California Commission on Teacher Credentialing and the National Council for Accreditation of Teacher Education and is authorized to recommend candidates for credentials. The University offers a complete training program for both Single (Secondary) and Multiple Subject (Elementary) teaching credentials. Upon completion

of a Stanford approved program, the credentials allow teachers to serve in California public schools.

Current Stanford undergraduates wishing to complete the requirements for a teaching credential should apply to the coterminal program at the Graduate School of Education (<https://ed.stanford.edu>). All other applicants should apply directly to the Stanford Teacher Education Program (STEP) at the School of Education.

Transfer Work

Stanford accepts a small number of undergraduate transfer students each year. Requirements for admission (<http://www.stanford.edu/dept/uga/application/transfer>) are described as part of the undergraduate application process and are listed on the Undergraduate Admission web site. Stanford University has a designated adviser who coordinates support for transfer students.

In conjunction with appropriate review bodies, the Office of the University Registrar evaluates and records the amount of transfer credit and advanced placement test credit an undergraduate can apply toward graduation requirements. Stanford awards credit based on course work completed at U.S. colleges or universities accredited by a regional accrediting association; or course work completed at international colleges or universities of recognized standing. Credit may also be awarded for certain Advanced Placement programs, International Baccalaureate Program, GCE, French Baccalaureate, and the German Abitur examinations.

See the "Advanced Placement (p. 32)" section of this Bulletin for information concerning Stanford's policy on credit for Advanced Placement work. Details on how to request credit for advanced placement examinations are available at the Registrar's Advanced Placement site (<http://studentaffairs.stanford.edu/registrar/students/ap>).

Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor's degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor's degree, subject to the approval of the credit evaluator and the appropriate departments.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned.
5. Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
6. Course work cannot duplicate, overlap, or regress previous work.
7. Transfer course work cannot count towards secondary school diploma and/or graduation requirements.
8. For students who want to fulfill general education requirements through transfer work and who are subject to the GER system in place prior to Autumn 2013-14, a proposed transfer course must match a specific Stanford course that fulfills the same GER requirement; it must be a minimum of 3 quarter units and have been taken for a letter grade.

For students who want to fulfill general education requirements through transfer work and who are subject to the Ways of Thinking/Doing

breadth requirement (instituted in Autumn 2013-14 for incoming first-year students and 2014-15 for incoming transfer students), transfer courses are reviewed to determine if courses can be certified to fulfill WAYS requirements. Courses must be a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must have been taken for a letter grade.

9. Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. Departments determine if approved transfer work can be used to satisfy a department major or minor requirement.
10. The credit allowed at Stanford for one quarter's work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
11. Credit is allowed at Stanford for work graded 'A,' 'B,' 'C,' or 'Pass' (where 'Pass' is equivalent to a letter grade of 'C' or above), but not for work graded 'D' or below.
12. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor's degree at Stanford (including advance placement test credit).
13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor's degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses.
14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. Engineer candidates who also earned their master's at Stanford are not eligible for transfer residency credit, nor are any master's degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student's department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.
2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is 12 units. No transfer credit is given for online or correspondence work.
3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.
4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which

letter grades were not an option and for which the standard of passing is 'B' quality work.

5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.

Veterans and Military Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with Veterans Affairs (VA) educational benefits and Department of Defense (DoD) tuition assistance.

Stanford University has made a good faith effort to comply with the Principles of Excellence established by Executive Order 13607. Stanford University participates in the Department of Defense Voluntary Education Partnership program so that eligible active duty service members are able to obtain Tuition Assistance from their military branch as administered by the Department of Defense. The Office of Military-Affiliated Communities in the Student Services Center (<http://www.stanford.edu/group/studentservicescenter>) serves as the first point of contact for veterans' educational benefits assistance and DoD tuition assistance.

Stanford certifies enrollment for veterans' educational benefits for students in degree seeking programs, and students in one of 23 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits or DoD tuition assistance while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs educational benefits or DoD tuition assistance. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs or DoD as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed. Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits or DoD tuition assistance have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Students (p. 43)" and "Undergraduate Degrees and Programs (p. 24)" sections of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences, Education,

Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

VA Status

In order to activate students' VA educational benefits at Stanford the Office of the University Registrar requires that students submit the following forms:

- A copy of the Certificate of Eligibility distributed by the VA
- Veterans' Benefits - Statement of Rights and Responsibilities (online form)
- DD-214 (if applicable)
- Any official transcripts from other institutions

It is the students' responsibility to ensure that all forms are submitted to the Office of University Registrar in order to activate the student as VA benefits receiving student.

In order to comply with VA regulations, students are responsible for the following:

- Obtain official transcripts from all postsecondary institutions attended, whether VA benefits were received or not.
- Report any changes in enrollment status to the Office of the University Registrar.
- Report any changes that are made to a degree plan. Undergraduates declaring or making changes to their major(s), minor(s), honor(s), or degree program(s) in Axess and Graduates adding or removing degree programs through the Graduate Program Authorization Petition in Axess should submit a Student Services Center Help ticket (attention VA Certifying Official) to report degree plan change.
- General overpayments of VA benefits are the responsibility of the student, even if the payment was submitted directly to the school on the student's behalf.
- Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with their adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.
- If concurrently enrolled with another college/university, notify both Stanford and the host institution.
- *Undergraduates only:* VA regulations require undergraduates to declare their major by the end of their sophomore year. Stanford cannot certify enrollment to the VA beyond sophomore year unless a major has been declared. Note that a student can change their major at any time.

Certification

The Office of the University Registrar certifies enrollment to the VA Office quarterly, approximately one week after the Preliminary Study List Deadline. See the Stanford Academic Calendar for exact dates in each quarter.

After the Final Study List deadline, the Office of the University Registrar confirms that your enrollment has not changed in Axess. If enrollment has increased or decreased your enrollment certification is adjusted.

The Office of the University continues to certify the student to the VA until the student leaves the program or unless notified by the student and/or the VA to stop the process of certification.

General overpayments of VA benefits are the responsibility of the student. If the enrollment change has resulted in tuition overpayment, the student is responsible for paying the tuition and fees back to the VA. If the student

is a Ch. 33 recipient and the enrollment change has resulted in tuition overpayment, a refund check will be issued by Stanford to the student. It remains the student's responsibility to provide tuition and fees back to the VA. If the enrollment change has resulted in underpayment, the VA sends the difference in tuition fees to the student, excluding Ch. 33 recipients. If you are a Ch. 33 recipient, fees will be paid directly to the institution in a separate payment.

Programs Subject to Restriction

Note that the following programs cannot be certified due to VA and federal regulations:

- *Certificate programs for non-matriculated students:* The VA defines "matriculated" as having been formally admitted to a college or university. Per the VA, educational benefits cannot be paid to "non-matriculated" college or university students. Hence, any certificate program that does not officially admit its students into Stanford University cannot be certified.

- *Visiting Students Programs:* Stanford cannot certify visiting students unless they meet one of the following conditions:

1. The student has an approved parent letter from the home institution which guarantees that the courses can be transferred back to original program.
2. The student is pending admission to a Stanford degree program and is required to take a prerequisite course(s). In that case the student can be certified for two terms.

- *Medical Residencies/Fellowship programs that are not certified by the ACGME:* these residencies are not allowed to be certified as on the job training. This is according to VA guidelines and the Federal Code of Regulations. See the School of Medicine for a full list of the fellowship/residency programs.

All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Financial Aid

The Post-9/11 GI Bill, also known as Chapter 33, is the most commonly used VA educational benefits program at Stanford. This program provides funding for tuition, required fees, books and housing. The level of an individual student's Chapter 33 benefits is determined by the qualifying veteran's length of military service since 9/11/2001. For the 2013-14 academic year, the base benefit for tuition and fees is capped at \$19,198.31. Eligible students may also receive funds through the Yellow Ribbon Provision.

Most of the VA educational benefit programs pay benefits directly to students on a monthly basis. However, under the Post-9/11 GI Bill (Chapter 33), the VA sends tuition and fees benefits to Stanford, where the Financial Aid Office is responsible for applying the funds to the student account (university bill). Chapter 33 books and housing benefits are sent directly to students monthly. Students may need to apply the housing benefits to the university bill to pay for on-campus room and board.

Yellow Ribbon Provision

Stanford elects on a yearly basis to participate in the Yellow Ribbon Program. Under this provision Stanford provides an annual contribution to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution. For the 2014-15 academic year, Stanford's annual Yellow Ribbon contribution for undergraduate students is \$3,000, with the VA providing a matching amount of \$3,000. For graduate and professional students, the amount of Stanford's Yellow Ribbon contribution

varies by school and program; see the Yellow Ribbon information on the University Registrar's web site.

Undergraduates

Undergraduates may apply for need-based financial aid from Stanford to supplement VA educational benefits. If the financial aid application demonstrates financial need beyond the amount of expected VA benefits, the student will be awarded institutional aid to meet the additional need.

If the student will be receiving VA educational benefits transferred from a parent, the student will be treated as a dependent student for financial aid purposes. The student's parents' income and asset information will be considered in determining eligibility for need-based aid from Stanford. If the student is a veteran, the student will most likely be treated as an independent student and will not need to provide parent information. Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

VA educational benefits are treated like other outside awards in that they can reduce or replace the Student Responsibility portion of the aid package. VA benefits do not reduce or replace the Parent Contribution in the determination of eligibility for need-based Stanford aid.

Graduate Students

Schools and departments are responsible for providing the Yellow Ribbon contribution for eligible graduate students. The Financial Aid Office will coordinate receipt of funds with responsible individuals in each school. Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

Veterans' Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans' benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans' benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student's degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student's degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the "Residency Policy for Graduate Student (p. 50)s" section of this bulletin. As an exception to that policy, students in master's programs in the schools of Earth Sciences,

Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of \$3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford's Yellow Ribbon contribution, so the student receives a combined total of \$6,000 in additional funds. Certain matriculated graduate students may be eligible for the Yellow Ribbon provision, and the amount of institutional contribution varies by school and program at the graduate level.

See the Office of Military Affiliated Communities (OMAC) web site (<https://military.stanford.edu/gi-bill-benefits>) for additional information about veterans' educational benefits..

Academic Policies and Statements

Compliance with University Policies/Registration Holds

Registration as a student constitutes a commitment by the student to abide by and accept University policies, rules, requirements, and regulations, including (but not limited to) those concerning registration, academic performance, student conduct, Title IX, health and safety, housing, use of the libraries and computing resources, intellectual property (including completing and signing the SU-18), operation of vehicles on campus, University facilities, and the payment of fees and assessments. Some of these are set forth in this bulletin while others are available in relevant University offices.

Students should take responsibility for informing themselves of applicable University policies, rules, requirements, and regulations. A collection is available on the Stanford University policy (<http://www.stanford.edu/about/administration/policy>) web site. Many are also set forth in the Research Policy Handbook (<http://doresearch.stanford.edu>) and the Graduate Academic Policies and Procedures Handbook (the GAP handbook) (<http://gap.stanford.edu>).

The University reserves the right to withhold registration privileges or to cancel the registration of any student: who is not in compliance with its policies, rules, requirements, or regulations; or for reasons pertaining to academic performance, health and wellness, qualification to be a student, behavioral conduct, or the safety of the University community.

University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding. Additionally, by accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

Registration and Study Lists

The preliminary study list deadline is the first day of classes of each quarter during the academic year. As early as possible, but no later than this deadline, students (including those with TGR status) must submit to the Office of the University Registrar via Axxess, a study list to enroll officially in classes for the quarter. Students are expected to be enrolled "at status" by the preliminary study list deadline; meaning that students must be enrolled in sufficient units to meet requirements for their status, whether full-time, or on approved special registration status. Students who enroll in more units than their anticipated tuition charge covers will be charged the additional tuition. They may not enroll in courses for zero units unless those courses, like TGR, are defined as zero-unit courses. Undergraduates are subject to academic load limits described in the "Amount of Work (p. 58)" section of this bulletin. Students will be charged a \$200 late study list fee for submitting their study lists after the quarterly deadline.

The University reserves the right to withhold registration from, and to cancel the advance registration or registration of, any student having unmet obligations to the University.

Study List Changes

Students may add courses or units to their study lists through the end of the third week of classes. (Individual faculty may choose to close their classes to new enrollments at an earlier date.) Courses or units may be added only if the revised program remains within the normal load limits.

Courses or units may be dropped by students through the end of the third week of classes, without any record of the course remaining on the student's transcript. No drops are permitted after this point. The Final Study List deadline is the last day for tuition reassessment for dropped courses or units.

A student may withdraw from a course after the final study list deadline through the end of the eighth week of each quarter. In this case, a grade notation of 'W' (withdraw) is automatically recorded on the student's transcript for that course. There are no tuition reassessments for withdrawing from individual courses. Students who do not officially withdraw from a class by the end of the eighth week are assigned the appropriate grade or notation by the instructor to reflect the work completed.

Through the end of the eighth week of classes, students may choose the grading option of their choice in courses where an option is offered.

If the instructor allows a student to take an 'I' (incomplete) in the course, the student must make the appropriate arrangements for that with the instructor by the last day of classes.

The deadlines described above follow the same pattern each quarter but, due to the varying lengths of Stanford's quarters, they may not always fall in exactly the week specified. Students should consult the University's academic calendar (<http://studentaffairs.stanford.edu/registrar/academic-calendar>) for the deadline dates each term. Other deadlines may apply in Law, Graduate School of Business, Medicine, and Summer Session.

Repeated Courses

Students may not enroll in courses for credit for which they received either Advanced Placement or transfer credit.

Some Stanford courses may be repeated for credit; they are specially noted in this bulletin. Most courses may not be repeated for credit. Under the general University grading system, when a course which may not be repeated for credit is retaken by a student, the following special rules apply:

1. A student may retake any course on his or her transcript, regardless of grade earned, and have the original grade, for completed courses only, replaced by the notation 'RP' (repeated course). When retaking a course, the student must enroll in it for the same number of units originally taken. When the grade for the second enrollment in the course has been reported, the units and grade points for the second course count in the cumulative grade point average in place of the grade and units for the first enrollment in the course. Because the notation 'RP' can only replace grades for completed courses, the notation 'W' cannot be replaced by the notation 'RP' in any case.
2. A student may not retake the same course for a third time unless he or she received a 'NC' (no credit) or 'NP' (not passed) when it was taken and completed the second time. Undergraduate students must file a petition for approval to take the course for a third time with the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. When a student completes a course for the third time, grades and units for both the second and third completions count in the cumulative grade point average. The notation 'W' is not counted toward the three-retake maximum.

Amount of Work

The usual amount of work for undergraduate students is 15 units per quarter; 180 units (225 for dual degree students) are required for graduation. Registration for fewer than 12 units is rarely permitted and may cause the undergraduate to be ineligible for certification as a full-time student. The maximum is 20 units (21 if the program includes a 1-unit activity course). Requests for exception to the maximum may be considered for compelling reasons, the approval of which may include conditions or restrictions. A past superior academic performance is not considered to be sufficient justification for exceeding the maximum. Petitions for programs of fewer than 12 or more than 20 units must be submitted to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research, Sweet Hall, first floor. For additional information regarding satisfactory academic progress, refer to the "Academic Standing (p. 64)" section of this bulletin.

Matriculated graduate students are expected to enroll for at least eight units during the academic year; schools and departments may set a higher minimum. Petitions for programs of fewer than 8 must be signed by the student's department and submitted for consideration to the Office of the University Registrar. Graduate students are normally expected to enroll in no more than 24 units; registration for more than 24 units must be approved by the department. Under certain circumstances, graduate students may register on a part-time basis. See the "Tuition, Fees, and Housing (p. 18)" section of this bulletin.

Undergraduates and graduate students with disabilities who may seek a reduced course load should contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>).

Unit of Credit

Guidance for faculty and instructors on how to comply with this policy is available on the Registrar's web site.

Every unit for which credit is given is understood to represent approximately three hours of actual work per week for the average student. Thus, in lecture or discussion work, for 1 unit of credit, one hour per week

may be allotted to the lecture or discussion and two hours for preparation or subsequent reading and study. Where the time is wholly occupied with studio, field, or laboratory work, or in the classroom work of conversation classes, three full hours per week through one quarter are expected of the student for each unit of credit; but, where such work is supplemented by systematic outside reading or experiment under the direction of the instructor, a reduction may be made in the actual studio, field, laboratory, or classroom time as seems just to the department.

Religious Holidays

Students planning not to attend class or take an exam because of a religious observance are expected to convey this information to instructors in advance. The Office for Religious Life makes available to faculty, staff, and students a list of significant religious observances at the beginning of each academic year. For further information, contact the Deans for Religious Life at (650) 723-1762 or see the Religious Life (<http://religiouslife.stanford.edu>) web site.

Privacy of Students Records Notification of Rights Under FERPA

The Family Educational Rights and Privacy Act of 1974 (FERPA) affords students certain rights with respect to their education records. They are:

1. The right to inspect and review the student's education records within 45 days of the date the University receives a request for access.

The student should submit to the Registrar, Dean, chair of the department, or other appropriate University official, a written request that identifies the record(s) the student wishes to inspect. The University official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the University official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student's education records that the student believes are inaccurate, misleading, or otherwise in violation of the student's privacy rights under FERPA.
 - a. A student may ask the University to amend the record that he or she believes is inaccurate or misleading. The student should write the University official responsible for the record (with a copy to the University Registrar), clearly identify the part of the records he or she wants changed, and specify why it should be changed.
 - b. If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment.
 - c. Additional information regarding the hearing procedures is provided to the student when notified of the right to a hearing.
3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

FERPA contains various exceptions to the general rule that the University should not disclose education records without seeking the prior written consent of the student. The following circumstances are representative of those in which education records (and information drawn from education records) may be disclosed without the student's prior written consent:

- a. Upon request, the University may release Directory Information (see the "Directory Information (<http://www.stanford.edu/dept/registrar/bulletin/4962.htm>)" section of this bulletin).

- b. School officials who have a legitimate educational interest in a student's education record may be permitted to review it. A school official is: a person employed by the University in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the University has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student or volunteer serving on an official committee (or representing a recognized student group), such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her responsibility to Stanford or to the student.
- c. The University discloses education records without consent to officials of another school, in which a student seeks or intends to enroll, upon request of officials at that other school.
- d. The University may choose to disclose education records (and information drawn from education records) to either supporting parent(s) or guardian(s) where the student is claimed as a dependent under the Internal Revenue Code.
- e. The University may inform persons including either parent(s) or guardian(s) when disclosure of the information is necessary to protect the health or safety of the student or other persons.
- f. For students under the age of 21, the University may notify either parent(s) or guardian(s) of a violation of any law or policy relating to the use of alcohol or controlled substances.
- g. The University must provide records in response to lawfully issued subpoenas, or as otherwise compelled by legal process.
4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA.

The name and address of the office that administers FERPA is:
Family Policy Compliance Office, U.S. Department of Education, 400
Maryland Avenue, SW, Washington, DC 20202-4605.

Sharing Information with Parents

Students are encouraged to maintain an ongoing, open dialogue with parents throughout their careers at Stanford about academic progress and personal development. Most student difficulties are resolved at Stanford without involving parents. The University does recognize, however, that there are some exceptional situations where parental involvement may be appropriate to assist a student through a difficult circumstance. Under those circumstances, Stanford may (but is not required to) choose to disclose information to parents if permitted by law.

Under the Family Educational Rights and Privacy Act (FERPA), Stanford is permitted to disclose information drawn from education records to parents if one or more parent claims the student as a dependent for federal tax purposes. Some laws, especially those relating to medical and mental health care, prohibit the disclosure of information without the student's consent, even where the student is a tax dependent.

Directory Information

The University regards the following items of information as "directory information," that is, information that the University may make available to any person upon specific request (and without student consent):

- Name*
- Email addresses
- Specific quarters or semesters of registration at Stanford
- Stanford degree(s) awarded and date(s)

- Major(s), minor(s), and field(s)
- University degree honors
- Student theses and dissertations
- Participation in officially recognized sports or activities*
- Weight and height of members of athletic teams*
- Institution attended immediately prior to Stanford
- ID card photographs

For more information, see Stanford's FERPA (<http://studentaffairs.stanford.edu/registrar/students/ferpa>) web page.

Students may prohibit the release of any of the items listed above (except those with an *) by designating which items should not be released on the Privacy function of Axess. Students may prohibit the release of all directory information listed above after an appointment with the Office of the University Registrar to discuss the ramifications of this action. Student theses and dissertations can be restricted through the publishing options and embargo settings students select during submission.

Students, faculty, and others with questions regarding student records should contact the Office of the University Registrar.

Consent to Use of Photographic Images

Registration as a student and attendance at or participation in classes and other campus and University activities constitutes an agreement by the student to the University's use and distribution (both now and in the future) of the student's image or voice in photographs, video or audio capture, or electronic reproductions of such classes and other campus and University activities.

If any student in a class where such photographing or recording is to take place does not wish to have his or her image or voice so used, the student should raise the matter in advance with the instructor.

Examinations Midterms

Classes that give midterm examinations outside of regular class hours must:

1. announce the date and time during the first week of the academic quarter, and
2. provide reasonable alternative times to those students who have another class or other University commitment at that time.

According to Honor Code interpretations and applications, different examinations may be given at these alternative times.

End-Quarter Policy Statement

The End-Quarter Period is a time of reduced social and extracurricular activity preceding final examinations. Its purpose is to permit students to concentrate on academic work and to prepare for final examinations.

In Autumn, Winter, and Spring quarters, End-Quarter starts seven full days (to begin at 12:01 a.m.) prior to the first day of final exams. In Spring Quarter, final examinations begin on Friday; no classes are held on Thursday, the day before. In Summer Quarter, this consists of the weekend and the four class days preceding the final examinations, which take place on Friday and Saturday of the eighth week. (See the Time Schedule for dates.)

During the End-Quarter Period, classes are regularly scheduled and assignments made; this regular class time is used by instructors in whatever way seems best suited to the completion and summation of course material. Instructors should neither make extraordinary assignments nor announce additional course meetings in order to "catch up" in course presentations

that have fallen behind. They are free, however, and even encouraged to conduct optional review sessions and to suggest other activities that might seem appropriate for students preparing for final examinations.

No graded homework assignments, mandatory quizzes, or examinations should be given during the End-Quarter Period except:

1. In classes where graded homework assignments or quizzes are routine parts of the instruction process.
2. In classes with laboratories where the final examination will not test the laboratory component. In such a case, the laboratory session(s) during the End-Quarter Period may be used to examine students on that aspect of the course.

Major papers or projects about which the student has had reasonable notice may be called due in the End-Quarter Period.

Take-home final examinations, given in place of the officially scheduled in-class examination, may be distributed in the End-Quarter Period. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course. Such a policy respects the principle that students' final examinations are to be scheduled over a period of several days.

End-quarter examinations may not be held during this period. This policy preserves the instruction time for courses and protects the students' opportunities for extensive review and synthesis of their courses.

During the End-Quarter Period, no musical, dramatic, or athletic events involving student participation may be scheduled, unless approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP), nor may routine committee meetings be scheduled (such as those of the ASSU, the Senate of the Academic Council, or the committees of the President of the University) when such meetings normally would involve student participation.

Note—Students who believe that there are faculty who are violating End-Quarter policy should contact the Office of the University Registrar (<https://remedyweb.stanford.edu/helpsu/2.0/helpsu-form?pcat=Registrar>).

End-Quarter Examinations

Examinations are part of the process of education at the same time that they are a means to measure the student's performance in course work. Their structure, content, frequency, and length are to be determined in accordance with the nature of the course and the material presented in it, subject only to the limitations contained herein.

Great flexibility is available regarding the types of examinations that an instructor may choose to employ. Examinations, including final examinations, may be, for example, in-class essay examinations, take-home essay examinations, objective examinations, oral examinations, or appropriate substitutes such as papers or projects. Instructors may use any type of examination, paper, or project, or any combination thereof, guided only by the appropriateness of the types of examinations, papers, or projects for the material upon which the student is being examined.

When the final examination is an in-class examination, the following regulations apply:

1. A three-hour period is reserved during examination week for the final examination in each course of more than 2 units. This examination period must be available for students, but not necessarily in its entirety, if an in-class examination is given. In courses with extraordinary meeting times, such that ambiguity might exist as regards the period reserved for the final examination, the schedule should be clarified and students informed no later than the end of the second week of the quarter.
2. Examinations in 1- or 2-unit courses must be completed by the end of the last class meeting before the End-Quarter Period, except in Summer

Quarter when examinations must be completed during the last regularly scheduled class session.

When the final examination or its appropriate substitute is not an in-class examination (for example, when an instructor chooses to employ a take-home examination, paper, or project in lieu of an in-class examination), the following regulations apply:

1. The schedule and format of the final examination or its appropriate substitute are made known not later than the end of the second week of the quarter and, if changed subsequently, may be only an option of the plan originally announced by the instructor.
2. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course.

In submitting official Study Lists, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. In choosing courses, students should take cognizance of the official schedule of final examinations announced on the Registrar's (<http://studentaffairs.stanford.edu/registrar/final-exams>) web site. Students anticipating conflicts in final examination schedules should seek to resolve these with the instructors involved before the Preliminary Study List deadline at the beginning of the quarter. If accommodation cannot be made at that time, the student should revise his or her Study List before the Final Study List deadline at the end of the third week of the quarter in order to be able to meet the required final examination.

If unforeseen circumstances prevent the student from sitting for the regularly scheduled examination, instructors should make alternative arrangements on an individual basis. Such unforeseen circumstances include illness, personal emergency, or the student's required participation in special events (for example, athletic championships) approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP). Inquiries regarding these circumstances may be directed to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual).

Statement Concerning Early Examinations

Students are reminded that taking final examinations earlier than the scheduled time is a privilege, not a right. They should request this privilege only in the event of extraordinary circumstances.

Since the final examination schedule for each quarter (<http://studentaffairs.stanford.edu/registrar/final-exams>) is published annually on the Registrar's web site at the time of course selection and enrollment, students are expected to make their academic plans in light of known personal circumstances that may make certain examination times difficult for them.

In general, faculty members are discouraged from giving final examinations earlier than the published and announced times. If faculty nevertheless decide to administer early examinations, either the questions should be completely different from those on the regularly scheduled examination or the early examination should be administered in a highly controlled setting. An example of such a setting would be a campus seminar room where the examination questions would be collected along with students' work and students would be reminded of their Honor Code (<http://www.stanford.edu/dept/registrar/bulletin/79155.htm>) obligations not to share information about the examination contents. Giving students easy opportunities to abuse the integrity of an examination is unfair to honest students and inconsistent with the spirit of the Honor Code (<http://www.stanford.edu/dept/registrar/bulletin/79155.htm>).

Academic fields differ in the degree to which early examination requests present dilemmas for faculty. If, for example, an examination format

consists of a small number of essay questions, where students would be greatly advantaged by knowing the question topics, faculty should be especially reluctant to allow early examinations unless they are willing to offer totally different examinations or a different kind of academic task, for example, a final paper in lieu of an examination.

Grading Systems

General University Grading Systems

The general University grading system is applicable to all of Stanford University except the Graduate School of Business, the School of Law, and M.D. students in the School of Medicine. Note that the GPA (grade point average) and rank in class are not computed under the general University grading system. Stanford does use an internal-only GPA which is based on units completed up to the time of conferral of the first bachelor's degree. This information is used for internal purposes only (including academic standing) and is not displayed on the official transcript which is sent outside the University. Most courses are graded according to the general University grading system. However, courses offered through Law, Business, and Medicine are graded according to those schools' grading systems, even in cases where students in other programs are enrolled in their classes. Note also that, as to graduate students, there may be departmental requirements as to grades that must be maintained for purposes of minimum academic progress.

Definition and Explanation of Grading Systems

All grades/notations for courses taken in 1995-96 or later are to be visible on student transcripts. Effective Summer Quarter 2008-09, the notation * was changed to GNR (Grade Not Reported).

Grade	Description
A (+,-)	Excellent
B (+,-)	Good
C (+,-)	Satisfactory
D (+,-)	Minimal pass
NP	Not Passed
NC	No Credit (unsatisfactory performance, 'D+' or below equivalent, in a class taken on a satisfactory/no credit basis)
CR	Credit (student-elected satisfactory; A, B, or C equivalent)
S	No-option Satisfactory; A, B, or C equivalent
L	Pass, letter grade to be reported
W	Withdraw
N (-)	Continuing course
I	Incomplete
RP	Repeated Course
*	No grade reported (effective through Spring 2008-09).
GNR	Grade not reported (effective beginning Autumn Quarter 2009-10).

Explanation

Grade	Description
NC	The notation 'NC' represents unsatisfactory performance in courses taken on a satisfactory/no credit basis. Performance is equivalent to letter grade 'D+' or below.
NP	The notation 'NP' is used by instructors in courses taken for a letter grade that are not passed.

CR	In a course for which some students receive letter grades, the 'CR' represents performance that is satisfactory or better when the student has elected the 'CR' grading option.
S	For an activity course or a course in which the instructor elects to grade students only on a satisfactory/no credit basis, the 'S' represents performance that is satisfactory or better. For such a course, no letter grades may be assigned for satisfactorily completed work. It should be noted that the Registrar is unable to record course grades submitted when the instructor has not observed the required distinction between 'S' and 'CR.' The 'satisfactory' options are intended to relieve the pressure on students for achievement in grades. The 'satisfactory' options in no way imply fewer or different course work requirements than those required of students who elect evaluation with a letter grade. A department may limit the number of 'satisfactory' courses to count for a major program. No more than 36 units of Stanford course work (including activity courses) in which a 'CR' or 'S' was awarded can be applied toward the 180 (225 if dual degrees are being pursued) units required for a bachelor's degree. Transfer students are limited to 27 'CR' or 'S' units applied to the 180/225 minimum.
L	The 'L' is a temporary notation that represents creditable completion of a course for which the student will receive a permanent letter grade before the start of the next quarter. The 'L' is given when the instructor needs additional time to determine the specific grade to be recorded, but it is not appropriate if additional work is expected to be submitted by the student. A student receives unit credit for work graded 'L.'
N	The 'N' indicates satisfactory progress in a course that has not yet reached completion. Continuation courses need not continue at the same number of units, but the grade for all quarters of such a course must be the same.
N-	The 'N-' grade indicates unsatisfactory progress in a continuing course. The first 'N-' grade constitutes a warning. The adviser, department chair, and student should discuss the deficiencies and agree on the steps necessary to correct them. A second consecutive 'N-' will normally cause the department to deny the student further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Subsequent 'N-' grades are grounds for dismissal from the program.

I	The 'I' is restricted to cases in which the student has satisfactorily completed a substantial part of the course work. No credit will be given until the course is completed and a passing grade received. When a final grade is received, all reference to the initial 'I' is removed. 'I' grades must be changed to a permanent notation or grade within a maximum of one year. If an incomplete grade is not cleared at the end of one year, it is changed automatically by the Office of the University Registrar to an 'NP' (not passed) or 'NC' (no credit) as appropriate for the grading method of the course. Students must request an incomplete grade by the last class meeting. Faculty may determine whether to grant the request or not. Faculty are free to determine the conditions under which the incomplete is made up, including setting a deadline of less than one year. A leave of absence does not stop the clock on the time limit for resolving incompletes. Graduate students with extenuating circumstances, that may warrant an exception to academic policy, should discuss the need for an extension to the time limit with their advisor and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students).
RP	The notation 'RP' (meaning Repeated Course) replaces the original grade recorded for a course when a student retakes a course. (See the "Repeated Courses" section of this bulletin.)
W	The notation 'W' (meaning Withdraw) is recorded when a student withdraws from a course.
*	The '*' symbol appears when no grade has been reported to the Registrar for courses taken prior to 2001-02. The '*' symbol remains on the transcript until a grade has been reported (effective through Spring 2008-09).
GNR	The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported. (Effective beginning Autumn Quarter 2009-10.)

Reporting of Grades

All grades should be reported within 96 hours after the time and day reserved for the final examination, and in no case later than noon of the fourth day (including weekends) after the last day of the final examination period.

In the case of degree candidates in Spring Quarter, final grades should be reported by noon of the day following the end of the final examination period.

Revision of End-Quarter Grades

When duly filed with the Office of the University Registrar, end-quarter grades are final and not subject to change by reason of a revision of judgment on the instructor's part; nor are grades to be revised on the basis of a second trial (for example, a new examination or additional work undertaken or completed after the end of the quarter). Changes may be made at any time to correct an actual error in computation or transcription, or where some part of the student's work has been unintentionally overlooked; that is, if the new grade is the one that would have been entered on the original report had there been no mistake in computing and had all the pertinent data been before the instructor, the change is a proper one.

If a student questions an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or transcription, or work unintentionally overlooked,

but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned whether an error is discovered by the student or the instructor; however, changing a grade is not permitted by reason of revision of judgment on the part of the instructor.

In the event that a student disputes an end-quarter grade, the established grievance procedure should be followed (see the "Student Academic Grievance Procedure (<http://www.stanford.edu/dept/registrar/bulletin/4988.htm>)" section of this bulletin).

Graduate School of Business Grades

All courses offered by the Graduate School of Business are graded according to the following five-level scheme:

Grade	Description
H	Honors. Work that is of truly superior quality.
HP	High Pass. A passing performance, and one that falls approximately in the upper quarter of passing grades.
P	Pass. A passing performance that falls in the center of the distribution of all passing grades.
LP	Low Pass. A passing performance that falls approximately in the lower quarter of passing grades.
U	Unsatisfactory. A failing performance. Work that does not satisfy the basic requirements of the course and is deficient in significant ways.
GNR	The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).

GSB courses may receive grades of "+" (Pass) for courses taken on a Pass-Fail basis, with "U" denoting a failing grade, "I" for Incomplete, and "N" for a continuing grade. The grade of N is recorded in a course that spans more than a single quarter, where the grade in an earlier quarter will be determined only later, after the entire course sequence is complete..

Prior to 2009-10, an asterisk (*) notation was placed when no grade was reported.

For more information, see the GSB Grades web site (p. 61).

Stanford Law School Grades

Effective Autumn Quarter 2009-10, units earned in the Stanford Law School are quarter units. Units earned in the Stanford Law School prior to 2009-10 were semester units. The following grading system became effective in Autumn Semester 2008-09. J.D. students who graduated in 2009 remained on the prior grading system but all other students shifted to the new grading system. For more information, see the Stanford Law School Handbook (http://www.law.stanford.edu/experience/studentlife/SLS_Student_Handbook.pdf).

Grade	Description
H	Honors (exceptional work, significantly superior to the average performance at the school)
P	Pass (representing successful mastery of the course material)
R	Restricted credit (representing work that is unsatisfactory)
F	Fail (representing work that does not show minimally adequate mastery of the material)

MP	Mandatory pass (representing P or better work)
N	Continuing course
I	Incomplete
*	No grade reported
GNR	Grade not reported (effective Autumn Quarter 2009-10).

The grading systems employed at the Stanford Law School September 2001 through Spring 2009 were as follows. Under the numerical system (with letter equivalents), the range of satisfactory grades ran from 4.3 to 2.5 as outlined in the following distribution. Below the grade of 2.5 was one level of restricted credit (2.2) and one level of failure (2.1). The number grades with letter equivalents were as follows:

Numbering	Grade
4.3-4.2	A+
4.1-3.9	A
3.8-3.5	A-
3.4-3.2	B+
3.1-2.9	B
2.8-2.5	B-
2.2	Restricted Credit
2.1	Failure

On this old system, students could elect to take a limited number of courses on a credit/restricted credit/no credit system (K/RK/NK). 'K' was awarded for work that was comparable to numerical grades 4.3 to 2.5, 'RK' for Restricted Credit-level work (2.2), and 'NK' for Failure-level work (2.1). A limited number of courses were offered on a mandatory credit (KM)/no credit (NK) basis.

'N' is a temporary notation used in a continuing course; it is replaced with a final grade upon completion of the course series.

School of Medicine Grades

In general, the following grades are used in reporting on the performance of students in the M.D. program:

Grade	Description
Pass (+)	Indicates that the student has demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.
Fail (-)	Indicates that the student has not demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.
Incomplete (I)	Indicates that extenuating medical or personal circumstances have prevented the student from completing the course requirements. This grade is given when requested by the student with the prior approval of an Advising Dean in the School of Medicine.
Continuing (N)	Indicates that the course has not concluded and the student is continuing the course.
Exempt (Ex)	Indicates a course that is exempted by examination. No units are awarded.
GNR	The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).

In general, a 'Fail' grade can be cleared by repeating and passing the particular course or by other arrangement prescribed by the department or teaching group. An 'Incomplete' grade can be made up in a manner specified by the department or teaching group within a reasonable time; if the deficiency is not made up within the specified time, the 'Incomplete'

grade becomes a 'Fail' grade. The opportunity to clear a 'Fail' grade or an 'Incomplete' grade cannot be extended to individuals who are not registered or eligible to register as students in the M.D. program. For more specific information, see the Assessment of Student Academic Performance (<http://med.stanford.edu/md/curriculum/assessment-grading.html>) web site.

Records Transcripts

Transcripts of Stanford records are issued by the Office of the University Registrar upon the student's request when submitted in writing or via the online Axess system. There is no charge for official transcripts. The courses taken in one quarter do not appear on any student's transcript until after the final study list deadline. The University reserves the right to withhold transcripts or records of students with unmet obligations to the University.

Certification of Enrollment or Degrees

The Office of the University Registrar can provide written confirmation of registration, enrollment, or degree status upon request by the student. The printed certification can be used whenever enrollment or degree verification is required for car insurance, loan deferments, medical coverage, scholarship purposes, and so on. Using Axess, students are able to print an official certification at no charge. Certification of full- or part-time enrollment cannot be provided until after the study list is filed for the quarter in question.

Degrees are conferred quarterly, but diplomas are issued in accordance to the distribution dates listed on the Registrar's Office (<http://studentaffairs.stanford.edu/registrar/students/diplomas>) web site. After conferral, the degree awarded to a student can be verified by contacting the Office of the University Registrar for an official transcript, or official degree certification form. Requests for transcripts or degree certifications must be made by the student in writing or through Axess.

Stanford University has authorized the National Student Clearinghouse (NSC) to act as its agent for purposes of third party enrollment and degree verification. The NSC will be able to verify degrees and enrollment for only those students who have not placed a privacy block on their academic record. The student's name when enrolled, Social Security Number or Student ID, and date of birth will be required for identification purposes and enrollment or degree verification. All third parties should contact the National Student Clearinghouse by phone or visit their web site for current enrollment and degree verification information, instructions, and fees.

As a general proposition, full-time enrollment for undergraduates is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time status in the current quarter. Enrollment in 8 to 11 units is considered half-time enrollment. Enrollment in 1 to 7 units is considered less-than-half-time, or part-time enrollment. During Summer Quarter, all graduate students who hold appointments as research or teaching assistants are considered to be enrolled on at least a half-time basis.

For students with disabilities taking a reduced course load, contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oae>) for additional information.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification.

Stanford uses the following definitions (in units) to certify the enrollment status of graduate and professional students each quarter:

Status	Graduate	Business (M.B.A./ Sloan)	Law	Medicine (M.D.)
Full time:	8 or more	11 or more	9 or more	9 or more
Half time:	6 or 7	6-10	6-8	6-8
Part time:	5 or fewer	5 or fewer	5 or fewer	5 or fewer

TGR students enrolled in a course numbered 801 or 802 are certified as full time. Graduate students on an approved Graduation Quarter status are certified as full time.

As a general proposition, only information classified by the University as directory information (see the "Directory Information (<http://www.stanford.edu/dept/registrar/bulletin/4962.htm>)" section of this bulletin) can be confirmed to inquirers other than the student.

H-1B Degree Certification

As the H-1B application deadline is April 1 and Winter Quarter degree conferral does not occur until after this date (or just before), the Office of the University Registrar provides an H-1B Degree Certification Letter for eligible students graduating Winter Quarter who are applying for the H-1B visa and have completed all school/department and University degree requirements.

Students conferring degrees in all terms except Winter Quarter should request an official transcript in their student Axess account after the degree conferral date of their graduation term. The official transcript indicates the results of all work completed and degrees awarded. Students can also request an official degree certification via Axess, or by completing a Degree Certification Request form. See Certifications and Verifications (<http://studentaffairs.stanford.edu/registrar/students/certifications>) for details on requesting degree verification.

An Enrollment Verification is included with the H-1B Degree Certification Letter. The Enrollment Certification states a student's enrollment history, current program of study, major, expected degree, and expected degree conferral date. This document bears the University seal and signature of the University Registrar. For more information see the Office of the University Registrar H-1B Certification Letter (<http://exploreddegrees.stanford.edu/academicpoliciesandstatements/x-webdoc://D3A5CCDC-66E3-45EE-8E78-2D47E9234AF2/studentaffairs.stanford.edu/registrar/students/h-1b>) web site.

Bechtel International Center organizes H-1B workshops which students are encouraged to attend if they have any questions regarding H-1B issues.

Posthumous Degrees

Stanford will consider granting a posthumous degree in instances in which a student was in good standing and had completed at least 90% of all graduation requirements at the time of death. Requests must be approved by the chair of the major department or the dean of a professional school and the University Registrar. Requests should be addressed to the University Registrar and generally should take place within 12 months of the student's death.

Academic Standing

Undergraduates must maintain a minimum 2.0 cumulative GPA and a quantitative unit requirement for good academic standing. In addition, a minimum 2.0 cumulative GPA is required for conferral of a baccalaureate degree.

Undergraduates normally are expected to plan their academic programs so that they can complete 180 units in four years (twelve quarters), including the requirements for a major and the General Education (p. 28), Writing and Rhetoric (p.), and Language (p.) Requirements. Satisfactory academic progress is, on average, 45 units per academic year

for four years leading to at least 180 units, a cumulative grade point average of at least 2.0, and a baccalaureate degree.

While undergraduates are expected to register for a minimum of 12 units, they are required to earn at least 9 units each quarter (by the end of the final exam period) and at least 36 units in their most recent three quarters of Stanford enrollment (by the end of the third final exam period). In addition, students are expected to maintain a cumulative grade point average of at least 2.0. Transfer work completed at other institutions is not considered in this calculation.

A student earning fewer than 9 units per quarter or fewer than 36 units in three quarters, or earning less than a 2.0 cumulative grade point average, is placed on probation. (For students with disabilities taking a reduced course load, contact the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) for additional information.) Additionally, a student may be placed directly on provisional registration or suspension (further defined in this section) without first being placed on probation if the student had a prior probation status. Students on probation (p.) or provisional registration (p.) status are required to earn a minimum of 12 units of new course work per quarter (by the end of the final quarter examination period for each quarter) in each quarter for three consecutive quarters, and achieve and maintain a cumulative grade point average of at least 2.0 to attain good academic standing. (A Stanford Summer Session quarter counts toward the three consecutive quarter requirement if 11 or more units are earned). The C-USP Subcommittee on Academic Standing may stipulate otherwise by acting upon a petition for fewer units.

Full-time enrollment is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Under extenuating circumstances, students may petition to the C-USP Subcommittee on Academic Standing to take fewer units. As a general proposition, work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time enrollment in the current quarter. All students registering for fewer than 12 units should consider the effects of that registration on their degree progress, visas, deferment of student loans, residency requirements, varsity athlete status, and their eligibility for financial aid and awards.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification and athletic participation.

Units are granted for courses completed with grades 'A,' 'B,' 'C,' 'D,' 'Satisfactory' ('CR' or 'S'), and 'L.' Courses graded 'N' are counted provisionally as units completed, provided the student enrolls in the continuing segment of that course the following quarter. When the course is completed, the student receives the units for which he or she enrolled. No units are granted for a course in which the student receives an 'I' or a 'GNR' ('GNR' replaced the '*' effective Autumn Quarter 2009-10) until the course is completed satisfactorily and the final grade reported. No units are granted for a course in which the student receives a 'W'. (See the "Grading Systems (p. 61)" section of this bulletin).

Students who receive all 'W's as the result of a Leave of Absence (either voluntary or involuntary) are subject to Academic Standing policies.

The C-USP Subcommittee on Academic Standing in its discretion is empowered to place conditions on students on probation or provisional registration in regard to enrollment and participation in programs and activities. In addition, students on probation require approval in advance from Undergraduate Advising and Research (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP/advising/MakeAdvisingAppointment.html), Residential Education (<http://studentaffairs.stanford.edu/resed>), and the Overseas Studies Program (<http://bossp.stanford.edu>) office or Stanford in Washington Program (<http://siw.stanford.edu>) office in order to participate in Stanford's Overseas Studies Program or Stanford in Washington Program; while students on provisional registration are ineligible to participate in these programs.

Academic performance of a student participating in a coterminal program, and whose undergraduate degree or degrees have not yet been conferred, is reviewed on a case-by-case basis in conjunction with the graduate department or program in which the student is enrolled.

Students receiving federal student aid funds must maintain satisfactory academic progress standards that may be stricter than those outlined here. See the Financial Aid Office web site at <http://financialaid.stanford.edu> for details.

Probation

A student who fails to earn at least 36 units of work in his or her most recent three quarters of enrollment at the University (by the end of the third final exam period), or who fails to earn by the end of the final examination period at least 9 quarter units of work in his or her most recent quarter of enrollment at the University, or who has a cumulative grade point average of less than 2.0, may be placed on probation (warning status).

A student shall be removed from probation after three consecutive subsequent quarters of enrollment at the University if, in each quarter, he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from probation at the discretion of the C-USP Subcommittee on Academic Standing or its designees as a result of a review of individual records.

Provisional Registration

A student who, while on probation, fails in any quarter of registration to earn a minimum of 12 units of new course work by the end of the final examination period or fails to achieve and maintain a cumulative grade point average of at least 2.0, may be placed on provisional registration status. In addition, and on occasion, a student may also be placed directly on provisional registration without first being placed on probation if the student has had a prior probation status.

C-USP, in its discretion, may impose conditions on the suspension and in regard to return from a suspension.

Provisional registration status requires that the student earn a minimum of 12 units of new course work per quarter (by the end of the final quarter examination period for each quarter) in each quarter for three consecutive quarters, and achieve and maintain a cumulative grade point average of at least 2.0 to attain good academic standing.

A student shall be removed from provisional registration after three consecutive subsequent quarters of enrollment at the University if, in each quarter, he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from provisional registration at the discretion of the C-USP Subcommittee on Academic Standing or its designees as a result of a review of individual records.

Suspension

A student who, while on provisional registration, fails to earn a minimum of 12 units of new course work by the end of the final examination period, or who fails to achieve and maintain a cumulative grade point average of at least 2.0, may be suspended. In addition, and on occasion, a student may also be suspended directly from probation; or may be suspended without first being placed on probation or provisional registration if the student has had a prior probation status.

While students suspended for the first time are suspended for one year, students suspended a subsequent time may be suspended for up to three years.

Students suspended for one year are not eligible to enroll for four quarters (including Summer Quarter) following the quarter in which the suspension

was issued. Students suspended for up to three years are not eligible to enroll for up to twelve quarters (including Summer Quarter) following the quarter in which the suspension was issued.

As well, until re-enrollment, students who are suspended are ineligible for the privileges associated with registration—privileges that include living in University housing, participating in voluntary student organizations, and involvement in any activity for which enrollment is a requirement.

C-USP, in its discretion, may impose conditions on the suspension and in regard to return from a suspension.

Appeal of Suspension

Students who have been suspended, and who believe they have a compelling reason to appeal their suspension, without a break in enrollment, are required to submit a Petition to Appeal Academic Suspension.

Otherwise, students are expected to complete their academic suspension in full.

Returning from Suspension

Students are required to submit a properly endorsed application for reinstatement to request reenrollment after the suspension period has been completed. Instructions including deadlines for requesting to return should be obtained from the Office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. The C-USP Subcommittee on Academic Standing, or those designated by the subcommittee, acts upon all requests concerning academic standing, including requests to return after academic suspension. The subcommittee or its designees may determine whether the application for reinstatement to return will be approved or not, and/or the conditions a student must meet in order to return. Request to return decisions may be based on activities while away from campus, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education or the subcommittee or its designees.

Questions concerning academic standing or requests to return should be directed to the Office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall.

Students returning from suspension should also contact appropriate campus offices, such as Housing and Financial Aid, regarding those deadlines and procedures.

Notification (Academic Standing)

Written notification that a student is on probation, provisional registration, or suspension is sent to the student, to the student's academic adviser, and to other relevant university offices and individuals as soon as possible after the close of the quarter. Students also receive written notification of the outcome of their Petition to Appeal Academic Suspension or request to return after suspension. Current student status, such as whether a student is enrolled or not, is considered Directory Information for FERPA purposes at Stanford, and Stanford may provide either parent(s) or guardian(s) written notification of a change in student status. Provided that a student consents, or the student is a dependent for income tax purposes, Stanford may also provide either parent(s) or guardian(s) written notification that the student is on probation, provisional registration, suspension, or leave of absence (either voluntary or involuntary). Other FERPA exceptions may also apply.

Student Academic Grievance Procedure

The following policy is subject to periodic review and modification.

1. Coverage
 - a. Any Stanford undergraduate or graduate student who believes that he or she has been subjected to an improper decision on an academic matter is entitled to file a grievance to obtain an independent review of the allegedly improper decision, followed by corrective action if appropriate. A grievance is a complaint in writing made to an administrative officer of the University concerning an academic decision, made by a person or group of persons acting in an official University capacity, that directly and adversely affects the student as an individual in his or her academic capacity.
 - b. This grievance procedure applies only in those cases involving a perceived academic impropriety arising from a decision taken by: (1) an individual instructor or researcher; (2) a school, department, or program; (3) a committee charged to administer academic policies of a particular school, department, or program; or (4) the University Registrar, the Vice Provost for Undergraduate Education, the C-USP Subcommittee on Academic Standing, or a Senate committee or subcommittee charged to administer academic policies of the Senate of the Academic Council. This procedure does not apply to: (1) complaints expressing dissatisfaction with a University policy of general application challenged on the grounds that the policy is unfair or inadvisable; (2) individual school, department, or program academic policies, as long as those policies are not inconsistent with general University policy; (3) matters proceeding through the Office of Judicial Affairs; or (4) involuntary leave decisions.
 - c. Individuals should be aware that the University Ombuds Office is available to all Stanford students, faculty, and staff to discuss and advise on any matter of University concern and frequently helps expedite resolution of such matters. Although it has no decision-making authority, the University Ombuds Office has wide powers of inquiry, including into student complaints against instructors.
2. Grievance and Appeal Procedures
 - a. Informal Attempts at Resolution: the student first should discuss the matter, orally or in writing, with the individual(s) most directly responsible. If no resolution results, the student should then consult with the individual at the next administrative level, for example, the chair or director of the relevant department or program, or, for those cases in which there is none, with the school dean. At this stage, the department chair or program director, if any, may inform the dean that the consultation is taking place and may solicit his or her advice on how to ensure that adequate steps are taken to achieve a fair result. Efforts should be made to resolve the issues at an informal level without the complaint escalating to the status of a formal grievance.
 - b. The Filing of the Grievance:
 - i. If informal means of resolution prove unsatisfactory, the student should set forth in writing a statement of the decision that constitutes the subject matter of the dispute, the grounds on which it is being challenged, and the reasons why the grievant believes that the decision was improperly taken. The statement should also include a description of the remedy sought and the informal efforts taken to date to resolve the matter. It is at this point that the complaint becomes a formal grievance. The written grievance should specifically address the matters set forth in the Standards for Review, as stated in Section 4 below. The grievance should include an allegation of any adverse effects on the grievant, known to the grievant at the time of filing.
 - ii. The grievance document should be submitted to the dean of the school in which the grievance arose; for a grievance concerning a decision of the University Registrar, the Vice Provost for Undergraduate Education, or of a Senate committee or subcommittee, the procedures set forth herein for grievances and appeals shall be modified as stated in Section

3 below. A grievance must be filed in a timely fashion, that is, no later than 30 days after the end of the academic quarter in which the adverse decision occurred or should reasonably have been discovered. Except in extraordinary circumstances, delay in filing a grievance will constitute grounds for rejection of the grievance.

c. The Response to the Grievance:

- i The relevant dean will consider the grievance. The dean may attempt to resolve the matter informally or make whatever disposition of the grievance that he or she deems appropriate. The dean may, in appropriate cases, remand the grievance to a lower administrative level (including to the level at which the grievance arose) for further consideration.
- ii The dean may also refer the grievance, or any issue therein, to any person (the "grievance officer") who will consider the matter and report to the dean as the latter directs. The dean will inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and will specify the matters referred, the directions to the person or persons to whom the referral is made (including the time frame within which the person is to report back to the dean), and the name of that person.
- iii In undertaking the review, the dean or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information considered relevant, including faculty, staff, and students.
- iv Should attempts to resolve the matter informally not be successful, the dean will decide the grievance, and will notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the grievance.
- v Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. If, because of absence of key persons from the campus or other circumstances or exigencies (including those due to breaks in the academic calendar), the dean decides that disposition on that schedule is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of that in writing, giving the grounds therefore and an estimate of when a disposition can be expected. During summers and the winter closure, this time frame will nearly always be extended.

d. The Filing of an Appeal:

- i If the grievant is dissatisfied with the disposition of the grievance at the decanal level, either on substantive or on procedural grounds, he or she may appeal in writing to the Provost.
- ii The appeal must specify the particular substantive or procedural bases of the appeal (that is, the appeal must be made on grounds other than general dissatisfaction with the disposition) and must be directed only to issues raised in the grievance as filed or to procedural errors in the grievance process itself, and not to new issues. The appeal must contain the following:
 1. A copy of the original grievance and any other documents submitted by the grievant in connection therewith.
 2. A copy of the determination made by the dean on that grievance.
 3. A statement of why the reasons for the determination of the dean are not satisfactory to the grievant. This statement should specifically address the matters set forth in the Standards for Review in Section 4 below.

- iii The grievant will file his or her appeal at the earliest practicable date after the grievant's receipt of the determination by the dean. Normally, no more than 30 days should elapse between the transmittal of the dean's decision on the grievance and the filing of the appeal. Except in extraordinary circumstances, delay in filing an appeal will constitute grounds for rejection of the appeal.

e. The Response to the Appeal:

- i The Provost may attempt to resolve the matter informally, or refer the appeal, or any issue thereof, to any person (the "grievance appeal officer") who shall consider the matter and report to the Provost as the latter directs. The Provost may also, in appropriate cases, remand the matter to a lower administrative level (including to the level at which the grievance arose) for further consideration.
- ii The Provost will inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and will specify the matters referred, the directions to the person to whom the referral is made (including the time frame within which the person is to report back to the Provost), and the name of that person.
- iii Should attempts be made to resolve the matter informally not be successful, the Provost will decide the appeal, and will notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the appeal. The decision of the Provost shall be final, unless the grievant requests a further appeal to the President pursuant to subsection 2f below, and the President agrees to entertain this further appeal.
- iv Normally no more than 45 days should elapse between the filing of the appeal and the disposition by the Provost. If, because of absence of key persons from the campus or other circumstances or exigencies (including those due to breaks in the academic calendar), the Provost judges that disposition on that schedule is not possible, he or she will inform the grievant (and the party against whose decision the grievance has been filed) of the fact in writing, giving the grounds therefore and an estimate of when a disposition can be expected. During summers and the winter closure, this time frame will nearly always be extended.

- f. The Request to the President: if the student is dissatisfied with the disposition of the appeal by the Provost, he or she may write to the President of the University giving reasons why he or she believes the grievance result to be wrong (following the general format set forth in subsection 2d.2 above). No more than 30 days should elapse between the transmittal of the Provost's disposition and the written statement to the President urging further appeal. In any case, the President may agree or decline to entertain this further appeal. If the President declines to entertain the further appeal, the decision of the Provost is final. If the President decides to entertain the further appeal, he or she will follow the general procedures set forth in Section 2e above, and the decision of the President will be final.

3. Grievances Concerning Decisions of the University Registrar, the Vice Provost for Undergraduate Education, or of a Senate Committee or Subcommittee

- a. For a grievance concerning a decision of the University Registrar, the Vice Provost for Undergraduate Education, the C-USP Subcommittee on Academic Standing, or of a Senate committee or subcommittee, the grievant will file his or her grievance with the Provost, rather than with the dean, and the Provost will handle that grievance in accordance with the procedures set forth in Section 2c above.

- b. There is no appeal of the Provost's disposition of that grievance, except as may be available under Section 2f above.
4. Standards for Review and Procedural Matters
- a. The review of grievances or appeals will usually be limited to the following considerations:
- i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
 - ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
 - iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?
- b. The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.
- c. Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.

Stanford University ID Number

The Stanford University ID Number is assigned to each student's academic record for unique identification. It is printed on the Stanford University ID card and on documents distributed by the Office of the University Registrar and other administrative offices. It is a violation of University policy to use another's Stanford University ID Number to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

SUNet ID

The SUNet ID provides access to the Stanford University Network (SUNet) and its services, and identifies authorized users of these services. Each member of the Stanford electronic community creates a unique SUNet ID and SUNet ID password for him/herself. SUNet IDs provide:

- Axxess services
- Email service
- Storage space within Stanford's distributed file system
- Usenet newsgroups
- World wide web services, including serving of personal web pages on the Leland system and access to Stanford Web Resources

The SUNet ID together with SUNet ID password may serve in place of a signature on electronic forms. The SUNet ID password must remain confidential; it is a violation of University policy to permit another person to use your SUNet ID or password. It is a violation of University policy to use another's SUNet ID or SUNet ID password to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

Identification Cards

The ID card serves as an identification card, an electronic key, and a debit card, allowing cardholders to use services for which they have privileges, to enter certain facilities, and to make purchases.

ID cards are available to registered students, faculty, academic staff, and regular staff. Students obtain their ID cards at the Student Services Center, Tresidder Union, 459 Lagunita Drive, 2nd Floor (650) 498-CARD). Faculty and staff obtain ID cards at George Forsythe Hall, 275 Panama Street, Room 190 (650-498-CARD).

Courtesy ID cards are available for spouses and domestic partners of the Stanford professoriate, academic staff, regular staff, and students. These cards may be obtained from the Stanford Card ID Office at Forsythe Hall. The spouse/partner courtesy ID card enables use of some campus services during terms for which the student is registered.

Visiting Scholars who are on campus for a minimum of one quarter and contribute to Stanford's mission by teaching or collaborating on Stanford research also receive ID cards and campus privileges during their stay on campus. These cards may be obtained from the Stanford Card ID Office at Forsythe Hall.

Library access and borrowing privileges are reserved for the Stanford professoriate, academic staff, regular staff, students, and others associated with the University with a need for such access.

ID cards bear a photograph of the cardholder. This photograph is maintained in an online database and, as stated in the "Directory Information (<http://www.stanford.edu/dept/registrar/bulletin/4962.htm>)" section of this bulletin, is available for classroom, student residence, and other use upon specific request and without student consent unless the student has designated that the photograph not be released. Photographs can be designated as private using the Privacy function of Axxess.

Misuse of the ID card may result in discipline or administrative action.

For more information, see the Campus Card Service (<http://campuscard.stanford.edu>) web site. For the complete policy on Stanford Identification Cards, see the Administrative Guide, 28-4 (http://adminguide.stanford.edu/28_4.pdf) (pdf).

Auditing

No person shall attend any class unless he or she is a fully registered student enrolled in the course or meets the criteria for auditors. Auditors are not permitted in courses that involve direct participation such as language or laboratory science courses, field work, art courses with studio work, or other types of individualized instruction (i.e., labs, seminars, case study, language, and activity courses are not permitted). Auditors are expected to be observers rather than active participants in the courses they attend, unless the instructors request attendance on a different basis. Stanford does not confer credit for auditing, nor is a permanent record kept of courses audited. Students who have been suspended are not permitted to audit.

Auditors may not join classes for the first time after the University's final study list deadline. Auditors are not eligible for other University services or privileges including housing, health insurance (Cardinal Care), Vaden clinical services, and the University health plan. The University Registrar reviews for approval any other services or privileges that may be sought.

The Auditor status is available to Stanford faculty or staff members for no fee. Otherwise, the Permit to Attend (http://studentaffairs.stanford.edu/registrar/students/tuition-fees_14-15) fee is assessed. The Application for Auditor or Permit to Attend (PTA) Status (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/PTA-Auditor.pdf>) is required. In all cases of auditing, the instructor, department administrator, and the Office of the University Registrar's prior approvals are required. Further information is available from the Office of the University Registrar or the Student Services Center (<http://studentservicescenter.stanford.edu>).

Nonacademic Regulations

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford's Title IX Coordinator, Catherine Criswell Spear, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

ADA (Americans with Disabilities Act)/Section 504 Grievance Procedure (Student)

For information more generally concerning policies and procedures for students with disabilities, see the Diversity & Access Office (<http://www.stanford.edu/dept/diversityaccess>) web site, or the ADA/Section 504 Compliance Officer, Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email); see also the Office for Accessible Education (OAE) (<http://studentaffairs.stanford.edu/oea>) web site.

Policy

The following is the policy:

I. Policy

Stanford University, in compliance with state and federal laws and regulations, including the Americans with Disabilities Act of 1990 (ADA; as amended 2008) and Section 504 of the Rehabilitation Act of 1973 (Section 504), does not discriminate on the basis of disability in administration of its education-related programs and activities, and has an institutional commitment to provide equal educational opportunities for disabled students who are otherwise qualified.

Students who believe they have been subjected to unlawful discrimination on the basis of disability, or have been denied access to services or accommodations required by law, have the right to use this grievance procedure.

II. Applicability

As a general proposition, the grievance procedure set forth below is applicable to undergraduate and graduate students of the University. In general, it is designed to address disputes concerning the following:

1. Disagreements regarding a requested service, accommodation, or modification of a University practice or requirement;
2. Inaccessibility of a program or activity;
3. Harassment or discrimination on the basis of disability;
4. Violation of privacy in the context of disability.

As a general proposition, this grievance procedure supplants the Student Academic Grievance Procedure (p. 66) and the Student Non-Academic Grievance Procedure (p.) (both of which are set forth in this bulletin) for disability-related grievances. Questions of applicability will be decided by the Director of the Diversity and Access Office.

III. Compliance Officers

Stanford University's Compliance Officers are responsible for administering this grievance procedure as well as ensuring compliance with applicable laws. The Director of the Diversity and Access Office is the designated ADA / Section 504 Compliance Officer. That office is located in the Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: disability.access@stanford.edu.

Additional Compliance Officers may be designated from time to time by the Provost from those faculty and staff members knowledgeable concerning disability issues and the legal mandates of state and federal disability statutes.

IV. Informal Resolution

Prior to initiating the formal complaint procedure set forth below, the student should, in general, first discuss the matter orally or in writing with the individual(s) most directly responsible. If no resolution results, or if direct contact is inappropriate under the circumstances, the student should then consult with the Compliance Officer at the Diversity and Access Office who will attempt to facilitate a resolution. (The informal resolution process may involve consultation with the Associate Vice Provost and Dean of Educational Resource Centers.)

If the Compliance Officer is not successful in quickly achieving a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the student's right to file a formal complaint.

V. Formal Complaint

If the procedure set forth above for informal resolution does not yield a successful resolution, then the student may file a formal complaint in the following manner:

1. When to File Complaint: Complaints must be filed as soon as possible, but in no event later than 10 days after the end of the quarter in which the concern arose.
2. What to File: a complaint must be in writing and include the following:
 - a. The grievant's name, address, email address and phone number;
 - b. A full description of the problem;
 - c. A description of what efforts have been made to resolve the issue informally;
 - d. A statement of the remedy requested.
3. Where to File Complaint: the complaint is to be filed with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230, 650-725-0326 (Voice), 650-723-1216 (TTY), 650-723-1791 (Fax), email: disability.access@stanford.edu.
4. Notice of Receipt: upon receipt of the complaint, the Compliance Officer reviews the complaint for timeliness and appropriateness for this grievance procedure, and provides the grievant with written notice acknowledging its receipt.
5. Investigation: the Compliance Officer will promptly initiate an investigation and may refer the matter (or any part of it) to a grievance

officer or other designee, who will look into and/or address the matter as the Compliance Officer directs. In undertaking the investigation, the Compliance Officer or grievance officer may interview, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.

6. Representation: the grievant and the party against whom the grievance is directed each have the right to have a representative. The party shall indicate whether he or she is to be assisted by a representative and, if so, the name of that representative. For purposes of this procedure, an attorney is not an appropriate representative.
7. Findings and Notification: upon completion of the investigation, the grievance officer will prepare and transmit to the student, and to the party against whom the grievance is directed, a final report containing a summary of the investigation, written findings, and a proposed disposition. This transmission will be expected within 45 calendar days of the filing of the formal complaint. The deadline may be extended by the Compliance Officer for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any University officer whose authority will be needed to carry out the proposed disposition or to determine whether any personnel action is appropriate.
8. Final Disposition: the disposition proposed by the Compliance Officer will be put into effect promptly. The grievant or any party against whom the grievance or the proposed disposition is directed may appeal. The appeal to the Provost (as set forth below) will not suspend the implementation of the disposition proposed by the grievance officer, except in those circumstances where the Provost decides that good cause exists making the suspension of implementation appropriate.

VI. Urgent Matters

Whenever the application of any of the time deadlines or procedures set forth in this grievance procedure creates a problem due to the nature of the complaint, the urgency of the matter, or the proximity of the upcoming event, the Compliance Officer will, at the request of the grievant, determine whether an appropriate expedited procedure can be fashioned.

VII. Remedies

Possible remedies under this grievance procedure include corrective steps, actions to reverse the effects of discrimination or to end harassment, and measures to provide a reasonable accommodation or proper ongoing treatment. As stated above, a copy of the Compliance Officer's report may, where appropriate, be sent to University officer(s) to determine whether any personnel action should be pursued.

VIII. Appeal

Within ten calendar days of the issuance of the final report, the grievant or the party against whom the grievance is directed may appeal to the Provost the grievance officer's determination.

An appeal is taken by filing a written request for review with the Compliance Officer at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford CA 94305-8230; (650) 723-0755 (Voice), (650) 723-1216 (TTY), (650) 723-1791 (Fax), email: disability.access@stanford.edu.

The written request for review must specify the particular substantive and/or procedural basis for the appeal, and must be made on grounds other than general dissatisfaction with the proposed disposition. Furthermore, the appeal must be directed only to issues raised in the formal complaint as filed or to procedural errors in the conduct of the grievance procedure itself, and not to new issues.

The Compliance Officer will forward the appeal to the Provost, and also provide copies to the other party or parties. If the grievance involves a

decision that is being challenged, the review by the Provost or his or her designee usually will be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
3. Given the proper facts, criteria, and procedures, was the decision a reasonable one?

A copy of the Provost's written decision will be expected within 30 calendar days of the filing of the appeal and will be sent to the parties, the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The decision of the Provost on the appeal is final.

Title IX of the Education Amendments of 1972

It is the policy of Stanford University to comply with Title IX of the Education Amendment of 1972 and its regulations, which prohibit unlawful discrimination on the basis of sex. The Title IX Compliance Officer is Rosa Gonzalez, the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title IX and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford, CA 94305-8230, (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). (See also the following section for addressing Title IX Concerns relating to sexual harassment.)

Title IX Concerns Relating to Sexual Harassment and the Violence Against Women Reauthorization Act of 2013

Catherine Criswell has been appointed Stanford's Title IX Coordinator to respond to matters of sexual assault, relationship (dating) violence and stalking (prohibited conduct). The Title IX Coordinator serves as a resource to review allegations of prohibited conduct and may provide interim accommodations relating to housing, academics, or no-contact letters while a matter is being reviewed. When prohibited conduct has been confirmed by a preponderance of the evidence, the Title IX Coordinator will provide long term accommodations and services to students to address the effects of sexual harassment and sexual violence. The Title IX Student Policy (https://titleix.stanford.edu/sites/default/files/title_ix_student_policy_ay_2013-14_faculty_staff_may_2014_final_0.pdf) provides the grievance procedure and appeal mechanism to review the University's actions relating to a Title IX concern involving Prohibited Conduct; see the Title IX web site (<https://titleix.stanford.edu>) for additional information. Additional resources are available the Sexual Assault Support and Resources (<https://notalone.stanford.edu>) web site. Ms. Criswell's contact information is titleix@stanford.edu; (650) 497-4955. See also Administrative Guide Memos 2.1.2 Recruiting and Hiring of Regular Staff (<https://adminguide.stanford.edu/chapter-2/subchapter-1/policy-2-1-2>), 1.7.1 Sexual Harassment (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-1>), 1.7.2, Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-2>), and 1.7.3, Sexual Misconduct and Sexual Assault (<https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-3>).

Title VI of the Civil Rights Act of 1964

It is the policy of Stanford University to comply with Title VI of the Civil Rights Act of 1964 and its regulations, which prohibit unlawful discrimination on the basis of race, color, and national origin. The Title VI Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title VI and its regulations should contact the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Grievance procedures to address complaints of discrimination on the basis of race, color, and national origin are set forth in the "Student Non-Academic Grievance Procedure (p.)." See also Administrative Guide Memo 2.2.1 General Personnel Policies (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-1>).

Grievances

A Stanford undergraduate or graduate student who believes that he or she has been subject to an improper decision on an academic matter may file a grievance pursuant to the Student Academic Grievance Procedure (p. 66). For other types of grievances, students should review the section that follows on the Student Non-Academic Grievance Procedure (p.), and consult concerning applicable procedures with the Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

Student Non-Academic Grievance Procedure Policy

The following is the policy:

1. Applicability
 - a. It is perhaps inevitable in any university that some students may at times feel improperly treated, and that concerns about unfairness (including potential discrimination and harassment) may also at times arise.

In this regard (and although this grievance procedure is not limited to concerns of discrimination), Stanford University's Nondiscrimination Policy provides in part: "Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. "
 - b. At Stanford, there are a number of grievance procedures through which students can raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. For example:

- i If the matter involves an academic decision, the Student Academic Grievance Procedure may be the applicable procedure.
 - ii If the matter involves a disability-related concern, the Student ADA/Section 504 Grievance Procedure may be applicable.
 - iii If the matter involves a student-athlete and his or her sport, the Student-Athlete Grievance Procedure may be applicable.
- c. The purpose of the Student Non-Academic Grievance Procedure is to provide a process for students to seek resolution of disputes and grievances that may not fall within the scope of one of the other grievance processes, including those which may arise in a student's capacity as a student-employee.
 - d. As a general proposition, this procedure is available to undergraduates and graduate students at Stanford University. It is designed to address individual decisions or individual actions that affect the grievant personally in his or her capacity as a student, but it does not apply to matters proceeding through the Office of Judicial Affairs or through the Dean's leave policy. This is likewise not a grievance procedure to address the concerns of student groups. Similarly and as a general proposition, dissatisfaction with a departmental, school, or University policy or practice of broad or general application is not grounds for a grievance under this procedure; the Director of the Diversity and Access Office (hereafter "the Director") may, in his or her discretion, entertain such a grievance in exceptional circumstances, such as where (for example) the policy or practice is alleged to be contrary to law. In the same way, the Director may entertain a grievance under this procedure brought by an individual who is not an undergraduate or graduate student, in an appropriate case or as required by law.
 - e. The Director is responsible for administering this Student Non-Academic Grievance Procedure.
 - i The Director may be contacted at: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email), <http://www.stanford.edu/dept/ocr>.
 - ii The Director in his or her sole discretion can decide whether to refer a grievance brought under this procedure to another grievance process. In cases involving allegations of sexual harassment in particular, the Director may wish to consult with the Director of the Sexual Harassment Policy Office as to the most appropriate way to proceed; see Section 5.d below. In cases involving student employment, the Director may wish to consult with the University's Department of Human Resources.
2. Informal Resolution
 - a. As a general proposition (and although particular circumstances may warrant an exception), the student should first discuss the problem and seek a solution with the individual(s) most directly involved.
 - b. If no resolution results (or if circumstances make discussion inappropriate with the person most directly involved), the student should then consult with the individual at the next (higher) administrative level in the department, school, residence or University administrative unit. Serious efforts should be made to resolve the issue locally at an informal level without resort to a formal grievance; such efforts may continue even after the formal process is underway.
 3. Formal Grievance
 - a. If informal means of resolution prove inadequate, the student should set forth in writing the substance of the complaint, the grounds for it and the evidence on which it is based, and the

efforts taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.

- b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after of the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.
- c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.
- e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any). Conduct meriting discipline will be brought to the attention of the appropriate disciplinary process.

4. Appeal

- a. If the student is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.
- b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost's direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

5. General Provisions

- a. **Time Guidelines**—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.
- b. **Advisers**—A student initiating or participating in a grievance under this procedure may be accompanied by an adviser in any discussion with the Director, the Provost or their designees, or a grievance or grievance appeal officer under this procedure; any adviser must be a current Stanford faculty, staff member or student.
- c. **Ombuds**—Students should be aware that the University Ombuds (<http://www.stanford.edu/dept/ocr/ombuds>) is available to discuss and advise on any matters of University concern and frequently help expedite resolution of such matters. Although it has no decision making authority, the Ombuds' Office has wide powers of inquiry.

- d. **Sexual Harassment and Sexual Misconduct and Sexual Assault**—For information and resources concerning sexual harassment, students should refer to the web page of the Sexual Harassment Policy Office at <http://harass.stanford.edu>. For information and resources concerning sexual assault and relationship abuse, students should refer to the web page of the Sexual Violence Advisory Board at <http://www.stanford.edu/group/svab/help.shtml>.
- e. **No retaliation**—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.
- f. **Standards for Review**—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:
 - i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
 - ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
 - iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

Age Discrimination Act of 1975

The following is the policy:

1. Policy

It is the policy of Stanford University to comply with the Age Discrimination Act of 1975 and its regulations, which prohibit unlawful discrimination on the basis of age. The Age Discrimination Act Compliance Officer is the Director of the Diversity and Access Office ("the Director"), who has been appointed to coordinate the University's efforts to comply with the law. Anyone who believes that Stanford is not in compliance with the Age Discrimination Act and its regulations ("the Act") should contact the Director at the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1216 (TTY), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

2. Grievance Procedure

- a. An individual who believes that Stanford is not acting in compliance with the Act and who wishes to file a grievance should set forth in writing the substance of his or her complaint, the grounds for it and the evidence on which it is based, and the efforts (if any) taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.
- b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.
- c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the

appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

- d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.
- e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any).

3. Appeal

- a. If the grievant is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.
- b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost's direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.
- c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

4. General Provisions

- a. **Time Guidelines**—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.
- b. **No Retaliation**—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.
- c. **Standards for Review**—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:
 - i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
 - ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?
 - iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

Ownership and Use of Stanford Name and Trademarks

Stanford registered marks, as well as other names, seals, logos, and other symbols and marks that are representative of Stanford, may be used solely with permission of Stanford. Merchandise bearing Stanford's names and

marks, such as t-shirts, glassware, and notebooks, must be licensed. For complete text of the currently applicable policy, including the University officers authorized to grant permission to use the Stanford name and marks, see Administrative Guide Memo 1.5.4 Ownership and Use of Stanford Name and Trademarks (<https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-4>).

Copyright

Copyright laws protect original works of authorship and give the owners of copyrights the exclusive right to do and to authorize others to do certain things in regard to a copyrighted work, including: make copies, distribute the work, display or perform the work publicly, and create derivative works. Copyright laws apply to nearly all forms of captured content, including traditional works like books, photographs, music, drama and sculpture. The laws also adapt to changes in technologies, and include in their scope modern forms of works like motion pictures, web sites, electronic media, software, multimedia works and some databases. Registration is not required to obtain a copyright, so if in doubt, assume a copyright applies.

Unless an exception to the copyright owner's exclusive rights applies, you must obtain permission from the copyright owner to copy, distribute, display or perform a copyrighted work in any medium for any purpose. Be especially mindful of copyright principles when using the Internet. Just because a work is posted on the Internet does not mean that the owner of the copyright has given you permission to use it. In general, do not post material onto the Internet without copyright clearance.

Stanford University Libraries have licenses with many publishers, which permit copying of materials in accordance with the educational, research or administrative functions of the University. In addition, there are four major exceptions to the copyright owner's exclusive rights, which (if applicable) permit limited use without permission. These are: the fair use exception, the library exception, the face-to-face teaching exception, and the distance-learning exception. For a more detailed explanation of these exceptions, the copyright laws and Stanford's copyright policies, please review the University's Copyright Reminder (http://www-sul.stanford.edu/libraries_collections/copyright_reminders) web site. It is each person's responsibility to be aware of and abide by copyright law; violation may result in civil or criminal liability, and constitutes grounds for University discipline, up to and including discharge, dismissal and expulsion.

Peer-to-Peer File Sharing

The use of file-sharing networks and software to download and share copyrighted works like software, music, movies, television programs, and books can violate copyright laws. Both the person who makes an illegal copy of a copyrighted work available and the person who receives or downloads an illegal copy have violated the law and Stanford policies. Many file-sharing programs have default settings that share copyrighted files, such as music and movies, through the Internet. Before enabling any of these programs students, faculty, or staff must read the fine print, make sure to understand the program itself, and only use such programs lawfully. Under the Digital Millennium Copyright Act (DMCA), copyright owners are entitled to notify Internet service providers, such as Stanford, that IP addresses linked to the Stanford network are sharing copies of music, movies, or other content without authorization. The law requires the University to respond to such complaints by eliminating access to the infringing materials. Stanford will disconnect students who fail to respond to a DMCA complaint promptly. Furthermore, the University also will suspend or terminate computer access to the Stanford network, including termination of the SUNet ID, to members of the community who continue to violate copyright laws. Finally, the University will take action through the student, employee, or faculty disciplinary processes if necessary. Beyond University consequences, copyright holders may file civil lawsuits against copyright infringers seeking extensive monetary damages. If compelled by a lawful subpoena, Stanford may be required to identify students, faculty, staff, or others who have violated copyright law. For more information about file-sharing, refer to Residential Computing's online

resource, File-Sharing and Copyright Law (<http://rescomp.stanford.edu/info/dmca>) web site.

Recording Lectures

Except with permission from the Office of Accessible Education (<http://studentaffairs.stanford.edu/oe>) or the instructor in question, students may not audio- or video-record lectures. Even with permission, students may only use such recordings for personal use; no posting or further distribution or use is permitted.

Domestic Partners

In October 1990, Stanford University adopted a domestic partners policy. This policy, which implements the University's nondiscrimination policy, makes services that have historically been available to married students available on an equal basis to students with same-sex or opposite-sex domestic partners. These services include access to student housing, a courtesy card that provides access to University facilities, and the ability to purchase medical care at Vaden Health Service. A domestic partnership is defined as an established long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

Sexual Harassment and Consensual Sexual or Romantic Relationships

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-4>). It is also available from the Sexual Harassment Policy Office (<http://harass.stanford.edu>) homepage.

Summary

Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.

Policy

The following is quoted from the policy:

1. In General
 - a. Applicability and Sanctions for Policy Violations—This policy applies to all students, faculty and staff of Stanford University, as well as to others who participate in Stanford programs and activities. Its application includes Stanford programs and activities both on and off-campus, including overseas programs. Individuals who violate this policy are subject to discipline up to and including discharge, expulsion, and/or other appropriate sanction or action.
 - b. Respect for Each Other—Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. It is expected that students, faculty, staff and other individuals covered by this policy will treat one another with respect.
 - c. Prompt Attention—Reports of sexual harassment are taken seriously and will be dealt with promptly. The specific action taken in any particular case depends on the nature and gravity of the conduct reported, and may include intervention, mediation, investigation and the initiation of grievance and disciplinary processes as discussed more fully below. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.
 - d. Confidentiality—The University recognizes that confidentiality is important. Sexual harassment advisers and others responsible to implement this policy will respect the confidentiality and privacy of individuals reporting or accused of sexual harassment to the extent reasonably possible. Examples of situations where confidentiality cannot be maintained include circumstances when the University is required by law to disclose information (such as in response to legal process) and when disclosure is required by the University's outweighing interest in protecting the rights of others.
 - e. Protection Against Retaliation—Retaliation and/or reprisals against an individual who in good faith reports or provides information in an investigation about behavior that may violate this policy are against the law and will not be tolerated. Intentionally making a false report or providing false information, however, is grounds for discipline.
 - f. Relationship to Freedom of Expression—Stanford is committed to the principles of free inquiry and free expression. Vigorous discussion and debate are fundamental to the University, and this policy is not intended to stifle teaching methods or freedom of expression generally, nor will it be permitted to do so. Sexual harassment, however, is neither legally protected expression nor the proper exercise of academic freedom; it compromises the integrity of the University, its tradition of intellectual freedom and the trust placed in its members.
2. What Is Sexual Harassment?

Unwelcome sexual advances, requests for sexual favors, and other visual, verbal or physical conduct of a sexual nature constitute sexual harassment when:

 - a. It is implicitly or explicitly suggested that submission to or rejection of the conduct will be a factor in academic or employment decisions or evaluations, or permission to participate in a University activity; or
 - b. The conduct has the purpose or effect of unreasonably interfering with an individual's academic or work performance or creating an intimidating or hostile academic, work or student living environment.

Determining what constitutes sexual harassment depends upon the specific facts and the context in which the conduct occurs. Sexual harassment may take many forms—subtle and indirect, or blatant and overt. For example,

 - i. It may be conduct toward an individual of the opposite sex or the same sex.
 - ii. It may occur between peers or between individuals in a hierarchical relationship.
 - iii. It may be aimed at coercing an individual to participate in an unwanted sexual relationship or it may have the effect of causing an individual to change behavior or work performance.
 - iv. It may consist of repeated actions or may even arise from a single incident if sufficiently egregious.

c. The University's Policy on Sexual Assault (see Guide Memo 23.3, Sexual Assault (http://adminguide.stanford.edu/23_3.pdf)) may also apply when sexual harassment involves physical contact.
3. What To Do About Sexual Harassment

Individuals seeking further information are directed to the following resources:

- The Sexual Harassment Policy Office (Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu for information, consultation, advice, or to lodge a complaint. Note that anonymous inquiries can be made to the SHPO by phone during business hours.
- The Sexual Harassment Policy Office web page at <http://harass.stanford.edu>.
- Any designated Sexual Harassment Adviser or resource person listed in 3.a or 5.a.

The following are the primary methods for dealing with sexual harassment at Stanford. They are not required to be followed in any specific order. However, early informal methods are often effective in correcting questionable behavior.

- a. Consultation—Consultation about sexual harassment is available from the Sexual Harassment Policy Office, Sexual Harassment Advisers (including residence deans), human resources officers, employee relations specialists, counselors at Counseling and Psychological Services (CAPS) or the Help Center, chaplains at Memorial Church, ombudspersons and others. A current list of Sexual Harassment Advisers is available from the Sexual Harassment Policy Office and at <http://harass.stanford.edu/SHadvisers.html>. Consultation is available for anyone who wants to discuss issues related to sexual harassment, whether or not "harassment" actually has occurred, and whether the person seeking information is a complainant, a person who believes his or her own actions may be the subject of criticism (even if unwarranted), or a third party.

Often there is a desire that a consultation be confidential or "off the record." This can usually be achieved when individuals discuss concerns about sexual harassment without identifying the other persons involved, and sometimes even without identifying themselves. Confidential consultations about sexual harassment also may be available from persons who, by law, have special professional status, such as:

- Counselors at Counseling and Psychological Services (CAPS), <http://caps.stanford.edu>
- Counselors at the Help Center, <http://www.stanford.edu/dept/helpcenter>
- Chaplains at Memorial Church
- The University Ombudsperson, <http://www.stanford.edu/dept/ombuds>

In these latter cases, the level of confidentiality depends on what legal protections are held by the specific persons receiving the information and should be addressed with them before specific facts are disclosed. For more information see <http://harass.stanford.edu/confidential.html>.

For further information on confidentiality, see Section 1(d) above.

- b. Direct Communication—An individual may act on concerns about sexual harassment directly, by addressing the other party in person or writing a letter describing the unwelcome behavior and its effect and stating that the behavior must stop. A Sexual Harassment Adviser can help the individual plan what to say or write, and likewise can counsel persons who receive such communications. Reprisals against an individual who in good faith initiates such a communication violate this policy.
- c. Third Party Intervention—Depending on the circumstances, third party intervention in the workplace, student residence or academic setting may be attempted. Third party intervenors may be the

Sexual Harassment Advisers, human resources professionals, the ombudspersons, other faculty or staff, or sometimes mediators unrelated to the University.

When third party intervention is used, typically the third party (or third parties) will meet privately with each of the persons involved, try to clarify their perceptions and attempt to develop a mutually acceptable understanding that can insure that the parties are comfortable with their future interactions. Other processes, such as a mediated discussion among the parties or with a supervisor, may also be explored in appropriate cases.

Possible outcomes of third party intervention include explicit agreements about future conduct, changes in workplace assignments, substitution of one class for another, or other relief, where appropriate.

- d. Formal Grievance, Appeal, and Disciplinary Processes—Grievance, appeal, or disciplinary processes may be pursued as applicable.
- Grievances and Appeals—The applicable procedure depends on the circumstances and the status of the person bringing the charge and the person against whom the charge is brought. Generally, the process consists of the individual's submission of a written statement, a process of fact-finding or investigation by a University representative, followed by a decision and, in some cases, the possibility of one or more appeals, usually to Stanford administrative officers at higher levels. The relevant procedure (see below) should be read carefully, since the procedures vary considerably.

If the identified University fact-finder or grievance officer has a conflict of interest, an alternate will be arranged, and the Director of the Sexual Harassment Policy Office or the Director of Employee and Labor Relations can help assure that this occurs.

In most cases, grievances and appeals must be brought within a specified time after the action complained of. While informal resolution efforts will not automatically extend the time limits for filing a grievance or appeal, in appropriate circumstances the complainant and the other relevant parties may mutually agree in writing to extend the time for filing a grievance or appeal.

A list of the established grievance and appeal procedures is located at http://hrweb.stanford.edu/elr/policies/list_grievance_procedures.html. Copies may also be obtained from the Sexual Harassment Policy Office, <http://www.stanford.edu/group/SexHarass>.

Copies of the following may be obtained from Employee and Labor Relations, 651 Serra Street:

- "Solving Workplace Problems at Stanford: Understanding the Staff Dispute Resolution Policy" (also at <http://hrweb.stanford.edu/forms/staffresolution.pdf>.)
- "Solving Workplace Problems at Stanford: Information for Academic Staff – Librarians and Academic Staff – Research Associates"
- "The Dispute Resolution Process (A User's Guide)"

- Disciplinary Procedures—In appropriate cases, disciplinary procedures may be initiated. The applicable disciplinary procedure depends on the status of the individual whose conduct is in question. For example, faculty are subject to the Statement on Faculty Discipline (<http://www.stanford.edu/dept/provost/faculty/policies/handbook/ch4.html#statementonfacultydiscipline>), and students to the Fundamental Standard. For additional information

related to student disciplinary procedures, see the Office of Community Standards (<http://studentaffairs.stanford.edu/communitystandards>).

The individuals referenced in this section are available to discuss these options and differing methods for dealing with sexual harassment.

4. Procedural Matters

- a. Investigations—If significant facts are contested, an investigation may be undertaken. The investigation will be conducted in a way that respects, to the extent possible, the privacy of all of the persons involved. In appropriate cases, professional investigators may be asked to assist in the investigation. The results of the investigation may be used in the third party intervention process or in a grievance or disciplinary action.
- b. Recordkeeping—The Sexual Harassment Policy Office will track reports of sexual harassment for statistical purposes and report at least annually to the University President concerning their number, nature and disposition.

The Sexual Harassment Policy Office may keep confidential records of reports of sexual harassment and the actions taken in response to those reports, and use them for purposes such as to identify individuals or departments likely to benefit from training so that training priorities can be established. No identifying information will be retained in cases where the individual accused was not informed that there was a complaint.

- c. Indemnification and Costs—The question sometimes arises as to whether the University will defend and indemnify a Stanford employee accused of sexual harassment. California law provides, in part, "An employer shall indemnify [its] employee for all that the employee necessarily expends or loses in direct consequence of the discharge of his [or her] duties as such." The issue of indemnification depends on the facts and circumstances of each situation. Individuals who violate this policy, however, should be aware that they and/or their schools, institutes, or other units may be required to pay or contribute to any judgments, costs and expenses incurred as a result of behavior that is wrongful and/or contrary to the discharge of the employee's duties. In general, see Administrative Guide Memo 2.4.6 Indemnification (<https://adminguide.stanford.edu/chapter-2/subchapter-4/policy-2-4-6>).

5. Resources for Dealing with Sexual Harassment

- a. Advice—Persons who have concerns about sexual harassment should contact the Sexual Harassment Policy Office, any Sexual Harassment Adviser at <http://harass.stanford.edu/SHadvisers.html> or one of the other individuals listed below. Reports should be made as soon as possible: the earlier the report, the easier it is to investigate and take appropriate remedial action. When reports are long delayed, the University will try to act to the extent it is reasonable to do so, but it may be impossible to achieve a satisfactory result after much time has passed.

Likewise, anyone who receives a report or a grievance involving sexual harassment should promptly consult with the Sexual Harassment Policy Office or with a Sexual Harassment Adviser.

There are a number of individuals specially trained and charged with specific responsibilities in the area of sexual harassment. In brief, they are:

- i Sexual Harassment Advisers (<http://harass.stanford.edu/SHadvisers.html>) serve as resources to individuals who wish to discuss issues of sexual harassment, either because they have been harassed or because they want information about the University's policy and procedures. There is usually at least one Adviser assigned to each of the schools at the University

and to each large work unit; most of the residence deans also have been appointed as Sexual Harassment Advisers. Advisers are also authorized to receive complaints.

- ii The Director of the Sexual Harassment Policy Office is responsible for the implementation of this policy. The Director's Office also provides advice and consultation to individuals when requested; receives complaints and coordinates their handling; supervises the other Advisers; encourages and assists prevention education for students, faculty and staff; keeps records showing the disposition of complaints; and generally coordinates matters arising under this policy. Because education and awareness are the best ways to prevent sexual harassment; developing awareness, education and training programs and publishing informational material are among the most important functions of the Sexual Harassment Policy Office (<http://harass.stanford.edu>).
- iii As stated above, individuals with concerns about sexual harassment may also discuss their concerns informally with psychological counselors (for example through CAPS or the HELP Center), chaplains (through the Memorial Chapel), or the University ombudsperson. For more information, see <http://harass.stanford.edu/resources.html>.

- b. External Reporting—Sexual harassment is prohibited by state and federal law. In addition to the internal resources described above, individuals may pursue complaints directly with the government agencies that deal with unlawful harassment and discrimination claims, e.g., the U.S. Equal Employment Opportunity Commission (EEOC), the Office for Civil Rights (OCR) of the U.S. Department of Education, and the State of California Department of Fair Employment and Housing (DFEH). These agencies are listed in the Government section of the telephone book. A violation of this policy may exist even where the conduct in question does not violate the law.

6. Consensual Sexual or Romantic Relationships

- a. In General—There are special risks in any sexual or romantic relationship between individuals in inherently unequal positions, and parties in such a relationship assume those risks. In the University context, such positions include (but are not limited to) teacher and student, supervisor and employee, senior faculty and junior faculty, mentor and trainee, adviser and advisee, teaching assistant and student, coach and athlete, and the individuals who supervise the day-to-day student living environment and student residents. Because of the potential for conflict of interest, exploitation, favoritism, and bias, such relationships may undermine the real or perceived integrity of the supervision and evaluation provided, and the trust inherent particularly in the teacher-student context. They may, moreover, be less consensual than the individual whose position confers power or authority believes. The relationship is likely to be perceived in different ways by each of the parties to it, especially in retrospect.

Moreover, such relationships may harm or injure others in the academic or work environment. Relationships in which one party is in a position to review the work or influence the career of the other may provide grounds for complaint by third parties when that relationship gives undue access or advantage, restricts opportunities, or creates a perception of these problems. Furthermore, circumstances may change, and conduct that was previously welcome may become unwelcome. Even when both parties have consented at the outset to a romantic involvement, this past consent does not remove grounds for a charge based upon subsequent unwelcome conduct.

Where such a relationship exists, the person in the position of greater authority or power will bear the primary burden

of accountability, and must ensure that he or she—and this is particularly important for teachers—does not exercise any supervisory or evaluative function over the other person in the relationship. Where such recusal is required, the recusing party must also notify his or her supervisor, department chair or dean, so that such chair, dean or supervisor can exercise his or her responsibility to evaluate the adequacy of the alternative supervisory or evaluative arrangements to be put in place. Staff members may notify their local human resources officers. To reiterate, the responsibility for recusal and notification rests with the person in the position of greater authority or power. Failure to comply with these recusal and notification requirements is a violation of this policy, and therefore grounds for discipline. The University has the option to take any action necessary to insure compliance with the spirit of this recusal policy, including transferring either or both employees in order to minimize disruption of the work group. In those extraordinarily rare situations where it is programmatically infeasible to provide alternative supervision or evaluation, the cognizant Dean or Director must approve all evaluative and compensation actions.

- b. With Students—At a university, the role of the teacher is multifaceted, including serving as intellectual guide, counselor, mentor and adviser; the teacher's influence and authority extend far beyond the classroom. Consequently and as a general proposition, the University believes that a sexual or romantic relationship between a teacher and a student, even where consensual and whether or not the student would otherwise be subject to supervision or evaluation by the teacher, is inconsistent with the proper role of the teacher, and should be avoided. The University therefore very strongly discourages such relationships.

7. Policy Review and Evaluation—This policy went into effect on October 6, 1993, and was amended on November 30, 1995, and on May 30, 2002. It is subject to periodic review, and any comments or suggestions should be forwarded to the Director of the Sexual Harassment Policy Office.

Resources

The following is a summary of resources concerning sexual harassment available to members of the Stanford Community:

A brochure containing the policy, a list of current sexual harassment advisers, confidential resources, and other helpful information is available online at the Sexual Harassment Policy Office (<http://harass.stanford.edu>) web site, and in printed form from the Sexual Harassment Policy Office at Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu. Copies of the University policy on sexual assault, which complements this sexual harassment policy, as well as all other documents mentioned in this section, are also available at the Sexual Harassment Policy Office.

All faculty, staff, and students who have questions regarding this policy and its enforcement can consult with a Sexual Harassment Adviser or can be directed to the local Personnel Officer or Regional Human Resources Manager. Faculty members should contact their dean or department chair, and students should contact the Director of the Sexual Harassment Policy Office or the Dean of Student Affairs.

Sexual Harassment Policy Office—telephone: (650) 723-1583; email: harass@stanford.edu.

Director: Laraine Zappert (Clinical Professor, Psychiatry and Behavioral Sciences)

Assistant Director: Nanette Andrews

Sexual Misconduct and Sexual Assault

The University's Policy on Sexual Misconduct and Sexual Assault is published in complete form in the Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-4>).

Summary

The following summarizes the policy on Sexual Assault and provides information on resources available to members of the Stanford community.

Policy

Under Title IX, sexual violence (sexual misconduct and sexual assault) is a severe form of sexual harassment. Sexual misconduct and sexual assault are unacceptable and is not tolerated at Stanford University. All University employees (including student residence staff employees) have a duty to report claims of sexual misconduct or sexual assault to Catherine Criswell, Title IX Coordinator at (650) 497-4955 (voice), titleix@stanford.edu, <https://titleix.stanford.edu/>. For students, report claims to the Title IX Coordinator or the Office of Sexual Assault and Relationship Abuse (SARA) at (650) 725-1056 or saraoffice@stanford.edu.

The University urges an individual who has been subjected to sexual misconduct or sexual assault to make an official report. A report of the matter will be dealt with promptly. Confidentiality will be maintained to the extent possible.

The University is committed to providing information regarding on- and off-campus services and resources to all parties involved.

Students, faculty and staff found to be in violation of this policy will be subject to discipline up to and including termination, expulsion or other appropriate institutional sanctions; affiliates and program participants may be removed from University programs and/or prevented from returning to campus.

A comprehensive web site dedicated to sexual violence awareness, prevention and support can be found at Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (<http://studentaffairs.stanford.edu/sara>). The site contains a list of resources and describes reporting options.

Definitions

What is Sexual Misconduct?

Sexual misconduct is the commission of an unwanted sexual act, whether by an acquaintance or by a stranger, that occurs without indication of consent.

What is Sexual Assault?

Sexual assault is the actual, attempted or threatened unwanted sexual act, whether by an acquaintance or by a stranger, accomplished (1) against a person's will by means of force (express or implied), violence, duress, menace, fear or fraud, or (2) when a person is incapacitated or unaware of the nature of the act, due to unconsciousness, sleep and/or intoxicating substances.

What is Consent?

Consent is informed, freely given, and mutually understood. Consent requires an affirmative act or statement by each participant. If coercion, intimidation, threats and/or physical force are used, there is no consent. If a person is mentally or physically incapacitated or impaired so that the person cannot understand the fact, nature or extent of the sexual situation, there is no consent; this includes conditions due to alcohol or drug consumption or

being asleep or unconscious. Whether one has taken advantage of a position of influence over another may be a factor in determining consent.

Notification

With the consent of the victim, allegations of sexual assault received by University offices or personnel shall be communicated promptly to the Department of Public Safety, 711 Serra Street, telephone 9-911 for emergency response or (650) 723-9633 during normal business hours.

Emergency Services Available to Victims

Victims of sexual assault are urged to seek immediate attention from emergency police, medical, and counseling services. On the Stanford campus and in the immediate vicinity, the following provide 24-hour response and will arrange for police assistance, medical assistance, emotional support services, and advocacy and support:

- "911" Emergency Network: dial 9-911 from University phones or 911 from outside phones
- Santa Clara Valley Medical Center, 751 South Bascom Avenue, San Jose, telephone (408) 885-5000
- YWCA Stanford Hotline, for students, telephone (650) 725-9955
- Stanford Hospital and Clinics, 300 Pasteur Drive, Stanford, telephone (650) 723-5111
- Residence and Graduate Life Deans, page through 723-8222, extension 25085

Non-Emergency Resources

Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (725-1056) provides comprehensive and consistent response to incidents of sexual and relationship violence to the campus community. SARA provides case consultation to students and staff, case management for reported assaults and information and referrals to services on and off campus. The office also assists with educational outreach and training to increase awareness, sensitivity, and community accountability in the prevention of these acts. Online information is available at the Sexual Assault & Relationship Abuse Education & Response (SARA) (<http://studentaffairs.stanford.edu/sara.html>) web site.

Additional resources for students are available at Vaden Health Service at (650) 723-3785, including short-term counseling, referral to long-term therapy, follow-up pregnancy testing, and testing and treatment for sexually transmitted diseases. Additional services for faculty and staff are available at the University's HELP Center, Galvez House (723-4577), including general counseling, information, support, and referral. The University ombuds (723-3682) is available to all in the Stanford community for general counseling, advice, and advocacy. Christine Criswell, Title IX Coordinator, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 497-4955, (650) 497-9257, titleix@stanford.edu, <https://titleix.stanford.edu/>, is available to assist students to address the effects of sexual harassment and sexual violence

Confidentiality of Information

The University will make reasonable and appropriate efforts to preserve an individual's privacy and protect the confidentiality of information. However, because of laws relating to reporting and other state and federal laws, the University cannot guarantee confidentiality to those who report incidents of sexual violence except where those reports are privileged communications with those in legally protected roles (set forth below). The professional being consulted should, if possible, make these limits clear before any disclosure of facts.

An individual can speak confidentially with certain individuals in legally protected roles. They include sexual assault counselors such as those at the YWCA Sexual Assault Center at Stanford, the Help Center, Counseling and Psychological Services (CAPS) and clergy. Exceptions to maintaining confidentiality are set by law; for example, physicians and nurses who treat any physical injury sustained during a sexual assault are required to report it to law enforcement. In addition, physicians, nurses, psychologists, psychiatrists, teachers and social workers must report a sexual assault committed against a person under age 18.

Information shared with other individuals is not legally protected from being disclosed. Considerations with respect to a complainant's request for confidentiality include factors such as the University's ability to respond effectively, to prevent further harassment or to ensure the safety of the University community. For example, an advisor, the Dean of Student Life, a Residence Dean or a Resident Assistant may need to inform other individuals to protect their safety or rights, in fairness to the persons involved, or in response to legal requirements. As required by law, all disclosures to any University employee of an on-campus sexual assault must be reported for statistical purposes only (without personal identifiers) to the Stanford University Department of Public Safety, which has the responsibility for tabulating and annually publishing sexual assault and other crime statistics. Such reports are for statistical purposes and do not include individual identities.

State law permits law enforcement authorities to keep confidential the identity of a person officially reporting a sexual assault. The Stanford University Department of Public Safety policy is to maintain such confidentiality. However, if the District Attorney files a criminal charge, confidentiality might not be maintained.

If a complaint is filed with the Office of Judicial Affairs then the accused student must be provided with the name of the alleged victim and witnesses, if applicable. However, accommodations can be made to protect the victim's privacy, as described on the website for the Office of Judicial Affairs.

Information about Options

The University offices responding to allegations of sexual misconduct or sexual assault will inform affected individuals, at a minimum, of the options of: criminal prosecution, civil prosecution, the disciplinary process, the appropriate Title IX grievance procedure, alternative housing assignments, and academic assistance alternatives.

Political Activities

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 1.5.1 Political Activities (<https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-1>).

Summary

The following summarizes the policy on Political Activities:

Stanford University, as a charitable entity, is subject to federal, state, and local laws and regulations regarding political activities: campaign activities, lobbying, and the giving of gifts to public officials.

While all members of the University community are naturally free to express their political opinions and engage in political activities to whatever extent they wish, it is very important that they do so only in their individual capacities and avoid even the appearance that they are speaking or acting for the University in political matters.

In the limited circumstances where individuals must speak or act on behalf of the University in the political arena, they must do so in accordance with the provisions of this Guide Memo.

Policy

The following is quoted from the policy:

1. Summary of Legal Requirements and Restrictions

- a. **Campaign Activities:** contributions of money, goods, or services to candidates for political office and in support of or opposition to ballot measure campaigns are subject to a wide variety of political laws. Depending on the jurisdiction and the campaign, political contributions may be prohibited or limited and, in nearly all cases, are subject to a complicated series of disclosure rules. Because of the University's tax-exempt status, the University is legally prohibited from endorsing candidates for political office or making any contribution of money, goods, or services to candidates. It is important, therefore, that no person inadvertently cause the University to make such a contribution.
- b. **Lobbying:** lobbying can generally be described as any attempt to influence the action of any legislative body (for example, Congress, state legislatures, county boards, city councils, and their staffs) or any federal, state, or local government agency. Laws regulating lobbying exist at the federal, state, and local levels but can differ widely in scope, depending on the jurisdiction. Some laws, for example, only regulate lobbying of the legislative branch. Others, however, also cover lobbying of administrative agencies and officers in the executive branch (for example, lobbying for federally-funded grants). To one degree or another, however, most lobbying laws require registration and reporting by individuals engaged in attempts to influence governmental action.

Tax-exempt organizations are permitted to lobby, and the University engages in lobbying on a limited number of issues, mostly those affecting education, research, and related activities. There is usually some threshold of time or money spent on lobbying that triggers registration and reporting requirements. Regardless of thresholds, however, no University employee—other than the following individuals, on matters under their jurisdiction—may lobby on behalf of the University without specific authorization:

- President
- Provost
- Deans of the Seven Schools
- Vice Provost and Dean of Research
- Vice President for Business Affairs and Chief Financial Officer
- Executive Director of Human Resources
- Director of the Stanford Linear Accelerator Center
- Director of the Hoover Institution
- General Counsel
- Vice President for Public Affairs

The Vice Provost and Dean of Research may grant permission to faculty members to lobby on behalf of the University for specific purposes. The Director of Government and Community Relations may grant permission to staff members to lobby on behalf of the University for specific purposes. All lobbying on behalf of the University should be coordinated with the Director of Government and Community Relations.

- c. **Giving of Gifts to Public Officials and Staff:** almost all jurisdictions have strict rules on the extent to which gifts and honoraria may be given to public officials (both elected and non-elected officials and, often, staff). In some cases gifts and honoraria are prohibited; in others they are limited; and in most cases they are subject to detailed disclosure. In addition, in some jurisdictions such as California, gifts to both state and local public officials can

result in a public official's disqualification from participation in any governmental action affecting the interests of the donor. Meals, travel, and entertainment are the most common types of gifts, but gift rules can also apply in cases where public officials attend a reception or receive tickets to sporting or other events.

As a non-profit organization, the University generally does not give gifts to public officials and, in those limited cases where it does give such gifts, it must do so in accordance with all applicable laws and regulations. Therefore, any University employee who, on behalf of the University, wishes to make a gift to a public official must receive prior approval from the Director of Government and Community Relations before making such a gift.

- d. **Reporting of Political Activities:** the University must report most of its political activities above certain thresholds. Therefore, any University employee engaging in such activities on behalf of the University should carefully review the remainder of this Guide Memo and should discuss the relevant activities in advance with the Director of Government and Community Relations.

2. Prohibited and Restricted Political Activities

a. In General:

- i No person may, on behalf of the University, engage in any political activity in support of or opposition to any candidate for elective public office (including giving or receiving funds or endorsements), nor shall any University resources be used for such purpose.
- ii No person may, on behalf of the University, lobby (or use University resources to lobby) any federal, state, or local legislative or administrative official or staff member unless specifically authorized to do so. Any lobbying activity, even when authorized, must be conducted in compliance with this Guide Memo, other applicable University policies, and applicable law.
- iii No person may, on behalf of the University, give a gift (or use any University resources to give a gift) to any federal, state, or local official or staff member, except in compliance with this Guide Memo, other applicable University policies, and applicable law.
- iv No person supporting candidates for public office or engaging in other political activities may use University space or facilities or receive University support, except in the limited ways described in section 3A, below.
- v No person may use for lobbying activities federally-funded contract or grant money received by the University.
- Even the foregoing activities that are only restricted, rather than prohibited, may be subject to limitations imposed by law. Therefore, any person engaging in the activity, or contemplating doing so, should consult with the Director of Government and Community Relations.

- b. **Guidelines for Avoiding Prohibited Partisan Political Activities:** the following guidelines should assist in preventing the involvement or apparent involvement of the University in political activities in support of or opposition to any candidate for elective public office, that is, partisan political activities. Except in the limited circumstances set forth in section 3.b., below:

- i **Use of Name and Seal:** neither the name nor seal of the University or of any of its schools, departments, or institutions should be used on letters or other materials intended for partisan political purposes.
- ii **Use of Address and Telephones:** no University office should be used as a return mailing address for partisan political

mailings, and telephone service that is paid by the University, likewise, should not be used for partisan political purposes. (Obviously, a student's dormitory room and telephone service that are personal to the student may be used for these purposes.)

- iii Use of Title: the University title of a faculty or staff member or other person should be used only for identification and should be accompanied by a statement that the person is speaking as an individual and not as a representative of the University.
- iv Use of Services and Equipment: University services, such as Interdepartmental Mail; equipment, such as duplicating machines, computers, and telephones; and supplies should not be used for partisan political purposes.
- v Use of Personnel: no University employee may, as part of his or her job, be requested to perform tasks in any way related to partisan political purposes.

3. Permissible Activities

- a. In General: as noted above, the federal, state, and local laws which limit the partisan political activities that can take place in University facilities and with University support in no way inhibit the expression of personal political views by any individual in the University community. Nor do they forbid faculty, students, or staff from joining with others in support of candidates for office or in furtherance of political causes. There is no restriction on discussion of political issues or teaching of political techniques. Academic endeavors which address public policy issues are in no way affected.

Because the University encourages freedom of expression, political activities which do not reasonably imply University involvement or identification may be undertaken so long as regular University procedures are followed for use of facilities. Examples of permissible activities are:

- i Use of areas, such as White Plaza, for tables, speeches, and similar activities.
- ii Use of auditoriums for speeches by political candidates, but subject to rules of the Internal Revenue Service, the Federal Election Commission, and the California Fair Political Practices Commission, and other applicable laws. Arrangements must be made with University Events and Services. (See also Guide Memo 82.1, Public Events (http://adminguide.stanford.edu/82_1.pdf), for more information.)

To reiterate, because tax and political compliance laws impose restrictions, and even prohibitions, on certain political activities and on the use of buildings and equipment at a non-profit institution such as the University, any such activities must be in compliance with these legal requirements. Individuals taking political positions for themselves or groups with which they are associated, but not as representatives of the University, should clearly indicate, by words and actions, that their positions are not those of the University and are not being taken in an official capacity on behalf of the University.

- b. Limited University Political Activities: limited activities relating to specific federal, state, or local legislation or ballot initiatives are permissible where (1) the subject matter is directly related to core interests of the University's activities; (2) the President has determined that the University should take a position; and (3) the individuals who speak or write on the University's behalf are specifically authorized to do so.

- 4. Responsibility for Interpretation: the Director of Government and Community Relations, in consultation with the General Counsel, is the administrative officer responsible for interpretation and application

of the above guidelines. Questions on whether planned student activities are consistent with the University's obligations should be directed to the Dean of Students, who will consult with the Director of Government and Community Relations and/or the General Counsel. All other questions on whether planned activities are consistent with the University's obligations should be addressed directly to the Director of Government and Community Relations or the General Counsel.

Campus Disruptions

The University's policy on campus disruption applies to students, faculty, and staff. It is published in its complete form on the Office of the General Counsel (http://www.stanford.edu/dept/legal/su_links.html) web site.

Policy

The following is quoted from the policy:

Because the rights of free speech and peaceable assembly are fundamental to the democratic process, Stanford firmly supports the rights of all members of the University community to express their views or to protest against actions and opinions with which they disagree.

All members of the University also share a concurrent obligation to maintain on the campus an atmosphere conducive to scholarly pursuits, to preserve the dignity and seriousness of University ceremonies and public exercises, and to respect the rights of all individuals.

The following regulations are intended to reconcile these objectives.

It is a violation of University policy for a member of the faculty, staff, or student body to:

1. prevent or disrupt the effective carrying out of a University function or approved activity, such as lectures, meetings, interviews, ceremonies, the conduct of University business in a University office, and public events.
2. obstruct the legitimate movement of any person about the campus or in any University building or facility.

Members of the faculty, staff, and student body have an obligation to leave a University building or facility when asked to do so in the furtherance of the above sections by a member of the University community acting in an official role and identifying himself or herself as such; members of the faculty, staff, or student body also have an obligation to identify themselves, when requested to do so by such a member of the University community who has reasonable grounds to believe that the person(s) has violated section (1) or (2) of this policy and who has so informed the person(s).

The policy has been applied to the following actions: refusal to leave a building which has been declared closed; obstructing the passage into or out of buildings by sitting in front of doorways; preventing University employees from entering their workplace; preventing members of a class from hearing a lecture or taking an examination, or preventing the instructor from giving a lecture, by means of shouts, interruptions, or chants; refusing to leave a closed meeting when unauthorized to attend; and intruding upon or refusing to leave a private interview.

It should be understood that while the above are examples of extraordinarily disruptive behavior, the application of the Policy also takes situational factors into consideration. Thus, for example, conduct appropriate at a political rally might constitute a violation of the Policy on Campus Disruption if it occurred within a classroom.

Students found responsible for violating the Fundamental Standard in connection with this policy are subject to University discipline.

Use of the Main Quadrangle and Memorial Court Policy

The following is quoted from the policy:

The Main Quadrangle and Memorial Court are part of Stanford University's academic preserve due to their locations at the heart of the campus. To protect and enhance their historic status, University policy limits activities primarily to established or traditional ceremonies and events.

To schedule an event, approval must be obtained in advance from the Office of Stanford Events (see below). Unscheduled events, protests, or activities are prohibited.

Requests for waivers to this policy must be submitted in advance and in writing to the Office of Stanford Events. Exceptions may be granted only in extraordinary cases.

Resources

The following is a summary of resources available:

For instructions on use of the Main Quadrangle/Memorial Court, contact the Office of Special Events and Protocol (OSEP) at (650) 724-1387, or at the OSEP (<https://osep.stanford.edu>) web site.

Note: White Plaza is made available to Stanford students, faculty, and staff for events other than scheduled "established or traditional ceremonies and events" including those that may involve amplified sound. For further information on the use of such other venues, students should contact Student Activities and Leadership (SAL) at (650) 723-2733, or at the SAL (<http://studentaffairs.stanford.edu/sal>) web site. Faculty and staff should contact the Office of Special Events and Protocol (OSEP) (<https://osep.stanford.edu>).

Oval Policy

The Oval is considered to be the initial and official visual entrance to the Stanford University campus. Given this historic and aesthetic status, it is in the best interests of the University community and visiting members of the public to maintain its open and pristine space, to help preserve its natural beauty and environmental integrity. The Oval also presents the formal academic image of the University, leading directly to departments, classrooms and other academic space, and faculty and graduate student offices, and thus is subject to the University's Noise Policy.

The University prohibits formal or informal events of any kind to take place in the Oval. Gatherings of Stanford students, faculty, and staff such as demonstrations, rallies, or dances may take place in White Plaza, which can be reserved through the Office of Student Activities. Weddings also are not allowed in the Oval but are in certain circumstances allowed in Memorial Church (refer to Memorial Church wedding ceremony guidelines (<http://www.stanford.edu/group/religiouslife/servicesWeddings.html>)).

The Oval is considered a pedestrian zone and appropriate use of its space includes walking, running, reading, relaxing, and other limited recreational use of the lawn area (such as quiet, very small picnics and Frisbee), unless or until such use damages or otherwise harms the property.

Cooking food or use of any grill/barbecue or open flame is strictly prohibited. Fireworks or the use of other incendiary devices represent a safety hazard to the area and are therefore prohibited. Amplified sound from items such as boom boxes, musical instruments, or the use of bullhorns or amplified speakers is also prohibited. Only authorized Stanford service vehicles are permitted inside the Oval areas.

As the official entrance to the University, the Oval offers public access to general parking spaces in the marked areas surrounding the outer perimeter

of the Oval; drivers are expected to obey all traffic signs and limitations. Buses are subject to additional restrictions.

For further information regarding this policy, contact the Executive Director of Special Events and Protocol, 724-1387 or see the Office of Special Events & Protocol (<http://osep.stanford.edu/policies/oval.html>) web site.

Noise and Amplified Sound Policy

The following is quoted from the policy:

Stanford is not only an academic institution but a residential community as well. It is the responsibility of all faculty, students, and staff to moderate noise especially during an event or activity held on campus. Supporting the mission of the University and respecting those who are studying, researching, or otherwise carrying out academic-related activities is a Stanford priority. The campus must require a conducive atmosphere to ensure these endeavors are accomplished and supported. Disturbing noise in or around a residence or other campus buildings which infringe on the rights of other residents or members of the University community is considered a violation of this policy. As part of the event planning process, the event sponsor must obtain all appropriate approvals regarding the use of amplified sound during an event or activity.

Resources

Information regarding whether and how the use of amplified sound is permitted is available from the following sources, which must be consulted for prior approval:

1. The Office of Student Activities: phone: 723-2733, or see <http://studentaffairs.stanford.edu/sal/policies/noise>
2. Registrar's Scheduling Office: email reg-events@stanford.edu, or see <http://studentaffairs.stanford.edu/registrar/faculty/events>.
3. Office of Special Events and Protocol (OSEP) at (650) 724-1387, or see <http://stanfordevents.stanford.edu>.

Prohibition of the Possession of Dangerous Weapons on Campus

The University's policy prohibiting weapons on campus is published in its complete form on the Office of Community Standards web site.

Policy

The following is quoted from the policy:

Except for authorized academic purposes, the knowing possession by any student on any Stanford campus of the following is prohibited: firearms, explosives, ammunition, or any instrument or weapon of the kind commonly known as blackjack, slingshot, billy club, sandclub, sandbag, or metal knuckles.

Notwithstanding the paragraph above, a student who is a resident of a Stanford campus may store a weapon on such campus if both of the following conditions are met:

1. The student has complied with all state and federal regulations regarding the use and possession of said weapon, or, in the case of a foreign campus, with the laws of the country in which the campus is located.
2. The student stores such weapons with the Stanford Department of Public Safety (SDPS) or, in the case of a foreign campus, in a facility provided by the director of such campus.

Students may remove their weapons from storage only in accordance with regulations established by the SDPS or by the director of the foreign campus at which the weapon is stored. A student who is a resident of a Stanford campus may bring any of the above weapons on campus for purposes of storage only if the student has previously notified the SDPS of the intention to do so, but in no event more than six hours after arrival on the campus. When the student removes the weapon from storage, it must be taken off campus as soon as is practicable, but in no event more than one hour after such removal.

The term "Stanford campus" shall include all the lands and facilities of Leland Stanford Junior University, whether owned or leased, and whether located in the United States or abroad.

Student Alcohol Policy

This document clarifies the University's expectations and approach related to the use of alcohol by students. The University's Controlled Substances and Alcohol Policy is also applicable. The full text is contained in the Controlled Substance and Alcohol (http://adminguide.stanford.edu/23_6.pdf) policy.

Preamble

The Fundamental Standard has set the standard of conduct for students at Stanford since 1896. It states: "Students at Stanford are expected to show both within and without the University such respect for order, morality, personal honor and the rights of others as is demanded of good citizens." Implicit in the Standard is the understanding that students are responsible for making their own decisions and accepting the consequences of those decisions.

The University is committed to the health, safety and well-being of each member of the Stanford community. In order to further student learning, development and success and to promote the University's academic mission, Stanford fosters an environment of personal and collective responsibility and respectful citizenship. This means that all members of the university community—students, faculty and staff—have a role in safeguarding a healthy learning environment free of the consequences of alcohol misuse. The University also strives to create a culture that supports students who do not use alcohol and students who use alcohol in a safe, legal and responsible fashion.

Legal Background

Members of the Stanford community are expected to abide by all federal, state and local laws, including those governing alcohol consumption and distribution. Under California law, it is illegal for anyone under the age of 21 to purchase alcohol or to possess alcohol in a public space. It is also illegal for anyone to furnish alcohol to an individual under the age of 21. Other state laws governing the use of alcohol are listed below.

While it is not the responsibility of most Stanford officials to enforce state law, it is the responsibility of the University's Department of Public Safety, and accordingly they enforce all state alcohol laws when they encounter violations. All community members should understand the law and, as individuals, ensure that they themselves do not violate it.

In addition, it is the responsibility of all community members to ensure that the University does not, through their actions, violate the law. Accordingly, official University functions, including events held by registered student groups, are not allowed to provide alcohol to those under 21, and no University funds may be used to purchase alcohol for that purpose. Violations of this requirement can result in both criminal prosecution and University administrative action, including dismissal from the University.

Responsible Alcohol Use

Stanford students are expected to behave responsibly, both in the classroom and outside, both on campus and off. In particular, the University does

not tolerate reckless drinking and its consequent harmful behaviors. The University is especially concerned about the misuse of distilled alcohol products ("hard alcohol"), and the dangers that arise from that misuse.

All students should understand the physical and behavioral effects of alcohol misuse, and should avoid such misuse themselves. In addition, they are expected to do their part to ensure the safety of fellow students whom they perceive to be engaged in reckless drinking behavior or to be suffering from its consequences.

The University provides educational resources to assure that students understand the effects of alcohol misuse and know how to respond when they perceive others to be engaged in dangerous behavior.

Reckless drinking and encouraging reckless drinking are violations of University policy, and may be subject to disciplinary action. Extreme or repeated violations may result in dismissal from the University.

More generally, students are expected to make legal, healthy, responsible choices concerning their personal use of alcohol and the University supports them in this endeavor through education and other resources. The University sponsors activities and programs focused on students who choose not to drink or to drink lightly, as well as resources and services to assist students who need help for themselves or others related to alcohol use.

Authority, Application, and Enforcement

Responsibility for application of the Student Alcohol Policy resides with the Vice Provost for Student Affairs. The Office of Alcohol Policy and Education reports to the Vice Provost for Student Affairs and is expected to coordinate and implement alcohol programs. (The University's Controlled Substances and Alcohol Policy is also applicable. The full text is contained at the Controlled Substances and Alcohol web site (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-8>).

The Stanford University Department of Public Safety enforces federal, state and local laws among students, other community members, guests and visitors.

Alcohol Policy Violations

The Office of Alcohol Policy and Education will work with the following offices to address violations of the University's alcohol policy as determined by the specifics of each situation.

- The Office of Residential Education (<http://studentaffairs.stanford.edu/resed>) for undergraduate students, residential groups, fraternities and sororities
- Graduate Life Office (GLO) (<http://glo.stanford.edu>) for graduate students
- Student Activities and Leadership (SAL) (<http://studentaffairs.stanford.edu/sal>) for voluntary student organizations
- Department of Athletics, Physical Education and Recreation (DAPER) (<http://www.gostanford.com/school-bio/stan-administration.html>) for student athletes and athletic groups
- Such other offices as are appropriate under particular circumstances

Violations may be referred to the Office of Judicial Affairs (<http://judicialaffairs.stanford.edu>) (for individual students) and the Organization Conduct Board (<http://studentaffairs.stanford.edu/studentlife/ocb>) (for student groups). The Dean of Student Life (<http://studentaffairs.stanford.edu/studentlife>) may take action as well in certain circumstances.

Getting Help: Resources Available to Students

Students have access to a variety of University resources (<http://alcohol.stanford.edu/resources.html>).

Additional University Regulations

- Students living in University residences sign a residence agreement (http://www.stanford.edu/dept/rde/shs/res_agree.htm) that outlines housing policies and expectations for conduct. Violations of the residence agreement can lead to loss of housing. [http://www.stanford.edu/dept/rde/shs/res_agree.htm]
- All parties must be registered with the University, and availability of alcohol is regulated by party planning guidelines coordinated by the Office of Student Activities and Leadership. [<http://studentaffairs.stanford.edu/sal/planning/party>]

Other restrictions apply to particular circumstances

- **Frosh Housing**—Alcoholic beverages are prohibited at all-frosh house events in common area spaces.
- **University Funds and the Purchase of Alcohol**—No University funds or funds collected by the University may be used in a way that violates the alcohol policy. In student residences, house funds (funds collected by Student Financial Services or other University offices) may not be used to buy alcohol. Any decision to use student-collected funds to buy alcohol must be made lawfully, thoughtfully, fairly and in a way that respects the views of all students. Students must not be required to contribute to the purchase of alcohol.
- **Dining Hall**—Students may not possess or consume alcoholic beverages in Stanford Dining Halls during meal times and food service. University Dining staff can deny admission, access or meal service to anyone who is believed to be intoxicated by the Dining Management staff.
- **White Plaza**—Alcoholic beverages in White Plaza are prohibited.
- **End of Quarter Period and Finals Week**—No registered parties (with or without alcohol) can occur during the End of the Quarter Period (dead week) or Finals Week.
- **Athletic Facilities**—No alcohol is permitted inside Stanford athletic facilities public spaces during athletic events.
- **Stanford Conferences and University Facilities**—The University requires that event sponsors and student groups wishing to offer alcoholic beverages at their programs and events operate within state and local laws as provided by the Department of Alcohol and Beverage Control (ABC). Alcohol service is not allowed in classrooms.
- **Admit Weekend**—Stanford students are prohibited from providing, serving or in anyway making alcohol available to any prospective frosh (ProFro). All student groups/organizations and residences may host only alcohol-free parties or events during Admit Weekend. This specifically means that no alcohol is to be present, served or consumed at any student group/organization and/or dorm function during Admit Weekend.
- **New Student Orientation (NSO) Period**—At no time should any Stanford student provide, serve or in any way make alcohol available to any new, incoming undergraduate student (freshman or transfer). All undergraduate student groups/organizations and residences will host only alcohol-free parties or events during Orientation. This specifically means that no alcohol is to be present, served, or consumed at any student group/organization and/or dorm function during NSO.

California State Laws

Students should be familiar with California laws governing the consumption of alcohol. The following summarizes those laws most relevant to individuals.

- It is illegal for persons under the age of 21 to possess an alcoholic beverage in any public place or any place open to the public (CA Business and Professions Code 25662).
- Any person who furnishes, gives or sells any alcoholic beverage to someone under the age of 21 is guilty of a misdemeanor (CA Business and Professions Code 25658(a)).
- Any person under the age of 21 who attempts to purchase an alcoholic beverage is guilty of an infraction (CA Business and Professions Code 25658.5).
- Any person under the influence of alcohol in a public place and unable to exercise care for one's own safety or that of others is guilty of a misdemeanor (CA Penal Code 647(f)).
- It is illegal for persons to operate a motor vehicle while under the influence of alcohol or other intoxicants or with a blood alcohol level of .08% or higher (CA Vehicle Code Section 23152). NOTE: A golf cart is a motor vehicle.
- It is unlawful for a person under the age of 21 years who has 0.05 percent or more, by weight, of alcohol in his or her blood to drive a vehicle (CA Vehicle Code Section 23140(a)).
- It is illegal for a person under the age of 21 to drive a vehicle when he or she has a blood alcohol concentration (BAC) of .01% or higher (CA Vehicle Code Section 23136).
- It is a misdemeanor to ride a bicycle under the influence of alcohol, drugs or both (CA Vehicle Code Section 21200.5).
- It is an infraction to possess an open container of an alcoholic beverage while in a motor vehicle (CA Vehicle Code Section 23223).
- It is an infraction for an owner or driver of a motor vehicle to allow an open container of alcohol in the passenger area (CA Vehicle Code Section 23225).

Hazing Policy

Hazing is not permitted at Stanford University. No individual, recognized student organization, club, team, or any other Stanford-affiliated student group is permitted to plan, engage in, or condone hazing, on or off the Stanford campus.

Definition of Hazing at Stanford University

Hazing includes any activity done in connection with a student organization, regardless of whether the organization is officially recognized at Stanford, that causes or is reasonably likely to cause another student to suffer bodily danger, physical harm, or significant personal degradation or humiliation, even if no bodily danger, physical harm, or significant degradation or humiliation in fact results. Hazing might occur during initiation or pre-initiation into a student organization, but is not limited to these time frames. Any individual who plans or intentionally assists in hazing activity has engaged in hazing, regardless of whether that individual is present when the hazing activity occurs.

Consequences of a Violation

Stanford University expects its students to conduct themselves in socially responsible and respectful ways. Thus, participation in hazing, either as an

individual or as part of any student group, may result in serious individual and organizational consequences including, but not limited to: disciplinary action up to and including expulsion; permanent loss of organizational recognition; and loss of eligibility to remain a member of any club, team, or other Stanford-affiliated student group. Consent, implied or expressed, is not a defense to any complaint or charge alleging a hazing violation.

A number of University offices may take institutional action, including: the Organizational Conduct Board; Judicial Affairs; or other University offices, such as the Vice Provost for Student Affairs or the Department of Athletics.

Applications

Stanford's hazing policy is distinct from and broader than California Penal Code section 245.6, which prohibits: "any method of initiation or preinitiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university or other educational institution in this state." A violation of Penal Code Section 245.6 that does not result in serious bodily injury is punishable as a misdemeanor, while a violation that results in death or injury is punishable as a felony or a misdemeanor.

Nothing in this hazing policy prevents Stanford from taking institutional action against hazing activity that falls outside the narrower definition of Penal Code section 245.6.

Stanford's hazing policy is not intended to prohibit student recruitment or new or continuing member activities that are positive and educational in nature, designed to instill a group ethos or unity. Its intent is to deter those behaviors that cause or are likely to cause danger, harm or humiliation to another student.

Stanford's hazing policy is not intended to apply to customary athletic events or other similar institutionally-approved contests or competitions.

Questions should be directed to the Office of Student Activities, (650) 723-2733.

Smoke-Free Environment

The University's policy on a smoke-free environment is published in its complete form in the Administrative Guide Memo 2.2.6 Smoke-Free Environment (<https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-6>).

Applicability—This policy applies to all academic and administrative units of Stanford University, including the SLAC National Accelerator Laboratory, and all campus student housing. This policy does not supersede more restrictive policies which may be in force in compliance with federal, state, or local laws or ordinances.

Note also that the School of Medicine has adopted a more restrictive policy; see the Tobacco-free Campus Policy (<http://med.stanford.edu/tobaccofree/>).

Policy

The following is quoted from the policy:

1. Policy

It is the policy of Stanford University that the smoking of tobacco products in enclosed buildings and facilities and during indoor or outdoor events (and the selling of tobacco products) on the campus is prohibited.

2. Guidelines

- a. **Smoking-Prohibited Areas**—Specifically, smoking is prohibited in classrooms and offices, all enclosed buildings and facilities, in covered walkways, in University vehicles, during indoor and

outdoor athletic events, and during other University sponsored or designated indoor or outdoor events.

- i Ashtrays will not be provided in any enclosed University building or facility.

- ii "Smoking Prohibited" signs will be posted.

- b. **Outdoor Smoking Areas**—Smoking is permitted in outdoor areas, except during organized events. Outdoor smoking areas should be located far enough away from doorways, open windows, covered walkways, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. To accommodate faculty, staff, and students who smoke, Vice Presidents, Vice Provosts, and Deans may designate certain areas of existing courtyards and patios as smoking areas in which case ashtrays must be provided. Costs associated with providing designated smoking areas and ashtrays will be absorbed by the specific academic or administrative unit(s).

3. **Enforcement**—This policy relies on the consideration and cooperation of smokers and non-smokers. It is the responsibility of all members of the University community to observe and follow this policy and its guidelines.

- a. **Smoking Cessation Information**—Smoking cessation programs are available for faculty and staff through the Center for Research in Disease Prevention, and the Health Improvement Program (HIP). Students may contact the Health Promotion Program (HPP) through the Student Health Center for smoking cessation information or programs.

- b. **Repeated Violations**—Faculty, staff, and students repeatedly violating this policy may be subject to appropriate action to correct any violation(s) and prevent future occurrences.

4. **Implementation and Distribution**—Copies of this policy will be disseminated by the Manager of HR Policy/Staff and Labor Relations and the Vice Provost for Student Affairs to all faculty, staff, and students, and to all new members of the University community.

Visitor Policy/University Statement on Privacy

Stanford University has an interest in ensuring that the privacy of its students, faculty, and staff is respected, and that no activities interfere with education, research, or residential life.

The University is private property; however, some areas of the campus typically are open to visitors. These areas include White Plaza, public eating areas (such as those at Tresidder Union), outdoor touring areas, and locations to which the public has been invited by advertised notice (such as for public educational, cultural, or athletic events). Even in these locations, visitors must not interfere with the privacy of students, faculty, and staff, or with educational, research, and residential activities. The University may revoke at any time permission to be present in these, or any other areas. Visitors should not be in academic or residential areas unless they have been invited for appropriate business or social purposes by the responsible faculty member, student, or staff member.

No commercial activity, including taking photos or similar audio or visual recordings that are sold to others or otherwise used for commercial purposes, may occur on the campus without the University's permission. Requests for permission should be submitted to the Director of University Communications or, as appropriate, the Dean of Students, the Department of Athletics, or the Office of Public Events. Recognized student groups and official units of the University will be granted such permission so long as they do not violate privacy or property interests of others; so long as any sale of their products is predominantly on campus to students, faculty, and

staff; and so long as they comply with applicable University policies and procedures.

Violators of this policy may be subject to criminal and/or civil liability, as well as University disciplinary action.

Computer and Network Usage

For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 6.2.1 Computer and Network Usage Policy (<https://adminguide.stanford.edu/chapter-6/subchapter-2/policy-6-2-1>).

Policy

The following is quoted from the policy:

Users of Stanford network and computer resources have a responsibility not to abuse the network and resources. This policy provides guidelines for the appropriate and inappropriate use of information technologies.

Summary

The following summarizes the policy on Computer and Network Usage:

In particular, the policy provides that users of University information resources must respect software copyrights and licenses, respect the integrity of computer-based information resources, refrain from seeking to gain or permitting others to gain unauthorized access, including by sharing passwords, and respect the rights of other computer users.

This policy covers appropriate use of computers, networks, and information contained therein. As to political, personal and commercial use, the University is a non-profit, tax-exempt organization and, as such, is subject to specific federal, state, and local laws regarding sources of income, political activities, use of property, and similar matters. It also is a contractor with government and other entities, and thus must assure proper use of property under its control and allocation of overhead and similar costs. For these reasons, University information resources must not be used for partisan political activities where prohibited by federal, state, or other applicable laws, and may be used for other political activities only when in compliance with federal, state, and other laws, and in compliance with applicable University policies. Similarly, University information resources should not be used for personal activities not related to appropriate University functions, except in a purely incidental manner. In addition, University information resources should not be used for commercial purposes, except in a purely incidental manner or except as permitted under other written policies of the University or with the written approval of a University officer having the authority to give such approval. Any such commercial use should be properly related to University activities, take into account proper cost allocations for government and other overhead determinations, and provide for appropriate reimbursement to the University for taxes and other costs the University may incur by reason of the commercial use. Users also are reminded that the .edu domain on the Internet has rules restricting or prohibiting commercial use, and thus activities not appropriately within the .edu domain and which otherwise are permissible within the University computing resources should use one or more other domains, as appropriate.

The University's Information Security Officer is authorized in appropriate circumstances to inspect or monitor private data (including email), such as when there is a reasonable cause to suspect improper use of computer or network resources.

For further information on the topic of peer-to-peer file sharing, see the section above on Copyright.

Stanford University Online Accessibility Policy

Stanford University will make Stanford Websites and web-based applications accessible to its students, faculty, staff and participants in the University's programs and activities who have disabilities. All personnel who are involved in the procurement, preparation and maintenance of University Websites and web-based applications should adopt this goal, with the assistance of campus resources dedicated to supporting web accessibility. Stanford Websites and web-based applications must either conform to WCAG 2.0 Level AA or their content and functionality be made available to Users on request (such as by a student request to the Office of Accessible Education) in an equally effective and accessible alternative manner.

Applicability

This policy applies to all Stanford academic and administrative units that create and maintain Websites and web-based applications used in the programs and activities of the University.

Definitions

Stanford Website: Any website or web-based application within the Stanford University (stanford.edu) domain used in the programs or activities of the University.

Users: Stanford Website users are defined as current Stanford students and applicants for admission, Stanford staff and faculty, and participants in the University's programs and activities.

Accessible: Refers to the concept that people with disabilities are able to independently and timely access and use a product or system, including with the benefit of assistive technologies. Assistive technologies include adaptive hardware and/or software and other devices that are used to increase, maintain, or improve the functional capabilities of individuals with disabilities.

Stanford Online Accessibility Program ("SOAP") Office: The SOAP Office (soap.stanford.edu) provides resources and services for Stanford web designers, developers and content creators to assist them in producing accessible materials. Services include Website accessibility testing and guidance regarding universal design and web standards compliance. The SOAP Office is also the campus resource designated to facilitate online accessibility for Users. To report and seek assistance on web accessibility issues, Users may contact the SOAP Office by email at web-accessibility@stanford.edu or submit a HelpSU ticket through the SOAP Office website (<http://soap.stanford.edu>).

Office of Accessible Education ("OAE"): OAE (<http://exploreddegrees.stanford.edu/nonacademicregulations/>(<http://oae.stanford.edu>) is the campus office designated to work with Stanford students with disabilities. OAE provides support services, accommodations, and programs to remove barriers to full participation of students with disabilities in the programs or activities of the University.

Diversity and Access Office ("D&A"): D&A (<http://diversityandaccess.stanford.edu>) oversees compliance with state and federal anti-discrimination laws including the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. D&A provides disability-related access information, and assists faculty, staff and other non-student participants in University programs and activities with disabilities who may need accommodations and/or auxiliary aids to obtain equal access to Stanford facilities, programs and activities. D&A also oversees the ADA/Section 504 Grievance Procedure for students who believe they have been subjected to unlawful discrimination based

on a disability or denied access to services or accommodations which the ADA and/or Section 504 require Stanford to provide. Information about the ADA/Section 504 Grievance Procedure is located at in this bulletin (<http://exploreddegrees.stanford.edu/nonacademicregulations/nonacademicregulations/#text-amerwithdisaactsgrieprocstud>).

Accessibility Standard

Stanford University has adopted the Worldwide Web Consortium Web Content Accessibility Guidelines version 2.0, Level AA Conformance (WCAG 2.0 Level AA) as its goal for accessible Stanford Websites. The guidelines and success criteria of WCAG 2.0 Level AA are organized around the following four principles which lay the foundation for Users with disabilities to access and use web content. For a Stanford Website to be accessible under these principles, its content must be:

Perceivable – Information and user interface components must be presentable to Users in ways they can perceive.

Operable – User interface components and navigation must be operable.

Understandable – Information and the operation of user interface must be understandable.

Robust – Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies.

Implementation Guidelines

1. All personnel responsible for existing Stanford Websites must use good faith efforts, subject to the requirements and exceptions of the applicable laws, to bring those Websites into conformance with WCAG Level 2.0 AA.
2. New Stanford Website development and purchases, including development and purchases for major revisions and updates of existing Stanford Websites, should conform to WCAG 2.0 Level AA.
3. Vendors seeking to develop or provide Websites or web-based applications for Stanford will be required to ensure that their products satisfy WCAG 2.0 Level AA Success Criteria, unless undue burden or fundamental alteration can be demonstrated (see below). Preferred standards for demonstrating satisfaction of WCAG 2.0 Level AA Success Criteria, and accessibility language for Stanford Website vendor contracts, as well as for other types of Electronic Information Technology vendor contracts, may be obtained from University Procurement (Purchasing and Payment Services) or from the SOAP Office.
4. Each Stanford Website should contain "Accessibility" contact information for the site's webmaster and/or the SOAP Office. The contact information may take a variety of forms, such as an email address, a link to a HelpSU page, or a contact form on the site. The recommended location for this information is the Website's "Contact" or "About Us" page.
5. The SOAP Office will continue to test Stanford Websites for accessibility and report accessibility issues to the webmaster.
6. OAE will continue to seek input from Stanford students regarding accessibility issues.
7. Conformance to WCAG 2.0 Level AA guidelines may be an undue burden due to the nature of the content, the purpose of the resource, the lack of accessible solutions, or an unreasonably high administrative or financial cost necessary to make the resource meet that goal. However, these difficulties do not relieve University programs or activities from meeting applicable legal obligations to provide reasonable accommodations to Users in regard to access to the content and services provided on Stanford Websites. Managers of University programs and activities must be prepared to provide content and/or services in a suitable alternative format (e.g., electronic text file or audio description) or manner upon request (such as by a student to the OAE).

Implementation Assistance

Guidelines and best practices are available from the SOAP Office (<http://soap.stanford.edu>). In addition, on-campus assistance is available for designing and implementing Websites that meet accessibility guidelines and for evaluating the accessibility of existing sites and those under development. If such assistance is needed, please visit soap.stanford.edu or email the SOAP Office at web-accessibility@stanford.edu.

Responding to Accessibility Issues

Recognizing the ongoing evolution of current web content and technologies, the webmaster, upon being made aware of an accessibility issue, should proceed as follows:

- Acknowledge receipt of the issue in writing (via email) to the User raising the issue, with a copy to the SOAP Office.
- Open an accessibility case for recording the issue and resulting action taken.
- Verify that the issue is an authentic accessibility issue.
- Treat all issues as important. Address any time-sensitive need of the User promptly (generally within a period of no greater than two business days), unless technology or work involved requires more effort, in which case the User will be promptly notified in writing of expected delivery.

Upon receiving a report of an accessibility issue, the SOAP Office shall notify the webmaster, as well as OAE (for reports from students) or D&A (for reports from non-students.) If the SOAP Office, in consultation with the webmaster, determines that the information or service provided on the Stanford Website cannot be made accessible, or that doing so would constitute an undue burden or fundamental alteration, OAE or D&A will engage in an interactive process with the User about alternative methods for providing the information or service and will provide an equally effective alternative format or service. In the event that an alternative format or service cannot be provided or the user is not satisfied with the results, he or she may contact the ADA/Section 504 Compliance Officer at D&A by telephone at (650) 723-0755 or by email at equalopportunity@stanford.edu for assistance in resolving the issue.

For questions about the policy, please contact the SOAP Office (<http://soap.stanford.edu>).

Protection of Sensitive Data

Stanford University maintains sensitive non-public data protected by laws and agreements, including Social Security numbers, financial information, health information, and student records. It is incumbent on every member of the Stanford community with access to such data to be familiar with and abide by Stanford's data classifications requirements provided at the Data Classification, Access, Transmittal and Storage (http://www.stanford.edu/group/security/securecomputing/dataclass_chart.html) web site. Members of the Stanford community should also familiarize themselves with applicable laws and University policies on privacy as provided by the University, including Administrative Guide Memos 6.3.1 Information Security (<https://adminguide.stanford.edu/chapter-6/subchapter-3/policy-6-3-1>), 6.4.1 Identification and Authentication Systems (<https://adminguide.stanford.edu/chapter-6/subchapter-4/policy-6-4-1>), 6.6.1 Information Security Incident Response (<https://adminguide.stanford.edu/chapter-6/subchapter-6/policy-6-6-1>), and 3.4.2 Card and Payment Account Acceptance and Processing (<https://adminguide.stanford.edu/chapter-3/subchapter-4/policy-3-4-2>). For information on best practices for securing mobile computing devices, see the Guidelines for Securing Mobile Computing Devices (http://www.stanford.edu/group/security/securecomputing/mobile_devices.html) web site.

Campus Safety and Criminal Statistics

Stanford University complies with the Jeanne Clery Disclosure of Campus Security Policy and Crime Statistics Act. A copy of Stanford's policies and statistics under this act are posted on the Department of Public Safety (<http://stanford.edu/group/SUDPS/safety-report.shtml>) web site. A paper copy can be obtained by calling the Stanford Department of Public Safety at (650) 723-9633.

Undergraduate Education (VPUE)

Established in 1995, the Office of the Vice Provost for Undergraduate Education (VPUE) comprises the Bing Overseas Studies Program, the Center for Teaching and Learning, Stanford Introductory Studies, and Undergraduate Advising and Research. VPUE fosters innovation, integration, and pedagogical advancement of the Stanford undergraduate journey. Working with our partners, we prepare Stanford students to be engaged citizens with the creative confidence to tackle the world's most complex challenges.

VPUE programs for first- and second-year students include New Student Orientation/Approaching Stanford, the Leland Scholars Program, Thinking Matters, Program in Writing and Rhetoric, Introductory Seminars, and Sophomore College. Programs for more advanced students include the Bing Overseas Studies Program, Writing in the Major, Undergraduate Research, Arts Intensive, Leadership Intensive, and Bing Honors College. Undergraduate Advising, the Center for Teaching and Learning, and the Hume Center for Writing and Speaking serve undergraduates throughout their time at Stanford. The office of the VPUE works closely with the office of the Vice Provost for Student Affairs and the Admissions Office. The Vice Provost for Undergraduate Education reports to the Provost.

Policies governing undergraduate education are formulated by Faculty Senate committees and voted into legislation by the Faculty Senate. The Committee on Undergraduate Standards and Policy (C-USP) addresses such topics as general education requirements, grading, awards, advising, and teaching evaluation. The Committee on Review of Undergraduate Majors (C-RUM) oversees the initiation and review of undergraduate degree programs. Committee members include the Vice Provost for Undergraduate Education or his delegated staff (ex-officio) and representatives from the faculty at large, administration (such as the Office of the University Registrar), and students. The Associated Students of Stanford University (ASSU) nominations committee selects student members. The VPUE also maintains, by rule of the Faculty Senate, the Thinking Matters Governance Board, the Writing and Rhetoric Governance Board, and the Breadth Governance Board to oversee these university degree requirements. Finally, the Undergraduate Advisory Council (UGAC) was established by the provost in 1996 to serve as the main faculty advisory body for the Vice Provost for Undergraduate Education.

Freeman-Thornton Vice Provost for Undergraduate Education: Harry J. Elam, Jr.

Olive H. Palmer Professor in the Humanities

Senior Associate Vice Provost for Undergraduate Education: Liz Hadly
Professor of Biology

Associate Vice Provost for Undergraduate Education: Sharon Palmer

Associate Vice Provost for Finance and Administration: Charles Litchfield

Stanford Introductory Studies

Stanford Introductory Studies

Program Directors: Marvin Diogenes, Ellen Woods

Offices: Sweet Hall

Email: stanfordintrostudies@stanford.edu

Web Site: <https://undergrad.stanford.edu/programs>

Stanford Introductory Studies (SIS) offers courses taught by faculty from across the seven Schools of the University and by SIS Lecturers. Some of these courses satisfy University Requirements (THINK, WAYS, and the Writing and Rhetoric Requirement) while others are electives especially designed for first- and second-year students including Introductory Seminars. Special residential programs such as Structured Liberal Education, Science in the Making (SIMILE), Immersion in the Arts—Living in Culture (ITALIC), and September Studies (Leland Scholars, Sophomore College, Leadership Intensive, Arts Intensive, and Bing Honors College) expand SIS curricular opportunities for students. The Hume Center for Writing and Speaking, which manages writing and oral communication services such as tutorials and workshops for all students, is also part of SIS.

Thinking Matters

Faculty Director: Russell A. Berman, Comparative Literature and German Studies

Director, Stanford Introductory Studies for Thinking Matters : Ellen Woods

Associate Director: Parna Sengupta

Affiliated Faculty: Steven Block (Applied Physics), James Campbell (History), Shelley Correll (Sociology), Cari Costanzo (Anthropology), Adrian Daub (German Studies), Jenna Davis (Civil and Environmental Engineering), Russ Fernald (Biology), Shelley Fisher Fishkin (English), Peter Graham (Physics), Allyson Hobbs (History), Susan Holmes (Statistics), Adam Johnson (English), Michelle Karnes (English), Jeffrey Koseff (Civil and Environmental Engineering), William Koski (School of Law), Joseph Lipsick (School of Medicine), Tanya Luhrmann (Anthropology), David Lummus (French and Italian), David Magnus (School of Medicine), Pamela Matson (Dean of the School of Earth Sciences), Peter Michelson (Physics), Josiah Ober (Political Science), Vijay Pande (Chemistry), Rob Reich (Political Science), Eric Roberts (Computer Science), Thomas Ryckman (Philosophy), Gabriella Safran (Slavic Languages), Scott Sagan (Political Science), Jan Skotheim (Biology), Kathryn Starkey (German Studies), Abraham Verghese (School of Medicine), Blakey Vermeule (English), Allen Weiner (School of Law), Amir Weiner (History), Tobias Wolff (English), Lee Yearley (Religious Studies)

Lecturers: Ayca Alemdaroglu, Jelena Batinic, Kassahun Betre, Noelle Boucquey, Rahul Chaudhri, Anna Corwin, Brian Coyne, Andrew Dosmann, Kjerstin Gruys, Jamie Conklin Imam, Sarah Ives, Raymond Kania, Hania Köver, Karola Kreitmair, Andy Lyons, Nicole Martinez, Kara McCormack, Pete Mohanty, Kate Leila Norako, Nate Olson, Melinda Owens, Michael Park, Sarah Perkins, Simon Rubenstein-Salzedo, Stephen Speiss, Bronwen Tate, Stacey Wirt Taylor, Ruth Tennen, Matthew Walker, Adam Zientek, Ian Zuckerman

Offices: Sweet Hall, Second Floor

Mail code: 3068

Phone: (650) 723-0944

Email: thinkingmatters@stanford.edu

Web Site: <https://undergrad.stanford.edu/programs/thinking-matters>

Thinking Matters courses are listed under the subject code THINK on the Stanford Bulletin's ExploreCourses web site (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20132014&filter-coursestatus=Active=on&collapse=&filter-catalognumber=THINK=on>).

Thinking Matters offers courses that satisfy the one-quarter Freshman Requirement. Taught by faculty from a wide range of disciplines and fields, the *Thinking Matters* (THINK) requirement helps you develop the ability to ask rigorous and genuine questions that can lead to scientific experimentation or literary interpretation or social policy analysis. Through the study of these questions and problems, you will develop critical skills in

interpretation, reasoning, and analysis as well as enhance your capacities for writing and discussion. The THINK requirement may be satisfied in three ways:

1. Thinking Matters courses:
 - a one quarter, 4-unit course taught by Academic Council faculty.
2. Education as Self-Fashioning courses: ESF
 - a one quarter, 7-unit course that satisfies both the Thinking Matters Requirement and the first-year Writing Requirement. For information on the program, faculty, and instructors, see the "ESF" section of this bulletin.
3. Integrated Learning Environments: ITALIC, SIMILE, and SLE
 - a three quarter, residence-based learning experience, which satisfies the THINK requirement, two of the University Writing and Rhetoric requirements and selected General Education Requirements. For information regarding the three residence-based programs, faculty, and instructors, see the "ILE" section of this bulletin.

Thinking Matters Courses Offered in 2014-15

- All Thinking Matters Courses Offered in 2014-15 (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20142015&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-THINK=on&filter-catalognumber-THINK=on>)
- Autumn Quarter (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20142015&filter-term-Autumn=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-THINK=on>) (click link to see Autumn course offerings)
- Winter Quarter (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20142015&filter-term-Winter=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-THINK=on&filter-catalognumber-THINK=on>) (click link to see Winter course offerings)
- Spring Quarter (<https://explorecourses.stanford.edu/search?q=THINK&view=catalog&page=0&academicYear=20142015&filter-term-Spring=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-THINK=on&filter-catalognumber-THINK=on>) (click link to see Spring course offerings)

Program in Writing and Rhetoric (PWR)

Acting Director: Marvin Diogenes

Director, Stanford Introductory Studies for PWR: Marvin Diogenes

Associate Director: Christine Alfano

Director, Hume Center for Writing & Speaking: Julia Bleakney

Director, Oral Communication Program: Doree Allen

Director, Stanford Storytelling Project: Jonah Willihnganz

Lecturers: Christine Alfano, Paul Bator, Shaleen Brawn, Russ Carpenter, Erica Cirillo-McCarthy, Kevin DiPirro, Erik Ellis, Thomas Freeland (Oral Comm), Chris Gerben, Wendy Goldberg, Arturo Heredia, Donna Hunter, Chris Kamrath, John Lee, Sohui Lee, Clara Lewis, Katie McDonough (SIMILE), Hillary Miller (ITALIC), Kimberly Moekle, Gabrielle Moyer, Alyssa O'Brien, John Peterson, Sarah Pittock, Emily Polk, Alya Raphael (Oral Comm), Carolyn Ross, Kim Savelson, Susan Schuyler, Zachary Sifuentes, Ruth Starkman, Jennifer Stonaker, Mary Stroud, Kathleen Tarr, Ann Watters, Cassie Wright

Fellows: Jodie Archer, Karli Cerankowski, Jesse Davie-Kessler, Magdalena Gross, Sarah Ives (Aut, Win), Kiersten Jakobsen, Hanna Janiszewska, Raechel Lee, Lindsey Mantoan, Luke Parker, Ethan Plaut, Trisha Stan, Robert Stephan, Eric Vanden Bussche

Teaching Affiliates: Vanessa Chang, Allen Frost, Daniel Murray (Win), Irena Yamboliev

Offices: Sweet Hall, Third Floor
Mail Code: 94305-3069

Web Site: <http://pwr.stanford.edu>

Courses offered by the Program in Writing and Rhetoric are listed under the subject code PWR on the Stanford Bulletin's ExploreCourses web site. Courses offered by the Oral Communication Program within PWR are listed under the subject code ORALCOMM on the Stanford Bulletin's ExploreCourses web site. Please see below for more information about the Oral Communication Program.

The Program in Writing and Rhetoric (PWR) designs and teaches courses that meet the Writing and Rhetoric requirement for undergraduates at Stanford as well as intermediate and advanced writing and rhetoric classes. For more information on the requirement, see the "Writing and Rhetoric Requirement" page on the PWR website.

PWR courses engage students in rhetorical analysis of texts and research-based argument. Students in PWR courses learn and practice time-tested rhetorical principles to gain increasing control over the intellectual and stylistic elements of their writing; they learn to analyze the persuasive strategies of others and to apply those insights to their own writing.

Toward these ends, PWR 1 focuses on elements of academic argument: understanding a writer's stance; developing an argumentative thesis; discovering, developing, and deploying cogent proofs; making appropriate organizational and stylistic choices; and understanding the expectations of varied audiences. The course emphasizes research-based writing, including the effective use of primary and secondary sources and data based on fieldwork. Students enrolled in PWR 1 carry out significant research and use it as the basis for a persuasive research-based argument.

PWR 2 further develops students' skills in writing and oral presentation of research, emphasizing the ongoing development of content, organization, and style. The course addresses the dynamic interdependence of writing and speaking, as well as the importance of visual and multimedia elements in the effective presentation of research. Students enrolled in PWR 2 have opportunities to draft and revise written assignments and oral presentations as well as opportunities to present the results of scholarly inquiry, with an emphasis on how to work purposefully and well with a variety of presentation media.

As a general rule, students complete a minimum of three major assignments in both PWR 1 and 2. Written assignments vary from 5 to 15 pages in length, and students work intensively on revising each piece of writing. All assignments involve analyzing a range of texts as well as identifying, evaluating, and using multiple sources in support of research-based arguments. In-class work focuses on how to read with an increasingly critical eye, how to utilize a range of generative writing and revision activities, and how to identify, evaluate, integrate, and cite sources effectively.

Writing and Rhetoric classes enroll no more than 15 students, and all classes are conducted as seminars in which participation is crucial. In-class activities include close reading of and responding to the writing of peers; these workshops are augmented by a minimum of three individual or small group conferences with the PWR instructor during the quarter.

Courses

The Writing and Rhetoric requirement includes courses at three levels.

1. The first-level course, taken in the first year, can be satisfied by courses in PWR, Structured Liberal Education, or Integrated Learning Environments (SIMILE and ITALIC) or by completion of the Education as Self-Fashioning course; the curriculum emphasizes analysis and research-based argument.
2. The second-level course, to be completed by the end of the sophomore year, is a writing and oral/multimedia presentation course taught by the Program in Writing and Rhetoric and by other programs and departments (completion of Structured Liberal Education fulfills this requirement); courses taught outside of PWR may include experience in visual, oral, and/or multimodal communication.
3. The third-level course is a Writing in the Major (WIM) course taught in each major, providing students with systematic opportunities to develop skills for writing in their chosen fields. A list of certified WIM courses may be found in the table of "Undergraduate Major Unit Requirements (p. 36)" of this bulletin. WIM course descriptions may be found under individual department and program sections.

The sequence of required courses provides a coordinated approach responsive to how students mature as writers, researchers, and presenters during their undergraduate years. At each level, students develop greater sophistication in conducting inquiry and producing scholarly work in progressively more specific disciplinary contexts.

Before the term in which students enroll in the first two levels of the requirement, they review course descriptions on the PWR Courses webpage. After reviewing the offerings, students submit a list of top choices, and the PWR office assigns students to courses based on these preferences.

Students wishing to pursue advanced work in Writing and Rhetoric may enroll in electives offered by PWR. Topics vary; further information may be found in the PWR section of the Stanford Bulletin's ExploreCourses web site or on the PWR advanced courses web page. PWR also offers courses culminating in a Notation in Science Communication. For more information, visit the webpage.

Writing and Rhetoric 2 Requirement

The Writing and Rhetoric 2 requirement may be satisfied through completion of PWR 2 courses or by other programs and departments; all courses outside of PWR must be certified by the Writing and Rhetoric Governance Board. In addition to PWR 2, some Introductory Seminars certified by the Writing and Rhetoric Governance Board satisfy the second-level Writing and Rhetoric requirement (Write-2). Courses offered as Introductory Seminars require an additional application form; see the Introductory Seminars web site.

Hume Center for Writing and Speaking

Location: Building 250

Mail Code: 2085

Phone: (650) 723-0045

Email: writingcenter@stanford.edu (for writing);

speakinghelp@stanford.edu (for speaking)

Web Site: <http://hume.stanford.edu>

The Hume Center for Writing and Speaking (Hume) works with all Stanford writers to help them develop rich and varied abilities in every aspect of writing and oral communication. In one-to-one sessions, Hume writing consultants help students get started on assignments; address and overcome writer's block or performance anxiety; learn strategies for revising and editing; and understand academic conventions in their fields. Hume emphasizes support for students' writing, oral presentations, and multimedia compositions for PWR, Thinking Matters, and Introductory Seminars while also serving all Stanford undergraduates through individual

and group tutorials, workshops, and seminars. The Hume Center also works with students in Writing in the Major (WIM) courses and students writing Honors theses. Other events hosted by the Center include performances for Parents Weekend and Admit Weekend. For further details, see the Hume Center for Writing and Speaking web site.

Oral Communication Program

The Oral Communication Program provides opportunities for undergraduates and graduate students to develop or improve their oral communication skills. Courses and workshops offer a comprehensive approach to speech communication, including training in the fundamental principles of public speaking and the effective delivery of oral presentations. The goal is to enhance students' general facility and confidence in oral expression. The program also provides innovative discipline-based instruction to help students refine their personal speaking styles in small groups and classroom settings.

Those interested in individualized instruction or independent study are invited to visit the Hume Center for Writing and Speaking, where trained student tutors, multimedia, and instructional resource materials are available on an ongoing basis.

Students with a passion for public speaking are encouraged to apply to become Oral Communication Tutors (OCTs); the application process takes place each January, and for those students chosen to serve as OCTs, we offer OralComm119, a required training practicum, in Spring Quarter.

To schedule appointments see the Hume Center for Writing and Speaking web site. For further details, call (650) 725-4149 or 725-7667 or email speakinghelp@stanford.edu.

Peer Writing Consultants

The Program in Writing and Rhetoric offers PWR 195 for undergraduates chosen to serve as peer writing consultants in the Hume Center for Writing and Speaking.

Advanced PWR Courses

Prerequisites: PWR 1 and PWR 2.

		Units
PWR 194	Topics in Writing and Rhetoric	4
PWR 194SB	Topics in Writing and Rhetoric: Rhetoric of Science	4
PWR 194KD	Topics in Writing and Rhetoric: Technology and Human Values	4
PWR 91	Intermediate Writing	3
PWR 91CL	Intermediate Writing: Creative Inquiry: New Genres for Science Writing	3
PWR 91CG	Intermediate Writing: Science and Technology Writing for Popular Audiences	3
PWR 91JS	Intermediate Writing: Stanford Science Podcast	3
PWR 91KS	Intermediate Writing: Design Thinking and Science Communication	3
PWR 5	Independent Writing	1-5
PWR 6	Writing Workshop	1-3

Integrated Learning Environments

By integrating the academic and residential experience, ILEs offer a comprehensive approach to liberal education across the entire year. One of the stated aims of residential education is to help students connect their curricular and residential lives, to create a culture in which ideas and inquiry are a part of the daily fabric of life. Listed below are the three ILE Programs.

Immersion in the Arts: Living in Culture

Director: Janice Ross (Theater and Performance Studies)

Assistant Director: Kim Beil

Faculty: Jonathan Berger (Music), Scott Bukatman (Art and Art History), Janice Ross (Theater and Performance Studies)

Lecturer: Ben Lempert

Program in Writing and Rhetoric Lecturer: Hillary Miller

Offices: Sweet Hall, Second Floor, and Stern Hall

Mail Code: 94305-7000

Phone: (650) 723-0944

Email: TBD

Web Site: <https://undergrad.stanford.edu/programs/residential-programs/italic/overview>

ITALIC is a new residence-based program built around a series of big questions about the purposes of art and its unique capacities for intellectual creativity. It fosters close exchanges along faculty, students and guest artists in class, over meals and during excursions to arts events. This year-long program fosters close exchanges among faculty, students and guest artists and scholars in class, over meals and during excursions to arts events. We trace the challenges that works of art have presented to categories of knowledge – history, politics, culture, science, medicine, law – by turning reality upside-down or inside-out, or just by altering one’s perspective on the world. The arts become a model for engaging with problem-solving: uncertainty and ambiguity confront art makers and viewers all the time; artworks are experiments that work by different sets of rules. Students will begin to understand and use the arts to create new frameworks for exploring our (and others’) experience.

All lectures, sections, arts workshops and guest talks and student “arts lab” work will happen in a cluster of on-site seminar and practice rooms dedicated to ITALIC. Through a series of close readings and analyses of canonical works of theatre, film, dance, music and visual and arts as well as graphic novels, comics, magic shows and popular culture, freshmen will live and learn together in Burbank Hall.

ITALIC satisfies the Thinking Matters requirement, PWR1, and between two and four Ways breadth requirements. ITALIC is designed as a three quarter sequence, and students are expected to make a commitment for the entire year (4 units in two quarters; 8 in the quarter with intensive writing). ITALIC writing sections are scheduled in all three quarters.

ITALIC Courses Offered in 2014-15

ITALIC 91	Immersion in the Arts: Living in Culture	4
ITALIC 92	Immersion in the Arts: Living in Culture	4
ITALIC 93	Immersion in the Arts: Living in Culture	4
ITALIC 95W	Immersion in the Arts: Living in Culture, Writing Section	4

Science in the Making Integrated Learning Environment

Director: Paula Findlen (History)

Assistant Director: Kristen Haring

Faculty: Paula Findlen (History), Tom Mullaney (History), Reviel Netz (Classics), Robert Proctor (History), Jessica Riskin (History)

Lecturer: Marcelo Aranda

Program in Writing and Rhetoric Lecturer: Katie McDonough

Offices: Sweet Hall, Second Floor, and Stern Hall

Mail Code: 94305-7000

Phone: (650) 723-0944

Email: haring@stanford.edu

Web Site: <https://undergrad.stanford.edu/programs/residential-programs/science-making-integrated-learning-environment-simile>

SIMILE is a new residence-based program organized around the question of when something we might call “science” identifiably began, what it became, and what it might become. While we may believe that science,

technology and medicine represent some of the powerful tools we have for making a difference in the world, SIMILE challenges students to consider these as dynamic and changing fields of knowledge which must be understood in their historical, cultural and social contexts. Only then can we consider how new ideas, interpretations, technological artifacts and systems respond to societal needs within the limits of what is possible but also, importantly, in light of what might even become plausible.

Lectures and discussions take place in the dorm and are complemented by hands-on tutorials, field trips, and guest speakers as well as informal conversations among faculty and students. Each week offers students the opportunity to examine a rich and well-chosen case study mapped in time and space. We see how past societies identified important scientific and technical problems and developed the means to provide explanations and solutions.

SIMILE satisfies the Thinking Matters requirement, PWR1, and between two and four Ways breadth requirements. SIMILE is designed as a three quarter sequence, and students are expected to make a commitment for the entire year (4 units in two quarters; 8 in the quarter with intensive writing). SIMILE writing sections are scheduled in two quarters, with one writing section in Autumn and two in Winter.

SIMILE Courses in 2014-15

SIMILE 91	Science In the Making an Integrated Learning Environment	4
SIMILE 92	Science in the Making Integrated Learning Environment	4
SIMILE 93	Science in the Making Integrated Learning Environment	4
SIMILE 95W	Science In the Making an Integrated Learning Environment, Writing Section	4

Structured Liberal Education

Director: Joshua Landy (French and Italian)

Assistant Director: Greg Watkins

Lecturers: Michael Bogucki, Elizabeth Coggeshall, Lisa Hicks, Peter Mann, Jeremy Sabol, Greg Watkins

Offices: Sweet Hall, Second Floor, and Florence Moore Hall
Mail Code: 94305-8581
Phone: (650) 723-0944
Email: sle-program@stanford.edu
Web Site: <http://sle.stanford.edu>

The Program in Structured Liberal Education (SLE) is a year-long residence-based great works course that satisfies several requirements at once: Thinking Matters, Writing and Rhetoric (both PWR1 and PWR2), and four of the Ways requirements. The curriculum includes works of philosophy, literature, art, and music from the ancient world to the present. The program is interdisciplinary in approach; it emphasizes intellectual rigor and individualized contact between faculty and students.

SLE has two fundamental purposes: to develop a student's ability to ask effective questions of texts, teachers, the culture, and themselves; and to develop intellectual skills in critical reading, expository writing, logical reasoning, and group discussion. SLE encourages students to live a life of ideas in an atmosphere that stresses critical thinking and a tolerance for ambiguity. Neither the instructors nor the curriculum provides ready-made answers to the questions being dealt with; rather, SLE encourages a sense of intellectual challenge, student initiative, and originality.

The residence hall is the setting for lectures and small group discussions. SLE enhances the classroom experience with other educational activities, including a weekly film series, writing tutorials, occasional special events and field trips, and a student-produced play each quarter.

Freshmen interested in enrolling in SLE should indicate this preference for their Thinking Matters assignment. SLE is designed as a three quarter sequence, and students are expected to make a commitment for the entire year (8 units each quarter).

SLE Courses Offered in 2014-15

		Units
SLE 91	Structured Liberal Education	8
SLE 92	Structured Liberal Education	8
SLE 93	Structured Liberal Education	8
SLE 299	Structured Liberal Education Capstone Seminar	1

Education as Self-Fashioning

Director: Blair Hoxby (English)

Faculty: Robert Harrison (French and Italian), Blair Hoxby (English), Caroline Hoxby (Economics), Andrea Nightingale (Classics), Kathryn Starkey (German Studies), Kenneth Taylor (Philosophy)

Writing Instructor: Jean Abbott, Max Ashton, Artemis Brod, Allen Frost, Karola Kreitmair, Inga Pierson, Ava Shirazi, Grainne Watson

Offices: Sweet Hall, Second Floor

Mail Code: 94305-3068

Phone: (650) 723-0944

Email: thinkingmatters@stanford.edu

Web Site: <https://undergrad.stanford.edu/programs/education-self-fashioning-esf>

Education as Self-Fashioning (ESF) is a unique opportunity offered only in the autumn quarter, since its aim is to introduce entering students to a liberal education. The six courses provide you with an opportunity to work closely with a faculty member in a seminar-style setting while simultaneously completing your first-year writing requirement. In ESF, we consider writings about education by intellectuals working in various fields, with the aim of articulating different ways that education can be used to structure one's thinking, one's self, and ultimately one's life as a whole. You will grapple with this issue in dialogue with fellow students and faculty from across a wide range of disciplines — from the humanities and social sciences through the natural sciences and mathematics.

The ESF program satisfies both the Thinking Matters and the PWR1 requirement. ESF is a set of linked seminars related to the general theme expressed in the course title. Six seminars, each with a different focus, meet separately as discussion classes led by the faculty; all ESF students also come together for a plenum session or large lecture each week. Each seminar coordinates writing instruction with the course theme in specially designated writing sections.

The three components of ESF are described below. ESF counts as a 7-unit course.

1. A seminar with a faculty member that meets once per week for at least 75 minutes.
2. A section with a writing instructor that meets for sessions of 110 minutes twice per week.
3. A lecture series that will meet once-a-week featuring prominent intellectuals. These lectures are required for students enrolled in ESF.

ESF Courses Offered in Autumn 2014-15

- All ESF Courses Offered in 2014-15 (<https://explorecourses.stanford.edu/search?filter-term-Autumn=on&page=0&q=ESF&filter-coursestatus->

Introductory Seminars

Faculty Director: Russell Berman, Comparative Literature and German Studies

Director, Stanford Introductory Studies for Introductory Seminars: Ellen Woods

Associate Directors: Joyce Moser, Lee West

Faculty: Over 200 faculty from more than 60 departments in all Schools of the University teach an SIS Introductory Seminar.

Offices: Sweet Hall, 229B, Second Floor

Mail Code: 3069

Phone: (650) 724-2405

Email: introsems@stanford.edu

Web Site: <http://introsems.stanford.edu>

Introductory Seminars provide opportunities for first- and second-year students to work closely with their peers and faculty in a small group setting of up to 16 students per class. Together they engage in the study of topics of mutual interest related to the research and scholarship of the professor teaching the seminar. Introductory Seminars aim to intensify the intellectual experience of freshmen and sophomores by fostering faculty-student relationships in a spirit of mentorship. Seminars require little or no formal background and allow freshmen and sophomores to discover the joys of learning in a vast range of fields. Over 200 faculty from more than 60 departments take part in the program. The courses provide department credit toward graduation, and many count towards a major as well as fulfill Ways of Thinking Ways of Doing requirements (WAYS) and General Education Requirements (GERs), including the second level Writing and Rhetoric Requirement (Write 2). Students submit an essay(s) for each seminar (up to three per quarter), which faculty review and select their student participants.

For a list of Introductory Seminars offered in 2014-15, see the online catalog. For information about submitting an essay and for course updates, see the Introductory Seminars web site. Due dates for submitting an essay(s) for an Introductory Seminar are at 5 p.m. on:

- Autumn Quarter: September 2, 2014
- Winter Quarter: October 14, 2014
- Spring Quarter: January 27, 2015

September Studies

Director: Marvin Diogenes

September Studies at Stanford allows students to be on-campus for three weeks prior to the beginning of Autumn Quarter to work with faculty on a focused area of study or artistic practice. The programs facilitate mentoring relationships between faculty and students and create vibrant learning communities. Leland Scholars are incoming first-year students; Sophomore College participants have completed their first year and are rising sophomores; Leadership Intensive participants are rising juniors; Arts Intensive participants are rising sophomores, juniors, and seniors; and Bing Honors College participants are generally rising seniors.

Sophomore College

Offices: Sweet Hall, Third Floor

Mail code: 3069

Phone: (650) 724-4667

Email: sophcollege@stanford.edu

Web Site: <http://soco.stanford.edu>

Sophomore College (SoCo) offers rising sophomores who share a passion for an area of study an opportunity to meet daily in seminar-size classes with Stanford faculty for lecture and discussion; students may also work in labs, participate in community-based learning, go on field trips, and engage in a range of other activities that facilitate in-depth mentoring relationships. Held before the start of students' sophomore year, this residential program encourages academic and social connections and transforms classes into intellectual communities, helping participants establish rich relationships with peers and faculty that extend beyond graduation. Seminars are for 2 credits; the Sophomore College program fee covers tuition, room, board, books, and class-required travel arranged by the program. Financial Aid is available. You can view the on-line catalog and learn more about SoCo at the Sophomore College (<https://undergrad.stanford.edu/programs/sophomore-college>) web site.

Arts Intensive

Offices: Sweet Hall, Third Floor

Mail code: 3069

Phone: (650) 724-4667

Email: artsintensive@stanford.edu

Web Site: <http://artsintensive.stanford.edu>

The Arts Intensive (AI) Program offers rising sophomores, juniors, and seniors the opportunity to study intensively with Stanford arts faculty and small groups of other Stanford students. The Arts Intensive program takes place over three weeks in September before the start of Autumn Quarter.

Arts Intensive courses engage students in the theory and practice of a particular artistic discipline. Courses often include field trips, workshops, film screenings, studio sessions, or other arts events in the afternoons, evenings, and on weekends. Courses are taught by Stanford arts faculty and often include contributions from professional visiting artists. Arts Intensive students live together in a Stanford residence during the program, making for a rich immersion into a creative community. This unique opportunity allows students to focus on their art practice without the constraints of other coursework. Enrollment is by application and takes place in Spring Quarter for the upcoming September program. Each Arts Intensive course enrolls 10 to 20 students and offers 2 units of academic credit. For more information

or to apply, see the Arts Intensive (<http://artsintensive.stanford.edu>) web site.

Leland Scholars Program

Offices: Sweet Hall, Third Floor
Mail code: 3069
Email: lelandscholars@stanford.edu
Web Site: <http://lelandscholars.stanford.edu>

In recognizing the need to prepare first year students for the academic, intellectual, social, and personal challenges they will face at Stanford, the Leland Scholars Program (LSP) facilitates the transition to college for incoming freshmen intending to study in the STEM (Science, Technology, Engineering, Math) or pre-health fields. Scholars will participate in a three-week residential program in the summer prior to arrival on campus. This fully-funded program has a carefully crafted schedule of activities, coursework, discussions, and trips designed to support the transition to Stanford. During the academic year, Leland Scholars will have access to additional advising and freshman seminars that sustain the community and reinforce the skills and strategies acquired during the program.

Bing Honors College

Offices: Sweet Hall, Third Floor
Mail code: 3069
Phone: (650) 724-4667
Email: binghonorscollege@stanford.edu
Web Site: Bing Honors College (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)

Bing Honors College brings together students working on the early phases of their honors theses back to campus in early September, and gives them three weeks before the start of Autumn Quarter during which they can think, read, plan, research, and write.

With the support of faculty leaders and graduate students from participating departments and programs, students work on what they need, such as narrowing down a topic, improving research skills, making a timeline, writing a literature review, starting a chapter, collecting or sorting data, etc. This opportunity to focus solely on their theses helps the students to begin their senior year with a sense of direction and intellectual purpose, a commitment to their scholarship, and concrete progress on their projects. The College provides room and board. It also sponsors cross-disciplinary forums, such as writing workshops and faculty-led methodology panels, as well as residential activities and a closing celebratory event for all the students and their faculty leaders.

If you are a prospective honors student interested in joining Bing Honors College, please contact your department to find out whether it is participating. If your department is not participating but your adviser is willing to nominate you, the College will try to place you with a BHC leader who will provide you with the necessary support and guidance.

Leadership Intensive

Offices: Sweet Hall, Third Floor
Mail code: 3069
Phone: (650) 724-4667
Email: leadershipintensive@stanford.edu
(binghonorscollege@stanford.edu)
Web Site: Leadership Intensive (<https://undergrad.stanford.edu/programs/leadership-intensive>)

Leadership Intensive (LEAD) offers rising juniors a unique and immersive study of the complexities of leadership through a 3-week residential summer program just before the start of fall quarter. The program is characterized by an atmosphere of intense exploration of one's own leadership skills and abilities and participation in a strong community committed to helping all members develop their own unique potential. Design thinking, collaborative leadership and hands-on practice of essential

leadership skills are integral components of LEAD. Enrollment is by application (spring quarter for the following September) and there is a \$600 program fee (financial aid is available). LEAD enrolls 24 – 40 students and offers 2 units of academic credit. For more information, please visit our website: undergrad.stanford.edu/lead.

Overseas Studies

Bing Overseas Studies Program

The Bing Overseas Studies Program (BOSP) provides opportunities for Stanford students to broaden their undergraduate education through study in another country and exposure to its culture. Regular quarter-length programs in Australia, Beijing, Berlin, Cape Town, Florence, Istanbul, Kyoto, Madrid, Oxford, Paris, and Santiago offer courses in social and natural sciences, humanities, engineering, and earth sciences with full Stanford credit. Many courses also count toward major requirements and/or fulfill University breadth requirements. Students may enroll for one or more quarters at most locations. Academic or paid internships are available at the Beijing, Berlin, Florence, Kyoto, Madrid, Paris, and Santiago programs. Research opportunities are available in various formats at different centers. Service-learning and community-based research opportunities are available in Cape Town. Minimum academic and language prerequisites are specific to each program. See the BOSP (<http://bosp.stanford.edu>) web site for information on these requirements.

While studying overseas through BOSP, students remain registered at Stanford and pay regular tuition, along with an overseas fee, which is based on Stanford on-campus room and board rates. Regular financial aid applies, and may be adjusted to cover additional costs. At many centers, students live in a homestay or with local students.

In addition to regular programs offered for enrolled Stanford students, the University is a member of two consortia: the Consortium for Advanced Studies in Barcelona and the Kyoto Consortium for Japanese Studies. Overseas Studies also offers three-week faculty-led overseas seminars in various locations during Summer Quarter, a special program in Oaxaca, Mexico focusing on community health, and occasional faculty-initiated programs.

Overseas Studies, located on the ground floor of Sweet Hall, has full-time staff members and student advisors to assist in advising and planning for overseas study. Course information, while accurate at the time of publication, is subject to change. See the BOSP (<http://bosp.stanford.edu>) web site for updated information.

Locations

Courses offered by the Overseas Studies Program are listed on the Stanford Bulletin's (<http://explorecourses.stanford.edu>) ExploreCourses (<http://explorecourses.stanford.edu>) web site under subject codes beginning with OSP. Each BOSP location has its own subject code. Those subject codes, by location, are:

- Australia [OSPAUSTL] (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=OSPAUSTL&filter-catalognumber-OSPAUSTL=on>)
- Barcelona (Consortium for Advanced Studies) [OSPBARCL] (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=OSPBARCL&filter-catalognumber-OSPBARCL=on>)

Undergraduate Advising and Research

Undergraduate Advising and Research

Associate Vice Provost for Undergraduate Education, Director, and Dean of Freshmen: Rob Urstein

Central UAR Office: Sweet Hall, first floor

Phone: (650) 723-2426

Fax: (650) 725-1436

Web Site: <http://undergrad.stanford.edu>

Email: advising@stanford.edu (vpue-advising@stanford.edu), vpue-research@stanford.edu

Appointments: (650) 723-2426

Undergraduate Advising and Research upholds the mission, standards, and requirements of the University, introduces students to the full intellectual richness of undergraduate study at Stanford, supports students in their academic and intellectual pursuits, and instills within them a sense of identity within and belonging to our community of scholars at Stanford.

This process begins with the pairing of each freshman with two advisers: a Pre-Major Adviser and a UAR Academic Director. Freshmen are assigned to Pre-Major Advisers (faculty and academic staff) according to their preliminary academic interests and residence. Pre-Major Advisers are well-suited to help students understand the university and are the first of many mentors students will find at Stanford. The UAR Academic Directors in the undergraduate residences complement the role of the assigned Pre-Major Advisers with a comprehensive understanding of the curriculum; they advise students broadly on their courses of study and long-term goals. The UAR advising staff also includes professional advisers in Sweet Hall who specialize in research, fellowships, and pre-professional advising, and advisers in the Athletics Academic Resource Center (AARC), who support varsity athletes.

UAR functions include:

- overseeing the transition of freshmen/transfers into the university
- assistance with curriculum planning
- consultation on choosing a major
- advice on integrating research into an undergraduate program of study
- support for students considering and applying for merit-based scholarships and national fellowships
- practical advice on how to prepare for and apply to graduate and professional schools
- academic and personal advising related to academic performance
- guidance on policies and procedures concerning academic standing

- assistance with interpretation and application of academic rules and regulations
- referrals to campus tutoring resources and counseling offices

See the Advising (<https://undergrad.stanford.edu/advising>) web site for more information about academic advising, programming, and support for undergraduate students.

Scholarships and Fellowships, and Post-Baccalaureate Studies

Together with advisers at the Overseas Resource Center (<http://stanford.edu/dept/center/orc>) and the Haas Center for Public Service (<http://studentaffairs.stanford.edu/haas>), UAR advisers help prepare students to compete for nationally competitive fellowships. UAR also administers the campus nomination process for several U.S.-based fellowships. See the Fellowships (<https://undergrad.stanford.edu/opportunities-research/fellowships>) web site for more information on fellowship opportunities.

UAR offers workshops and individual consultations on planning for graduate or professional studies (e.g., business, education, law, and medicine) and on general application procedures, including how to write personal statements, how to solicit letters of recommendation, and how to prepare for interviews. See the Planning for Graduate and Professional School (<https://undergrad.stanford.edu/opportunities-research/steps-planning-graduate-and-professional-school>) web site for more information.

Undergraduate Research

UAR encourages undergraduates to work with faculty on independent projects in research, the arts, and senior synthesis. UAR facilitates these close relationships by providing advising and funding to undergraduate students across all disciplines and at all stages of developing an idea. See the Research and Independent Projects (<http://undergradresearch.stanford.edu>) web site for more information.

Student Grant Programs

UAR offers Student Grants for faculty-mentored independent projects in research, the arts, and senior synthesis. Grants are typically used to pay for project supplies and travel expenses. Full-time summer projects may also use grants as a stipend.

The application for any Student Grant is centered on:

1. a student-authored project proposal, including a line-item budget
2. a letter of support written by a qualified member of the Stanford faculty

Proposals are judged on intellectual significance, rigor and feasibility of project design, and evidence of student preparedness. The program is competitive, and not all good proposals can be funded.

For current deadlines, grant types, and program details, see the Student Grants (<http://studentgrants.stanford.edu>) web site.

Departmental and Faculty Research Opportunities

Departments, interdisciplinary programs, research centers, and individual faculty use VPUE funding to support programs that provide undergraduates with mentorship and training in scholarship and research. Typically, students are paired with a faculty member or faculty-led research group according to their mutual scholarly interests. Students conduct substantive, directed research on a particular aspect of the faculty member's research project, and they meet frequently with their faculty mentors to discuss progress and future directions for the project. Students should consult

directly with the departments and programs of interest to learn about these opportunities.

Faculty or departments interested in applying for this funding can learn more at the For Faculty (<https://undergrad.stanford.edu/opportunities/research/faculty>) page of the Research and Independent Projects web site.

Center for Teaching and Learning

Center for Teaching and Learning

The Center for Teaching and Learning is a University-wide resource whose vision is that everyone at Stanford will know how learning works and will translate that knowledge into research-based, daily practice and public dialog. The Center supports faculty, lecturers, teaching assistants, and students with courses and other resources designed to enhance teaching excellence and/or learning skills while also providing a source of motivation, inspiration, and guided self-reflective growth.

CTL Resources for Teaching

CTL provides the Stanford community with services and resources on effective teaching. The center's goals are to:

- engender and disseminate knowledge and understanding of the newest research on student learning
- network and support instructors seeking to share ideas and community around teaching
- stimulate faculty involvement in the scholarship of teaching and learning
- identify and involve successful faculty, lecturers, and TAs who are willing to share their talents with others
- provide those who are seeking to improve their teaching with the means to do so
- acquaint the Stanford community with important innovations and new technologies for teaching
- prepare new faculty and TAs for their responsibilities
- contribute to the professional development of teaching assistants
- expand awareness of the role of teaching at research universities
- increase the rewards for superior teaching.

Resources available to faculty, lecturers, and TAs include: classroom observation and video recording, microteaching (simulated practice teaching), and consultation; small group and other forms of mid-quarter evaluation; workshops, lectures, and teaching orientations; online teaching resources, and a library of teaching materials. CTL works with individuals, groups, and departments on their specific needs, including support of teaching events, retreats, and the design of effective TA training programs.

All these resources and more are available at <http://teachingcommons.stanford.edu>.

For questions or requests, email TeachingCenter@stanford.edu.

CTL Resources for Learning

CTL provides academic coaching for graduate students and undergraduates who want to enhance their study approaches and learning strategies. Through courses, individual counseling, and workshops, CTL helps students build skills that are the foundation for continual improvement

and lifelong learning. Students benefit from developing and applying individually crafted strategies that build on their existing strengths. Time management, test preparation, note taking, reading comprehension and retention, and procrastination are common topics for discussion. For more information, visit Academic Skills Coaching (<https://undergrad.stanford.edu/tutoring-support/academic-skills-coaching>).

Free tutoring is available to undergraduates in many subjects; see <http://tutoring.stanford.edu> for details on where and when tutors can be found, what to expect, and how to apply to work as a tutor.

Associate Vice Provost for Undergraduate Education and Director: Robyn Wright Dunbar

Senior Associate Director: Vera Safa Michalchik

Associate Directors: Jennifer Randall Crosby, Mariatte Denman, Adina Glickman

Directors of Community Engaged Learning: Suzanne Gaulocher, Luke Terra, Sarah Truebe

Assistant Director: Tim Randazzo

Faculty Fellows: Sarah Billington, Michele Elam

Faculty Advisers: Robert Calfee, Tom Ehrlich, Sheri Sheppard, Lee Shulman

ROTC

Reserve Officers' Training Corps (ROTC) Cross-Enrollment Agreements for ROTC

Stanford has cross-enrollment agreements for the Reserve Officers' Training Corps (ROTC) with the Navy and Marine Corps ROTC program at the University of California at Berkeley, the Army ROTC program at Santa Clara University, and the Air Force ROTC program at San Jose State University. These agreements allow Stanford students to engage in military training while working on their degrees from Stanford. Courses taken in ROTC programs are offered by and through UC Berkeley, Santa Clara, and San Jose State. Most courses count for academic or activity credit and count toward the 12-unit requirement for full-time registration status and satisfactory academic progress requirements for Stanford undergraduates.

Normally, students who participate in ROTC training complete a four-year course of instruction at the respective institution that consists of two years of basic courses during the freshmen and sophomore years, and an advanced course of instruction during the junior and senior years. Students who accept ROTC scholarships are generally subject to a service obligation, depending on the regulations of the particular service.

Stanford students who are enrolled in ROTC programs under the cross-enrollment agreements are eligible to compete for various scholarships that provide up to full tuition and a monthly stipend. Students normally compete for national scholarships as high school seniors, although current Stanford students may be eligible to enroll in ROTC on a non-scholarship basis. Non-scholarship ROTC students are eligible to compete for scholarships, and individual services may offer additional scholarship programs to current qualifying undergraduate and graduate students. Interested students should contact the appropriate military branch at the host institution to obtain information on these programs and to initiate application procedures.

Students who satisfactorily complete an ROTC program and are awarded a Stanford degree qualify for a commission as a Second Lieutenant in the

U.S. Army, an Ensign in the U.S. Navy, a Second Lieutenant in the U.S. Marines, or a Second Lieutenant in the U.S. Air Force.

For additional questions concerning the ROTC programs, Stanford students should consult with one of the host units.

Academic Credit

All three service programs have a mandatory lab course each quarter which carries 1 unit of activity credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other university activity classes) may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 32) section of this bulletin).

Upper level ROTC academic courses carry two units of credit for satisfactory completion of work and are graded on a credit/no credit basis. No more than 36 units without a letter grade may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 32) section of this bulletin).

Air Force ROTC

Commanding Officer: Lieutenant Colonel Douglas Lomsdalen

Air Force ROTC courses are offered at San Jose State University. See also the SJSU website (<http://www.sjsu.edu/afrotc>).

Courses in the freshman year focus on the foundation of the United States Air Force and introduce students to the Air Force and AFROTC. Topics include the characteristics, missions, and organization of the Air Force, the qualities of an officer and professionalism, career opportunities, military customs and courtesies, and communication skills.

Courses in the sophomore year focus on the evolution of the United States air and space power. Students study air and space power through historical analysis and examine the capabilities, function, and doctrinal employment of aerospace forces. The course emphasizes oral and written communication skills.

Courses in the junior year focus on Air Force leadership studies. Topics include leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communications. Students apply knowledge and skills required of junior Air Force officers through case studies, practical exercises, and seminar discussion.

Senior year courses cover two subjects, national security affairs and preparation for active duty. Students learn about national security process, international and regional relations, advanced leadership ethics, Air Force doctrine with focus on the military as a profession, military justice, civilian control of the military, and current issues affecting the military. Preparation for active duty focuses on the role of the Air Force officer in contemporary society emphasizing skills to facilitate a smooth transition from civilian to military life.

The leadership laboratory is required for all students every quarter. Students participate in hands-on exercises to learn drill and ceremony; Air Force customs and courtesies; leadership and followership skills; and they hear from guest speakers on a variety of Air Force topics.

Army ROTC

Commanding Officer: Lieutenant Colonel John Tao

Some Army ROTC courses are offered at Santa Clara University and some are offered on Stanford's campus. See also the Army ROTC web site (<http://www.scu.edu/rotc>).

Freshman year courses introduce students to leadership and personal development and provide foundations for leadership. Course topics include personal challenges and competencies for effective leadership, goal setting,

time management, physical fitness, and stress management related to leadership and officership. Students develop a personal fitness program under the guidance of an Army master fitness trainer. In addition, they learn leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and effective writing skills in the context of practical and interactive exercises.

Army courses taught in the sophomore year look at leadership through a variety of lenses using case study and interactive exercises. Topics include creative and innovative leadership strategies and styles, challenges of leading in contemporary operational environments along with crosscultural challenges, and team leading procedures.

In the junior year, students learn adaptive team leadership and situational leadership. They develop skills including decision making, persuading, and motivating team members when under fire in small-unit tactical operations scenarios.

Courses for seniors provide capstone leadership instruction and experiences in a practical and current event driven context. Students plan, execute, and assess complex operations, function as a member of staff, and provide leadership performance feedback to subordinates. They use case studies, scenarios, and exercises to prepare for their first unit assignment and the transition to commissioned officer in a modern world.

All students are also required to take a military history course focused on leadership. This course may be taken any year. The leadership laboratory is required for all students every quarter. In addition, students complete a four-day weekend field training exercise away from the University in the Autumn and Spring quarters, and a formal military dinner during an evening in the Winter Quarter.

Naval ROTC

Executive Officer: Captain Michael J. Slotsky

Naval ROTC courses are offered at the University of California at Berkeley. See also the Naval ROTC web site.

Courses in the freshman year introduce students to the Navy and Marine Corps and to the NROTC program. They also study sea power from a historical and United States centered perspective.

In the sophomore year, students take their first leadership class with a focus on management and their first navigation class with a focus on the fundamentals of nautical navigation. Courses include case studies, student presentations, and practical exercises.

Juniors study introductory naval engineering with a focus on ship systems and modern weapons systems. Example topics include gas turbine propulsion systems, nuclear reactors, and radar and sonar theory.

During their senior year, students study advanced leadership topics within an ethics framework and advanced navigation and naval operations.

Students pursuing a commission in the Marine Corps do not take the two engineering courses or the two navigation courses. Marine option students take two Marine Corps specific courses that examine the history of littoral warfare and the evolution of warfare.

All students are required to take the weekly professional development laboratory course (drill) at UC Berkeley every quarter.

Graduate Education (VPGE)

The Vice Provost for Graduate Education (VPGE) works collaboratively to ensure that every graduate student has the best possible education. VPGE's initiatives and resources enrich students' academic experiences at Stanford, advancing diversity, preparing leaders, and positioning Stanford at the forefront of innovation in graduate education. VPGE serves Stanford's doctoral, master's, and professional degree students from all seven Stanford schools. VPGE plays a leadership role in initiating and managing policies and programs that enhance and complement the offerings of the departments and programs that have primary responsibility for organizing and delivering graduate education.

In addition to providing University-wide graduate policy direction, the VPGE office has five primary areas of program activity: administering University-wide graduate fellowship programs; advancing graduate student diversity; providing professional development programs and events; promoting interdisciplinary and cross-school learning; and encouraging innovation in graduate programs. The Vice Provost for Graduate Education reports to the Provost.

Graduate Policy

The Faculty Senate Committee on Graduate Studies (C-GS) formulates policy concerning the substance and process of graduate education as well as the evaluation and recording of graduate achievement, and reviews the implementation of such policy. The committee also monitors the academic quality and effectiveness of the University's graduate interdisciplinary and joint degree granting programs. Committee members include the Vice Provost for Graduate Education or her delegated staff (*ex officio*) and representatives from the faculty at large, administration such as the Office of the University Registrar, and students. The Graduate Student Council and the Nominations Committee of the Associated Students of Stanford University (ASSU) choose student members.

VPGE recommends, promulgates, and interprets University policies related to graduate education. VPGE oversees administrative and financial systems related to graduate student support, including policies related to requirements for research and teaching assistantships, and minimum compensation levels for those positions. For other policies related to graduate admissions and degree requirements, see relevant sections of this bulletin.

Honor Code and Fundamental Standard

The Honor Code and Fundamental Standard establish the conditions for academic work at Stanford and represent an agreement between students and faculty about their responsibilities for learning and teaching. The Interpretations and applications of the Honor Code, the Student Judicial Charter of 1997, the Student Conduct Penalty Code, statistics, and other documents are available at the Office of Community Standards (<http://studentaffairs.stanford.edu/communitystandards>) web site.

Research Policies for Graduate Students

Graduate education and research are interrelated enterprises. Many Stanford graduate students conduct research under the guidance and sponsorship of Stanford faculty members. The Dean of Research has primary responsibility for oversight of the research enterprise. Several policies in that arena are particularly relevant to graduate students. These include:

Academic Authorship

Guidelines related to academic authorship, such as the allocation of responsibility and credit for scholarly publications. For complete text of the guidelines, see Research Policy Handbook memo 1.5, On Academic Authorship (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/academic-authorship>).

Intellectual Property

Policies on copyrights and patents resulting from University work. Graduate students and postdoctoral scholars, as well as all faculty, staff, and visitors engaged in research, must sign the Stanford University Patent and Copyright Agreement (SU-18). For complete text of the currently applicable versions of these policies, see Research Policy Handbook chapter 9, Intellectual Property (<http://doresearch.stanford.edu/policies/research-policy-handbook/intellectual-property>).

Openness in Research

Policy on openness in research, such as the principle of freedom of access by all interested persons to the underlying data, processes, and final results of research. Stanford University does not accept funding for research projects that require secrecy. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.4, Openness in Research (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/openness-research>).

Relationships between Students and Outside Organizations

Summary of policies on the establishment of relationships between students and outside entities, such as private companies or nonprofit organizations, as part of or outside the student's academic program at Stanford. This covers open versus proprietary nature of the work, ownership of intellectual property, and possible conflicts of commitment and interest. For complete text of the currently applicable versions of these policies, see Research Policy Handbook memo 10.6, Relationships Between Students (Including Postdoctoral Scholars) and Outside Entities (<http://doresearch.stanford.edu/policies/research-policy-handbook/non-faculty-research-appointments/relationships-between-students>).

Research Compliance

Several administrative panels review and approve research projects to safeguard the rights and welfare of all human research subjects, ensure the humane care and use of laboratory animals, and protect the safety of personnel and the general public in the areas of biosafety and radiological safety. For more information, contact the Research Compliance Office (<http://researchcompliance.stanford.edu>).

Research Misconduct

Policy on allegations, investigations, and reporting of research misconduct. Each member of the University community has a responsibility to foster an environment which promotes intellectual honesty and integrity, and which does not tolerate misconduct in any aspect of research or scholarly endeavor. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.7, Research Misconduct: Policy on Allegations, Investigations and Reporting (<http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/research-misconduct-policy-allegations>).

Graduate Fellowship Programs

Several University-wide graduate fellowship programs are administered by the VPGE, including the Stanford Graduate Fellowships Program in Science and Engineering (SGF) and the Stanford Interdisciplinary Graduate Fellowship (SIGF) program. VPGE also administers several smaller

University-wide fellowships programs to new and continuing doctoral students that require nomination by faculty or deans.

Stanford Graduate Fellowships Program in Science and Engineering (SGF)

Web site: <http://sgf.stanford.edu>

SGF competitively awards approximately 100 two- and three-year fellowships providing tuition support and stipend to outstanding students pursuing a doctoral degree in the sciences and engineering. SGF fellows can explore labs in a variety of fields. Nominations for SGF fellowships are submitted by science and engineering departments and programs.

Stanford Interdisciplinary Graduate Fellowships (SIGF)

Web Site: <http://sigf.stanford.edu>

The SIGF program awards fellowships on a competitive basis to doctoral students engaged in interdisciplinary research. The fellowships enable Stanford doctoral students to pursue questions that cross traditional disciplinary boundaries. Students in the first three years of their doctoral program are eligible to apply.

Graduate Student Diversity

VPGE works to diversify the graduate student population by supporting recruitment and retention programs in collaboration with faculty and staff in each of the schools. VPGE funds recruitment activities to expand the pool of qualified applicants, such as visits to campus and travel grants. VPGE offers resources to groups within and across schools for activities that enhance the quality of students' educational experiences and improve retention. VPGE also works collaboratively to develop programs that cultivate interest in academic careers and diversify the pipeline for future faculty. The DARE Doctoral Fellowship Program, administered by VPGE, awards two-year fellowships on a competitive basis to Stanford doctoral students in their final two years who want to investigate and prepare for academic careers and whose presence will help to diversify the professoriate.

Professional Development

Leadership, pedagogy, communication, working in teams, career development and entrepreneurship are topics of interest to graduate students across the University. VPGE collaborates with other departments, such as the Center for Teaching and Learning (p. 97), the Graduate Life Office (p.), and the Hume Writing Center (p.) to raise the visibility and expand the breadth of offerings to help graduate students' professional development.

Interdisciplinary and Cross-School Learning Opportunities

VPGE provides seed funding to initiatives that foster interdisciplinary and cross-school interactions for graduate students. The Stanford Graduate Summer Institute (SGSI) offers noncredit interdisciplinary short courses exclusively for Stanford graduate students and postdoctoral scholars. VPGE also seeks to facilitate enrollment in courses outside of students' home departments and schools.

Leadership, pedagogy, communication, working in teams, career development and entrepreneurship are topics of interest to graduate students across the University. VPGE collaborates with other departments, such as the Center for Teaching and Learning, the Graduate Life Office, and the Hume Writing Center to raise the visibility and expand the breadth of offerings to help graduate students' professional development.

Stanford Graduate Summer Institute (SGSI)

Web site: <http://sgsi.stanford.edu>

SGSI courses introduce graduate students to multidisciplinary and interdisciplinary thinking. Students from across the University have the opportunity to meet others outside their fields, create networks, and foster cross-disciplinary collaborations. Most SGSI courses are small and taught in an intensive workshop format at the end of Summer Quarter. Courses are non-credit bearing and free of tuition or fees.

Innovation in Graduate Programs

Academic departments and programs are the foundation of graduate education, so VPGE supports innovation in degree-granting programs. VPGE awards funds to faculty members for program innovation with SCORE Innovation funds (<http://vpge.stanford.edu/programs/score.html>); these help faculty and graduate students to scrutinize long-existing practices and test new approaches for graduate education. Student Projects for Intellectual Community Enhancement (SPICE) funds (<http://vpge.stanford.edu/programs/spice.html>) support graduate students (master's, doctoral, or professional) to develop activities to expand the intellectual community and enhance the academic life of their department or program.

Vice Provost for Graduate Education: Patricia J. Gumport

Associate Vice Provosts for Graduate Education: John Boothroyd, Chris M. Golde, Sheri D. Sheppard

Director of Fellowships and Programs: Pat Cook

Directors of Educational Programs: Helen Doyle, Anika Green

Associate Director, Programs and Administration: Rebecca Jantzen

Graduate School of Business

The mission of the Stanford Graduate School of Business is to create ideas that deepen and advance the understanding of management, and with these ideas, develop innovative, principled, and insightful leaders who change the world.

The two-year Master of Business Administration (M.B.A.) degree program prepares change agents to make a meaningful impact in the world through leadership of business, government, and social-sector organizations. The general management curriculum rests on a foundation of social science principles and management functions, tailored to each student's background and aspirations. Interdisciplinary themes of critical analytical thinking, creativity and innovation, and personal leadership development differentiate the Stanford M.B.A. experience. Each M.B.A. student undertakes a global experience to provide direct exposure to the world's opportunities. A Joint Degree Program (p. 47) allows Stanford students to combine the M.B.A. with degrees in the Graduate School of Education (M.A.), the School of Engineering (M.S. in C.S., M.S. in E.E.), the Stanford Law School (J.D.), and the School of Medicine (M.D.), as well as interdisciplinary degrees in Public Policy (M.P.P.) and in Environment and Resources (M.S.).

The primary criteria for admission are intellectual vitality, demonstrated leadership potential, and personal qualities and contributions. No specific undergraduate major or courses are required for admission, but experience with analytic and quantitative concepts is important. Almost all students obtain one or more years of work experience before entering, but a few students enroll directly following undergraduate study.

The Stanford Master of Science in Management for Experienced Leaders Program (MSx) is an intensive, one-year course of study for middle-management executives leading to the degree of Master of Science in management. Participants generally have eight or more years of work experience, with at least five years of management experience. Some students are sponsored by their company, but most are self-sponsored.

The Doctor of Philosophy (Ph.D) degree program is designed to develop outstanding scholars for careers in research and teaching in various fields of study associated with business education. Students focus on one of seven distinct areas of study including accounting, economic analysis and policy, finance, marketing, operations information and technology, organizational behavior, and political economics.

For detailed information on programs, curricula, and faculty, see the School's (<http://gsb.stanford.edu>) web site.

Associate Deans: Rajkumar Chellaraj, Stephanie Frost, Ranga Jayaraman, Claudia J. Morgan, Dave Weinstein

Assistant Deans: Derrick Bolton, Bethany Coates, Margaret Hayes, Maeve Richard

Professors: Jennifer L. Aaker, Anat R. Admati, Susan Athey, William P. Barnett, Mary E. Barth, Jonathan Bendor, Lanier Benkard, Jonathan B. Berk, David W. Brady, Jeremy I. Bulow, Robert A. Burgelman, Steven Callander, Glenn R. Carroll, Peter M. DeMarzo, J. Darrell Duffie, Yossi Feinberg, Francis J. Flynn, George Foster, Steven R. Grenadier, Deborah H. Gruenfeld, Michael T. Hannan, Chip Heath, Guido Imbens, Charles I. Jones, Ron Kasznik, Daniel P. Kessler, Roderick M. Kramer, Keith Krehbiel, David M. Kreps, Arvind Krishnamurthy, David F. Larcker, James M. Lattin, Edward P. Lazear, Charles M.C. Lee, Hau L. Lee, Brian S. Lowery, Neil Malhotra, John G. McDonald, Maureen F. McNichols, Haim Mendelson, Dale T. Miller, Benoit Monin, Harikesh Nair, Margaret A. Neale, Charles A. O'Reilly III, Paul Oyer, James M. Patell, Jeffrey Pfeffer, Paul C. Pfleiderer, Erica L. Plambeck, Madhav Rajan, Hayagreeva Rao, Joshua Rauh, Stefan J. Reichelstein, Peter C. Reiss, Condoleezza Rice, Garth Saloner, Kathryn L. Shaw, Baba Shiv, Kenneth W. Shotts, Itamar Simonson, Kenneth J. Singleton, Andrzej Skrzypacz, Jesper Sørensen, Sarah A. Soule, Ilya Strebulaev, Larissa Z. Tiedens, Lawrence W. Wein, Seungjin Whang, S. Christian Wheeler, Stefanos Zenios, Jeffrey H. Zwiebel

Associate Professors: Anne Beyer, Wesley Hartmann, Dirk Jenter, Saumitra Jha, Uzma Khan, Jonathan Levav, Sridhar Narayanan, Michael Ostrovsky, Joseph D. Piotroski, Zakary L. Tormala

Assistant Professors: Mohsen Bayati, Shai B. Bernstein, Konstantinos Bimpikis, Elizabeth Blankespoor, T. Renee Bowen, Bradyn Breon-Drish, Katherine Casey, Eduard DeHaan, Lisa De Simone, Sebastian Di Tella, Rebecca Diamond, John-Paul Ferguson, Octavia D. Foarta, Pedro Gardete, Amir Goldberg, Lindred Greer, Yonatan Gur, Nir Halevy, Sharique Hasan, Szu-chi Huang, Dan A. Iancu, Peter Koudijs, Nicholas S. Lambert, Kristin Laurin, Ivan Marinovic, Timothy McQuade, Francisco Pérez-González, Mar Reguant-Rido, Navdeep Sahni, Stephan Seiler, Takuo Sugaya, Christopher Tonetti, Victoria Vanasco, Ali Yurukoglu

Professor (Teaching): James A. Phillips, Jr.

Courtesy Professors: Michele Barry, Eric P. Bettinger, Nicholas Bloom, Timothy F. Bresnahan, M. Kate Bundorf, Geoffrey L. Cohen, Shelley J. Correll, Robert M. Daines, Joseph Grundfest, Jens Hainmueller, Warren H. Hausman, Takeo Hoshi, Ronald A. Howard, Carolyn M. Hoxby, Mark G. Kelman, Jonathan D. Levin, Paul R. Milgrom, Walter W. Powell, Balaji Prabhakar, Ilya Segal, Robert I. Sutton, Robb Willer

Lecturers: Douglas Abbey, Matthew Abrahams, Federico Antoni, Laura K. Arrillaga-Andreessen, Steven Ballmer, Matthew Bannick, Sven Beiker, Kirk D. Bowman, Scott Brady, Melissa Briggs, Scott Bristol, Jeffrey Brown, Safra Catz, William Chace, Jeffrey Chambers, Patricia Chang, Robert B. Chess, Michael Child, Stephen J. Ciesinski, George Cogan, Richard Cox, Stephen Davis, David Demarest, Gary Dexter, David M. Dodson, Nicholas Donatiello, R. James Ellis, Christopher Flink, Peter Francis, Richard P. Francisco, Douglas Galen, Matthew Glickman, John Glynn, Jacob Goldfield, Theresia Gouw, Brian Grey, Saar Gur, William Guttentag, Mark Hartmann, Laura Hattendorf, Keith Hennessey, Sujay Jaswa, Efrat Kasznik, Dan Katzir, David Kaval, Peter B. Kelly, Dan Klein, Allison Kluger, Glenn Kramon, Gloria Lee, Mark Leslie, Peter Levine, Nori Lietz, Richard Lin, Leo E. Linbeck III, Ann Livermore, Kevin Mak, Fern Mandelbaum, Paraag Marathe, Michael Marks, William L. McLennan, William F. Meehan III, Stephen Mellas, Craig Milroy, Shantanu Narayan, Raymond Nasr, Robert Pearl, Nancy Pfund, John Powers, Andrew Rachleff, Alyssa Rapp, Alan Rappaport, Dan Reicher, Barry Rhein, Carole Robin, Dennis M. Rohan, Howard Rosen, JD Schramm, Robert Seigel, Russell Siegelman, F. Victor Stanton, Emma Stewart, Kevin Taweel, Allan Thygesen, Robert Urstein, Gil-li Vardi, Jay Watkins, John G. Watson, Graham Weaver, Leah Weiss, Peter C. Wendell, Donald Wood, Thomas Wurster, Peter Ziebelman

Consulting Professors: H. Irving Grousbeck, Joel C. Peterson, Mark A. Wolfson

Visiting Professor: Henri-Claude De Bettignies

* Recalled to active duty. ** Emeritus Professor from another SU department recalled to active duty.

School of Earth Sciences

On February 11, 2015, the Stanford Board of Trustees approved the change of name for the school to become the School of Earth, Energy and Environmental Sciences. Prior to February 11, the school was named the School of Earth Sciences.

Courses offered by the School of Earth, Energy and Environmental Sciences are listed under the subject code EARTHSCI on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EARTHSCI&filter-catalognumber-EARTHSCI=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EARTHSCI&filter-catalognumber-EARTHSCI=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EARTHSCI&filter-catalognumber-EARTHSCI=on>). Courses offered by departments and programs of the school are linked on their separate sections, and are available at the ExploreCourses (<http://explorecourses.stanford.edu>) web site.

The School of Earth, Energy and Environmental Sciences includes the departments of Geological Sciences, Geophysics, Energy Resources Engineering, and Earth System Science; and two interdisciplinary programs: the Earth Systems undergraduate and coterminal M.S. program and the Emmett Interdisciplinary Graduate Program in Environment and Resources (E-IPER). The Earth Systems Program and E-IPER offer study in biophysical and social dimensions of environment and resources.

The aims of the school are:

1. to prepare students for careers in the fields of biogeochemistry, climate science, energy resource engineering, environmental science, geology, geochemistry, geomechanics, geophysics, geostatistics, hydrogeology, land science, oceanography, petroleum engineering, and petroleum geology
2. to conduct research in the Earth sciences
3. to provide opportunities for Stanford undergraduates to learn about the planet's history, to understand the energy and resource base that supports humanity, to appreciate the geological and geophysical hazards that affect human societies, and to understand the challenges and solutions related to the environment and sustainability.

To accomplish these objectives, the school offers a variety of programs adaptable to the needs of the individual student:

- four-year undergraduate programs leading to the degree of Bachelor of Science (B.S.)
- five-year programs leading to the coterminal Bachelor of Science and Master of Science (M.S.)
- graduate programs offering the degrees of Master of Science, Engineer, and Doctor of Philosophy.

Details of individual degree programs are found in the section for each department or program.

Undergraduate Programs in the School of Earth, Energy and Environmental Sciences

Any undergraduate admitted to the University may declare a major in one of the school's departments or programs by contacting the appropriate department or program office.

Requirements for the B.S. degree are listed in each department or program section. Departmental academic advisers work with students to define a career or academic goal and assure that the student's curricular choices

are appropriate to the pursuit of that goal. Advisers can help devise a sensible and enjoyable course of study that meets degree requirements and provides the student with opportunities to experience advanced courses, seminars, and research projects. To maximize such opportunities, students are encouraged to complete basic science and mathematics courses in high school or during their freshman year.

The Earth Systems Program offers an honors program in Environmental Science, Technology, and Policy through the Woods Institute for the Environment.

Coterminal Bachelor's and Master's Degrees in the School of Earth, Energy and Environmental Sciences

The Stanford coterminal degree plan enables an undergraduate to embark on an integrated program of study leading to the master's degree before requirements for the bachelor's degree have been completed. This may result in more expeditious progress towards the advanced degree than would otherwise be possible, making the program especially important to Earth scientists because the master's degree provides an excellent basis for entry into the profession. The coterminal plan permits students to apply for admission to a master's program after earning 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree.

Under the plan, the student may meet the degree requirements in the more advantageous of the following two ways: by first completing the 180 units required for the B.S. degree and then completing the three quarters required for the M.S. degree; or by completing a total of 15 quarters during which the requirements for the two degrees are completed concurrently. In either case, the student has the option of receiving the B.S. degree upon meeting all the B.S. requirements or of receiving both degrees at the end of the coterminal program. Students earn degrees in the same department or program, in two different departments, or even in different schools; for example, a B.S. in Physics and an M.S. in Geological and Environmental Sciences. Students are encouraged to discuss the coterminal program with their advisers during their junior year. Additional information is available in the individual department offices.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4874.htm>)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Publications and Online Guides (<http://studentaffairs.stanford.edu/registrar/publications/#Coterm>) web site.

Graduate Programs in the School of Earth, Energy and Environmental Sciences

Admission to the Graduate Program

A student who wishes to enroll for graduate work in the school must be qualified for graduate standing in the University and also must be accepted by one of the school's four departments or one of the two interdisciplinary Ph.D. programs. One requirement for admission is submission of scores on the verbal and quantitative sections of the Graduate Record Exam. Admission to one department of the school does not guarantee admission to other departments.

Faculty Adviser

Upon entering a graduate program, the student should report to the head of the department or program who arranges with a member of the faculty to act as the student's adviser. Alternatively, in several of the departments, advisers are established through student-faculty discussions prior to admission. The student, in consultation with the adviser(s), then arranges a course of study for the first quarter and ultimately develops a complete plan of study for the degree sought.

Financial Aid

Detailed information on scholarships, fellowships, and research grants is available from the school's individual departments and programs. Applications should be filed by the various dates listed in the application packet for awards that become effective in Autumn Quarter of the following academic year.

Dean: Pamela A. Matson

Associate Dean, Academic Affairs: Stephan A. Graham

Associate Dean, Educational Initiatives: Margot Gerritsen

Associate Dean, Multicultural Affairs: Jerry M. Harris

Assistant Dean, Academic Affairs: Roni Holeton

Assistant Dean, Multicultural Affairs: Tenea M. Nelson

Lecturers: Sara Cina, Richard Nevle, Jennifer Saltzman

Earth Systems

Courses offered by the Earth Systems Program are listed under the subject code EARTHSYS (<https://explorecourses.stanford.edu/search?q=EARTHSYS&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-departmentcode-EARTHSYS=on&filter-coursestatus-Active=on&filter-catalognumber-EARTHSYS=on&filter-catalognumber-EARTHSYS=on>) on the Stanford Bulletin's ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EARTHSYS&filter-catalognumber-EARTHSYS=on>).

Mission of the Undergraduate Program in Earth Systems

The Earth Systems Program is an interdisciplinary environmental science major. Students learn about and independently investigate complex environmental problems caused by human activities in interaction with natural changes in the Earth system. Earth Systems majors become skilled in those areas of science, economics, and policy needed to tackle the globe's most pressing environmental problems, becoming part of a generation of scientists, professionals, and citizens who approach and solve problems in a new way: a systematic, interdisciplinary way.

For students to be effective contributors to solutions for such problems, their training and understanding must be both broad and deep. To this end, Earth Systems students take courses in the fundamentals of biology, calculus, chemistry, geology, and physics, as well as economics, policy, and statistics. After completing breadth training, they concentrate on advanced work in one of six focus areas: biology, energy, environmental economics and policy, land systems, sustainable food and agriculture, or oceanography. Tracks are designed to support focus and rigor but include flexibility for specialization. Examples of specialized focus have included but are not limited to environment and human health, sustainable agriculture, energy economics, sustainable development, business and the environment, and marine policy. Along with formal course requirements, Earth Systems

students complete a 9-unit (270-hour) internship. The internship provides a hands-on academic experience working on a supervised field, laboratory, government, or private sector project.

The following is an outline of the sequential topics covered and skills developed in this major.

- Fundamentals:** The Earth Systems Program includes courses that describe the natural workings of the physical and biological components of the Earth, as well as courses that describe the human activities that lead to change in the Earth system. Training in fundamentals includes introductory course work in geology, biology, chemistry, physics, and economics. Depending on the Earth Systems track chosen, training may also include introduction to the study of energy systems, microbiology, oceans, or soils.
- System Interactions:** Focus in these courses is on the fundamental interactions among the physical, biological, and human components of the Earth system. The dynamics of the interplay between natural variation and human-imposed influences must be understood to achieve effective solutions to environmental problems.
 - Earth Systems courses that introduce students to the dynamic and multiple interactions that characterize global change problems include:

		Units
EARTHSYS 10	Introduction to Earth Systems	4
EARTHSYS 111	Biology and Global Change	4
EARTHSYS 112	Human Society and Environmental Change	4
 - Competence in understanding system-level interactions is critical to development as an Earth Systems thinker, so additional classes that meet this objective are excellent choices as electives.
- Skills Development:** Students take skills courses that help them to recognize, quantify, describe, and help solve complex problems that face society.

Field and laboratory methods can help students to recognize the scope and nature of environmental change. For example, training in satellite remote sensing and geographic information systems allows students to monitor and analyze large-scale spatial patterns of change. This training is either required or recommended for all tracks.

Quantification of environmental problems requires training in single and multivariable calculus, linear algebra, and statistics. Training in statistics is specific to the area of focus: geostatistics, biostatistics, econometrics.

Success in building workable solutions to environmental problems is linked to the ability to effectively communicate ideas, data, and results. Writing intensive courses (WIM) help students to communicate complex concepts to expert and non-expert audiences. All Stanford students must complete one WIM course in their major. The Earth Systems WIM courses are:

		Units
EARTHSYS 195	Natural Hazards and Risk Communication	3
EARTHSYS 200	Sustaining Action: Research, Analysis and Writing for the Public	3

Other Earth Systems courses also focus on effective written and oral communication and are recommended.

Effective solutions to environmental problems take into consideration natural processes as well as human needs. Earth Systems emphasizes the importance of interdisciplinary analysis and implementation of workable solutions through:

		Units
EARTHSYS 210A	Senior Seminar	3

EARTHSYS 210B	Senior Seminar	3
EARTHSYS 260	Internship	9

A comprehensive list of environmental courses (p. 111), as well as advice on those that focus on problem solving, is available in the program office.

The Earth Systems Program provides an advising network that includes faculty, staff, and student peer advisers.

Learning Outcomes (Undergraduate)

The program expects majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the program's undergraduate degree. Students are expected to:

1. demonstrate knowledge of foundational skills and concepts relevant to interdisciplinary study of the environment.
2. analyze environmental problems at the interface of natural and human systems in an interdisciplinary fashion.
3. demonstrate the ability to communicate complex concepts and data to expert and non-expert audiences.
4. apply relevant science, economics, engineering, and policy to problem analysis and proposed solutions, both independently and as part of a team.

Learning Outcomes (Graduate)

The master's degree in Earth Systems provides the student with enhanced analytical tools to evaluate the disciplines most closely associated with the student's focus area. Specialization is gained through course work and independent research work supervised by the M.S. faculty adviser.

Bachelor of Science in Earth Systems

The B.S. in Earth Systems (EARTHSYS) requires the completion of courses divided into three categories: 1) core; 2) foundation and breadth; 3) track-specific requirements. The student must carry out an internship project and participate in the Senior Seminar, as well as the Writing in the Major (WIM) requirement. Core courses, track courses, and electives must be taken for a letter grade.

Required Core

		Units
EARTHSYS 10	Introduction to Earth Systems	4
EARTHSYS 111	Biology and Global Change	4
EARTHSYS 112	Human Society and Environmental Change	4
Select one of the following:		3
EARTHSYS 210A	Senior Seminar	
or	Senior Seminar	
EARTHSYS 210B		
Select one of the following:		3
EARTHSYS 195	Natural Hazards and Risk Communication	
or	Sustaining Action: Research, Analysis and Writing for the Public	
EARTHSYS 200		
EARTHSYS 260	Internship	1-9

Required Foundation and Breadth Courses

		Units
Biology		
Select one of the following:		
BIO 41	Genetics, Biochemistry, and Molecular Biology	
BIO 43	Plant Biology, Evolution, and Ecology	
BIOHOPK 43	Plant Biology, Evolution, and Ecology	
BIO 101	Ecology	
EARTHSYS 30	Ecology for Everyone	
HUMBIO 2A & HUMBIO 2B	Genetics, Evolution, and Ecology and Culture, Evolution, and Society	
EARTHSYS 116	Ecology of the Hawaiian Islands	
Chemistry		5-10
Select one of the following:		
CHEM 31X	Chemical Principles Accelerated	
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	
Economics		5
ECON 1	Principles of Economics	
Geology and Environmental Sciences		4-5
Select one of the following:		
GES 1A	Introduction to Geology: The Physical Science of the Earth	
GES 1B	Introduction to Geology	
GES 1C	Introduction to Geology: Dynamic Earth	
GES 4	Evolution and Extinction: Introduction to Historical Geology	
EARTHSYS 117	Earth Sciences of the Hawaiian Islands	
Mathematics		5-15
Select one of the following:		
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
or MATH 41 & MATH 42	Calculus and Calculus	
MATH 51	Linear Algebra and Differential Calculus of Several Variables	
or CME 100	Vector Calculus for Engineers	
Probability and Statistics		3-5
Select one of the following:		
BIOHOPK 174H	Experimental Design and Probability	
BIO 141	Biostatistics	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
STATS 110	Statistical Methods in Engineering and the Physical Sciences	
STATS 116	Theory of Probability	
More extensive work in mathematics and physics may be valuable for those planning graduate study. Graduate study in ecology and evolutionary biology and in economics requires familiarity with differential equations, linear algebra, and stochastic processes. Graduate study in geology,		

oceanography, and geophysics may require more physics and chemistry. Students should consult their adviser for recommendations beyond the requirements specified above.

Tracks

Anthrosphere

Additional foundation and breadth courses

ECON 50	Economic Analysis I	
ECON 155	Environmental Economics and Policy	

Physics (select one of the following): 3-4

One physics class from the PHYSICS 20 or 40 series

Choose one course in each of the three following sub-categories, with a total of six required. At least one of the six must be a skills/methods course marked with an asterisk (*):

Economics and Environmental Policy 3-5

ECON 51	Economic Analysis II	
ECON 102B	Applied Econometrics *	
ECON 150	Economic Policy Analysis	
ECON 154	Law and Economics	

EARTHSYS 175 California Coast: Science, Policy, and Law

MSE 197	Ethics, Technology, and Public Policy	
MSE 243	Energy and Environmental Policy Analysis	
MSE 294	Climate Policy Analysis	
MSE 295	Energy Policy Analysis	

Social Entrepreneurship and the Environment 2-5

CEE 151	Negotiation	
ENGR 231	Transformative Design	
MSE 180	Organizations: Theory and Management	
MSE 264	Sustainable Product Development and Manufacturing	
MSE 277	Creativity and Innovation	
ME 206A	Entrepreneurial Design for Extreme Affordability	
ME 221	Green Design Strategies and Metrics	
ME 222	Design for Sustainability	
ME 377	Design Thinking Studio: Experiences in Innovation and Design	

URBANST 132 Concepts and Analytic Skills for the Social Sector *

URBANST 133 Social Entrepreneurship Collaboratory

Sustainable Development 3-5

ANTHRO 161	Human Behavioral Ecology	
ANTHRO 162	Indigenous Peoples and Environmental Problems	
ANTHRO 343	Culture as Commodity	
ANTHRO 349	Anthropology of Capitalism	
BIO 102	Demography: Health, Development, Environment	
CEE 124	Sustainable Development Studio (must be taken for at least 3 units)	

EARTHSYS 106 World Food Economy *

EARTHSYS 142A Negotiating Sustainable Development

ECON 52	Economic Analysis III *	
ECON 118	Development Economics	

Units

HUMBIO 118 Theory of Ecological and Environmental Anthropology

POLISCI 337T Designing Liberation Technology

URBANST 163 Land Use Control

Elective Requirement 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Biosphere

Units

Additional foundation and breadth courses

Instead of Biology Foundation requirement listed above, these Bio courses are required:

BIO 41 Genetics, Biochemistry, and Molecular Biology

And select one of the following: 5

BIO 43 Plant Biology, Evolution, and Ecology
or BIOHOPK 43 Plant Biology, Evolution, and Ecology

Additional Chemistry requirement (in addition to 31A/B or X): 5

CHEM 33 Structure and Reactivity

Instead of Geology Foundation requirement listed above, select one of the following:

GES 1C Introduction to Geology: Dynamic Earth ¹
or GES 4 Evolution and Extinction: Introduction to Historical Geology

or Earth Sciences of the Hawaiian Islands

EARTHSYS 117

Physics (select one of the following): 4

PHYSICS 41 Mechanics
or PHYSICS 45 Light and Heat

Choose two courses from Ecology and Conservation Biology, and one course from each of the remaining sub-categories below, total six required:

Biogeochemistry 3-4

BIO 216 Terrestrial Biogeochemistry
CEE 177 Aquatic Chemistry and Biology

EARTHSYS 134

EARTHSYS 151 Biological Oceanography

EARTHSYS 152 Marine Chemistry

EARTHSYS 155 Science of Soils

EARTHSYS 158 Geomicrobiology

Ecology and Conservation Biology 3-12

BIO 101 Ecology
BIO 136 Evolutionary Paleobiology
BIO 144 Conservation Biology: A Latin American Perspective

BIO 164 Biosphere-Atmosphere Interactions

EARTHSYS 116 Ecology of the Hawaiian Islands

GES 123 Paleobiology

BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems
BIOHOPK 177H	Dynamics and Management of Marine Populations
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities
BIOHOPK 189H	Sustainability and Marine Ecosystems
OSPAUSTL 10	Coral Reef Ecosystems
OSPAUSTL 25	Freshwater Systems
OSPAUSTL 30	Coastal Forest Ecosystems

Ecosystems and Society ² 3-5

ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii
ANTHRO 147	Nature, Culture, Heritage
ANTHRO 161	Human Behavioral Ecology
ANTHRO 162	Indigenous Peoples and Environmental Problems
ANTHRO 165	Parks and Peoples: The Benefits and Costs of Protected Area Conservation
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
ANTHRO 177	Environmental Change and Emerging Infectious Diseases
ANTHRO 178	Evolution and Conservation in Galapagos
ANTHRO 183	

Elective Requirement 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

¹ Must take GES 1C, GES 4, or EARTHSYS 117 to fulfill this requirement, and not GES 1A or 1B.

² May also use ANTHRO 183 or HISTORY 169 to fulfill this requirement. These courses are not offered this year.

Energy, Science and Technology

	Units
Additional Foundation and Breadth Courses	8
PHYSICS 43 Electricity and Magnetism	
PHYSICS 45 Light and Heat	
CME 100 Vector Calculus for Engineers (preferred over MATH 51 for this track)	
Computer science requirement: One-unit of Computer Science is required (unless CME 100 was completed); see Earth Systems staff for approved CS courses.	0-1
Energy Fundamentals	3
ENGR 30 Engineering Thermodynamics	
Select one of the following:	3-4
CEE 272R Modern Power Systems Engineering	
ENERGY 120 Fundamentals of Petroleum Engineering	
MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies	
MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
Select one of the following:	3-5
EARTHSYS 101 Energy and the Environment	

EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes
EARTHSYS 103	Energy Resources

Choose at least one course in each of the three sub-categories, total five required. Please note that many of these have prerequisite work:

Energy Resources & Technology 3-5

EARTHSYS 101	Energy and the Environment
EARTHSYS 103	Energy Resources
CEE 156	Building Systems
CEE 176A	Energy Efficient Buildings
ENERGY 120	Fundamentals of Petroleum Engineering
ENERGY 171	Energy Infrastructure, Technology and Economics
ENERGY 269	Geothermal Reservoir Engineering
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
ENERGY 293B	Fundamentals of Energy Processes
ENERGY 293C	Energy from Wind and Water Currents
ME 250	Internal Combustion Engines
ME 260	Fuel Cell Science and Technology

Sustainable Energy & Development 3-4

EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes
CEE 176B	Electric Power: Renewables and Efficiency
CEE 215	Goals and Methods of Sustainable Building Projects
CEE 221A	Planning Tools and Methods in the Power Sector
CEE 226	Life Cycle Assessment for Complex Systems
CEE 272S	Green House Gas Mitigation
ENERGY 153	Carbon Capture and Sequestration
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
EARTHSYS 146A	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation

Energy Policy, Economics & Entrepreneurship 2-4

ENERGY 104	Transition to sustainable energy systems
ENERGY 154	Energy in Transition: Technology, Policy and Politics
ENERGY 191	Optimization of Energy Systems
MSE 243	Energy and Environmental Policy Analysis
MSE 264	Sustainable Product Development and Manufacturing
MSE 294	Climate Policy Analysis
MSE 295	Energy Policy Analysis
GSBGEN 336	Energy Markets and Policy
LAW 455	Energy Law

Elective Requirement 3-5

One additional course at the 100-level or above is required. This course must be a minimum of 3 units. 3 units of approved energy seminars may count as one elective. See Earth Systems staff for the approved seminar list.

Land Systems

Additional foundation and breadth courses Units 4

PHYSICS 41 Mechanics
or PHYSICS 45 Light and Heat

Choose at least one course in each of the four sub-categories below, total seven required:

Land Ecosystems 3-4

BIO 144 Conservation Biology: A Latin American Perspective

EARTHSYS 155 Science of Soils

EARTHSYS 156 Soil and Water Chemistry

BIO 216 Terrestrial Biogeochemistry

Water 3-4

CEE 101B Mechanics of Fluids

CEE 166A Watersheds and Wetlands

CEE 166B Floods and Droughts, Dams and Aqueducts

CEE 177 Aquatic Chemistry and Biology

GEOPHYS 190 Near-Surface Geophysics

GES 130 Soil Physics and Hydrology

Land Use 3-5

EARTHSYS 106 World Food Economy

CEE 115 Goals and Methods of Sustainable Building Projects

CEE 124 Sustainable Development Studio (must be taken for at least 3 units)

CEE 176A Energy Efficient Buildings

URBANST 110 Utopia and Reality: Introduction to Urban Studies

URBANST 113 Introduction to Urban Design: Contemporary Urban Design in Theory and Practice

URBANST 163 Land Use Control

URBANST 171 Urban Design Studio

EARTHSYS 181 Urban Agriculture in the Developing World

Methods 3-5

EARTHSYS 142 Remote Sensing of Land

EARTHSYS 144 Fundamentals of Geographic Information Science (GIS)

EARTHSYS 211 Fundamentals of Modeling

Elective Requirement 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Sustainable Food and Agriculture

Additional foundation and breadth courses Units 4

PHYSICS 41 Mechanics
or PHYSICS 45 Light and Heat

A total of seven courses are required from the Food and Agriculture focus areas:

Fundamentals of Agriculture Production and Economics 9-10

Both required:

EARTHSYS 106 World Food Economy

EARTHSYS 185 Feeding Nine Billion

Biogeophysical Dimensions 9-12

Required:

EARTHSYS 155 Science of Soils

And select two of the following:

EARTHSYS 184 Climate and Agriculture

BIO 137 Plant Genetics

HUMBIO 113 The Human-Plant Connection

HUMBIO 130 Human Nutrition

GES 130 Soil Physics and Hydrology

Social Dimensions 3-5

Select one of the following:

EARTHSYS 173 Aquaculture and the Environment: Science, History, and Policy

EARTHSYS 181 Urban Agriculture in the Developing World

HUMBIO 166 Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context

ANTHRO 169 The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet

Applied Study in the Field 3-4

Required:

EARTHSYS 180B Principles and Practices of Sustainable Agriculture

Elective Requirement 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Oceans

Additional Foundation and Breadth Courses Units 0-5

MATH 51 Linear Algebra and Differential Calculus of Several Variables & MATH 52 Variables

and Integral Calculus of Several Variables ¹

or CME 100 Vector Calculus for Engineers

Physics (select one of the following): 3-4

PHYSICS 41 Mechanics

PHYSICS 45 Light and Heat

or GEOPHYS 110 Earth on the Edge: Introduction to Geophysics

Physics of the Atmosphere and Climate 3

Select one of the following:

CEE 63 Weather and Storms

EARTHSYS 146A Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (preferred)

Physics of the Ocean 3-4

Select one of the following:

EARTHSYS 164 Introduction to Physical Oceanography

EARTHSYS 146B Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation ²

Spatial Analysis 3-4

EARTHSYS 141 Remote Sensing of the Oceans

Biological Oceanography 3-4

Select one of the following:

EARTHSYS 151 Biological Oceanography (preferred; take at the same time as EARTHSYS 152)

BIOHOPK 163H Oceanic Biology

Marine Chemistry 3-4

EARTHSYS 152 Marine Chemistry

Human Dimensions 1-5

Select one of the following:

BIOHOPK 173H Marine Conservation Biology

EARTHSYS 175 California Coast: Science, Policy, and Law

EARTHSYS 156M Marine Resource Economics and Conservation

Field Experience ³ 12-20

Select at least one of the following:

EARTHSYS 323 Stanford at Sea

One quarter abroad at the Stanford in Australia Program

One quarter (or more) at the Hopkins Marine Station

Elective Requirement 6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units. See Earth Systems staff for a list of possible electives.

¹ CME 100 is preferred over taking MATH 51 and MATH 52 for this track.

² EARTHSYS 146B can be taken in addition to EARTHSYS 164 and would count as an elective.

³ Courses taken during Stanford@SEA and BOSP Australia cannot be substituted for track requirements but can count toward electives.

Summary of Course Requirements and Units

For all students:

	Units
Earth Systems Introduction and Core	12
Required Foundation and Breadth Courses	31-48
Internship	9
Senior Seminar	3
Writing in the Major (WIM)	3

Track-Specific:

	Units
Anthrosphere Track	38-54
Biosphere Track	40-60
Energy, Science and Technology Track	34-47
Land Systems Track	31-44

Sustainable Food and Agriculture Track 34-45
Oceans Track 37-63

Honors Program

The Earth Systems Honors program provides students with an opportunity to pursue individual interdisciplinary research. It consists of a year-long research project that is mentored by one or more Earth Systems-affiliated faculty members, and culminates in a written thesis.

To qualify for the honors program, students must have and maintain a minimum overall GPA of 3.4. Potential honors students should complete the EARTHSYS 111 Biology and Global Change and EARTHSYS 112 Human Society and Environmental Change sequence by the end of the junior year. Qualified students can apply in Spring Quarter of the junior year, or the fourth quarter before graduation (check with program for specific application deadlines), by submitting a detailed research proposal and a brief statement of support from a faculty research adviser. Students who elect to do an honors thesis should begin planning no later than Winter Quarter of the junior year.

A maximum of 9 units is awarded for thesis research through EARTHSYS 199 Honors Program in Earth Systems. Those 9 units may not substitute for any other required parts of the Earth Systems curriculum. All theses are evaluated for acceptance by the thesis faculty adviser and one additional faculty member, who is the second reader. Both the adviser and second reader must be members of the Academic Council. Acceptance into the Honors program is not a guarantee of graduating with the honors designation. The thesis must be accepted and approved by both readers and the Earth Systems Honors Committee, and a minimum overall GPA of 3.4 must be maintained.

Honors students are encouraged to present their research through the School of Earth Sciences Annual Research Review, which highlights undergraduate and graduate research in the school during the annual visit of the School of Earth Sciences external Advisory Board. Faculty advisers are encouraged to sponsor presentation of student research results at professional society meetings.

Coterminal Master's Degree in Earth Systems

The Stanford coterminal degree plan enables an undergraduate to embark on an integrated program of study leading to the master's degree before requirements for the bachelor's degree have been completed. Undergraduates majoring in Earth Systems, or a related field, may apply to work simultaneously toward their Bachelor's of Science (B.S.) degree and Master's of Science (M.S.) degree in Earth Systems. The M.S. degree in Earth Systems allows increased specialization through additional course work that may include up to nine units of research with the master's adviser. This may culminate in the preparation of a M.S. thesis; however, a thesis is not required for the degree. All coterminal M.S. students are required to take the capstone course, EARTHSYS 290 Master's Seminar.

Application and Admission

To apply, complete and return the following to the Earth Systems office:

- The Stanford coterminal application (<http://studentaffairs.stanford.edu/sites/default/files/CotermApplic.pdf>)
- A statement of purpose
- A resume
- A current Stanford unofficial transcript
- Two letters of recommendation, one of which must be from the M.S. adviser (who must be an Academic Council member)
- A list of courses that fulfill degree requirements signed by the M.S. adviser and the Director of Earth Systems

1. Applications must be submitted no later than the quarter prior to the expected completion of the B.S. degree (check with program office for specific application deadline). An application fee is assessed by the Registrar's Office for coterminal applications, once students are matriculated into the program.
2. Students applying to the coterminal M.S. program must have completed a minimum of 120 units toward graduation with a minimum overall Stanford GPA of 3.4.
3. All applicants must devise a program of study that shows a level of specialization appropriate to the master's level, as determined in consultation with the M.S. adviser and the Director of Earth Systems.
4. Students applying from an undergraduate major other than Earth Systems should review their undergraduate course list with Kevin Arrigo, Richard Nevle, Deana Fabbro-Johnston, Katie Phillips, or Julie Kennedy.
5. The student has the option of receiving the B.S. degree after completing that degree's requirements or receiving the B.S. and M.S. degrees concurrently at the completion of the M.S. program.

Degree Requirements

These specific requirements must be fulfilled to receive an M.S. degree in Earth Systems:

- A minimum of 45 units of course work and/or research credit (upon approval).
- At least 34 units of the student's course work for the M.S. must be at the 200-level or above.
- All remaining course work must be at the 100-level or above.
- All courses for the M.S. degree must be taken for a letter grade; courses not taken for a letter grade must be approved by the M.S. adviser and Director of Earth Systems.
- A minimum overall GPA of 3.4 must be maintained.
- The following courses must be taken if not completed in your undergraduate degree program (these may not be counted as part of the 45-unit M.S. degree):

	Units
Core (both required):	8
EARTHSYS 111 Biology and Global Change	
EARTHSYS 112 Human Society and Environmental Change	
Biology (select one of the following):	4-10
BIO 41 Genetics, Biochemistry, and Molecular Biology	
BIO 43 Plant Biology, Evolution, and Ecology	
BIOHOPK 43 Plant Biology, Evolution, and Ecology	
BIO 101 Ecology	
HUMBIO 2A Genetics, Evolution, and Ecology & HUMBIO 2B and Culture, Evolution, and Society	
EARTHSYS 116 Ecology of the Hawaiian Islands	
Chemistry (select one of the following):	5-10
CHEM 31X Chemical Principles Accelerated	
CHEM 31A Chemical Principles I & CHEM 31B and Chemical Principles II	
Physics (select one of the following):	3-4
One physics class from the PHYSICS 20 or 40 series	
Mathematics (select one of the following):	5
MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CME 100 Vector Calculus for Engineers	

Statistics (select one of the following):

3-5

BIOHOPK 174H	Experimental Design and Probability
BIO 141	Biostatistics
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists
STATS 110	Statistical Methods in Engineering and the Physical Sciences
STATS 116	Theory of Probability

University requirements for the coterminal M.S. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the "Procedures for Coterminal Students (<http://studentaffairs.stanford.edu/registrar/students/coterm>)" web site.

Director: Kevin Arrigo

Deputy Director: Richard Nevle

Associate Director: Deana Fabbro-Johnston

Affiliated Faculty and Lecturers: Patrick Archie (Earth Systems, Environmental Earth System Science), Nicole Ardoin (School of Education, Woods Institute for the Environment), Kevin Arrigo (Earth Systems, Environmental Earth System Science), Gregory Asner (Department of Global Ecology, Carnegie Institution), Greg Beroza (Geophysics), Barbara Block (Biology, Hopkins Marine Station, Woods Institute for the Environment), Alexandria Boehm (Civil and Environmental Engineering), Gordon Brown (Geological and Environmental Sciences), Marshall Burke (Environmental Earth System Science), Ken Caldeira (Environmental Earth System Science), Margaret Caldwell (Law, Woods Institute for the Environment), Karen Casciotti (Environmental Earth System Science), Page Chamberlain (Environmental Earth System Science), Lisa Curran (Anthropology, Woods Institute for the Environment), Gretchen Daily (Biology, Woods Institute for the Environment), Jenna Davis (Civil and Environmental Engineering, Woods Institute for the Environment), Mark Denny (Biology, Hopkins Marine Station), Noah Diffenbaugh (Environmental Earth System Science, Woods Institute for the Environment), Rodolfo Dirzo (Biology, Woods Institute for the Environment), Robert Dunbar (Environmental Earth System Science, Woods Institute for the Environment), Debra Dunn (Earth Systems, Hasso Plattner Institute of Design), William Durham (Anthropology, Woods Institute for the Environment), Louis Durlafsky (Energy Resources Engineering), Bradley Eichelberger (Woods Institute for the Environment), Gary Ernst (Geological and Environmental Sciences, emeritus), Walter Falcon (Freeman Spogli Institute for International Studies, emeritus, Woods Institute for the Environment), Scott Fendorf (Environmental Earth System Science, Woods Institute for the Environment, Precourt Institute for Energy), Christopher Field (Department of Global Ecology, Carnegie Institution, Woods Institute for the Environment), Derek Fong (Civil and Environmental Engineering), Christopher Francis (Environmental Earth System Science, Woods Institute for the Environment), Zephyr Frank (History, Woods Institute for the Environment), David Freyberg (Civil and Environmental Engineering, Woods Institute for the Environment), Tad Fukami (Biology), Margot Gerritsen (Energy Resources Engineering), Theo Gibbs-Plessl (Earth Systems), Deborah Gordon (Biology, Woods Institute for the Environment), Steven Gorelick (Environmental Earth System Science, Woods Institute for the Environment), Elizabeth Hadly (Biology, Woods Institute for the Environment), Thomas Hayden (Environmental Earth System Science), George Hilley (Geological and Environmental Sciences), Robert Jackson (Environmental Earth System Science, Woods Institute for the Environment), David Kennedy (History, emeritus, Woods Institute for the Environment), Donald Kennedy (Biology, Freeman Spogli Institute for International Studies, emeritus, Woods Institute for the Environment), Julie Kennedy (Earth Systems, Environmental Earth System Science, Woods Institute for the Environment), Karl Knapp (Atmosphere and Energy Operations),

Rosemary Knight (Geophysics, Woods Institute for the Environment), Jeffrey Koseff (Civil and Environmental Engineering, Woods Institute for the Environment), Anthony Kovscek (Energy Resources Engineering), Eric Lambin (Environmental Earth System Science, Woods Institute for the Environment), David Lobell (Environmental Earth System Science, Woods Institute for the Environment), Gilbert Masters (Civil and Environmental Engineering), Pamela Matson (Dean, School of Earth Sciences, Freeman Spogli Institute for International Studies, Woods Institute for the Environment), Anna Michalak (Environmental Earth System Science), Fiorenza Micheli (Hopkins Marine Station), Stephen Monismith (Civil and Environmental Engineering, Woods Institute for the Environment), Ian Monroe (Earth Systems), Harold Mooney (Biology, emeritus, Woods Institute for the Environment), Rosamond Naylor (Environmental Earth System Science, Freeman Spogli Institute for International Studies, Woods Institute for the Environment), Richard Neve (Earth Systems), Julia Novy-Hildesley (Earth Systems), Stephen Palumbi (Biology, Hopkins Marine Station, Woods Institute for the Environment), Jonathan Payne (Geological and Environmental Sciences), Kathleen Phillips (Earth Systems), Bala Rajaratnam (Environmental Earth System Science, Statistics), Thomas Robinson (Medicine), Terry Root (Biology, Woods Institute for the Environment), Matt Rothe (Earth Systems, Hasso Plattner Institute of Design, Graduate School of Business), Paul Segall (Geophysics), Deborah Sivas (Law), George Somero (Biology, Hopkins Marine Station), James Sweeney (Management Science and Engineering, Woods Institute for the Environment), Leif Thomas (Environmental Earth System Science), Nancy Thomas (Environmental Earth System Science), Barton Thompson, Junior (Law, Woods Institute for the Environment), Tiziana Vanorio (Geophysics), Peter Vitousek (Biology, Emmett Interdisciplinary Program in Environment and Resources, Woods Institute for the Environment), Virginia Walbot (Biology), Paula Welander (Environmental Earth System Science), Cindy Wilber (Jasper Ridge), Michael Wilcox (Anthropology), Jane Woodward (Atmosphere and Energy Operations), Mark Zoback (Geophysics)

Overseas Studies Courses in Earth Systems

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPAUSTL 10	Coral Reef Ecosystems	3
OSPAUSTL 25	Freshwater Systems	3
OSPAUSTL 30	Coastal Forest Ecosystems	3
OSPBEIJ 35	Toward a Sustainable Future: China's Environmental Challenges	4
OSPCPTWN 49	Water in South Africa: Human Right, Public Trust, or Market Commodity?	4
OSPFLOR 52	Mass Extinctions and the Geology of Italy	4
OSPKYOTO 45	Japan's Energy-Environment Conundrum	4-5
OSPMADRD 79	Earth and Water Resources' Sustainability in Spain	4
OSPSANTG 31	The Chilean Energy System: 30 Years of Market Reforms	4-5
OSPSANTG 58	Living Chile: A Land of Extremes	5
OSPSANTG 85	Marine Ecology of Chile and the South Pacific	5

Environmental Courses List

Units

AA 116Q	Electric Automobiles and Aircraft
AA 260	Sustainable Aviation
AFRICAAM 16N	African Americans and Social Movements
AFRICAAM 47	History of South Africa
AFRICAAM 147	History of South Africa
AFRICAST 112	AIDS, Literacy, and Land: Foreign Aid and Development in Africa
AFRICAST 141A	Science, Technology, and Medicine in Africa
AMSTUD 1B	Media, Culture, and Society
AMSTUD 124A	The American West
ANTHRO 11SC	Conservation and Development Dilemmas in the Amazon
ANTHRO 31	Ecology, Evolution, and Human Health
ANTHRO 90C	Theory of Ecological and Environmental Anthropology
ANTHRO 113	Faunal Analysis: Animal Remains for the Archaeologist
ANTHRO 117	Thinking Through Animals
ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii
ANTHRO 119	Zooarchaeology: An Introduction to Faunal Remains
ANTHRO 125	Language and the Environment
ANTHRO 130B	Introduction to GIS in Anthropology
ANTHRO 137	The Politics of Humanitarianism
ANTHRO 141A	Science, Technology, and Medicine in Africa
ANTHRO 147	Nature, Culture, Heritage
ANTHRO 155	Research Methods in Ecological Anthropology
ANTHRO 160	Social and Environmental Sustainability: The Costa Rican Case
ANTHRO 161	Human Behavioral Ecology
ANTHRO 162	Indigenous Peoples and Environmental Problems
ANTHRO 163	Conservation and Evolutionary Ecology
ANTHRO 164	Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes
ANTHRO 164A	Anthropology of Ecotourism
ANTHRO 165	Parks and Peoples: The Benefits and Costs of Protected Area Conservation
ANTHRO 165A	People and Parks: Management of Protected Areas
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
ANTHRO 167A	A Wilderness Empire: The Political Ecology of California
ANTHRO 168	Everest: Extreme Anthropology
ANTHRO 168A	Risky Environments: The Nature of Disaster

ANTHRO 169	The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet	BIO 10AX	Conservation Photography
ANTHRO 173	Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice	BIO 10SC	Natural History, Marine Biology, and Research
ANTHRO 177	Environmental Change and Emerging Infectious Diseases	BIO 11N	Biotechnology in Everyday Life
ANTHRO 213	Faunal Analysis: Animal Remains for the Archaeologist	BIO 12N	Sensory Ecology of Marine Animals
ANTHRO 219	Zooarchaeology: An Introduction to Faunal Remains	BIO 13N	Environmental Problems and Solutions
ANTHRO 225	Language and the Environment	BIO 15N	Environmental Literacy
ANTHRO 237	The Politics of Humanitarianism	BIO 18Q	Plant Evolutionary Ecology
ANTHRO 247	Nature, Culture, Heritage	BIO 22Q	Infection, Immunity, and Global Health

Emmett Interdisciplinary Program in Environment and Resources (E-IPER)

Courses offered by the Emmett Interdisciplinary Program in Environment and Resources are listed under the subject code ENVRES on the Stanford Bulletin's ExploreCourses web site (<http://explorecourses.stanford.edu/search;jsessionid=75B13D9BD401BF4435773811DC678716?view=catalog&catalog=&page=0&q=ENVRES&filter-catalognumber-ENVRES=on&filter-coursestatus-Active=on>).

Mission of the Program

The Emmett Interdisciplinary Program in Environment and Resources develops the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges. E-IPER strives to be a model for interdisciplinary graduate education. E-IPER offers a Ph.D. in Environment and Resources and a Joint M.S., the latter exclusively for students in Stanford's Graduate School of Business or Stanford Law School. E-IPER also offers a Dual M.S. for students in the School of Medicine. E-IPER's

home is the School of Earth Sciences; affiliated faculty come from all seven Stanford schools.

Graduate Programs in Environment and Resources

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 43)" section of this bulletin. The E-IPER Ph.D. and M.S. degrees are guided by comprehensive requirements created with faculty and student input and approved by E-IPER's Executive Committee. To access the current Ph.D. and M.S. degree requirement documents, see the E-IPER web site.

Learning Outcomes (Graduate)

Completion of the Ph.D. and M.S. degrees in Environment and Resources provides students with the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges.

Master of Science in Environment and Resources

Students may not apply directly for the M.S. in Environment and Resources degree. The M.S. is an option exclusively for M.B.A. students in the Graduate School of Business, J.D. students in the Stanford Law School, and M.D. students in the School of Medicine; in special cases for students pursuing a Ph.D. in another Stanford department; or for E-IPER Ph.D. students who do not continue in the Ph.D. degree program.

Joint Master's Degree

Students enrolled in a professional degree program in Stanford's Graduate School of Business or the Stanford Law School are eligible to apply for admission to the Joint M.S. in Environment and Resources Degree Program (JDP). Enrollment in the Joint M.S. Program allows students to pursue an M.S. degree concurrently with their professional degree and to count a defined number of units toward both degrees, resulting in the award of Joint M.B.A. and M.S. in Environment and Resources degree or a joint J.D. and M.S. in Environment and Resources degree.

The Joint M.B.A./M.S. degree program requires a total of 129 units to be completed over approximately eight academic quarters (compared to 105 units for the M.B.A. and 45 units for the M.S. if pursued as separate degrees).

The Joint J.D./M.S. degree program requires a minimum of 111 units, although it is possible that students may need to take additional units to satisfy the degree requirements for both the J.D. and M.S. The Joint J.D./M.S. may be completed in three years.

The student's program of study is subject to the approval of the student's faculty adviser and E-IPER staff. The joint degrees are conferred when the requirements for both the E-IPER M.S. and the professional degree programs have been met. For additional information, see the E-IPER website.

In addition to requirements for the professional degree, all Joint M.S. students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree.

1. Completion of a required introductory core course and a capstone project seminar:

ENVRES 280 Introduction to Environmental Science

Units

2

ENVRES 290	Capstone Project Seminar in Environment and Resources *	1-3
------------	---	-----

* The capstone project integrates the student's professional and M.S. degrees.

2. Completion of a minimum of four letter-graded courses from one Joint M.S. Course Track (specific track course listings below):
 - a. Energy
 - b. Climate and Atmosphere
 - c. Cleantech
 - d. Land Use and Agriculture
 - e. Oceans and Estuaries
 - f. Freshwater
 - g. Global, Community, and Environmental Health
 - h. Sustainable Built Environment
 - i. Sustainable Design
3. Completion of at least four additional 3-5 unit letter-graded elective courses at the 100-level or higher, which may be taken from one or more Course Tracks or elsewhere in the University.

Among the courses fulfilling the M.S. requirements, completion of at least 23 units at the 200-level or above.

Additional restrictions on course work that may fulfill the Joint M.S. degree include:

- A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar or the Environmental Law Workshop, may be counted toward the joint M.S. degree.
- A maximum of 4 units of individual study courses, directed reading and independent research units (such as ENVRES 398 Directed Individual Study in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources). One individual study course, if taken for 3-4 units, can be counted as one of the four elective courses.
- A maximum of 12 units from approved courses related to the environmental and resource fields from any professional school.

Dual Master's Degree

Students in the School of Medicine, or in special cases, students pursuing a Ph.D. in another Stanford department may apply to pursue the M.S. in Environment and Resources dual degree. For the dual degree, students must meet the University's minimum requirements for their stand-alone degree and also complete an additional 45 units for the M.S. in Environment and Resources. The student's program of study is subject to the approval of the student's faculty adviser and E-IPER staff. Completion of the M.S. is anticipated to require at least three quarters in addition to the quarters required for the student's other degree. For additional information, see the E-IPER website.

The student's program of study is subject to the approval of the student's faculty adviser and E-IPER staff. The two degrees are conferred when the requirements for both the E-IPER M.S. and the professional degree programs have been met. For application information, see the Admissions (<https://pangea.stanford.edu/programs/eiper/admissions>) page on the E-IPER website.

In addition to requirements for the stand-alone degree, students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree.

1. Completion of a required introductory core course and a capstone project seminar:

ENVRES 280	Introduction to Environmental Science	2
------------	---------------------------------------	---

Units
2

ENVRES 290	Capstone Project Seminar in Environment and Resources *	1-3
------------	---	-----

* The capstone project integrates the student's professional and M.S. degrees.

2. Completion of a minimum of four letter-graded courses from one M.S. Course Track (specific track course listings below):
 - Energy
 - Climate and Atmosphere
 - Cleantech
 - Land Use and Agriculture
 - Oceans and Estuaries
 - Freshwater
 - Global, Community, and Environmental Health
 - Sustainable Built Environment
 - Sustainable Design
3. Completion of at least four additional 3-5 unit letter-graded elective courses at the 100-level or higher, which may be taken from one or more Course Tracks or elsewhere in the University.

Among the courses fulfilling the M.S. requirements, completion of at least 23 units at the 200-level or above. .

Additional restrictions on course work that may fulfill the Dual M.S. degree include:

- A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar or the Environmental Law Workshop may be counted toward the Dual M.S. degree.
- A maximum of 4 units of individual study courses, directed reading, and independent research (such as ENVRES 398 Directed Individual Study in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources). One individual study course, if taken for 3-4 units, can be counted as one of the 4 elective courses.
- A maximum of 12 units from approved courses related to the environmental and resource fields from any professional school.

Joint M.S. and Dual M.S. Course Tracks

Students should consult Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site to determine course description, class schedule, location, eligibility, and prerequisites. Course tracks and other recommended courses are also available on the E-IPER website.

POLISCI 337T	Designing Liberation Technology	3-4

Master of Science

In exceptional circumstances, E-IPER offers a Master of Science degree for students in E-IPER's Ph.D. program who opt to complete their training with an M.S. degree or who do not advance to candidacy for the Ph.D. degree. Admission directly to the M.S. program is not allowed. Requirements for the M.S. include:

1. Completion of a minimum of 45 units at or above the 100-level, of which 23 units must be at or above the 200-level.
2. Completion of the E-IPER Ph.D. core curriculum, each with a letter grade of 'B' or higher, comprising:

*Students admitted prior to 2014-15 must consult with E-IPER staff regarding an allowable replacement for this course.

Additional courses may be chosen in consultation with the student's lead advisers. Students may take no more than 6 of the required 45 units credit/no credit and must maintain at least a "B" (3.0) grade point average in all courses taken for the M.S. degree. Directed research and independent study may count for a maximum of 8 units of the 45 required units. The M.S. degree does not have an M.S. with thesis option. Students may write a M.S. thesis, but it is not formally recognized by the University.

Doctor of Philosophy in Environment and Resources

E-IPER's Ph.D. requirements are updated annually and lay out a scaffold of advising meetings, core courses, program activities, and milestones to guide students' progress. Each student works with a faculty advising team from different areas of research to design a course of study that allows the student to develop and exhibit: a) familiarity with analytical tools and research approaches for interdisciplinary problem solving, and a mastery of those tools and approaches central to the student's thesis work; b) interdisciplinary breadth as determined by faculty advisers and student; and c) depth in at least two distinct Fields of Inquiry.

Program-specific Ph.D. requirements are outlined in detail in the current year requirements and are summarized below:

1. In the first year, completion of the Ph.D. core course sequence:

		Units
EARTHSCI 300	Earth Sciences Seminar	1
ENVRES 300	Introduction to Resource, Energy and Environmental Economics	3
ENVRES 315	Environmental Research Design Seminar	1
ENVRES 320	Designing Environmental Research	3-4
ENVRES 330 & ENVRES 398	Research Approaches for Environmental Problem Solving and Directed Individual Study in Environment and Resources	4-12

2. Demonstration of breadth of knowledge related to environment and resources in the form of courses, independent study, and/or evidence of proficiency through prior course work or experience. Fulfillment of interdisciplinary breadth requirement must be certified by the student's lead faculty advisers and committee members.
3. Fulfillment of depth in the student's two chosen fields of inquiry through additional courses, research, and/or independent studies as determined by the student and his/her faculty advisers and committee members. Fields of Inquiry are the central focus of a student's dissertation research. Students have the freedom to define and choose the Fields of Inquiry in which they would like to develop depth of understanding through the course of their Ph.D. and which are distinct enough to ensure that the student's research is interdisciplinary. Each Field of Inquiry must be mapped to a corresponding faculty adviser. As part of their Qualifying Exam, students are required to submit a detailed essay describing: the two Fields of Inquiry, mapping these Fields of Inquiry from the larger disciplines on which their Fields of

Inquiry draw; how rigor is understood and achieved in these Fields; the importance and applicability of these Fields to the student's research questions; and how the student's work will combine these two Fields of Inquiry to yield an interdisciplinary research project achieving scholarly rigor.

4. Completion of quarterly meetings with advisers during the first year, and at minimum, annual meetings thereafter.
5. Submission of a Candidacy Plan by end of Spring Quarter of the second year, for review at the Second Year committee Meeting of the Minds and subject to the approval of E-IPER's Faculty Director. The Candidacy Plan should document how the student has fulfilled the program requirements to date and include a summary of research ideas and a list of faculty who might serve as qualifying exam committee members.
6. Completion of the oral qualifying exam and completion of the requirements for candidacy, including at least 25 letter-graded graduate course units (200 level and above) with at least a "B" (3.0) average, by the end of Winter Quarter of the third year. The oral qualifying exam committee should include the student's two lead advisers and 2-3 other faculty with expertise in the student's research area. The majority of the oral qualifying exam committee should be members of the Academic Council; the chair of the committee must be an Academic Council member and may not be one of the student's two lead advisers. In exceptional cases, the committee may include a member-at-large who is not a Stanford faculty member as a fourth or fifth member.
7. Completion of a written dissertation, approved by the student's dissertation reading committee consisting of the student's lead advisers and at least one other member, and passage of the University oral examination in defense of the dissertation following the guidelines outlined in the "Graduate Degrees" section of this bulletin. The University oral examination committee comprises the student's two lead advisers, at least two additional members, and a chair who is appointed in a department outside that of the lead advisers, all of whom are normally Academic Council members. Appointment of a non-Academic Council member must be petitioned and approved by the Faculty Director.

In addition to the requirements listed above, all Ph.D. students must:

1. Serve as a teaching assistant (TA) for at least one quarter in a course with a discussion section or with an opportunity to lecture in at least two class sessions, in any department or program, including but not limited to ENVRES 320 Designing Environmental Research or ENVRES 330 Research Approaches for Environmental Problem Solving. Seminars, including Introductory Seminars, may not be used to fulfill this requirement. Students should fulfill the teaching requirement by the end of the third year unless they obtain a firm commitment from a faculty member to TA a future course.
2. On an ongoing basis, submit grant proposals for external funding, defined as fellowship and/or research funds provided by a government agency, a private foundation, or a University entity other than E-IPER or the School of Earth Sciences.
3. Participate each year in a Spring Quarter annual review in which the student and lead advisers submit progress reports for review by the E-IPER Academic Guidance Committee.

Faculty Director: Peter Vitousek (Biology)

Associate Director: Deborah Wojcik

Faculty: Nicole Ardoin (Education, Woods Institute for the Environment), Kevin Arrigo (Environmental Earth System Science), Kenneth J. Arrow (Economics, emeritus), Gregory Asner (Global Ecology, Carnegie Institution), Shilajeet Banerjee (Human-Sciences and Technologies Advanced Research Institute), Stephen Barley (Management Science and Engineering), William Barnett (Business), Michele Barry (Medicine, Woods Institute for the Environment), Sally M. Benson (Energy Resources Engineering, Global Climate and Energy Program, Woods Institute for the

Environment), Sarah L. Billington (Civil and Environmental Engineering), Douglas W. Criddle (Civil and Environmental Engineering, Woods Institute for the Environment), Larry B. Crowder (Biology, Woods Institute for the Environment), Lisa Curran (Anthropology, Woods Institute for the Environment), Gretchen C. Daily (Biology, Woods Institute for the Environment), Jennifer Davis (Civil and Environmental Engineering, Woods Institute for the Environment), Noah Diffenbaugh (Environmental Earth System Science, Woods Institute for the Environment), Rodolfo Dirzo (Biology, Woods Institute for the Environment), Robert B. Dunbar (Environmental Earth System Science, Woods Institute for the Environment), William H. Durham (Anthropology, Woods Institute for the Environment), Anne Ehrlich (Biology), Paul Ehrlich (Biology, Woods Institute for the Environment), Gary Ernst (Geological and Environmental Sciences, emeritus), Walter Falcon (Woods Institute for the Environment, Freeman Spogli Institute for International Studies, emeritus), Scott Fendorf (Environmental Earth System Science, Woods Institute for the Environment), James Ferguson (Anthropology), Christopher B. Field (Global Ecology, Carnegie Institution, Woods Institute for the Environment), Martin Fischer (Civil and Environmental Engineering), Zephyr Frank (History), David Freyberg (Civil and Environmental Engineering, Woods Institute for the Environment), Oliver Fringer (Civil and Environmental Engineering), Tadashi Fukami (Biology), Margot Geritsen (Energy Resources Engineering), Steven Gorelick (Environmental Earth System Science, Woods Institute for the Environment), Mark Granovetter (Sociology), Elizabeth Hadly (Biology, Woods Institute for the Environment), Dan Iancu (Business), Mark Jacobson (Civil and Environmental Engineering, Woods Institute for the Environment), James Holland Jones (Anthropology, Woods Institute for the Environment), Terry Karl (Political Science), David Kennedy (History, Woods Institute for the Environment), Donald Kennedy (Biology, Woods Institute for the Environment, emeritus), Julie Kennedy (Environmental Earth System Science, Woods Institute for the Environment), Herve Kieffel (Management Science and Engineering), Brian Knutson (Psychology), Charles D. Kolstad (Stanford Institute for Economic Policy Research, Precourt Institute for Energy), Jeffrey Koseff (Civil and Environmental Engineering, Woods Institute for the Environment), Anthony Kovscek (Energy Resources Engineering), Eric Lambin (Environmental Earth System Science, Woods Institute for the Environment), Raymond Levitt (Civil and Environmental Engineering, Woods Institute for the Environment), David Lobell (Environmental Earth System Science, Woods Institute for the Environment), Stephen P. Luby (Medicine, Woods Institute for the Environment), Richard Luthy (Civil and Environmental Engineering, Woods Institute for the Environment), Janet Martinez (Law), Gilbert M. Masters (Civil and Environmental Engineering, emeritus), Michael D. Mastrandrea (Woods Institute for the Environment), Pamela Matson (Woods Institute for the Environment, Dean, School of Earth Sciences), Douglas McAdam (Sociology), Daniel McFarland (Education), Michael D. McGehee (Materials Science and Engineering), Lynn Meskell (Anthropology), Anna Michalak (Global Ecology, Carnegie Institution), Fiorenza Micheli (Biology), Grant Miller (Medicine), Stephen Monismith (Civil and Environmental Engineering, Woods Institute for the Environment), Harold Mooney (Biology, Woods Institute for the Environment, emeritus), Clayton Nall (Political Science), Rosamond Naylor (Environmental Earth System Science, Woods Institute for the Environment), Leonard Ortolano (Civil and Environmental Engineering), Stephen Palumbi (Biology, Woods Institute for the Environment), Erica Plambeck (Business, Woods Institute for the Environment), Walter W. Powell (Education), Dariush Rafinejad (Management Science and Engineering), Ram Rajagopal (Civil and Environmental Engineering), Hayagreeva Rao (Business), Stefan J. Reichelstein (Business, Woods

Institute for the Environment), Thomas N. Robinson (Medicine), Terry L. Root (Woods Institute for the Environment), Robert Sapolsky (Biology), Debra Satz (Philosophy), Gary Schoolnik (Medicine, Woods Institute for the Environment), Richard Scott (Sociology), Deborah Sivas (Law), Sarah A. Soule (Business), Charles Sprenger (Economics), Stephen Stedman (Freeman Spogli Institute for International Studies), James Sweeney (Management Science and Engineering, Precourt Energy Efficiency Center), Leif Thomas (Environmental Earth System Science), Barton Thompson (Law, Woods Institute for the Environment), Shripad Tuljapurkar (Biology), Peter Vitousek (Biology), Michael Wara (Law, Woods Institute for the Environment), Jeremy Weinstein (Political Science), John Weyant (Management Science and Engineering, Precourt Energy Efficiency Center), Richard White (History), Jennifer Wilcox (Energy Resources Engineering), Michael Wilcox (Anthropology), Mikael Wolfe (History), Mark Zoback (Geophysics)

Energy Resources Engineering

Courses offered by the Department of Energy Resources Engineering are listed under the subject code ENERGY on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENERGY&filter-catalognumber-ENERGY=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENERGY&filter-catalognumber-ENERGY=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENERGY&filter-catalognumber-ENERGY=on>).

The Department of Energy Resources Engineering (ERE) awards the following degrees: the Bachelor of Science, Master of Science, Engineer, and Doctor of Philosophy in Energy Resources Engineering. The department also awards the Master of Science, Engineer, and Doctor of Philosophy in Petroleum Engineering. Consult the ERE student services office to determine the relevant program.

Energy resources engineers are concerned with the design of processes for energy recovery. Included in the design process are characterizing the spatial distribution of hydrocarbon and geothermal reservoir properties, drilling wells, designing and operating production facilities, selecting and implementing methods for enhancing fluid recovery, examining the environmental aspects of petroleum and geothermal exploration and production, monitoring reservoirs, and predicting recovery process performance.

The program also has a strong interest in related energy topics such as renewable energy, global climate change, carbon capture and sequestration, clean energy conversions (e.g., "clean coal"), and energy systems. The Energy Resources Engineering curriculum provides a sound background in basic sciences and their application to practical problems to address the complex and changing nature of the field. Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover most aspects of energy resources engineering and some related fields such as geothermal engineering and geostatistics. The curriculum emphasizes the fundamental aspects of fluid flow in the subsurface. These principles apply equally well to optimizing oil recovery from petroleum reservoirs, geothermal energy production and remediating contaminated groundwater systems.

Faculty and graduate students conduct research in areas including: enhanced oil recovery by thermal means, gas injection, and the use of chemicals; geostatistical reservoir characterization and mathematical modeling; geothermal engineering; natural gas engineering; production optimization;

data assimilation and uncertainty modeling; properties of petroleum fluids; well test analysis; carbon sequestration; clean energy conversions; and energy system modeling and optimization. Undergraduates are encouraged to participate in research projects.

The department is housed in the Green Earth Sciences Building. It operates laboratories for research in enhanced oil recovery processes, geological carbon storage operations, clean energy conversions, and geothermal engineering. Students have access to a variety of computers, computing platforms and software for research and course work.

Mission of the Undergraduate Program in Energy Resources Engineering

The mission of the Energy Resources Engineering major is to provide students with the engineering skills and foundational knowledge needed to flourish as technical leaders within the energy industry. Such skills and knowledge include resource assessment, choices among energy alternatives, and carbon management, as well as the basic scientific background and technical skills common to engineers. The curriculum is designed to prepare students for immediate participation in many aspects of the energy industry and graduate school.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.

Graduate Programs in Energy Resources Engineering

The Energy Resources Engineering department offers two distinct degree programs at both the M.S. and Ph.D. levels. One program leads to the degrees of M.S. or Ph.D. in Petroleum Engineering, and the other leads to the degrees of M.S. or Ph.D. in Energy Resources Engineering. The Engineer degree, which is offered in either Petroleum Engineering or Energy Resources Engineering, is an extended form of the M.S. degree with additional course work and research.

Learning Outcomes (Graduate)

The objective is to prepare students to be technical leaders in the energy industry, academia and research organizations through completion of fundamental courses in the major field and in related sciences, as well as through independent research. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.

- 5. MS students are expected to develop in-depth technical understanding of energy problems at an advanced level.
- 6. Ph.D. students are expected to complete a scientific investigation that is significant, challenging and original.

Bachelor of Science in Energy Resources Engineering

The four-year program leading to the B.S. degree provides a foundation for careers in many facets of the energy industry. The curriculum includes basic science and engineering courses that provide sufficient depth for a wide spectrum of careers in the energy and environmental fields.

One of the goals of the program is to provide experience integrating the skills developed in individual courses to address a significant design problem. In ENERGY 199 Senior Project and Seminar in Energy Resources, taken in the senior year, student teams identify and propose technical solutions for an energy-resource related problem of current interest.

Program

The requirements for the B.S. degree in Energy Resources Engineering are similar, but not identical, to those described in the "School of Engineering" section of this bulletin. Students must satisfy the University general education, writing, and language requirements. The normal Energy Resources Engineering undergraduate program automatically satisfies the University General Education Requirements (GERs) in the Disciplinary Breadth areas of Natural Sciences, Engineering and Applied Sciences, and Mathematics.

Engineering fundamentals courses and Energy Resources Engineering depth and elective courses must be taken for a letter grade.

The Energy Resources Engineering undergraduate curriculum is designed to prepare students for participation in the energy industry or for graduate studies, while providing requisite skills to evolve as the energy landscape shifts over the next half century. The program provides a background in mathematics, basic sciences, and engineering fundamentals such as multiphase fluid flow in the subsurface. In addition, the curriculum is structured with flexibility that allows students to explore energy topics of particular individual interest and to study abroad.

In brief, the unit and subject requirements are:

	Units
Energy Resources Core	15-16
Energy Resources Depth	18
Mathematics	25
Engineering Fundamentals and Depth	20-24
Science	29-32
Technology in Society	3-5
University Requirements: IHUM, GERs, Writing, Language	60-70
Total Units	170-190

The following courses constitute the normal program leading to a B.S. in Energy Resources Engineering. The program may be modified to meet a particular student's needs and interests with the advisor's prior approval.

Required Core in Energy Resources Engineering

The following courses constitute the core program in Energy Resources Engineering

ENERGY 101	Energy and the Environment	3
ENERGY 104	Transition to sustainable energy systems	3

ENERGY 120	Fundamentals of Petroleum Engineering	3
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3
ENERGY 199	Senior Project and Seminar in Energy Resources (WIM)	3-4

Mathematics

Select one of the following Series (A or B): 10

Series A

MATH 41	Calculus	
MATH 42	Calculus	

Series B

MATH 19	Calculus	
MATH 20	Calculus	
MATH 21	Calculus	

And the following (CME series recommended):

CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	

CME 102	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	

CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
---------	---	---

or MATH 52 Integral Calculus of Several Variables

Science

CHEM 31A	Chemical Principles I	5
or CHEM 31X	Chemical Principles Accelerated	

CHEM 31B	Chemical Principles II	5
or CHEM 31X	Chemical Principles Accelerated	

CHEM 33	Structure and Reactivity	5
---------	--------------------------	---

PHYSICS 41	Mechanics	4
------------	-----------	---

PHYSICS 43	Electricity and Magnetism	4
------------	---------------------------	---

PHYSICS 45	Light and Heat	4
------------	----------------	---

PHYSICS 46	Light and Heat Laboratory	1
------------	---------------------------	---

GES 1A	Introduction to Geology: The Physical Science of the Earth	4-5
--------	--	-----

or GES 1C Introduction to Geology: Dynamic Earth

Engineering Fundamentals

CS 106A	Programming Methodology	3-5
or CS 106X	Programming Abstractions (Accelerated)	

CS 106B	Programming Abstractions	3-5
or CS 106X	Programming Abstractions (Accelerated)	

ENGR 14	Intro to Solid Mechanics	4
---------	--------------------------	---

ENGR 30	Engineering Thermodynamics	3
---------	----------------------------	---

CEE 146A	Engineering Economy	3
----------	---------------------	---

or ECON 155	Environmental Economics and Policy	
-------------	------------------------------------	--

or ECON 250	Environmental Economics	
-------------	-------------------------	--

or ECON 251	Natural Resource and Energy Economics	
-------------	---------------------------------------	--

ME 70	Introductory Fluids Engineering	4
-------	---------------------------------	---

Technology in Society, 1 course

Earth and Energy Depth Concentration

Choose courses from the list below for a total of at least 18 units. At least one course must be completed in each category. Courses must be planned in consultation with the student's academic advisor. Appropriate substitutions are allowed with the consent of the advisor.

Units

Fluid Flow and the Subsurface

Units

ENERGY 120A	Flow Through Porous Media Laboratory	1
ENERGY 121	Fundamentals of Multiphase Flow	3
ENERGY 130	Well Log Analysis I	3
ENERGY 175	Well Test Analysis	3
ENERGY 180	Oil and Gas Production Engineering	3
ENGR 62	Introduction to Optimization	4
GEOPHYS 181	Fluids and Flow in the Earth: Computational Methods	3
3D Modeling of Subsurface Structures		
ENERGY 125	Modeling and Simulation for Geoscientists and Engineers	3
ENERGY 141	Seismic Reservoir Characterization	3-4
ENERGY 146	Reservoir Characterization and Flow Modeling with Outcrop Data	3
GEOPHYS 112	Exploring Geosciences with MATLAB	1-3
GEOPHYS 182	Reflection Seismology	3
GES 151	Sedimentary Geology and Petrography: Depositional Systems	4
GEOPHYS 183	Reflection Seismology Interpretation	1-4
GEOPHYS 185	Rock Physics for Reservoir Characterization	3
GEOPHYS 186	Tectonophysics & Global Tectonics	3
Earth and Energy Systems		
ENERGY 102	Renewable Energy Sources and Greener Energy Processes	3
ENERGY 153	Carbon Capture and Sequestration	3-4
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 191	Optimization of Energy Systems	3-4
ENERGY 301	The Energy Seminar	1
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	3
CEE 70	Environmental Science and Technology	3
CEE 176B	Electric Power: Renewables and Efficiency	3-4
GEOPHYS 150	Geodynamics: Our Dynamic Earth	3
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
GEOPHYS 120	Ice, Water, Fire	3-5
GEOPHYS 150	Geodynamics: Our Dynamic Earth	3

Honors Program

The program in Energy Resources Engineering leading to the Bachelor of Science with Honors provides an opportunity for independent study and research on a topic of special interest and culminates in a written report and oral presentation.

The Honors Program is open to students with a grade point average (GPA) of at least 3.5 in all courses required for the ERE major and minimum of 3.0 in all University course work. Qualified students intending to pursue honors must submit an Honors Program Application to the Undergraduate Program Director no later than the eighth week of their ninth quarter, but students are encouraged to apply to the program during Winter Quarter of their junior year. The application includes a short form, an unofficial transcript, and a 2-3 page research proposal prepared by the student and endorsed by a faculty member who will serve as the research advisor.

Upon approval, students enroll in the Honors Program via Axxess. Students must enroll in a total of 9 units of ENERGY 193 Undergraduate Research Problems; these units may be spread out over the course of the senior year, and may include previous enrollment units for the same research project. Research undertaken for the Honors Program cannot be used as a substitute for regularly required courses. A formal written report must be submitted to the student's research advisor no later than the fourth week of the student's

final quarter, and the report must be read, approved, and signed by the student's faculty advisor and a second member of the faculty. Each honors candidate must make an oral presentation of his or her research results.

Minor in Energy Resources Engineering

The minor in Energy Resources Engineering requires the following three courses plus three additional electives. Courses must be planned in consultation with an ERE advisor. Appropriate substitutions are allowed with the consent of the advisor.

Required courses

		Units
ENERGY 101	Energy and the Environment	3
ENERGY 120	Fundamentals of Petroleum Engineering	3
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3

Elective courses

Select at least three of the following:

ENERGY 102	Renewable Energy Sources and Greener Energy Processes	
ENERGY 104	Transition to sustainable energy systems	
ENERGY 121	Fundamentals of Multiphase Flow	
ENERGY 125	Modeling and Simulation for Geoscientists and Engineers	
ENERGY 130	Well Log Analysis I	
ENERGY 141	Seismic Reservoir Characterization	
ENERGY 146	Reservoir Characterization and Flow Modeling with Outcrop Data	
ENERGY 153	Carbon Capture and Sequestration	
ENERGY 269	Geothermal Reservoir Engineering	
ENERGY 175	Well Test Analysis	
ENERGY 180	Oil and Gas Production Engineering	
GEOPHYS 182	Reflection Seismology	
GES 151	Sedimentary Geology and Petrography: Depositional Systems	

Master of Science in Petroleum Engineering

The objective is to prepare the student for professional work in the energy industry, or for doctoral studies, through completion of fundamental courses in the major field and in related sciences as well as independent research.

Students entering the graduate program are expected to have an undergraduate-level engineering or physical science background. Competence in computer programming in a high-level language (CS 106X Programming Abstractions (Accelerated) or the equivalent) and knowledge of engineering and geological fundamentals (ENERGY 120 Fundamentals of Petroleum Engineering, ENERGY 130 Well Log Analysis I, and GES 151 Sedimentary Geology and Petrography: Depositional Systems) are prerequisites for taking most graduate courses.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.0
3. a grade point average (GPA) of 2.7 each quarter
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to 'NP' (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student's adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

A balanced master's degree program including engineering course work and research requires a minimum of one maximum-tuition academic year beyond the baccalaureate to meet the University residence requirements. Most full-time students spend at least one additional summer to complete the research requirement. An alternative master's degree program based only on course work is available, also requiring at least one full tuition academic year to meet University residence requirements.

M.S. students who anticipate continuing in the Ph.D. program should follow the research option. M.S. students receiving financial aid normally require two academic years to complete the degree. Such students must take the research option.

The candidate must fulfill the following requirements:

1. Register as a graduate student for at least 45 units.
2. Submit a program proposal for the Master's degree approved by the adviser during the first quarter of enrollment.
3. Complete 45 units with a grade point average (GPA) of at least 3.0. This requirement is satisfied by taking the core sequence, selecting one of the seven elective sequences, an appropriate number of additional courses from the list of technical electives, and completing 6 units of master's level research. Students electing the course work only M.S. degree are strongly encouraged to select an additional elective sequence in place of the research requirement. Students interested in continuing for a Ph.D. are expected to choose the research option and enroll in 6 units of ENERGY 361 Master's Degree Research in Energy Resources Engineering. All courses must be taken for a letter grade.
4. Students entering without an undergraduate degree in Petroleum Engineering must make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units toward the M.S. degree.

Research subjects include certain groundwater hydrology and environmental problems, energy industry management, flow of non-Newtonian fluids, geothermal energy, natural gas engineering, oil and gas recovery, pipeline transportation, production optimization, reservoir

characterization and modeling, carbon sequestration, reservoir engineering, reservoir simulation, and transient well test analysis.

Recommended Courses and Sequences

The following list is recommended for most students. With the prior special consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

Core Sequence

		Units
ENERGY 175	Well Test Analysis	3
or ENERGY 130	Well Log Analysis I	
ENERGY 221	Fundamentals of Multiphase Flow	3
ENERGY 222	Advanced Reservoir Engineering ¹	3
ENERGY 246	Reservoir Characterization and Flow Modeling with Outcrop Data	3
ENERGY 251	Thermodynamics of Equilibria ²	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
Total Units		21

Elective Sequence

		Units
Select one of the following Series:		9-14
Crustal Fluids:		
GEOPHYS 200	Fluids and Flow in the Earth: Computational Methods	
EESS 220	Physical Hydrogeology	
EESS 221	Contaminant Hydrogeology and Reactive Transport	
Environmental:		
ENERGY 227	Enhanced Oil Recovery	
EESS 221	Contaminant Hydrogeology and Reactive Transport	
And two of the following:		
ENERGY 240	Geostatistics	
ENERGY 260	Modeling Uncertainty in the Earth Sciences	
CEE 270	Movement and Fate of Organic Contaminants in Waters	
CEE 273	Aquatic Chemistry	
CEE 274A	Environmental Microbiology I	
Enhanced Recovery:		
EESS 220	Physical Hydrogeology	
ENERGY 225	Theory of Gas Injection Processes	
ENERGY 226	Thermal Recovery Methods	
ENERGY 227	Enhanced Oil Recovery	
Geostatistics and Reservoir Modeling:		
ENERGY 240	Geostatistics	
ENERGY 241	Seismic Reservoir Characterization	
GEOPHYS 182	Reflection Seismology	
or GEOPHYS 262	Rock Physics	
Geothermal:		
ENERGY 269	Geothermal Reservoir Engineering	
or ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	

CHEMENG 120B	Energy and Mass Transport
ME 131A	Heat Transfer
Reservoir Performance:	
ENERGY 223	Reservoir Simulation
ENERGY 280	Oil and Gas Production Engineering
GEOPHYS 202	Reservoir Geomechanics
Simulation and Optimization:	
ENERGY 223	Reservoir Simulation
ENERGY 224	Advanced Reservoir Simulation
ENERGY 284	Optimization and Inverse Modeling
Renewable Energy:	
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
ENERGY 293B	Fundamentals of Energy Processes
ENERGY 293C	Energy from Wind and Water Currents
Total Units	9-14

Research Sequence

ENERGY 361	Master's Degree Research in Energy Resources Engineering ¹	1-6
Total Units		1-6

¹ Students choosing the company sponsored course-work-only for the M.S. degree may substitute an additional elective sequence in place of the research.

Technical Electives

Technical electives from the following list of advanced-level courses usually complete the M.S. program. In unique cases, when justified and approved by the adviser prior to taking the course, courses listed here may be substituted for courses listed above in the elective sequences.

		Units
ENERGY 130	Well Log Analysis I	3
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 230	Advanced Topics in Well Logging	3
ENERGY 260	Modeling Uncertainty in the Earth Sciences	3
ENERGY 267	Engineering Valuation and Appraisal of Oil and Gas Wells, Facilities, and Properties	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 273	Special Topics in Energy Resources Engineering	1-3
ENERGY 280	Oil and Gas Production Engineering	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3
ENERGY 301	The Energy Seminar	1
CME 204	Partial Differential Equations in Engineering	3
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3

GEOPHYS 190	Near-Surface Geophysics	3
GEOPHYS 202	Reservoir Geomechanics	3

Master of Science in Energy Resources Engineering

The objective of the M.S. degree in Energy Resources Engineering is to prepare the student either for a professional career or for doctoral studies. Students in the M.S. degree program must fulfill the following:

- Complete a 45-unit program of study. The degree has two options:
 - a course work degree, requiring 45 units of course work
 - a research degree, of which a minimum of 39 units must be course work, with the remainder consisting of no more than 6 research units.
- Course work units must be divided among two or more scientific and/or engineering disciplines and can include the core courses required for the Ph.D. degree.
- All courses must be taken for a letter grade.
- The program of study must be approved by the academic adviser and the department graduate program committee.
- Students taking the research-option degree are required to complete an M.S. thesis, approved by the student's thesis committee.

Recommended Courses and Sequences

The following list is recommended for most students. With the prior consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

Core Sequence

		Units
ENERGY 221	Fundamentals of Multiphase Flow	3
ENERGY 246	Reservoir Characterization and Flow Modeling with Outcrop Data	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
mse 248		
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
Total Units		21-22

Subject Sequence Alternatives

Coterminal B.S. and M.S. Program in Energy Resources Engineering

The coterminal B.S./M.S. program offers an opportunity for Stanford University students to pursue a graduate experience while completing the B.S. degree in any relevant major. Energy Resources Engineering graduate students generally come from backgrounds such as chemical, civil, or mechanical engineering; geology or other earth sciences; or physics or chemistry. Students should have a background at least through MATH 53 Ordinary Differential Equations with Linear Algebra and CS 106A Programming Methodology before beginning graduate work in this program.

The two types of M.S. degrees, the course work only degree and the research degree, as well as the courses required to meet degree requirements, are described below in the M.S. section. Both degrees require 45 units and may take from one to two years to complete depending on circumstances unique to each student.

Requirements to enter the program are: two letters of recommendation from faculty members or job supervisors, a statement of purpose, scores from the GRE general test, and a copy of Stanford University transcripts. While the department does not require any specific GPA or GRE score, potential applicants are expected to compete favorably with graduate student applicants.

A Petroleum Engineering or Energy Resources Engineering master's degree can be used as a terminal degree for obtaining a professional job in the petroleum or energy industries, or in any related industry where analyzing flow in porous media or computer simulation skills are required. It can also be a stepping stone to a Ph.D. degree, which usually leads to a professional research job or an academic position.

Students should apply to the program any time after they have completed 105 undergraduate units, and in time to take ENERGY 120 Fundamentals of Petroleum Engineering, the basic introductory course in Autumn Quarter of the year they wish to begin the program. Contact the Department of Energy Resources Engineering to obtain additional information.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Doctor of Philosophy in Petroleum Engineering or Energy Resources Engineering

The Ph.D. degree is conferred upon demonstration of high achievement in independent research and by presentation of the research results in a written dissertation and oral defense.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.25
3. a grade point average (GPA) of 2.7 each quarter
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to 'NP' (not passed) at the end of the

quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student's adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

The Ph.D. degree is awarded primarily on the basis of completion of significant, original research. Extensive course work and a minimum of 90 units of graduate work beyond the master's degree are required. Doctoral candidates planning theoretical work are encouraged to gain experimental research experience in the M.S. program. Ph.D. students receiving financial assistance are limited to 10 units per quarter and often require more than three years to complete the Ph.D. beyond the M.S. degree.

In addition to University and the Department of Energy Resources Engineering basic requirements for the doctorate, the Petroleum Engineering Ph.D. and Energy Resources Engineering Ph.D. degrees have the following requirements:

1. Students must complete a minimum of 36 course units and a minimum of 36 research units (a total of 90 units) beyond the M.S. degree. The research adviser may specify additional courses beyond the minimum requirements. At least half of the classes must be at a 200 level or higher and all must be taken for a letter grade. Students with an M.S. degree or other specialized training from outside ERE are generally expected to include ENERGY 221 Fundamentals of Multiphase Flow, and ENERGY 240 Geostatistics, or their equivalents. The number and distribution of courses to be taken is determined with input from the research advisers and department graduate program committee.
2. To achieve candidacy (usually during or at the end of the first year of enrollment), the student must complete 24 units of letter-graded course work beyond the M.S. degree, develop a written Ph.D. research proposal, and choose a dissertation committee.
3. The research adviser(s) and two other faculty members comprise the dissertation reading committee. Upon completion of the dissertation, the student must pass a University oral examination in defense of the dissertation.
4. Complete 135 units of total graduate work (usually 90 units beyond the M.S. degree).
5. Act as a teaching assistant at least once, and enroll in ENERGY 359 Teaching Experience in Energy Resources Engineering.

36 units of course work is a minimum; in some cases the research adviser may specify additional requirements to strengthen the student's expertise in particular areas. The 36 units of course work does not include required teaching experience (ENERGY 359 Teaching Experience in Energy Resources Engineering) nor required research seminars. Courses must be taken for a letter grade, and a grade point average (GPA) of at least 3.25 must be maintained.

The dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Candidates who fail to meet

this deadline must submit an Application for Extension of Candidacy for approval by the department chair if they wish to continue in the program.

Ph.D. students entering the department are required to hold an M.S. degree in a relevant science or engineering discipline. Students wishing to follow the Ph.D. program in Petroleum Engineering must hold an M.S. degree (or equivalent) in Petroleum Engineering. Students following the Ph.D. program in Energy Resources Engineering must hold an M.S. degree (or equivalent), although it need not be in Energy Resources Engineering.

After the second quarter at Stanford, a faculty committee evaluates the student's progress. If a student is found to be deficient in course work and/or research, a written warning is issued. After the third quarter, the faculty committee decides whether or not funding should be continued for the student. Students denied funding after the third quarter are advised against proceeding with the Ph.D. proposal, though the student may choose to proceed under personal funding.

Ph.D. Degree Qualification

The procedure for Ph.D. qualification is identical for individuals who entered the department as an M.S. or a Ph.D. student. For students completing an MS in the department, the student formally applies to the Ph.D. program in the second year of the M.S. degree program. The student is considered for admission to the Ph.D. program along with external applicants. The admission decision is based primarily upon research progress and course work.

There are two steps to the qualification procedure. Students first take a preliminary written exam that is offered at the beginning of Autumn Quarter. The exam focuses upon synthesis of knowledge acquired from core courses in ERE or PE. Exams are different for ERE and PE Ph.D. students, but share a goal of having students exhibit capability to solve an engineering problem. Students continuing within the department take the exam at the beginning of their first quarter as Ph.D. students. Students who completed their M.S. outside of the department take the exam at the beginning of their fourth quarter as PhD students. A student who does not pass the exam may not be allowed to take the exam a second time.

Any student who does not pass the written exam is considered to have failed the qualifying exam. Any student who is deemed to have not made sufficient research progress may not be allowed to take the preliminary exam and research progress shall be taken into account for pass, fail, and retake decisions.

A written Ph.D. proposal and oral defense are the main components of the second step. The written proposals are reviewed by three faculty members. Students are provided a template of what constitutes an acceptable proposal. Students subsequently make an oral presentation of their proposal to three faculty members including material such as a literature review, identification of key unanswered research questions, proposed work outline, and an oral presentation.

Following the presentation, the student is questioned on the research topic and general field of study. The student can pass, pass with qualifications requiring more classes or teaching assistantships, or fail. Students who completed their MS in the department prepare and defend their proposal in their third quarter (not counting summer) as a Ph.D. student. Their adviser may request an additional quarter given extenuating circumstances such as a major change in research focus between M.S. and Ph.D. programs. Students who completed their MS outside of the department complete the proposal in their fourth quarter (not counting summer) of study.

Course Work

The 36 units of course work may include graduate courses in Energy Resources Engineering (numbered 200 and above) and courses chosen from the following list. Other courses may be substituted with prior approval of the adviser. In general, non-technical courses are not approved.

Students who enter directly into the Ph.D. program after receiving an M.S. degree from another university are expected to show expertise in

the core courses required for Stanford's M.S. degree in Energy Resources Engineering, either by including those courses in their Ph.D. degree or by showing that they have taken equivalent courses during their M.S. degree.

For a Ph.D. in Energy Resources Engineering, 12 of the 36 required course units must be completed from the following list of courses. If the student has not taken ENERGY 293A Solar Cells, Fuel Cells, and Batteries:

Materials for the Energy Solution, ENERGY 293B Fundamentals of Energy Processes, ENERGY 293C Energy from Wind and Water Currents or their equivalent during the M.S., then these courses must be taken during the Ph.D. (they will satisfy 9 of the required 12 units).

		Units
Required to take 12 units from the following list:		
ENERGY 104	Transition to sustainable energy systems	3
ENERGY 253	Carbon Capture and Sequestration	3-4
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics (formerly ENERGY 252)	3
ENERGY 260	Modeling Uncertainty in the Earth Sciences	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 291	Optimization of Energy Systems	3-4
ENERGY 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ENERGY 293B	Fundamentals of Energy Processes	3
ENERGY 293C	Energy from Wind and Water Currents	3
ENERGY 301	The Energy Seminar	1

ME 335B	Finite Element Analysis	3
ME 335C	Finite Element Analysis	0
ME 370A	Energy Systems I: Thermodynamics	3
ME 370B	Energy Systems II: Modeling and Advanced Concepts	4
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
MATSCI 316	Nanoscale Science, Engineering, and Technology	3
MSE 248		3-4

Ph.D. Minor in Petroleum Engineering or Energy Resources Engineering

To be recommended for a Ph.D. degree with Petroleum Engineering or Energy Resources Engineering as a minor subject, a student must take 20 units of graduate-level lecture courses in the department. These courses must include ENERGY 221 Fundamentals of Multiphase Flow and ENERGY 222 Advanced Reservoir Engineering for the Petroleum Engineering minor, or ENERGY 293A Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution and ENERGY 293B Fundamentals of Energy Processes and ENERGY 293C Energy from Wind and Water Currents for the Energy Resources Engineering minor. The remaining courses should be selected from:

		Units
ENERGY 175	Well Test Analysis	3
ENERGY 223	Reservoir Simulation	3-4
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 225	Theory of Gas Injection Processes	3
ENERGY 227	Enhanced Oil Recovery	3
ENERGY 240	Geostatistics	2-3
ENERGY 241	Seismic Reservoir Characterization	3-4
ENERGY 251	Thermodynamics of Equilibria	3
ENERGY 253	Carbon Capture and Sequestration	3-4
ENERGY 256	Electronic Structure Theory and Applications to Chemical Kinetics (formerly ENERGY 252)	3
ENERGY 269	Geothermal Reservoir Engineering	3
ENERGY 280	Oil and Gas Production Engineering	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3

* Joint appointment with Geological and Environmental Sciences

** Joint appointment with Geophysics

Earth System Science

Courses offered by the Department of Environmental Earth System Science are listed under the subject code EESS on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EESS&filter-catalognumber-EESS=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/>)

CourseSearch/search?view=catalog&catalog=&page=0&q=EESS&filter-catalognumber-EESS=on) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EESS&filter-catalognumber-EESS=on>).

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Earth System Science. Prior to April 16, the department was named the Department of Environmental Earth System Science.

Earth System Science studies the planet's oceans, lands, and atmosphere as an integrated system, with an emphasis on changes occurring during the current period of overwhelming human influence, the Anthropocene. Faculty and students within the department use the principles of biology, chemistry, and physics to study problems involving processes occurring at the Earth's surface, such as climate change and global nutrient cycles, providing a foundation for problem solving related to environmental sustainability and global environmental change.

Graduate Programs in Earth System Science

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Learning Objectives (Graduate)

The objectives of the doctoral program in Earth System Science are to enable students to develop the skills needed to conduct original investigations in environmental and earth system sciences, to interpret the results, and to present the data and conclusions in a publishable manner. Graduates should develop strong communication skills with the ability to teach and communicate effectively with the public.

The objectives of the master's program in Earth System Science is to continue a student's training in one of the earth science disciplines and to prepare students for a professional career or doctoral studies.

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Earth System Science. Students who matriculated into the Master of Science in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

Master of Science in Environmental Earth System Science

The University's requirements for M.S. degrees are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Additional departmental requirements include the following:

1. Completion of core course work:
- 2.

		Units
EESS 211	Fundamentals of Modeling	3-5
EESS 212	Measurements in Earth Systems	3-4
EESS 215	Earth System Dynamics	2
EARTHSCI 300	Earth Sciences Seminar	1

3. Enrollment in EESS 301 Topics in Environmental Earth System Science, each quarter during the academic year.
4. A minimum of 45 units of course work at the 100 level or above.

5. Half of the courses used to satisfy the 45-unit requirement must be intended primarily for graduate students, usually at the 200 level or above.
6. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
7. Some students may be required to make up background deficiencies in addition to these basic requirements.
8. By the end of Winter Quarter of the first year in residence, a student must complete at least three courses taught by a minimum of two different department faculty members.
9. Serve as a teaching assistant in at least two quarters during their graduate career.

The department's graduate coordinator, in coordination with the departmental faculty, appoints an academic adviser prior to registration with appropriate consideration of the student's background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The faculty adviser is charged with designing the curriculum in consultation with the student specific to the research topic. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

Master of Science, Course Work Only Option

The course-work-only M.S. for EESS Ph.D. students requires 45 unduplicated units of which all 45 must be course work (non-research, non-independent study, non-thesis units). All required units must be in courses at the 100-level or above, 50 percent of those units must be in graduate-level courses (generally, at the 200-level or above). No units are awarded for course work completed elsewhere (i.e., not eligible to transfer-in units). All 45 units can be applied to the 135 unit requirement for the Ph.D. The remaining 90 units can consist of all research units

On April 16, 2015, the Senate of the Academic Council approved the Doctor of Philosophy in Earth System Science. Students who matriculated into the Doctor of Philosophy in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

Doctor of Philosophy in Environmental Earth System Science

The University's requirements for the Ph.D. degree are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. A summary of additional department requirements follows:

1. Completion of core course work:
- 2.

		Units
EESS 211	Fundamentals of Modeling	3-5
EESS 212	Measurements in Earth Systems	3-4
EESS 215	Earth System Dynamics	2
EARTHSCI 300	Earth Sciences Seminar	1

3. Enrollment in EESS 301 Topics in Environmental Earth System Science, each quarter during the academic year.

4. By the end of Winter Quarter of their first year in residence, students must complete at least three courses taught by a minimum of two different departmental faculty members.
5. Completion of required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere.
6. Completion of a minimum of four letter grade courses of at least three units each from four different faculty members on the Academic Council in the University.
7. Serve as a teaching assistant in at least four quarters during their graduate career.
8. During Spring Quarter of each year, students must undergo an annual review by their thesis committee to allow the committee to monitor the progress of the student and make recommendations, where necessary.
9. Qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three parts: oral presentation of a research proposal; examination on the research proposal; and examination on subject matter relevant to the proposed research. The exam should take place prior to May 1 so that its outcome is known at the time of the annual spring evaluation of graduate students.

Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, in the month of March or April, the candidate must organize a meeting of the full research committee to present a progress report covering the past year and provide expected goals for the coming year.

Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research; curriculum must also be developed with the supervision of the committee, which should be designed to provide a rigorous foundation for the research area. The format of the dissertation must meet University guidelines. The student is urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

The doctoral dissertation is defended in the University oral examination. The department appoints the research adviser and two other members of the research committee to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Co-Chairs: Scott Fendorf, Eric Lambin

Geological Sciences

Courses offered by the Department of Geological Sciences are listed under the subject code GES on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GES&filter-catalognumber-GES=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GES&filter-catalognumber-GES=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GES&filter-catalognumber-GES=on>).

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Geological Sciences. Prior to April 16, the department was named the Department of Geological and Environmental Sciences.

The geological and environmental sciences are naturally interdisciplinary, and include: the study of earth materials, earth processes, and how they have changed over Earth's 4.56 billion year history. More specifically, courses and research within the department address: the chemical and physical makeup and properties of minerals, rocks, soils, sediments, and water; the formation and evolution of Earth and other planets; the processes that deform Earth's crust and shape Earth's surface; the stratigraphic, paleobiological, and geochemical records of Earth history including changes in climate, oceans, and atmosphere; present-day, historical, and long-term feedbacks between the geosphere and biosphere, and the origin and occurrence of our natural resources.

The department's research is critical to the study of natural hazards (earthquakes, volcanic eruptions, landslides, and floods), environmental and geological engineering, surface and groundwater management, the assessment, exploration, and extraction of energy, mineral and water resources, ecology and conservation biology, remediation of contaminated water and soil, geological mapping and land use planning, and human health and the environment.

A broad range of instrumentation for elemental and radiogenic/stable isotope analysis is available, including ion microprobe, electron microprobe, thermal and gas source mass spectrometry, inductively coupled plasma mass spectrometry and nuclear magnetic resonance. The Center for Materials Research and facilities at the SLAC National Accelerator Laboratory, Stanford Synchrotron Radiation Laboratory (SSRL), and the U.S. Geological Survey in nearby Menlo Park are also available for the department's research. Branner Library, devoted exclusively to the Earth Sciences, represents one of the department's most important resources. The department also maintains rock preparation (crushing, cutting, polishing), mineral separation, and microscopy facilities.

Mission of the Undergraduate Program in Geological Sciences

The purpose of the undergraduate program in Geological Sciences is to provide students with a broad background in the fundamentals of the Earth sciences and the quantitative, analytical, and communications skills necessary to conduct research and think critically about questions involving the Earth. The major provides excellent preparation for graduate school and

careers in geological and environmental consulting, land use planning, law, teaching, and other professions in which an understanding of the Earth and a background in science are important.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to develop and demonstrate:

1. an understanding of fundamental concepts in Earth science.
2. the ability to collect, analyze, and interpret geological and environmental data using a variety of techniques to test hypotheses.
3. the ability to address real geological and/or environmental problems in the field.
4. the ability to communicate scientific knowledge orally, visually, and in writing.

Graduate Programs in Geological Sciences

Graduate Studies in the Department of Geological Sciences involve academic course work and independent research. Students are prepared for careers as professional scientists in research, education, or the application of the earth sciences to mineral, energy, and water resources. Programs lead to the M.S., Engineer, and Ph.D. degrees. Course programs in the areas of faculty interest are tailored to the student's needs and interests with the aid of his or her research adviser. Students are encouraged to include in their program courses offered in other departments in the School of Environmental Earth System Science as well as in other departments in the University. Diplomas designate degrees in Geological and Environmental Sciences or Geological Sciences and may also indicate the following specialized fields of study: Geostatistics and Hydrogeology.

Learning Outcomes (Graduate)

The purpose of the master's program in Geological Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

On April 16, 2015, the Senate of the Academic Council approved the Bachelor of Science in Geological Sciences. Students who declared the Bachelor of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

Bachelor of Science in Geological and Environmental Sciences

The major consists of five interrelated components:

1. *Earth Sciences Fundamentals*—Students must complete a set of core courses that introduce the properties of Earth materials, the processes that change the Earth, and the timescales over which those processes act. These courses provide a broad foundational knowledge that can

lead to specialization in many different disciplines of the geological and environmental sciences.

2. *Quantitative and Analytical Skills*—Students must complete adequate course work in mathematics, chemistry, and physics or biology. In addition, they learn analytical techniques specific to the Earth sciences through the laboratory component of courses.
3. *Advanced Course Work and Research*—Students gain breadth and depth in upper-level electives and are encouraged to apply these skills and knowledge to problems in the Earth sciences through directed research.
4. *Field Research Skills*—Most GES courses include field trips and/or field-based projects. In addition, students must complete at least six weeks of field research through departmental offerings (GES 105 Introduction to Field Methods and GES 190 Research in the Field), in which they learn and apply field techniques, field mapping, and the prepare a written report.
5. *Communication Skills*—To fulfill the Writing in the Major requirement, students take a writing-intensive senior seminar (GES 150 Senior Seminar: Issues in Earth Sciences), in which they give both oral and written presentations that address current research in the earth sciences.

The major requires at least 93 units; letter grades are required in all courses if available. Students interested in the GES major should consult with the undergraduate program coordinator for information about options within the curriculum.

Course Sequence (93-110 units total)

Core Requirement

Students are required to take all of the following:

		Units
Select one of the following:		4-5
GES 1A	Introduction to Geology: The Physical Science of the Earth	
GES 1B	Introduction to Geology	
GES 1C	Introduction to Geology: Dynamic Earth	
GES 4	Evolution and Extinction: Introduction to Historical Geology	4
GES 90	Introduction to Geochemistry	3-4
GES 102	Earth Materials: Introduction to Mineralogy	4
GES 103	Earth Materials: Rocks in Thin Section	3
GES 104	Introduction to Petrology	4
GES 105	Introduction to Field Methods	3
GES 150	Senior Seminar: Issues in Earth Sciences	3
GES 190	Research in the Field (see below for more information)	4
Total Units		32-34

Breadth in the Discipline Requirement

To gain understanding of the breadth of subject areas within the geological and environmental sciences, students are required to take one course from each of the following seven groups (22-28 units).

Environmental Geology and Surface Processes

The chemical and physical properties of the solid, aqueous, and gaseous phases comprising Earth's surface environment, their natural compositional

variations and biogeochemical interactions, and the processes that affect their distribution and stability.

EESS 155	Science of Soils
or GES 130	Soil Physics and Hydrology
or GES 131	Hydrologically-Driven Landscape Evolution
or GES 170	Environmental Geochemistry

Structural Geology and Tectonics

The nature, description, and modeling of deformation of earth materials in response to tectonic forces. Processes of plate tectonics, mountain building, and sedimentary basin formation. The origin and evolution of geologic structures including folds, faults, fabrics, and fractures.

GES 110	Structural Geology and Tectonics
or GES 111	Fundamentals of Structural Geology

Earth Materials and Geochemistry

The materials that comprise the Earth and how they can be used to deduce geological processes over time. The fundamental chemical and geologic processes responsible for the abundance and distribution of elements and their isotopes.

GES 107	Journey to the Center of the Earth
or GES 163	Introduction to Isotope Geochemistry
or GES 180	Igneous Processes
or GES 185	Volcanology

Sedimentary Systems

The processes of weathering, erosion, transportation, and deposition, interpretation of depositional environments, the formation and evolution of sediments and sedimentary basins, and the evolution of sedimentary systems over geologic time.

GES 151	Sedimentary Geology and Petrography: Depositional Systems
---------	---

Biogeosciences

The origin and evolution of life on Earth, the influence of biological processes on Earth's surface environments, and the role of geological processes in shaping large-scale evolutionary patterns.

GES 123	Paleobiology
---------	--------------

Geophysics

The integration of physics, mathematics, and geology to study Earth processes using remote sensing, modeling, experiments, and direct observations.

GEOPHYS 110	Earth on the Edge: Introduction to Geophysics
or GEOPHYS 120	Ice, Water, Fire
or GEOPHYS 130	Introductory Seismology

Geospatial Statistics and Computer Science

Statistical techniques specific to the geosciences that facilitate analysis of three- and four-dimensional data; computer programming and modeling.

Units
3-4

EARTHSCI 211	Introduction to Programming for Scientists and Engineers	3-4
or CS 106A	Programming Methodology	
or ENERGY 125	Modeling and Simulation for Geoscientists and Engineers	
or ENERGY 160	Modeling Uncertainty in the Earth Sciences	
or EESS 164	Fundamentals of Geographic Information Science (GIS)	
or GEOPHYS 112	Exploring Geosciences with MATLAB	

Depth in the Discipline Requirement (10 Units)

Units
3-5

To allow students to go into greater depth in the major, students must complete at least 10 units of electives drawn primarily from the list above and other upper-level courses in GES (including graduate-level courses). Additional courses in Geophysics, EESS, and ERE may be counted towards the elective units if they allow a student to pursue a topic in depth; these options should be discussed with an adviser. A maximum of 3 elective units may be fulfilled by:

Units
3-4

GES 192	Undergraduate Research in Geological and Environmental Sciences
GES 197	Senior Thesis
GES 198	Special Problems in Geological and Environmental Sciences
Advanced Seminars	

Honors research (GES 199 Honors Program) may fulfill up to 4 elective units.

Required Supporting Mathematics (15 Units)

Units
4

This requirement may also be fulfilled by Advanced Placement credit. Choose one of the following equivalent series:

Select one of the following series:		
Series A		
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	10
Series B		
MATH 41 & MATH 42	Calculus and Calculus	10
And one of the following:		
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
or MATH 52	Integral Calculus of Several Variables	
or MATH 53	Ordinary Differential Equations with Linear Algebra	
or CME 100	Vector Calculus for Engineers	
or CME 102	Ordinary Differential Equations for Engineers	
or CME 104	Linear Algebra and Partial Differential Equations for Engineers	

Units
3-5

Required Supporting Cognate Sciences (15-23 Units)

Advanced placement credit may be accepted for these courses as determined by the relevant departments.

Chemistry

CHEM 31A & CHEM 31B or CHEM 31X	Chemical Principles I and Chemical Principles II Chemical Principles Accelerated	5-10
---------------------------------------	--	------

or a score of 4-5 on the Chemistry AP exam

And one of the following:

CHEM 135 or CHEM 171 or GES 171	Physical Chemical Principles Physical Chemistry I Geochemical Thermodynamics	3
---------------------------------------	--	---

In addition to chemistry, students may choose between introductory sequences in biology and physics. This choice should be made after discussion with an adviser and based on a student's interests.

Biology

BIO 41 or BIO 44X	Genetics, Biochemistry, and Molecular Biology Core Molecular Biology Laboratory	5
----------------------	--	---

And one of the following:

BIO 105A & BIO 105B	Ecology and Natural History of Jasper Ridge Biological Preserve and Ecology and Natural History of Jasper Ridge Biological Preserve	5-8
or BIO 42	Cell Biology and Animal Physiology	
or BIO 43	Plant Biology, Evolution, and Ecology	
or BIO 44Y	Core Plant Biology & Eco Evo Laboratory	

Or

Physics

Select one of the following Series: 8-9

Series A

PHYSICS 21 & PHYSICS 22 & PHYSICS 23 & PHYSICS 24	Mechanics and Heat and Mechanics and Heat Laboratory and Electricity and Optics and Electricity and Optics Laboratory	8
--	--	---

Series B

PHYSICS 41 & PHYSICS 43 & PHYSICS 44	Mechanics and Electricity and Magnetism and Electricity and Magnetism Lab	9
--	---	---

Series C

PHYSICS 41 & PHYSICS 45 & PHYSICS 46	Mechanics and Light and Heat and Light and Heat Laboratory	9
--	--	---

Field Research

Field research skills are a critical component of the undergraduate curriculum in GES. The conventional and most straightforward way for undergraduates to meet the field requirement is to take the two GES courses (GES 105 Introduction to Field Methods and GES 190 Research in the Field) that are offered every year:

- GES 105 Introduction to Field Methods, is a two-week introduction to field techniques and geologic mapping that is taught every year in the White Mountains of eastern California prior to the start of Autumn Quarter in September. This course gives students the tools to undertake geologic research in the field. GES 105 Introduction to Field Methods is required of all GES majors and is the framework upon which all subsequent undergraduate field-related instruction is based.
- GES 190 Research in the Field, gives GES undergraduates additional training in field research. This course provides undergraduates with a team-based experience of collecting data to answer research questions and is directed by faculty and graduate students. Offered in June and/or September.

Units By taking GES 105 Introduction to Field Methods and two iterations of GES 190 Research in the Field, GES undergraduates develop the broad experience and confidence necessary to go out and evaluate a geological or environmental geology question by collecting field-based data. The main goal is that, upon graduation, GES undergraduates will be able to plan and execute independent field research.

It is also possible to substitute non-Stanford courses to allow flexibility in fulfilling the field requirement. A modified version of an existing field-based course such as Stanford at Sea/Australia/Hawaii may fulfill one GES 190 Research in the Field requirement. To receive credit for GES 190, a proposal must be filed at the end of Winter Quarter with the field program committee which evaluates it for suitability. Students subsequently enroll in GES 190 with a specific instructor or their faculty mentor who evaluates the final report from the fieldwork.

GES 190 Research in the Field can also be satisfied by enrolling in a single four-to-six week geology field camp offered by another institution. This externally administered experience can substitute for two GES 190 courses, subject to approval by the Undergraduate Curriculum Committee.

Engineering Geology and Hydrogeology Undergraduate Specialized Curriculum

The Engineering Geology and Hydrogeology curriculum is intended for undergraduates interested in the application of geological and engineering data and principles to the study of rock, soil, and water to recognize and interpret geological and environmental factors affecting engineering structures and groundwater resources. Students learn to characterize and assess the risks associated with natural geological hazards, such as landslides and earthquakes, and with groundwater flow and contamination. The curriculum prepares students for graduate programs and professional careers in engineering, environmental geology, geology, geotechnical engineering, and hydrogeology. Students interested in this curriculum should contact a faculty adviser: Professor Loague, Pollard, or Hilley.

GES majors who elect the Engineering Geology and Hydrogeology curriculum are expected to complete a core course sequence and a set of courses in supporting sciences and mathematics. The core courses come from Earth Sciences and Engineering. Any substitutions for core courses must be approved by the faculty adviser and through a formal petition to the undergraduate program director. In addition, four elective courses, consistent with the core curriculum and required of all majors, are to be chosen with the advice and consent of the adviser. Typically, electives are chosen from the list below. Letter grades are required if available.

Course Sequence (85-101 Units Total)

Required Geological and Environmental Sciences (33-35 Units)

		Units
GES 1A	Introduction to Geology: The Physical Science of the Earth	4-5
or GES 1B	Introduction to Geology	
or GES 1C	Introduction to Geology: Dynamic Earth	
GES 102	Earth Materials: Introduction to Mineralogy	4
GES 104	Introduction to Petrology	4
GES 111	Fundamentals of Structural Geology	3
GES 115	Engineering Geology and Global Change	3
GES 150	Senior Seminar: Issues in Earth Sciences	3

EESS 164	Fundamentals of Geographic Information Science (GIS)	4
EESS 220	Physical Hydrogeology	4
ENERGY 160	Modeling Uncertainty in the Earth Sciences	3-4
GEOPHYS 190	Near-Surface Geophysics	3
Total Units		35-37

Required Engineering (18-21 Units)

CEE 101A or ME 80	Mechanics of Materials	4
CEE 101B	Mechanics of Fluids	4
CEE 101C	Geotechnical Engineering	3-4
CS 106A	Programming Methodology	3-5
ENGR 14	Intro to Solid Mechanics	4
Total Units		18-21

Required Supporting Sciences and Mathematics (23-29 Units)

CHEM 31A & CHEM 31B or CHEM 31X	Chemical Principles I and Chemical Principles II Chemical Principles Accelerated	5-10
MATH 51	Linear Algebra and Differential Calculus of Several Variables	5
MATH 52	Integral Calculus of Several Variables	5
MATH 53	Ordinary Differential Equations with Linear Algebra	5
PHYSICS 41	Mechanics	4
Total Units		24-29

Suggested Electives Electives (11-16 Units)

Choose four courses from the following list or, with faculty approval, four related courses:

CEE 101D	Computations in Civil and Environmental Engineering	3
CEE 180	Structural Analysis	4
CEE 270	Movement and Fate of Organic Contaminants in Waters	3
CEE 293	Foundations and Earth Structures	3
CEE 296	Special Topics in Fluid-Solid Interactions	2
EESS 221	Contaminant Hydrogeology and Reactive Transport	4
ENGR 30	Engineering Thermodynamics	3
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	4
GEOPHYS 112	Exploring Geosciences with MATLAB	1-3
GES 130	Soil Physics and Hydrology	3
GES 131	Hydrologically-Driven Landscape Evolution	3
GES 217	Faults, Fractures, and Fluid Flow	3
GES 237	Surface and Near-Surface Hydrologic Response	3
MATSCI 151	Microstructure and Mechanical Properties	3-4
ME 80	Mechanics of Materials	4

Honors Program

The honors program provides an opportunity for year-long independent study and research on a topic of special interest, culminating in a written thesis. Students select research topics in consultation with the faculty adviser of their choosing. Research undertaken for the honors program may be of a theoretical, field, or experimental nature, or a combination of these approaches. The honors program is open to students with a GPA of at least 3.5 in GES courses and 3.0 in all University course work. Modest financial support is available from several sources to help defray laboratory and field expenses incurred in conjunction with honors research. Interested students must submit an application, including a research proposal, to the department by the end of their junior year.

Upon approval of the research proposal and entrance to the program, course credit for the honors research project and thesis preparation is assigned by the student's faculty adviser within the framework of GES 199 Honors Program; the student must complete a total of 9 units over the course of the senior year. Up to 4 units of GES 199 may be counted towards the elective requirement, but cannot be used as a substitute for regularly required courses.

Both a written and oral presentation of research results are required. The thesis must be read, approved, and signed by the student's faculty adviser and a second member of the faculty. In addition, honors students must participate in the GES Honors Symposium in which they present their research to the broader community. Honors students in GES are also eligible for the Firestone medal, awarded by Undergraduate Advising and Research (<http://ual.stanford.edu>) for exceptional theses.

On April 16, 2015, the Senate of the Academic Council approved the minor in Geological Sciences. Students who declared the minor in Geological and Environmental Sciences have the option of changing the name of their minor to Geological Sciences. Minor requirements remain the same.

Minor in Geological and Environmental Sciences

The minor in GES consists of a small set of required courses plus 12 elective units. A wide variety of courses may be used to satisfy these elective requirements. All courses must be taken for a letter grade.

Required Courses

GES 1A	Introduction to Geology: The Physical Science of the Earth	4-5
or GES 1B or GES 1C	Introduction to Geology Introduction to Geology: Dynamic Earth	
GES 4	Evolution and Extinction: Introduction to Historical Geology	4
GES 102	Earth Materials: Introduction to Mineralogy	4
GES 104	Introduction to Petrology	4
Total Units		16-17

Electives (12 Units)

Students must take a minimum of 12 additional units drawn primarily from the Breadth in the Discipline list in the GES major (<http://www.stanford.edu/dept/registrar/bulletin/5038.htm>); a majority of units must be from classes within the GES department. Up to 3 units of Stanford Introductory Seminars in GES may be counted.

Students pursuing a minor in GES are encouraged to participate in the senior seminar (GES 150 Senior Seminar: Issues in Earth Sciences) and in field research (GES 105 Introduction to Field Methods)

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Geological Sciences. Students who matriculated into the Master of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

Coterminal B.S. and M.S. Degrees in Geological and Environmental Sciences

The coterminal B.S./M.S. program offers students the opportunity to pursue graduate research and an M.S. degree concurrently with or subsequent to their B.S. studies. The M.S. degree can serve as an entrance to a professional degree in subdisciplines within the Earth sciences such as engineering geology and environmental geology, or to graduate course work and research as an intermediate step in pursuit of the Ph.D. Regardless of professional goals, coterminal B.S./M.S. students are treated as members of the graduate community and are expected to meet all of the standards set for regular M.S. students. Applicants must have earned no fewer than 120 units toward graduation, and must submit their application no later than the quarter prior to the expected completion of their undergraduate degree, normally the Winter Quarter prior to Spring Quarter graduation. The application includes a statement of purpose, a current Stanford transcript, official Graduate Record Examination (GRE) scores, letters of recommendation from two members of the Stanford faculty (at least one of whom must be in the GES department), and a list of courses in which they intend to enroll to fulfill the M.S. degree requirements. Specific research interests should be noted in the statement of purpose and discussed with a member of the GES faculty prior to submission of the application. Coterminal students must complete a thesis describing research results.

The University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, also see the Publications and Online Guides (<http://studentaffairs.stanford.edu/registrar/publications/#Coterm>) web site.

Students must meet all requirements for both the B.S. and M.S. degrees. Students may either:

1. complete 180 units required for the B.S. degree and then complete three full-time quarters (45 units at the 100-level or above) for the M.S. degree
2. or, complete a total of fifteen quarters during which the requirements of the two degrees are fulfilled concurrently.

At least half of the courses used to satisfy the 45-unit requirement must be designated as being primarily for graduate students, normally at the 200-level or above. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement. Further information about this program may be obtained from the GES office.

Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

Master of Science in Geological and Environmental Sciences Objectives

The purpose of the master's program in Geological and Environmental Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

Procedures

The graduate coordinator of the department appoints an academic adviser during registration with appropriate consideration of the student's background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The student should select a thesis adviser within the first year of residence and submit to the thesis adviser a proposal for thesis research as soon as possible. The academic adviser supervises completion of the department requirements for the M.S. program (as outlined below) until the research proposal has been accepted; responsibility then passes to the thesis adviser. The student may change either thesis or academic advisers by mutual agreement and after approval of the graduate coordinator.

Requirements

The University's requirements for M.S. degrees are outlined in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Practical training (GES 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background of the student. Additional department requirements include the following:

1. A minimum of 45 units of course work at the 100 level or above.
 - a. Half of the courses used to satisfy the 45-unit requirement must be intended as being primarily for graduate students, usually at the 200 level or above.
 - b. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
 - c. Some students may be required to make up background deficiencies in addition to these basic requirements.
2. By the end of Winter Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GES faculty members.
3. Each student must have a research adviser who is a faculty member in the department and is within the student's thesis topic area or specialized area of study.
4. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence.
5. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis, who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

Engineer Degree in Geological and Environmental Sciences

The Engineer degree is offered as an option for students in applied disciplines who wish to obtain a graduate education extending beyond that of an M.S., yet do not have the desire to conduct the research needed to obtain a Ph.D. A minimum of two years (six quarters) of graduate

study is required. The candidate must complete 90 units of course work, no more than 10 of which may be applied to overcoming deficiencies in undergraduate training. The student must prepare a substantial thesis that meets the approval of the thesis adviser and the graduate coordinator.

On April 16, 2015, the Senate of the Academic Council approved the Doctor of Philosophy in Geological Sciences. Students who matriculated into the Doctor of Philosophy in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

Doctor of Philosophy in Geological and Environmental Sciences

Objectives

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores. Previously admitted students who wish to change their degree objective from M.S. to Ph.D. must petition the GES Admissions Committee.

Requirements

The University's requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 43)" section of this bulletin. Practical training (GES 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background of the student. A summary of additional department requirements is presented below:

1. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four graduate level, letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GES faculty members.
2. Each student must qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three parts: oral presentation of a research proposal, examination on the research proposal, and examination on subject matter relevant to the proposed research. The exam should be scheduled prior to May 1, so

that the outcome of the exam is known at the time of the annual spring evaluation of graduate students.

3. Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, in the month of March or April, the candidate must organize a meeting of the research committee to present a brief progress report covering the past year.
4. Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research. The format of the dissertation must meet University guidelines. The student is strongly urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.
5. The doctoral dissertation is defended in the University oral examination. The research adviser and two other members of the research committee are determined to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Ph.D. Minor in Geological and Environmental Sciences

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in Geological and Environmental Sciences must complete, with a GPA of 3.0 (B) or better, 20 units in the geosciences in lecture courses intended for graduate students. The selection of courses must be approved by the student's GES adviser and the department chair.

Emeriti: (Professors) Atilla Aydin, Robert Coleman, Robert R. Compton, Marco T. Einaudi, W. Gary Ernst,* John W. Harbaugh, James C. Ingle, Jr.,* Andre G. Journal, Juhn G. Liou, Ronald J. P. Lyon, Michael McWilliams, J. Michael Moldowan, George A. Parks

* Recalled to active duty

Cognate Courses

Many courses offered within the School of Earth Sciences, as well as courses in other schools with a significant Earth sciences component, may be used in satisfaction of optional requirements for the Geological and

Environmental Sciences degree. Undergraduates should discuss the options available to them with the undergraduate program coordinator; graduate students should discuss options with their advisers.

The following courses outside the School of Earth Sciences are particularly applicable:

		Units
BIO 121	Biogeography	3
BIO 136	Evolutionary Paleobiology	4
BIOHOPK 182H	Stanford at Sea	16
CEE 63	Weather and Storms	3
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	3
CEE 101A	Mechanics of Materials	4
CEE 101B	Mechanics of Fluids	4
CEE 101C	Geotechnical Engineering	3-4
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 164	Introduction to Physical Oceanography	4
CEE 166A	Watersheds and Wetlands	3
CEE 173A	Energy Resources	3-5

Overseas Studies Courses in Geological and Environmental Sciences

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

OSPFLOR 52	Mass Extinctions and the Geology of Italy	4

Geophysics

Courses offered by the Department of Geophysics are listed under the subject code GEOPHYS on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GEOPHYS&filter-catalognumber-GEOPHYS=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GEOPHYS&filter-catalognumber-GEOPHYS=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=GEOPHYS&filter-catalognumber-GEOPHYS=on>).

Geophysics is the branch of Earth science concerned with exploring and analyzing active processes of the Earth through physical measurement. The undergraduate and graduate programs are designed to provide a background of fundamentals in science, and courses to coordinate these fundamentals with the principles of geophysics. The program leading to the Bachelor of Science (B.S.) in Geophysics permits many electives and a high degree of flexibility for each student. Graduate programs provide specialized training

for professional work in resource exploration, research, and education, and lead to the degrees of Master of Science and Doctor of Philosophy.

The Department of Geophysics is housed in the Ruth Watis Mitchell Earth Sciences Building. It has numerous research facilities, among which are a state-of-the-art broadband seismic recording station, high pressure and temperature rock properties and rock deformation laboratories, various instruments for field measurements including seismic recorders, nine dual frequency GPS receivers, and field equipment for measuring in-situ stress at great depth. Current research activities include crustal deformation; earthquake seismology and earthquake mechanics; reflection, refraction, and tomographic seismology; rock mechanics, rock physics; seismic studies of the continental lithosphere; remote sensing; environmental geophysics; and synthetic aperture radar studies.

Mission of the Undergraduate Program in Geophysics

The mission of the undergraduate program in Geophysics is to expose students to a broad spectrum of geophysics, including resource exploration, environmental geophysics, seismology, and tectonics. Students in the major obtain a solid foundation in the essentials of mathematics, physics, and geology, and build upon that foundation with advanced course work in geophysics to develop the in-depth knowledge they need to pursue advanced graduate study and professional careers in government or the private sector.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. understand the physics and geology that form the basis for geophysical observation and measurement.
2. understand Earth structure and evolution.
3. identify the physical processes governing the behavior of common geophysical systems.
4. be able to explain the principles of applying geophysical methods to societally relevant problems, including natural hazards, resource exploration and management, and environmental issues.
5. be able to quantitatively describe the behavior of natural systems and the principles of geophysical measurement with physics-based mathematical models.
6. investigate these models by solving the governing equations with a combination of analytical and computational methods.
7. make their own observations with a variety of geophysical instruments, and reduce, model, and interpret their data and uncertainties.
8. effectively communicate their scientific knowledge through written and oral presentations.
9. be able to interpret and evaluate the published literature and oral and poster presentations at national meetings.

Graduate Programs in Geophysics

University requirements for the M.S. and Ph.D. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Lecture course units applied to graduate degree program requirements must be taken for a letter grade if the course is offered for a letter grade.

Learning Outcomes (Graduate)

The objective of the graduate program in Geophysics is to prepare students to be leaders in the geophysics industry, academia, and research organizations through completion of fundamental courses in the major field and in related sciences, as well as through independent research. Students are expected to:

1. apply skills developed in fundamental courses to geophysical problems.
2. research, analyze, and synthesize solutions to an original and contemporary geophysics problem.
3. work independently and as part of a team to develop and improve geophysics solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.
5. master's students are expected to develop in-depth technical understanding of geophysics problems at an advanced level.
6. doctoral students are expected to complete a scientific investigation that is significant, challenging and original.

Bachelor of Science in Geophysics

The following courses are required for the B.S. degree in Geophysics. A written report on original research or an honors thesis is also required through participation in and GEOPHYS 199 Senior Seminar: Issues in Earth Sciences in Autumn Quarter of the senior year. Seniors in Geophysics who expect to do graduate work should take the Graduate Record Examination (GRE) early in their final undergraduate year.

Optional Pre-Major Class

GEOPHYS 113

Units
3

Geophysics Core Courses (29-32 units)

Students must take all of the following:

	Units
GEOPHYS 110 Earth on the Edge: Introduction to Geophysics	3
GEOPHYS 120 Ice, Water, Fire	3-5
GEOPHYS 130 Introductory Seismology	3
GEOPHYS 150 Geodynamics: Our Dynamic Earth	3
GEOPHYS 162 Laboratory Methods in Geophysics	2-3
or PHYSICS 67 Introduction to Laboratory Physics	
GEOPHYS 190 Near-Surface Geophysics	3
GEOPHYS 196 Undergraduate Research in Geophysics (or approved research internship)	5
GEOPHYS 197 Senior Thesis in Geophysics	3
or GEOPHYS 198 Honors Program	
GEOPHYS 199 Senior Seminar: Issues in Earth Sciences	3
GEOPHYS 201 Frontiers of Geophysical Research at Stanford: Faculty Lectures	1
Total Units	29-32

Geophysics Breadth Courses (18-29 units)

Choose six upper-level courses, one from each of the following six areas (but an additional Geophysics class may substitute for either the Physics of the Geology breadth areas):

1. Resources, hazards, and the environment

	Units
Select one of the following:	3
GEOPHYS 182 Reflection Seismology	
GEOPHYS 183 Reflection Seismology Interpretation	
GEOPHYS 185 Rock Physics for Reservoir Characterization	
ENERGY 120 Fundamentals of Petroleum Engineering	
GES 130 Soil Physics and Hydrology	
GES 131 Hydrologically-Driven Landscape Evolution	
Total Units	3

2. Whole-Earth Geophysics

	Units
Select one of the following:	3
EESS 141 Remote Sensing of the Oceans	
GEOPHYS 170 Global Tectonics	
GEOPHYS 184 Journey to the Center of the Earth	
GEOPHYS 186 Tectonophysics & Global Tectonics (Tectonophysics & Global Tectonics)	3
Total Units	6

3. Numerical and computational methods

	Units
Select one of the following:	3-4
GEOPHYS 187 Environmental Soundings Image Estimation	
GEOPHYS 281 Geophysical Inverse Problems	
EARTHSCI 211 Introduction to Programming for Scientists and Engineers	
ENERGY 160 Modeling Uncertainty in the Earth Sciences	
EE 102A Signal Processing and Linear Systems I	
CME 108 Introduction to Scientific Computing	
CS 106A Programming Methodology & CS 106B and Programming Abstractions	
PHYSICS 113 Computational Physics	

4. Geophysical fluid dynamics

	Units
Select one of the following:	3-4

GEOPHYS 146A	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
GEOPHYS 146B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
GEOPHYS 181	Fluids and Flow in the Earth: Computational Methods
ENERGY 121	Fundamentals of Multiphase Flow
CEE 164	Introduction to Physical Oceanography
EESS 220	Physical Hydrogeology

5. Physics

Select one of the following:

CEE 101A	Mechanics of Materials	Units	4
EE 141			
ME 80	Mechanics of Materials		
PHYSICS 110	Advanced Mechanics		
PHYSICS 120	Intermediate Electricity and Magnetism I		

6. Geology

Select one of the following:

GES 102	Earth Materials: Introduction to Mineralogy	Units	3-5
GES 110	Structural Geology and Tectonics		
GES 111	Fundamentals of Structural Geology		
GES 151	Sedimentary Geology and Petrography: Depositional Systems		

Supporting Mathematics Courses

Students must take one of the following series (15 or 19 units):

CME 100	Vector Calculus for Engineers	Units	5
CME 102	Ordinary Differential Equations for Engineers		5
CME 104	Linear Algebra and Partial Differential Equations for Engineers		5

(MATH 51 (MATH 51M recommended), MATH 52, and MATH 53 plus either GEOPHYS 112 or CME 192 may substitute for CME series)

Supporting Science Courses

Students must take all of the following (8-27 units):

GES 1A	Introduction to Geology: The Physical Science of the Earth	Units	4-5
or GES 1B	Introduction to Geology		
or GES 1C	Introduction to Geology: Dynamic Earth		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II		5-10
or CHEM 31X	Chemical Principles Accelerated		
or a score of 5 on the Chemistry AP exam			
PHYSICS 41	Mechanics		4
or PHYSICS 61	Mechanics and Special Relativity		

or a score of 4-5 on the Physics C Mechanics AP exam			
PHYSICS 43	Electricity and Magnetism		4
or PHYSICS 63	Electricity, Magnetism, and Waves		
or a score of 4-5 on the Physics C E & M AP exam			
PHYSICS 45	Light and Heat		4
or PHYSICS 65	Quantum and Thermal Physics		

Optional Field Class

GES 105	Introduction to Field Methods		3
---------	-------------------------------	--	---

Honors Program

The department offers a program leading to the B.S. degree in Geophysics with honors. The guidelines are:

1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.
2. Submit a proposal to the department, which decides on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of GEOPHYS 198 Honors Program.
4. The decision whether a given independent study project does or does not merit an award of honors is made jointly by the department and the student's adviser. This decision is based on the quality of both the honors work and the student's other work in Earth Sciences.
5. The work done on the honors program cannot be used as a substitute for regularly required courses.

Minor in Geophysics

The Geophysics minor provides students with a general knowledge of Geophysics in addition to a background in the related fields of physics, mathematics, and geology. The minor consists of one required class (3 units), three electives (min. 9 units), and supporting classes in geology, mathematics, and physics.

Curriculum

1. Required course:

GEOPHYS 110	Earth on the Edge: Introduction to Geophysics	Units	3
-------------	---	-------	---

2. Plus three additional approved electives, typically chosen from:

Select three of the following: 9			
GEOPHYS 120	Ice, Water, Fire		
GEOPHYS 130	Introductory Seismology		
GEOPHYS 141	Remote Sensing of the Oceans		
GEOPHYS 150	Geodynamics: Our Dynamic Earth		
GEOPHYS 162	Laboratory Methods in Geophysics		
GEOPHYS 184	Journey to the Center of the Earth		
GEOPHYS 186	Tectonophysics & Global Tectonics		
GEOPHYS 190	Near-Surface Geophysics		

3. Supporting Math & Science:

		Units
GES 1A	Introduction to Geology: The Physical Science of the Earth	4-5
or GES 1B	Introduction to Geology	
or GES 1C	Introduction to Geology: Dynamic Earth	
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
PHYSICS 21	Mechanics and Heat	8
or PHYSICS 22	Mechanics and Heat Laboratory	
or PHYSICS 23	Electricity and Optics	
or PHYSICS 24	Electricity and Optics Laboratory	
or PHYSICS 41	Mechanics	
& PHYSICS 43	and Electricity and Magnetism	
or PHYSICS 41	Mechanics	
& PHYSICS 45	and Light and Heat	
or equivalent AP scores		

Coterminal B.S./M.S. Program in Geophysics

The Department offers a coterminal M.S. degree for students wishing to obtain more specialized training in Geophysics than is normally possible during study for the B.S. degree alone. An M.S. degree should be considered as the professional degree in Geophysics, and is aimed at students wishing to work in a related industry, or students desiring more focused academic study in the field than the B.S. program allows.

The coterminal M.S. degree in Geophysics is offered in conjunction with any relevant undergraduate program at Stanford. Geophysics students often enter the department with degrees in Earth sciences, mathematics, physics, chemistry, or other natural science or engineering fields. Any of these are suitable for the coterminal Geophysics program, and interested students are encouraged to discuss their own background with a Geophysics faculty member.

The requirements for entry into the coterminal M.S. program are submission of a transcript, a statement of purpose, and at least two letters of recommendation. Applications with a letter of recommendation from a Geophysics faculty are generally considered the strongest. Additional letters from other academic or work-related persons also strengthen the application. There are no specific GPA requirements for entry, but the Department looks for proven performance in a rigorous undergraduate curriculum as a prerequisite for admission.

Undergraduates with at least junior-level standing may apply, and applications should be submitted by the Autumn Quarter of the senior year. The graduation requirements to obtain the degree are identical to those for the regular Geophysics master's degree. Contact the Department of Geophysics student services officer for additional information.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Master of Science in Geophysics Objectives

To enhance the student's training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

Degree Requirements

The candidate must complete 45 units from the following groups of courses:

1. Complete 15 units of Geophysics lecture courses with at least 9 units numbered 200 or higher.
2. Complete six units numbered 100 or higher and three units of 200-level, non-Geophysics lecture courses in earth sciences.
3. Complete one to four electives selected from courses numbered 100 or higher from mathematics, chemistry, engineering, physics, relevant biology, computer science, ecology, hydrology, or earth science. At least one course must be numbered 200 or higher.
4. At least 9, but not more than 18, of the 45 units must be independent work on a research problem resulting in a written report accepted and archived by the candidate's faculty adviser. Normally, this research is undertaken as part of the candidate's participation in multiple quarters of research seminar (GEOPHYS 385 series). A summer internship is encouraged as a venue for research, but no academic credit is given.
5. Submit a program proposal for approval by a faculty adviser in the first quarter of enrollment.
6. Each candidate must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members; and turn in a thesis/report to adviser.
7. Students are required to attend department seminars.

Doctor of Philosophy in Geophysics Objectives

The Ph.D. degree is conferred upon evidence of high attainment in Geophysics and ability to conduct an independent investigation and present the results of such research.

Transfer Credit

An incoming student with a relevant master of science degree may apply for a departmental waiver of up to 12 units of the 30 lecture units required for the Ph.D. degree, for certain courses as approved by the departmental graduate faculty adviser. Credit for courses generally requires that students identify an equivalent Stanford course and obtain the signature of the Stanford faculty responsible for that course, stating its equivalence.

Requirements for the Degree

A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. Required courses must be taken for a letter grade, if offered. Students are required to attend the department seminars, and to complete sufficient units of independent work on a research problem to meet the 135-unit University requirement. 12 units must be met by participation in the GEOPHYS 385 series, or equivalent series in other departments with approval of the adviser and graduate coordinator. Students are encouraged to participate in the GEOPHYS 385 series from more than one faculty

member or group and relevant equivalent series in other departments. Students with a Master's degree may waive up to 12 units for approved courses.

ENGR 202W Technical Writing, is recommended but not required.

The student's record must indicate outstanding scholarship, and deficiencies in previous training must be removed. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. For more information, see the Geophysics Administrative Guide, section 1.4.1.

The student must pass the departmental oral examination by the end of the sixth academic quarter (third academic quarter for students with an M.S. degree); prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination.

The Ph.D. dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Upon formal acceptance into a research group, the student and faculty adviser form a supervising committee consisting of at least three members who are responsible for overseeing satisfactory progress toward the Ph.D. degree. At least two committee members must be Geophysics faculty members. The committee conducts the department oral examination, and meets thereafter annually with the student to review degree progress. The Geophysics faculty monitors progress of all students who have not yet passed their department oral examination by carrying out an annual performance appraisal at a closed faculty meeting.

Course requirements

1. *Geophysics*: 12 units, lecture courses numbered 200 and above, from 4 different Geophysics faculty with different research specializations. These units cannot be waived.
2. *Additional Geophysics*: 3 units, lecture courses numbered 150 and above
3. *School of Earth Sciences (non-Geophysics)*: 3 units, lecture courses numbered 100 or above
4. *Mathematics (numbered 100 or above), Science, and Engineering (non-School of Earth Sciences)*: 6 units, lecture courses numbered 200 or above
5. *Any of the above categories*: 6 units, lecture courses numbered 200 or above
6. *Total required units*: 30 units.

Ph.D. Department Examination Requirement

1. One research proposal (10-20 pages) with a completed component that outlines a plan of research for 2-3 years
2. Second scientific proposal or paper (4-10 pages) with a professor in another area
3. An oral presentation with the student's advising committee on both the research proposal (~30-40 min) and the second proposal/paper (~10 min), with questions by the committee constituting the qualifying exam.

Second Project

The purpose of the second research project is to add breadth to Ph.D. study and give the student the opportunity, ability and confidence to carry out research in multiple areas.

Description/Scope:

The second project should stand alone as a separate piece of work from the primary research project.

- The second project must be in Geophysics or a closely related discipline
- The topic must be substantially different from the topic of the Ph.D. thesis; i.e., it should not be the same method applied to a different problem, or a different method applied to the same problem.
- The second project should be supervised by a Stanford Geophysics faculty member (Academic Council or research faculty) who does not serve as the primary research adviser, and who must be in a separate research group. Exceptions allowing for second project advisers who are not Stanford Geophysics faculty must be approved by both the research adviser and the Director of Graduate Studies.
- Completion of the second project ideally results in a publication in the refereed literature, or a presentation at a scientific conference.
- Most students are expected to complete the second research project as part of their Ph.D. studies. However, the department allows an option of meeting academic breadth requirements through additional focused course work; see the Geophysics (<https://pangea.stanford.edu/departments/geophysics/academics/graduate-program/graduation-requirements>) web site for further information on program requirements and the coursework breadth option.

Chair: Howard Zebker

Associate Chair: Biondo Biondi

Professors: Greg Beroza, Biondo Biondi, Jerry M. Harris, Simon Klempner, Rosemary J. Knight, Paul Segall, Norman H. Sleep, Howard Zebker,* Mark D. Zoback

Assistant Professors: Eric Dunham, Jesse Lawrence, Tiziana Vanorio, Jenny Suckale

Professor (Research): Gerald M. Mavko

Associate Professor (Research): Tapan Mukerji***

Emeriti: Jon Claerbout, Antony Fraser-Smith,* Robert Kovach, Amos Nur, Joan Roughgarden,** George A. Thompson

Courtesy Professors: Stephan A. Graham, Wendy Mao, David D. Pollard

Consulting Faculty: Antoine Guitton, Dave Nichols, Shuki Ronen, Stewart Levin, Mary Lou Zoback

Senior Research Scientists: Robert Clapp, Jack Dvorkin

* Joint appointment with Electrical Engineering

** Joint appointment with Biological Sciences

*** Joint appointment with Energy Resources Engineering

Graduate School of Education

Courses offered by the Graduate School of Education are listed under the subject code EDUC on the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=EDUC&filter-catalognumber-EDUC=on>) web site.

Aiming towards the ideal of enabling all people to achieve maximum benefit from their educational experiences, the Graduate School of Education seeks to continue as a world leader in ground-breaking, cross-disciplinary inquiries that shape educational practices, their conceptual underpinnings, and the professions that serve the enterprise. The Graduate School of Education prepares scholars, teachers, teacher educators, policy analysts, evaluators, researchers, administrators, and other educational specialists. Two graduate degrees with specialization in education are granted by the University: Master of Arts and Doctor of Philosophy. While no undergraduate majors are offered, the school offers a number of courses for undergraduates, an undergraduate minor and undergraduate honors program, and a variety of tutoring programs.

The Graduate School of Education is organized into three program area committees: Curriculum Studies and Teacher Education (CTE); Developmental and Psychological Sciences (DAPS); and Social Sciences, Humanities, and Interdisciplinary Policy Studies in Education (SHIPS).

In addition, several cross-area programs are sponsored by faculty from more than one area. These programs include the doctoral program in Learning Sciences and Technology Design (LSTD); two master's level programs: the Stanford Teacher Education Program (STEP) and the Learning, Design, and Technology Program (LDT); and the undergraduate honors and minor programs.

These program area committees function as administrative units that act on admissions, plan course offerings, assign advisers, and determine program requirements. Various concentrations exist within most of these areas. Faculty members are affiliated primarily with one area but may participate in several programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

Detailed information about admission and degree requirements, faculty members, and specializations related to these area committees and programs can be found in the Academics section of the School's website (<https://ed.stanford.edu/academics>).

The Graduate School of Education offers an eight-week summer session for admitted students only. The school offers no correspondence or extension courses, and in accordance with University policy, no part-time enrollment is allowed. Work in an approved internship or as a research assistant is accommodated within the full-time program of study.

Undergraduate Programs in Education

The Graduate School of Education offers a minor and an honors program at the undergraduate level. Further information about these programs can be found at the Graduate School of Education (<https://ed.stanford.edu/academics>) web site.

Regardless of whether they are enrolled in one of these undergraduate programs, undergraduates are also welcome in many graduate-level courses at the GSE.

Graduate Programs in Education

The Graduate School of Education offers Master of Arts and Doctor of Philosophy degrees in several programs described below. University and Graduate School of Education requirements must be met for each degree. The University requirements are detailed in the "Graduate Degrees (<http://stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin. Students are urged to read this section carefully, noting residency, tuition, and registration requirements. A student who wishes to enroll for graduate work in the Graduate School of Education must be admitted to graduate standing by one of the school's area committees and with the approval of the Associate Dean of Student Affairs.

Complete information about admissions procedures and requirements is available from Graduate Admissions (<http://studentaffairs.stanford.edu/gradadmissions>), or at the Graduate School of Education (<https://ed.stanford.edu/admissions>) web site. All applicants, except coterminal applicants, must submit scores from the Graduate Record Examination General Test (verbal, quantitative, and analytical or analytical writing areas); TOEFL scores are also required from those whose first language is not English. Applicants to the Stanford Teacher Education Program are also required to submit specific test scores or acceptable equivalents as required by the California Commission on Teacher Credentialing; see the section on STEP. Test information is available at the Graduate School of Education (<https://ed.stanford.edu/admissions>) web site.

Honors Program in Education

An honors program in Education is available to undergraduates to supplement their regular majors by applying their studies to the field of education, broadly conceived. This program enables qualified undergraduates at Stanford to extend the training in their major field of study by pursuing additional courses and a research thesis in a related area in the study of education.

Students apply for entry during the junior year. Application information can be found at the Graduate School of Education (<https://ed.stanford.edu/academics/undergraduate/honors>) web site. The current director of the honors program is Professor John Willinsky.

Near the end of Spring Quarter, successful candidates for honors present brief reports of their work and findings at a mini-conference that all the honors students in Education, as well as other members of the academic community, attend.

Required Coursework:

1. Students are required to enroll in the Undergraduate Honors Seminar during their senior year: EDUC 199A Undergraduate Honors Seminar (Autumn, 3 credits), EDUC 199B Undergraduate Honors Seminar (Winter, 1 credit), and EDUC 199C Undergraduate Honors Seminar (Spring, 1 credit)
2. Students are required to enroll in Honors Research (EDUC 140 Honors Research) with their adviser during Winter and Spring quarters of their senior year. The number of units is to be determined in consultation with the faculty adviser.
3. Students must complete a minimum of 3 courses taken for a minimum of 3 units each in Education (EDUC units). All courses must be taken for a letter grade. Coursework completed for the Honors program in Education should address varied topics in the field of education, and must be approved by the Honors Director and student's faculty adviser.

Minor in Education (Undergraduate)

The Graduate School of Education awards an undergraduate minor in the field of Education. The minor is structured to provide a substantial introduction to education through a broad-based and focused study of educational research, theory and practice. The goals of the minor are to allow undergraduates to develop an understanding of the core issues facing educators and policymakers, to make connections to their major programs of study, and to provide rigorous preparation for graduate studies in education.

Students interested in pursuing an undergraduate minor in Education begin by contacting the minor director (Jennifer Lynn Wolf, jlwolf@stanford.edu), who is responsible for advising all candidates and approving each student's minor plan of study. Applications for the minor are due no later than the second quarter of the junior year.

The Education minor requires three core courses to ensure coverage of the disciplines of the field, while allowing flexibility for students wanting to pursue specific interests within Education. In order to graduate with a minor in Education, undergraduates must complete the minor program of study as described here, for a total of not less than 20 units and not more than 30 units, with a minimum of six courses.

Course Requirements and Distribution

- All minor students are required to take the minor core course:

		Units
EDUC 101	Introduction to Teaching and Learning	4

- All students are also required to take two foundational courses, such as the following:

		Units
EDUC 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5
EDUC 110	Sociology of Education: The Social Organization of Schools	4
EDUC 120C	Education and Society	4-5
EDUC 201	History of Education in the United States	3-5
EDUC 204	Introduction to Philosophy of Education	3

- Each student identifies a subfield of study in which to take at least three elective courses. Established subfields of study within the School of Education include: Teaching and Learning; Education Research and Policy; and Educational Technology. Suitable elective courses include:

- Subfield 1: Teaching and Learning—

		Units
EDUC 103A	Tutoring: Seeing a Child through Literacy	4
EDUC 111	The Young Adult Novel: A Literature For and About Adolescents	4
EDUC 112X	Urban Education	3-4
EDUC 121X	Hip Hop, Youth Identities, and the Politics of Language	3-4
EDUC 149	Theory and Issues in the Study of Bilingualism	3-5
EDUC 171	Early Childhood Education Practicum	2-4
EDUC 256	Psychological and Educational Resilience Among Children and Youth	4
EDUC 357	Science and Environmental Education in Informal Contexts	3-4

- Subfield 2: Education Research and Policy—

		Units
EDUC 117	Research and Policy on Postsecondary Access	3
EDUC 121X	Hip Hop, Youth Identities, and the Politics of Language	3-4
EDUC 165	History of Higher Education in the U.S.	3-5
EDUC 197	Education, Gender, and Development	4
EDUC 218	Topics in Cognition and Learning: Executive Function	3
EDUC 223	Good Districts and Good Schools: Research, Policy, and Practice	3-4
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4

- Subfield 3: Learning Design and Technology—

		Units
EDUC 139X	Educating Young STEM Thinkers	3-5
EDUC 303X	Designing Learning Spaces	3-4
EDUC 328	Topics in Learning and Technology: Core Mechanics for Learning	3
EDUC 333A	Understanding Learning Environments	3
EDUC 342	Child Development and New Technologies	3

- Course work completed for the Education Minor must meet the following criteria:

- All courses must be taken for a letter grade.
- All courses must be completed with a minimum GPA of 3.0.
- Courses used to fulfill the minor may not be used to fulfill any other department degree requirements (major or minor).
- All courses must be taken at Stanford University.

Coterminal Bachelor's and Master's Program in Education

The Graduate School of Education admits a small number of students from undergraduate departments within the University into a coterminal bachelor's and master's program. For information about the coterminal option through the Stanford Teacher Education Program (STEP), see the details under STEP. Students in this program receive the bachelor's degree in their undergraduate major and the master's degree in Education. Approval of the student's undergraduate department and admission to the School of Education M.A. program are required. Undergraduates may apply when they have completed at least 120 units toward graduation (UTG). The number of units required for the M.A. degree depends on the program requirements within the Graduate School of Education; the minimum is 45 units.

Applicants may learn more about the coterminal application process and download the application from the Graduate School of Education's (<https://ed.stanford.edu/admissions/application-reqs>) web site.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Master of Arts in Education

The M.A. degree is conferred by the University upon recommendation of the faculty of the Graduate School of Education. The minimum unit requirement is 45 quarter units earned at Stanford as a graduate student. Students must maintain a grade point average (GPA) of 3.0 or better in courses applicable to the degree, and a minimum of 27 units must be taken in the Graduate School of Education. Students typically enroll in 15 to

18 units per quarter. They must enroll in at least 11 units of work each quarter unless their program makes special provision for a lower quarterly minimum. Master's students should obtain detailed program requirements from the Master's Handbook (<https://ed.stanford.edu/academics/masters-handbook>). Some programs require a final project or scholarly paper. Additional detailed information regarding program content, entrance, and degree requirements is available at the Graduate School of Education's (<https://ed.stanford.edu/admissions/application-reqs>) web site. Before the program begins, each student is assigned a faculty adviser from the appropriate area committee to begin early planning of a coherent program.

Master of Arts degrees are offered for the following specializations:

- Curriculum and Teacher Education. (CTE) (This is not a credentialing program; see STEP below.)
- International Comparative Education (ICE)
- International Education Policy Analysis (IEPA)
- Joint Degree with Graduate School of Business (M.B.A./M.A.)
- Joint Degree with Law School (J.D./M.A.)
- Joint Degree with Public Policy Program (M.A./M.P.P.)
- Learning, Design, and Technology (LDT)
- Policy, Organization, and Leadership Studies (POLS)

In addition, an M.A. degree with a teaching credential is offered in the Stanford Teacher Education Program.

Stanford Teacher Education Program (STEP)

STEP is a 12-month, full-time program leading to a Master of Arts and a preliminary California teaching credential. STEP offers a Master of Arts in Education that prepares program graduates for careers as teachers in single or multiple subject classrooms. STEP Elementary prepares students to become teachers in multiple subject classrooms. STEP Secondary prepares students to become teachers of English, World Languages (French, German, Japanese, Mandarin, Spanish), Mathematics, Science (biology, chemistry, earth science, physics), and History/Social Science. STEP seeks to prepare and support teacher candidates to work with diverse learners to achieve high intellectual, academic, and social standards by creating equitable and successful schools and classrooms.

The 12-month STEP year begins in June with a summer quarter of intensive academic preparation and placement in a local summer school. During the academic year, students continue their course work and begin year-long field placements under the guidance of expert teachers in local schools. The Master of Arts and teaching credential require a minimum of 45 quarter units, taken during four quarters of continuous residency.

Stanford undergraduates who enroll in STEP through the coterminal program must complete their undergraduate coursework and have their bachelor's degree conferred prior to beginning in the STEP year. Coterminal STEP students graduate with a Master of Arts in Education and a recommendation for a preliminary California teaching credential.

Applicants to STEP Elementary are required to pass the California Basic Educational Skills Test (CBEST), an approved out of state basic skills exam, or CSET: Writing Skills. Applicants must also pass the California Multiple Subject Examination for Teachers (CSET), and the Reading Instruction Competence Assessment Test (RICA).

Applicants to STEP Secondary are required to pass the California Basic Educational Skills Test (CBEST) or an approved out of state basic skills exam, and must demonstrate subject matter competence in one of two ways:

1. by passing the California Subject Examination for Teachers (CSET) in their content area; or
2. by completing a California state-approved subject matter preparation program.

Further information regarding admission requirements, course work, and credential requirements is available at the Stanford Teacher Education Program website. (<https://gse-step.stanford.edu>)

Doctoral Degrees in Education

The Graduate School of Education offers the Doctor of Philosophy (Ph.D.) degree in all program area committees. The degree is conferred by the University upon recommendation by the faculty of the Graduate School of Education and the University Committee on Graduate Studies. The Ph.D. requires a minimum of 135 units of course work and research completed at Stanford beyond the baccalaureate degree. Students may transfer up to 45 units of graduate course work. Students must consult with the doctoral programs officer if they intend to transfer prior course work. Students must maintain a grade point average (GPA) of 3.0 (B) or better in courses applicable to the degree.

Students should note that admission to the doctoral program does not constitute admission to candidacy for the degree. Students must qualify and apply for candidacy by the end of their second year of study and should obtain information about procedures and requirements during their first year from the doctoral programs officer in Cubberley 135.

The Ph.D. degree is designed for students who are preparing for research work in public school systems, branches of government, or specialized institutions; teaching roles in education in colleges or universities, and research connected with such teaching; or other careers in educational scholarship and research.

Ph.D. students must complete a minor in another discipline taught outside the school, or hold an acceptable master's degree outside the field of education, or complete an approved individually designed distributed minor that combines relevant advanced work taken in several disciplines outside the school.

Upon admission, the admitting area committee assigns an initial adviser from its faculty who works with the student to establish an appropriate and individualized course of study, a relevant minor, and project research plans. Other faculty members may also be consulted in this process. Details about administrative and academic requirements for each area committee and the Graduate School of Education, along with the expected time frame to complete program milestones, are given in the publication Graduate School of Education Doctoral Degree Handbook, available for download at <http://ed.stanford.edu/academics/doctoral-handbook>.

The following doctoral specializations, with their sponsoring area and concentration, are offered:

- Anthropology of Education (SHIPS)
- Developmental and Psychological Sciences (DAPS)
- Economics of Education (SHIPS)
- Educational Linguistics (SHIPS)
- Educational Policy (SHIPS)
- Elementary Education (CTE)
- Higher Education (SHIPS)
- History/Social Science Education (CTE)
- History of Education (SHIPS)
- International Comparative Education (SHIPS)
- Learning Sciences and Technology Design (CTE, DAPS, SHIPS)
- Linguistics (SHIPS)
- Literacy, Language, and English Education (CTE)
- Mathematics Education (CTE)
- Organizational Studies (SHIPS)
- Philosophy of Education (SHIPS)
- Race, Inequality, and Language in Education (SHIPS)
- Science Education (CTE)

- Sociology of Education (SHIPS)
- Teacher Education (CTE)

Ph.D. Minor in Education

Candidates for the Ph.D. degree in other departments or schools of the University may elect to minor in Education. Requirements include a minimum of 20 quarter units of graduate course work in Education and a field of concentration. Students choosing to minor in Education should meet with the Associate Dean for Student Affairs to determine a suitable course of study early in their program.

Emeriti: (Professors) J. Myron Atkin, John Baugh, Edwin M. Bridges, Robert C. Calfee, Larry Cuban, James Greeno, Edward Haertel, Michael Kamil, Michael W. Kirst, Henry M. Levin, Richard Lyman (President Emeritus), James G. March, William F. Massy, Milbrey McLaughlin, Nel Noddings, Ingram Olkin, Denis C. Phillips, Thomas Rohlen, Richard J. Shavelson, Lee S. Shulman, Claude Steele, Myra H. Strober, Patrick Suppes, Carl E. Thoresen, David B. Tyack, Decker F. Walker, Hans Weiler

Dean: Deborah Stipek

Associate Dean for Faculty Affairs: Francisco O. Ramirez

Associate Dean for Student Affairs: Eamonn Callan

Senior Associate Dean for Administration: Stephen Olson

Associate Dean for External Relations: Rebecca T. Smith

Assistant Dean for Academic Services: Shu-Ling Chen

Assistant Dean for HR, Faculty Affairs, Facilities, and Admin Support: Priscilla Fiden

Assistant Dean for Information Technology and CTO: Paul Kim

Professors: H. Samy Alim, Arnetha Ball, Jo Boaler, Hilda Borko, Eamonn Callan, Martin Carnoy, Prudence Carter, Geoffrey Cohen, William Damon, Linda Darling-Hammond, Tom Dee, Claude Goldenberg, Pamela Grossman, Patricia J. Gumpert, Kenji Hakuta, Connie Juel, John D. Krumboltz, David F. Labaree, Teresa D. LaFromboise, Susanna Loeb, Bruce D. McCandliss, Raymond P. McDermott, Daniel A. McFarland, Jonathan Osborne, Amado M. Padilla, Roy Pea, Walter Powell, Francisco O. Ramirez, Sean Reardon, Daniel Schwartz, Deborah J. Stipek, Guadalupe Valdés, Carl Wieman, John Willinsky, Sam Wineburg

Associate Professors: Anthony L. Antonio, Brigid J. Barron, Eric Bettinger, Bryan Brown, Ari Y. Kelman, David Rogosa, Mitchell Stevens

Assistant Professors: Nicole M. Ardoin, Maren Songmy Aukerman, Paulo Blikstein, Leah Gordon, Jennifer Langer-Osuna, Jelena Obradovi#, Candace Thille

Professors (Teaching): Shelley Goldman, Rachel Lotan

Associate Professors (Teaching): David Brazer, Ira Lit, Christine Min Wotipka

Professor (Research): David Plank

Associate Professor (Research): Janet Carlson

Assistant Professor (Research): Michelle Reininger

Courtesy Professors: Richard Banks, Stephen Barley, Albert Camarillo, Carol Dweck, Eric Hanushek, William Koski, John C. Mitchell, Terry Moe, Clifford Nass, Brad Osgood, John Rickford, Cecilia Ridgeway, Caroline Winterer

Courtesy Associate Professors: Stephen Cooper, Robert Reich

Courtesy Professor (Teaching): Don Barr

Courtesy Assistant Professor: Shashank Joshi

Affiliated Faculty: Prashant Loyalka

Senior Lecturers: Gay Hoagland, Denise Pope, Ann Porteus, Jennifer Wolf

Overseas Studies Courses in Education

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

Units

ExploreCourses No courses found: explorecourses:OSP::educ

School of Engineering

Courses offered by the School of Engineering are listed under the subject code ENGR on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENGR&filter-catalognumber=ENGR=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENGR&filter-catalognumber=ENGR=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ENGR&filter-catalognumber=ENGR=on>).

The School of Engineering offers undergraduate programs leading to the degree of Bachelor of Science (B.S.), programs leading to both B.S. and Master of Science (M.S.) degrees, other programs leading to a B.S. with a Bachelor of Arts (B.A.) in a field of the humanities or social sciences, dual-degree programs with certain other colleges, and graduate curricula leading to the degrees of M.S., Engineer, and Ph.D.

The school has nine academic departments: Aeronautics and Astronautics, Bioengineering, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering. These departments and one interdisciplinary program, the Institute for Computational and Mathematical Engineering, are responsible for graduate curricula, research activities, and the departmental components of the undergraduate curricula.

In research where faculty interest and competence embrace both engineering and the supporting sciences, there are numerous programs within the school as well as several interschool activities, including the Army High Performance Computing Research Center, Biomedical Informatics Training Program, Center for Integrated Systems, Center for Work, Technology, and Organization, Collaboratory for Research on Global Projects, National Center for Physics-Based Simulation in Biology, Center for Position, Navigation, and Time, the Energy Modeling Forum, the NIH Biotechnology Graduate Training Grant in Chemical Engineering, and the Stanford Technology Ventures Program. Energy Resources Engineering (formerly Petroleum Engineering) is offered through the School of Earth Sciences.

The School of Engineering's Hasso Plattner Institute of Design (<http://dschool.stanford.edu>) brings together students and faculty in engineering, business, education, medicine, and the humanities to learn design thinking and work together to solve big problems in a human-centered way.

The Woods Institute for the Environment (<http://environment.stanford.edu>) brings together faculty, staff, and students from the schools, institutes and centers at Stanford to conduct interdisciplinary research, education, and outreach to promote an environmentally sound and sustainable world.

The School of Engineering's Office of Student Affairs offers a variety of international programs and experiences for undergraduate and graduate students focusing on engineering fields. For more information, please see <http://engineering.stanford.edu/portals/student/jobs-and-internships/global-engineering-programs>. The School of Engineering also has an exchange program available exclusively to graduate students whose research would benefit from collaboration with Chinese academic institutions.

Instruction in Engineering is offered primarily during Autumn, Winter, and Spring quarters of the regular academic year. During the Summer Quarter, a small number of undergraduate and graduate courses are offered.

Undergraduate Programs in the School of Engineering

The principal goals of the undergraduate engineering curriculum are to provide opportunities for intellectual growth in the context of an

engineering discipline, for the attainment of professional competence, and for the development of a sense of the social context of technology. The curriculum is flexible, with many decisions on individual courses left to the student and the adviser. For a student with well-defined educational goals, there is often a great deal of latitude.

In addition to the special requirements for engineering majors described below, all undergraduate engineering students are subject to the University general education, writing, and foreign language requirements outlined in the first pages of this bulletin. Depending on the program chosen, students have the equivalent of from one to three quarters of free electives to bring the total number of units to 180.

The School of Engineering's *Handbook for Undergraduate Engineering Programs* is the definitive reference for all undergraduate engineering programs. It is available online at <http://ughb.stanford.edu> and provides detailed descriptions of all undergraduate programs in the school, as well as additional information about extracurricular programs and services. Because it is revised in the summer, and updates are made to the web site on a continuing basis, the handbook reflects the most up-to-date information on School of Engineering programs for the academic year.

Accreditation

The Accreditation Board for Engineering and Technology (ABET) accredits college engineering programs nationwide using criteria and standards developed and accepted by U.S. engineering communities. At Stanford, the following undergraduate programs are accredited:

- Chemical Engineering
- Civil Engineering
- Mechanical Engineering

In ABET-accredited programs, students must meet specific requirements for engineering science, engineering design, mathematics, and science course work. Students are urged to consult the *School of Engineering Handbook for Undergraduate Engineering Programs* and their adviser.

Accreditation is important in certain areas of the engineering profession; students wishing more information about accreditation should consult their department office or the office of the Senior Associate Dean for Student Affairs in 135 Huang Engineering Center.

Policy on Satisfactory/No Credit Grading and Minimum Grade Point Average

All courses taken to satisfy major requirements (including the requirements for mathematics, science, engineering fundamentals, Technology in Society, and engineering depth) for all engineering students (including both department and School of Engineering majors) must be taken for a letter grade if the instructor offers that option.

For departmental majors, the minimum combined GPA (grade point average) for all courses taken in fulfillment of the Engineering Fundamentals requirement and the Engineering Depth requirement is 2.0. For School of Engineering majors, the minimum GPA on all engineering courses taken in fulfillment of the major requirements is 2.0.

Admission

Any students admitted to the University may declare an engineering major if they elect to do so; no additional courses or examinations are required for admission to the School of Engineering.

Recommended Preparation Freshman

Students who plan to enter Stanford as freshmen and intend to major in engineering should take the highest level of mathematics offered in high school. (See the "Mathematics (<http://www.stanford.edu/dept/registrar/bulletin/6023.htm>)" section of this bulletin for information on advanced placement in mathematics.) High school courses in physics and chemistry are strongly recommended, but not required. Additional elective course work in the humanities and social sciences is also recommended.

Transfer Students

Students who do the early part of their college work elsewhere and then transfer to Stanford to complete their engineering programs should follow an engineering or pre-engineering program at the first school, selecting insofar as possible courses applicable to the requirements of the School of Engineering, that is, courses comparable to those described under "Undergraduate Programs (<http://www.stanford.edu/dept/registrar/bulletin/5144.htm>)." In addition, students should work toward completing the equivalent of Stanford's foreign language requirement and as many of the University's General Education Requirements (GERs) as possible before transferring. Some transfer students may require more than four years (in total) to obtain the B.S. degree. However, Stanford affords great flexibility in planning and scheduling individual programs, which makes it possible for transfer students, who have wide variations in preparation, to plan full programs for each quarter and to progress toward graduation without undue delay.

Transfer credit is given for courses taken elsewhere whenever the courses are equivalent or substantially similar to Stanford courses in scope and rigor. The policy of the School of Engineering is to study each transfer student's preparation and make a reasonable evaluation of the courses taken prior to transfer by means of a petition process. Inquiries may be addressed to the Office of Student Affairs in 135 Huang Engineering Center. For more information, see the transfer credit section of the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.

Degree Program Options

In addition to the B.S. degrees offered by departments, the School of Engineering offers two other types of B.S. degrees:

- Bachelor of Science in Engineering (see subplan majors listed below)
- Bachelor of Science for Individually Designed Majors in Engineering (IDMEN)

There are eight Engineering B.S. subplans that have been proposed by cognizant faculty groups and pre-approved by the Undergraduate Council:

- Aeronautics and Astronautics
- Architectural Design
- Atmosphere/Energy
- Biomechanical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design.

The B.S. for an Individually Designed Major in Engineering has also been approved by the council.

Curricula for majors are offered by the departments of:

- Bioengineering
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Science
- Electrical Engineering

- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

Curricula for majors in these departments have the following components:

- 36-45 units of mathematics and science (see Basic Requirements 1 and 2 at the end of this section)
- engineering fundamentals (three course minimum, at least one of which must be unspecified by the department, see Basic Requirement 3)
- Technology in Society (TIS) (one course minimum, see Basic Requirement 4)
- engineering depth (courses such that the total number of units for Engineering Fundamentals and Engineering Depth is between 60 and 72)
- ABET accredited majors must meet a minimum number of Engineering Science and Engineering Design units; (see Basic Requirement 5)

Consult the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>) for additional information.

Dual and Coterminal Programs

A Stanford undergraduate may work simultaneously toward two bachelor's degrees or toward a bachelor's and a master's degree, that is, B.A. and M.S., B.A. and M.A., B.S. and M.S., or B.S. and M.A. The degrees may be granted simultaneously or at the conclusion of different quarters. Five years are usually required for a dual or coterminal program or for a combination of these two multiple degree programs. For further information, inquire with the School of Engineering's student affairs office, 135 Huang Engineering Center, or with department contacts listed in the Handbook for Undergraduate Engineering Programs, available at <http://ughb.stanford.edu>.

Dual B.A. and B.S. Degree Program—To qualify for both degrees, a student must:

1. complete the stated University and department requirements for each degree
2. complete 15 full-time quarters, or 3 full-time quarters after completing 180 units
3. complete a total of 225 units (180 units for the first bachelor's degree plus 45 units for the second bachelor's degree)

Coterminal Bachelor's and Master's Degree Program—A Stanford undergraduate may be admitted to graduate study for the purpose of working simultaneously toward a bachelor's degree and a master's degree, in the same or different disciplines. To qualify for both degrees, a student must:

1. complete, in addition to the 180 units required for the bachelor's degree, the number of units required by the graduate department for the master's degree which in no event is fewer than the University minimum of 45 units
2. complete the requirements for the bachelor's degree (department, school, and University) and apply for conferral of the degree at the appropriate time
3. complete the department and University requirements for the master's degree and apply for conferral of the degree at the appropriate time

A student may complete the bachelor's degree before completing the master's degree, or both degrees may be completed in the same quarter.

Admission to the coterminal program requires admission to graduate status by the pertinent department. Admission criteria vary from department to department.

Procedure for Applying for Admission to Coterminal Degree Programs

A Stanford undergraduate may apply to the pertinent graduate department using the University coterminal application form after completing 120 bachelor's degree units. Application deadlines vary by department, but in all cases the student must apply early enough to allow a departmental decision at least one quarter in advance of the anticipated date of conferral of the bachelor's degree.

Students should refer to the University Registrar's Office or its web site for details about when courses begin to count toward the master's degree requirements and when graduate tuition is assessed; this may affect the decision about when to apply for admission to graduate status.

The University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4874.htm>)" section of this bulletin. For University coterminal degree program rules and University application forms, also see <http://studentaffairs.stanford.edu/registrar/publications#Coterm>.

Graduate Programs in the School of Engineering Admission

Application for admission with graduate standing in the school should be made to the graduate admissions committee in the appropriate department or program. While most graduate students have undergraduate preparation in an engineering curriculum, it is feasible to enter from other programs, including chemistry, geology, mathematics, or physics.

For further information and application instructions, see the department sections in this bulletin or <http://gradadmissions.stanford.edu>. Stanford undergraduates may also apply as coterminal students; details can be found under "Degree Program Options" in the "Undergraduate Programs in the School of Engineering (<http://www.stanford.edu/dept/registrar/bulletin/5144.htm>)" section of this bulletin.

Fellowships and Assistantships

Departments and divisions of the School of Engineering award graduate fellowships, research assistantships, and teaching assistantships each year.

Curricula in the School of Engineering

For further details about the following programs, see the department sections in this bulletin.

Related aspects of particular areas of graduate study are commonly covered in the offerings of several departments and divisions. Graduate students are encouraged, with the approval of their department advisers, to choose courses in departments other than their own to achieve a broader appreciation of their field of study. For example, most departments in the school offer courses concerned with nanoscience, and a student interested in an aspect of nanotechnology can often gain appreciable benefit from the related courses given by departments other than her or his own.

Departments and programs of the school offer graduate curricula as follows:

Aeronautics and Astronautics

- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control

- Applied Aerodynamics
- Autonomy
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Decision Making Under Uncertainty
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

Bioengineering

- Biomedical Computation
- Biomedical Devices
- Biomedical Imaging
- Cell and Molecular Engineering
- Regenerative Medicine

Chemical Engineering

- Applied Statistical Mechanics
- Biocatalysis
- Biochemical Engineering
- Bioengineering
- Biophysics
- Computational Materials Science
- Colloid Science
- Dynamics of Complex Fluids
- Energy Conversion
- Functional Genomics
- Hydrodynamic Stability
- Kinetics and Catalysis
- Microrheology
- Molecular Assemblies
- Nanoscience and Technology
- Newtonian and Non-Newtonian Fluid Mechanics
- Polymer Physics
- Protein Biotechnology
- Renewable Fuels
- Semiconductor Processing
- Soft Materials Science
- Solar Utilization
- Surface and Interface Science
- Transport Mechanics

Civil and Environmental Engineering

- Atmosphere/Energy
- Construction Engineering and Management
- Design/Construction Integration
- Environmental Engineering and Science
- Environmental Fluid Mechanics and Hydrology
- Environmental and Water Studies
- Geomechanics
- Structural Engineering
- Sustainable Design and Construction

Computational and Mathematical Engineering

- Applied and Computational Mathematics
- Computational Biology
- Computational Fluid Dynamics
- Computational Geometry and Topology
- Computational Geosciences
- Computational Medicine
- Data Science
- Discrete Mathematics and Algorithms
- Numerical Analysis
- Optimization
- Partial Differential Equations
- Stochastic Processes
- Uncertainty Quantification
- Financial Mathematics

Computer Science

See <http://forum.stanford.edu/research/areas.php> for a comprehensive list.

- Algorithmic Game Theory
- Artificial Intelligence
- Autonomous Agents
- Biomedical Computation
- Compilers
- Complexity Theory
- Computational and Cognitive Neuroscience
- Computational Biology
- Computational Geometry and Topology
- Computational Logic
- Computational Photography
- Computational Physics
- Computer Architecture
- Computer Graphics
- Computer Security
- Computer Science Education
- Computer Vision
- Cryptography
- Database Systems
- Data Center Computing
- Data Mining
- Design and Analysis of Algorithms
- Digital Libraries
- Distributed and Parallel Computation
- Distributed Systems

- Electronic Commerce
- Formal Verification
- Haptic Display of Virtual Environments
- Human-Computer Interaction
- Image Processing
- Information and Communication Technologies for Development
- Information Management
- Learning Theory
- Machine Learning
- Mathematical Theory of Computation
- Mobile Computing
- Multi-Agent Systems
- Nanotechnology-enabled Systems
- Natural Language and Speech Processing
- Networking and Internet Architecture
- Operating Systems
- Parallel Computing
- Probabilistic Models and Methods
- Programming Systems/Languages
- Robotics
- Robust System Design
- Scientific Computing and Numerical Analysis
- Sensor Networks
- Social and Information Networks
- Social Computing
- Ubiquitous and Pervasive Computing
- Visualization
- Web Application Infrastructure

Electrical Engineering

- Biomedical Devices and Bioimaging
- Communication Systems: Wireless, Optical, Wireline
- Control, Learning, and Optimization
- Electronic and Magnetic Devices
- Energy: Solar Cells, Smart Grid, Load Control
- Environmental and Remote Sensing: Sensor Nets, Radar Systems, Space
- Fields and Waves
- Graphics, HCI, Computer Vision, Photography
- Information Theory and Coding: Image and Data Compression, Denoising
- Integrated Circuit Design: MEMS, Sensors, Analog, RF
- Network Systems and Science: Next Gen Internet, Wireless Networks
- Nano and Quantum Science
- Photonic Devices
- Systems Software: OS, Compilers, Languages
- Systems Hardware: Architecture, VLSI, Embedded Systems
- VLSI Design

Management Science and Engineering

- Decision and Risk Analysis
- Dynamic Systems
- Economics
- Entrepreneurship
- Finance

- Information
- Marketing
- Optimization
- Organization Behavior
- Organizational Science
- Policy
- Production
- Stochastic Systems
- Strategy

Materials Science and Engineering

- Biomaterials
- Ceramics and Composites
- Computational Materials Science
- Electrical and Optical Behavior of Solids
- Electron Microscopy
- Fracture and Fatigue
- Imperfections in Crystals
- Kinetics
- Magnetic Behavior of Solids
- Magnetic Storage Materials
- Nanomaterials
- Photovoltaics
- Organic Materials
- Phase Transformations
- Physical Metallurgy
- Solid State Chemistry
- Structural Analysis
- Thermodynamics
- Thin Films
- X-Ray Diffraction

Mechanical Engineering

- Biomechanics
- Combustion Science
- Computational Mechanics
- Controls
- Design of Mechanical Systems
- Dynamics
- Environmental Science
- Experimental Stress and Analysis
- Fatigue and Fracture Mechanics
- Finite Element Analysis
- Fluid Mechanics
- Heat Transfer
- High Temperature Gas Dynamics
- Kinematics
- Manufacturing
- Mechatronics
- Product Design
- Robotics
- Sensors
- Solids
- Thermodynamics
- Turbulence

For more information on the ME graduate curriculum, please see the Graduate Bulletin and Graduate student handbook.

Bachelor of Science in the School of Engineering

Departments within the School of Engineering offer programs leading to the B.S. degree in the following fields:

- Chemical Engineering
- Civil Engineering
- Computer Science
- Electrical Engineering
- Environmental Engineering (no longer offered after 2014-15)
- Environmental Systems Engineering
- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

The School of Engineering itself offers interdisciplinary programs leading to the B.S. degree in Engineering with specializations in:

- Aeronautics and Astronautics
- Architectural Design
- Atmosphere/Energy
- Bioengineering
- Biomechanical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design

In addition, students may elect a B.S. in an Individually Designed Major in Engineering.

Bachelor of Arts and Science (B.A.S.) in the School of Engineering

This degree is available to students who complete both the requirements for a B.S. degree in engineering and the requirements for a major or program ordinarily leading to the B.A. degree. For more information, see the "Undergraduate Degrees (p. 24)" section of this bulletin.

Independent Study, Research, and Honors

The departments of Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, and Mechanical Engineering, as well as the faculty overseeing the Architectural Design, Atmosphere/Energy, Bioengineering, Biomechanical Engineering, Biomedical Computing, and Engineering Physics majors, offer qualified students opportunities to do independent study and research at an advanced level with a faculty mentor in order to receive a Bachelor of Science with honors. An honors option is also available to students pursuing an independently designed major, with the guidance and approval of their adviser.

Petroleum Engineering

Petroleum Engineering is offered by the Department of Energy Resource Engineering in the School of Earth Sciences. Consult the "Energy Resources Engineering (p. 130)" section of this bulletin for requirements. School of Engineering majors who anticipate summer jobs or career

positions associated with the oil industry should consider enrolling in ENGR 120.

Programs in Manufacturing

Programs in manufacturing are available at the undergraduate, master's, and doctorate levels. The undergraduate programs of the departments of Civil and Environmental Engineering, Management Science and Engineering, and Mechanical Engineering provide general preparation for any student interested in manufacturing. More specific interests can be accommodated through Individually Designed Majors in Engineering (IDMENS).

Basic Requirements

Basic Requirement 1 (Mathematics)

Engineering students need a solid foundation in the calculus of continuous functions, linear algebra, an introduction to discrete mathematics, and an understanding of statistics and probability theory. Students are encouraged to select courses on these topics. To meet ABET accreditation criteria, a student's program must include the study of differential equations. Courses that satisfy the math requirement are listed at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

Basic Requirement 2 (Science)

A strong background in the basic concepts and principles of natural science in such fields as biology, chemistry, geology, and physics is essential for engineering. Most students include the study of physics and chemistry in their programs. Courses that satisfy the science requirement are listed at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

Basic Requirement 3 (Engineering Fundamentals)

The Engineering Fundamentals requirement is satisfied by a nucleus of technically rigorous introductory courses chosen from the various engineering disciplines. It is intended to serve several purposes. First, it provides students with a breadth of knowledge concerning the major fields of endeavor within engineering. Second, it allows the incoming engineering student an opportunity to explore a number of courses before embarking on a specific academic major. Third, the individual classes each offer a reasonably deep insight into a contemporary technological subject for the interested non-engineer.

The requirement is met by taking three courses from the following list, at least one of which is chosen by the student rather than by the department:

		Units
ENGR 10	Introduction to Engineering Analysis	4
ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 20	Introduction to Chemical Engineering (same as CHEMENG 20)	3
ENGR 25B	Biotechnology ¹	3
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E) ¹	3
ENGR 30	Engineering Thermodynamics	3
ENGR 40	Introductory Electronics ^{1,2}	5
ENGR 40A	Introductory Electronics	3
ENGR 40M	An Intro to Making: What is EE	3-5

ENGR 40P	Physics of Electrical Engineering ¹	5
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis ^{1,2}	4
ENGR 50E	Introduction to Materials Science, Energy Emphasis ¹	4
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis ¹	4
ENGR 60	Engineering Economy	3
ENGR 62	Introduction to Optimization (same as MS&E 111)	4
ENGR 70A/CS 106A	Programming Methodology ¹	5
ENGR 70B/CS 106B	Programming Abstractions ¹	5
ENGR 70X/CS 106X	Programming Abstractions (Accelerated) ¹	5
ENGR 80	Introduction to Bioengineering (same as BIOE 80)	4
ENGR 90	Environmental Science and Technology (same as CEE 70)	3

- ¹ Only one course from each numbered series can be used in the Engineering Fundamentals category within a major program.
- ² ENGR 40 Introductory Electronics and ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis may be taken on video at some of Stanford's Overseas Centers.

Basic Requirement 4 (Technology in Society)

It is important for the student to obtain a broad understanding of engineering as a social activity. To foster this aspect of intellectual and professional development, all engineering majors must take one course devoted to exploring issues arising from the interplay of engineering, technology, and society. Courses that fulfill this requirement are listed online at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

Basic Requirement 5 (Engineering Topics)

In order to satisfy ABET (Accreditation Board for Engineering and Technology) requirements, a student majoring in Chemical, Civil, or Mechanical Engineering must complete one and a half years of engineering topics, consisting of a minimum of 68 units of Engineering Fundamentals and Engineering Depth appropriate to the student's field of study. In most cases, students meet this requirement by completing the major program core and elective requirements. A student may need to take additional courses in Depth in order to fulfill the minimum requirement. Appropriate courses assigned to fulfill each major's program are listed online at <http://ughb.stanford.edu> in the Handbook for Undergraduate Engineering Programs.

Experimentation

Chemical Engineering, Civil Engineering, and Mechanical Engineering must include experimental experience appropriate to the discipline. Lab courses taken in the sciences, as well as experimental work taken in courses within the School of Engineering, will fulfill this requirement.

Overseas Studies Courses in Engineering

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses web site (<http://>)

explorecourses.stanford.edu) or the Bing Overseas Studies web site (<http://bosp.stanford.edu>). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

Aeronautics and Astronautics (AA)

Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Aeronautics and Astronautics" appears on the transcript and on the diploma.

Requirements

Mathematics

24 units minimum ¹		
MATH 41	Calculus (or AP Calculus)	5
MATH 42	Calculus (or AP Calculus)	5
CME 100/ENGR 154	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 102/ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
CME 106/ENGR 155C	Introduction to Probability and Statistics for Engineers (or STATS 110, STATS 116, CS 109)	4-5
or STATS 110	Statistical Methods in Engineering and the Physical Sciences	
or STATS 116	Theory of Probability	
or CS 109	Introduction to Probability for Computer Scientists	

Science

19 units minimum		
PHYSICS 41	Mechanics (or AP Physics)	4
PHYSICS 43	Electricity and Magnetism (or AP Physics)	4
PHYSICS 45	Light and Heat	4
CHEM 31X	Chemical Principles Accelerated (or CHEM 31A +B, AP Chemistry)	4-5

or ENGR 31	Chemical Principles with Application to Nanoscale Science and Technology	
Science elective ²		3-5
Technology in Society (one course required)		
3 units minimum ³		3-5
Engineering Fundamentals (three courses required)		
11 units minimum		
ENGR 30	Engineering Thermodynamics	3
ENGR 70A	Programming Methodology	5
Fundamentals Elective ⁴		3-5
Engineering Depth		
30 units minimum		
AA 100	Introduction to Aeronautics and Astronautics	3
AA 190	Directed Research and Writing in Aero/Astro	3-5
ME 70	Introductory Fluids Engineering	4
ENGR 14	Intro to Solid Mechanics	4
ME 131A	Heat Transfer	3
ENGR 15	Dynamics	4
ME 161	Dynamic Systems, Vibrations and Control	3-4
or PHYSICS 110	Advanced Mechanics	
CEE 101A	Mechanics of Materials	4
or ME 80	Mechanics of Materials	
Aero/Astro Depth		
18 units minimum		
Engineering Electives (two courses required) ⁵		6-10
See Course List AA-1 below for a list of options		
Depth Area I (two courses required) ⁶		6-10
See Course List AA-2 below for a list of options		
Depth Area II (two courses required) ⁶		6-10
See Course List AA-2 below for a list of options		
Units	Total Units	103-126

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

- ¹ It is recommended that the CME series (100, 102, 104) be taken rather than the MATH series (51, 52, 53). If students take the MATH series, it is recommended to take MATH 51M Introduction to MATLAB for Multivariable Mathematics, offered Autumn Quarter.
- ² Courses that satisfy the Science elective are listed in Figure 3-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.
- ³ Courses that satisfy the Technology in Society Requirement are listed in Figure 3-3 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.
- ⁴ Courses that satisfy the Engineering Fundamentals elective are listed in Figure 3-4 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. ENGR 70B or X (same as CS 106B or X) is not allowed to fulfill the third fundamentals requirement.
- ⁵ Courses that satisfy the Engineering Electives are listed in Figure AA-1 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-1 below.
- ⁶ Courses that satisfy the Depth Area choices are listed in Figure AA-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-2 below.

Units		
AA-1. Engineering Electives: Two Courses Required		
AA 250	Nanomaterials for Aerospace	3

ENGR 240	Introduction to Micro and Nano Electromechanical Systems	3
ME 210	Introduction to Mechatronics	4
ME 220	Introduction to Sensors	3-4
ME 227	Vehicle Dynamics and Control	3
ME 250	Internal Combustion Engines	3-5
ME 257	Turbine and Internal Combustion Engines	3
ME 260	Fuel Cell Science and Technology	3
ME 324	Precision Engineering	4
ME 331A	Advanced Dynamics & Computation	3
ME 331B	Advanced Dynamics, Simulation & Control	3
ME 345	Fatigue Design and Analysis	3

ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems Structures	5
AA 240A	Analysis of Structures	3
AA 240B	Analysis of Structures	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
ME 335A	Finite Element Analysis	3

* It is recommended that students review prerequisites for all courses.

Architectural Design (AD)

Completion of the undergraduate program in Architectural Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Architectural Design" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Architectural Design

The mission of the undergraduate program in Architectural Design is to develop students' ability to integrate engineering and architecture in ways that blend innovative architectural design with cutting-edge engineering technologies. Courses in the program combine hands-on architectural design studios with a wide variety of other courses. Students can choose from a broad mix of elective courses concerning energy conservation, sustainability, building systems, and structures, as well as design foundation and fine arts courses. In addition to preparing students for advanced studies in architecture and construction management, the program's math and science requirements prepare students well for graduate work in other fields such as civil and environmental engineering, law, and business.

Requirements

Units

Mathematics and Science (36 units minimum) ¹

Mathematics		
MATH 19	Calculus	3
MATH 20	Calculus	3
MATH 21	Calculus	4
Or the following sequence:		
MATH 41	Calculus	
MATH 42	Calculus	
CME 100	Vector Calculus for Engineers (Recommended)	5
One course in Statistics (required)		3-5
Science		
PHYSICS 41	Mechanics	4
Recommended:		
EARTHSYS 101	Energy and the Environment	
EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes	

GES 1A	Introduction to Geology: The Physical Science of the Earth (or GES 1B or 1C)	
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CEE 70	Environmental Science and Technology	
CEE 101D	Computations in Civil and Environmental Engineering	
PHYSICS 23 or PHYSICS 43	Electricity and Optics Electricity and Magnetism	

Or from School of Engineering approved list

Technology in Society		
One course required, see Basic Requirement 4		3-5

Engineering Fundamentals		
Three courses minimum, see Basic Requirement 3		9-15

ENGR 14	Intro to Solid Mechanics	4
ENGR 60 or CEE 146A	Engineering Economy ² Engineering Economy	3

AD Depth Core ³

CEE 31 or CEE 31Q	Accessing Architecture Through Drawing Accessing Architecture Through Drawing	4
CEE 100	Managing Sustainable Building Projects	4
CEE 120A	Building Information Modeling Workshop	2-4
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	4
CEE 137B	Advanced Architecture Studio	5
ARTHIST 3	Introduction to World Architecture	5

Depth Options 12

See Note 3 for course options

Depth Electives

Elective units must be such that courses in ENGR Fundamentals, Core, Depth Options, and Depth Electives total at least 60 units. One of the following must be taken:

CEE 131A or CEE 32A or CEE 32B or CEE 32D or CEE 32F or CEE 32G or CEE 131A or CEE 139	Professional Practice: Mixed-Use Design in an Urban Setting Psychology of Architecture Design Theory Construction: The Writing of Architecture Light, Color, and Space Architecture Since 1900 Professional Practice: Mixed-Use Design in an Urban Setting Design Portfolio Methods	3
---	--	---

Total Units	80-92
--------------------	--------------

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

¹ School of Engineering approved list of math and science courses available in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.
² CEE 146A, offered Autumn quarter, may be used in place of ENGR 60 for the second ENGR Fundamental.

³ Engineering depth options: Choose at least 12 units from the following courses: CEE 101A, CEE 101B, CEE 101C, CEE 156, CEE 172, CEE 172A, CEE 176A, CEE 180, CEE 181, CEE 182, CEE 183, CEE 226, CEE 241, OR CEE 242. Students should investigate any prerequisites for the listed courses and carefully plan course sequences with the AD director.

Electives:

- CEE 32A, CEE 32B, CEE 32D, CEE 32F, CEE 32G, CEE 32Q, CEE 101B, CEE 101C, CEE 120A, CEE 120B, CEE 120C, CEE 122A, CEE 122B, CEE 124, CEE 131A, CEE 132, CEE 134B, CEE 135A, CEE 139, CEE 154, CEE 172A, CEE 176A, CEE 180, CEE 181, CEE 182, CEE 183
- ENGR 50, ENGR 103, ENGR 131
- ME 10AX, ME 101, ME 110, ME 115A/B/C, ME 120, ME 203
- ARTSTUDI 13BX, ARTSTUDI 140, ARTSTUDI 145, ARTSTUDI 151, ARTSTUDI 160, ARTSTUDI 170, ARTSTUDI 171, ARTSTUDI 181
- ARTHIST 107A, ARTHIST 142, ARTHIST 143A, ARTHIST 188A
- FILMPROD 114
- TAPS 137
- URBANST 110, URBANST 113, URBANST 163, URBANST 171

Atmosphere/Energy (A/E)

Completion of the undergraduate program in Atmosphere/Energy leads to the conferral of the Bachelor of Science in Engineering. The subplan "Atmosphere/Energy" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Atmosphere/Energy

Atmosphere and energy are strongly linked: fossil-fuel energy use contributes to air pollution, global warming, and weather modification; and changes in the atmosphere feed back to renewable energy resources, including wind, solar, hydroelectric, and wave resources. The mission of the undergraduate program in Atmosphere/Energy (A/E) is to provide students with the fundamental background necessary to understand large- and local-scale climate, air pollution, and energy problems and solve them through clean, renewable, and efficient energy systems. To accomplish this goal, students learn in detail the causes and proposed solutions to the problems, and learn to evaluate whether the proposed solutions are truly beneficial. A/E students take courses in renewable energy resources, indoor and outdoor air pollution, energy efficient buildings, climate change, renewable energy and clean-vehicle technologies, weather and storm systems, energy technologies in developing countries, electric grids, and air quality management. The curriculum is flexible. Depending upon their area of interest, students may take in-depth courses in energy or atmosphere and focus either on science, technology, or policy. The major is designed to provide students with excellent preparation for careers in industry, government, and research; and for study in graduate school.

Requirements

	Units
Mathematics and Science (45 units minimum):	
Mathematics	23
23 units minimum, including at least one course from each group:	
Group A	
MATH 53	Ordinary Differential Equations with Linear Algebra
CME 102	Ordinary Differential Equations for Engineers
Group B	
CME 106	Introduction to Probability and Statistics for Engineers
STATS 60	Introduction to Statistical Methods: Precalculus
STATS 110	Statistical Methods in Engineering and the Physical Sciences
Science	20
20 units minimum, including all of the following:	

PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
or PHYSICS 45	Light and Heat	
Select one of the following:		4
CHEM 31B	Chemical Principles II	
or CHEM 31X	Chemical Principles Accelerated	
or ENGR 31	Chemical Principles with Application to Nanoscale Science and Technology	
CEE 70	Environmental Science and Technology ¹	
Technology in Society (1 course)		
MSE 197	Ethics, Technology, and Public Policy (WIM)	5
Engineering Fundamentals		
Three courses minimum, including the following:		
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use	3
Plus one of the following courses, plus one elective (see Basic Requirement 3):		6-9
ENGR 10	Introduction to Engineering Analysis	
ENGR 30	Engineering Thermodynamics	
ENGR 60	Engineering Economy	
ENGR 70A	Programming Methodology	
Engineering Depth		
Required: ²		
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions (cannot also fulfill science requirement)	3
CEE 173A	Energy Resources	4-5
At least 34 units from the following with at least four courses from each group:		34
Group A: Atmosphere		
AA 100	Introduction to Aeronautics and Astronautics	
BIO 147		
CEE 63	Weather and Storms	
CEE 101B	Mechanics of Fluids	
or ME 70	Introductory Fluids Engineering	
CEE 164	Introduction to Physical Oceanography	
or EESS 146B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	
CEE 172	Air Quality Management	
CEE 172A	Indoor Air Quality (given alt years)	
CEE 172S	Green House Gas Mitigation	
CEE 178	Introduction to Human Exposure Analysis	
EARTHSYS 37N	Climate Change: Science & Society	
or	The Global Warming Paradox	
EARTHSYS 41N		
EARTHSYS 57Q	Climate Change from the Past to the Future	
EARTHSYS 111	Biology and Global Change	
or BIO 164	Biosphere-Atmosphere Interactions	
EARTHSYS 142	Remote Sensing of Land	
or	Fundamentals of Geographic Information Science (GIS)	
EARTHSYS 144		

EARTHSYS 146A	Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (alt years)	
EARTHSYS 184	Climate and Agriculture (alt. years)	
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	
MSE 92Q	International Environmental Policy	
Group B: Energy		
AA 116Q	Electric Automobiles and Aircraft	
or EE 152	Green Electronics	
CEE 109	Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision (alternate years)	
or CEE 136	Green Architecture	
CEE 142A	Negotiating Sustainable Development	
or CEE 156	Building Systems	
CEE 176A	Energy Efficient Buildings	
CEE 176B	Electric Power: Renewables and Efficiency	
CEE 176F	Energy Systems Field Trips: China Energy Systems ((given alt years))	
CEE 177S	Design for a Sustainable World	
CHEMENG 35N	Renewable Energy for a Sustainable World	
EARTHSYS 101	Energy and the Environment	
EARTHSYS 102	Renewable Energy Sources and Greener Energy Processes	
ECON 17N	Energy, the Environment, and the Economy	
EE 151	Sustainable Energy Systems	
ENERGY 104	Transition to sustainable energy systems	
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
ME 185	Electric Vehicle Design	
OSPSANTG 31	The Chilean Energy System: 30 Years of Market Reforms	

Total Units **102-106**

- Can count as a science requirement or Engineering Fundamental, but not both.
- To fulfill the Writing in the Major (WIM) requirement take Technology in Society course MS&E 193W or MS&E 197. Alternative WIM Courses: CEE 100, EARTHSYS 200, HUMBIO 4B, or the combination of 2 units of CEE 199 with 1 unit of E199W.

Honors Program

The A/E honors program offers eligible students the opportunity to engage in guided original research, or project design, over the course of an academic year. Interested students must:

- submit a 1-2 page letter applying to the honors program in A/E. The letter must describe the problem to be investigated. Students must obtain signatures from the current primary adviser and the proposed honors adviser, if different, and submit the letter to the student services office in the Department of Civil and Environmental Engineering (CEE). The application must include an unofficial Stanford transcript. Applications must be received in the fourth quarter prior to graduation. It is recommended that a prospective student meet with the proposed honors adviser well in advance of submitting an application.
- maintain a GPA of at least 3.5.
- complete an honors thesis or project over a period of three quarters. The typical length of the written report is 15-20 pages. The deadline for

submission of the report is decided by the honors adviser, but should be no later than the end of the third week in May.

- present their thesis or project be read and evaluated by the honors adviser and one other reader. It is the student's responsibility to obtain both the adviser and the reader. At least one of the two must be a member of the Academic Council in the School of Engineering.
- present the completed work in an appropriate forum such as in the same session as honors theses are presented in the department of the adviser. All honors programs require some public presentation of the thesis or project.
- take up to 10 units of CEE 199H Undergraduate Honors Thesis toward the thesis (optional). Students must take ENGR 202S Writing: Special Projects or its equivalent. Units for ENGR 202S are beyond those required for the A/E major.
- submit two copies of the signed thesis to the CEE student services office no later than two weeks before the end of the graduation quarter.

For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Bioengineering (BioE)

Completion of the undergraduate program in Bioengineering leads to the conferral of the Bachelor of Science in Engineering. The subplan "Bioengineering" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to BioE and computer programming. A series of core BioE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) program (<http://bioengineering.stanford.edu/education/REU.html>). BioE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

Requirements

	Units

BIOE 281	Biomechanics of Movement
BIOE 287	Introduction to Physiology and Biomechanics of Hearing
BIOE 291	Principles and Practice of Optogenetics for Optical Control of Biological Tissues

Total Units119-128 **(BME)**

- It is strongly recommended that CME 100 Vector Calculus for Engineers, CME 102 Ordinary Differential Equations for Engineers, and CME 104 Linear Algebra and Partial Differential Equations for Engineers be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables, MATH 52 Integral Calculus of Several Variables, and MATH 53 Ordinary Differential Equations with Linear Algebra. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. If you are taking the MATH 50 series, it is strongly recommended to take MATH 51M Introduction to MATLAB or CME 192 Introduction to MATLAB.
- Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31X Chemical Principles Accelerated or ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology) and calculus-based Physics, with two quarters of course work in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters. Premeds should take Chemistry, not ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Bioengineering with Honors (ENGR-BSH, BIOE). This program provides the opportunity for qualified BioE majors to conduct independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

- Declare the honors program in Axxess (ENGR-BSH, Subplan: Bioengineering).
- Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
- Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
- Submit a completed thesis draft to the honors adviser and second reader by the first week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.
- Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the department's undergraduate site (<http://bioengineering.stanford.edu/education/bio-honors-instructions-v.2.pdf>).

Biomechanical Engineering (BME)

Completion of the undergraduate program in Biomechanical Engineering leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomechanical Engineering" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Biomechanical Engineering

The mission of the undergraduate program in Biomechanical Engineering is to help students address health science challenges by applying engineering mechanics and design to the fields of biology and medicine. The program is interdisciplinary in nature, integrating engineering course work with biology and clinical medicine. Research and teaching in this discipline focus primarily on neuromuscular, musculoskeletal, cardiovascular, and cell and tissue biomechanics. This major prepares students for graduate studies in bioengineering, medicine or related areas.

Requirements

		Units
Mathematics		21
21 units minimum; see Basic Requirement 1		
Science (22 units Minimum) ¹		
CHEM 31X	Chemical Principles Accelerated (or CHEM 31A +B)	5
CHEM 33	Structure and Reactivity	5
PHYSICS 41	Mechanics	4
BIO 44X	Core Molecular Biology Laboratory	5
Biology or Human Biology A/B core courses		10
Technology in Society		
One course required, see Basic Requirement 4		3-5
Engineering Topics (Engineering Science and Design)		
Engineering Fundamentals (minimum three courses; see Basic Requirement 3):		
ENGR 14	Intro to Solid Mechanics	4
ENGR 25B	Biotechnology	3
or ENGR 80	Introduction to Bioengineering	
Fundamentals Elective		3-5
Engineering Depth		
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 80	Mechanics of Materials	4
ME 389	Biomechanical Research Symposium ²	1
Options to complete the ME depth sequence (3 courses, minimum 9 units):		9
ENGR 105	Feedback Control Design	
ME 101	Visual Thinking	
ME 112	Mechanical Systems Design ³	
ME 113	Mechanical Engineering Design	
ME 131A	Heat Transfer ³	

ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery
ME 140	Advanced Thermal Systems ³
ME 161	Dynamic Systems, Vibrations and Control
ME 203	Design and Manufacturing
ME 210	Introduction to Mechatronics
ME 220	Introduction to Sensors
Options to complete the BME depth sequence (3 courses, minimum 9 units) and WIM: ³	
BIOE 260	Tissue Engineering
ME 239	Mechanics of the Cell
ME 266	Introduction to Physiology and Biomechanics of Hearing
ME 280	Skeletal Development and Evolution
ME 281	Biomechanics of Movement
ME 283	Tissue Mechanics and Mechanobiology
ME 287	Mechanics of Biological Tissues
ME 294L	Medical Device Design Lab
ME 328	Medical Robotics (with permission of instructor)

Total Units

97-101

- Science must include both Chemistry and Physics with one year of course work (3 courses) in at least one, two courses of HUMBIO core or BIO core, and CHEM 31A and B or X, *or* ENGR 31. CHEM 31A and B are considered one course even though given over two quarters.
- If ME 389 is not offered, other options include BIOE 393, ME 571, or course by petition.
- There are two options for fulfilling the WIM requirement. The first option is to complete one of ME112, ME131A, or ME140 (ME 131A must be taken for 5 units to fulfill WIM). The second option is to perform engineering research over the summer or during the academic year and enroll in 3 units of ENGR 199W "Writing of Original Research for Engineers," (preferably during the time you are performing research or the following quarter) to write a technical report on your research. This second option requires an agreement with your faculty research supervisor.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Biomechanical Engineering with Honors. This program provides an opportunity for qualified BME majors to conduct independent study and research related to biomechanical engineering at an advanced level with a faculty mentor.

Honors Criteria:

- GPA of 3.5 or higher in the major
- Arrangement with an ME faculty member (or a faculty member from another department who is approved by the BME Undergraduate Program Director) who agrees to serve as the honors adviser, plus a second faculty member who reads and approves the thesis. The honors adviser must be a member of the Academic Council in the School of Engineering.
- Applications are subject to the review and final approval by the BME Undergraduate Program Director. Applicants and thesis advisers receive written notification when a decision has been made. Submit application documents to the student services office, Building 530, room 125.
- An application consists of
 - One page written statement describing the research topic
 - Unofficial Stanford transcript

- Signature of thesis adviser and thesis reader agreeing to serve on the committee
- Deadline: No later than the second week of the Autumn Quarter of the senior year
- In order to graduate with honors:
 - Declare ENGR-BSH (Honors) program in Axess
 - Maintain 3.5 GPA
 - Submit a completed thesis draft to the adviser and reader by April 1
 - Present the thesis synopsis at the Mechanical Engineering Poster Session held in April
- Further revisions and a final endorsement by the adviser and reader are to be completed by May 15 when two bound copies are to be submitted to the Mechanical Engineering student services office.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Biomedical Computation (BMC)

Completion of the undergraduate program in Biomedical Computation leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomedical Computation" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Biomedical Computation

As biology and medical science enter the 21st century, the importance of computational methods continues to increase dramatically. These methods span the analysis of biomedical data, the construction of computational models for biological systems, and the design of computer systems that help biologists and physicians create and administer treatments to patients. The Biomedical Computation major prepares students to work at the cutting edge of this interface between computer science, biology, and medicine. Students begin their journey by gaining a solid fundamental understanding of the underlying biological and computational disciplines. They learn techniques in informatics and simulation and their countless applications in understanding and analyzing biology at all levels, from individual molecules in cells to entire organs, organisms, and populations. Students then focus their efforts on a depth area of their choice, and participate in a substantial research project with a Stanford faculty member. Upon graduation, students are prepared to enter a wide range of cutting-edge fields in both academia and industry.

Requirements

Units

Mathematics

21 unit minimum, see Basic Requirement 1

MATH 41	Calculus	5
MATH 42	Calculus	5
STATS 116	Theory of Probability ¹	3-5
CS 103	Mathematical Foundations of Computing	3-5

Cellular Elective (one course)^{5,6}

Organs Elective (one course)^{5,6}

Simulation, Cellular, or Organs Elective (two courses)^{5,6}

Total Units **89-105**

- CS 109 Introduction to Probability for Computer Scientists, MSE 120 Probabilistic Analysis, MSE 220 Probabilistic Analysis, EE 178 Probabilistic Systems Analysis, and CME 106 Introduction to Probability and Statistics for Engineers are acceptable substitutes for STATS 116 Theory of Probability.
- Research projects require pre-approval of BMC Coordinators
- Research units taken as CS 191W Writing Intensive Senior Project or in conjunction with ENGR 199W Writing of Original Research for Engineers fulfill the Writing in the Major (WIM) requirement. CS 272 Introduction to Biomedical Informatics Research Methodology, which does not have to be taken in conjunction with research, also fulfills the WIM requirement.
- One 3-5 unit course required; CS 106A Programming Methodology may not be used. See Fundamentals list in Handbook for Undergraduate Engineering Programs.
- The list of electives is continually updated to include all applicable courses. For the current list of electives, see <http://bmc.stanford.edu>.
- A course may only be counted towards one elective or core requirement; it may not be double-counted.

- 7 A total of 40 Engineering units must be taken. The core classes only provide 27 Engineering units, so the remaining units must be taken from within the electives.

Honors Program

The Biomedical Computation program offers an honors option for qualified students, resulting in a B.S. with Honors degree in Engineering (ENGR-BSH, Biomedical Computation). An honors project is meant to be a substantial research project during the later part of a student's undergraduate career, culminating in a final written and oral presentation describing the student's project and its significance. There is no limit to the number of majors who can graduate with honors; any BMC major who is interested and meets the qualifications is considered.

- Students apply by submitting a 1-2 page proposal describing the problem the student has chosen to investigate, its significance, and the student's research plan. This plan must be endorsed by the student's research and academic advisers, one of whom must be a member of the Academic Council. In making its decision, the department evaluates the overall scope and significance of the student's proposed work.
- Students must maintain a 3.5 GPA.
- Students must complete three quarters of research. All three quarters must be on the same project with the same adviser. A Summer Quarter counts as one quarter of research.
 - Ideally, funding should not be obtained through summer research college sources, but rather through the UAR's Student Grants Program (<http://exploreddegrees.stanford.edu/schoolofengineering/%20http://studentgrants.stanford.edu>). In no case can the same work be double-paid by two sources.
- Students must complete a substantial write-up of the research in the format of a publishable research paper. This research paper is expected to be approximately 15-20 pages and must be approved by the student's research adviser and by a second reader.
- As the culmination of the honors project, each student presents the results in a public forum. This can either be in the honors presentation venue of the home department of the student's adviser, or in a suitable alternate venue.

For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Chemical Engineering (CHE)

Completion of the undergraduate program in Chemical Engineering leads to the conferral of the Bachelor of Science in Chemical Engineering.

Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

Requirements*

Units

Mathematics¹

MATH 41	Calculus	5
MATH 42	Calculus	5
Select one of the following:		5-10
CME 100	Vector Calculus for Engineers	
MATH 51 & MATH 52	Linear Algebra and Differential Calculus of Several Variables and Integral Calculus of Several Variables	
Select one of the following:		5
CME 102 or MATH 53	Ordinary Differential Equations for Engineers or Ordinary Differential Equations with Linear Algebra	
Select one of the following:		4-5
CME 104 or CME 106	Linear Algebra and Partial Differential Equations for Engineers or Introduction to Probability and Statistics for Engineers	

Science¹

CHEM 31X	Chemical Principles Accelerated	5
CHEM 33	Structure and Reactivity	5
CHEM 35	Synthetic and Physical Organic Chemistry	5
CHEM 36	Organic Chemistry Laboratory I	3
PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
CHEM 131	Organic Polyfunctional Compounds	3

Technology in Society

One course required, see Basic Requirement 4 3-5

Engineering Fundamentals

Three courses minimum; see Basic Requirement 3		
ENGR/ CHEMENG 20	Introduction to Chemical Engineering	3
Fundamentals Elective from another School of Engineering department		3-5
See the UGHB for a list of courses.		
Select one of the following:		3
ENGR 25B	Biotechnology (same as CHEMENG 25B)	
ENGR 25E	Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E)	

Chemical Engineering Depth

CHEM 171	Physical Chemistry I	3
CHEM 173	Physical Chemistry II	3

CHEM 175	Physical Chemistry III	3
Select four of the following: ^{2,3}		12
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	
CHEMENG 142	Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160	Polymer Science and Engineering	
CHEMENG 162	Polymers for Clean Energy and Water	
CHEMENG 174	Environmental Microbiology I	
CHEMENG 183	Biochemistry II	
CHEMENG 196	Creating New Ventures in Engineering and Science-based Industries	

Total Units 125-135

* For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- Unit count is higher if program includes one of more of the following: MATH 51 and MATH 52 in lieu of CME 100; or CHEM 31A and CHEM 31B in lieu of CHEM 31X.
- Any two acceptable except combining 160 and 162 or 174 and 183.
- The student may petition to substitute one other science and engineering 3 unit lecture course. See UGHB (<http://ughb.stanford.edu>) for additional details.

Civil Engineering (CE)

Completion of the undergraduate program in Civil Engineering leads to the conferral of the Bachelor of Science in Civil Engineering.

Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies necessary for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate studies in engineering.

CEE 101C	Geotechnical Engineering	4
CEE 146A	Engineering Economy	3
Specialty courses in either:		35-42
Environmental and Water Studies (see below)		
Structures and Construction (see below)		
Other School of Engineering Electives		3-0
Total Units		115-123

- Mathematics must include CME 100 Vector Calculus for Engineers/ CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables/ MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics; either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quarters in either chemistry or physics and GES 1A Introduction to Geology: The Physical Science of the Earth (or GES 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45.
- Chosen TiS class must specifically include an ethics component, such as ENGR 130 Science, Technology, and Contemporary Society, ENGR 131 Ethical Issues in Engineering, and MS&E 197 Ethics and Public Policy.
- CEE 100 meets the Writing in the Major (WIM) requirement

Environmental and Water Studies Focus

		Units
ENGR 30	Engineering Thermodynamics ¹	3
CEE 101D	Computations in Civil and Environmental Engineering ²	3
CEE 160	Mechanics of Fluids Laboratory	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 166A	Watersheds and Wetlands	3
CEE 166B	Floods and Droughts, Dams and Aqueducts	3
CEE 171	Environmental Planning Methods	3
CEE 172	Air Quality Management	3
CEE 177	Aquatic Chemistry and Biology	4
CEE 179A	Water Chemistry Laboratory	3
CEE 179C	Environmental Engineering Design	5
(or CEE 169) Capstone design experience course		
Remaining specialty units from:		
CEE 63	Weather and Storms ²	3
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions ²	3
CEE 109	Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision	2
CEE 129	Climate Change Adaptation for Coastal Cities: Engineering and Policy for a Sustainable Future	3
CEE 155	Introduction to Sensing Networks for CEE	4

CEE 164	Introduction to Physical Oceanography	4
CEE 166D	Water Resources and Water Hazards Field Trips	2
CEE 172A	Indoor Air Quality	2-3
CEE 173A	Energy Resources	4-5
CEE 174A	Providing Safe Water for the Developing and Developed World	3
CEE 174B	Wastewater Treatment: From Disposal to Resource Recovery	3
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 178	Introduction to Human Exposure Analysis	3
CEE 199	Undergraduate Research in Civil and Environmental Engineering	1-4

Structures and Construction Focus

		Units
CEE 102	Legal Principles in Design, Construction, and Project Delivery	3
CEE 156	Building Systems	4
CEE 181	Design of Steel Structures	4
CEE 180	Structural Analysis	4
CEE 182	Design of Reinforced Concrete Structures	4
CEE 183	Integrated Civil Engineering Design Project	4
Select one of the following:		4
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	
ENGR 50E	Introduction to Materials Science, Energy Emphasis	
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis	
Remaining specialty units from:		
ENGR 15	Dynamics	4
CME 104	Linear Algebra and Partial Differential Equations for Engineers	5
CEE 101D	Computations in Civil and Environmental Engineering	3
CEE 112A	Industry Applications of Virtual Design & Construction	2-4
CEE 112B	Industry Applications of Virtual Design & Construction	2-4
CEE 122A	Computer Integrated Architecture/Engineering/Construction	2
CEE 122B	Computer Integrated A/E/C	2
CEE 129	Climate Change Adaptation for Coastal Cities: Engineering and Policy for a Sustainable Future	3
CEE 141A	Infrastructure Project Development	3
CEE 141B	Infrastructure Project Delivery	3
CEE 142A	Negotiating Sustainable Development	3
CEE 151	Negotiation	3
CEE 155	Introduction to Sensing Networks for CEE	4
CEE 160	Mechanics of Fluids Laboratory	2
CEE 161A	Rivers, Streams, and Canals	3-4
CEE 171	Environmental Planning Methods	3
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
CEE 195	Fundamentals of Structural Geology	3
CEE 196	Engineering Geology and Global Change	3

CEE 199	Undergraduate Research in Civil and Environmental Engineering	1-4
CEE 203	Probabilistic Models in Civil Engineering	3-4
One of the following can also count as remaining specialty units.		
CEE 120A	Building Information Modeling Workshop	2-4
or CEE 120B		
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	
CEE 131A	Professional Practice: Mixed-Use Design in an Urban Setting	
CEE 134B	Intermediate Arch Studio	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Computer Science (CS)

Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

Requirements

Mathematics (26 units minimum)—

CS 103	Mathematical Foundations of Computing ¹	5
CS 109	Introduction to Probability for Computer Scientists ²	5
MATH 41	Calculus	10
& MATH 42	and Calculus ³	
Plus two electives ⁴		

Science (11 units minimum)—

PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4
Science elective ⁵		3

Technology in Society (3-5 units)—

One course; see Basic Requirement 4

Engineering Fundamentals (13 units minimum; see Basic Requirement 3)—

CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	
ENGR 40	Introductory Electronics ⁴	5
or ENGR 40A or 40M*		
Fundamentals Elective (may not be 70A, B, or X)		3-5

*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

Writing in the Major—

Select one of the following:

CS 181W	Computers, Ethics, and Public Policy
CS 191W	Writing Intensive Senior Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

Computer Science Core (15 units)—

CS 107	Computer Organization and Systems	5
CS 110	Principles of Computer Systems	5
CS 161	Design and Analysis of Algorithms	5

Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

Artificial Intelligence Track

	Units
CS 221 Artificial Intelligence: Principles and Techniques	4
Select two of the following:	6-8
CS 223A Introduction to Robotics	
CS 224M Multi-Agent Systems	
CS 224N Natural Language Processing	
CS 228 Probabilistic Graphical Models: Principles and Techniques	
CS 229 Machine Learning	
CS 131 Computer Vision: Foundations and Applications or CS 231A Computer Vision: From 3D Reconstruction to Recognition	
One additional course from the list above or the following:	3-4
CS 124 From Languages to Information	
CS 205A Mathematical Methods for Robotics, Vision, and Graphics	
CS 222 Rational Agency and Intelligent Interaction	
CS 224S Spoken Language Processing	
CS 224U Natural Language Understanding	
CS 224W Social and Information Networks	
CS 225A Experimental Robotics	
CS 225B Robot Programming Laboratory	
CS 227B General Game Playing	
CS 231A Computer Vision: From 3D Reconstruction to Recognition	
CS 231B The Cutting Edge of Computer Vision	
CS 231M Mobile Computer Vision	
CS 262 Computational Genomics	
CS 276 Information Retrieval and Web Search	
CS 277 Experimental Haptics	

CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells

CS 329 Topics in Artificial Intelligence (with adviser consent)

CS 331A Advanced Reading in Computer Vision

CS 374 Algorithms in Biology

CS 379 Interdisciplinary Topics (with adviser consent)

EE 263 Introduction to Linear Dynamical Systems

EE 376A Information Theory

ENGR 205 Introduction to Control Design Techniques

ENGR 209A Analysis and Control of Nonlinear Systems

MSE 251 Stochastic Control

MSE 351 Dynamic Programming and Stochastic Control

STATS 315A Modern Applied Statistics: Learning

STATS 315B Modern Applied Statistics: Data Mining

Track Electives (at least three additional courses from the above lists, the general CS electives list, or the following):⁵ 9-13

CS 275 Translational Bioinformatics

CS 334A Convex Optimization I

or EE 364A Convex Optimization I

EE 364B Convex Optimization II

ECON 286 Game Theory and Economic Applications

MSE 252 Decision Analysis I: Foundations of Decision Analysis

MSE 352 Decision Analysis II: Professional Decision Analysis

MSE 355 Influence Diagrams and Probabilistic Networks

PHIL 152 Computability and Logic

PSYCH 202 Cognitive Neuroscience

PSYCH 204A Human Neuroimaging Methods

PSYCH 204B Computational Neuroimaging: Analysis Methods

STATS 200 Introduction to Statistical Inference

STATS 202 Data Mining and Analysis

STATS 205 Introduction to Nonparametric Statistics

Biocomputation Track—

Units

The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.

Select one of the following: 3-4

CS 121 (Not given this year)

CS 221 Artificial Intelligence: Principles and Techniques

CS 228 Probabilistic Graphical Models: Principles and Techniques

CS 229 Machine Learning

CS 231A Computer Vision: From 3D Reconstruction to Recognition

Select one of the following:

CS 173 A Computational Tour of the Human Genome

or CS 273A A Computational Tour of the Human Genome

CS 262 Computational Genomics

CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving

CS 274 Representations and Algorithms for Computational Molecular Biology

CS 275 Translational Bioinformatics

CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
One additional course from the lists above or the following:		3-4
CS 124	From Languages to Information	
CS 145	Introduction to Databases	
CS 147	Introduction to Human-Computer Interaction Design	
CS 148	Introduction to Computer Graphics and Imaging	
CS 248	Interactive Computer Graphics	
One course from either the general CS electives list, BIOE 101, or the list of Biomedical Computation (BMC) Informatics electives (see http://bmc.stanford.edu and select Informatics from the elective options) ⁵		3-4
One course from the BMC Informatics elective list		3-4
One course from either the BMC Informatics, Cellular/Molecular, or Organs/Organisms electives lists		3-5
One course from either the BMC Cellular/Molecular or Organs/Organisms electives lists		3-5

Computer Engineering Track—

	Units
EE 108 & EE 180	Digital System Design and Digital Systems Architecture
Select two of the following:	
EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
Satisfy the requirements of one of the following concentrations:	
1) Digital Systems Concentration	
CS 140 or CS 143	Operating Systems and Systems Programming Compilers
EE 109	Digital Systems Design Lab
EE 271	Introduction to VLSI Systems
Select two of the following if not counted above (6-8 units):	
CS 140 or CS 143	Operating Systems and Systems Programming Compilers
CS 144	Introduction to Computer Networking
CS 149	Parallel Computing
CS 240E	
CS 244	Advanced Topics in Networking
EE 273	Digital Systems Engineering
EE 282	Computer Systems Architecture
2) Robotics and Mechatronics Concentration	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 223A	Introduction to Robotics
ME 210	Introduction to Mechatronics
ENGR 105	Feedback Control Design
Select one of the following (3-4 units):	
CS 225A	Experimental Robotics
CS 225B	Robot Programming Laboratory
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 235	(Not given this year)
CS 277	Experimental Haptics

ENGR 205	Introduction to Control Design Techniques
ENGR 207A	Linear Control Systems I
ENGR 207B	Linear Control Systems II
3) Networking Concentration	
CS 140 & CS 144	Operating Systems and Systems Programming and Introduction to Computer Networking
Select three of the following (9-11 units):	
CS 240	Advanced Topics in Operating Systems
CS 240E	
CS 244	Advanced Topics in Networking
CS 244B	Distributed Systems
CS 244E	Networked Wireless Systems
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
EE 179	Analog and Digital Communication Systems

Graphics Track—

	Units
CS 148 & CS 248	Introduction to Computer Graphics and Imaging and Interactive Computer Graphics
Select one of the following: ⁶	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CME 104	Linear Algebra and Partial Differential Equations for Engineers
CME 108	Introduction to Scientific Computing
MATH 52	Integral Calculus of Several Variables
MATH 113	Linear Algebra and Matrix Theory
Select two of the following:	
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion
CS 178	Digital Photography
CS 205B	Mathematical Methods for Fluids, Solids, and Interfaces
CS 231A or CS 131	Computer Vision: From 3D Reconstruction to Recognition Computer Vision: Foundations and Applications
CS 268	Geometric Algorithms
CS 348A	
CS 348B	Computer Graphics: Image Synthesis Techniques
CS 448	Topics in Computer Graphics
CS 478	(Not given this year)
Track Electives: at least two additional courses from the lists above, the 6-8 general CS electives list, or the following: ⁵	
ARTSTUDI 160	Design I : Fundamental Visual Language
ARTSTUDI 170	Introduction to Photography
ARTSTUDI 179	Digital Art I
CS 48N	(Not given this year)
CME 302	Numerical Linear Algebra
CME 306	Numerical Solution of Partial Differential Equations
EE 262	Two-Dimensional Imaging
EE 264	Digital Signal Processing
EE 278	Introduction to Statistical Signal Processing

EE 368	Digital Image Processing
ME 101	Visual Thinking
PSYCH 30	Introduction to Perception
PSYCH 221	Applied Vision and Image Systems

Human-Computer Interaction Track—

	Units
CS 147	Introduction to Human-Computer Interaction Design 4
Select one of the following:	4
CS 247	Human-Computer Interaction Design Studio
CS 377	Topics in Human-Computer Interaction
CS 448B	Data Visualization
CS 210A	Software Project Experience with Corporate Partners
Select one of the following:	3-6
PSYCH 30	Introduction to Perception
PSYCH 45	Introduction to Learning and Memory
PSYCH 50	Introduction to Cognitive Neuroscience
PSYCH 70	Introduction to Social Psychology
PSYCH 75	Introduction to Cultural Psychology
PSYCH 131	Language and Thought
PSYCH 154	Judgment and Decision-Making
PSYCH 252	Statistical Methods for Behavioral and Social Sciences
ME 101	Visual Thinking
Or any MS&E 18*	
Select one of the following:	3-4
CS 108	Object-Oriented Systems Design
CS 124	From Languages to Information
CS 140	Operating Systems and Systems Programming
CS 142	Web Applications
CS 221	Artificial Intelligence: Principles and Techniques
CS 229	Machine Learning
CS 229A	(Not given this year)
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
Select one of the following:	3-4
CS 148	Introduction to Computer Graphics and Imaging
CS 376	Human-Computer Interaction Research
CS 378	(Not given this year)
Track Electives: at least two additional courses from the lists above, the 6-9 general CS electives list, or the following: ⁵	
ARTSTUDI 160	Design I: Fundamental Visual Language
COMM 169	Computers and Interfaces
CS 476A	Music, Computing, and Design I: Software Paradigms for Computer Music
ME 115A	Introduction to Human Values in Design
ME 115B	Product Design Methods
SYMSYS 245	Cognition in Interaction Design

Information Track—

	Units
CS 124	From Languages to Information 4
CS 145	Introduction to Databases 4

Two courses, from different areas:	6-9
1) Information-based AI applications	
CS 224N	Natural Language Processing
CS 224S	Spoken Language Processing
CS 229	Machine Learning
CS 229A	(Not given this year)
2) Database and Information Systems	
CS 140	Operating Systems and Systems Programming
CS 142	Web Applications
CS 245	Database Systems Principles
CS 246	Mining Massive Data Sets
CS 341	Project in Mining Massive Data Sets
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 347	Parallel and Distributed Data Management
3) Information Systems in Biology	
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 274	Representations and Algorithms for Computational Molecular Biology
4) Information Systems on the Web	
CS 224W	Social and Information Networks
CS 276	Information Retrieval and Web Search
CS 364B	(Not given this year)
At least three additional courses from the above areas or the general CS electives list. ⁵	

Systems Track—

	Units
CS 140	Operating Systems and Systems Programming 4
Select one of the following:	3-4
CS 143	Compilers
EE 180	Digital Systems Architecture
Two additional courses from the list above or the following:	6-8
CS 144	Introduction to Computer Networking
CS 145	Introduction to Databases
CS 149	Parallel Computing
CS 155	Computer and Network Security
CS 240	Advanced Topics in Operating Systems
CS 242	Programming Languages
CS 243	Program Analysis and Optimizations
CS 244	Advanced Topics in Networking
CS 245	Database Systems Principles
EE 271	Introduction to VLSI Systems
EE 282	Computer Systems Architecture
Track Electives: at least three additional courses selected from the list above, the general CS electives list, or the following: ⁵	9-12
CS 240E	
CS 244C	Readings and Projects in Distributed Systems
CS 244E	Networked Wireless Systems
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 341	Project in Mining Massive Data Sets
CS 343	(Not given this year)
CS 344	Topics in Computer Networks

CS 344E	Advanced Wireless Networks
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 347	Parallel and Distributed Data Management
CS 349	Topics in Programming Systems (with permission of undergraduate advisor)
CS 448	Topics in Computer Graphics
EE 382C	Interconnection Networks
EE 384A	Internet Routing Protocols and Standards
EE 384B	Multimedia Communication over the Internet
EE 384C	Wireless Local and Wide Area Networks
EE 384S	Performance Engineering of Computer Systems & Networks
EE 384X	Packet Switch Architectures

Theory Track—

	Units
CS 154	Introduction to Automata and Complexity Theory 4
Select one of the following:	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion
CS 167	(Not given this year)
CS 168	The Modern Algorithmic Toolbox
CS 255	Introduction to Cryptography
CS 258	(Not given this year)
CS 261	Optimization and Algorithmic Paradigms
CS 264	Beyond Worst-Case Analysis
CS 265	Randomized Algorithms and Probabilistic Analysis
CS 268	Geometric Algorithms
CS 361A	Advanced Algorithms
CS 361B	Advanced Algorithms
Two additional courses from the list above or the following:	6-8
CS 143	Compilers
CS 155	Computer and Network Security
CS 157	Logic and Automated Reasoning
or PHIL 151	Metalogic
CS 166	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 242	Programming Languages
CS 254	Computational Complexity
CS 259	((With adviser consent); Not given this year)
CS 262	Computational Genomics
CS 266	Parameterized Algorithms and Complexity
CS 267	Graph Algorithms
CS 354	(Not given this year)
CS 355	(Not given this year)
CS 357	(Not given this year)
CS 358	Topics in Programming Language Theory
CS 359	Topics in the Theory of Computation (with adviser consent)
CS 364A	Algorithmic Game Theory
CS 364B	(Not given this year)
CS 366	(Not given this year)
CS 367	(Not given this year)

CS 369	Topics in Analysis of Algorithms (with adviser consent)
CS 374	Algorithms in Biology
MSE 310	Linear Programming
Track Electives: at least three additional courses from the list above, the general CS electives list, or the following: ⁵	9-12
CME 302	Numerical Linear Algebra
CME 305	Discrete Mathematics and Algorithms
PHIL 152	Computability and Logic

Unspecialized Track—

	Units
CS 154	Introduction to Automata and Complexity Theory 4
Select one of the following:	4
CS 140	Operating Systems and Systems Programming
CS 143	Compilers
One additional course from the list above or the following:	3-4
CS 144	Introduction to Computer Networking
CS 155	Computer and Network Security
CS 242	Programming Languages
CS 244	Advanced Topics in Networking
EE 180	Digital Systems Architecture
Select one of the following:	3-4
CS 121	(Not given this year)
CS 221	Artificial Intelligence: Principles and Techniques
CS 223A	Introduction to Robotics
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
Select one of the following:	3-4
CS 145	Introduction to Databases
CS 147	Introduction to Human-Computer Interaction Design
CS 148	Introduction to Computer Graphics and Imaging
CS 248	Interactive Computer Graphics
CS 262	Computational Genomics
At least two courses from the general CS electives list ⁵	

Individually Designed Track

Students may propose an individually designed track. Proposals should include a minimum of seven courses, at least four of which must be CS courses numbered 100 or above. See Handbook for Undergraduate Engineering Programs for further information.

Senior Capstone Project (3 units minimum)

CS 191	Senior Project ⁷
CS 191W	Writing Intensive Senior Project ⁷
CS 194	Software Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- MATH 19, MATH 20, and MATH 21 may be taken instead of MATH 41 and MATH 42 as long as at least 26 MATH units are taken. AP Calculus must be approved by the School of Engineering.
- The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 104. Completion of MATH 52 and MATH 53 counts as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.
- The science elective may be any course of 3 or more units from the School of Engineering Science list plus PSYCH 30; AP Chemistry may be used to meet this requirement. Either of the PHYSICS sequences 61/63 or 21/23 may be substituted for 41/43 as long as at least 11 science units are taken. AP Physics must be approved by the School of Engineering.
- Students who take ENGR 40A (3 units) are required to take two additional units of ENGR Fundamentals (13 units minimum), or 2 additional units of Depth (27 units minimum for track and elective courses).
- General CS Electives: CS 108, CS 121 or CS 221, CS 124, CS 131, CS 140, CS 142, CS 143 CS 144, CS 145, CS 147, CS 148, CS 149, CS 154, CS 155, CS 157 or PHIL 151, CS 164, CS 166, CS 167, CS 168, CS 190, CS 205A, CS 205B, CS 210A, CS 222, CS 223A, CS 224M, CS 224N, CS 224S, CS 224U, CS 224W, CS 225A, CS 225B, CS 227B, CS 228, CS 228T, CS 229, CS 229A, CS 229T, CS 231A, CS 231B, CS 231M, CS 232, CS 235, CS 240, CS 240H, CS 241, CS 242, CS 243, CS 244, CS 244B, CS 245, CS 246, CS 247, CS 248, CS 249A, CS 249B, CS 254, CS 255, CS 258, CS 261, CS 262, CS 263, CS 264, CS 265, CS 266, CS 267, CS 270, CS 272, CS 173 or CS 273A, CS 274, CS 276, CS 277, CS 279, CS 295, CS 348B; CME 108; EE 180, EE 282, EE 364A.
- CS 205A Mathematical Methods for Robotics, Vision, and Graphics is recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.
- Independent study projects (CS 191 Senior Project or CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the *Handbook for Undergraduate Engineering Programs*.

Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.

Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart a basic understanding of electrical engineering built on a foundation of physical science, mathematics, computing, and technology, and to provide majors in the department with knowledge of electrical engineering principles along with the required supporting knowledge of mathematics, science, computing, and engineering fundamentals. The program develops students' skills in performing and designing experimental projects and communicating their findings to the scientific community effectively. Students in the major are required to

select one sub-discipline for specialization. Choices include: electronic circuits, devices and photonics; signal processing, communication and controls; hardware and software systems; bio-electronics and bio-imaging; music; and energy and environment. The program prepares students for careers in government agencies, the corporate sector, or for future study in graduate or professional schools.

Requirements

Mathematics

MATH 41	Calculus	5
MATH 42	Calculus	5
Select one 2-course sequence:		10

CME 100 & CME 102	Vector Calculus for Engineers and Ordinary Differential Equations for Engineers (Same as ENGR 154)
-------------------	--

MATH 52 & MATH 53	Integral Calculus of Several Variables and Ordinary Differential Equations with Linear Algebra
-------------------	--

EE Math. One additional 100-level course. Select one of the following: 3

EE 102B	Signal Processing and Linear Systems II (if not used in Depth)
---------	--

EE 103	Introduction to Matrix Methods
--------	--------------------------------

EE 142	Engineering Electromagnetics
--------	------------------------------

CME 104/ENGR 155B	Linear Algebra and Partial Differential Equations for Engineers
-------------------	---

MATH 113	Linear Algebra and Matrix Theory
----------	----------------------------------

CS 103	Mathematical Foundations of Computing
--------	---------------------------------------

Statistics/Probability. Select one of the following: ¹ 3-4

EE 178	Probabilistic Systems Analysis (Preferred)
--------	--

CS 109	Introduction to Probability for Computer Scientists
--------	---

Science

Select one of the following sequences: 8

PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism ²
-------------------------	--

PHYSICS 61 & PHYSICS 63	Mechanics and Special Relativity and Electricity, Magnetism, and Waves
-------------------------	--

Science elective. One additional 4-5 unit course from approved list in Undergraduate Handbook, Figure 3-2. ³ 4-5

Technology in Society

One course, see Basic Requirement 4 in the School of Engineering section 3-5

Engineering Fundamentals ⁴

Select one of the following:

CS 106B/ENGR 70B	Programming Abstractions	5
------------------	--------------------------	---

or CS 106X/ENGR 70X	Programming Abstractions (Accelerated)
---------------------	--

At least two additional courses, at least one of which is not in EE or CS (CS 106A is not allowed). Choose from table in Undergraduate Handbook, Figure 3-4. One from ENGR 40, ENGR 40M or ENGR 40P recommended. 8-10

Writing in the Major (WIM)

Select one of the following: 3-4

EE 109	Digital Systems Design Lab (WIM/Design)
--------	---

EE 133	Analog Communications Design Laboratory (WIM/Design)
--------	--

EE 134	Introduction to Photonics (WIM/Design)
--------	--

EE 152	Green Electronics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 191W	Special Studies and Reports in Electrical Engineering (WIM; Department approval required) ⁵	
CS 194W	Software Project (WIM/Design)	

Core Electrical Engineering Courses

EE 100	The Electrical Engineering Profession ⁶	1
EE 101A	Circuits I	4
EE 102A	Signal Processing and Linear Systems I	4
EE 108	Digital System Design	4
Physics in Electrical Engineering. Students must complete one of the following courses:		3-5
EE 41/ENGR 40P	Physics of Electrical Engineering ⁷	
EE 65	Modern Physics for Engineers (Preferred)	
EE 142	Engineering Electromagnetics ⁸	

Depth Courses 14

Select four courses from one of the following Depth areas. Courses must include one required course, one Design course, and 2 additional courses.

Design Course 3-4

Select one of the following:

EE 109	Digital Systems Design Lab (WIM/Design)	
EE 133	Analog Communications Design Laboratory (WIM/Design)	
EE 134	Introduction to Photonics (WIM/Design)	
EE 152	Green Electronics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 262	Two-Dimensional Imaging (Design)	
EE 265	Digital Signal Processing Laboratory (Design)	
CS 194W	Software Project (WIM/Design)	

Additional Depth Electives 12

May include up to two additional Engineering Fundamentals, any CS 193 course and any letter graded EE or EE Related courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE191 and CS 106A do not count toward the 60 units.

- 1 CME 106 or STATS 116 can also fulfill the Statistics/Probability requirement, but these are not preferred.
- 2 The EE introductory class ENGR 40 or ENGR 40M may be taken concurrently with PHYSICS 43.
- 3 A minimum of 12 science units must be taken. A minimum of 40 math and science units combined must be taken.
- 4 EE Engineering Topics: Fundamentals and Depth courses must total 60 units minimum.
- 5 EE 191W may satisfy WIM only if it is a follow-up to an REU, independent study project or as part of an honors thesis project where a faculty agrees to provide supervision of writing a technical paper and with suitable support from the Writing Center.
- 6 For upper division students, a 200-level seminar in their depth area will be accepted, on petition.
- 7 EE 41/ENGR 40P can meet this requirement only if it is not used to fulfill the Engineering Fundamentals requirement.

- ⁸ EE 142 cannot be used for both Physics in Electrical Engineering and as a depth elective.

Depth Areas

		Units
Bio-electronics and Bio-imaging		
EE 101B or EE 102B	Circuits II (Required) Signal Processing and Linear Systems II	4
EE 122B	Introduction to Biomedical Electronics	3
EE 124	Introduction to Neuroelectrical Engineering	3
EE 134	Introduction to Photonics (WIM/Design)	4
EE 168	Introduction to Digital Image Processing (WIM/Design)	4
EE 169	Introduction to Bioimaging	3
EE 202	Electrical Engineering in Biology and Medicine	3
EE 225	Biochips and Medical Imaging	3
Circuits and Devices

ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Engineering Physics (EPHYS)

Completion of the undergraduate program in Engineering Physics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Engineering Physics" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Engineering Physics

The mission of the undergraduate program in Engineering Physics is to provide students with a strong foundation in physics and mathematics, together with engineering and problem solving skills. All majors take high-level math and physics courses as well as engineering courses. This background prepares them to tackle complex problems in multidisciplinary areas that are at the forefront of 21st-century technology such as solid state devices, quantum optics and photonics, materials science, nanotechnology, electromechanical systems, energy systems, biophysics, computational science, and any other engineering field that requires a solid background in physics. Because the program emphasizes science, mathematics, and engineering, students are well prepared to pursue graduate work in engineering, physics, or applied physics.

Requirements

	Units	
Mathematics		
Select one of the following sequences:	10	
MATH 51 & MATH 52	Linear Algebra and Differential Calculus of Several Variables and Integral Calculus of Several Variables	
CME 100 & CME 104	Vector Calculus for Engineers and Linear Algebra and Partial Differential Equations for Engineers	
MATH 53 or CME 102	Ordinary Differential Equations with Linear Algebra Ordinary Differential Equations for Engineers	5
MATH 131P	Partial Differential Equations I	3
Science		
PHYSICS 41	Mechanics (or PHYSICS 61)	4
PHYSICS 42	Classical Mechanics Laboratory (or PHYSICS 62) ¹	1
PHYSICS 43	Electricity and Magnetism (or PHYSICS 63)	4
PHYSICS 67	Introduction to Laboratory Physics ²	2
PHYSICS 45	Light and Heat (or PHYSICS 65)	4
PHYSICS 46	Light and Heat Laboratory (or PHYSICS 67)	1
PHYSICS 70	Foundations of Modern Physics (if taking the 40 series)	4
Technology in Society		

One course required, see Basic Requirement 4 3-5

Engineering Fundamentals

Three courses minimum (CS 106A or X recommended)³ 9-14

Engineering Physics Depth (core)

Advanced Mathematics:

One advanced math elective such as 3-5

EE 261 The Fourier Transform and Its Applications

PHYSICS 112 Mathematical Methods of Physics

CS 109 Introduction to Probability for Computer Scientists

CME 106 Introduction to Probability and Statistics for Engineers

Also qualified are EE 263, any Math or Statistics course numbered 100 or above, and any CME course numbered 200 or above, except CME 206.

Advanced Mechanics:⁴ 3-4

AA 242A Classical Dynamics (or ME 333 or PHYSICS 110) 3

Intermediate Electricity and Magnetism 6-8

Select one of the following sequences:

PHYSICS 120 Intermediate Electricity and Magnetism I
& PHYSICS and Intermediate Electricity and Magnetism II
121

EE 142 Engineering Electromagnetics
& EE 242 and Electromagnetic Waves

Numerical Methods

Select one of the following: 3-4

APPPHYS 215 Numerical Methods for Physicists and Engineers

CME 108 Introduction to Scientific Computing

CME 206/ME Introduction to Numerical Methods for Engineering
300C

PHYSICS 113 Computational Physics

Electronics Lab

Select one of the following: 3-5

ENGR 40 Introductory Electronics (ENGR 40A is not
allowed)

EE 101B Circuits II

EE 122A Analog Circuits Laboratory

PHYSICS 105 Intermediate Physics Laboratory I: Analog
Electronics

APPPHYS 207 Laboratory Electronics

Writing Lab (WIM)

Select one of the following: 4-5

ENGR 199W Writing of Original Research for Engineers (for
students pursuing an independent research project)

BIOE 131 Ethics in Bioengineering (for Biophysics specialty
only)

CS 181W Computers, Ethics, and Public Policy (for
Computational Science specialty only)

EE 134 Introduction to Photonics (for Photonics specialty
only)

EE 152 Green Electronics (for Renewable Energy specialty
only)

ME 112 Mechanical Systems Design (for Electromechanical
System Design specialty only)

ME 131A Heat Transfer
& ME 140 and Advanced Thermal Systems (for Energy
Systems specialty only)

MATSCI 161 Nanocharacterization Laboratory (Okay for
Materials Science, Renewable Energy and Solid
State Physics specialties)

MATSCI 164 Electronic and Photonic Materials and Devices
Laboratory (Okay for Materials Science, Renewable
Energy and Solid State Physics specialties)

PHYSICS 107 Intermediate Physics Laboratory II: Experimental
Techniques and Data Analysis (for Photonics
specialty)

Quantum Mechanics

Select one of the following sequences: 6-8

EE 222 Applied Quantum Mechanics I
& EE 223 and Applied Quantum Mechanics II

PHYSICS 130 Quantum Mechanics
& PHYSICS and Quantum Mechanics II
131

Thermodynamics and Statistical Mechanics

PHYSICS 170 Thermodynamics, Kinetic Theory, and Statistical
& PHYSICS 171 Mechanics I 3-8

and Thermodynamics, Kinetic Theory, and
Statistical Mechanics II

or ME 346A Introduction to Statistical Mechanics

Design Course

Select one of the following: 3-4

CS 108 Object-Oriented Systems Design

EE 133 Analog Communications Design Laboratory

ME 203 Design and Manufacturing

ME 210 Introduction to Mechatronics

PHYSICS 108 Advanced Physics Laboratory: Project

Specialty Tracks

Select three courses from one specialty area: 9-12

Solid State Physics:

APPPHYS 272 Solid State Physics

or PHYSICS Solid State Physics
172

APPPHYS 273 Solid State Physics II

EE 116 Semiconductor Device Physics

EE 216 Principles and Models of Semiconductor Devices

MATSCI 199 Electronic and Optical Properties of Solids

Photonics:

EE 216 Principles and Models of Semiconductor Devices

EE 234 Photonics Laboratory

EE 243 Semiconductor Optoelectronic Devices

MATSCI 199 Electronic and Optical Properties of Solids

Materials Science:

Any MATSCI courses numbered 151 to 199 (except 159Q) or
PHYSICS 172

Electromechanical System Design:

ME 80 Mechanics of Materials

ME 112 Mechanical Systems Design

ME 210 Introduction to Mechatronics

or EE 118 Introduction to Mechatronics

Energy Systems:

ME 131A Heat Transfer

ME 131B Fluid Mechanics: Compressible Flow and
Turbomachinery

ME 140 Advanced Thermal Systems

Renewable Energy:

CEE 176B Electric Power: Renewables and Efficiency

EE 152 Green Electronics

EE 153 Power Electronics

EE 237	Solar Energy Conversion	
EE 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
EE 293B	Fundamentals of Energy Processes	
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
MATSCI 302	Solar Cells	
MATSCI 316	Nanoscale Science, Engineering, and Technology	
ME 260	Fuel Cell Science and Technology	
Biophysics:		
BIO 132	Advanced Imaging Lab in Biophysics	
BIOE 41	Physical Biology of Macromolecules	
BIOE 42	Physical Biology of Cells	
BIOE 44	Fundamentals for Engineering Biology Lab	
BIOE 101	Systems Biology	
BIOE 103	Systems Physiology and Design	
BIOE 123	Optics and Devices Lab	
CS 262	Computational Genomics	
EE 169	Introduction to Bioimaging	
or EE 369A	Medical Imaging Systems I	
Computational Science:		
CME 212	Advanced Programming for Scientists and Engineers	
CME 215A	Advanced Computational Fluid Dynamics	
CME 215B	Advanced Computational Fluid Dynamics	
Any CME course with course number greater than 300 and less than 390		
CS 103	Mathematical Foundations of Computing	
CS 154	Introduction to Automata and Complexity Theory	
CS 161	Design and Analysis of Algorithms	
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 205B	Mathematical Methods for Fluids, Solids, and Interfaces	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	3-4
STATS 202	Data Mining and Analysis	
STATS 213	Introduction to Graphical Models	

Total Units **99-127**

- 1 PHYSICS 42 Classical Mechanics Laboratory or PHYSICS 62 Classical Mechanics Laboratory, Mechanics Lab (1 unit), required in 2011-12 and beyond
- 2 PHYSICS 67 Introduction to Laboratory Physics (2 units), recommended in place of PHYSICS 44 Electricity and Magnetism Lab
- 3 The Engineering Fundamental courses are to be selected from the Basic Requirements 3 list. Fundamentals courses acceptable for the core program may also be used to satisfy the fundamentals requirement as long as 45 unduplicated units of Engineering are taken.
- 4 ENGR 15 Dynamics, allowed for students who matriculated in 2011/2012 or earlier; however, AA 242A Classical Dynamics, ME 333 Mechanics or PHYSICS 110 Advanced Mechanics recommended instead of, or in addition to, ENGR 15 Dynamics.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Engineering Physics with Honors.

Honors Criteria

1. Minimum overall GPA of 3.5.
2. Independent research conducted at an advanced level with a faculty research adviser and documented in an honors thesis. The honors candidate must identify a faculty member who will serve as his or her honors research adviser and a second reader who will be asked to read the thesis and give feedback before endorsing the thesis. One of the two must be a member of the Academic Council and in the School of Engineering.

Application: The deadline to apply is October 15 in Autumn Quarter of the senior year. The application documents should be submitted to the student services officer. Applications are reviewed by a subcommittee of the faculty advisers for Engineering Physics majors. Applicants and thesis advisers receive written notification when the application is approved. An application consists of three items:

1. One-page description of the research topic
2. Application form (http://www.stanford.edu/group/ughb/2011-12/2012-13/EPhysHonorsReq_App_2012.doc) signed by the honors thesis adviser
3. Unofficial Stanford transcript

Requirements and Timeline for Honors in Engineering Physics:

1. Declare the honors program in Axess (ENGR-BSH, Subplan: Engineering Physics)
2. Obtain application form from the student services officer.
3. Apply to honors program by October 15 in the autumn quarter of the senior year.
4. Maintain an overall GPA of at least 3.5.
5. Optional: Under direction of the thesis adviser, students may enroll for research units in ENGR 199(W) or in departmental courses such as ME 191(H).
6. Submit a completed thesis draft to the research adviser and second reader by April 15.
7. Present the thesis work in an oral presentation or poster session in an appropriate forum (e.g., an event that showcases undergraduate research and is organized by the department of the adviser, the school of the adviser, or the university).
8. Incorporate feedback, which the adviser and second reader should provide by April 30, and obtain final endorsement signatures from the thesis adviser and second reader by May 15.
9. Submit two signed, single-sided copies to the student services officer by May 15.

Environmental Systems Engineering (EnvSE)

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

Environmental Engineering (ENV)

The program in Environmental Engineering has been discontinued. Students currently enrolled in this program should consult the previous year's Stanford Bulletin (<http://exploreddegrees.stanford.edu/archive/2012-13/schoolofengineering/civilandenvironmentalengineering/#bachelorofsciencetext-enviengi>) for program requirements (click on Environmental Engineering in the right hand menu). Any current Environmental Engineering major wishing ABET accreditation must graduate by June 2015.

Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st Century involving natural and built environments, in consulting and industry as well as in graduate school.

Requirements

Mathematics and Science

See Basic Requirement 1 and 2 ¹ 36

Technology in Society (TiS)

One 3-5 unit course required, see Basic Requirement 4 3-5

Engineering Fundamentals

Three courses minimum (see Basic Requirement 3), including:

ENGR 70A Programming Methodology 5

(or ENGR 70X)

(req'd) plus one of the following courses:

ENGR 90 Environmental Science and Technology

(req'd for Freshwater and Coastal focus areas)

or

ENGR 60 Engineering Economy 3

(req'd for Urban focus area)

(or CEE 146A)

plus one Engineering Fundamentals Elective 3-5

Fundamentals Tools/Skills ² 10

in Visual, Oral/Written Communication, and Modeling/Analysis

Specialty Courses, in either 36

Coastal Environments (see Below)

or Freshwater Environments (see Below)

or Urban Environments (see Below)

Total Units 96-100

- Math must include CME 100 Vector Calculus for Engineers (or MATH 51 Linear Algebra and Differential Calculus of Several Variables), and either a Probability/Statistics course or CME 102 Ordinary Differential Equations for Engineers (or MATH 53 Ordinary Differential Equations with Linear Algebra). Science must include PHYSICS 41 Mechanics; and either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM 31B Chemical Principles II or CHEM 31X Chemical Principles Accelerated (or PHYSICS 43 Electricity and Magnetism, for Urban track only).
- Fundamental Tools/Skills must include: (a) CEE 1 Introduction to Environmental Systems Engineering (offered AY 2015-16); (b) *at least* one Visual Communication class from CEE 31 Accessing Architecture Through Drawing / CEE 31Q Accessing Architecture Through Drawing, CEE 133F Principles of Freehand Drawing, ME 110 Design Sketching, ARTSTUDI 160 Design I : Fundamental Visual Language, or OSPPARIS 44 EAP: Analytical Drawing and Graphic Art; (c) *at least* one Oral/Written Communication class from ENGR 103 Public Speaking (or ORALCOMM 122 "The TED Commandments": The Art and Heart of Effective Public Speaking), ENGR 202W Technical Writing, CEE 151 Negotiation, EARTHSYS 195 Natural Hazards and Risk Communication or ENVRES 200 Sustaining Action: Research, Analysis and Writing for the Public; and (d) *at least* one Modeling/Analysis class from CEE 155 Introduction to Sensing Networks for CEE, CEE 120A Building Information Modeling Workshop (or CEE 120B Building Information Modeling Workshop), CEE 226 Life Cycle Assessment for Complex Systems, EARTHSYS 144 Fundamentals of Geographic Information Science (GIS), ENERGY 160 Modeling Uncertainty in the Earth Sciences, CEE 101D Computations in Civil and Environmental Engineering (if not counted as Math), or CEE 211 Introduction to Programming for Scientists and Engineers (or EARTHSYS 211 Fundamentals of Modeling).

Urban Environments Focus Area (36 units)

Required

CEE 100 Managing Sustainable Building Projects 4

CEE 101B Mechanics of Fluids 4

CEE 176A Energy Efficient Buildings 3-4

Electives

Building Systems

CEE 102 Legal Principles in Design, Construction, and Project Delivery 3

Individually Designed Majors in Engineering (IDMENS)

Completion of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) leads to the conferral of the Bachelor of Science in an Individually Designed Major: (approved title). The approved title of the IDMEN also appears on the transcript.

Mission of the Undergraduate Program in Individually Designed Majors in Engineering

The mission of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) is to provide students with an understanding of engineering principles and the analytical and problem solving, design, and communication skills necessary to be successful in the field. The B.S. for IDMENS is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. Core courses in the curriculum include engineering fundamentals, mathematics, technology in society, and the sciences. Students then take additional courses pertinent to their IDMEN major. The program prepares students for careers in government and the corporate sector, and for graduate study.

B.S. in Individually Designed Majors in Engineering

The B.S. degree for IDMENs is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. IDMEN curricula are designed by students with the assistance of two faculty advisers of their choice and are submitted to the Undergraduate Council's Subcommittee on Individually Designed Majors. The degree conferred is "Bachelor of Science in Individually Designed Major in Engineering: (approved title)."

Students must submit written proposals to the IDMEN subcommittee detailing their course of study. Programs must meet the following requirements: mathematics (21 unit minimum, see Basic Requirement 1 below), science (17 units minimum, see Basic Requirement 2 below), Technology in Society (one approved course, see Basic Requirement 4 below), at least three Engineering Fundamentals courses, see Basic Requirement 4 for a list of courses, and a minimum of 31 units of engineering depth courses, and sufficient relevant additional course work to bring the total number of units to at least 90 and at most 107. Students may take additional courses pertinent to their IDMEN major, but the IDMEN proposal itself may not exceed 107 units. Students are responsible for completing the prerequisites for all courses included in their majors.

Each proposal should begin with a statement describing the proposed major. In the statement, the student should make clear the motivation for and goal of the major, and indicate how it relates to her or his projected career plans. The statement should specify how the courses to be taken relate to and move the student toward realizing the major's goal. A proposed title for the major should be included. The title approved by the IDMEN Subcommittee is listed on the student's official University transcript and on the diploma in this form: "Individually Designed Major in Subplan", where "Subplan" is the title approved by the IDMEN Subcommittee.

The proposal statement should be followed by a completed Program Sheet listing all the courses comprising the student's IDMEN curriculum, organized by the five categories printed on the sheet (mathematics, science, technology in society, engineering fundamentals, and engineering depth). Normally, the courses selected should comprise a well-coordinated sequence or sequences that provide mastery of important principles and techniques in a well-defined field. In some circumstances, especially if the proposal indicates that the goal of the major is to prepare the student for graduate work outside of engineering, a more general engineering program may be appropriate. A four-year study plan, showing courses to be taken each quarter, should also be included in the student's IDMEN proposal.

The proposal must be signed by two faculty members who certify that they endorse the major as described in the proposal and that they agree to serve as the student's permanent advisers. One of the faculty members, who must be from the School of Engineering, acts as the student's primary adviser. The proposal must be accompanied by a statement from that person giving an appraisal of the academic value and viability of the proposed major.

Students proposing IDMENs must have at least four quarters of undergraduate work remaining at Stanford after the quarter in which their proposals are first submitted. Any changes in a previously approved major must be endorsed by the advisers and re-approved by the IDMEN subcommittee. A request by a student to make changes in her or his approved curriculum must be made sufficiently far in advance so that, should the request be denied, adequate time remains to complete the original, approved curriculum. Proposals are reviewed and acted upon once a quarter. Forms may be obtained from the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. Completed proposals should be submitted to Darlene Lazar in the Office of Student Affairs, Huang Engineering Center, Suite 135. An IDMEN cannot be a student's secondary major.

Management Science and Engineering (MS&E)

Completion of the undergraduate program in Management Science and Engineering leads to the conferral of the Bachelor of Science in Management Science and Engineering.

Requirements

		Units
Mathematics and Science		
All required; see SoE Basic Requirements 1 and 2 ¹		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 103	Introduction to Matrix Methods	5
MSE 120	Probabilistic Analysis	5
MSE 121	Introduction to Stochastic Modeling	4
MSE 125	Introduction to Applied Statistics	4
Select one of the following sequences:		8
CHEM 31B & CHEM 33	Chemical Principles II and Structure and Reactivity	
CHEM 31X & CHEM 33	Chemical Principles Accelerated and Structure and Reactivity	
PHYSICS 21 & PHYSICS 22 & PHYSICS 23 & PHYSICS 24	Mechanics and Heat and Mechanics and Heat Laboratory and Electricity and Optics and Electricity and Optics Laboratory	
PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism	
Electives from SoE approved list or AP/IB credit ¹		13
Technology in Society		
Select one of the following; see SoE Basic Requirement 4		3
COMM 120W	Digital Media in Society	
COMM 169	Computers and Interfaces	
CS 181	Computers, Ethics, and Public Policy	
ENGR 130	Science, Technology, and Contemporary Society	
ENGR 131	Ethical Issues in Engineering	
MSE 181	Issues in Technology and Work for a Postindustrial Economy	
MSE 193	Technology and National Security (WIM)	
MSE 197	Ethics, Technology, and Public Policy (WIM)	
Engineering Fundamentals ²		
Three courses; see SoE Basic Requirement 3		
CS 106A	Programming Methodology ³	5
Select one of the following:		3
ENGR 25B or ENGR 25E	Biotechnology Energy: Chemical Transformations for Production, Storage, and Use	
ENGR 40 or ENGR 40A or ENGR 40M or ENGR 40P	Introductory Electronics Introductory Electronics An Intro to Making: What is EE Physics of Electrical Engineering	
ENGR 80	Introduction to Bioengineering	

Select one of the following (or ENGR 25, ENGR 40, or ENGR 80 if not used above): 3

ENGR 10	Introduction to Engineering Analysis
ENGR 14	Intro to Solid Mechanics
ENGR 15	Dynamics
ENGR 20	Introduction to Chemical Engineering
ENGR 30	Engineering Thermodynamics
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis
or ENGR 50E	Introduction to Materials Science, Energy Emphasis
or ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis
ENGR 60	Engineering Economy
ENGR 90	Environmental Science and Technology

Engineering Depth²

Core Courses (all six required) 25

CS 103	Mathematical Foundations of Computing ⁴
or CS 106B	Programming Abstractions
or CS 106X	Programming Abstractions (Accelerated)
ECON 50	Economic Analysis I
MSE 108	Senior Project
MSE 111	Introduction to Optimization ⁴
MSE 140	Accounting for Managers and Entrepreneurs
or MSE 140X	Financial Accounting Concepts and Analysis
MSE 180	Organizations: Theory and Management

Area Courses (see below) 27

Choose four or five courses (minimum 15 units) from a primary area and two courses (minimum 6 units) from each of the other two areas.

Depth Areas

Finance and Decision Area

Units
6-15

Students choosing F&D as their primary area must take at least two of ECON 51, MS&E 145, and MS&E 152

Introductory (appropriate for freshmen and sophomores)	
MSE 145	Introductory Financial Analysis
MSE 152	Introduction to Decision Analysis (WIM)
Intermediate (appropriate for juniors and seniors)	
MSE 146	Corporate Financial Management
MSE 245G	Finance for Non-MBAs
MSE 252	Decision Analysis I: Foundations of Decision Analysis
Advanced (intended primarily for graduate students)	
MSE 245A	Investment Science
MSE 250A	Engineering Risk Analysis
MSE 250B	Project Course in Engineering Risk Analysis
MSE 245B	Advanced Investment Science

Operations and Analytics Area

6-15

Students choosing O&A as their primary area may also include CS 161, CS 229, and STATS 202 in their selections⁴

Introductory (no prerequisites)	
MSE 107	Interactive Management Science
Methods	
MSE 223	Simulation
MSE 226	"Small" Data
MSE 251	Stochastic Control

Applications

MSE 130	Information Networks and Services
MSE 233	Networked Markets
MSE 260	Introduction to Operations Management
MSE 262	Supply Chain Management
MSE 263	Healthcare Operations Management
MSE 264	Sustainable Product Development and Manufacturing
MSE 268	Operations Strategy

Organizations, Technology, and Policy Area

6-15

Students choosing OT&P as their primary area must take at least two of ENGR 145, MS&E 175, MS&E 181, MS&E 185, PSYCH 70, and SOC 114 (but not both PSYCH 70 and SOC 114)⁴

Introductory (no prerequisites)

ENGR 131	Ethical Issues in Engineering ⁴
MSE 178	The Spirit of Entrepreneurship
MSE 189	Social Networks - Theory, Methods, and Applications
MSE 190	Methods and Models for Policy and Strategy Analysis
MSE 193	Technology and National Security (WIM) ⁴
MSE 197	Ethics, Technology, and Public Policy (WIM) ⁴
Advanced (has prerequisites and/or appropriate for juniors and seniors)	
ENGR 145	Technology Entrepreneurship
MSE 175	Innovation, Creativity, and Change
MSE 177	Engineering Innovation
MSE 181	Issues in Technology and Work for a Postindustrial Economy ⁴
MSE 185	Global Work
MSE 243	Energy and Environmental Policy Analysis
MSE 292	Health Policy Modeling
MSE 294	Climate Policy Analysis
MSE 295	Energy Policy Analysis

- 1 Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Introduction to Social Psychology, and many not repeat material from any other requirement. AP/IB credit for Chemistry, Mathematics, and Physics may be used.
- 2 Engineering fundamentals plus engineering depth must total a minimum of 60 units.
- 3 Students may petition to place out of CS 106A Programming Methodology.
- 4 Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Materials Science and Engineering (MATSCI)

Completion of the undergraduate program in Materials Science and Engineering leads to the conferral of the Bachelor of Science in Materials Science and Engineering.

Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

Requirements

Mathematics

20 units minimum; see Basic Requirement 1¹

Select one of the following: 5

MATH 51 Linear Algebra and Differential Calculus of Several Variables

CME 100/
ENGR 154 Vector Calculus for Engineers

Select one of the following: 5

MATH 52 Integral Calculus of Several Variables

CME 104/
ENGR 155B Linear Algebra and Partial Differential Equations for Engineers

Select one of the following: 5

MATH 53 Ordinary Differential Equations with Linear Algebra

CME 102/
ENGR 155A Ordinary Differential Equations for Engineers

One additional course 5

Science

20 units minimum; see Basic Requirement 2² 20

Must include a full year of physics or chemistry, with one quarter of study in the other subject.

Technology in Society

One course; see Basic Requirement 3³ 3-5

Engineering Fundamentals

Three courses minimum; see Basic Requirement 4⁴

Select one of the following: 4

ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis⁴

ENGR 50E Introduction to Materials Science, Energy Emphasis⁴

ENGR 50M Introduction to Materials Science, Biomaterials Emphasis⁴

Units

At least two additional courses 6-9

Materials Science and Engineering Depth

Materials Science Fundamentals:

MATSCI 153 Nanostructure and Characterization 4

MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies⁵ 4

MATSCI 155 Nanomaterials Synthesis 4

MATSCI 157 Quantum Mechanics of Nanoscale Materials 4

Two of the following courses: 8

MATSCI 151 Microstructure and Mechanical Properties

MATSCI 152 Electronic Materials Engineering

MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

MATSCI 190 Organic and Biological Materials

MATSCI 192 Materials Chemistry

MATSCI 193 Atomic Arrangements in Solids

MATSCI 194 Thermodynamics and Phase Equilibria

MATSCI 195 Waves and Diffraction in Solids

MATSCI 196 Defects in Crystalline Solids

MATSCI 197 Rate Processes in Materials

MATSCI 198 Mechanical Properties of Materials

MATSCI 199 Electronic and Optical Properties of Solids

Engineering Depth 16

One of the following courses:

MATSCI 161 Nanocharacterization Laboratory (WIM)

MATSCI 164 Electronic and Photonic Materials and Devices Laboratory (WIM)

Three of the following courses:

MATSCI 160 Nanomaterials Laboratory

MATSCI 162 X-Ray Diffraction Laboratory

MATSCI 163 Mechanical Behavior Laboratory

MATSCI 165 Nanoscale Materials Physics Computation Laboratory

Focus Area Options⁶ 10

¹ Basic Requirement 1 (20 units minimum): see a list of approved Math Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

² Basic Requirement 2 (20 units minimum): see a list of approved Science Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

³ Basic Requirement 3 (one course minimum): see a list of approved Technology in Society Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

⁴ Basic Requirement 4 (3 courses minimum): see a list of approved Engineering Fundamentals (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses) Courses. If both ENGR 50 (p. 155) Introduction to Materials Science, Nanotechnology Emphasis, ENGR 50E (p. 155) Introduction to Materials Science - Energy Emphasis, and/or ENGR 50M (p. 155) Introduction to Materials Science, Biomaterials Emphasis are taken, one may be used for the Materials Science Fundamentals requirement.

⁵ ENGR 30 (p. 155) Engineering Thermodynamics may be substituted for MATSCI 154 (p. 155) Thermodynamic Evaluation of Green Energy Technologies as long as the total MATSCI program units total 50 or more.

⁶ Focus Area Options: 10 units from one of the following Focus Area Options below.

Focus Area Options

Bioengineering (10 units minimum)

BIOE 220	Introduction to Imaging and Image-based Human Anatomy
BIOE 281	Biomechanics of Movement
BIOE 284B	Cardiovascular Bioengineering
BIOE 333	Interfacial Phenomena and Bionanotechnology
BIOE 381	Orthopaedic Bioengineering
MATSCI 190	Organic and Biological Materials
MATSCI 380	Nano-Biotechnology
MATSCI 381	Biomaterials in Regenerative Medicine
MATSCI 382	Biochips and Medical Imaging

Chemical Engineering (10 units minimum)

CHEM 171	Physical Chemistry I
CHEMENG 130	Separation Processes
CHEMENG 140	Micro and Nanoscale Fabrication Engineering
CHEMENG 150	Biochemical Engineering
CHEMENG 160	Polymer Science and Engineering

Chemistry (10 units minimum)

CHEM 151	Inorganic Chemistry I
CHEM 153	Inorganic Chemistry II
CHEM 171	Physical Chemistry I
CHEM 173	Physical Chemistry II
CHEM 175	Physical Chemistry III
CHEM 181	Biochemistry I
CHEM 183	Biochemistry II
CHEM 185	Biochemistry III

Electronics & Photonics (10 units minimum)

EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
EE 116	Semiconductor Device Physics
EE 134	Introduction to Photonics
EE 136	Introduction to Nanophotonics and Nanostructures
EE 142	Engineering Electromagnetics (Formerly EE 141)
MATSCI 343	Organic Semiconductors for Electronics and Photonics

Energy Technology (10 units minimum)

EE 293B	Fundamentals of Energy Processes
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 302	Solar Cells
MATSCI 303	Principles, Materials and Devices of Batteries
ME 260	Fuel Cell Science and Technology

Materials Characterization Techniques (10 units minimum)

MATSCI 320	Nanocharacterization of Materials
MATSCI 321	Transmission Electron Microscopy
MATSCI 322	Transmission Electron Microscopy Laboratory
MATSCI 323	Thin Film and Interface Microanalysis
MATSCI 326	X-Ray Science and Techniques

Mechanical Behavior & Design (10 units minimum)

AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
MATSCI 198	Mechanical Properties of Materials
MATSCI 358	Fracture and Fatigue of Materials and Thin Film Structures
ME 80	Mechanics of Materials
or CEE 101A	Mechanics of Materials
ME 203	Design and Manufacturing
ME 294	Medical Device Design

Nanoscience (10 units minimum)

BIOE 333	Interfacial Phenomena and Bionanotechnology
EE 136	Introduction to Nanophotonics and Nanostructures
ENGR 240	Introduction to Micro and Nano Electromechanical Systems
MATSCI 316	Nanoscale Science, Engineering, and Technology
MATSCI 320	Nanocharacterization of Materials
MATSCI 346	Nanophotonics
MATSCI 347	Introduction to Magnetism and Magnetic Nanostructures
MATSCI 380	Nano-Biotechnology

Physics (10 units minimum)

PHYSICS 70	Foundations of Modern Physics
PHYSICS 110	Advanced Mechanics
PHYSICS 120	Intermediate Electricity and Magnetism I
PHYSICS 121	Intermediate Electricity and Magnetism II
PHYSICS 130	Quantum Mechanics
PHYSICS 131	Quantum Mechanics II
PHYSICS 134	Advanced Topics in Quantum Mechanics
PHYSICS 170	Thermodynamics, Kinetic Theory, and Statistical Mechanics I
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II
PHYSICS 172	Solid State Physics

Self-Defined Option (10 units minimum)

Petition for a self-defined cohesive program.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work

as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

Requirements

Mathematics

24 units minimum; see Basic Requirement 1 ¹		
CME 102/ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
Select one of the following:		3-5
CME 106/ENGR 155C	Introduction to Probability and Statistics for Engineers	
STATS 110	Statistical Methods in Engineering and the Physical Sciences	
STATS 116	Theory of Probability	
Plus additional courses to total min. 24		16

Science

20 units minimum; see Basic Requirement 2 ¹		
CHEM 31X or ENGR 31	Chemical Principles Accelerated Chemical Principles with Application to Nanoscale Science and Technology	5
Plus additional required courses ¹		15

Technology in Society

One course from approved SoE list; see Basic Requirement 4	3-5
--	-----

Engineering Fundamentals

Three courses minimum; see Basic Requirement 3 ²		
ENGR 40	Introductory Electronics	5
ENGR 70A	Programming Methodology (same as CS 106A)	5
Fundamentals Elective ²		3-5

Engineering Depth

Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5		
ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 103D	Engineering Drawing and Design ³	1
ME 112	Mechanical Systems Design ⁴	4
ME 113	Mechanical Engineering Design	4
ME 131A	Heat Transfer	3-5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems ⁴	5
ME 161	Dynamic Systems, Vibrations and Control	4
ME 203	Design and Manufacturing ³	4

- ¹ Math and science must total 45 units.
 - Math: 24 units required and must include a course in differential equations (CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra; one of these required) and calculus-based Statistics (CME 106 Introduction to Probability and Statistics for Engineers or STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 116 is required).
 - Science: 20 units minimum and requires courses in calculus-based Physics and Chemistry, with at least a full year (3 courses) in one or the other. CHEM 31A Chemical Principles I/CHEM 31B Chemical Principles II are considered one course because they cover the same material as CHEM 31X Chemical Principles Accelerated but at a slower pace. CHEM 31X Chemical Principles Accelerated or ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology are recommended.
- ² ME Fundamental elective may not be a course counted for other requirements. Students may opt to use ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics from the required depth courses as the third fundamental class. However, total units for Engineering Topics (Fundamentals + Depth) must be a minimum of 68 units; additional options courses may be required to meet unit requirements. ENGR 70A (CS 106A) must be taken for 5 units.
- ³ Courses ME 103D and ME 203 must be taken concurrently .
- ⁴ ME 112, ME 131A and ME 140 together fulfill the WIM requirement.

Options to complete the ME depth sequence: see the list of options in the ME major section of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Product Design (PD)

Completion of the undergraduate program in Product Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Product Design" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Product Design

The mission of the undergraduate program in Product Design is to graduate designers who can synthesize technology, human factors, and business factors in the service of human need. The program teaches a design process that encourages creativity, craftsmanship, aesthetics, and personal expression, and emphasizes brainstorming and need finding. The course work provides students with the skills necessary to carry projects from initial concept to completion of working prototypes. Students studying product design follow the basic mechanical engineering curriculum and are expected to meet the University requirements for a Bachelor of Science degree. The program prepares students for careers in industry and for graduate study.

Conferral of the undergraduate program in Product Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Product Design" appears on the transcript and on the diploma.

Requirements

Mathematics and Science	Units
	43
	minimum
Mathematics	20
20 units minimum	
Recommended: one course in Statistics	
Science	23
	units

ME 216C	Advanced Product Design: Implementation 2	4

¹ School of Engineering approved science list available at <http://ughb.stanford.edu>. If the Psychology elective was taken prior to the requirement being increased to 3 units minimum in 2012-13, student will be short 1 unit in Science/Behavioral Science; this is approved without petition.

² Select one of the following: ENGR 10, ENGR 15, ENGR 20, ENGR 25B or ENGR 25E, ENGR 30, ENGR 50 or ENGR 50E or ENGR 50M, ENGR 60, ENGR 62, ENGR 90. Note that CS 106B or CS 106X are not allowed to fulfill elective.

³ If ENGR 14 and/or ME 110 were taken prior to the courses being offered for 4 units, depth total may be reduced by 1-2 units with no petition required.

⁴ ME 103D and ME 203 should be taken concurrently.

⁵ ME 112 meets the Writing in the Major (WIM) requirement for Product Design.

⁶ ME 115C is the only course that can be waived if student takes a quarter overseas. Students should plan their overseas quarter to take place in Sophomore year, or Spring Quarter of the junior year only. Total depth units are reduced by 3; this is approved without petition.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 26)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Sciences).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the intellectual traditions of two Stanford departments-it does so in a way that reduces the total unit requirement for each major.

Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS requirements for the CS-BS degree with the following exceptions:

- Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
- The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
- There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.
- For CS, WIM can be satisfied with CS181W or CS191W.

Depth Electives for CS Tracks for students completing a Joint Major:

Artificial Intelligence Track:

One Track Elective (rather than three).

Biocomputation Track:

One course from the BMC Informatics elective list (see <http://bmc.stanford.edu> and select Informatics from the elective options), plus one course from either the general CS electives list, BIOE 101, or the list of BMC Informatics electives.

Computer Engineering Track:

- EE 108A and 108B
 - One of the following: EE 101A, 101B, 102A, 102B
 - Satisfy the requirements of one of the following concentrations:
1. Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
 2. Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105
 3. Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

Graphics Track:

No Track Electives required (rather than two)

HCI Track:

No Track Electives required (rather than two)

Information Track:

One Track Elective (rather than three)

Systems Track:

One Track Elective (rather than three)

Theory Track:

One Track Elective (rather than three)

Unspecialized Track:

No Track Electives required (rather than two)

Individually Designed Track:

Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with a joint major.

Dropping a Joint Major Program

Information about dropping a joint major program is still being developed. This bulletin will be updated when that information is available. Student may consult the Student Services Center (<http://studentaffairs.stanford.edu/studentervicescenter>) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

Minor in the School of Engineering

An undergraduate minor in some Engineering programs may be pursued by interested students; see the Handbook for Undergraduate Engineering Programs, or consult with a department's undergraduate program representative or the Office of Student Affairs, Huang Engineering Center, Suite 135.

General requirements and policies for a minor in the School of Engineering are:

1. A set of courses totaling not less than 20 and not more than 36 units, with a minimum of six courses of at least 3 units each. These courses must be taken for a letter grade except where letter grades are not offered, and a minimum GPA of 2.0 within the minor course list must be maintained (departments may require a higher GPA if they choose).
2. The set of courses should be sufficiently coherent as to present a body of knowledge within a discipline or subdiscipline.
3. Prerequisite mathematics, statistics, or science courses, such as those normally used to satisfy the school's requirements for a department major, may not be used to satisfy the requirements of the minor; conversely, engineering courses that serve as prerequisites for subsequent courses must be included in the unit total of the minor program.
4. Courses used for the major and/or minor core must not be duplicated within any other of the student's degree programs; that is, students may not overlap (double-count) courses for completing major and minor requirements except in the case of prerequisite courses as noted in #3.

Departmentally based minor programs are structured at the discretion of the sponsoring department, subject only to requirements 1, 2, 3, and 4 above. Interdisciplinary minor programs may be submitted to the Undergraduate Council for approval and sponsorship. A general Engineering minor is not offered.

Aeronautics and Astronautics (AA) Minor

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro adviser can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

		Units
AA 100	Introduction to Aeronautics and Astronautics	3
ENGR 14	Intro to Solid Mechanics *	4
ENGR 15	Dynamics *	4
ENGR 30	Engineering Thermodynamics *	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer ¹	3-5
Two courses from one of the upper-division elective areas below (min. 6 units)		
Plus one course from a second area below (min. 3 units)		9-11
Aerospace Systems Synthesis/Design		
AA 236A & AA 236B	Spacecraft Design and Spacecraft Design Laboratory	

AA 241A Introduction to Aircraft Design, Synthesis, and
& AA 241B Analysis
and Introduction to Aircraft Design, Synthesis, and
Analysis

AA 284B Propulsion System Design Laboratory

Dynamics and Controls

AA 242A Classical Dynamics

AA 203 Introduction to Optimal Control Theory

AA 222 Introduction to Multidisciplinary Design
Optimization

AA 271A Dynamics and Control of Spacecraft and Aircraft

ENGR 105 Feedback Control Design

ENGR 205 Introduction to Control Design Techniques

Fluids

AA 200 Applied Aerodynamics

AA 201A Fundamentals of Acoustics

AA 210A Fundamentals of Compressible Flow

AA 214A Introduction to Numerical Methods for Engineering

or CME 206 Introduction to Numerical Methods for Engineering

AA 283 Aircraft and Rocket Propulsion

ME 131B Fluid Mechanics: Compressible Flow and
Turbomachinery

ME 140 Advanced Thermal Systems

Structures

AA 240A Analysis of Structures

AA 240B Analysis of Structures

AA 256 Mechanics of Composites

AA 280 Smart Structures

ME 335A Finite Element Analysis

* ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics are waived as minor requirements if already taken as part of the major.

¹ AA minors take ME 131 for 3 units

Chemical Engineering (CHE) Minor

The following core courses fulfill the minor requirements:

	Units
ENGR/ CHEMENG 20	Introduction to Chemical Engineering 3
CHEMENG 100	Chemical Process Modeling, Dynamics, and Control 3
CHEMENG 110	Equilibrium Thermodynamics 3
CHEMENG 120A	Fluid Mechanics 4
CHEMENG 120B	Energy and Mass Transport 4
CHEMENG 170	Kinetics and Reactor Design 3
CHEMENG 185A	Chemical Engineering Laboratory A 4
CHEM 171	Physical Chemistry I 3
CHEMENG 180	Chemical Engineering Plant Design 4
Select one of the following:	3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering 3
CHEMENG 142	Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations 3
CHEMENG 160	Polymer Science and Engineering 3

CHEMENG
162

CHEMENG
174

CHEMENG
181

Total Units

34

Civil Engineering (CE) Minor

The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 41 Calculus (or MATH 19 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site (http://cee.stanford.edu/prospective/undergrad/minor_overview.html) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

General guidelines are:

1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are given on the CEE webpage.

Professor Anne Kiremidjian (kiremidjian@stanford.edu) is the CEE undergraduate minor adviser in Structural Engineering and Construction Engineering and Management. John Barton (jhbarton@stanford.edu), Program Director for Architectural Design, is the undergraduate minor adviser in Architectural Design. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

Computer Science (CS) Minor

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51.

Introductory Programming (AP Credit may be used to fulfill this requirement):

	Units
CS 106B	Programming Abstractions 5
or CS 106X	Programming Abstractions (Accelerated) 5
Core:	
CS 103	Mathematical Foundations of Computing 5
CS 107	Computer Organization and Systems 5

CS 109	Introduction to Probability for Computer Scientists	5
Electives (choose two courses from different areas):		
Artificial Intelligence—		
CS 124	From Languages to Information	4
CS 221	Artificial Intelligence: Principles and Techniques	4
CS 229	Machine Learning	3-4
Human-Computer Interaction—		
CS 147	Introduction to Human-Computer Interaction Design	4
Software—		
CS 108	Object-Oriented Systems Design	4
CS 110	Principles of Computer Systems	5
Systems—		
CS 140	Operating Systems and Systems Programming	4
CS 143	Compilers	4
CS 144	Introduction to Computer Networking	4
CS 145	Introduction to Databases	4
CS 148	Introduction to Computer Graphics and Imaging	4
Theory—		
CS 154	Introduction to Automata and Complexity Theory	4
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	5

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

Electrical Engineering (EE) Minor

The options for completing a minor in EE are outlined below. Students must complete a minimum of 23-25 units, as follows:

Select one of the following courses:	5
EE 65 Modern Physics for Engineers	
ENGR 40 Introductory Electronics	
ENGR 40M An Intro to Making: What is EE	
ENGR 40P/EE Physics of Electrical Engineering	
41	
Select one of the following options:	8
Option I:	
EE 101A Circuits I	
EE 101B Circuits II	
Option II:	
EE 102A Signal Processing and Linear Systems I	
EE 102B Signal Processing and Linear Systems II	
Option III:	
EE 108 Digital System Design	
EE 180 Digital Systems Architecture	

In addition, four letter-graded EE or Related courses at the 100-level or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.

Environmental Systems Engineering (EnvSE) Minor

The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor

is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an environmental systems engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (<http://ughb.stanford.edu>).

General guidelines are—

- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site (http://cee.stanford.edu/prospective/undergrad/minor_overview.html).

Professor Lynn Hildemann (hildemann@stanford.edu) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Hildemann in developing their minor program, and obtain approval of the finalized study list from her.

Management Science and Engineering (MS&E) Minor

The following courses are required to fulfill the minor requirements:

	Units
Select one of the following courses:	5
Background requirements (two courses)	
CME 100 Vector Calculus for Engineers	5
or MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CS 106A Programming Methodology	5
Minor requirements (seven courses, letter-graded)	
MSE 111 Introduction to Optimization	4
MSE 120 Probabilistic Analysis	5
MSE 121 Introduction to Stochastic Modeling	4
MSE 125 Introduction to Applied Statistics	4
MSE 180 Organizations: Theory and Management	4
Electives (select any two 100- or 200-level MS&E courses)	6
Recommended courses	
In addition to the required background and minor courses, it is recommended that students also take the following courses.	
ECON 50 Economic Analysis I	5
MSE 140 Accounting for Managers and Entrepreneurs (may be used as one of the required electives above)	2-4
or MSE 140X Financial Accounting Concepts and Analysis	

Materials Science and Engineering (MATSCI) Minor

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:

	Units
Engineering Fundamentals	

Select one of the following:	4
ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis	
ENGR 50E Introduction to Materials Science, Energy Emphasis	
ENGR 50M Introduction to Materials Science, Biomaterials Emphasis	
Materials Science Fundamentals and Engineering Depth	
Select six of the following:	24
MATSCI 151 Microstructure and Mechanical Properties	
MATSCI 152 Electronic Materials Engineering	
MATSCI 153 Nanostructure and Characterization	
MATSCI 154 Thermodynamic Evaluation of Green Energy Technologies	
MATSCI 155 Nanomaterials Synthesis	
MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	
MATSCI 157 Quantum Mechanics of Nanoscale Materials	
MATSCI 160 Nanomaterials Laboratory	
MATSCI 161 Nanocharacterization Laboratory	
MATSCI 162 X-Ray Diffraction Laboratory	
MATSCI 163 Mechanical Behavior Laboratory	
MATSCI 164 Electronic and Photonic Materials and Devices Laboratory	
MATSCI 165 Nanoscale Materials Physics Computation Laboratory	
MATSCI 190 Organic and Biological Materials	
MATSCI 192 Materials Chemistry	
MATSCI 193 Atomic Arrangements in Solids	
MATSCI 194 Thermodynamics and Phase Equilibria	
MATSCI 195 Waves and Diffraction in Solids	
MATSCI 196 Defects in Crystalline Solids	
MATSCI 197 Rate Processes in Materials	
MATSCI 198 Mechanical Properties of Materials	
MATSCI 199 Electronic and Optical Properties of Solids	
Total Units	28

Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

General Minor *

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 101	Visual Thinking	4
Plus two of the following:		8-9
ME 80	Mechanics of Materials	
ME 131A	Heat Transfer	
ME 161	Dynamic Systems, Vibrations and Control	
ME 203	Design and Manufacturing	

Thermosciences Minor **

ENGR 14	Intro to Solid Mechanics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4

ME 131A	Heat Transfer	5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5

Mechanical Design Minor ***

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 112	Mechanical Systems Design	4
ME 203	Design and Manufacturing	4

Plus one of the following: 3-4

ME 113 Mechanical Engineering Design

ME 210 Introduction to Mechatronics

ME 220 Introduction to Sensors

Total Units **79-81**

* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 41 Calculus, MATH 42 Calculus, and PHYSICS 41 Mechanics.

** Prerequisites: MATH 41 Calculus, MATH 42 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.

*** This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 41 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

Master of Science in the School of Engineering

The M.S. degree is conferred on graduate students in engineering according to the University regulations stated in the "Graduate Degrees (p. 43)" section of this bulletin, and is described in the various department listings. A minimum of 45 units is usually required in M.S. programs in the School of Engineering. The presentation of a thesis is not a school requirement. Further information is found in departmental listings.

Master of Science in Engineering

The M.S. in Engineering is available to students who wish to follow an interdisciplinary program of study that does not conform to a normal graduate program in a department. There are three school requirements for the M.S. degree in Engineering:

Units

1. The student's program must be a coherent one with a well-defined objective and must be approved by a department within the school which has experience with graduate-level teaching and advising in the program area.
2. The student's program must include at least 21 units of courses within the School of Engineering with catalog numbers of 200 or above in which the student receives letter grades.
3. The program must include a total of at least 45 units.

Each student's program is administered by the particular department in which it is lodged and must meet the standard of quality of that department. Transfer into this program is possible from any graduate program by application through the appropriate department; the department then recommends approval to the Office of Student Affairs in the School of Engineering. The application should be submitted before completing 18 units of the proposed program; it should include a statement describing the objectives of the program, the coherence of the proposed course work, and why this course of study cannot conform to existing graduate programs.

Normally, it would include the approval of at least one faculty member willing to serve as adviser. (A co-advising team may be appropriate for interdisciplinary programs.) The actual transfer is accomplished through the Graduate Authorization Petition process.

Engineer in the School of Engineering

The degree of Engineer is intended for students who want additional graduate training beyond that offered in an M.S. program. The program of study must satisfy the student's department and must include at least 90 units beyond the B.S. degree. The presentation of a thesis is required. The University regulations for the Engineer degree are stated in the "Graduate Degrees (p. 43)" section of this bulletin, and further information is available in the individual departmental sections of this bulletin.

Doctor of Philosophy in the School of Engineering

Programs leading to the Ph.D. degree are offered in each of the departments of the school. University regulations for the Ph.D. are given in the "Graduate Degrees (p. 43)" section of this bulletin. Further information is found in departmental listings.

Honors Cooperative Program

Industrial firms, government laboratories, and other organizations may participate in the Honors Cooperative Program (HCP), a program that permits qualified engineers, scientists, and technology professionals admitted to Stanford graduate degree programs to register for Stanford courses and obtain the degree on a part-time basis. In many areas of concentration, the master's degree can be obtained entirely online.

Through this program, many graduate courses offered by the School of Engineering on campus are made available through the Stanford Center for Professional Development (SCPD). SCPD delivers more than 250 courses a year online. For HCP employees who are not part of a graduate degree program at Stanford, courses and certificates are also available through a non-degree option (NDO) and a non-credit professional education program. Non-credit short courses may be customized to meet a company's needs. For a full description of educational services provided by SCPD, see <http://scpd.stanford.edu>; call (650) 725-3000; fax (650) 725-2868; or email scpd-registration@stanford.edu.

Dean: Persis Drell

Senior Associate Deans: Laura L. Breyfogle (External Relations), Scott Calvert (Administration), Bernd Girod (Online Learning & Professional Development), Thomas Kenny (Student Affairs), Jennifer Widom (Faculty and Academic Affairs)

Associate Dean: Noé P. Lozano (Diversity Programs)

Assistant Dean: Sally Gressens (Graduate Student Affairs)

Faculty Teaching General Engineering Courses

Professors: Chris Edwards, Mark Horowitz, Chaitan Khosla, Sanjay Lall, Parviz Moin, Eric Roberts, Stephen M. Rock, Sheri Sheppard, Robert Sinclair, James Swartz, Hai Wang

Associate Professors: Drew Endy, Sarah Heilshorn, Thomas Jaramillo, Jan Liphardt, Nick Melosh, Allison Okamura, Amin Saberi, Thomas Jaramillo, Xiaolin Zheng

Assistant Professors: Chuck Easley, Werner Ihme, Sindy Tang,

Professors (Teaching): Thomas H. Byers, Robert McGinn, Mehran Sahami

Senior Lecturers: Vadim Khayms

Lecturers: Abbas Emami-Naeini, Jeff Epstein, David Evans, Rebeca Hwang, David Jaffe, Thomas Kosnik, Cynthia Bailey Lee, Hung Le, Adam Leeper, Paul Mitiguy, Keith Schwarz, Marty Stepp, Jeremy Utley, Matt Vassar

Emeritus Faculty: George M. Homsy

Other Teaching: William Behrman, Jesse Benck, Steve Blank, Robyn Dunbar, Larry Lagerstrom, Mark McClure, Mary McDevitt, Michael T. Padilla, Bernard Roth

Overseas Studies Courses in Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPBER 40B	Introductory Electronics	5
OSPBER 50M	Introductory Science of Materials	4
OSPFLOR 50M	Introductory Science of Materials	4
OSPKYOTO 40K	Introductory Electronics	5
OSPPARIS 40P	Introductory Electronics	5
OSPPARIS 50M	Introductory Science of Materials	4

Aeronautics and Astronautics

Courses offered by the Department of Aeronautics and Astronautics are listed under the subject code AA on the (<https://explorecourses.stanford.edu/search?filter-term=Autumn=on&filter-catalognumber-AA=on&filter-term=Summer=on&page=0&q=AA&filter-coursestatus-Active=on&view=catalog&filter-term-Spring=on&collapse=&filter-term-Winter=on&catalog=71>) *Stanford Bulletin's* ExploreCourses web site.

The Department of Aeronautics and Astronautics prepares students for professional positions in industry, government, and academia by offering a comprehensive program of graduate teaching and research. In this broad program, students have the opportunity to learn and integrate multiple engineering disciplines. The program emphasizes structural, aerodynamic, guidance and control, and propulsion problems of aircraft and spacecraft. Courses in the teaching program lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Undergraduates and doctoral students in other departments may also elect a minor in Aeronautics and Astronautics.

Requirements for all degrees include courses on basic topics in Aeronautics and Astronautics, as well as in mathematics, and related fields in engineering and the sciences.

The current research and teaching activities cover a number of advanced fields, with emphasis on:

- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work which provides a solid grounding in the basic disciplines, including fluid mechanics, dynamics and control, propulsion, structural mechanics, and applied or computational mathematics, and course work or supervised research which provides depth and breadth in the student's area of specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Aeronautics and Astronautics and related fields.

Graduate Programs in Aeronautics and Astronautics Admission

To be eligible to apply for admission to the department, a student must have a bachelor's degree in engineering, physical science, mathematics, or an acceptable equivalent. Students who have not yet received a master's degree in a closely allied discipline will be admitted to the master's program; eligibility for the Ph.D. program is considered after the master's year (see "Doctor of Philosophy"). Applications for admission with financial aid (fellowships or assistantships) or without financial aid must be received and completed by December 2 for the next Autumn Quarter.

Information about admission to the Honors Cooperative Program is included in the "School of Engineering" section of this bulletin. The department may consider HCP applications for Winter or Spring quarters as well as for Autumn Quarter; prospective applicants should contact the department's student services office.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar's Office, <http://gradadmissions.stanford.edu>.

Waivers and Transfer Credits

Waivers of the Basic Courses required for the M.S. degree in Aeronautics and Astronautics can only be granted by the instructor of that course. Students who believe that they have had a substantially equivalent course at another institution should consult with the course instructor to determine if they are eligible for a waiver, and with their adviser to judge the effect on their overall program plans. To request a waiver, students should fill out a Petition for Waiver form (reverse side of the department's program proposal) and have it approved by the instructor and their adviser. One additional technical elective must be added for each Basic Course that is waived.

A similar procedure should be followed for transfer credits. The number of transfer credits allowed for each degree (Engineer and Ph.D.) is delineated in the "Graduate Degrees" section of this bulletin; transfer credit is not accepted for the M.S. degree. Transfer credit is allowed only for courses taken as a graduate student, after receiving a bachelor's degree, in which equivalence to Stanford courses is established and for which a grade of 'B' or better has been awarded. Transfer credits, if approved, reduce the total number of Stanford units required for a degree.

Fellowships and Assistantships

Fellowships and course or research assistantships are available to qualified graduate students. Fellowships sponsored by Gift Funds, Stanford University, and Industrial Affiliates of Stanford University in Aeronautics and Astronautics provide grants to several first-year students for the nine-month academic year to cover tuition and living expenses. Stanford Graduate Fellowships, sponsored by the University, provide grants for three full years of study and research; each year, the department is invited to nominate several outstanding doctoral or predoctoral students for these prestigious awards. Students who have excelled in their master's-level course work at Stanford are eligible for course assistantships in the department; those who have demonstrated research capability are eligible for research assistantships from individual faculty members. Students may also hold assistantships in other departments if the work is related to their academic progress; the criteria for selecting course or research assistants are determined by each hiring department. A standard, 20 hours/week course or research assistantship provides a semi-monthly salary and an 8-10 unit

tuition grant per quarter. Research assistants may be given the opportunity of additional summer employment. They may use their work as the basis for a dissertation or Engineer's thesis.

Aeronautics and Astronautics Facilities

The work of the department is centered in the William F. Durand Building for Space Engineering and Science. This 120,000 square foot building houses advanced research and teaching facilities and concentrates in one complex the Department of Aeronautics and Astronautics. The Durand Building also houses faculty and staff offices and several conference rooms.

Through the department's close relations with nearby NASA-Ames Research Center, students and faculty have access to one of the best and most extensive collections of experimental aeronautical research facilities in the world, as well as the latest generation of supercomputers.

General Information

Further information about the facilities and programs of the department is available at <http://aa.stanford.edu>, or from the department's student services office.

The department has a student branch of the American Institute of Aeronautics and Astronautics, which sponsors programs and speakers covering aerospace topics and social events. It also conducts visits to nearby research, government, and industrial facilities, and sponsors a Young Astronauts Program in the local schools.

Bachelor of Science in Engineering (Aeronautics and Astronautics)

Although primarily a graduate-level department, the program offers an undergraduate major in Aeronautics and Astronautics (AA) leading to the B.S. degree in Engineering and an undergraduate minor in Aeronautics and Astronautics. For further information, see the *Handbook for Undergraduate Engineering Programs* at <http://ughb.stanford.edu>.

Undergraduates interested in aerospace are encouraged to combine either a minor or a coterminal M.S. in Aeronautics and Astronautics with a major in a related discipline (such as Mechanical or Electrical Engineering). Students considering these options are encouraged to contact the department's student services office.

Aeronautics and Astronautics (AA)

Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of

materials, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, space exploration, air and space-based telecommunication industries, teaching, research, military service, and many related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Engineering. The subplan "Aeronautics and Astronautics" appears on the transcript and on the diploma.

Requirements

		Units
Mathematics		
24 units minimum ¹		
MATH 41	Calculus (or AP Calculus)	5
MATH 42	Calculus (or AP Calculus)	5
CME 100/ENGR 154	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 102/ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
CME 106/ENGR 155C	Introduction to Probability and Statistics for Engineers (or STATS 110, STATS 116, CS 109)	4-5
or STATS 110	Statistical Methods in Engineering and the Physical Sciences	
or STATS 116	Theory of Probability	
or CS 109	Introduction to Probability for Computer Scientists	
Science		
19 units minimum		
PHYSICS 41	Mechanics (or AP Physics)	4
PHYSICS 43	Electricity and Magnetism (or AP Physics)	4
PHYSICS 45	Light and Heat	4
CHEM 31X	Chemical Principles Accelerated (or CHEM 31A +B, AP Chemistry)	4-5
or ENGR 31	Chemical Principles with Application to Nanoscale Science and Technology	
Science elective ²		3-5
Technology in Society (one course required)		
3 units minimum ³		3-5
Engineering Fundamentals (three courses required)		
11 units minimum		
ENGR 30	Engineering Thermodynamics	3
ENGR 70A	Programming Methodology	5
Fundamentals Elective ⁴		3-5
Engineering Depth		
30 units minimum		
AA 100	Introduction to Aeronautics and Astronautics	3
AA 190	Directed Research and Writing in Aero/Astro	3-5
ME 70	Introductory Fluids Engineering	4
ENGR 14	Intro to Solid Mechanics	4
ME 131A	Heat Transfer	3
ENGR 15	Dynamics	4
ME 161	Dynamic Systems, Vibrations and Control	3-4
or PHYSICS 110	Advanced Mechanics	
CEE 101A	Mechanics of Materials	4
or ME 80	Mechanics of Materials	

Aero/Astro Depth	
18 units minimum	
Engineering Electives (two courses required) ⁵	6-10
See Course List AA-1 below for a list of options	
Depth Area I (two courses required) ⁶	6-10
See Course List AA-2 below for a list of options	
Depth Area II (two courses required) ⁶	6-10
See Course List AA-2 below for a list of options	
Total Units	103-126

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

- It is recommended that the CME series (100, 102, 104) be taken rather than the MATH series (51, 52, 53). If students take the MATH series, it is recommended to take MATH 51M Introduction to MATLAB for Multivariable Mathematics, offered Autumn Quarter.
- Courses that satisfy the Science elective are listed in Figure 3-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.
- Courses that satisfy the Technology in Society Requirement are listed in Figure 3-3 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>.
- Courses that satisfy the Engineering Fundamentals elective are listed in Figure 3-4 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>. ENGR 70B or X (same as CS 106B or X) is not allowed to fulfill the third fundamentals requirement.
- Courses that satisfy the Engineering Electives are listed in Figure AA-1 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-1 below.
- Courses that satisfy the Depth Area choices are listed in Figure AA-2 in the Handbook for Undergraduate Engineering Programs at <http://ughb.stanford.edu>, as well as Course List AA-2 below.

		Units
AA-1. Engineering Electives: Two Courses Required		
AA 250	Nanomaterials for Aerospace	3
ENGR 240	Introduction to Micro and Nano Electromechanical Systems	3
ME 210	Introduction to Mechatronics	4
ME 220	Introduction to Sensors	3-4
ME 227	Vehicle Dynamics and Control	3
ME 250	Internal Combustion Engines	3-5
ME 257	Turbine and Internal Combustion Engines	3
ME 260	Fuel Cell Science and Technology	3
ME 324	Precision Engineering	4
ME 331A	Advanced Dynamics & Computation	3
ME 331B	Advanced Dynamics, Simulation & Control	3
ME 345	Fatigue Design and Analysis	3
ME 348	Experimental Stress Analysis	3
ME 351A	Fluid Mechanics	3
ME 351B	Fluid Mechanics	3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	3
CS 107	Computer Organization and Systems	3-5
CS 110	Principles of Computer Systems	3-5
CS 140	Operating Systems and Systems Programming	3-4
CS 161	Design and Analysis of Algorithms	3-5
EE 102A	Signal Processing and Linear Systems I	4
EE 102B	Signal Processing and Linear Systems II	4
EE 101A	Circuits I	4

EE 101B	Circuits II	4
ENERGY 121	Fundamentals of Multiphase Flow	3
ENERGY 191	Optimization of Energy Systems	3-4
ENERGY 226	Thermal Recovery Methods	3
MATSCI 155	Nanomaterials Synthesis	4
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
MATSCI 197	Rate Processes in Materials	3-4
MATSCI 198	Mechanical Properties of Materials	3-4
PHYSICS 100	Introduction to Observational and Laboratory Astronomy	4

* It is recommended that students review prerequisites for all courses.

Units

AA-2. Depth Area: Four Courses Required, Two From Each of Two Areas

Dynamics and Controls		
ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3
AA 203	Introduction to Optimal Control Theory	3
AA 222	Introduction to Multidisciplinary Design Optimization	3-4
AA 242A	Classical Dynamics	3
AA 271A	Dynamics and Control of Spacecraft and Aircraft	3
Systems Design		
AA 236A	Spacecraft Design	3-5
AA 236B	Spacecraft Design Laboratory	3-5
AA 241A	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis	3
AA 284B	Propulsion System Design Laboratory	3
Fluids and CFD		
AA 200	Applied Aerodynamics	3
AA 201A	Fundamentals of Acoustics	3
AA 210A	Fundamentals of Compressible Flow	3
AA 214A/CME 206/ME 300C	Introduction to Numerical Methods for Engineering	3
AA 283	Aircraft and Rocket Propulsion	3
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5
Structures		
AA 240A	Analysis of Structures	3
AA 240B	Analysis of Structures	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
ME 335A	Finite Element Analysis	3

* It is recommended that students review prerequisites for all courses.

Aeronautics and Astronautics (AA) Minor

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements

for the minor are described in detail below. Courses cannot be double-counted within a major and a minor, or within multiple minors; if necessary, the Aero/Astro adviser can help select substitute courses to fulfill the AA minor core.

The following core courses fulfill the minor requirements:

		Units
AA 100	Introduction to Aeronautics and Astronautics	3
ENGR 14	Intro to Solid Mechanics *	4
ENGR 15	Dynamics *	4
ENGR 30	Engineering Thermodynamics *	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer	3
Two courses from one of the upper-division elective areas below (min. 6 units)		
Plus one course from a second area below (min. 3 units)		9-14
Aerospace Systems Synthesis/Design		
AA 236A	Spacecraft Design	
AA 236B	Spacecraft Design Laboratory	
AA 241A	Introduction to Aircraft Design, Synthesis, and Analysis	
AA 241B	Introduction to Aircraft Design, Synthesis, and Analysis	
AA 284B	Propulsion System Design Laboratory	
Dynamics and Controls		
ENGR 105	Feedback Control Design	
ENGR 205	Introduction to Control Design Techniques	
AA 203	Introduction to Optimal Control Theory	
AA 222	Introduction to Multidisciplinary Design Optimization	
AA 242A	Classical Dynamics	
AA 271A	Dynamics and Control of Spacecraft and Aircraft	
Fluids		
AA 200	Applied Aerodynamics	
AA 201A	Fundamentals of Acoustics	
AA 210A	Fundamentals of Compressible Flow	
AA 214A	Introduction to Numerical Methods for Engineering	
AA 283	Aircraft and Rocket Propulsion	
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	
ME 140	Advanced Thermal Systems	
Structures		
AA 240A	Analysis of Structures	
AA 240B	Analysis of Structures	
AA 256	Mechanics of Composites	
AA 280	Smart Structures	
ME 335A	Finite Element Analysis	
Total Units		30-35

* ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics are waived as minor requirements if already taken as part of the major.

Coterminal Degrees Program in Aeronautics and Astronautics

This special program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in another field and an M.S. in Aeronautics and Astronautics. General requirements for this program and admissions procedures are described in the "School of Engineering" section of this bulletin. Admission is granted or denied through the departmental faculty Admissions and Awards Committee. A coterminal student must meet the course and scholarship requirements detailed for the M.S. below.

For University coterminal degree program rules and University application forms, see <http://registrar.stanford.edu/shared/publications.htm#Coterm>.

Master of Science in Aeronautics and Astronautics

The University's basic requirements for the master's degree are outlined in the "Graduate Degrees" section of this bulletin. Students with an aeronautical engineering background should be able to qualify for the master's degree in three quarters of work at Stanford. Students with a bachelor's degree in Physical Science, Mathematics, or other areas of Engineering may find it necessary to take certain prerequisite courses, which would lengthen the time required to obtain the master's degree. The following are departmental requirements.

Grade Point Averages

A minimum grade point average (GPA) of 2.75 is required to fulfill the department's M.S. degree requirements; a minimum GPA of 3.5 is required for eligibility to attempt the Ph.D. qualifying examination. It is incumbent upon both M.S. and potential Ph.D. candidates to request letter grades in all courses except those that do not offer a letter grade option and those that fall into the categories of colloquia and seminars (for example, ENGR 298 Seminar in Fluid Mechanics). Insufficient grade points on which to base the GPA may delay expected degree conferral or result in refusal of permission to take the qualifying examinations.

Course Requirements

The Master of Science (M.S.) program is a terminal degree program. It is based on the completion of lecture courses focused on a theme within the discipline of Aeronautics and Astronautics engineering. No thesis is required. No research is required.

The Master's degree program requires 45 quarter units of course work, which must be taken at Stanford. The course work is divided into four categories

- Basic Courses
- Mathematics Courses
- Technical Electives
- Other Electives

Basic Courses

M.S. candidates must select eight courses as follows:

Units

(I) Five courses in the basic areas of Aeronautics and Astronautics (one in each area):

Fluids		
AA 200	Applied Aerodynamics	3
AA 210A	Fundamentals of Compressible Flow	3
Structures		

AA 240A	Analysis of Structures	3
Guidance and Control		
ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3
Propulsion		
AA 283	Aircraft and Rocket Propulsion	3
Experimentation/Design Requirements (see courses under Related Courses tab above)		
(II) Three courses (one each from three of the four areas below)		
Fluids		
AA 200	Applied Aerodynamics	3
AA 210A	Fundamentals of Compressible Flow	3
AA 244A	Introduction to Plasma Physics and Engineering	3
Structures		
AA 240B	Analysis of Structures	3
AA 242B	Mechanical Vibrations	3
AA 256	Mechanics of Composites	3
AA 280	Smart Structures	3
Guidance and Control		
AA 242A	Classical Dynamics	3
AA 242B	Mechanical Vibrations	3
AA 251	Introduction to the Space Environment	3
AA 271A	Dynamics and Control of Spacecraft and Aircraft	3
AA 272C	Global Positioning Systems	3
AA 279A	Space Mechanics	3
One course selected from AA courses numbered 200 and above, excluding seminars and independent research		

Candidates who believe they have satisfied a basic course requirement in previous study may request a waiver of one or more courses (see "Waivers and Transfer Credits" in the "Graduate Programs in Aeronautics and Astronautics" section of this bulletin).

Mathematics Courses

M.S. candidates are expected to exhibit competence in applied mathematics. Students meet this requirement by taking a minimum of 6 units of either advanced mathematics offered by the Mathematics Department or technical electives that strongly emphasize applied mathematics. Common choices include:

- AA 214A Introduction to Numerical Methods for Engineering
- AA 214B Numerical Methods for Compressible Flows
- AA 214C Numerical Computation of Viscous Flow
- AA 215A Advanced Computational Fluid Dynamics
- AA 215B Advanced Computational Fluid Dynamics
- AA 218 Introduction to Symmetry Analysis
- AA 222 Introduction to Multidisciplinary Design Optimization

See the list of mathematics courses under Related Courses tab above for additional suggestions. All courses in the Mathematics Department numbered 200 or above are also included as suggestions.

Technical Electives

Students, in consultation with their advisers, select at least four courses (totaling at least 12 units) from among the graduate-level courses offered by departments of the School of Engineering and related science departments. Normally, one course (3 units) may be directed research.

Other Electives

It is recommended that all candidates enroll in a humanities or social sciences course to complete the 45-unit requirement. Practicing courses in, for example, art, music, and physical education do not qualify in this category. Language courses may qualify.

Master of Science in Engineering (AA)

Students whose career objectives require a more interdepartmental or narrowly focused program than is possible in the M.S. program in Aeronautics and Astronautics (AA) may pursue a program for an M.S. degree in Engineering (45 units). This program is described in the "Graduate Programs in the School of Engineering" section of this bulletin.

Sponsorship by the Department of Aeronautics and Astronautics in this more general program requires that the student file a proposal before completing 18 units of the proposed graduate program. The proposal must be accompanied by a statement explaining the objectives of the program and how the program is coherent, contains depth, and fulfills a well-defined career objective. The proposed program must include at least 12 units of graduate-level work in the department and meet rigorous standards of technical breadth and depth comparable to the regular AA Master of Science program. The grade and unit requirements are the same as for the M.S. degree in Aeronautics and Astronautics.

Engineer in Aeronautics and Astronautics

The degree of Engineer represents an additional year (or more) of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master's degree alone. It is expected that full-time students will be able to complete the degree within two years of study after the master's degree.

The University's basic requirements for the degree of Engineer are outlined in the "Graduate Degrees" section of this bulletin. The following are department requirements.

The candidate's prior study program should have fulfilled the department's requirements for the master's degree or a substantial equivalent. Beyond the master's degree, a total of 45 units of work is required, including a thesis and a minimum of 30 units of courses chosen as follows:

1. 24 units of approved technical electives, of which 9 are in mathematics or applied mathematics. See the list of mathematics courses under Related Courses tab above. All courses in the Mathematics Department numbered 200 or above are included. The remaining 15 units are chosen in consultation with the adviser, and represent a coherent field of study related to the thesis topic. Suggested fields include: (a) acoustics, (b) aerospace structures, (c) aerospace systems synthesis and design, (d) analytical and experimental methods in solid and fluid mechanics, (e) computational fluid dynamics, and (f) guidance and control.
2. 6 units of free electives.
3. The remaining 15 units may be thesis, research, technical courses, or free electives.

Candidates for the degree of Engineer are expected to have a minimum grade point average (GPA) of 3.0 for work in courses beyond those required for the master's degree. All courses except seminars and directed research should be taken for a letter grade.

Doctor of Philosophy in Aeronautics and Astronautics

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 43)" section of this bulletin. Department requirements are stated below.

Qualifications for candidacy for the doctoral degree are contingent on:

1. Having fulfilled department requirements for the master's degree or its substantial equivalent.
2. Maintaining a high scholastic record for graduate course work.
3. Completing 3 units of a directed research problem (AA 290 Problems in Aero/Astro).
4. In the first year of doctoral study, passing an oral Ph.D. qualifying examination given by the department during Autumn and Spring quarters.

Detailed information about the deadlines, nature, and scope of the Ph.D. qualifying examination can be obtained from the department. Research on the doctoral dissertation may not be formally started before passing this examination.

Course Requirements

Each individual Ph.D. program in Aeronautics and Astronautics, designed by the student in consultation with the adviser, should represent a strong and cohesive program reflecting the student's major field of interest. A total of 90 units of work is required beyond the master's degree, including a minimum of 36 units of approved formal course work (excluding research, directed study, and seminars). The courses should consist primarily of graduate courses in engineering and related sciences. The remainder of the 90 units may be in the form of either Ph.D. dissertation units or free electives. For students who elect a minor in another department, a maximum of 12 units from the minor program may be included in the 36 units of formal course work; the remaining minor units may be considered free electives and are included in the 90 unit total required for the AA Ph.D. degree.

Ph.D. students in Aeronautics and Astronautics must take 12 units of mathematics courses, with at least 6 of these units from courses with numbers over 200. The AA department and other engineering departments offer many courses that have sufficient mathematical content that they may be used to satisfy the mathematics requirement. See the list of mathematics courses under Related Courses tab above for suggestions. Others may be acceptable if approved by the adviser and the AA Student Services Office. University requirements for continuous registration apply to doctoral students for the duration of the degree.

Candidacy

Ph.D. students must complete the candidacy process and be admitted to candidacy by their second year of doctoral study. There are two requirements for admission to Ph.D. candidacy in Aeronautics and Astronautics: students must first pass the departmental qualifying exam and must then submit an application for candidacy. Detailed deadlines for the qualifying exam may be obtained from the AA Student Services Office. The candidacy form lists the courses the student will take to fulfill the requirements for the degree. The form must include the 90 non-MS units required for the Ph.D.; it should be signed by the adviser and submitted to the AA Student Services Office for the candidacy chairman's signature. AA has a department-specific candidacy form, which may be obtained in the AA Student Services Office. Candidacy is valid for five years; this term is not affected by leaves of absence.

Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department's Ph.D. qualifying exam. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. If the principal adviser is emeritus, there should be a non-emeritus co-adviser. Reading committees in Aeronautics and Astronautics often include faculty from another department. It is expected that at least two members of the AA faculty be on each reading committee. If the principal research adviser is not within the AA department, then the student's AA academic adviser should be one of those members. The initial committee, and any subsequent changes, must be approved by the department Chair.

Although all readers are usually members of the Stanford Academic Council, the department Chair may approve one non-Academic Council reader if the person brings unusual and necessary expertise to the dissertation research. Generally, this non-Academic Council reader will be a fourth reader, in addition to three Academic Council members.

University Oral and Dissertation

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four faculty examiners, plus a chairman). The examiners usually include the three members on the student's Ph.D. reading committee. The chairman must not be in the same department as the student or the adviser. Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the AA Student Services Office at least three weeks prior to the date of the oral for departmental review and approval. Students must be enrolled during the quarter when they take their University oral. If the oral takes place during the vacation time between quarters, the student must be enrolled in the prior quarter.

Ph.D. Minor in Aeronautics and Astronautics

A student who wishes to obtain a Ph.D. minor in Aeronautics and Astronautics should consult the department office for designation of a minor adviser. A minor in Aeronautics and Astronautics may be obtained by completing 20 units of graduate-level courses in the Department of Aeronautics and Astronautics, following a program (and performance) approved by the department's candidacy chair.

The student's Ph.D. reading committee and University oral committee must each include at least one faculty member from Aeronautics and Astronautics.

Emeriti: (Professors) Arthur E. Bryson, Robert H. Cannon, Richard Christensen*, Daniel B. DeBra*, Robert W. MacCormack, Bradford W. Parkinson*, J. David Powell, George S. Springer, Charles R. Steele, Stephen W. Tsai*, Walter G. Vincenti

Chair: Charbel Farhat

Professors: Brian J. Cantwell, Fu-Kuo Chang, Per Enge, Charbel Farhat, Sanjiva Lele, Stephen Rock

Research Professors: Antony Jameson, Ilan Kroo

Associate Professors: Juan Alonso, Sanjay Lall

Assistant Professors: Sigrid Close, Simone D'Amico, Mykel Kochenderfer, Marco Pavone, Debbie Senesky

Courtesy Professors: J. Christian Gerdes, Ronald K. Hanson, Lambertus Hesselink

Consulting Professors: G. Scott Hubbard

Consulting Assistant Professor: Andrew Barrows, Andrew Kalman, Steven Murray, Frank Van Diggelen

* Recalled to active duty.

Experimentation/Design Requirements Courses

The following courses satisfy the master's Experimentation/Design Requirements.

		Units
AA 236A	Spacecraft Design	3-5
AA 241X	Design, Construction, and Testing of Autonomous Aircraft	3
AA 284B	Propulsion System Design Laboratory	3
CS 225A	Experimental Robotics	3
CS 402L	Beyond Bits and Atoms - Lab	1-3
EE 133	Analog Communications Design Laboratory	3-4
EE 233	Analog Communications Design Laboratory	3-4
EE 234	Photonics Laboratory	3
EE 265	Digital Signal Processing Laboratory	3-4
EE 345	Optical Fiber Communication Laboratory	3
EE 410	Integrated Circuit Fabrication Laboratory	3-4
EE 412	Advanced Nanofabrication Laboratory	3
ENGR 206	Control System Design	3-4
ENGR 207A	Linear Control Systems I	3
ENGR 341	Micro/Nano Systems Design and Fabrication	3-5
MATSCI 160	Nanomaterials Laboratory	4
MATSCI 161	Nanocharacterization Laboratory	3-4
MATSCI 162	X-Ray Diffraction Laboratory	3-4
MATSCI 163	Mechanical Behavior Laboratory	3-4
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory	3-4
MATSCI 171	Nanocharacterization Laboratory	3-4
MATSCI 172	X-Ray Diffraction Laboratory	3-4
MATSCI 173	Mechanical Behavior Laboratory	3-4
MATSCI 322	Transmission Electron Microscopy Laboratory	3
ME 210	Introduction to Mechatronics	4
ME 218A	Smart Product Design Fundamentals	4-5
ME 218B	Smart Product Design Applications	4-5
ME 218C	Smart Product Design Practice	4-5
ME 218D	Smart Product Design: Projects	3-4
ME 220	Introduction to Sensors	3-4
ME 310A	Product-Based Engineering Design, Innovation, and Development	4
ME 310B	Product-Based Engineering Design, Innovation, and Development	4

ME 310C	Project-Based Engineering Design, Innovation, and Development	4
ME 324	Precision Engineering	4
ME 348	Experimental Stress Analysis	3
ME 354	Experimental Methods in Fluid Mechanics	4
ME 367	Optical Diagnostics and Spectroscopy Laboratory	4
ME 385	Tissue Engineering Lab	1-2

Mathematics Courses

Each Aero/Astro degree has a mathematics requirement, for which courses on the following list are pre-approved. (Other advanced courses may also be acceptable.) Students should consult with their advisers in selecting the most appropriate classes for their field. M.S. candidates select 2 courses; they may also use the mathematics courses listed as common choices in the master's degree course requirements. Engineers select 3 courses; Ph.D. candidates select 4 courses, with at least 6 units from courses numbered above 200.

		Units
AA 214A	Introduction to Numerical Methods for Engineering	3
AA 214B	Numerical Methods for Compressible Flows	3
AA 214C	Numerical Computation of Viscous Flow	3

Bioengineering

Mail Code: 94305-4245

Student Services Phone: Graduate students: (650) 498-2408;
Undergraduates: (650) 724-5314

Web Site: <http://bioengineering.stanford.edu>

Courses offered by the Department of Bioengineering are listed under the subject code BIOE on the *Stanford Bulletin's* ExploreCourses web site.

Bioengineering is jointly supported by the School of Engineering and the School of Medicine. The facilities and personnel of the Department of Bioengineering are housed in the Shriram Center, James H. Clark Center, the William F. Durand Building for Space Engineering and Science, the William M. Keck Science Building, the Jerry Yang and Akiko Yamazaki Environment and Energy Building, and the Richard M. Lucas Center for Magnetic Resonance Spectroscopy and Imaging. The departmental headquarters is in the Shriram Center for Bioengineering and Chemical Engineering.

Courses in the teaching program lead to the degrees of Bachelor of Science in Engineering (Bioengineering), Master of Science and Doctor of Philosophy. The department collaborates in research and teaching programs with faculty members in Chemical Engineering, Mechanical Engineering, Electrical Engineering, and departments in the School of Medicine. Quantitative biology is the core science base of the department. The research and educational thrusts are in biomedical computation, biomedical imaging, biomedical devices, regenerative medicine, and cell/molecular engineering. The clinical dimension of the department includes cardiovascular medicine, neuroscience, orthopedics, cancer care, neurology, and environment.

Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering (BioE) leading to the B.S. degree in Engineering. An undergraduate major in Biomechanical Engineering and an undergraduate major in Biomedical Computation, both of which lead to the B.S. degree in Engineering, are available through the School of Engineering. For further information, see the *Handbook for Undergraduate Engineering Programs* at <http://ughb.stanford.edu>.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work with specialization in an area of the field, including biomedical computation, regenerative medicine and tissue engineering, molecular and cell bioengineering, biomedical imaging, and biomedical devices.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course

work and guided research, the program prepares students to make original contributions in Bioengineering and related fields.

Graduate Programs in Bioengineering

The University's requirements for the M.S. and Ph.D. degrees are outlined in the "Graduate Degrees (p. 43)" section of this bulletin.

Admission

Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Students entering the program are assessed by the examination of their undergraduate transcripts and research experiences. Specifically, the department requires that students have completed mathematics through multivariable calculus and differential equations, completed a series of undergraduate biology courses and completed physics, chemistry, and computer sciences courses required of all undergraduate majors in engineering.

Qualified applicants are encouraged to apply for predoctoral national competitive fellowships, especially those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for information and applications.

The deadline for receiving applications is December 2, 2014.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar's Office, <http://gradadmissions.stanford.edu>.

Bachelor of Science in Engineering (Bioengineering)

The department offers an undergraduate major in Bioengineering (BioE) leading to the B.S. degree in Engineering. For additional information, see the *Handbook for Undergraduate Engineering Programs* at <http://ughb.stanford.edu>.

Bioengineering (BioE)

Completion of the undergraduate program in Bioengineering leads to the conferral of the Bachelor of Science in Engineering. The subplan "Bioengineering" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BioE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to BioE and computer programming. A series of core BioE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) program (<http://bioengineering.stanford.edu/education/REU.html>). BioE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

Requirements

Mathematics ¹

28 units minimum required, see Basic Requirement 1)

MATH 41 Calculus 10
& MATH 42 and Calculus (or AP Calculus)

Select one of the following:

CME 100 Vector Calculus for Engineers (Recommended) 5
or MATH 51 Linear Algebra and Differential Calculus of Several Variables

Select one of the following:

CME 102 Ordinary Differential Equations for Engineers (Recommended) 5

or MATH 53 Ordinary Differential Equations with Linear Algebra

Select one of the following:

CME 104 Linear Algebra and Partial Differential Equations for Engineers (Recommended) 5

or MATH 52 Integral Calculus of Several Variables

CME 106 Introduction to Probability and Statistics for Engineers (Recommended) 3-5

or STATS 110 Statistical Methods in Engineering and the Physical Sciences

or STATS 141 Biostatistics

Science ²

28 units minimum:

CHEM 31X Chemical Principles Accelerated 5-10

or CHEM 31A Chemical Principles I
& CHEM 31B and Chemical Principles II

CHEM 33 Structure and Reactivity 5

BIO 41 Genetics, Biochemistry, and Molecular Biology 5

BIO 42 Cell Biology and Animal Physiology 5

PHYSICS 41 Mechanics 4

PHYSICS 43 Electricity and Magnetism 4

Technology in Society

One course required; see Basic Requirement 4

BIOE 131 Ethics in Bioengineering ^(WIM) 3

Engineering Fundamentals

ENGR 70A Programming Methodology (same as CS 106A) 5

ENGR 80 Introduction to Bioengineering 4

Fundamentals Elective; see UGHB Fig. 3-4 for approved course list; may not use ENGR 70B or ENGR 70X 3-5

Bioengineering Core

BIOE 41 Physical Biology of Macromolecules 4

BIOE 42 Physical Biology of Cells 4

BIOE 44 Fundamentals for Engineering Biology Lab 4

BIOE 51 Anatomy for Bioengineers 4

BIOE 101 Systems Biology 4

BIOE 103 Systems Physiology and Design 4

BIOE 123 Optics and Devices Lab 4

BIOE 141A Senior Capstone Design I 4

BIOE 141B Senior Capstone Design II 4

Bioengineering Depth Electives

Four courses, minimum 12 units: 12

BIOE 115 Computational Modeling of Microbial Communities

BIOE 201C Diagnostic Devices Lab

Units

BIOE 211 Biophysics of Multi-cellular Systems and Amorphous Computing

BIOE 212 Introduction to Biomedical Informatics Research Methodology

BIOE 214 Representations and Algorithms for Computational Molecular Biology

BIOE 220 Introduction to Imaging and Image-based Human Anatomy

BIOE 221 Physics and Engineering of Radionuclide Imaging

BIOE 222 Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects

BIOE 223 Physics and Engineering of X-Ray Computed Tomography

BIOE 224 Probes and Applications for Multi-modality Molecular Imaging of Living Subjects

BIOE 227 Functional MRI Methods

BIOE 231 Protein Engineering

BIOE 244 Advanced Frameworks and Approaches for Engineering Integrated Genetic Systems

BIOE 260 Tissue Engineering

BIOE 281 Biomechanics of Movement

BIOE 287 Introduction to Physiology and Biomechanics of Hearing

BIOE 291 Principles and Practice of Optogenetics for Optical Control of Biological Tissues

Total Units

119-128

¹ It is strongly recommended that CME 100 Vector Calculus for Engineers, CME 102 Ordinary Differential Equations for Engineers, and CME 104 Linear Algebra and Partial Differential Equations for Engineers) be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables, MATH 52 Integral Calculus of Several Variables, and MATH 53 Ordinary Differential Equations with Linear Algebra. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. If you are taking the MATH 50 series, it is strongly recommended to take MATH 51M Introduction to MATLAB or CME 192 Introduction to MATLAB.

² Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31X Chemical Principles Accelerated or ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology) and calculus-based Physics, with two quarters of course work in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters. Premeds should take Chemistry, not ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Bioengineering with Honors (ENGR-BSH, BIOE). This program provides the opportunity for qualified BioE majors to conduct independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

1. Declare the honors program in Axxess (ENGR-BSH, Subplan: Bioengineering).
2. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
3. Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
4. Submit a completed thesis draft to the honors adviser and second reader by the first week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.
5. Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the department's undergraduate site (<http://bioengineering.stanford.edu/education/bioe-honors-instructions-v.2.pdf>).

Coterminal B.S./M.S. Program in Bioengineering

This option is available to outstanding Stanford undergraduates who wish to work simultaneously toward a B.S. in another field and an M.S. in Bioengineering. The degrees may be granted simultaneously or at the conclusion of different quarters, though the bachelor's degree cannot be awarded after the master's degree has been granted. The University minimum requirements for the coterminal bachelor's/master's program are 180 units for the bachelor's degree plus 45 unduplicated units for the master's degree. Students may apply for the coterminal B.S. and M.S. program after 120 undergraduate units have been completed, and they must be accepted into our program one quarter before receiving the B.S. degree. Students should apply directly to the Bioengineering Student Service Office by November 3, 2014. Students interested in the coterminal degree must take the Graduate Record Examination (GRE) (<http://www.gre.org>). Prospective applicants should see the department's web site for application form, instructions, and supporting documents (<http://bioengineering.stanford.edu/education/coterminal.html>).

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted upon by the graduate admissions committee of the department. Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Typically, a GPA of at least 3.5 in engineering, science, and math is expected.

Master of Science in Bioengineering

The Master of Science in Bioengineering requires 45 units of course work. The curriculum consists of core bioengineering courses, technical electives, seminars and unrestricted electives. Core courses focus on quantitative biology and biological systems analysis. Approved technical electives are chosen by the student in consultation with his/her graduate adviser, and can be selected from graduate course offerings in mathematics, statistics,

engineering, physical sciences, life sciences, and medicine. Seminars highlight emerging research in bioengineering and provide training in research ethics. Unrestricted electives can be freely chosen by the student in association with his/her adviser.

Requirements

The department's requirements for the M.S. in Bioengineering are:

1. Core Bioengineering courses (10-11 units)

The following courses are required:

		Units
BIOE 300A	Molecular and Cellular Bioengineering	3
BIOE 300B	Physiology and Tissue Engineering	3
Select two of the following:		4-5
BIOE 301A	Molecular and Cellular Engineering Lab	
BIOE 301B	Clinical Needs and Technology	
BIOE 301C	Diagnostic Devices Lab	
Total Units		10-11

These courses, together with the approved technical electives, should form a cohesive course of study that provides depth and breadth.

2. Approved Technical Electives (26 units)

These units must be selected from graduate courses in mathematics, statistics, engineering, physical science, life science, and medicine. They should be chosen in concert with the bioengineering courses to provide a cohesive degree program in a bioengineering focus area. Students are required to take at least one course in some area of device or instrumentation. Up to 9 units of directed study and research may be used as approved electives.

3. Seminars (4 units)

The seminar units should be fulfilled through:

		Units
BIOE 393	Bioengineering Departmental Research Colloquium (Students enroll each quarter for 1 unit)	3
MED 255	The Responsible Conduct of Research	1
Total Units		4

Other relevant seminar units may also be used with the approval of the faculty adviser. One of the seminar units must be MED 255 The Responsible Conduct of Research.

4. Unrestricted Electives (6 units).

Students are assigned an initial faculty adviser to assist them in designing a plan of study that creates a cohesive degree program with a concentration in a particular bioengineering focus area. These focus areas include, but are not limited to: Biomedical Computation, Regenerative Medicine/Tissue Engineering, Molecular and Cell Bioengineering, Biomedical Imaging, and Biomedical Devices.

To ensure that an appropriate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level must:

1. submit an adviser-approved Program Proposal for a Master's Degree form to the student services office during the first month of the first quarter of enrollment
2. obtain approval from the M.S. adviser and the Chair of Graduate Studies for any subsequent program change or changes.

It is expected that the requirements for the M.S. in Bioengineering can be completed within approximately one year. There is no thesis requirement for the M.S.

Due to the interdisciplinary nature of Bioengineering, a number of courses are offered directly through the Bioengineering Department but many are available through other departments. See respective ExploreCourses for course descriptions.

Doctor of Philosophy in Bioengineering

A student studying for the Ph.D. degree must complete a master's degree (45 units) comparable to that of the Stanford M.S. degree in Bioengineering. Up to 45 units of master's degree residency units may be counted towards the degree. The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Students admitted to the Ph.D. program with an M.S. degree must complete at least 90 units of work at Stanford. The maximum number of transfer units is 45.

On the basis of the research interests expressed in their application, students are assigned an initial faculty adviser who assists them in choosing courses and identifying research opportunities. The department does not require formal lab rotations, but students are encouraged to explore research activities in two or three labs during their first academic year.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of bioengineering fundamentals and a potential for research by passing a qualifying oral examination.

Typically, the exam is taken shortly after the student earns a master's degree. The student is expected to have a nominal graduate Stanford GPA of 3.25 to be eligible for the exam. Once the student's faculty sponsor has agreed that the exam is to take place, the student must submit an application folder containing items including a curriculum vitae, research project abstract, and preliminary dissertation proposal to the student services office. Information about the exam may be obtained from the student services office.

In addition to the course requirements of the M.S. degree, doctoral candidates must complete a minimum of 15 additional units of approved formal course work (excluding research, directed study, and seminars).

Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department's Ph.D. qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Bioengineering may include faculty from another department. It is expected that at least one member of the Bioengineering faculty be on each reading committee. The initial committee, and any subsequent changes, must be officially approved by the department Chair.

University Oral and Dissertation

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University

oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the department student services office at least three weeks prior to the date of the oral for departmental review and approval.

Ph.D. Minor in Bioengineering

Doctoral students pursuing a Ph.D. degree in a major other than Bioengineering may apply for the Ph.D. minor in Bioengineering. A minor is not a requirement for any degree, but is available when agreed upon by the student and the major and minor department.

Application forms, including the University's general requirements, can be found at <http://registrar.stanford.edu/shared/forms.htm>.

A student desiring a Ph.D. minor in Bioengineering must have a minor program advisor who is a regular Bioengineering faculty member. This advisor must be a member of the student's reading committee for the doctoral dissertation, and the entire reading committee must meet at least one year prior to the date of the student's dissertation defense.

The Ph.D. minor program must include at least 20 units of course work in Stanford Bioengineering or Bioengineering cognate courses at or above the 200 level. Of these 20 units, no more than 10 can be in cognate courses. All courses listed to fulfill the 20-unit requirement must be taken for a letter grade and the GPA must be at least 3.25. Courses used for a minor may not be used to also meet the requirements for a master's degree.

M.D./Ph.D. Dual Degree Program

Students interested in a career oriented towards bioengineering and medicine can pursue the combined M.D./Ph.D. degree program. Stanford has two ways to do an M.D./Ph.D. U.S. citizens and permanent residents can apply to the Medical Scientist Training Program and can be accepted with funding from both M.D. and Ph.D. programs for stipend and tuition. They can then select a bioengineering laboratory for their Ph.D. Students not admitted to the Medical Scientist Training Program must apply to be admitted separately to the M.D. program and the Ph.D. program of their choice.

The Ph.D. is administered by the Department of Bioengineering. To be formally admitted as a Ph.D. degree candidate in this combined degree program, the student must apply through normal departmental channels and must have earned or have plans to earn an M.S. in bioengineering or other engineering discipline at Stanford or another university. The M.S. requires 45 units of course work which consists of core bioengineering courses, technical electives, seminars, and 6 unrestricted units. Students must also pass the Department of Bioengineering Ph.D. qualifying examination.

For students fulfilling the full M.D. requirements who earned their master's level engineering degree at Stanford, the Department of Bioengineering waives the normal departmental requirement of 15 units applied towards the Ph.D. degree beyond the master's degree level through formal course work. Consistent with the University Ph.D. requirements, the department accepts 15 units comprised of courses, research, or seminars approved by the student's academic adviser and the department chair. Students not completing their M.S. engineering degree at Stanford are required to take 15 units of formal course work in engineering-related areas as determined by their academic adviser.

Joint Degree Programs in Bioengineering and the School of Law

The School of Law and the Department of Bioengineering offer joint programs leading to either a J.D. degree combined with an M.S. degree in Bioengineering or to a J.D. degree combined with a Ph.D. in Bioengineering.

The J.D./M.S. and J.D./Ph.D. degree programs are designed for students who wish to prepare themselves intensively for careers in areas relating to both law and bioengineering. Students interested in either joint degree program must apply and gain entrance separately to the School of Law and the Department of Bioengineering and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Bioengineering Department may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Department of Bioengineering. Faculty advisers from each academic unit will participate in the planning and supervising of the student's joint program. Students must be enrolled full time in the Law School for the first year of law school, and, at some point during the joint program, may be required to devote one or more quarters largely or exclusively to studies in the Bioengineering program regardless of whether enrollment at that time is in the Law School or in the Department of Bioengineering. At all other times, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in the *Stanford Bulletin* or elsewhere.

The Law School shall approve courses from the Bioengineering Department that may count toward the J.D. degree, and the Bioengineering Department shall approve courses from the Law School that may count toward the M.S. or Ph.D. degree in Bioengineering. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in Bioengineering.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the law degree, the law school credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis, but not below zero. The maximum number of law school credits that may be counted toward the M.S. or Ph.D. in Bioengineering is the greater of: (i) 15 units; or (ii) the maximum number of units from courses outside of the department that M.S. or Ph.D. candidates in Bioengineering are permitted to count toward the applicable degree under general departmental guidelines or in the case of a particular student's individual program. Tuition and financial aid arrangements will normally be through the school in which the student is then enrolled.

Chair: Norbert J. Pelc

Professors: Russ B. Altman, Annelise E. Barron, Kwabena Boahen, Dennis R. Carter, Karl Deisseroth, Scott L. Delp, Norbert J. Pelc, Stephen R. Quake, Matthew Scott, James R. Swartz, Paul Yock

Associate Professors: Jennifer R. Cochran, Markus Willard Covert, Andrew Endy, Jan T. Liphardt, Christina D. Smolke

Assistant Professors: Zev David Bryant, David B. Camarillo, Kerwyn C. Huang, Jin Hyung Lee, Michael Lin, Manu Prakash, Stanley Qi (effective October 2014), Ingmar Riedel-Kruse, Bo Wang (effective May 2015), Fan Yang

Chemical Engineering

Courses offered by the Department of Chemical Engineering are listed under the subject code CHEMENG on the *Stanford Bulletin's* ExploreCourses web site.

Research investigations are currently being carried out in the following fields: applied statistical mechanics, biocatalysis, bioengineering, biophysics, colloid science, computational materials science, electronic materials, hydrodynamic stability, kinetics and catalysis, Newtonian and non-Newtonian fluid mechanics, polymer science, renewable energy, rheo-optics of polymeric systems, and surface and interface science. Additional information may be found at <http://cheme.stanford.edu>.

The Department of Chemical Engineering offers opportunities for both undergraduates and graduate students to pursue course work and research in energy sciences and technology, which include the chemical, physical, mathematical, and engineering sciences. Courses include 25E, 35N, 140/240, 142/242, 162/262, 432, 444 with some 400 level courses being offered only in alternate years.

In addition, both undergraduates and graduate students can pursue work in interdisciplinary biosciences, which include the chemical, biological, physical, mathematical, and engineering sciences. Courses include 25B, 150, 174/274, 181/281, 183/283, 185B, 355, 420, 450, 454 with some advanced graduate courses offered only in alternate years. Students are encouraged to review course offerings in all departments of the School of Engineering and to seek academic advising with individual chemical

engineering faculty. Students wishing assistance should talk with student services staff in the department.

Further information about the department also may be found at <http://cheme.stanford.edu>. Undergraduates considering majoring in Chemical Engineering are encouraged to talk with faculty and to meet with student services' staff in room 129. Students interested in pursuing advanced work in chemical engineering, including coterminal degrees, should contact the student services manager. Admission to an advanced degree program for an active Stanford graduate student is by approval of a Graduate Authorization Petition. All other interested applicants should go to <http://studentaffairs.stanford.edu/gradadmissions> for general and departmental information about the requirements and processes for applying for admission to a graduate degree program.

Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government or for advanced study.

Learning Outcomes (Undergraduate)

Learning outcomes are used in evaluating students and the undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the following:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. a recognition of the need for, and an ability to engage in life-long learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. the background for admission to engineering or other professional graduate programs.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through advanced lecture course work in the fundamentals of the field, including microhydrodynamics, molecular thermodynamics, kinetics, spectroscopy, applied mathematics, and biochemical engineering, in addition to the student's area of specialization. All students must master the fundamental chemical, physical, and biological concepts that govern molecular behavior.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Chemical Engineering and related fields.

Graduate Programs in Chemical Engineering

The University's requirements, including residency requirements, for the M.S., Engineer, and Ph.D. degrees are summarized in the "Graduate Degrees" section of this bulletin.

Current research and teaching activities cover a number of advanced topics in chemical engineering, including applied statistical mechanics, biocatalysis, biochemical engineering, bioengineering, biophysics, computational materials science, colloid science, dynamics of complex fluids, energy conversion, functional genomics, hydrodynamic stability, kinetics and catalysis, microrheology, molecular assemblies, nanoscience and technology, Newtonian and non-Newtonian fluid mechanics, polymer physics, protein biotechnology, renewable fuels, semiconductor processing, soft materials science, solar utilization, surface and interface science, and transport mechanics.

Fellowships and Assistantships

Qualified predoctoral applicants are encouraged to apply for nationally competitive fellowships, for example, those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for application information and advice. In the absence of other awards, incoming Ph.D. students normally are awarded departmental fellowships. Matriculated Ph.D. students are supported primarily by fellowship awards and assistantship research or teaching appointments. All students are encouraged to apply for external, competitive fellowships and may obtain information about various awarding agencies from faculty advisers and student services. Assistantships are paid positions for graduate students that, in addition to a salary, provide the benefit of a tuition allocation. Individual faculty members appoint students to research assistantships; the department chair appoints doctoral students to teaching assistantships. Contact departmental student services for additional information.

Bachelor of Science in Chemical Engineering

The Chemical Engineering B.S. program requires basic courses in biology, chemistry, engineering, mathematics, and physics. The depth sequence of courses required for the major in chemical engineering provides training in applied chemical kinetics, biochemical engineering, electronic materials, engineering thermodynamics, plant design, polymers, process analysis and control, separation processes, and transport phenomena. Undergraduates who are considering and/or wish to major in chemical engineering should talk with departmental student services as early as during freshman orientation if feasible and consult the curriculum outlined in the "Undergraduate Program in Chemical Engineering" section of this bulletin. Courses taken to fulfill the requirements for the major (courses in

mathematics; science; technology and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if this option is offered.

Representative sequences of courses leading to a B.S. in Chemical Engineering, in both flow chart and 4-year, quarter-by-quarter formats, can be found in the *Handbook for Undergraduate Engineering Programs*, available at <http://ughb.stanford.edu>. These are explanatory examples, with each sequence starting at a different level and demonstrating how a student, based on his or her pre-college preparation, can complete the major in four years. These typical course schedules are available as well from departmental student services and chemical engineering faculty advisers for undergraduates. It is recommended that students discuss their prospective programs with the chemical engineering faculty advisers, particularly if they are transferring from another major such as Biology, Chemistry, Physics, or another Engineering major. With advance planning, students can usually arrange to attend one of the overseas campuses.

Students interested in a minor in Chemical Engineering should consult the requirements for a "Minor in Chemical Engineering" section of this bulletin.

Chemical Engineering (CHE)

Completion of the undergraduate program in Chemical Engineering leads to the conferral of the Bachelor of Science in Chemical Engineering.

Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students' understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program's core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

Requirements*

	Units
Mathematics ¹	
MATH 41 Calculus	5
MATH 42 Calculus	5
Select one of the following:	5-10
CME 100 Vector Calculus for Engineers	
MATH 51 Linear Algebra and Differential Calculus of Several & MATH 52 Variables and Integral Calculus of Several Variables	
Select one of the following:	5
CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra	
Select one of the following:	4-5
CME 104 Linear Algebra and Partial Differential Equations for Engineers or CME 106 Introduction to Probability and Statistics for Engineers	
Science ¹	
CHEM 31X Chemical Principles Accelerated	5
CHEM 33 Structure and Reactivity	5

CHEM 35 Synthetic and Physical Organic Chemistry	5
CHEM 36 Organic Chemistry Laboratory I	3
PHYSICS 41 Mechanics	4
PHYSICS 43 Electricity and Magnetism	4
CHEM 131 Organic Polyfunctional Compounds	3
Technology in Society	
One course required, see Basic Requirement 4	3-5
Engineering Fundamentals	
Three courses minimum; see Basic Requirement 3	
ENGR/ Introduction to Chemical Engineering CHEMENG 20	3
Fundamentals Elective from another School of Engineering department	3-5
See the UGHB for a list of courses.	
Select one of the following:	3
ENGR 25B Biotechnology (same as CHEMENG 25B)	
ENGR 25E Energy: Chemical Transformations for Production, Storage, and Use (same as CHEMENG 25E)	
Chemical Engineering Depth	
Minimum 68 Engineering Science and Design units; see Basic Requirement 5	
CHEMENG 10 The Chemical Engineering Profession	1
CHEMENG 100 Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110 Equilibrium Thermodynamics	3
CHEMENG 120A Fluid Mechanics	4
CHEMENG 120B Energy and Mass Transport	4
CHEMENG 130 Separation Processes	3
CHEMENG 150 Biochemical Engineering	3
CHEMENG 170 Kinetics and Reactor Design	3
CHEMENG 180 Chemical Engineering Plant Design	4
CHEMENG 181 Biochemistry I	3
CHEMENG 185A Chemical Engineering Laboratory A (WIM)	4
CHEMENG 185B Chemical Engineering Laboratory B	4
CHEM 171 Physical Chemistry I	3
CHEM 173 Physical Chemistry II	3
CHEM 175 Physical Chemistry III	3
Select four of the following: ^{2,3}	12
CHEMENG 140 Micro and Nanoscale Fabrication Engineering	
CHEMENG 142 Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160 Polymer Science and Engineering	
CHEMENG 162 Polymers for Clean Energy and Water	
CHEMENG 174 Environmental Microbiology I	
CHEMENG 183 Biochemistry II	
CHEMENG 196 Creating New Ventures in Engineering and Science-based Industries	
Total Units	125-135

* For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- Unit count is higher if program includes one of more of the following: MATH 51 and MATH 52 in lieu of CME 100; or CHEM 31A and CHEM 31B in lieu of CHEM 31X.
- Any two acceptable except combining 160 and 162 or 174 and 183.
- The student may petition to substitute one other science and engineering 3 unit lecture course. See UGHB (<http://ughb.stanford.edu>) for additional details.

Honors Program

The Department of Chemical Engineering offers a program leading to the degree of Bachelor of Science in Chemical Engineering with Honors. Qualified undergraduate majors conduct independent study and research at an advanced level with faculty mentors, graduate students, and fellow undergraduates. This three quarter sequential program requires concurrent participation each quarter in the CHEMENG 191H Undergraduate Honors Seminar; completion of a faculty-approved thesis; and participation in the Chemical Engineering Honors Poster Session held annually during the Mason Lecture Series Spring Quarter. The last requirement may also be fulfilled through an alternative, public, oral presentation with the approval of the department chair. A research proposal/application must be submitted at least five quarters prior to graduation with work to begin at a minimum of four quarters prior to graduation.

Admission to the honors program is by application and submission of a research proposal and is subject to approvals by faculty advisers, sponsors, and the chair of the department. Declared Chemical Engineering majors with a cumulative grade point average (GPA) of 3.5 or higher are encouraged to apply. Students must submit their applications no later than the first week of March Winter Quarter of their junior year, assuming a June degree conferral the following year, e.g. the primary 2014-2015 deadline is March 4, 2015. An application includes a Stanford transcript in addition to the research proposal, approved by both the student's research thesis adviser, a faculty reader, and, if required, a chemical engineering faculty sponsor. The research adviser or the reader or, alternatively, a faculty sponsor, must be a faculty member in the Department of Chemical Engineering. Students must start their research no later than Spring Quarter their junior year and are encouraged to consider incorporating research opportunities such as those sponsored by Undergraduate Academic Life into their honors research proposal; see http://ual.stanford.edu/OO/research_opps/Grants http://ual.stanford.edu/OO/research_opps/Grants. See departmental student services staff in Shriram Center room 129, for more information about the application process, a proposal template, and other assistance.

In order to receive departmental honors, students admitted to the honors program must:

- Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
- Complete at least three quarters of research with a minimum of 9 units of CHEMENG 190H Undergraduate Honors Research in Chemical Engineering for a letter grade. All quarters must focus on the same topic. The same faculty adviser and faculty reader should be maintained throughout if feasible.
- Enroll in CHEMENG 191H Undergraduate Honors Seminar, concurrently with each quarter of enrollment in CHEMENG 190H Undergraduate Honors Research in Chemical Engineering.
- Participate with a poster and oral presentation of thesis work at the Chemical Engineering Honors Poster Session held during the Mason Lectures week, Spring Quarter, or, at the Undergraduate Program Committee's discretion, at a comparable public event. Submit at the same time to student services one copy of the poster in electronic format.
- Submit final drafts of a thesis simultaneously to the adviser and the reader and, if appropriate, to the Chemical Engineering faculty sponsor,

no later than April 6, 2015, or the first school day of the second week of the quarter in which the degree is to be conferred.

- Complete all work and thesis revisions and obtain indicated faculty approvals on the Certificate of Final Reading of Thesis forms by the end of the last full week of April (4/24/2015), or the first month of the graduation quarter.
- Submit to departmental student services five (5) final copies of the honors thesis, as approved by the appropriate faculty. Include in each thesis an original, completed, faculty signature sheet immediately following the title page. The 2014-15 deadline is April 30, 2015.
- Submit to student services one copy of the honors thesis in electronic format at the same time as the final copies of the thesis, or no later than April 30, 2015.

Upon faculty approval, departmental student services to submit one copy of each honors thesis to Student Affairs, School of Engineering.

Chemical Engineering (CHE) Minor

The following core courses fulfill the minor requirements:

		Units
ENGR/ CHEMENG 20	Introduction to Chemical Engineering	3
CHEMENG 100	Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110	Equilibrium Thermodynamics	3
CHEMENG 120A	Fluid Mechanics	4
CHEMENG 120B	Energy and Mass Transport	4
CHEMENG 170	Kinetics and Reactor Design	3
CHEMENG 185A	Chemical Engineering Laboratory A	4
CHEM 171	Physical Chemistry I	3
CHEMENG 180	Chemical Engineering Plant Design	4
Select one of the following:		3
CHEMENG 140	Micro and Nanoscale Fabrication Engineering	
CHEMENG 142	Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations	
CHEMENG 160	Polymer Science and Engineering	
CHEMENG 162	Polymers for Clean Energy and Water	
CHEMENG 174	Environmental Microbiology I	
CHEMENG 181	Biochemistry I	
Total Units		34

Master of Science in Chemical Engineering

A range of M.S. programs comprising appropriate course work is available to accommodate students wishing to obtain further academic preparation before pursuing a professional chemical engineering career. This degree is lecture course based; there are no research or thesis requirements. It is a terminal M.S. degree, i.e. this degree is not a prerequisite for nor does it lead to admission to the department's Ph.D. program. For conferral of a master's degree in chemical engineering the following departmental requirements must be met.

Coterminal Bachelor's and Master's Degrees in Chemical Engineering

Stanford undergraduates with strong academic records may apply to study for a master's degree while at the same time completing their bachelor's degree(s). Interested students should discuss their educational goals with their faculty advisers and talk with departmental graduate student services about the application requirements before submitting an application. Students, who have completed at least 120 units toward an undergraduate degree and complete their applications by the seventh week of a quarter, may be admitted to the Chemical Engineering M.S. program the following quarter.

University requirements for the coterminal M.S. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Unit and Course Requirements for the Master's Degree

Students terminating their graduate work with the M.S. degree in Chemical Engineering must develop a graduate-level, thematic M.S. program consisting of a minimum of 45 completed units of academic work that includes:

1. Four (4) Chemical Engineering core graduate lecture courses selected from the CHEMENG 300 series
2. Three (3) units of CHEMENG 699 Colloquium
3. An additional 30 units, selected from graduate-level science or engineering lecture courses (3 units or more) in any appropriate department and, by petition to the Chair of the Department of Chemical Engineering, from upper-division undergraduate lecture courses in science and engineering

Alternatively, up to 6 units of research may be used in lieu of up to 6 units of the additional 30 lecture units, to partially satisfy the 45 unit minimum requirement. Credit toward the required minimum of 45 completed units for the M.S. degree is not given for CHEMENG 296 nor for similar courses in other departments or for the Chemical Engineering special topics courses numbered in the 500 series.

To ensure that an appropriate Chemical Engineering graduate program is pursued by each M.S. candidate, students who first matriculate at Stanford at the graduate level must do the following, during the first quarter no later than the seventh week:

1. Complete a Program Proposal for a Master's Degree form, that is approved by the M.S. adviser
2. Submit this petition to departmental student services, for review by the graduate curriculum committee, and
3. Obtain approval for any subsequent program change or changes from the M.S. adviser and the graduate committee.

Stanford undergraduates admitted to the coterminal master's program must:

1. Submit an adviser-approved Program Proposal for a Master's Degree (a graduate degree progress form), either during their second quarter of graduate standing or upon the completion of 9 units of graduate work (whichever occurs first), and
2. Document with student services their M.S. adviser's review and approval of their graduate program when they have accrued 30 units toward the M.S. degree in Chemical Engineering.

Each M.S. candidate must obtain approvals for the final M.S. program no later than the seventh week of the quarter preceding the quarter of degree conferral, in order to permit amendment of the final quarter's study list if the faculty deem this necessary. Students with questions should contact departmental graduate student services.

Minimum Grade Requirement

Any course used to satisfy the 45-unit minimum for the Master of Science degree must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

Research Experience

Students in the M.S. program wishing to obtain research experience should talk with departmental student services and work with the M.S. faculty adviser on the choice of research adviser as early as feasible and in advance of the anticipated quarter(s) of research. Once arrangements are mutually agreed upon, including the number of units, students enroll in the appropriate section of CHEMENG 600 Graduate Research in Chemical Engineering. A written report describing the results of the research undertaken must be submitted to and approved by the research adviser. Research units may not be substituted for any of the required four 300-level core lecture courses.

Engineer in Chemical Engineering

The degree of Engineer is awarded after the completion of a minimum of 90 units of graduate work beyond the B.S. degree and the satisfactory completion of all University requirements plus the following departmental requirements. Application to this program is open only to active chemical engineering M.S. or Ph.D. candidates. This degree is not a prerequisite for the Ph.D. program.

Unit and Course Requirements

A minimum of 90 total units (including research), within which 45 units consisting of 42 lecture units and 3 colloquium units are required, including:

		Units
CHEMENG 300	Applied Mathematics in the Chemical and Biological Sciences	3
CHEMENG 310	Microhydrodynamics	3
CHEMENG 320	Chemical Kinetics and Reaction Engineering	3
CHEMENG 340	Molecular Thermodynamics	3
CHEMENG 345	Fundamentals and Applications of Spectroscopy	3
CHEMENG 355	Advanced Biochemical Engineering	3
(2) 3 units of:		
CHEMENG 699	Colloquium	1

The remaining lecture courses, for total at least 45 completed units, may be chosen from graduate level science and engineering courses according to the guidelines given in the Master of Science section and with the consent of the graduate curriculum committee chair and the department chair. In fulfilling the required 45-unit requirement for lecture course units, the course work may not include chemical engineering's 500 level seminar courses or similar 1-2 unit courses in other departments.

Students seeking the Engineer degree may petition to add a M.S. program and apply for the M.S. degree once the requirements for that degree have

been fulfilled (see General Requirements in the "Graduate Degrees" section of this bulletin and Chemical Engineering's "Master of Science" section).

Minimum Grade Requirement

Any course intended to satisfy the degree requirements must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

Reading Committee Requirement

All candidates are required to have an initial meeting with their reading committees, consisting of two members of the Chemical Engineering faculty, by the end of their ninth quarter. In addition, faculty strongly encourage degree candidates to hold meetings on a more frequent basis to help focus and guide the thesis project. It is each student's responsibility to schedule these meetings and to assist in the keeping of accurate degree progress records by informing student services of meeting dates in a timely manner.

Thesis Requirement

The thesis must represent a substantial piece of research equivalent to nine months of full-time effort and must be approved by the student's reading committee.

Qualification for the Ph.D. Program by Students Ready to Receive the Degree of Engineer

After completing the requirements for the Engineer degree, a student may request to be examined on the research work completed for that degree, for the purpose of qualifying for admission to Ph.D. candidacy. If the request is granted, the student's thesis must be approved by the reading committee and available in its final form for inspection by the entire faculty at least two weeks prior to the scheduled date of said examination.

Doctor of Philosophy in Chemical Engineering

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements and the following departmental requirements. Completion of a M.S. degree is not a prerequisite for beginning, pursuing, or completing doctoral work.

Unit and Course Requirements

A minimum of 135 completed units is required, including a minimum of 45 units, consisting of 42 lecture units and 3 colloquium units. The 45-unit component includes 42 units of lecture courses and 3 units of 699. CHEMENG 699 should be taken each quarter; its units count towards the required 135 units. The research units for CHEMENG 399 are included in the 135 total, but may not be counted toward the 45 unit requirement. The following courses are required:

CHEMENG 300 Applied Mathematics in the Chemical and Biological Sciences

CHEMENG 310	Microhydrodynamics	3
CHEMENG 320	Chemical Kinetics and Reaction Engineering	3
CHEMENG 340	Molecular Thermodynamics	3
CHEMENG 345	Fundamentals and Applications of Spectroscopy	3
CHEMENG 355	Advanced Biochemical Engineering	3
CHEMENG 399	Graduate Research Rotation in Chemical Engineering	1
CHEMENG 699	Colloquium	1

Plus two courses at the 400 course level; in 2014-15 the following are available:

CHEMENG 432	Electrochemical Energy Conversion	3
CHEMENG 450	Advances in Biotechnology	3
CHEMENG 456	Microbial Bioenergy Systems	3
CHEMENG 464	Polymer Chemistry	3
CHEMENG 466	Polymer Physics	3

These courses are to be taken at Stanford, and any petition to substitute another graduate-level course for any of these core courses must be approved by the department chair. The remaining graduate-level science and engineering lecture courses may be chosen from any department. A student may petition the department chair for approval to include an upper-division undergraduate science or engineering lecture course. All proposals for Ph.D. course work must be approved by the student's adviser and the department chair or his designee. Students working with a research advisor should enroll each quarter in the 500 series, 600, and 699 as appropriate and as study list unit limits permit. Students with questions or issues should see departmental graduate student services.

Predocutorial students may petition for a M.S. degree program to be added to their university record; see departmental student services and submit in a Graduate Authorization petition in Axxess. Once a petition is approved, the M.S. candidate must complete a Program Proposal for a Master's Degree form and submit it to student services. Students may apply in Axxess for M.S. degree conferral upon completion of the requirements for this degree. (See the "Master of Science in Chemical Engineering" section in this bulletin.) The M.S. degree must be awarded within the University's candidacy period for completion of a master's degree.

Minimum Grade Requirement

Any course intended to satisfy the Ph.D. degree requirements must be taken for a letter grade, if offered. A GPA of 3.0 or above is required at the end of the second quarter (or, potentially, a petition approved by the student's research advisor, and any required co-advisor, and the department chair). In any case, a GPA of 3.0 or above is required at the end of the third quarter in order to continue in the Ph.D. program. An overall grade point average (GPA) of 3.0 must be maintained.

Candidacy

To be advanced to Ph.D. candidacy, the student must secure a research dissertation adviser (and any required co-adviser) and complete a Ph.D. candidacy examination. First, the research adviser and any required co-adviser must be established by the end of the second quarter in the Ph.D. program. Failure to do so leads to termination of a student's study toward a Ph.D. in Chemical Engineering; however, the student may continue to work toward an M.S. degree (see the "Master of Science in Chemical Engineering (p. 208)" section of this bulletin). Failure to obtain a doctoral adviser precludes any financial aid beyond that already awarded for which the student is still eligible. Second, the Ph.D. candidacy examination before a faculty committee at the end of the fourth quarter consists of (a) a student's oral presentation of their thinking about their research proposal and current progress and (b) an examination by faculty members of the proposal specifics as well as the student's understanding

Units
3

of the fundamental chemical, physical, and biological concepts that govern the molecular behavior of the system being studied. Upon successful completion of this examination candidates must submit an Application for Candidacy for Doctoral Degree form, approved by their research adviser(s), to departmental graduate student services within two months.

Teaching Requirement

Teaching experience is considered an essential component of predoctoral training because it assists in the further development and refinement of candidates' skills in conveying what they know, think, and conclude, based on articulated assumptions and knowledge. All Ph.D. candidates, regardless of the source of their financial support, are required to assist in the teaching of a minimum of two chemical engineering courses.

Reading Committee Requirement

Reading committee meetings are intended to be discussion sessions, which help to focus and guide the dissertation project; they are not examinations. By the end of the second year, all Ph.D. candidates are required to assemble reading committees and submit Doctoral Dissertation Reading Committee forms signed by research advisers to student services. By the beginning of their third year (or by the end of their ninth quarter) candidates should have had an initial meeting with the full reading committee. The faculty strongly encourage doctoral candidates to take advantage of the benefits of ongoing, yearly, full reading committee meetings. It is the student's responsibility to schedule committee meetings, and the faculty's to respond in a timely manner to scheduling requests. Students should assist in the maintenance of degree progress records by reporting the committee meeting dates to the student services manager.

Research Poster Requirement

Experience in analyzing and presenting one's research to diverse audiences also is an essential component of predoctoral training, and faculty strongly encourage candidates to do so several times each year, starting in the second year. All candidates in their third year are required to prepare and present a research poster during the annual Mason Lecturers week in spring quarter.

Dissertation and Oral Defense Requirements

A dissertation based on a successful investigation of a fundamental problem in chemical engineering is required. A student is expected to have fulfilled all the requirements for this degree, including the completion of a dissertation approved by his or her research adviser(s) and reading committee members within approximately five calendar years after enrolling in the Ph.D. program. Upon adviser approval (s), copies of the final draft of the dissertation must be distributed to each reading committee member. No sooner than three weeks after this distribution, a student may schedule an oral examination. This examination is a dissertation defense, based on the candidate's dissertation research, and is in the form of a public seminar followed by a private examination by the faculty members on the student's oral examination committee. Satisfactory performance in the oral examination and acceptance of an approved dissertation by Graduate Degree Progress, Office of the University Registrar, leads to Ph.D. degree conferral.

Ph.D. Minor in Chemical Engineering

The University's general requirements for the Ph.D. minor are specified in the "Graduate Degrees" section of this bulletin. An application for a Ph.D. minor must be approved by both the major and minor departments.

A student desiring a Ph.D. minor in Chemical Engineering must work with a minor program adviser who has a faculty appointment in Chemical Engineering. This adviser must be included as a member of the student's reading committee for the doctoral dissertation, and the entire reading committee must meet at least once and at least one year prior to the scheduling of the student's oral examination. The department strongly prefers that regular meetings of the full reading committee start no later than the third year of graduate study or when the student is admitted to Ph.D. candidacy. In addition, the Chemical Engineering faculty member who is the minor adviser must be a member of the student's University oral examination committee.

The Ph.D. minor program must include at least 20 units of graduate-level lecture courses (numbered at the 200 level or above), but may not include any 1-2 unit lecture courses in the 20-unit minimum. The list of courses must form a coherent program and must be approved by the minor program adviser and the chair of this department. All courses for the minor must be taken for a letter grade, and a GPA of at least 3.0 must be earned for these courses.

Emeriti: (Professors) Andreas Acrivos, George M. Homsy, Robert J. Madix, Channing R. Robertson

Chair: Eric S. G. Shaqfeh

Professors: Zhenan Bao, Stacey F. Bent, Curtis W. Frank, Gerald G. Fuller, Chaitan Khosla, Jens K. Nørskov, Eric S. G. Shaqfeh, Alfred M. Spormann, James R. Swartz

Associate Professors: Thomas F. Jaramillo, Andrew J. Spakowitz

Assistant Professors: Matteo Cargnello (effective January 1, 2015), Alexander R. Dunn, Elizabeth S. Sattely, Clifford L. Wang

Courtesy Professors: Gordon E. Brown, Jennifer R. Cochran, Sarah C. Heilshorn, Daniel Herschlag, Anders R. Nilsson, Christina D. Smolke, Robert M. Waymouth

Lecturers: Lisa Y. Hwang, Ricardo B. Levy, Shari B. Libicki, Sara Loesch-Frank, John E. Moalli, Anthony Pavone, Howard B. Rosen

Consulting Professors: Jae Chun Hyun, Do Yeung Yoon

Visiting Professor: Karsten Reuter

Cognate Courses for Advanced Degrees in Chemical Engineering

In addition to core CHEMENG graduate courses in the 300 series and elective CHEMENG graduate courses in the 200 and 400 series, students pursuing advanced degrees in chemical engineering include elective courses offered by other departments. The following list is a partial list of the more frequently chosen courses and is subdivided into five focus areas.

	Units
Broadly Applicable	
APPPHYS 207	Laboratory Electronics 4
CHEM 221	Advanced Organic Chemistry 3
CHEM 271	Advanced Physical Chemistry 3
CHEM 273	Advanced Physical Chemistry 3
EE 261	The Fourier Transform and Its Applications 3
STATS 200	Introduction to Statistical Inference 3
Biochemistry and Bioengineering focus *	

BIO 217	Neuronal Biophysics	4
BIOE 331	Protein Engineering	3
BIOPHYS 228	Computational Structural Biology	3
BIOPHYS/SBIO 241	Biological Macromolecules	3-5
CBIO 241	Molecular, Cellular, and Genetic Basis of Cancer	5
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	4
SBIO 228	Computational Structural Biology	3
SBIO 241	Biological Macromolecules	3-5

Fluid Mechanics, Applied Mathematics, and Numerical Analysis focus**

AA 218	Introduction to Symmetry Analysis	3
CME 200	Linear Algebra with Application to Engineering Computations	3
CME 204	Partial Differential Equations in Engineering	3
CME 206	Introduction to Numerical Methods for Engineering	3
CME 212	Advanced Programming for Scientists and Engineers	3
ME 351A	Fluid Mechanics	3
ME 457	Fluid Flow in Microdevices	3

Materials Science focus***

MATSCI 210	Organic and Biological Materials	3

Civil and Environmental Engineering

Courses offered by the Department of Civil and Environmental Engineering are listed under the subject code CEE (<https://explorecourses.stanford.edu/search/?search?view=catalog&academicYear=&q=CEE&filter-departmentcode=CEE=on&filter-coursestatus=Active=on&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&page=0>) on the *Stanford Bulletin's* ExploreCourses (<https://explorecourses.stanford.edu>) web site.

The Department of Civil and Environmental Engineering (CEE) at Stanford conducts fundamental and applied research to advance the civil and environmental engineering professions, educate future academic and industry leaders, and prepare students for careers in professional practice. Civil and environmental engineers work to sustain the natural environment while creating and maintaining the built environment. Civil and environmental engineers are essential to providing the necessities of human life, including water, air, shelter, the infrastructure, energy, and food in increasingly more efficient and renewable ways.

The department focuses on the theme of engineering for sustainability, including three core areas: built environment, environmental and water studies, and atmosphere/energy. The Sustainable Built Environment Program includes creating processes, techniques, materials, and monitoring technologies for planning, design, construction and operation of environmentally sensitive, economically efficient, performance-based buildings and infrastructure, and managing associated risks from natural and man-made hazards. The Environmental and Water Studies Program includes creating plans, policies, science-based assessment models and engineered systems to manage water in ways that protect human health, promote human welfare, and provide freshwater and coastal ecosystem services. The Atmosphere/Energy Program includes studying fundamental energy and atmospheric engineering and science, assessing energy-use effects on atmospheric processes and air quality, and analyzing and designing energy-efficient generation and use systems with minimal environmental impact.

The department oversees undergraduate programs in Civil Engineering and in Environmental Systems Engineering. The department also hosts the School of Engineering undergraduate major in Architectural Design and the undergraduate major in Atmosphere/Energy; both of these programs lead to a B.S. in Engineering.

Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodology needed for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate school in Engineering.

Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math, science, and engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st century involving natural and built environments, in consulting and industry as well as in graduate school.

Learning Outcomes (Undergraduate)

Undergraduates in the Civil Engineering and the Environmental Systems Engineering programs are expected to achieve the following learning outcomes through their major. These learning outcomes are used both in evaluating students and the department's undergraduate programs. Students are expected to demonstrate the ability to:

1. apply knowledge of mathematics, science, and engineering.
2. design and conduct experiments, as well as analyze and interpret data.
3. design a system, component, or process to meet desired needs.
4. function on multidisciplinary teams.
5. identify, formulate, and solve engineering problems.
6. understand professional and ethical responsibility.
7. communicate effectively.
8. obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. recognize the need for and engage in life-long learning.
10. gain knowledge of contemporary issues.
11. apply the techniques, skills, and modern engineering tools necessary for engineering practice.
12. acquire the background for admission to engineering or other professional graduate programs.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. Students are prepared through course work with specialization within one of three broad areas including the built environment, atmosphere and energy, and environmental and water studies. All graduate students must master the analytical, quantitative, and interpretive skills necessary for successful leadership in their chosen field.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Civil and Environmental Engineering and related fields.

Graduate Programs in Civil and Environmental Engineering

The Department of Civil and Environmental Engineering (CEE), in collaboration with other departments, offers graduate degrees structured in three degree programs.

- The Atmosphere/Energy Program offers degrees with the designation of Atmosphere/Energy.
- The Sustainable Built Environment Program offers degrees with two designations:
 - Structural Engineering and Geomechanics
 - Sustainable Design and Construction
- The Environmental and Water Studies Program offers degrees with two designations:
 - Environmental Engineering and Science
 - Environmental Fluid Mechanics and Hydrology

For detailed information on these programs and degree designations, see the "Programs of Graduate Study in Civil and Environmental Engineering" section of this bulletin.

Admissions and Financial Aid

Applications require online submission of the application form and statement of purpose, followed by three letters of recommendation, results of the General Section of the Graduate Record Examination, and transcripts of all courses taken at colleges and universities. See <http://gradadmissions.stanford.edu>. Policies for each of the department's programs are available on the department website. See: <http://cee.stanford.edu>. Successful applicants are advised as to the degree and program for which they are admitted. If students wish to transfer from one CEE program to another after being accepted, an application for the intradepartmental change must be filed within the department; they will then be advised whether the change is possible. If, after enrollment at Stanford, students wish to continue toward a degree beyond the one for which they were originally admitted, a written application must be made to the Department of Civil and Environmental Engineering.

The department maintains a continuing program of merit-based financial aid for graduate students. MS and ENG applications for financial aid and assistantships should be filed by December 2, 2014; it is important that Graduate Record Examination scores be available at that time. MS and ENG applicants not requesting financial assistance have until January 13, 2015 to submit their online application. PHD applicants for financial aid and assistantships should be filed January 13, 2015. Merit-based financial aid consists of teaching assistantships and research assistantships for up to half-time work. Engineer and Ph.D. candidates may be able to use research results as a basis for their thesis or dissertation. Fellowship and scholarship awards or loans may supplement assistantships and other basic support. Continued support is generally provided for further study toward the Engineer or Ph.D. degree based on the student's performance, the availability of research funds, and requisite staffing of current research projects.

Research Centers and Facilities

Research work and instruction in the three principal areas are carried out in these facilities: Building Energy Laboratory; Environmental Engineering and Science Laboratory (EESL); Environmental Fluid Mechanics

Laboratory (EFML); Geotechnical Engineering Laboratory; Structural Engineering Laboratory.

The EESL conducts laboratory and field-based research on air quality and on water and wastewater quality and treatment and is home to the following centers: The National Science Foundation (NSF) supported Engineering Research Center for Re-inventing the Nation's Urban Water Infrastructure (ReNUWIt): a four-university consortium that seeks more sustainable solutions to urban water challenges in the arid west; and The William and Cloy Codiga Resource Recovery Center (CR2C), a new facility for pilot-scale testing of resource recovery technology, will be operational in 2015.

The EFML focuses on transport and mixing processes in the surface and sub-surface environment using computation, laboratory experimentation and a global network of field sites

The John A. Blume Earthquake Engineering Center conducts research on earthquake engineering including advanced sensing and control, innovative materials, and risk hazard assessment.

Research and advanced global teamwork education is conducted in the Project Based Learning (PBL) Laboratory. In collaboration with the Department of Computer Science, the Center for Integrated Facility Engineering (CIFE) employs advanced CAD, artificial intelligence, communications concepts, and information management to integrate participants in the facility development process and to support design and construction automation. The Global Projects Center (GPC) is a multi-school, multi-university research program aimed at improving the performance of global engineering and construction projects, with a special focus on financing and governance of sustainable civil and social infrastructure projects. The Stanford Sustainable Systems Lab (S3L) aims to advance the state of the art in the design, monitoring and management of built environment systems, with a special focus on smart grid, smart buildings and smart infrastructures.

Programs of Graduate Study in Civil and Environmental Engineering Atmosphere/Energy Program

The Atmosphere/Energy Program in Civil and Environmental Engineering combines atmospheric science with energy science and engineering. The main goals of the program are to educate students and the public, through courses, research, and public outreach, about the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. In addition, students learn about feedback between the atmosphere and renewable energy systems and the effects of the current energy infrastructure on the atmosphere.

Major focus areas of energy research include examining the resource availability of renewable energies, such as wind, solar, and wave, and studying optimal methods of combining renewable energies together to match energy supply with instantaneous demand. This type of work is generally done through a combination of data analysis, three-dimensional atmospheric computer modeling of wind, solar, wave, and hydroelectric power resources, and transmission load flow computer modeling. Other energy research, performed through three-dimensional computer modeling, focuses on the effects, for example, of hydrogen fuel cell vehicles on air pollution and the ozone layer and the effects of ethanol and diesel vehicles on air quality and climate. Studies also examine the feedback of wind turbines to the atmosphere and the effects of climate change on wind and solar energy resources.

Atmospheric research in the program generally involves laboratory work, field measurements, or three-dimensional computer modeling of the combined atmosphere, ocean, and land surface. An example of laboratory

work includes measuring the properties of organic particulate matter that forms in the atmosphere. Examples of fieldwork include measuring exposures to secondhand smoke, allergens, and emissions from building materials.

Computer modeling is performed at a variety of spatial scales, from the globe down to the size of a building or smaller. Some examples of modeling studies include examining the effects of air pollution particles on clouds, rainfall, water supply, ultraviolet radiation, the stratospheric ozone layer, and climate, simulating the dispersion of toxic contaminants in an urban street canyon, studying the effects of aircraft exhaust and biomass burning on climate, studying the effects of carbon dioxide domes over cities on air pollution mortality, and studying the leading causes of global warming and their impacts.

Environmental and Water Studies Programs

Environmental and Water Studies include subprograms in Environmental Engineering and Science and Environmental Fluid Mechanics and Hydrology, which includes environmental planning. Course offerings permit study in a single area or interrelated study between areas. Programs are flexible to foster interaction among students and encourage the development of individual programs. The Stanford laboratories for water quality control and environmental fluid mechanics are well equipped for advanced research and instruction.

Courses from other programs and departments complement our programs' course offerings. Examples include the Institute for Computational and Mathematical Engineering (applied math, numerical methods), Environmental Earth System Science (geostatistics, soil science, hydrogeology, oceanography), Mechanical Engineering (experimental methods, fluid mechanics, heat transfer), Energy Resources Engineering (reservoir engineering, well-test analysis), Statistics (probability and statistics), and the School of Law (natural resources law, environmental law).

Environmental Engineering and Science

The Environmental Engineering and Science (EES) subprogram emphasizes the chemical and biological processes involved in water quality engineering, pollution treatment, remediation, and environmental protection.

Course offerings include: the biological, chemical, and engineering aspects of water supply; the movement and fate of pollutants in surface and ground waters, soil, and the atmosphere; hazardous substance control; molecular environmental biotechnology; and water and air pollution. Companion courses in the Environmental Fluid Mechanics and Hydrology Program (EFMH) include environmental planning and impact assessment, and environmental fluid mechanics, hydrology, and transport modeling.

Environmental Fluid Mechanics and Hydrology

The Environmental Fluid Mechanics and Hydrology (EFMH) subprogram focuses on understanding, characterizing, and modeling the physical and biochemical processes, and their interaction, controlling the movement of mass, energy, and momentum in the water environment and the atmosphere. It also considers the planning, design, and implementation of water resources projects and systems, including environmental and institutional issues.

Environmental fluid mechanics courses address: experimental methods in the field and in the laboratory; fluid transport and mixing processes; the fluid mechanics of geophysical and stratified flows; natural flows in coastal waters, estuaries, lakes, and open channels; and hydrodynamic modeling. Hydrology courses consider flow and transport in porous

media, stochastic methods in both surface and subsurface hydrology, and watershed hydrology and modeling. Water resources courses address design principles and tools for systems incorporating urban and rural water supply, irrigation, hydropower, stormwater management, flood-damage mitigation, and hydrologic ecosystem services. Planning courses emphasize environmental policy implementation and sustainable water resources development.

The research of this group is focused in the Environmental Fluid Mechanics Laboratory, which includes the P. A. McCuen Environmental Computing Center, and a wide range of field sites.

Admission to Environmental Engineering and Science and Environmental Fluid Mechanics and Hydrology are handled separately; prospective students should indicate their preference on their application.

Sustainable Built Environment Program

The Sustainable Built Environment program includes subprograms in Structural Engineering and Geomechanics, and Sustainable Design and Construction. These programs focus on educating practitioners and researchers to plan, design, build, and operate more sustainable buildings and infrastructure.

The Structural Engineering and Geomechanics (SEG) subprogram educates designers and researchers who want to progress beyond traditional life safety code-based design, to develop and disseminate performance-based structural and geotechnical engineering methods and tools that maximize the lifecycle economic value of facilities.

The Sustainable Design and Construction (SDC) subprogram provides courses in sustainable, multi-stakeholder design methods and tools that incorporate lifecycle assessment, project planning and entitlement, green architectural design, lighting, and energy analysis, power systems, transportation, water supply and wastewater treatment to educate students interested in promoting more sustainable development of buildings and infrastructure.

Admission is managed separately for these two subprograms; prospective students should indicate their preference on their application.

Structural Engineering and Geomechanics

The Structural Engineering and Geomechanics (SEG) subprogram encompasses teaching and research in structural design and analysis, structural materials, earthquake engineering and structural dynamics, advanced sensing and structural health monitoring, risk and reliability analysis, computational science and engineering, solid mechanics, computational mechanics, and geomechanics. The SEG subprogram prepares students for industrial or academic careers.

Students can balance engineering fundamentals with modern computational and experimental methods to customize programs to launch careers as consultants on large and small projects, designers, and engineering analysts.

Structural design and analysis focuses on the conceptual design of structural systems and on computational methods for predicting the static and dynamic, linear and nonlinear responses of structures.

Structural materials research and teaching focuses on the design and analysis of high-performance as well as low-environmental impact materials.

Earthquake engineering and structural dynamics addresses earthquake phenomena, ground shaking, and the behavior, analysis, and design of structures under seismic and other dynamic forces.

Reliability and risk analysis focuses on assessing damage and losses to structures and lifeline systems under earthquakes, wind and other hazards;

insights from these assessments are used to engineer more sustainable structures and more resilient communities.

Computational science and engineering emphasizes the application of modern computing methods to structural engineering and geomechanics, and encompasses numerical, structural, and geotechnical analysis.

In the area of geomechanics, students focus on the application of the principles of computational and applied mechanics to problems involving geologic materials including soil and rock, as well as on the use of computational methods for analysis and design of foundations and earth structures.

Sustainable Design and Construction

The Sustainable Design and Construction (SDC-X) subprogram prepares students for careers in planning, designing, building, and operating sustainable buildings and infrastructure to maximize their lifecycle economic value, their net contribution to environmental functions and services, and their social equity.

The SDC-X subprogram offers courses in:

- Project finance
- Lifecycle assessment
- Sustainable multidisciplinary, multi-stakeholder planning and design processes
- Green architecture
- Performance-based structural design
- Building energy systems
- Renewable power generation and smart electrical grids
- Water supply
- Wastewater treatment
- Transportation development
- Sustainable construction materials and processes

Classes on cutting-edge information technology, sensor networks embedded in intelligent buildings and infrastructure, strategy, economics, entrepreneurship and organization design for new businesses, corporate or governmental initiatives aimed at enhancing the sustainability of buildings and infrastructure round out the subprogram

This subprogram is intended for students with undergraduate degrees in architecture, engineering, science, construction management, economics or business who wish to pursue careers that enhance the sustainability of the built environment.

Employers of past SDC graduates include: architectural and engineering design firms, constructors, design-build firms and developers focused on delivering green buildings and infrastructure; energy and sustainability consultants; facility management or sustainability departments within large companies; clean-tech start ups, and clean-tech venture funds.

There are four tracks in the SDC subprogram. All four SDC tracks have a common overarching structure and core that includes courses in construction engineering and management and introduces cutting edge metrics and tools to enhance lifecycle sustainability of the sustainable built environment. Each track then offers a different set of additional courses beyond the SDC core to support a specific career direction.

SDC Construction (SDC-C)

The SDC-C track includes courses in construction engineering and management and introduces advanced modeling and visualization methods and tools known as virtual design and construction. This track prepares technically qualified students for responsible engineering and management roles in all phases of the development of major constructed facilities. It emphasizes management techniques useful in organizing, planning, and controlling the activities of diverse specialists working within the unique

project environment of the construction industry, and it covers construction engineering aspects of heavy, industrial and building construction.

SDC-C offers courses in:

- Building systems
- Construction administration
- Construction law
- Project finance
- Accounting
- Real estate development
- Structural design
- Equipment and methods
- Estimating
- International construction
- Labor relations
- Managing human resources
- Planning and control techniques
- Productivity improvement
- Project and company organizations

Additional related course work is available from other programs within the department, from other engineering departments, and from other schools in the University such as Earth Sciences and the Graduate School of Business

SDC-C allows students substantial flexibility to tailor their program of study for careers with general contractors, specialty contractors, real estate or infrastructure developers or facility owners and operators.

SDC-Energy (SDC-E)

The SDC-Energy (SDC-E) track includes courses on design and construction of buildings and infrastructure systems to produce, distribute and consume energy sustainably. SDC-E prepares students for careers in design and construction of building energy systems, renewable power generating systems, and smart power grids connected to smart buildings and infrastructure, cleantech venture capital, sustainability-focused public policy, green real estate development, and sustainability management positions.

SDC-E includes courses from our department and several other departments at Stanford on sustainable HVAC design and construction of small scale and large structures, the planning, design and construction of renewable power systems, and sensing and control technologies to link integrated smart grids with intelligent buildings, data centers and infrastructure systems.

SDC-Structures (SDC-S)

The SDC-Structures (SDC-S) track includes courses from construction engineering and management and Structural Engineering and Geomechanics (SEG) to prepare students for careers in design and construction firms that provide integrated design-build project delivery, construction management, and pre-construction services.

This track prepares students for multidisciplinary collaborative teamwork in an integrated design and construction process. The subprogram extends a student's design or construction background with core courses in each of these areas and develops the background needed to understand the concerns and expertise of the many project stakeholders. It includes a comprehensive project-based learning experience.

The SDC-S track is intended for applicants with backgrounds in engineering and science. Applicants should also have a background in the planning, design, or construction of facilities by virtue of work experience and/or their undergraduate education. Knowledge in subjects from the traditional areas of civil engineering is necessary for students to receive the degree and to satisfy prerequisite requirements for some of the required graduate courses.

Students with an undergraduate degree in Civil Engineering, and who expect to pursue careers with design or construction firms that emphasize design-build, EPC, or turnkey projects should consider SDC-S.

SDC-Water (SDC-W)

The SDC-Water (SDC-W) track combines courses from our department's subprograms in Environmental Engineering and Science and Environmental Fluid Mechanics with courses on sustainable design and construction methods and tools. The SDC-W track prepares students for careers in sustainable design, construction and operation of both centralized systems and emerging distributed systems for water supply and water and waste treatment that integrate the production of energy and a grown stream of valuable bio-engineered products recovered from the waste stream.

This track offers courses in physical and chemical treatment processes for water and wastewater treatment, environmental biotechnology for use in water resource management and bioremediation, watershed and wetland management, environmental engineering design, and sustainable water resource development. Additional related course work is available from other programs within the department, including the Environmental Engineering and Science (EES) and Environmental Fluid Mechanics and Hydrology (EFMH) programs.

This track is intended for students with a background and interest in environmental engineering and fluid mechanics who wish to pursue careers in the development of sustainable water and waste treatment facilities with large integrated design-building firms or progressive governmental agencies in this sector.

Bachelor of Science in Civil Engineering

The B.S. in Civil Engineering is an ABET accredited program, which integrates research with engineering education. The B.S. in Civil Engineering offers the opportunity to focus on structures and construction, or on environmental and water studies. No new majors are being accepted for the B.S. in Environmental Engineering. Current Environmental Engineering majors should refer to the 2013-14 Bulletin for details. Any current Environmental Engineering major wishing ABET accreditation must graduate by June 2015.

Three educational objectives structure the Civil Engineering degree program. Graduates of the program are expected within a few years of graduation to have the ability to:

1. Establish themselves as practicing professionals in civil or environmental engineering or a related field.
2. Pursue graduate study in civil or environmental engineering or other fields.
3. Work effectively as responsible professionals alone or in teams handling increasingly complex professional and societal expectations.

Students who major in Civil Engineering must complete the appropriate requirements for the B.S. degree listed. Each student has elective units, which may be used in any way the student desires, including additional studies in the department of Civil and Environmental Engineering or any other school or department in the University. Because the undergraduate engineering curriculum provides breadth of study, students who intend to enter professional practice in civil engineering should plan to obtain their professional education at the graduate level.

A number of undergraduate programs at Stanford may be of interest to students seeking to specialize in environmental studies. In addition to the Environmental and Water Studies track within the Civil Engineering major, students may consider related programs in the department such as Atmosphere/Energy and Environmental Systems Engineering, as well as programs offered in other departments and schools such as Earth Systems,

Geological and Environmental Sciences, Urban Studies, and Human Biology.

Civil Engineering (CE)

Completion of the undergraduate program in Civil Engineering leads to the conferral of the Bachelor of Science in Civil Engineering.

Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies necessary for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate studies in engineering.

Requirements

	Units
Mathematics and Science	45
45 units minimum; see Basic Requirements 1 and 2 ¹	
Technology in Society	
One course; see Basic Requirement 4 ²	3-5
Engineering Fundamentals	
Three courses minimum, see Basic Requirement 3	
ENGR 14 Intro to Solid Mechanics	4
ENGR 90/CEE 70 Environmental Science and Technology Fundamentals Elective	3-5
Engineering Depth	
Minimum of 68 Engineering Fundamentals plus Engineering Depth; see Basic Requirement 5	
CEE 100 Managing Sustainable Building Projects ³	4
CEE 101A Mechanics of Materials	4
CEE 101B Mechanics of Fluids	4
CEE 101C Geotechnical Engineering	4
CEE 146A Engineering Economy	3
Specialty courses in either:	35-42
Environmental and Water Studies (see below)	
Structures and Construction (see below)	
Other School of Engineering Electives	3-0
Total Units	115-123

- ¹ Mathematics must include CME 100 Vector Calculus for Engineers/ CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables/ MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics; either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quarters in either chemistry or physics and GES 1A Introduction to Geology: The Physical Science of the Earth (or GES 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45.
- ² Chosen TiS class must specifically include an ethics component, such as ENGR 130 Science, Technology, and Contemporary Society, ENGR 131 Ethical Issues in Engineering, and MS&E 197 Ethics and Public Policy.
- ³ CEE 100 meets the Writing in the Major (WIM) requirement

Environmental and Water Studies Focus

	Units
ENGR 30 Engineering Thermodynamics ¹	3
CEE 101D Computations in Civil and Environmental Engineering ²	3
CEE 160 Mechanics of Fluids Laboratory	2
CEE 161A Rivers, Streams, and Canals	3-4
CEE 166A Watersheds and Wetlands	3
CEE 166B Floods and Droughts, Dams and Aqueducts	3
CEE 171 Environmental Planning Methods	3
CEE 172 Air Quality Management	3
CEE 177 Aquatic Chemistry and Biology	4
CEE 179A Water Chemistry Laboratory	3
CEE 179C Environmental Engineering Design (or CEE 169) Capstone design experience course	5
Remaining specialty units from:	
CEE 63 Weather and Storms ²	3
CEE 64 Air Pollution and Global Warming: History, Science, and Solutions ²	3
CEE 109 Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision	2
CEE 129 Climate Change Adaptation for Coastal Cities: Engineering and Policy for a Sustainable Future	3
CEE 155 Introduction to Sensing Networks for CEE	4
CEE 164 Introduction to Physical Oceanography	4
CEE 166D Water Resources and Water Hazards Field Trips	2
CEE 172A Indoor Air Quality	2-3
CEE 173A Energy Resources	4-5
CEE 174A Providing Safe Water for the Developing and Developed World	3
CEE 174B Wastewater Treatment: From Disposal to Resource Recovery	3
CEE 176A Energy Efficient Buildings	3-4
CEE 176B Electric Power: Renewables and Efficiency	3-4

CEE 203	Probabilistic Models in Civil Engineering	3-4
One of the following can also count as remaining specialty units.		3-4
CEE 120A	Building Information Modeling Workshop	2-4
or CEE 120B		
CEE 130	Architectural Design: 3-D Modeling, Methodology, and Process	
CEE 131A	Professional Practice: Mixed-Use Design in an Urban Setting	
CEE 134B	Intermediate Arch Studio	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Bachelor of Science in Environmental Systems Engineering

For undergraduate studies focusing on Environmental Engineering, two options are available. The undergraduate Civil Engineering major (which is ABET-accredited) offers an Environmental & Water Studies track, and the new Environmental Systems Engineering major (which is not ABET-accredited) offers a choice of focusing on coastal environments, freshwater environments, or urban environments.

Environmental Systems Engineering (EnvSE)

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

Environmental Engineering (ENV)

The program in Environmental Engineering has been discontinued. Students currently enrolled in this program should consult the previous year's Stanford Bulletin (<http://exploreddegrees.stanford.edu/archive/2012-13/schoolofengineering/civilandenvironmentalengineering/#bachelorofsciencetext-enviengi>) for program requirements (click on Environmental Engineering in the right hand menu). Any current Environmental Engineering major wishing ABET accreditation must graduate by June 2015.

Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st Century involving natural and built environments, in consulting and industry as well as in graduate school.

Requirements

Mathematics and Science

See Basic Requirement 1 and 2¹ 36

Technology in Society (TiS)

One 3-5 unit course required, see Basic Requirement 4 3-5

Engineering Fundamentals

Three courses minimum (see Basic Requirement 3), including:

ENGR 70A Programming Methodology 5

(or ENGR 70X)

(req'd) plus one of the following courses:

ENGR 90 Environmental Science and Technology

(req'd for Freshwater and Coastal focus areas)

or		
ENGR 60	Engineering Economy	3
(req'd for Urban focus area)		
(or CEE 146A)		
plus one Engineering Fundamentals Elective		3-5
Fundamentals Tools/Skills ²		10
in Visual, Oral/Written Communication, and Modeling/Analysis		
Specialty Courses, in either		36
Coastal Environments (see Below)		
or Freshwater Environments (see Below)		
or Urban Environments (see Below)		
Total Units		96-100

- ¹ Math must include CME 100 Vector Calculus for Engineers (or MATH 51 Linear Algebra and Differential Calculus of Several Variables), and either a Probability/Statistics course or CME 102 Ordinary Differential Equations for Engineers (or MATH 53 Ordinary Differential Equations with Linear Algebra). Science must include PHYSICS 41 Mechanics; and either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM 31B Chemical Principles II or CHEM 31X Chemical Principles Accelerated (or PHYSICS 43 Electricity and Magnetism, for Urban track only).
- ² Fundamental Tools/Skills must include: (a) CEE 1 Introduction to Environmental Systems Engineering (offered AY 2015-16); (b) *at least* one Visual Communication class from CEE 31 Accessing Architecture Through Drawing / CEE 31Q Accessing Architecture Through Drawing, CEE 133F Principles of Freehand Drawing, ME 110 Design Sketching, ARTSTUDI 160 Design I : Fundamental Visual Language, or OSPPARIS 44 EAP: Analytical Drawing and Graphic Art; (c) *at least* one Oral/Written Communication class from ENGR 103 Public Speaking (or ORALCOMM 122 "The TED Commandments": The Art and Heart of Effective Public Speaking), ENGR 202W Technical Writing, CEE 151 Negotiation, EARTHSYS 195 Natural Hazards and Risk Communication or ENVRES 200 Sustaining Action: Research, Analysis and Writing for the Public; and (d) *at least* one Modeling/Analysis class from CEE 155 Introduction to Sensing Networks for CEE, CEE 120A Building Information Modeling Workshop (or CEE 120B Building Information Modeling Workshop), CEE 226 Life Cycle Assessment for Complex Systems, EARTHSYS 144 Fundamentals of Geographic Information Science (GIS), ENERGY 160 Modeling Uncertainty in the Earth Sciences, CEE 101D Computations in Civil and Environmental Engineering (if not counted as Math), or CEE 211 Introduction to Programming for Scientists and Engineers (or EARTHSYS 211 Fundamentals of Modeling).

Urban Environments Focus Area (36 units)

Required		
CEE 100	Managing Sustainable Building Projects	4
CEE 101B	Mechanics of Fluids	4
CEE 176A	Energy Efficient Buildings	3-4

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Honors Program

This program leads to a B.S. with honors for undergraduates majoring in Civil Engineering or in Environmental Systems Engineering. It is designed to encourage qualified students to undertake a more intensive study of civil and environmental engineering than is required for the normal majors through a substantial, independent research project.

The program involves an in-depth research study in an area proposed to and agreed to by a Department of Civil and Environmental Engineering faculty adviser and completion of a thesis of high quality. A written proposal

for the research to be undertaken must be submitted and approved by the faculty advisor in the fourth quarter prior to graduation. At the time of application, the student must have an overall grade point average (GPA) of at least 3.3 for course work at Stanford; this GPA must be maintained to graduation. The thesis is supervised by a CEE faculty adviser and must involve input from the School of Engineering writing program by means of ENGR 202S Writing: Special Projects or its equivalent. The written thesis must be approved by the thesis adviser. Students are encouraged to present their results in a seminar for faculty and students. Up to 10 units of CEE 199H Undergraduate Honors Thesis, may be taken to support the research and writing (not to duplicate ENGR 202S). These units are beyond the normal Civil Engineering or Environmental Systems Engineering major program requirements.

Minor in Civil Engineering or Environmental Systems Engineering

The department offers a minor in Civil Engineering and a minor in Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of architectural design, construction engineering, construction management, structural/geotechnical engineering, environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The courses required for the minors typically have prerequisites. Minors are not ABET-accredited programs.

Civil Engineering (CE) Minor

The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 41 Calculus (or MATH 19 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site (http://cee.stanford.edu/prospective/undergrad/minor_overview.html) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

General guidelines are:

1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are given on the CEE webpage.

Professor Anne Kiremidjian (kiremidjian@stanford.edu) is the CEE undergraduate minor adviser in Structural Engineering and Construction

Engineering and Management. John Barton (jhbarton@stanford.edu), Program Director for Architectural Design, is the undergraduate minor adviser in Architectural Design. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

Environmental Systems Engineering (EnvSE) Minor

The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor is MATH 42 Calculus (or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an environmental systems engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (<http://ughb.stanford.edu>).

General guidelines are—

- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site (http://cee.stanford.edu/prospective/undergrad/minor_overview.html).

Professor Lynn Hildemann (hildemann@stanford.edu) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Hildemann in developing their minor program, and obtain approval of the finalized study list from her.

Coterminal B.S./M.S. Program in Civil and Environmental Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program at Stanford must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree and are expected to meet the Department of Civil and Environmental Engineering application deadlines for coterminal applicants for graduate study (January 16, 2015). Applications are considered once a year during Winter Quarter. An application must display evidence of potential for strong academic performance as a graduate student.

It is recommended that students who contemplate advanced study at Stanford discuss their plans with their advisers in the junior year.

University requirements for the coterminal M.S. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University

application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Master of Science in Civil and Environmental Engineering

The following programs are available leading to the M.S. degree in Civil and Environmental Engineering:

- Atmosphere/Energy
- Environmental Engineering and Science
- Environmental Fluid Mechanics and Hydrology
- Geomechanics
- Structural Engineering
- Sustainable Design and Construction

Students admitted to graduate study with a B.S. in Civil Engineering, or equivalent, from an accredited curriculum can satisfy the requirements for the M.S. degree in Civil and Environmental Engineering by completing a minimum of 45 units beyond the B.S. All 45 units must be taken at Stanford. A minimum 2.75 grade point average (GPA) is required for candidates to be recommended for the M.S. degree. No thesis is required.

The program of study must be approved by the faculty of the department and should include at least 45 units of courses in engineering, mathematics, science, and related fields unless it can be shown that other work is pertinent to the student's objectives. Additional program area requirements are available on the department web site and from the department's student services office (Y2E2 room 316).

Candidates for the M.S. in Civil and Environmental Engineering who do not have a B.S. in Civil Engineering may, in addition to the above, be required to complete those undergraduate courses deemed important to their graduate programs. In such cases, more than three quarters is often required to obtain the degree.

Engineer in Civil and Environmental Engineering

A student with an M.S. in Civil Engineering may satisfy the requirements of the degree of Engineer in Civil and Environmental Engineering by completing 45 unduplicated course work and research units for a total of 90 units. Engineer candidates must submit an acceptable thesis (12-15 units) and maintain a minimum GPA of 3.0. The program of study must be approved by a faculty member in the department.

This degree is recommended for those desiring additional graduate education, especially those planning a career in professional practice. The thesis normally should be started in the first quarter of graduate study after the M.S. degree. Programs are offered in the fields of specialization mentioned for the M.S. degree. For students who will continue study toward a CEE Ph.D., the Engineer thesis topic must be significantly different from their doctoral research.

Graduate students who lack adequate background in their area of specialization (e.g. lack a prior degree in civil engineering, if required in their program) or who are not full-time students should expect to be enrolled for more than two years. Engineer degree candidates should develop individually tailored expected-progress timetables in consultation with their program advisers.

For graduate students not currently attending Stanford, admission to study for the Engineer degree in the Department of Civil and Environmental Engineering begins with the office of Graduate Admissions (<http://www.stanford.edu/home/admission/index/html>).

If you are currently pursuing a graduate degree at Stanford, and wish to apply for the Engineer degree program, submit an Application for Post-

Masters Study (available in the department office, Y2E2 Room 314). This form is typically filed during your second quarter of graduate study, preferably before January 1, so that your application may be reviewed during the normal graduate admissions cycle. You may apply at a later date if your adviser feels that it is appropriate to do so.

A minimum of 90 quarter units of full-time graduate study (or equivalent part-time graduate study) is required for the Engineer degree. For most students, the master's degree supplies 45 of these units.

If your master's degree was obtained at another school, you can apply to transfer up to 45 quarter units of residency credit by completing an Application for Transfer Credit for Graduate Work Done Elsewhere. No units need to be transferred if you hold an M.S. degree from Stanford.

Doctor of Philosophy in Civil and Environmental Engineering

The Ph.D. is offered under the general regulations of the University as set forth in the "Graduate Degrees" section of this bulletin. This degree is recommended for those who expect to engage in a professional career in research, teaching, or technical work of an advanced nature. The Ph.D. program requires a total of 135 units of graduate study, at least 90 units of which must be at Stanford. Up to 45 units of graduate study can be represented by the M.S. program described above. Students must maintain a minimum GPA of 3.0 in post-M.S. course work. All candidates for the Ph.D. degree are required to complete CEE 200 in conjunction with a one-quarter teaching assistantship/course assistantship to gain training and instructional experience. Further information on Ph.D. requirements and regulations is found in the department Graduate Handbook.

The program of study is arranged by the prospective candidate at the beginning of the second year with the advice of a faculty committee whose members are nearest in the field of interest to that of the student. The chair of the committee serves as the student's interim adviser until such time as a member of the faculty has agreed to direct the dissertation research. Insofar as possible, the program of study is adapted to the interests and needs of the student within the framework of the requirements of the department and the University.

By the end of the second year of graduate study (or by the end of the first year for students who enroll at Stanford with an M.S.), the student is expected to pass the department's General Qualifying Examination (GQE) to be admitted to candidacy for the doctoral degree. The purpose of the GQE is to ensure that the student is adequately prepared to undertake doctoral research and has a well planned research topic. The exam may take the form of (1) a written and/or oral general examination of the candidate's major field, (2) a presentation and defense of the candidate's doctoral research dissertation proposal, or (3) a combination research proposal and general examination. The GQE is administered by an advisory committee consisting of at least three Stanford faculty members, including a chair who is a faculty member in Civil and Environmental Engineering. All members are normally on the Stanford Academic Council. A petition for appointment of one advisory committee member who is not on the Academic Council may be made if the proposed person contributes an area of expertise that is not readily available from the faculty. Such petitions are subject to approval by the department chair. When the primary research adviser is not a member of the CEE Academic Council faculty, the committee must consist of four examiners, with two members from the CEE department.

Ph.D. Minor in Civil and Environmental Engineering

A Ph.D. minor is a program outside a major department. Requirements for a minor are established by the minor department. Acceptance of the minor as part of the total Ph.D. program is determined by the major department.

Application for the Ph.D. minor must be approved by both the major and the minor department, and the minor department must be represented at the University oral examination.

A student desiring a Ph.D. minor in Civil and Environmental Engineering (CEE) must have a minor program adviser who is a regular CEE faculty member in the program of the designated subfield. This adviser must be a member of the student's University oral examination committee and the reading committee for the doctoral dissertation.

The program must include at least 20 units of graduate-level course work (courses numbered 200 or above, excluding special studies and thesis) in CEE completed at Stanford University. Units taken for the minor cannot be counted as part of the 45 unduplicated units for the PhD major. The list of courses must form a coherent program and must be approved by the minor program adviser and the CEE chair. A minimum GPA of 3.0 must be achieved in these courses.

Emeriti: (Professors) Joseph B. Franzini, Gilbert M. Masters*, Perry L. McCarty*, Henry W. Parker, Martin Reinhard*, Hareesh C. Shah, Robert L. Street*, Clyde B. Tatum*, Paul M. Teicholz

Chair: Stephen G. Monismith

Associate Chair: Sarah Billington

Professors: Sarah L. Billington, Ronaldo I. Borja (on leave Aut), Craig S. Criddle, Gregory G. Deierlein (on leave Win, Spr), Martin A. Fischer, Lynn M. Hildemann, Mark Z. Jacobson, Anne S. Kiremidjian (on leave Spr), Peter K. Kitanidis (on leave Win, Spr), Jeffrey R. Koseff, Kincho H. Law, James O. Leckie, Raymond E. Levitt (on leave Aut, Win), Richard G. Luthy, Stephen G. Monismith, Leonard Ortolano (on leave Autumn), Alfred M. Spormann

Associate Professors: Jack W. Baker, Alexandria B. Boehm, Jennifer Davis, David L. Freyberg, Oliver B. Fringer, Eduardo Miranda, William A. Mitch

Assistant Professors: Michael D. Lepech, Christian Linder, Ram Rajagopal

Courtesy Professors: Peter M. Pinsky, David D. Pollard

Courtesy Associate Professor: Margot G. Gerritsen

Courtesy Assistant Professor: Karen L. Casciotti

Lecturers: Cassiana Aaronson Wright, Michael Azgour, Deborah Ballati, John H. Barton II, Terry Beaubois, Thomas Beischer, Christopher Burmester, Alex Chase, Beverly Choe Harris, Stanley F. Christensen, Peter L. Datin, Charles Debbas, Derek Fong, Jack Fuchs, Renate Fruchter, Robert R. Groves, James Hawk, Kenneth D. Hayes, Geza T. Kisch, Glenn Katz, Sunil Kishnani, Michael Lyons, David N. Kleiman, Nelson A. Koen Cohen, Erik Kolderup, John Koester, Royal J. Kopperud, John C. Kunz, Amy Larimer, Ashby Monk, Ryan J. Orr, Alexander P. Robertson, Peter Rumsey, Jon R. Wren, Ethen J. Wood

Consulting Professors: Vladimir Bazjanac, Calvin K. Kam, James E. Cloern, Angelos N. Findikakis, Gary E. Griggs, Robert F. Hickey, Thomas L. Holzer, Michael C. Kavanaugh, Martin W. McCann, Jr., William McDonough, Paul K. Meyer, Piotr D. Moncarz, Wayne R. Ott, Benedict R. Schwegler, Jr, Avram S. Tucker, Antonio L. Vives, Michael W. Walton, Jane Woodward

Consulting Associate Professors: Edward S. Gross, Gloria T. Lau, Karl Knapp, Colin Ong, Ryan J. Orr, Joel N. Swisher, Jie Wang

Shimizu Visiting Professor: Jennifer Whyte

UPS Visiting Associate Professor: Angela Lin

* Recalled to active duty.

Overseas Studies Courses in Civil and Environmental Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPAUSTL 10	Coral Reef Ecosystems	3
OSPAUSTL 25	Freshwater Systems	3
OSPAUSTL 30	Coastal Forest Ecosystems	3
OSPSANTG 31	The Chilean Energy System: 30 Years of Market Reforms	4-5

Note: OSPAUSTL 10 may count towards the ENVEN-BS and the CE-BS with Specialty in Environmental & Water Studies, however it does not count towards the CE-BS with Specialty in Structures & Construction.

Computer Science

Courses offered by the Department of Computer Science are listed under the subject code CS on the *Stanford Bulletin's* ExploreCourses (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=CS&filter-catalognumber-CS=on&filter-coursestatus-Active=on>) web site.

The Department of Computer Science (CS) operates and supports computing facilities for departmental education, research, and administration needs. All CS students have access to the departmental student machine for general use (mail, news, etc.), as well as computer labs with public workstations located in the Gates Building. In addition, most students have access to systems located in their research areas.

Each research group in Computer Science has systems specific to its research needs. These systems include workstations (PCs, Macs), multi-CPU computer clusters, and local mail and file servers. Servers and workstations running Linux or various versions of Windows are commonplace. Support for course work and instruction is provided on systems available through Information Technology Services (<http://itservices.stanford.edu>) (ITS) and the School of Engineering (<http://engineering.stanford.edu>) (SoE).

Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and

applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to be able to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering application.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work in the foundational elements of the field and in at least one graduate specialization. Areas of specialization include artificial intelligence, biocomputation, computer and network security, human-computer interaction, information management and analytics, mobile and internet computing, real-world computing, software theory, systems, and theoretical computer science.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computer Science and related fields.

Graduate Programs in Computer Science

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 43)" section of this bulletin.

Computer Science Course Catalog Numbering System

The first digit of a CS course number indicates its general level of sophistication:

Digit	Description
001-099	Service courses for nontechnical majors
100-199	Other service courses, basic undergraduate
200-299	Advanced undergraduate/beginning graduate
300-399	Advanced graduate

400-499	Experimental
500-599	Graduate seminars

The tens digit indicates the area of Computer Science it addresses:

Digit	Description
00-09	Introductory, miscellaneous
10-19	Hardware and Software Systems
20-39	Artificial Intelligence
40-49	Software Systems
50-59	Mathematical Foundations of Computing
60-69	Analysis of Algorithms
70-79	Computational Biology and Interdisciplinary Topics
90-99	Independent Study and Practicum

Bachelor of Science in Computer Science

The department offers both a major in Computer Science and a minor in Computer Science. Further information is available in the *Handbook for Undergraduate Engineering Programs* published by the School of Engineering. The Computer Science major offers a number of tracks (programs of study) from which students can choose, allowing them to focus their program on the areas of most interest. These tracks also reflect the broad diversity of areas in computing disciplines. The department has an honors program, which is described in the following section.

In addition to Computer Science itself, Stanford offers several interdisciplinary degrees with a substantial computer science component. The Symbolic Systems major (in the School of Humanities and Sciences) offers an opportunity to explore computer science and its relation to linguistics, philosophy, and psychology. The Mathematical and Computational Sciences major (also Humanities and Sciences) allows students to explore computer science along with more mathematics, statistics, and operations research.

Computer Science (CS)

Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer sciences, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

Requirements

Mathematics (26 units minimum)—

CS 103	Mathematical Foundations of Computing ¹	5
CS 109	Introduction to Probability for Computer Scientists ²	5

MATH 41	Calculus	10
& MATH 42	and Calculus ³	

Plus two electives⁴

Science (11 units minimum)—

PHYSICS 41	Mechanics	4
PHYSICS 43	Electricity and Magnetism	4

Science elective⁵ 3

Technology in Society (3-5 units)—

One course; see Basic Requirement 4

Engineering Fundamentals (13 units minimum; see Basic Requirement 3)—

CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	
ENGR 40	Introductory Electronics ⁴	5
or ENGR 40A or 40M*		

Fundamentals Elective (may not be 70A, B, or X) 3-5

*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

Writing in the Major—

Select one of the following:

CS 181W	Computers, Ethics, and Public Policy
CS 191W	Writing Intensive Senior Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

Computer Science Core (15 units)—

CS 107	Computer Organization and Systems	5
CS 110	Principles of Computer Systems	5
CS 161	Design and Analysis of Algorithms	5

Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

Artificial Intelligence Track

		Units
CS 221	Artificial Intelligence: Principles and Techniques	4
Select two of the following:		6-8
CS 223A	Introduction to Robotics	
CS 224M	Multi-Agent Systems	
CS 224N	Natural Language Processing	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 131	Computer Vision: Foundations and Applications	

or CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
One additional course from the list above or the following:		3-4
CS 124	From Languages to Information	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	
CS 222	Rational Agency and Intelligent Interaction	
CS 224S	Spoken Language Processing	
CS 224U	Natural Language Understanding	
CS 224W	Social and Information Networks	
CS 225A	Experimental Robotics	
CS 225B	Robot Programming Laboratory	
CS 227B	General Game Playing	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
CS 231B	The Cutting Edge of Computer Vision	
CS 231M	Mobile Computer Vision	
CS 262	Computational Genomics	
CS 276	Information Retrieval and Web Search	
CS 277	Experimental Haptics	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CS 329	Topics in Artificial Intelligence (with adviser consent)	
CS 331A	Advanced Reading in Computer Vision	
CS 374	Algorithms in Biology	
CS 379	Interdisciplinary Topics (with adviser consent)	
EE 263	Introduction to Linear Dynamical Systems	
EE 376A	Information Theory	
ENGR 205	Introduction to Control Design Techniques	
ENGR 209A	Analysis and Control of Nonlinear Systems	
MSE 251	Stochastic Control	
MSE 351	Dynamic Programming and Stochastic Control	
STATS 315A	Modern Applied Statistics: Learning	
STATS 315B	Modern Applied Statistics: Data Mining	
Track Electives (at least three additional courses from the above lists, or the general CS electives list, or the following): ⁵		9-13
CS 275	Translational Bioinformatics	
CS 334A	Convex Optimization I	
or EE 364A	Convex Optimization I	
EE 364B	Convex Optimization II	
ECON 286	Game Theory and Economic Applications	
MSE 252	Decision Analysis I: Foundations of Decision Analysis	
MSE 352	Decision Analysis II: Professional Decision Analysis	
MSE 355	Influence Diagrams and Probabilistic Networks	
PHIL 152	Computability and Logic	
PSYCH 202	Cognitive Neuroscience	
PSYCH 204A	Human Neuroimaging Methods	
PSYCH 204B	Computational Neuroimaging: Analysis Methods	
STATS 200	Introduction to Statistical Inference	
STATS 202	Data Mining and Analysis	
STATS 205	Introduction to Nonparametric Statistics	

Biocomputation Track—

The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.

Select one of the following:		3-4
CS 121	(Not given this year)	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	

Select one of the following:		
CS 173	A Computational Tour of the Human Genome	
or CS 273A	A Computational Tour of the Human Genome	
CS 262	Computational Genomics	
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 274	Representations and Algorithms for Computational Molecular Biology	
CS 275	Translational Bioinformatics	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	

One additional course from the lists above or the following:		3-4
CS 124	From Languages to Information	
CS 145	Introduction to Databases	
CS 147	Introduction to Human-Computer Interaction Design	
CS 148	Introduction to Computer Graphics and Imaging	
CS 248	Interactive Computer Graphics	

One course from either the general CS electives list, BIOE 101, or the list of Biomedical Computation (BMC) Informatics electives (see <http://bmc.stanford.edu> and select Informatics from the elective options)⁵

One course from the BMC Informatics elective list	3-4
One course from either the BMC Informatics, Cellular/Molecular, or Organs/Organisms electives lists	3-5
One course from either the BMC Cellular/Molecular or Organs/Organisms electives lists	3-5

Computer Engineering Track—

		Units
EE 108 & EE 180	Digital System Design and Digital Systems Architecture	6-8
Select two of the following:		8
EE 101A	Circuits I	
EE 101B	Circuits II	
EE 102A	Signal Processing and Linear Systems I	
EE 102B	Signal Processing and Linear Systems II	
Satisfy the requirements of one of the following concentrations:		
1) Digital Systems Concentration		
CS 140	Operating Systems and Systems Programming	
or CS 143	Compilers	
EE 109	Digital Systems Design Lab	
EE 271	Introduction to VLSI Systems	

Select two of the following if not counted above (6-8 units):

CS 140 Operating Systems and Systems Programming
or CS 143 Compilers

CS 144 Introduction to Computer Networking

CS 149 Parallel Computing

CS 240E

CS 244 Advanced Topics in Networking

EE 273 Digital Systems Engineering

EE 282 Computer Systems Architecture

2) Robotics and Mechatronics Concentration

CS 205A Mathematical Methods for Robotics, Vision, and Graphics

CS 223A Introduction to Robotics

ME 210 Introduction to Mechatronics

ENGR 105 Feedback Control Design

Select one of the following (3-4 units):

CS 225A Experimental Robotics

CS 225B Robot Programming Laboratory

CS 231A Computer Vision: From 3D Reconstruction to Recognition

CS 235 (Not given this year)

CS 277 Experimental Haptics

ENGR 205 Introduction to Control Design Techniques

ENGR 207A Linear Control Systems I

ENGR 207B Linear Control Systems II

3) Networking Concentration

CS 140 Operating Systems and Systems Programming
& CS 144 and Introduction to Computer Networking

Select three of the following (9-11 units):

CS 240 Advanced Topics in Operating Systems

CS 240E

CS 244 Advanced Topics in Networking

CS 244B Distributed Systems

CS 244E Networked Wireless Systems

CS 249A Object-Oriented Programming from a Modeling and Simulation Perspective

CS 249B Large-scale Software Development

EE 179 Analog and Digital Communication Systems

Graphics Track—

CS 148	Introduction to Computer Graphics and Imaging & CS 248	8
--------	--	---

Select one of the following: ⁶ 3-5

CS 205A Mathematical Methods for Robotics, Vision, and Graphics

CME 104 Linear Algebra and Partial Differential Equations for Engineers

CME 108 Introduction to Scientific Computing

MATH 52 Integral Calculus of Several Variables

MATH 113 Linear Algebra and Matrix Theory

Select two of the following: 6-8

CS 164 Computing with Physical Objects: Algorithms for Shape and Motion

CS 178 Digital Photography

CS 205B Mathematical Methods for Fluids, Solids, and Interfaces

CS 231A Computer Vision: From 3D Reconstruction to Recognition

or CS 131 Computer Vision: Foundations and Applications

CS 268 Geometric Algorithms

CS 348A

CS 348B Computer Graphics: Image Synthesis Techniques

CS 448 Topics in Computer Graphics

CS 478 (Not given this year)

Track Electives: at least two additional courses from the lists above, the 6-8 general CS electives list, or the following: ⁵

ARTSTUDI Design I : Fundamental Visual Language
160

ARTSTUDI Introduction to Photography
170

ARTSTUDI Digital Art I
179

CS 48N (Not given this year)

CME 302 Numerical Linear Algebra

CME 306 Numerical Solution of Partial Differential Equations

EE 262 Two-Dimensional Imaging

EE 264 Digital Signal Processing

EE 278 Introduction to Statistical Signal Processing

EE 368 Digital Image Processing

ME 101 Visual Thinking

PSYCH 30 Introduction to Perception

PSYCH 221 Applied Vision and Image Systems

Human-Computer Interaction Track—

CS 147	Introduction to Human-Computer Interaction Design	4
--------	---	---

Select one of the following: 4

CS 247 Human-Computer Interaction Design Studio

CS 377 Topics in Human-Computer Interaction

CS 448B Data Visualization

CS 210A Software Project Experience with Corporate Partners

Select one of the following: 3-6

PSYCH 30 Introduction to Perception

PSYCH 45 Introduction to Learning and Memory

PSYCH 50 Introduction to Cognitive Neuroscience

PSYCH 70 Introduction to Social Psychology

PSYCH 75 Introduction to Cultural Psychology

PSYCH 131 Language and Thought

PSYCH 154 Judgment and Decision-Making

PSYCH 252 Statistical Methods for Behavioral and Social Sciences

ME 101 Visual Thinking

Or any MS&E 18*

Select one of the following: 3-4

CS 108 Object-Oriented Systems Design

CS 124 From Languages to Information

CS 140 Operating Systems and Systems Programming

CS 142 Web Applications

CS 221 Artificial Intelligence: Principles and Techniques

CS 229 Machine Learning

CS 229A	(Not given this year)	
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	
Select one of the following:		3-4
CS 148	Introduction to Computer Graphics and Imaging	
CS 376	Human-Computer Interaction Research	
CS 378	(Not given this year)	
Track Electives: at least two additional courses from the lists above, the general CS electives list, or the following: ⁵		6-9
ARTSTUDI 160	Design I : Fundamental Visual Language	
COMM 169	Computers and Interfaces	
CS 476A	Music, Computing, and Design I: Software Paradigms for Computer Music	
ME 115A	Introduction to Human Values in Design	
ME 115B	Product Design Methods	
SYMSYS 245	Cognition in Interaction Design	

Information Track—

		Units
CS 124	From Languages to Information	4
CS 145	Introduction to Databases	4
Two courses, from different areas:		6-9
1) Information-based AI applications		
CS 224N	Natural Language Processing	
CS 224S	Spoken Language Processing	
CS 229	Machine Learning	
CS 229A	(Not given this year)	
2) Database and Information Systems		
CS 140	Operating Systems and Systems Programming	
CS 142	Web Applications	
CS 245	Database Systems Principles	
CS 246	Mining Massive Data Sets	
CS 341	Project in Mining Massive Data Sets	
CS 345	(Offered occasionally)	
CS 346	Database System Implementation	
CS 347	Parallel and Distributed Data Management	
3) Information Systems in Biology		
CS 262	Computational Genomics	
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
CS 274	Representations and Algorithms for Computational Molecular Biology	
4) Information Systems on the Web		
CS 224W	Social and Information Networks	
CS 276	Information Retrieval and Web Search	
CS 364B	(Not given this year)	
At least three additional courses from the above areas or the general CS electives list. ⁵		

Systems Track—

		Units
CS 140	Operating Systems and Systems Programming	4
Select one of the following:		3-4
CS 143	Compilers	
EE 180	Digital Systems Architecture	

Two additional courses from the list above or the following:		6-8
CS 144	Introduction to Computer Networking	
CS 145	Introduction to Databases	
CS 149	Parallel Computing	
CS 155	Computer and Network Security	
CS 240	Advanced Topics in Operating Systems	
CS 242	Programming Languages	
CS 243	Program Analysis and Optimizations	
CS 244	Advanced Topics in Networking	
CS 245	Database Systems Principles	
EE 271	Introduction to VLSI Systems	
EE 282	Computer Systems Architecture	

Track Electives: at least three additional courses selected from the list above, the general CS electives list, or the following:⁵

CS 240E		
CS 244C	Readings and Projects in Distributed Systems	
CS 244E	Networked Wireless Systems	
CS 315A	Parallel Computer Architecture and Programming	
or CS 316	Advanced Multi-Core Systems	
CS 341	Project in Mining Massive Data Sets	
CS 343	(Not given this year)	
CS 344	Topics in Computer Networks	
CS 344E	Advanced Wireless Networks	
CS 345	(Offered occasionally)	
CS 346	Database System Implementation	
CS 347	Parallel and Distributed Data Management	
CS 349	Topics in Programming Systems (with permission of undergraduate advisor)	
CS 448	Topics in Computer Graphics	
EE 382C	Interconnection Networks	
EE 384A	Internet Routing Protocols and Standards	
EE 384B	Multimedia Communication over the Internet	
EE 384C	Wireless Local and Wide Area Networks	
EE 384S	Performance Engineering of Computer Systems & Networks	
EE 384X	Packet Switch Architectures	

Theory Track—

		Units
CS 154	Introduction to Automata and Complexity Theory	4
Select one of the following:		3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	
CS 167	(Not given this year)	
CS 168	The Modern Algorithmic Toolbox	
CS 255	Introduction to Cryptography	
CS 258	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	
CS 264	Beyond Worst-Case Analysis	
CS 265	Randomized Algorithms and Probabilistic Analysis	
CS 268	Geometric Algorithms	
CS 361A	Advanced Algorithms	
CS 361B	Advanced Algorithms	
Two additional courses from the list above or the following:		6-8
CS 143	Compilers	
CS 155	Computer and Network Security	

CS 157	Logic and Automated Reasoning
or PHIL 151	Metalogic
CS 166	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 242	Programming Languages
CS 254	Computational Complexity
CS 259	((With adviser consent); Not given this year)
CS 262	Computational Genomics
CS 266	Parameterized Algorithms and Complexity
CS 267	Graph Algorithms
CS 354	(Not given this year)
CS 355	(Not given this year)
CS 357	(Not given this year)
CS 358	Topics in Programming Language Theory
CS 359	Topics in the Theory of Computation (with adviser consent)
CS 364A	Algorithmic Game Theory
CS 364B	(Not given this year)
CS 366	(Not given this year)
CS 367	(Not given this year)
CS 369	Topics in Analysis of Algorithms (with adviser consent)
CS 374	Algorithms in Biology
MSE 310	Linear Programming

Track Electives: at least three additional courses from the list above, 9-12 the general CS electives list, or the following:⁵

CME 302	Numerical Linear Algebra
CME 305	Discrete Mathematics and Algorithms
PHIL 152	Computability and Logic

Unspecialized Track—

	Units	
CS 154	Introduction to Automata and Complexity Theory	4
Select one of the following:		4
CS 140	Operating Systems and Systems Programming	
CS 143	Compilers	
One additional course from the list above or the following:		3-4
CS 144	Introduction to Computer Networking	
CS 155	Computer and Network Security	
CS 242	Programming Languages	
CS 244	Advanced Topics in Networking	
EE 180	Digital Systems Architecture	
Select one of the following:		3-4
CS 121	(Not given this year)	
CS 221	Artificial Intelligence: Principles and Techniques	
CS 223A	Introduction to Robotics	
CS 228	Probabilistic Graphical Models: Principles and Techniques	
CS 229	Machine Learning	
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	
Select one of the following:		3-4
CS 145	Introduction to Databases	

CS 147	Introduction to Human-Computer Interaction Design
CS 148	Introduction to Computer Graphics and Imaging
CS 248	Interactive Computer Graphics
CS 262	Computational Genomics

At least two courses from the general CS electives list⁵

Individually Designed Track

Students may propose an individually designed track. Proposals should include a minimum of seven courses, at least four of which must be CS courses numbered 100 or above. See Handbook for Undergraduate Engineering Programs for further information.

Senior Capstone Project (3 units minimum)

CS 191	Senior Project ⁷
CS 191W	Writing Intensive Senior Project ⁷
CS 194	Software Project
CS 194W	Software Project
CS 210B	Software Project Experience with Corporate Partners
CS 294W	Writing Intensive Research Project in Computer Science

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>)

- MATH 19, MATH 20, and MATH 21 may be taken instead of MATH 41 and MATH 42 as long as at least 26 MATH units are taken. AP Calculus must be approved by the School of Engineering.
- The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 104. Completion of MATH 52 and MATH 53 counts as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.
- The science elective may be any course of 3 or more units from the School of Engineering Science list plus PSYCH 30; AP Chemistry may be used to meet this requirement. Either of the PHYSICS sequences 61/63 or 21/23 may be substituted for 41/43 as long as at least 11 science units are taken. AP Physics must be approved by the School of Engineering.
- Students who take ENGR 40A (3 units) are required to take two additional units of ENGR Fundamentals (13 units minimum), or 2 additional units of Depth (27 units minimum for track and elective courses).
- General CS Electives: CS 108, CS 121 or CS 221, CS 124, CS 131, CS 140, CS 142, CS 143 CS 144, CS 145, CS 147, CS 148, CS 149, CS 154, CS 155, CS 157 or PHIL 151, CS 164, CS 166, CS 167, CS 168, CS 190, CS 205A, CS 205B, CS 210A, CS 222, CS 223A, CS 224M, CS 224N, CS 224S, CS 224U, CS 224W, CS 225A, CS 225B, CS 227B, CS 228, CS 228T, CS 229, CS 229A, CS 229T, CS 231A, CS 231B, CS 231M, CS 232, CS 235, CS 240, CS 240H, CS 241, CS 242, CS 243, CS 244, CS 244B, CS 245, CS 246, CS 247, CS 248, CS 249A, CS 249B, CS 254, CS 255, CS 258, CS 261, CS 262, CS 263, CS 264, CS 265, CS 266, CS 267, CS 270, CS 272, CS 173 or CS 273A, CS 274, CS 276, CS 277, CS 279, CS 295, CS 348B; CME 108; EE 180, EE 282, EE 364A.

- ⁶ CS 205A Mathematical Methods for Robotics, Vision, and Graphics is recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.
- ⁷ Independent study projects (CS 191 Senior Projector CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the *Handbook for Undergraduate Engineering Programs*.

Honors Program

The Department of Computer Science (CS) offers an honors program for undergraduates whose academic records and personal initiative indicate that they have the necessary skills to undertake high-quality research in computer science. Admission to the program is by application only. To apply for the honors program, students must be majoring in Computer Science, have a grade point average (GPA) of at least 3.6 in courses that count toward the major, and achieve senior standing (135 or more units) by the end of the academic year in which they apply. Coterminous master's students are eligible to apply as long as they have not already received their undergraduate degree. Beyond these requirements, students who apply for the honors program must find a Computer Science faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford's Academic Council.

Students who meet the eligibility requirements and wish to be considered for the honors program must submit a written application to the CS undergraduate program office by May 1 of the year preceding the honors work. The application must include a letter describing the research project, a letter of endorsement from the faculty sponsor, and a transcript of courses taken at Stanford. Each year, a faculty review committee selects the successful candidates for honors from the pool of qualified applicants.

In order to receive departmental honors, students admitted to the honors program must, in addition to satisfying the standard requirements for the undergraduate degree, do the following:

1. Complete at least 9 units of CS 191 or CS 191W under the direction of their project sponsor.
2. Attend a weekly honors seminar Winter and Spring quarters.
3. Complete an honors thesis deemed acceptable by the thesis adviser and at least one additional faculty member.
4. Present the thesis at a public colloquium sponsored by the department.
5. Maintain the 3.6 GPA required for admission to the honors program.

Guide to Choosing Introductory Courses

Students arriving at Stanford have widely differing backgrounds and goals, but most find that the ability to use computers effectively is beneficial to their education. The department offers many introductory courses to meet the needs of these students.

For students whose principal interest is an exposure to the fundamental ideas behind computer science and programming, CS 101 or CS 105 are the most appropriate courses. They are intended for students in nontechnical disciplines who expect to make some use of computers, but who do not expect to go on to more advanced courses. CS 101 and CS 105 meet the new Ways of Thinking Ways of Doing breadth requirements in Formal Reasoning and include an introduction to programming and the use of modern Internet-based technologies. Students interested in learning to use the computer should consider CS 1C, Introduction to Computing at Stanford.

Students who intend to pursue a serious course of study in computer science may enter the program at a variety of levels, depending on their background. Students with little prior experience or those who wish to take more time to study the fundamentals of programming should take CS 106A followed by CS 106B. Students in CS 106A need not have prior programming experience. Students with significant prior exposure to programming or those who want an intensive introduction to the field should take CS 106X or may start directly in CS 106B. CS 106A uses Java as its programming language; CS 106B and X use C++. No prior knowledge of these languages is assumed, and the prior programming experience required for CS 106B or X may be in any language. In all cases, students are encouraged to discuss their background with the instructors responsible for these courses.

After the introductory sequence, Computer Science majors and those who need a significant background in computer science for related majors in engineering should take CS 103, CS 107 and CS 110. CS 103 offers an introduction to the mathematical and theoretical foundations of computer science. CS 107 exposes students to a variety of programming concepts that illustrate critical strategies used in systems development; CS 110 builds on this material, focusing on the development of larger-scale software making use of systems and networking abstractions.

In summary:

For exposure:

CS 1C	Introduction to Computing at Stanford
-------	---------------------------------------

For nontechnical use:

CS 101 or CS 105	Introduction to Computing Principles Introduction to Computers
---------------------	---

For scientific use:

CS 106A	Programming Methodology
---------	-------------------------

For a technical introduction:

CS 106A	Programming Methodology
---------	-------------------------

For significant use:

CS 106A & CS 106B or CS 106X	Programming Methodology and Programming Abstractions Programming Abstractions (Accelerated)
CS 103	Mathematical Foundations of Computing
CS 107	Computer Organization and Systems
CS 110	Principles of Computer Systems

Overseas Studies Courses in Computer Science

For course descriptions and additional offerings, see the listings in the *Stanford Bulletin's* ExploreCourses web site (<http://explorecourses.stanford.edu>) or the Bing Overseas Studies web site (<http://bosp.stanford.edu>). Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

Joint Major Program: Computer Science and a Humanities Major

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 26)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Sciences).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the intellectual traditions of two Stanford departments—it does so in a way that reduces the total unit requirement for each major.

Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS requirements for the CS-BS degree with the following exceptions:

1. Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
2. The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
3. There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.
4. For CS, WIM can be satisfied with CS181W or CS191W.

Depth Electives for CS Tracks for students completing a Joint Major:

Artificial Intelligence Track:

One Track Elective (rather than three).

Biocomputation Track:

One course from the BMC Informatics elective list (see <http://bmc.stanford.edu> and select Informatics from the elective options), plus one course from either the general CS electives list, BIOE 101, or the list of BMC Informatics electives.

Computer Engineering Track:

- EE 108A and 108B
 - One of the following: EE 101A, 101B, 102A, 102B
 - Satisfy the requirements of one of the following concentrations:
1. Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
 2. Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105

3. Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

Graphics Track:

No Track Electives required (rather than two)

HCI Track:

No Track Electives required (rather than two)

Information Track:

One Track Elective (rather than three)

Systems Track:

One Track Elective (rather than three)

Theory Track:

One Track Elective (rather than three)

Unspecialized Track:

No Track Electives required (rather than two)

Individually Designed Track:

Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axxess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/change_UG_program.pdf) The Major-Minor and Multiple Major Course Approval Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) is required for graduation for students with a joint major.

Dropping a Joint Major Program

Information about dropping a joint major program is still being developed. This bulletin will be updated when that information is available. Student may consult the Student Services Center (<http://studentaffairs.stanford.edu/studentsservicescenter>) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

Computer Science (CS) Minor

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51.

Introductory Programming (AP Credit may be used to fulfill this requirement):

Course	Requirement	Units
CS 106B	Programming Abstractions	5
or CS 106X	Programming Abstractions (Accelerated)	

Core:

Units

CS 103	Mathematical Foundations of Computing	5
CS 107	Computer Organization and Systems	5
CS 109	Introduction to Probability for Computer Scientists	5
Electives (choose two courses from different areas):		
Artificial Intelligence—		
CS 124	From Languages to Information	4
CS 221	Artificial Intelligence: Principles and Techniques	4
CS 229	Machine Learning	3-4
Human-Computer Interaction—		
CS 147	Introduction to Human-Computer Interaction Design	4
Software—		
CS 108	Object-Oriented Systems Design	4
CS 110	Principles of Computer Systems	5
Systems—		
CS 140	Operating Systems and Systems Programming	4
CS 143	Compilers	4
CS 144	Introduction to Computer Networking	4
CS 145	Introduction to Databases	4
CS 148	Introduction to Computer Graphics and Imaging	4
Theory—		
CS 154	Introduction to Automata and Complexity Theory	4
CS 157	Logic and Automated Reasoning	3
CS 161	Design and Analysis of Algorithms	5

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

Master of Science in Computer Science

In general, the M.S. degree in Computer Science is intended as a terminal professional degree and does not lead to the Ph.D. degree. Most students planning to obtain the Ph.D. degree should apply directly for admission to the Ph.D. program. Some students, however, may wish to complete the master's program before deciding whether to pursue the Ph.D. To give such students a greater opportunity to become familiar with research, the department has instituted a program leading to a master's degree with distinction in research. This program is described in more detail below.

Admission

Applications to the M.S. program and all supporting documents must be submitted and received online by the published deadline. Information on admission requirements and deadlines is available at <http://cs.stanford.edu/admissions/>. Exceptions are made for applicants who are already students at Stanford and are applying to the coterminal program. See <http://cs/content/coterminal-program-deadline>.

University requirements for the coterminal M.S. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see <http://studentaffairs.stanford.edu/registrar/publications#Coterm>.

Requirements

A candidate is required to complete a program of 45 units. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. The 45 units may include no more than 10 units of courses from those listed below in Requirement 1. Thus, students needing to take more than two of the courses listed in Requirement 1 actually complete more than 45 units of course work in the program. Only well-prepared students may expect to finish the program in one year; most students complete the program in six quarters. Students hoping to complete the

program with 45 units should already have a substantial background in computer science, including course work or experience equivalent to all of Requirement 1 and some prior course work related to their specialization area.

Requirement 1: Foundations—

Students must complete the following courses, or waive out of them by providing evidence to their advisers that similar or more advanced courses have been taken, either at Stanford or another institution (total units used to satisfy foundations requirement may not exceed 10):

Logic, Automata, and Computability

CS 103	Mathematical Foundations of Computing
--------	---------------------------------------

Probability

Select one of the following:

CS 109	Introduction to Probability for Computer Scientists
--------	---

STATS 116	Theory of Probability
-----------	-----------------------

MSE 220	Probabilistic Analysis
---------	------------------------

CME 106	Introduction to Probability and Statistics for Engineers
---------	--

Algorithms

CS 161	Design and Analysis of Algorithms
--------	-----------------------------------

Computer Organization and Systems

CS 107	Computer Organization and Systems
--------	-----------------------------------

Principles of Computer Systems

CS 110	Principles of Computer Systems
--------	--------------------------------

Requirement 2: Significant Software Implementation—

Students must complete at least one course designated as having a significant software implementation component. The list of such courses includes:

CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
CS 145	Introduction to Databases	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 210B	Software Project Experience with Corporate Partners	3-4
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 243	Program Analysis and Optimizations	3-4
CS 248	Interactive Computer Graphics	3-4
CS 341	Project in Mining Massive Data Sets	3
CS 346	Database System Implementation (no longer offered)	3-5

Requirement 3: Specialization—

Students may choose to satisfy this requirement through one of two options, Single Depth or Dual Depth, outlined following. All courses taken for this requirement must be taken for letter grades.

Option 1—Single Depth

- A program of 27 units in a single area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the specialization.
- Additionally, students must complete three breadth courses from the list of approved breadth courses associated with their chosen specialization. Individual specializations explicitly have different breadth requirements; see the individual specialization sheets at <http://cs.stanford.edu/degrees/mssc/programsheets> for details.

- Breadth courses may not be waived, must be taken for at least 3 units each, and must be completed for a letter grade.

Option 2—Dual Depth

- Students select distinct primary and secondary areas.
- A program of 21 units in the primary area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the primary specialization.
- Students must also complete a program of five courses satisfying the requirements for their secondary area of specialization.
- Breadth courses are not required.

Specialization Areas—

Ten approved specialization areas which may be used to satisfy Requirement 3 are listed following. Students may propose to the M.S. program committee other coherent programs that meet their goals and satisfy the basic requirements.

Courses marked with an asterisk (*) require consent of the faculty adviser. Courses marked with a double asterisk (**) may be waived by students with equivalent course work and with the approval of their adviser.

1. Artificial Intelligence—

A.

CS 221	Artificial Intelligence: Principles and Techniques **
--------	---

B. Select at least four of the following:

CS 223A	Introduction to Robotics
CS 224M	Multi-Agent Systems
CS 224N	Natural Language Processing
CS 224S	Spoken Language Processing
CS 224U	Natural Language Understanding
CS 224W	Social and Information Networks
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 231A	Computer Vision: From 3D Reconstruction to Recognition

C. Sufficient depth units from category (b) and the following:

CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 222	Rational Agency and Intelligent Interaction
CS 225A	Experimental Robotics
CS 225B	Robot Programming Laboratory
CS 227B	General Game Playing
CS 229A	(Not given this year)
CS 229T	Statistical Learning Theory
CS 231B	The Cutting Edge of Computer Vision
CS 231M	Mobile Computer Vision
CS 232	Digital Image Processing
CS 238	Decision Making under Uncertainty
CS 239	Advanced Topics in Sequential Decision Making
CS 246	Mining Massive Data Sets
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 275	Translational Bioinformatics

CS 276	Information Retrieval and Web Search
CS 277	Experimental Haptics
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells
CS 294A	Research Project in Artificial Intelligence *
CS 321	(Not given this year)
CS 327A	Advanced Robotic Manipulation (Not given this year)
CS 328	Topics in Computer Vision
CS 329	Topics in Artificial Intelligence
CS 331A	Advanced Reading in Computer Vision
CS 331B	3D Representation and Recognition
CS 334A	Convex Optimization I
or EE 364A	Convex Optimization I
CS 341	Project in Mining Massive Data Sets
CS 345	(Offered occasionally)
CS 362	(Not given this year)
CS 364A	Algorithmic Game Theory
CS 364B	(Not given this year)
CS 374	Algorithms in Biology (not given this year)
CS 377	Topics in Human-Computer Interaction *
CS 379	Interdisciplinary Topics *
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
EE 263	Introduction to Linear Dynamical Systems
EE 363	(not given this year)
EE 364B	Convex Optimization II
EE 376A	Information Theory
ENGR 205	Introduction to Control Design Techniques
ENGR 209A	Analysis and Control of Nonlinear Systems
MSE 251	Stochastic Control
MSE 252	Decision Analysis I: Foundations of Decision Analysis
MSE 351	Dynamic Programming and Stochastic Control
MSE 352	Decision Analysis II: Professional Decision Analysis
MSE 353	Decision Analysis III: Frontiers of Decision Analysis
PSYCH 202	Cognitive Neuroscience
STATS 202	Data Mining and Analysis
STATS 315A	Modern Applied Statistics: Learning
STATS 315B	Modern Applied Statistics: Data Mining
BIOE 332	Large-Scale Neural Modeling
APPPHYS 293	Theoretical Neuroscience

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Artificial Intelligence must take five total courses satisfying the area (a) and (b) requirements above.
- Those students who have waived out of CS 221 may take an additional course in either area (b) or (c).

Artificial Intelligence Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E		
CS 240H		3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E	Networked Wireless Systems	3
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 255	Introduction to Cryptography	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	3
CS 264	Beyond Worst-Case Analysis	3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266	Parameterized Algorithms and Complexity	3
CS 267	Graph Algorithms	3
CS 268	Geometric Algorithms	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

2. Biocomputation—

A. Select at least four of the following:

CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells

B. Sufficient depth units from category (a) and the following:

CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning

CS 229A	(Not given this year)
CS 245	Database Systems Principles
CS 246	Mining Massive Data Sets
CS 261	Optimization and Algorithmic Paradigms
CS 264	Beyond Worst-Case Analysis
CS 265	Randomized Algorithms and Probabilistic Analysis
CS 268	Geometric Algorithms
CS 275	Translational Bioinformatics
CS 277	Experimental Haptics
CS 341	Project in Mining Massive Data Sets
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 362	(Not given this year)
CS 374	Algorithms in Biology
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
APPPHYS 293	Theoretical Neuroscience
BIOC 218	
BIOE 332	Large-Scale Neural Modeling
GENE 211	Genomics
SBIO 228	Computational Structural Biology

• Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) and (b) requirements above.

• Students with a secondary area of specialization (per Option 2 above) in Biocomputation must take five total courses, three courses of which must come from area (a) and the remaining two courses may come from either area (a) or (b).

Biocomputation Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4

CS 224W	Social and Information Networks	3
CS 227B	General Game Playing	3
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E		
CS 240H		3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E	Networked Wireless Systems	3
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 255	Introduction to Cryptography	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

3. Computer and Network Security—

A.

CS 140	Operating Systems and Systems Programming **	
CS 144	Introduction to Computer Networking **	
CS 155	Computer and Network Security	
CS 244	Advanced Topics in Networking	
CS 255	Introduction to Cryptography	

B. Select at least three of the following:

CS 142	Web Applications	
CS 240	Advanced Topics in Operating Systems	
CS 241	(Not given this year; alternate years)	
CS 244B	Distributed Systems	
CS 244C	Readings and Projects in Distributed Systems	
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	
CS 265	Randomized Algorithms and Probabilistic Analysis	
CS 340	Topics in Computer Systems	
CS 344	Topics in Computer Networks	
CS 355	(Not given this year)	

C. Sufficient depth units from category (b) and the following:

CS 240E		
CS 244E	Networked Wireless Systems	
CS 245	Database Systems Principles	
CS 264	Beyond Worst-Case Analysis	
CS 294S	Research Project in Software Systems and Security (Not given this year) *	
CS 295	Software Engineering	
CS 341	Project in Mining Massive Data Sets	
CS 345	(Offered occasionally)	
CS 347	Parallel and Distributed Data Management	
CS 361A	Advanced Algorithms	

CS 393	Computer Laboratory *	
CS 395	Independent Database Project *	
CS 399	Independent Project *	
EE 384A	Internet Routing Protocols and Standards	
EE 384B	Multimedia Communication over the Internet (not given this year)	
EE 384C	Wireless Local and Wide Area Networks	
EE 384M	Network Science	
EE 384S	Performance Engineering of Computer Systems & Networks	
EE 384X	Packet Switch Architectures	

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Computer and Network Security must take five courses; those five courses must satisfy the area (a) requirement and additional courses from area (b) should be taken if any area (a) requirements are waived.

Computer and Network Security Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 143	Compilers	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social and Information Networks	3
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 246	Mining Massive Data Sets	3-4
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 262	Computational Genomics	3

CS 268	Geometric Algorithms	3
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

4. Human-Computer Interaction—

A.

CS 147	Introduction to Human-Computer Interaction Design	**
--------	---	----

B. Select one of the following:

CS 247	Human-Computer Interaction Design Studio
CS 294H	Research Project in Human-Computer Interaction

C. Select one of the following:

CS 376	Human-Computer Interaction Research
CS 378	(Not given this year)
CS 448B	Data Visualization

D. Select one of the following:

CS 124	From Languages to Information
CS 142	Web Applications
CS 148	Introduction to Computer Graphics and Imaging

E. Select one of the following:

CS 303	(Not given this year)
COMM 206	Communication Research Methods
COMM 268	Experimental Research in Advanced User Interfaces
PSYCH 110	Research Methods and Experimental Design
PSYCH 252	Statistical Methods for Behavioral and Social Sciences
PSYCH 254	Lab in Experimental Methods
SOC 257	Causal Inference in Quantitative Educational and Social Science Research

F. Select one of the following:

ARTSTUDI 160	Design I: Fundamental Visual Language
ME 203	Design and Manufacturing
ME 216A	Advanced Product Design: Needfinding
ME 277	Graduate Design Research Techniques
ME 377	Design Thinking Studio: Experiences in Innovation and Design

Any d.school course

G. One or more courses from areas (b) through (f), or the following:

ARTSTUDI 260	Design II
CS 224N	Natural Language Processing
CS 224W	Social and Information Networks
CS 229	Machine Learning
CS 229A	(Not given this year)
CS 242	Programming Languages
CS 246	Mining Massive Data Sets
CS 248	Interactive Computer Graphics

CS 295	Software Engineering
CS 341	Project in Mining Massive Data Sets
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
CS 402	Beyond Bits and Atoms: Designing Technological Tools
CS 476A	Music, Computing, and Design I: Software Paradigms for Computer Music

- Or any d.school class listed at <http://dschool.stanford.edu>, or any HCI class listed at <http://hci.stanford.edu/courses>. Such courses must be numbered 100 or above and be taken for at least 3 units to count for this requirement.
- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) through (g) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Human-Computer Interaction must take five courses as follows:
 - one course each from areas (a), (d), (e), and (f)
 - then one course from either area (b) or (c)
- Students waiving out of the area (a) requirement should take one additional course from areas (b) through (g).

Human-Computer Interaction Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E	(no longer offered)	
CS 240H		3-4
CS 243	Program Analysis and Optimizations	3-4

CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E	Networked Wireless Systems	3
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 255	Introduction to Cryptography	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	3
CS 262	Computational Genomics	3
CS 264	Beyond Worst-Case Analysis	3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266	Parameterized Algorithms and Complexity	3
CS 267	Graph Algorithms	3
CS 268	Geometric Algorithms	3
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3

EE 282	Computer Systems Architecture	3

5. Information Management and Analytics

A.

CS 145	Introduction to Databases **	3-4
--------	------------------------------	-----

B. Select at least four of the following:

CS 224N	Natural Language Processing
CS 224W	Social and Information Networks
CS 229	Machine Learning
CS 245	Database Systems Principles
CS 246	Mining Massive Data Sets
CS 276	Information Retrieval and Web Search
CS 345	(Offered occasionally)
CS 346	Database System Implementation (no longer offered)

CS 347 Parallel and Distributed Data Management

C. Sufficient depth units from category (b) and the following:

CS 144	Introduction to Computer Networking
CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 224S	Spoken Language Processing
CS 224U	Natural Language Understanding
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229A	(Not given this year)
CS 229T	Statistical Learning Theory
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 240	Advanced Topics in Operating Systems
CS 242	Programming Languages
CS 243	Program Analysis and Optimizations

CS 244	Advanced Topics in Networking
CS 244B	Distributed Systems
CS 244C	Readings and Projects in Distributed Systems
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 255	Introduction to Cryptography
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 275	Translational Bioinformatics
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 321	(Not given this year)
CS 341	Project in Mining Massive Data Sets
CS 344	Topics in Computer Networks
CS 362	(Not given this year)
CS 364B	(Not given this year)
CS 374	Algorithms in Biology
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
STATS 315A	Modern Applied Statistics: Learning
STATS 315B	Modern Applied Statistics: Data Mining

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Information Management and Analytics must take five courses satisfying the area (a) and (b) requirements above. Note that if CS145 was waived in area (a), students should take an additional course from either area (b) or (c) in its place.

Information Management and Analytics Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3

CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 227B	General Game Playing	3
CS 240E		
CS 244E	Networked Wireless Systems	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	3
CS 264	Beyond Worst-Case Analysis	3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266	Parameterized Algorithms and Complexity	3
CS 267	Graph Algorithms	3
CS 268	Geometric Algorithms	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

6. Mobile and Internet Computing—

A. Select two of the following:

CS 140	Operating Systems and Systems Programming **
CS 144	Introduction to Computer Networking
CS 244	Advanced Topics in Networking

B. Select one of the following:

CS 142	Web Applications
CS 147	Introduction to Human-Computer Interaction Design
CS 247	Human-Computer Interaction Design Studio

C. Select one of the following:

CS 155	Computer and Network Security
CS 255	Introduction to Cryptography

D.

CS 294S	Research Project in Software Systems and Security (Not given this year)
---------	--

E. Sufficient depth units from categories (a) through (d) and the following:

CS 224W	Social and Information Networks
CS 244E	Networked Wireless Systems
CS 246	Mining Massive Data Sets
CS 344	Topics in Computer Networks
CS 344E	Advanced Wireless Networks
CS 364A	Algorithmic Game Theory

PSYCH 252	Statistical Methods for Behavioral and Social Sciences
-----------	--

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a) through (e) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Mobile and Internet Computing must take five courses satisfying the area (a) through (d) requirements above.

Mobile and Internet Computing Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 143	Compilers	3-4
CS 145	Introduction to Databases	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E	(no longer offered)	
CS 240H		3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244B	Distributed Systems	3
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	3
CS 262	Computational Genomics	3
CS 264	Beyond Worst-Case Analysis	3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266	Parameterized Algorithms and Complexity	3
CS 267	Graph Algorithms	3
CS 268	Geometric Algorithms	3

CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

7. Real-World Computing—

A. Select at least three of the following:

CS 148	Introduction to Computer Graphics and Imaging
CS 223A	Introduction to Robotics
CS 231A	Computer Vision: From 3D Reconstruction to Recognition
CS 248	Interactive Computer Graphics

B. Select at least three of the following:

CS 205A	Mathematical Methods for Robotics, Vision, and Graphics
CS 205B	Mathematical Methods for Fluids, Solids, and Interfaces
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 262	Computational Genomics
CS 268	Geometric Algorithms
CS 277	Experimental Haptics
CS 348A	
CS 348B	Computer Graphics: Image Synthesis Techniques
CS 374	Algorithms in Biology
CME 302	Numerical Linear Algebra
CME 306	Numerical Solution of Partial Differential Equations
CME 326	Numerical Methods for Initial Boundary Value Problems

C. Sufficient additional units chosen from the above and from the following:

CS 173	A Computational Tour of the Human Genome
or CS 273A	A Computational Tour of the Human Genome
CS 225A	Experimental Robotics
CS 225B	Robot Programming Laboratory
CS 228	Probabilistic Graphical Models: Principles and Techniques
CS 229	Machine Learning
CS 229A	(Not given this year)
CS 231B	The Cutting Edge of Computer Vision
CS 231M	Mobile Computer Vision
CS 232	Digital Image Processing
or EE 368	Digital Image Processing
CS 247	Human-Computer Interaction Design Studio
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 274	Representations and Algorithms for Computational Molecular Biology

CS 294A	Research Project in Artificial Intelligence *
CS 327A	Advanced Robotic Manipulation (Not given this year)
CS 328	Topics in Computer Vision
CS 331A	Advanced Reading in Computer Vision
CS 331B	3D Representation and Recognition
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
CS 448	Topics in Computer Graphics
CS 478	(Not given this year)

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a), (b), and (c) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Real-World Computing must take five total courses satisfying area (a) and two of the three courses in the area (b) requirements above (i.e., three courses in area (a) and two courses in area (b)).

Real-World Computing Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social and Information Networks	3
CS 227B	General Game Playing	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E	(no longer offered)	
CS 240H		3-4
CS 242	Programming Languages	3
CS 243	Program Analysis and Optimizations	3-4
CS 244	Advanced Topics in Networking	3-4
CS 244B	Distributed Systems	3
CS 244E	Networked Wireless Systems	3
CS 246	Mining Massive Data Sets	3
CS 255	Introduction to Cryptography	3
CS 258	(Not given this year)	3
CS 259	(Not given this year)	
CS 261	Optimization and Algorithmic Paradigms	3

CS 264	Beyond Worst-Case Analysis	3
CS 265	Randomized Algorithms and Probabilistic Analysis	3
CS 266	Parameterized Algorithms and Complexity	3
CS 267	Graph Algorithms	3
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
EE 180	Digital Systems Architecture	3-4
EE 282	Computer Systems Architecture	3

8. Software Theory—

A.

CS 242	Programming Languages
CS 243	Program Analysis and Optimizations

B. Select at least one of the following:

CS 244	Advanced Topics in Networking
CS 245	Database Systems Principles
CS 295	Software Engineering
CS 341	Project in Mining Massive Data Sets
CS 345	(Offered occasionally)

C. Select at least one course from the following:

CS 255	Introduction to Cryptography
CS 261	Optimization and Algorithmic Paradigms
CS 264	Beyond Worst-Case Analysis
CS 265	Randomized Algorithms and Probabilistic Analysis
CS 266	Parameterized Algorithms and Complexity
CS 267	Graph Algorithms
CS 268	Geometric Algorithms
CS 355	(Not given this year)
CS 361A	Advanced Algorithms
CS 361B	Advanced Algorithms
CS 367	(Not given this year)

D. Sufficient depth units from (b), (c), or the following:

CS 259	(Not given this year)
CS 294S	Research Project in Software Systems and Security (Not given this year)
CS 346	Database System Implementation
CS 362	(Not given this year)
CS 393	Computer Laboratory
CS 395	Independent Database Project
CS 399	Independent Project

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (a)-(d) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Software Theory need to take 5 total courses satisfying the area (a) through (d) requirements above:
 - two courses in area (a)
 - one course each in areas (b) through (d).

Software Theory Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 140	Operating Systems and Systems Programming	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4

CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4
CS 224W	Social and Information Networks	3
CS 227B	General Game Playing	3
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 229A	(Not given this year)	3-4
CS 231A	Computer Vision: From 3D Reconstruction to Recognition	3
CS 240	Advanced Topics in Operating Systems	3
CS 240E	(no longer offered)	
CS 240H		3-4
CS 244B	Distributed Systems	3
CS 244E	Networked Wireless Systems	3
CS 246	Mining Massive Data Sets	3-4
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective	3
CS 262	Computational Genomics	3
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
CS 274	Representations and Algorithms for Computational Molecular Biology	3-4
CS 276	Information Retrieval and Web Search	3
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	3
CME 108	Introduction to Scientific Computing	3-4
CME 302	Numerical Linear Algebra	3

EE 282	Computer Systems Architecture	3

9. Systems—

A.

CS 140	Operating Systems and Systems Programming **
CS 144	Introduction to Computer Networking **
CS 240	Advanced Topics in Operating Systems
CS 242	Programming Languages

B. Select at least three of the following:

CS 243	Program Analysis and Optimizations
CS 244	Advanced Topics in Networking
CS 245	Database Systems Principles

CS 248	Interactive Computer Graphics
CS 348B	Computer Graphics: Image Synthesis Techniques
EE 271	Introduction to VLSI Systems
EE 282	Computer Systems Architecture
C. At least two additional courses chosen from category (b) and the following:	
CS 240E	(no longer offered)
CS 240H	
CS 244B	Distributed Systems
CS 244C	Readings and Projects in Distributed Systems
CS 244E	Networked Wireless Systems
CS 246	Mining Massive Data Sets
CS 249A	Object-Oriented Programming from a Modeling and Simulation Perspective
CS 249B	Large-scale Software Development
CS 255	Introduction to Cryptography
CS 259	(Not given this year)
CS 262	Computational Genomics
CS 270	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 272	Introduction to Biomedical Informatics Research Methodology
CS 276	Information Retrieval and Web Search
CS 294S	Research Project in Software Systems and Security (Not given this year) *
CS 295	Software Engineering
CS 315A	Parallel Computer Architecture and Programming
or CS 316	Advanced Multi-Core Systems
CS 340	Topics in Computer Systems
CS 341	Project in Mining Massive Data Sets
CS 343	(Not given this year)
CS 344	Topics in Computer Networks
CS 344B	(Not given this year)
CS 345	(Offered occasionally)
CS 346	Database System Implementation
CS 347	Parallel and Distributed Data Management
CS 348A	
CS 349	Topics in Programming Systems
CS 374	Algorithms in Biology
CS 393	Computer Laboratory *
CS 395	Independent Database Project *
CS 399	Independent Project *
CS 448	Topics in Computer Graphics
CS 478	(Not given this year)
EE 273	Digital Systems Engineering
EE 382C	Interconnection Networks
EE 384A	Internet Routing Protocols and Standards
EE 384B	Multimedia Communication over the Internet (not given this year)
EE 384C	Wireless Local and Wide Area Networks
EE 384M	Network Science
EE 384S	Performance Engineering of Computer Systems & Networks
EE 384X	Packet Switch Architectures

- Students with a 27-unit depth option (Option 1 above) must take 27 units subject to satisfying the area (a), (b), and (c) requirements above.

- Students with a 21-unit depth option (Option 2 above) must take that many units subject to satisfying the area (a) and (b) requirements above, and additional courses may be taken from area (c) if any courses in the area (a) requirement are waived.
- Students with a secondary area of specialization (per Option 2 above) in Systems need to take five courses; those courses must satisfy the area (a) requirement and additional courses may be taken from area (b).

Systems Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124	From Languages to Information	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-4
CS 154	Introduction to Automata and Complexity Theory	3-4
CS 155	Computer and Network Security	3
CS 157	Logic and Automated Reasoning	3
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 173	A Computational Tour of the Human Genome	3
or CS 273A	A Computational Tour of the Human Genome	
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 222	Rational Agency and Intelligent Interaction	3
CS 223A	Introduction to Robotics	3
CS 224M	Multi-Agent Systems	3
CS 224N	Natural Language Processing	3-4
CS 224S	Spoken Language Processing	2-4
CS 224U	Natural Language Understanding	3-4

EE 282	Computer Systems Architecture	3

* With consent of faculty adviser.

** Students with equivalent course work may waive with approval of their adviser.

*** CS 361A or CS 361B may be used as substitutes for CS 261.

Requirement 4

Additional elective units must be technical courses (numbered 100 or above) related to the degree program and approved by the adviser. All CS courses numbered above 110 (with the exception of CS 196 and 198) taken for 3 or more units are pre-approved as elective courses. Additionally, up to a maximum of 3 units of 500-level CS seminars, CS 300, EE 380, EE 385A, or other 1-2 unit seminars offered in the School of Engineering may be counted as electives. Elective courses may be taken on a satisfactory/no

credit basis provided that a minimum of 36 graded units is presented within the 45-unit program.

Master of Science with Distinction in Research

A student who wishes to pursue the M.S. in CS with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Computer Science. The student and principal adviser must also identify another faculty member, who need not be in the Department of Computer Science, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S. in CS degree:

1. **Research Experience**—The program must include significant research experience at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by a 50 percent appointment to a departmentally supported research assistantship, 6 units of independent study (CS 393, CS 395, or CS 399), or a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study). This research must be carried out under the direction of the primary or secondary adviser.
2. **Supervised Writing and Research**—In addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (CS 393, CS 395, or CS 399) under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. The writing and research units described in parts (1) and (2) may be counted toward the 45 units required for the degree.
3. All independent study units (CS 393, CS 395, CS 399) must be taken for letter grades and a GPA of 3.0 (B) or better must be maintained.
4. **Research Report**—Students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. A copy of the research report must be submitted to the student services office in the department three weeks before the beginning of the examination period in the student's final quarter. Both the primary and secondary adviser must approve the research report before the distinction-in-research designation can be conferred.

Joint M.S. and MBA Degree

The joint MS in Computer Science/MBA degree links two of Stanford University's world-class programs. This joint degree offers students an opportunity to develop advanced technical and managerial skills for a broader perspective on both existing technologies and new technology ventures.

Admission to the joint MSCS/MBA program requires that students apply and be accepted independently to both the Computer Science Department in the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in CS and apply to the GSB during their first year.

Additional information on the MS in Computer Science/MBA Joint Degree Program and its requirements is available on the web at: <http://cs.stanford.edu/education/masters>

Joint M.S. and Law Degree

Law students interested in pursuing an M.S. in Computer Science must apply for admission to the Computer Science Department either (i) concurrently with applying to the Law School; or (ii) after being admitted to the Law School, but no later than the earlier of: (a) the end of the second year of Law School; or (b) the Computer Science Department's admission deadline for the year following that second year of Law School.

In addition to being admitted separately to the Law School and the Computer Science Department, students must secure permission from both academic units to pursue degrees in those units as part of a joint degree program.

J.D./M.S. students may elect to begin their course of study in either the Law School or the Computer Science Department. Faculty advisors from each academic unit participate in the planning and supervising of the student's joint program. Students must be enrolled full-time in the Law School for the first year of law studies. Otherwise, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. degree as specified by the Law School and the M.S. degree as specified in this Bulletin.

The Law School approves courses from the Department of Computer Science that may count toward the J.D. degree, and the Computer Science Department approves courses from the Law School that may count toward the M.S. degree in Computer Science. In either case, approval may consist of a list applicable to all joint-degree students or may be tailored to each individual student program. No more than 45 units of approved courses may be counted toward both degrees. No more than 36 units of courses that originate outside the Law School may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the Law degree, the Law School credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis, but not below zero. The maximum number of Law School credits that may be counted toward the M.S. in Computer Science is the greater of: (i) 12 units; or (ii) the maximum number of units from courses outside of the department that M.S. candidates in Computer Science are permitted to count toward the M.S. in the case of a particular student's individual program. Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

Teaching and Research Assistantships in Computer Science

Graduate student assistantships are available. Half-time assistants receive a tuition scholarship for 8, 9, or 10 units per quarter during the academic year, and in addition receive a monthly stipend.

Duties for half-time assistants during the academic year involve approximately 20 hours of work per week. Course assistants (CAs) help an instructor teach a course by conducting discussion sections, consulting with students, and grading examinations. Research assistants (RAs) help faculty and senior staff members with research in computer science. Most course and research assistantships are held by Ph.D. students. If there is an insufficient number of Ph.D. students to staff teaching and research assistantships, then these positions are open to master's students. However, master's students should not plan on being appointed to an assistantship.

Students with fellowships may have the opportunity to supplement their stipends by serving as graduate student assistants.

Doctor of Philosophy in Computer Science

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 43)" section of this bulletin. Department requirements are stated below.

Requirements

Applications to the Ph.D. program and all supporting documents must be submitted and received online by the published deadline. Please see <http://www-cs.stanford.edu/admissions> for admissions requirements and the application deadline. Changes or updates to the admission process are posted in September.

The following are general department requirements. Contact the Computer Science Ph.D. administrator for details.

1. A student should plan and complete a coherent program of study covering the basic areas of computer science and related disciplines. The student's adviser has primary responsibility for the adequacy of the program, which is subject to review by the Student Services Office.
2. The first year of the Ph.D. program is spent working with 1-3 different professors on a rotating basis. The intent is to allow the first-year Ph.D. student to work with a variety of professors before aligning with a permanent program adviser. Students who don't need the full year to find a professor to align with will have the option of aligning within the first or second quarter.
3. The CS 300 Departmental Lecture Series seminar gives faculty the opportunity to explain their research to first year CS Ph.D. students. First year CS Ph.D. students are required to attend 2/3 of the classes to receive credit.
4. A student must complete 135 course units for graduation. Computer Science Ph.D. students take 8-10 units per quarter. Credit for coursework done elsewhere (up to the maximum of 45 course units) may be applied to graduation requirements. Students must also take at least three units of coursework from four different faculty members. There are NO courses specifically required by the CS Ph.D. program except for the 1-unit CS 300 Departmental Lecture Series and CS 499 Advanced Reading and Research or its equivalent.
5. Each student, to remain in the Ph.D. program, must satisfy the breadth requirement covering introductory-level graduate material in major areas of computer science. A student must fulfill two breadth-area requirements in each of three general areas by the end of the second year in the program. If students have fulfilled the six breadth-area requirements, and taken courses from at least four different faculty members, they are eligible to apply for candidacy prior to the second year in the program. An up-to-date list of courses that satisfy the breadth requirements can be found at <http://cs.stanford.edu/education/phd>. The student must completely satisfy the breadth requirement by the end of the second year in the program and must pass a qualifying exam in the general area of their expected dissertation by the end of the third year in the program.
6. University policy requires that all doctoral students declare candidacy by the end of the sixth quarter in residence, excluding summers. However, after aligning with a permanent adviser, passing six breadth requirements, and taking classes with four different faculty, a student is eligible to file for candidacy prior to the sixth quarter. The candidacy form serves as a "contract" between the department and the student. The department acknowledges that the student is a *bona fide* candidate for the Ph.D. and agrees that the program submitted by the student is sufficient to warrant granting the Ph.D. upon completion. The student may petition the department for modification of his or her program. Candidacy expires five years from the date of submission of the candidacy form, rounded to the end of the quarter. In special

cases, the department may extend a student's candidacy, but is under no obligation to do so.

7. Each student is required to pass a qualifying exam in their area by the end of their third year in the program. A student may only take the qualifying exam twice. If the student fails the qualifying exam a second time, the Ph.D. Program Committee is convened to discuss the student's lack of a reasonable academic progress. Failing the exam a second time is cause for dismissal from the Computer Science Ph.D. program and the committee will meet to discuss the final outcome for the student.
8. As part of the training for the Ph.D., the student is also required to complete at least four units (a unit is ten hours per week for one quarter) as a course assistant or instructor for courses in Computer Science numbered 100 or above.
9. The Reading Committee form and Oral Thesis Proposal must be submitted within one year of passing the qualifying exam.
10. The most important requirement is the dissertation. After passing the required qualifying examination, each student must secure the agreement of a member of the department faculty to act as the dissertation adviser. The dissertation adviser is often the student's program adviser.
11. The student must pass a University oral examination in the form of a defense of the dissertation. This is typically held after all or a substantial portion of the dissertation research has been completed.
12. The student is expected to demonstrate the ability to present scholarly material orally in the dissertation defense.
13. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a second member from within the department, and a third member chosen from within or outside of the University. The department requires at least two committee members to be affiliated with the Computer Science department. The principal adviser and at least one of the other committee members must be Academic Council members.

Guidelines for Reasonable Progress

By the end of the first academic year, a student should be aligned with a permanent research advisor.

By Spring Quarter of the second year, a student should complete all six breadth area requirements, two breadth area requirements in each of three areas, and file for candidacy.

By Spring Quarter of the third year, a student should pass a Qualifying Examination (<http://cs.stanford.edu/content/qualifying-exams>) in the area of his or her intended dissertation.

Within one year of passing the Qualifying Examination, a student should submit a signed Reading Committee Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/doc_diss_rdg_ctte.pdf) and Thesis Proposal.

The teaching requirement may be satisfied at any time. The research requirement is routinely satisfied by participation in research throughout the student's career.

Ph.D. Minor in Computer Science

For a minor in Computer Science, a candidate must complete 20 non-duplicate units of Computer Science coursework numbered 200 or above, except for the 100-level courses listed on the Ph.D. Minor Worksheet found at <http://cs.stanford.edu/content/phd-minor>. At least three of the courses must be master's core courses to provide breadth and one course numbered 300 or above to provide depth. One of the courses taken must include a significant programming project to demonstrate programming efficiency.

Courses must be taken for a letter grade and passed with a grade of 'B' or better. Applications for a minor in Computer Science are submitted at the same time as admission to candidacy.

Emeriti (Professors) Tom Binford, Edward Feigenbaum (<http://ksl-web.stanford.edu/people/eaf>), Richard Fikes (<http://www.stanford.edu/~fikes>), Donald E. Visiting Professors: Roland Angst, Ian Benson, Adrian Butscher, Vassos Hadzilacos, Norbert Pohlmann, Joerg Rothe, Gil Segev, Michael Stark, Jan Vitek

Secondary Appointment in CS: Anshul Kundaje

* Recalled to active duty.

Electrical Engineering

Courses offered by the Department of Electrical Engineering are listed under the subject code EE on the *Stanford Bulletin's* ExploreCourses web site.

Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart a basic understanding of electrical engineering built on a foundation of physical science, mathematics, computing, and technology, and to provide majors in the department with knowledge of electrical engineering principles along with the required supporting knowledge of mathematics, science, computing, and engineering fundamentals. The program develops students' skills in performing and designing experimental projects and communicating their findings to the scientific community effectively. Students in the major are required to select one sub-discipline for specialization. Choices include bio-electronics and bio-imaging; circuits and devices; computer hardware; computer software; music; signal processing, communication and controls; and photonics, solid state and electromagnetics; and energy and environment. The program prepares students for careers in government agencies, the corporate sector, or for future study in graduate or professional schools.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. The educational objectives of the program are:

1. Technical knowledge—provide a knowledge of electrical engineering principles along with the required supporting knowledge of computing, engineering fundamentals, mathematics, and science. The program must include depth in at least one specialty area, currently including bio-electronics and bio-imaging; circuits and devices; computer hardware; computer software; music; signal processing, communication and controls; and photonics, solid state and electromagnetics; and energy and environment.
2. Laboratory and design skills—develop the basic skills needed to perform and design experimental projects. Develop the ability to formulate problems and projects and to plan a process for solution, taking advantage of diverse technical knowledge and skills.
3. Communications skills—develop the ability to organize and present information and to write and speak effective English.
4. Preparation for further study—provide sufficient breadth and depth for successful subsequent graduate study, postgraduate study, or lifelong learning programs.
5. Preparation for the profession—provide an appreciation for the broad spectrum of issues arising in professional practice, including economics, ethics, leadership, professional organizations, safety, service, and teamwork.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing specialization in one area of Electrical Engineering and breadth in several other areas. Areas of specialization include bio-electrical engineering; hardware; software; control and system engineering; communication systems; dynamic systems and optimization; circuits; devices, sensors and technology; fields, waves and radioscience; image systems; lasers, optoelectronics and quantum electronics; network systems; signal processing; solid state materials and devices.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Electrical Engineering and related fields.

Graduate Programs in Electrical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the "Graduate Degrees" section of this bulletin.

The profession of electrical engineering demands a strong foundation in physical science and mathematics, a broad knowledge of engineering techniques, and an understanding of the relationship between technology and society. Curricula at Stanford are planned to offer the breadth of education and depth of training necessary for leadership in the profession. To engage in this profession with competence, four years of undergraduate study and at least one year of postgraduate study are recommended. For those who plan to work in highly technical development or fundamental research, additional graduate study is desirable.

The degree of Master of Science is offered under the general regulations of the University. The master's program, requiring a minimum of 45 units of

graduate study, should be considered by those with the ability and desire to make a life work of professional practice or continued graduate study.

The degree of Doctor of Philosophy is offered under the general regulations of the University. The doctoral program, requiring a minimum of 135 units of graduate study, should be considered by those with the ability and desire to make a life work of research or teaching.

Application for Admission

Applications for graduate admission in Electrical Engineering (EE) should be completed electronically at <http://gradadmissions.stanford.edu>. For information concerning Electrical Engineering graduate admissions, see <http://ee.stanford.edu/admissions>. The application deadline for full-time admission for Autumn Quarter 2015-16 is December 9, 2014.

Electrical Engineering Course Catalog Numbering System

Electrical Engineering courses are typically numbered according to the year in which the courses are normally taken.

Number	Year
010-099	first or second year undergraduate
100-199	second through fourth year undergraduate
200-299	mezzanine courses for advanced undergraduate or first-year graduate
300-399	second through fourth year graduate
400-499	specialized courses for advanced graduate
600-799	special summer courses

The Department of Electrical Engineering (EE) offers courses in the following areas:

- Biomedical Devices and Bioimaging
- Communication Systems: wireless, optical, wireline
- Control, Learning, and Optimization
- Electronic and Magnetic Devices
- Energy: solar cells, smart grid, load control
- Environmental and Remote Sensing: sensor nets, radar systems, space
- Fields and Waves
- Graphics, HCI, Computer Vision, Photography
- Information Theory and Coding: Image and data compression, denoising
- Integrated Circuit Design: MEMs, sensors, analog, RF
- Network Systems and Science: Next gen internet, wireless networks
- Nano and Quantum Science
- Nanofabrication Science and Technology
- Photonic Devices
- Systems Software: OS, compilers, languages
- Systems Hardware: architecture, VLSI, embedded systems

Areas of Research in Electrical Engineering

Candidates for advanced degrees participate in the research activities of the department as paid research assistants or as students of individual faculty members. At any one time, certain areas of research have more openings

than others. At present, faculty members and students are actively engaged in research in the following areas:

Hardware/Software Systems

- Data Science
- Distributed Systems
- Energy-Efficient Hardware Systems
- Integrated Circuits and Power Electronics
- Programming Environments
- Security
- Software Defined Networking
- Mobile Networking

Information Systems and Science

- Bio-Medical Imaging
- Communications Systems
- Control & Optimization
- Data Science
- Information Theory and Applications
- Societal Networks
- Signal Processing and Multimedia

Physical Science and Technology

- Biomedical Devices and Systems
- Electronic Devices
- Energy Harvesting and Conversion
- Integrated Circuits and Power Electronics
- Nanotechnology and NEMS/MEMS
- Nanophotonics and Quantum Technologies
- Optics

For additional information, see the Department of Electrical Engineering's Research page at <https://ee.stanford.edu/research/the-big-picture>.

Undergraduate Programs in Electrical Engineering

To major in Electrical Engineering (EE), undergraduates should follow the depth sequence in the "Undergraduate Degree in Electrical Engineering" section of this bulletin. Students must have a program planning sheet approved by their adviser and the department before the end of the quarter following the quarter in which they declare the EE major. A final version of the completed and signed program sheet is due to the department no later than one month prior to the quarter of senior year. Program sheets are available at <http://ughb.stanford.edu>. Majors must receive at least a 2.0 grade point average (GPA) in courses taken for the EE depth requirement; all classes must be taken for a letter grade.

Students interested in a minor should consult the "Minor in Electrical Engineering" section of this bulletin.

A Stanford undergraduate may work simultaneously toward the B.S. and M.S. degrees. University requirements for the coterminal M.A. or M.S. are described in the "Coterminal Bachelor's and Master's Degrees" section of this bulletin. For University coterminal degree program rules and University application forms, see <http://studentaffairs.stanford.edu/registrar/publications#Coterm>.

Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.

Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart a basic understanding of electrical engineering built on a foundation of physical science, mathematics, computing, and technology, and to provide majors in the department with knowledge of electrical engineering principles along with the required supporting knowledge of mathematics, science, computing, and engineering fundamentals. The program develops students' skills in performing and designing experimental projects and communicating their findings to the scientific community effectively. Students in the major are required to select one sub-discipline for specialization. Choices include: electronic circuits, devices and photonics; signal processing, communication and controls; hardware and software systems; bio-electronics and bio-imaging; music; and energy and environment. The program prepares students for careers in government agencies, the corporate sector, or for future study in graduate or professional schools.

Requirements

Mathematics

MATH 41	Calculus	5
MATH 42	Calculus	5
Select one 2-course sequence:		10

CME 100 & CME 102	Vector Calculus for Engineers and Ordinary Differential Equations for Engineers (Same as ENGR 154)	
----------------------	--	--

MATH 52 & MATH 53	Integral Calculus of Several Variables and Ordinary Differential Equations with Linear Algebra	
----------------------	--	--

EE Math. One additional 100-level course. Select one of the following: 3

EE 102B	Signal Processing and Linear Systems II (if not used in Depth)	
---------	---	--

EE 103	Introduction to Matrix Methods	
--------	--------------------------------	--

EE 142	Engineering Electromagnetics	
--------	------------------------------	--

CME 104/ ENGR 155B	Linear Algebra and Partial Differential Equations for Engineers	
-----------------------	--	--

MATH 113	Linear Algebra and Matrix Theory	
----------	----------------------------------	--

CS 103	Mathematical Foundations of Computing	
--------	---------------------------------------	--

Statistics/Probability. Select one of the following: ¹ 3-4

EE 178	Probabilistic Systems Analysis (Preferred)	
--------	--	--

CS 109	Introduction to Probability for Computer Scientists	
--------	---	--

Science

Select one of the following sequences: 8

PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism ²	
-------------------------------	---	--

PHYSICS 61 & PHYSICS 63	Mechanics and Special Relativity and Electricity, Magnetism, and Waves	
-------------------------------	---	--

Science elective. One additional 4-5 unit course from approved list in Undergraduate Handbook, Figure 3-2. ³ 4-5

Technology in Society

One course, see Basic Requirement 4 in the School of Engineering section 3-5

Engineering Fundamentals⁴

Select one of the following:

CS 106B/ENGR 70B	Programming Abstractions	5
or CS 106X/ ENGR 70X	Programming Abstractions (Accelerated)	

At least two additional courses, at least one of which is not in EE or CS (CS 106A is not allowed). Choose from table in Undergraduate Handbook, Figure 3-4. One from ENGR 40, ENGR 40M or ENGR 40P recommended.

Writing in the Major (WIM)

Select one of the following: 3-4

EE 109	Digital Systems Design Lab (WIM/Design)	
EE 133	Analog Communications Design Laboratory (WIM/Design)	
EE 134	Introduction to Photonics (WIM/Design)	
EE 152	Green Electronics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 191W	Special Studies and Reports in Electrical Engineering (WIM; Department approval required) ⁵	
CS 194W	Software Project (WIM/Design)	

Core Electrical Engineering Courses

EE 100	The Electrical Engineering Profession ⁶	1
EE 101A	Circuits I	4
EE 102A	Signal Processing and Linear Systems I	4
EE 108	Digital System Design	4
Physics in Electrical Engineering. Students must complete one of the following courses: 3-5		
EE 41/ENGR 40P	Physics of Electrical Engineering ⁷	
EE 65	Modern Physics for Engineers (Preferred)	
EE 142	Engineering Electromagnetics ⁸	

Depth Courses 14

Select four courses from one of the following Depth areas. Courses must include one required course, one Design course, and 2 additional courses.

Design Course 3-4

Select one of the following:

EE 109	Digital Systems Design Lab (WIM/Design)	
EE 133	Analog Communications Design Laboratory (WIM/Design)	
EE 134	Introduction to Photonics (WIM/Design)	
EE 152	Green Electronics (WIM/Design)	
EE 153	Power Electronics (WIM/Design)	
EE 168	Introduction to Digital Image Processing (WIM/Design)	
EE 262	Two-Dimensional Imaging (Design)	
EE 265	Digital Signal Processing Laboratory (Design)	
CS 194W	Software Project (WIM/Design)	

Additional Depth Electives 12

May include up to two additional Engineering Fundamentals, any CS 193 course and any letter graded EE or EE Related courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE191 and CS 106A do not count toward the 60 units.

- 1 CME 106 or STATS 116 can also fulfill the Statistics/Probability requirement, but these are not preferred.
- 2 The EE introductory class ENGR 40 or ENGR 40M may be taken concurrently with PHYSICS 43.
- 3 A minimum of 12 science units must be taken. A minimum of 40 math and science units combined must be taken.
- 4 EE Engineering Topics: Fundamentals and Depth courses must total 60 units minimum.
- 5 EE 191W may satisfy WIM only if it is a follow-up to an REU, independent study project or as part of an honors thesis project where a faculty agrees to provide supervision of writing a technical paper and with suitable support from the Writing Center.
- 6 For upper division students, a 200-level seminar in their depth area will be accepted, on petition.
- 7 EE 41/ENGR 40P can meet this requirement only if it is not used to fulfill the Engineering Fundamentals requirement.
- 8 EE 142 cannot be used for both Physics in Electrical Engineering and as a depth elective.

Depth Areas

		Units
Bio-electronics and Bio-imaging		
EE 101B	Circuits II (Required)	4
or EE 102B	Signal Processing and Linear Systems II	
EE 122B	Introduction to Biomedical Electronics	3
EE 124	Introduction to Neuroelectrical Engineering	3
EE 134	Introduction to Photonics (WIM/Design)	4
EE 168	Introduction to Digital Image Processing (WIM/Design)	4
EE 169	Introduction to Bioimaging	3
EE 202	Electrical Engineering in Biology and Medicine	3
EE 225	Biochips and Medical Imaging	3
Circuits and Devices		
EE 101B	Circuits II (Required)	4
EE 114	Fundamentals of Analog Integrated Circuit Design	3
EE 116	Semiconductor Device Physics	3
EE 122A	Analog Circuits Laboratory	3
EE 133	Analog Communications Design Laboratory (WIM/Design)	4
EE 152	Green Electronics	4
EE 153	Power Electronics (WIM/Design)	3-4
EE 212	Integrated Circuit Fabrication Processes	3
EE 214B	Advanced Analog Integrated Circuit Design	3
EE 216	Principles and Models of Semiconductor Devices	3
EE 271	Introduction to VLSI Systems	3
Computer Hardware		
CS 107	Computer Organization and Systems (Prerequisite for EE 180)	3-5
EE 180	Digital Systems Architecture (Required)	3-4
EE 109	Digital Systems Design Lab (WIM/Design)	4
EE 152	Green Electronics (WIM/Design)	4
EE 271	Introduction to VLSI Systems	3
EE 273	Digital Systems Engineering	3
EE 282	Computer Systems Architecture	3
Computer Software		
CS 107	Computer Organization and Systems (Prerequisite for EE 180)	3-5
EE 180	Digital Systems Architecture (Required)	3-4

CS 108	Object-Oriented Systems Design	3-4
CS 110	Principles of Computer Systems	3-5
CS 140	Operating Systems and Systems Programming	3-4
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
or EE 284	Introduction to Computer Networks	
CS 145	Introduction to Databases	3-4
CS 148	Introduction to Computer Graphics and Imaging	3-4
EE 152	Green Electronics (WIM/Design)	4
CS 194W	Software Project (WIM/Design)	3
Energy and Environment		
EE 101B	Circuits II (Required)	4
or EE 180	Digital Systems Architecture	
EE 116	Semiconductor Device Physics	3
EE 134	Introduction to Photonics (WIM/Design)	4
EE 151	Sustainable Energy Systems	3
EE 152	Green Electronics (WIM/Design)	4
EE 153	Power Electronics (WIM/Design)	3-4
EE 168	Introduction to Digital Image Processing (WIM/Design)	3-4
EE 263	Introduction to Linear Dynamical Systems	3
EE 293A	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
EE 293B	Fundamentals of Energy Processes	3
CEE 155	Introduction to Sensing Networks for CEE	4
CEE 173A	Energy Resources	4-5
CEE 176A	Energy Efficient Buildings	3-4
CEE 176B	Electric Power: Renewables and Efficiency	3-4
ENGR 105	Feedback Control Design	3
ENGR 205	Introduction to Control Design Techniques	3
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution	3-4
ME 185	Electric Vehicle Design	3
Music		
EE 102B	Signal Processing and Linear Systems II (Required)	4
or MUSIC 320A	Introduction to Audio Signal Processing Part I: Spectrum Analysis	
EE 109	Digital Systems Design Lab (WIM/Design)	4
EE 122A	Analog Circuits Laboratory	3
EE 264	Digital Signal Processing	3-4

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Honors Program

The Department of Electrical Engineering offers a program leading to a Bachelor of Science in Electrical Engineering with Honors. This program offers a unique opportunity for qualified undergraduate majors to conduct independent study and research at an advanced level with a faculty mentor, graduate students, and fellow undergraduates.

Admission to the honors program is by application. Declared EE majors with a grade point average (GPA) of at least 3.5 in Electrical Engineering are eligible to submit an application. Applications must be submitted by Autumn quarter of the senior year, be signed by the thesis adviser and second reader (one must be a member of the EE Faculty), and include an honors proposal. Students need to declare honors on Axess.

In order to receive departmental honors, students admitted to the honors program must:

1. Maintain a grade point average (GPA) of at least 3.5 in EE courses.
2. Complete at least 10 units of EE 191 or EE 191W for a letter grade with their thesis adviser. EE191 units do not count toward the required 60 units, with the exception of EE 191W if used to satisfy WIM.
3. Submit one final copy of the honors thesis approved by the adviser and second reader to the EE Degree Progress Officer by May 15.
4. Attend poster and oral presentation held at the end of spring quarter or present in another suitable forum approved by the faculty adviser.

Electrical Engineering (EE) Minor

The options for completing a minor in EE are outlined below. Students must complete a minimum of 23-25 units, as follows:

Select one of the following courses: Units
5

EE 65	Modern Physics for Engineers	
ENGR 40	Introductory Electronics	
ENGR 40M	An Intro to Making: What is EE	
ENGR 40P/EE 41	Physics of Electrical Engineering	
Select one of the following options:		8
Option I:		
EE 101A	Circuits I	
EE 101B	Circuits II	
Option II:		
EE 102A	Signal Processing and Linear Systems I	
EE 102B	Signal Processing and Linear Systems II	
Option III:		
EE 108	Digital System Design	
EE 180	Digital Systems Architecture	
In addition, four letter-graded EE or Related courses at the 100-level or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.		12

Master of Science in Electrical Engineering

Students with undergraduate degrees in physics, mathematics, or related sciences, as well as in various branches of engineering, are invited to apply for admission. They should typically be able to complete the master's degree in five quarters; note that many courses are not taught during the summer. Capable students without formal undergraduate preparation in electrical engineering may also be admitted for graduate study. Such students may have graduated in any field and may hold either the B.S. or B.A. degree. Graduate study in electrical engineering demands that students be adequately prepared in areas such as circuits, digital systems, fields, lab work, mathematics, and physics.

It is the student's responsibility, in consultation with an adviser, to determine whether the prerequisites for advanced courses have been met. Prerequisite courses ordinarily taken by undergraduates may be included as part of the graduate program of study. However, if the number of these is large, the proposed program may contain more than the minimum 45 units, and the time required to meet the degree requirements may be increased.

The master's degree program may provide advanced preparation for professional practice or for teaching at the junior college level. The faculty does not prescribe specific courses to be taken. Each student, with the help of a program adviser, prepares an individual program and submits it to the department for approval. The Program Proposal must be submitted to the Degree Progress Office before the end of the first quarter of graduate study (second quarter for Honors Cooperative Program students); a final revised version is due early in the final quarter of study, prior to degree conferral. Detailed requirements and instructions are available at <http://ee.stanford.edu/gradhandbook>. All requirements for a master's degree must be completed within three years after the student's first term of enrollment in the master's program (five years for Honors Cooperative Program students).

Joint Electrical Engineering and Law Degree (J.D./M.S.)

The Department of Electrical Engineering and the School of Law offer a joint degree program leading to an M.S. degree in EE combined with a J.D. degree. The J.D./M.S. program is designed for students who wish to prepare themselves for careers that involve both Law and Electrical Engineering.

Students interested in this joint degree program must apply to and gain admission separately from the Department of Electrical Engineering and

the School of Law, and as an additional step, secure consent from both academic units to pursue both degrees simultaneously. Interest in the program should be noted on a student's application to each academic unit. A student currently enrolled in either the Department of Electrical Engineering or the School of Law may apply for admission to the other academic unit and for joint degree status after commencing study in that unit.

Joint degree students may elect to begin their study in either the Department of Electrical Engineering or the School of Law. Faculty advisers from each academic unit participate in the planning and supervising of the student's joint program. In the first year of the joint degree program, students must be enrolled full-time in the School of Law. Students must satisfy the requirements for both the J.D. and the M.S. degrees as specified in the *Stanford Bulletin*.

The Electrical Engineering Department approves courses from the Law School that may count toward the M.S. degree in Electrical Engineering, and the Law School approves courses from the Department of Electrical Engineering that may count toward the J.D. degree. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program.

No more than 45 quarter hours of approved courses may be counted toward both degrees. No more than 36 quarter hours of courses that originate outside the School of Law may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the School of Law but count toward the Law degree, the School of Law credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis but not below zero.

The maximum number of School of Law units that may be counted toward the M.S. degree in Electrical Engineering is the greater of:

1. 12 units

or

2. the maximum number of units from courses outside of the department that M.S. candidates in Electrical Engineering are permitted to count toward the M.S. degree under general departmental guidelines, or as set forth in the case of a particular student's individual program.

Tuition and financial aid arrangements are typically administered through the school in which the student is enrolled.

Joint Electrical Engineering and Masters in Business Administration Degree (M.S./M.B.A.)

The Department of Electrical Engineering and the Graduate School of Business offer a joint degree program leading to an M.S. degree in EE combined with an M.B.A. degree. The joint program offers students an opportunity to develop advanced technical and managerial skills in preparation for careers in existing and new technology ventures.

Admission to the joint M.S./M.B.A. program requires that students apply and be accepted independently to both the Electrical Engineering Department at the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in EE and apply to the GSB during their first year.

The Honors Cooperative Program

Many of the department's graduate students are supported by the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in nearby companies to be part-time master's students in Electrical Engineering while continuing nearly full-

time professional employment. Prospective HCP students follow the same admission process and must meet the same admission requirements as full-time master's students. For more information regarding the Honors Cooperative Program, see the "School of Engineering" section of this bulletin.

Doctor of Philosophy in Electrical Engineering

The University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

Admission to a graduate program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement, satisfactory performance on a qualifying examination, and sponsorship by two faculty members. Enrollment in EE 391, Special Studies, is recommended as a means for getting acquainted with a faculty member who might be willing to serve as the dissertation advisor.

Students admitted to the Ph.D. program must sign up to take the department qualifying examination, given once a year in winter quarter. Students are allowed two attempts to pass the examination. Students are encouraged to take the exam in their first year of study. The first attempt must be made no later than the second year of study. Students who have never taken the qualifying examination by the end of the second year of study will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master's degree in Electrical Engineering instead. Students who do not pass the qualifying examination after two attempts will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master's degree in Electrical Engineering instead.

Upon completion of the qualifying examination and after securing agreement by two faculty members to serve as dissertation adviser and second reader, the student files an Application for Candidacy for Doctoral Degree. The dissertation adviser must be a member of the Academic Council. One of the two faculty members must have either a full, joint or courtesy appointment in the Electrical Engineering department. Students are required to advance to candidacy prior to the end of their second year in the graduate program. Students who do not advance to candidacy by the end of their second year will be dismissed from the Ph.D. program for failure to progress.

The Ph.D. in Electrical Engineering is a specialized degree, and is built on a broad base of physics, mathematics, and engineering skills. The course program is expected to reflect competency in Electrical Engineering and specialized study in other areas relevant to the student's research focus. 90 units must be completed at Stanford beyond the 45 units for a master's degree (completed either at Stanford or at another institution and transferred in via the Application for Graduate Residency Credit form), for a total of 135 units. Students must complete 21 units of letter-graded lecture courses in related advanced physics, mathematics, engineering, or computer science courses, depending on the area of research. 12 of these 21 units must be EE/EE Related courses at the 200 level or higher. The remaining 69 units should be research with the dissertation advisor (EE 400, or the corresponding course number if the dissertation advisor's primary appointment is in another department).

Only after receiving department approval of the Application for Candidacy does the student become a candidate for the Ph.D. degree.

For the most recent information, see <http://ee.stanford.edu/gradhandbook>.

Financial Assistance

The department awards a limited number of fellowships, teaching and course assistantships, and research assistantships to incoming graduate

students. Applying for financial assistance is part of the admission application.

Ph.D. Minor in Electrical Engineering

For a minor in Electrical Engineering, students must fulfill the M.S. degree depth requirement, complete at least 20 units of lecture course work at the 200-level or higher in Electrical Engineering (of which 15 units must be letter-graded), and have the Application for Ph.D. Minor approved by the EE department and the major department. A grade point average of at least 3.35 on these courses is required.

Emeriti: (Professors) Clayton W. Bates, Richard Bube, John Cioffi*, Donald C. Cox, Von R. Eshleman, Michael J. Flynn*, Joseph W. Goodman, Robert M. Gray, Stephen E. Harris, Martin E. Hellman, Umran S. Inan*, Thomas Kailath*, Gordon S. Kino, Marc Levoy, Albert Macovski*, Laurence A. Manning, Edward J. McCluskey, Malcolm M. McWhorter, James D. Meindl, Teresa Meng, Richard H. Pantell, R. Fabian W. Pease, Leonard Tyler*, Robert L. White, Bernard Widrow, Bruce A. Wooley, Yoshihisa Yamamoto*; *(Associate Professor)* Bruce B. Lusignan; *(Professors, Research)* Donald L. Carpenter*, Aldo da Rosa, Antony Fraser-Smith*, C. Robert Helms, Ingolf Lindau*, David Luckham, Arogyaswami J. Paulraj, Calvin F. Quate (* *Recalled to active duty*)

Academic Affairs Committee Chair: Joseph M. Kahn

Professors: Nicholas Bambos, Dan Boneh, Stephen P. Boyd, Robert W. Dutton, Abbas El Gamal, Shanhui Fan, Hector Garcia-Molina, Bernd Girod, Andrea G. Goldsmith, Patrick Hanrahan, James S. Harris, John L. Hennessy, Lambertus Hesselink, Mark A. Horowitz, Roger T. Howe, Joseph M. Kahn, Gregory T. A. Kovacs, Sanjay Lall, Thomas H. Lee, Nick McKeown, David A. B. Miller, Dwight G. Nishimura, Oyekunle Olukotun, Brad G. Osgood, John M. Pauly, James D. Plummer, Balaji Prabhakar, Mendel Rosenblum, Krishna Saraswat, Krishna V. Shenoy, Olav Solgaard, Fouad A. Tobagi, David Tse, Benjamin Van Roy, Jelena Vuckovic, Shan X. Wang, Jennifer Widom, H. S. Philip Wong, S. Simon Wong, Howard Zebker

Associate Professors: Dawson Engler, John T. Gill III, Christoforos E. Kozyrakis, Philip Levis, Subhasish Mitra, Andrea Montanari, Boris Murmann, Eric Pop, Tsachy Weissman

Assistant Professors: Amin Arbabian, John Duchi, Audrey Ellerbee, Jonathan Fan, Sachin Katti, Ayfer Ozgur Aydin, Ada Poon, Juan Rivas-Davila, Gordon Wetzstein

Professors (Research): William J. Dally, James F. Gibbons, Leonid Kazovsky, Butrus Khuri-Yakub, Yoshio Nishi, Piero Pianetta

Courtesy Professors: Stacey Bent, Kim Butts-Pauly, Emmanuel Candes, EJ Chichilnisky, Amir Dembo, David L. Dill, Per Enge, Ron Fedkiw, Gary Glover, Peter Glynn, Monica S. Lam, Craig Levin, David G. Luenberger, Michael McConnell, John C. Mitchell, Sandy Napel, Richard Olshen, John Ousterhout, Norbert Pelc, Julius Smith, Brian Wandell, Lei Xing, Yinyu Ye

Courtesy Associate Professors: Kwabena Boahen, Brian Hargreaves, Ramesh Johari, Andrew Ng, Amin Saberi, Daniel Spielman, Barbara van Schewick

Courtesy Assistant Professors: Mohsen Bayati, Sigrid Close, Adam de la Zerda, Surya Ganguli, Jin Hyung Lee, David Liang, Marco Pavone, Ram Rajagopal, Debbie Senesky

Lecturers: Dennis Allison, Sakshi Arora, Andrea Di Blas, Abbas Emami-Naeini, Andrew Freeman, Peter Griffin, My Le, Roger Melen, Scott Murray, David Obershaw, Dan O'Neill, Marcel Pelgrom, Jason Stinson

Consulting Professors: Ahmad Bahai, Richard Dasher, Leslie Field, Michael Garner, Fred M. Gibbons, Dimitry Gorinevsky, Bob S. Hu, Theodore Kamins, David Leeson, Fernando Mujica, Madihally Narasimha, Guru Parulkar, Stephen Ryu, Ronald Schafer, Ashok Srivastava, John Wenstrand

Consulting Associate Professors: Jatinder Singh, Jun Ye

Consulting Assistant Professor: Aneesh Nainani

Visiting Professors: Nicola Femia, Jinliang He, Anping Jiang, Igor Markov, Naresh Shanbhag

Visiting Associate Professors: Joao Cordeiro de Oliveira Barros, Hoon Kim, Olga Munoz Medina, Aslan Tchamkerten, Shengli Zhang

Visiting Assistant Professors: Meili Guo, Haricharan Lakshman, Panagiotis Patrinos, Gerson Rodriguez de los Santos Lopez, Xiumin Shi

Institute for Computational and Mathematical Engineering

Courses offered by the Institute for Computational and Mathematical Engineering are listed under the subject code CME on the (<http://explorecourses.stanford.edu/search?jsessionid=14DE1634FEFCBE32542A001C07860506?view=catalog&catalog=&page=0&q=CME&filter-catalognumber=CME=on&filter-coursestatus-Active=on>) *Stanford Bulletin's* ExploreCourses web site.

ICME is a degree granting (M.S./Ph.D.) interdisciplinary institute at the intersection of mathematics, computing, engineering and applied sciences. ICME was founded in 2004, building upon the Scientific Computing and Computational Mathematics Program (est. 1989).

At ICME, we design state-of-the-art mathematical and computational models, methods, and algorithms for engineering and science applications. The program collaborates closely with engineers and scientists in academia and industry to develop improved computational approaches and advance disciplinary fields. In particular, it leverages Stanford's strength in engineering applications in the physical, biological, mathematical, and information sciences, and has established connections with nearly 20 departments across five schools at Stanford.

The program identifies research areas that would benefit from a multidisciplinary approach in which computational mathematics plays a role. This multidisciplinary intellectual environment is a core strength of ICME, with interaction among students and faculty with diverse backgrounds and expertise. Students and faculty are active in many research areas: financial mathematics, fluid dynamics, protein folding, data science including machine learning and recommender systems, ocean dynamics, climate modeling, reservoir engineering, aerodynamics and space applications, computer graphics, and many more.

The program trains students and scholars from across Stanford in mathematical modeling, scientific computing, and advanced computational algorithms at the undergraduate and graduate levels. Courses typically provide strong theoretical foundations for the solution of real world problems and numerical computations to facilitate application of mathematical techniques and theories. Training offered includes matrix computations, computational probability and combinatorial optimization, optimization, stochastics, numerical solution of partial differential

equations, parallel computer algorithms, and new computing paradigms (CUDA, MapReduce), amongst others.

ICME offers service courses for undergraduates and graduate students to fulfill departmental requirements, core courses for master's and doctoral students in Computational and Mathematical Engineering, and specialized electives in various application areas.

The ICME master's program offers both specialized and general tracks. Currently, the program is offering specialized tracks in Computational Geoscience (<https://pangea.stanford.edu/programs/compgeo>), Data Science, Imaging Sciences, and Mathematical and Computational Finance. The program is planning to implement a Computational Medicine track in the near future.

Graduate Programs in Computational and Mathematical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the "Graduate Degrees (p. 43)" section of this bulletin.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through coursework in mathematical modeling, scientific computing, advanced computational algorithms, and a set of courses from a specific area of application or field. The latter includes computational geoscience, computational medicine, data sciences, imaging sciences, mathematical and computational finance and other interdisciplinary areas that combine advanced mathematics with the classical physical sciences or with challenging interdisciplinary problems emerging within disciplines such as business, biology, medicine, and information.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computational and Mathematical Engineering and related fields.

Master of Science in Computational and Mathematical Engineering

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees" (p. 43) section of this bulletin. The following are specific departmental requirements.

The M.S. degree in Computational and Mathematical Engineering is intended as a terminal professional degree and does not lead to the Ph.D. program. Students interested in the doctoral program should apply directly to the Ph.D. program. Master's students who have maintained a minimum grade point average (GPA) of 3.5 are eligible to take the Ph.D. qualifying exam; those who pass this examination and secure a research adviser may continue into the Ph.D. program upon acceptance by the institute.

The master's program consists of 45 units of course work taken at Stanford. No thesis is required; however, students may become involved in research projects during the master's program, particularly to explore an interest in continuing to the doctoral program. Although there is no specific background requirement, significant exposure to mathematics and engineering course work is necessary for successful completion of the program.

A student may follow the conventional master's program as described directly below, or any of the specialized tracks outlined below. Additional

information on the Computational Geoscience track is available on the department's web site (<https://pangea.stanford.edu/programs/compgeo>).

Applications to the M.S. program and all required supporting documents must be received by January 6, 2015. See <http://icme.stanford.edu/prospective/admissions/index.php.html> for up-to-date information including departmental deadlines. See also Graduate Admissions (<http://studentaffairs.stanford.edu/gradadmissions>).

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Requirements

A candidate is required to complete a program of 45 units of courses numbered 200 or above. Courses below 200 level require special approval from the program office. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. Master's students interested in continuing to the doctoral program must maintain a 3.5 or better grade point average in the program.

Requirement 1: Foundational

Students must demonstrate foundational knowledge in the field by completing four of the six core courses:

		Units
CME 303	Partial Differential Equations of Applied Mathematics	3
CME 306	Numerical Solution of Partial Differential Equations	3
CME 302	Numerical Linear Algebra	3
CME 304 or CME 364A	Numerical Optimization Convex Optimization I	3
CME 305	Discrete Mathematics and Algorithms	3
CME 308	Stochastic Methods in Engineering	3

Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

Requirement 2: Breadth Electives

18 units of general electives to demonstrate breadth of knowledge in technical area. The elective course list represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis. The elective part of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. Courses outside this list can be accepted as electives subject to approval by the student's ICME adviser.

		Units
Aeronautics and Astronautics		
AA 214B	Numerical Methods for Compressible Flows	3
AA 214C	Numerical Computation of Viscous Flow	3
AA 218	Introduction to Symmetry Analysis	3
Computational and Mathematical Engineering		
CME 211	Introduction to Programming for Scientists and Engineers	3
CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3

CME 215A/215B	Advanced Computational Fluid Dynamics	3
CME 263	Introduction to Linear Dynamical Systems	3
CME 342	Parallel Methods in Numerical Analysis	3
CME 364A	Convex Optimization I	3
Computer Science		
CS 164	Computing with Physical Objects: Algorithms for Shape and Motion	3
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 255	Introduction to Cryptography	3
CS 261	Optimization and Algorithmic Paradigms	3
CS 268	Geometric Algorithms	3
CS 340	Topics in Computer Systems	3-4
CS 348A		3-4
CS 364A	Algorithmic Game Theory	3
Electrical Engineering		
EE 223	Applied Quantum Mechanics II	3
EE 256	Numerical Electromagnetics	3
EE 376A	Information Theory	3
Management Science and Engineering		
MSE 220	Probabilistic Analysis	3-4
MSE 221	Stochastic Modeling	3
MSE 223	Simulation	3
MSE 238	Leading Trends in Information Technology	3
MSE 251	Stochastic Control	3
MSE 310	Linear Programming	3
MSE 316	Discrete Mathematics and Algorithms	3
MSE 321	Stochastic Systems	3
MSE 322	Stochastic Calculus and Control	3
Mathematics		
MATH 136	Stochastic Processes	3
MATH 171	Fundamental Concepts of Analysis	3

MATH 238	Mathematical Finance	3
Mechanical Engineering		
ME 335A/335B/335C	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 408	Spectral Methods in Computational Physics	3
ME 412	Engineering Functional Analysis and Finite Elements	3
ME 469	Computational Methods in Fluid Mechanics	3
ME 484	Computational Methods in Cardiovascular Bioengineering	3
Statistics		
STATS 208	Introduction to the Bootstrap	3
STATS 217	Introduction to Stochastic Processes	3
STATS 219	Stochastic Processes	3

STATS 237	Theory of Investment Portfolios and Derivative Securities	3
STATS 250	Mathematical Finance	3
STATS 305	Introduction to Statistical Modeling	3
STATS 310A/310B/310C	Theory of Probability	2-4
STATS 324	Multivariate Analysis	3
STATS 362	Topic: Monte Carlo	2-3
Other		
CEE 281	Mechanics and Finite Elements	3
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
ENGR 209A	Analysis and Control of Nonlinear Systems	3

Requirement 3: Specialized Electives

9 units of focused graduate application electives, approved by the ICME graduate adviser, in the areas of engineering, mathematics, physical, biological, information, and other quantitative sciences. These courses should be foundational depth courses relevant to the student's professional development and research interests.

Requirement 4: Programming

3 units of programming course work demonstrating programming proficiency. All graduate students in the program are required to complete programming course for letter grade at the level of CME 212 Advanced Programming for Scientists and Engineers or higher.

Requirement 5: Seminar

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement.

Prerequisites:

Note: Fundamental courses in mathematics and computing may be needed as prerequisites for other courses in the program. Check the prerequisites of each required course. Preparatory courses include such subjects as: calculus, linear algebra and differential calculus of several variables, integral calculus of several variables, ODEs with linear algebra, linear algebra and matrix theory, vector calculus for engineers, linear algebra and PDEs for engineers, introduction to scientific computing, linear algebra with application to engineering computations, PDEs in engineering, Computer Programming in C++ for Earth Scientists and Engineers, Introduction to Large-Scale Computing in Engineering, numerical linear algebra, programming methodology, programming abstractions, machine learning, introduction to optimization, theory of probability, and data mining and analysis.

Computational Geoscience Track

The Computational Geoscience (CompGeo) track is designed for students interested in the skills and knowledge required to develop efficient and robust numerical solutions to Earth Science problems using high-performance computing. The CompGeo curriculum is based on four fundamental areas: modern programming methods for Science and Engineering, applied mathematics with an emphasis on numerical methods, algorithms and architectures for high-performance computing and computationally oriented Earth Sciences courses. Earth Sciences/ computational project courses give practice in applying methodologies and concepts. CompGeo students are required to complete general and focused application electives (Requirements 2 and 3) from the approved list of courses from the Computational Geosciences program as well as completing EARTHSYS 310 seminar as part of Requirement 5. See <http://pangea.stanford.edu/programs/compgeo/>. All other requirements remain the same as set forth above.

Note: Students interested in pursuing the ICME M.S. in the Computational Geoscience (CompGeo) track are encouraged to contact the Computational Geoscience Program Director before applying. This track is not declared on AxBess, and it does not appear on the transcript or diploma.

Students are required to take 45 units of course work, and research credits to earn an M.S. in Computational and Mathematical Engineering with the Computational Geoscience track. The course work follows the requirements of the ICME M.S. degree as above with additional restrictions placed on the general and focused electives.

Requirement 1: Fundamentals

Identical to the general ICME master's program.

Requirement 2: Breadth Electives in Geosciences

The M.S. CompGeo track requires 18 units of course work in the Geosciences. Courses are currently offered but are not limited to the following specific areas of the School of Earth Sciences:

1. Reservoir Simulation
2. Geophysical Imaging
3. Tectonophysics/Geomechanics
4. Climate/Atmosphere/Ocean
5. Ecology/Geobiology.

The Earth Science courses, offered in EESS, ERE, GES, and Geophysics is selected based on the area of the student's interest and their research/thesis work, along with the advice and consent of the student's adviser. Students are encouraged to choose a range of courses in order to guarantee breadth of knowledge in Earth Sciences. A maximum of one non-computationally-oriented course can be counted towards the master's degree requirements. Following is a list of recommended courses (grouped by area) that can be taken to fulfill the Geosciences course requirement.

		Units
Environmental/Climate/Hydrogeology		
EESS 215	Earth System Dynamics	2
EESS 220	Physical Hydrogeology	4
EESS 221	Contaminant Hydrogeology and Reactive Transport	4
EESS 244	Marine Ecosystem Modeling	3
EESS 246B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	3
GES 224	Modeling Transport and Transformations in the Environment	2-3
GES 264	Mathematical Modeling in Biogeochemistry	3
CEE 262A	Hydrodynamics	3-4
CEE 262B	Transport and Mixing in Surface Water Flows	3-4
CEE 262C	Modeling Environmental Flows	3
CEE 263A	Air Pollution Modeling	3-4

Requirement 3: Integrative courses in Computational Geoscience (9 units)

9 units of focused research in computational geoscience. Students are required to either complete a Research Project or an Internship as described below.

		Units
Internship and/or Research Project, enrolling in a course such as:		1-4
EARTHSCI 400	Directed Research	
EARTHSCI 401	Curricular Practical Training	

Research Project

Students who plan to apply to the Ph.D. program need to take 9 units of research. Students will work with the CompGeo program director to find an appropriate advisor and research topic and then enroll in EARTHSCI 400: Directed Research (or a similar SES research course). The successful outcome of a Research Project can be:

1. an oral presentation at an international meeting requiring an extended abstract
2. a publication submission in a peer reviewed journal.
3. a written report

Internship

As an alternative to the Research Project students have the option of an internship which is recommended for those students interested in a terminal degree. The individual student is responsible for securing and organizing the internship and is required to obtain a faculty advisor and submit a written report on the internship project. Credit for the internship will be obtained through EARTHSCI 401: Curricular Practical Training (1 unit) and in this case only 8 units of research are required.

Requirement 4: Programming

3 units of programming course work demonstrating programming proficiency. All graduate students in the program are required to complete programming course for letter grade at the level of CME 212 Advanced Programming for Scientists and Engineers or higher.

		Units
CME 212	Advanced Programming for Scientists and Engineers	3
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CME 342	Parallel Methods in Numerical Analysis	3
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4

Requirement 5: Seminar

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement. One of the required seminars for CompGeo must be EARTHSCI 310 Computational Geosciences Seminar (1 unit).

Data Science Track

The Data Science track develops strong mathematical, statistical, and computational and programming skills through the general master's core and programming requirements. In addition, it provides a fundamental data science education through general and focused electives requirement from courses in data sciences and related areas. The course work follows the

requirements of the general master's degree in the core course requirement. The general and focused elective requirements (requirements 2 and 3 below) are limited to predefined courses from the data sciences and related courses group. Programming requirement (requirement 4) is extended to 6 units and includes course work in advanced scientific programming and high performance computing. The final requirement is a practical component (requirement 5) for 6 units to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component such as statistical consulting.

Requirement 1: Foundational (12 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

The following courses are required:

CME 302	Numerical Linear Algebra	3
CME 304	Numerical Optimization	3
or CME 364A	Convex Optimization I	
CME 305	Discrete Mathematics and Algorithms	3
CME 308	Stochastic Methods in Engineering (or an equivalent course approved by the committee)	3
Total Units		12

Requirement 2: Data Science electives (12 units)

Data Science electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

Take 12 units of the following:

STATS 200	Introduction to Statistical Inference	3
STATS 203	Introduction to Regression Models and Analysis of Variance	3
or STATS 305	Introduction to Statistical Modeling	
STATS 315A	Modern Applied Statistics: Learning	2-3
STATS 315B	Modern Applied Statistics: Data Mining	2-3

Requirement 3: Specialized electives (9 units)

Choose three courses in specialized areas from the following list. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

Take three of the following:

BIOE 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOS 221	Modern Statistics for Modern Biology	3
CS 224W	Social and Information Networks	3-4
CS 229	Machine Learning	3-4
CS 246	Mining Massive Data Sets	3-4
CS 347	Parallel and Distributed Data Management	3

CS 448	Topics in Computer Graphics	3-4
ENERGY 240	Geostatistics	2-3
OIT 367	Business Intelligence from Big Data	4
PSYCH 204A	Human Neuroimaging Methods	3
PSYCH 303	Human and Machine Hearing	3
STATS 290	Paradigms for Computing with Data	3
STATS 366	Modern Statistics for Modern Biology	3

Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6 units)

To ensure that students have a strong foundation in programming students are required to take 6 units of advanced programming for letter grade, with at least 3 units in parallel computing. Approved courses for advanced scientific programming include:

		Units
Advanced Scientific Programming; take 3 units		
CME 212	Advanced Programming for Scientists and Engineers	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CS 107	Computer Organization and Systems	3-5
CS 249B	Large-scale Software Development	3
Parallel/HPC Computing; take 3 units		
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 342	Parallel Methods in Numerical Analysis	3
CS 149	Parallel Computing	3-4
CS 315A	Parallel Computer Architecture and Programming	3
CS 316	Advanced Multi-Core Systems	3
CS 344C, offered in previous years, may also be counted		3

Requirement 5: Practical component (6 units)

Students are required to take 6 units of practical component that may include any combination of:

- A capstone project, supervised by a faculty member and approved by the steering committee. The capstone project should be computational in nature. Students should submit a one-page proposal, supported by the faculty member, to the steering committee (gwalther@stanford.edu) for approval at least one quarter before.
- Project labs offered by Stanford Data Lab: ENGR 250 Data Challenge Lab, and ENGR 350 Data Impact Lab.
- Other courses that have a strong hands-on and practical component, such as STATS 390 Consulting Workshop up to 3 units.

Mathematical and Computational Finance Track

The Mathematical & Computational Finance (MCF) track is an interdisciplinary program that provides education in applied and computational mathematics, statistics, and financial applications for individuals with strong mathematical skills. Upon successful completion of the MCF track in the ICME M.S. program, students will be prepared to assume positions in the financial industry as data and information scientists, quantitative strategists, risk managers, regulators, financial technologists,

or to continue on to their Ph.D. in ICME, MS&E, Mathematics, Statistics, Finance and other disciplines.

The Institute for Computational and Mathematical Engineering, in close cooperation with Mathematics, Management Science and Engineering and Statistics provide many of the basic courses.

Note: This new track in the ICME M.S. Program will supersede, beginning in the fall quarter of 2014, the interdisciplinary M.S. Program (IDP) in Financial Mathematics in the School of Humanities & Sciences.

Requirement 1: Foundational (9 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

	Units
The following courses are required:	
CME 302 Numerical Linear Algebra	3
CME 304 Numerical Optimization ¹	3
or CME 364A Convex Optimization I	
CME 308 Stochastic Methods in Engineering (or an equivalent course approved by the committee) ²	3
or MATH 236 Introduction to Stochastic Differential Equations	
Total Units	9

Requirement 2: Data Science electives (9 units)

Data Science electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

	Units
Take 9 units of the following:	
STATS 240 Statistical Methods in Finance	3-4
STATS 241 Data-driven financial and risk econometrics	3-4
STATS 243 Financial Models and Statistical Methods in Active Risk Management	3-4
STATS 315A Modern Applied Statistics: Learning	2-3
STATS 315B Modern Applied Statistics: Data Mining	2-3

Requirement 3: Finance electives (9-12 units)

Choose three courses in specialized areas from the following list. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

	Units
Take three or four of the following:	
FINANCE 320 Debt Markets	4
FINANCE 620 Financial Markets I	3
FINANCE 621 Financial Markets II	4
FINANCE 622 Dynamic Asset Pricing Theory	4
MATH 237 Default and Systemic Risk	3
MATH 239 Computation and Simulation in Finance	3
MATH 238 Mathematical Finance	3
MSE 347 Credit Risk: Modeling and Management	3

MSE 348 Optimization of Uncertainty and Applications in Finance	3
STATS 242 Algorithmic Trading and Quantitative Strategies	3

Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6-9 units)

To ensure that students have a strong foundation in programming students are required to take 6 units of advanced programming for letter grade, with at least 3 units in parallel computing. Approved courses for advanced scientific programming include:

	Units
Advanced Scientific Programming; take 3-6 units	
CME 212 Advanced Programming for Scientists and Engineers	3
CME 214 Software Design in Modern Fortran for Scientists and Engineers	3
CS 107 Computer Organization and Systems	3-5
CS 249B Large-scale Software Development	3
Parallel/HPC Computing (at least 3 units required)	
CME 213 Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 342 Parallel Methods in Numerical Analysis	3
CS 149 Parallel Computing	3-4
CS 315A Parallel Computer Architecture and Programming	3
CS 316 Advanced Multi-Core Systems	3
CS 344C, offered in previous years, may also be counted	3

Requirement 5: Practical component (6-9 units)

Students are required to take 6 units of practical component that may include any combination of:

	Units
CME 244 Project Course in Mathematical and Computational Finance	1-6
CME 245 Topics in Mathematical and Computational Finance	1
MSE 445 Projects in Wealth Management	3-4

Imaging Sciences Track

The Imaging track is designed for students interested in the skills and knowledge required to develop efficient and robust computational tools for imaging sciences. The curriculum is based on four fundamental areas:

1. mathematical models and analysis for imaging sciences and inverse problems,
2. tools and techniques from modern imaging sciences from medicine, biology, physics/chemistry, and earth science
3. algorithms in numerical methods and scientific computing
4. high performance computing skills and architecture oriented towards imaging sciences.

This program serves both as a terminal degree for students who are interested in a professional career in computational imaging sciences and also as a preparation for a higher level degree in imaging research. Students in the Imaging track are required to complete:

1. core courses (Requirement 1)
2. general and focused application electives (Requirements 2 and 3) from the approved list of courses
3. high performance computing core (Requirement 4)

4. the ICME graduate seminar or other approved seminar series (Requirement 5)

Requirement 1: Fundamentals

Identical to the general ICME master's program; see above.

Requirement 2: Imaging Sciences electives (18 units)

Imaging Sciences electives should demonstrate breadth of knowledge in the technical area. The elective course list is defined. Courses outside this list can be accepted as electives subject to approval. Petitions for approval should be submitted to student services.

Take 18 units of the following:

APPPHYS 232	Advanced Imaging Lab in Biophysics	4
BIOE 220	Introduction to Imaging and Image-based Human Anatomy	3
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
EE 236A	Modern Optics	3
EE 262	Two-Dimensional Imaging	3
EE 355	Imaging Radar and Applications	3
EE 368	Digital Image Processing	3
EE 369A	Medical Imaging Systems I	3
EE 369B	Medical Imaging Systems II	3
EE 369C	Medical Image Reconstruction	3
GEOPHYS 210	Basic Earth Imaging	2-3
GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 280	3-D Seismic Imaging	2-3
MATH 221A	Mathematical Methods of Imaging	3
MATH 221B	Mathematical Methods of Imaging	3
MATH 262	Applied Fourier Analysis and Elements of Modern Signal Processing	3
PSYCH 204A	Human Neuroimaging Methods	3

Requirement 3: Specialized electives (6 units)

6 units of focused graduate application electives, approved by the ICME graduate adviser, in the areas of engineering, mathematics, physical, biological, information, and other quantitative sciences. These courses should be foundational depth courses relevant to the student's professional development and research interests.

Requirement 4: Advanced Scientific Programming and High Performance Computing Core (6 units)

To ensure that students have a strong foundation in programming students are required to take 6 units of advanced programming for letter grade, with at least 3 units in parallel computing. Approved courses for advanced scientific programming include:

		Units
Advanced Scientific Programming; take 3 units		
CME 212	Advanced Programming for Scientists and Engineers	3
CME 214	Software Design in Modern Fortran for Scientists and Engineers	3
CS 249B	Large-scale Software Development	3

Parallel/HPC Computing; take 3 units

CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 342	Parallel Methods in Numerical Analysis	3
CS 149	Parallel Computing	3-4
CS 315A	Parallel Computer Architecture and Programming	3
CS 316	Advanced Multi-Core Systems	3
CS 344C	offered in previous years, may also be counted	3

Requirement 5: Seminar

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement.

Units Doctor of Philosophy in Computational and Mathematical Engineering

Applications to the Ph.D. program and all required supporting documents must be received by December 2, 2014. See <http://icme.stanford.edu/prospective/admissions/index.php.html> for full information. Prospective graduate students should see <http://gradadmissions.stanford.edu> for information and application materials. Applicants should take the Graduate Record Examination by October of the academic year in which the application is submitted.

Admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement and passing the qualifying examination.

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees" (p. 43) section of this bulletin.

Requirements

- Complete a minimum of 135 units of residency at Stanford, including:
 - 45 units from the master's program; all six core courses have to be completed for letter grade.
 - 27 units of focused electives in an area planned with the student's Ph.D. adviser; 12 of these units should come from ICME specialized electives with significant computational content such as the CME 320-380 series. The focused and specialized elective component of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. The elective course list following represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis; courses outside the list can be accepted as electives subject to approval by the student's ICME adviser. Research, directed study, and seminar units are excluded.
 - 3 units of programming elective demonstrating programming proficiency. Students are required to complete programming course at the level of CME 213 Introduction to parallel computing using MPI, openMP, and CUDA or higher for letter grade.
 - 60 units of thesis research
- Maintain a grade point average (GPA) of 3.5.
- Pass the qualifying examination administered by ICME.
- Complete an approved program of original research.
- Complete a written dissertation based on research.
- Pass the oral examination that is a defense of the dissertation research.

Specialized Elective List

See requirement 1b above.

		Units
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
CME 364A/364B	Convex Optimization I	3
CS 348A		3-4
EE 368	Digital Image Processing	3
MATH 205A	Real Analysis	3
MATH 215A	Complex Analysis, Geometry, and Topology	3
MATH 217A	Differential Geometry	3
MATH 221A	Mathematical Methods of Imaging	3
MATH 221B	Mathematical Methods of Imaging	3
MATH 227	Partial Differential Equations and Diffusion Processes	3
MATH 236	Introduction to Stochastic Differential Equations	3
MATH 238	Mathematical Finance	3
ME 335A/335B/335C	Finite Element Analysis	3
ME 346B	Introduction to Molecular Simulations	3
ME 351A/351B	Fluid Mechanics	3
ME 361	Turbulence	3
ME 408	Spectral Methods in Computational Physics	3
ME 412	Engineering Functional Analysis and Finite Elements	3
ME 469	Computational Methods in Fluid Mechanics	3
MSE 319	Approximation Algorithms	3
MSE 336	Platform and Marketplace Design	3
STATS 305	Introduction to Statistical Modeling	3
STATS 306A/306B	Methods for Applied Statistics	5-6
STATS 318	Modern Markov Chains	3
STATS 366	Modern Statistics for Modern Biology	3

Note: Students who need to complete 135 units at Stanford, should necessarily complete the CME master's requirements (p. 251). All courses listed under "Requirement 3" under the "Master of Science in Computational and Mathematical Engineering (p. 251)" section can be used for fulfilling the general elective requirement.

Financial Assistance

The department awards a limited number of fellowships, course assistantships, and research assistantships to incoming graduate students. Applying for such assistance is part of submitting the application for admission to the program. Students are appointed for half-time assistantships which provide a tuition scholarship at the 8, 9, 10 unit rate during the academic year and a monthly stipend. Half-time appointments generally require 20 hours of work per week. Most course assistantships and research assistantships are awarded to students in the doctoral program in ICME. If the number of Ph.D. students is not sufficient to staff all course and research assistantship positions available, these positions may be open to master's students. However, master's students are not guaranteed financial assistance.

Ph.D. Minor in Computational and Mathematical Engineering

For a minor in Computational and Mathematical Engineering (CME), a doctoral candidate must complete 21 units of approved graduate level courses. These should include three ICME core courses and three ICME graduate electives at the 300 level or above and a programming course at the level of CME212 or higher. All courses must be taken for a letter grade and passed with a grade of 'B' or better. Elective courses cannot be cross

listed with the primary department. Minor programs should be developed in close discussion between the student and the student's primary Ph.D. adviser.

Emeriti: (Professor) Joe Keller (Mathematics, Mechanical Engineering), (Professor, Research) Arogyaswami Paulraj (Electrical Engineering)

Director: Margot Gerritsen (Energy Resources Engineering)

Professors: Biondo Biondi (Geophysics), Stephen Boyd (Electrical Engineering), Emanuel Candes (Mathematics, Statistics), Gunnar Carlsson (Mathematics), Persi Diaconis (Mathematics, Statistics), David Donoho (Statistics), Charbel Farhat (Aeronautics and Astronautics, Mechanical Engineering), Ronald Fedkiw (Computer Science), Peter Glynn (Management Science and Engineering), Ashish Goel (Management Science and Engineering), Leonidas Guibas (Computer Science), Pat Hanrahan (Computer Science, Electrical Engineering), Jerry Harris (Geophysics), Trevor Hastie (Mathematics, Statistics), Peter Kitanidis (Civil and Environmental Engineering), Tze Leung Lai (Statistics), Sanjiva Lele (Mechanical Engineering, Aeronautics and Astronautics), Parviz Moin (Mechanical Engineering), Brad Osgood (Electrical Engineering), Vijay Pande (Chemistry), George Papanicolaou (Mathematics), Peter Pinsky (Mechanical Engineering), Lenya Ryzhik (Mathematics), Eric Shaqfeh (Chemical Engineering, Mechanical Engineering), Hamdi Tchelepi (Energy Resources Engineering), Benjamin Van Roy (Management Science and Engineering, Electrical Engineering), Andras Vasy (Mathematics), Lawrence Wein (Graduate School of Business), Wing Wong (Statistics), Yinyu Ye (Management Science and Engineering), Lexing Ying (Mathematics, Institute for Computational and Mathematical Engineering)

Associate Professors: Juan Alonso (Aeronautics and Astronautics), Eric Darve (Mechanical Engineering), Ron Dror (Computer Science, Institute for Computational and Mathematical Engineering, starting in February 2014), Oliver Fringer (Civil and Environmental Engineering), Margot Gerritsen (Energy Resources Engineering), Kay Giesecke (Management Science and Engineering), Gianluca Iaccarino (Mechanical Engineering), Ramesh Johari (Management Science and Engineering), Adrian Lew (Mechanical Engineering), Amin Saberi (Management Science and Engineering)

Assistant Professors: Eric Dunham (Geophysics), Marco Pavone (Aeronautics and Astronautics), Bala Rajaratnam (Statistics, Environmental and Earth System Sciences), Andrew Spakowitz (Chemical Engineering)

Professors (Research): Antony Jameson (Aeronautics and Astronautics), Walter Murray (Management Science and Engineering), Michael A. Saunders (Management Science and Engineering)

Senior Lecturer: Vadim Khayms

Lecturers: Bill Behrman, Kapil Jain, Hung Le, Patrick LeGresley

Consulting Professors: Reza Bosagh-Zadeh, Michael Minion, Visha Sikkal

Courses of interest to students in the department may include:

		Units
CEE 262A	Hydrodynamics	3-4
CEE 262B	Transport and Mixing in Surface Water Flows	3-4
CEE 263A	Air Pollution Modeling	3-4
CEE 263B	Numerical Weather Prediction	3-4
CEE 294	Computational Poromechanics	3
CEE 362	Numerical Modeling of Subsurface Processes	3-4
CEE 362G	Stochastic Inverse Modeling and Data Assimilation Methods	3-4
CS 205A	Mathematical Methods for Robotics, Vision, and Graphics	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 228	Probabilistic Graphical Models: Principles and Techniques	3-4

CS 229	Machine Learning	3-4
CS 232	Digital Image Processing	3
CS 261	Optimization and Algorithmic Paradigms	3
CS 268	Geometric Algorithms	3
EE 256	Numerical Electromagnetics	3
EE 368	Digital Image Processing	3
EESS 221	Contaminant Hydrogeology and Reactive Transport	4
EESS 244	Marine Ecosystem Modeling	3
EESS 246B	Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation	3
ENERGY 223	Reservoir Simulation	3-4
ENERGY 224	Advanced Reservoir Simulation	3
ENERGY 241	Seismic Reservoir Characterization	3-4
ENERGY 252	Chemical Kinetics Modeling	3
ENERGY 281	Applied Mathematics in Reservoir Engineering	3
ENERGY 284	Optimization and Inverse Modeling	3
ENERGY 290	Numerical Modeling of Fluid Flow in Heterogeneous Porous Media	3
GEOPHYS 190	Near-Surface Geophysics	3
GEOPHYS 200	Fluids and Flow in the Earth: Computational Methods	3
GEOPHYS 202	Reservoir Geomechanics	3
GEOPHYS 210	Basic Earth Imaging	2-3
GEOPHYS 211	Environmental Soundings Image Estimation	3
GEOPHYS 240	Borehole Seismic Modeling and Imaging	3
GEOPHYS 257	Introduction to Computational Earth Sciences	2-4
GEOPHYS 258	Applied Optimization Laboratory (Geophys 258)	3-4
GEOPHYS 260	Rock Physics for Reservoir Characterization	3
GEOPHYS 262	Rock Physics	3
GEOPHYS 280	3-D Seismic Imaging	2-3
GEOPHYS 281	Geophysical Inverse Problems	3
GEOPHYS 287	Earthquake Seismology	3-5
GEOPHYS 288A	Crustal Deformation	3-5
GEOPHYS 288B	Crustal Deformation	3-5
GEOPHYS 290	Tectonophysics & Global Tectonics	3
GES 224	Modeling Transport and Transformations in the Environment	2-3

STATS 305	Introduction to Statistical Modeling	3
STATS 306A	Methods for Applied Statistics	3
STATS 306B	Methods for Applied Statistics: Unsupervised Learning	2-3
STATS 310A	Theory of Probability	2-4
STATS 310B	Theory of Probability	2-3
STATS 310C	Theory of Probability	2-4
STATS 318	Modern Markov Chains	3

Management Science and Engineering

Courses offered by the Department of Management Science and Engineering are listed under the subject code MS&E on the *Stanford Bulletin's* ExploreCourses web site.

The Department of Management Science and Engineering leads at the interface of engineering, business, and public policy. The department's mission is, through education and research, to advance the design, management, operation, and interaction of technological, economic, and social systems. The department's engineering research strength is integrated with its educational program at the undergraduate, master's, and doctoral levels: graduates of the program are trained as engineers and future leaders in technology, policy, and industry. Research and teaching activities are complemented by an outreach program that encourages the transfer of ideas to the environment of Silicon Valley and beyond.

Management Science and Engineering (MS&E) provides programs of education and research by integrating three basic strengths:

1. depth in conceptual and analytical foundations
2. comprehensive coverage of functional areas of application
3. interaction with other Stanford departments, Silicon Valley industry, and organizations throughout the world.

The analytical and conceptual foundations include decision and risk analysis, dynamic systems, economics, optimization, organizational science, and stochastic systems. The functional areas of application include entrepreneurship, finance, information, marketing, organizational behavior, policy, production, and strategy. Close associations with other engineering departments and with industry enrich the programs by providing opportunities to apply MS&E methods to important problems and by motivating new theoretical developments from practical experience. MS&E's programs also provide a basis for contributing to other areas such as biotechnology, defense policy, environmental policy, information systems, and telecommunications.

Mission of the Undergraduate Program in Management Science and Engineering

The mission of the undergraduate program in Management Science and Engineering is to provide students with the fundamentals of engineering systems analysis so that they are able to plan, design, and implement complex economic and technical management systems. The program builds on the foundational courses for engineering including calculus, engineering fundamentals, and physics or chemistry as well as management science. Students complete core courses in accounting, computer science, economics, ethics, organizational theory, mathematical modeling,

optimization, probability, and statistics. To personalize their exploration, students select additional courses from different areas of the department, with greater emphasis in one of them. The major prepares students for a variety of career paths, including investment banking, management consulting, facilities and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy .

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to be able:

1. to apply the knowledge of mathematics, science, and engineering;
2. to design and conduct experiments;
3. to design a system or components to meet desired needs;
4. to identify, formulate, and solve engineering problems;
5. to use techniques, skills, and modern engineering tools necessary for engineering practice;
6. to function on multidisciplinary teams;
7. to communicate effectively;
8. to recognize the need for and demonstrate an ability to engage in lifelong learning;
9. to obtain the background necessary for admission to top professional graduate engineering or business programs;
10. to understand professional and ethical responsibility;
11. to obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context; and
12. to obtain a knowledge of contemporary issues pertinent to the field of management science and engineering.

Graduate Programs in Management Science and Engineering

MS&E offers programs leading to the degrees of Master of Science and Doctor of Philosophy. The department also offers a coterminal B.S./M.S. degree, a dual master's degree in cooperation with each of the other departments in the School of Engineering, and joint master's degrees with the School of Law and the Public Policy Program.

For University coterminal degree program rules and University application forms, see the Registrar's coterminal degrees web site (<http://studentaffairs.stanford.edu/registrar/publications/#Coterm>).

Applicants for admission as graduate students in MS&E must submit the results of the verbal, quantitative, and analytical parts of the Graduate Record Examination. The deadline for application to the doctoral program is December 2, 2014, and the deadline for application to the master's program is January 13, 2015.

Except in unusual circumstances, admission is limited to the Autumn Quarter because courses are arranged sequentially with basic courses and prerequisites offered early in the academic year.

Assistantships and Fellowships

A limited number of fellowships and assistantships are awarded each year. Applicants admitted to the doctoral program, who have indicated on their application that they would like to be considered for financial aid, are

automatically considered for these assistantships and fellowships. New and returning master's students may apply for course assistantships each quarter, but priority is given to MS&E doctoral students.

Information about loan programs and need-based aid for U.S. citizens and permanent residents can be obtained from the Financial Aid Office.

Learning Outcomes (Graduate)

The M.S. prepares engineers for a lifelong career addressing the critical technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making better decisions, developing and executing strategies while also leading people who innovate. Unlike an MBA, our master's program addresses the technical as well as the behavioral challenges of running organizations and complex systems. We emphasize quantitative analytic skills and an entrepreneurial spirit.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Management Science and Engineering and related fields.

Careers in MS&E

MS&E students are candidates for careers in consulting, product and project management, financial analysis, and work in policy arenas. A significant number join or found start-ups. Many have become leaders in technology-based businesses which have an increasing need for analytically oriented people who understand both business and technology. Other graduates make careers tackling the problems faced by local, national, and international governments by developing new healthcare systems, new energy systems and a more sustainable environment. The major problems of the day demand an ability to integrate the technical, social and economic ways of thinking. This is precisely what the department educates its students to do.

Bachelor of Science in Management Science and Engineering

The program leading to the B.S. degree in Management Science and Engineering (MS&E) is outlined in the School of Engineering section of this bulletin; more information is contained in the School of Engineering's *Handbook for Undergraduate Engineering Programs*. Students are encouraged to plan their academic programs as early as possible, ideally in the freshman or sophomore year. Students should not wait until they are declaring a major to consult with the department's student services staff. This is particularly important for students who would like to study overseas or pursue another major or minor.

The undergraduate curriculum in Management Science and Engineering provides students training in the fundamentals of engineering systems analysis to prepare them to plan, design, and implement complex economic and technological management systems where a scientific or engineering background is necessary or desirable. The major prepares students for a variety of career paths, including investment banking, management consulting, facilities and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy .

The educational objectives of the undergraduate degree program are:

- *Principles and Skills*—provide students with a basic understanding of management science and engineering principles, including analytical problem solving and communications skills.
- *Preparation for Practice*—prepare students for practice in a field that sees rapid changes in tools, problems, and opportunities.

- *Preparation for Continued Growth*—prepare students for graduate study and self development over an entire career.
- *Preparation for Service*—develop in students the awareness, background, and skills necessary to become responsible citizens, employees, and leaders.

See also the department's undergraduate Learning Outcomes (p.) for additional learning objectives.

The program builds on the foundational courses for engineering, including calculus, mathematical modeling, probability, statistics, engineering fundamentals, and physics or chemistry.

Students interested in a minor should see the Minor tab in this section.

MS&E also participates with the departments of Computer Science, Mathematics, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the "Mathematical and Computational Science (p. 546)" section of this bulletin.

Core

The department core, taken for all areas, includes courses in accounting, computer science, deterministic optimization, economics, organization theory, and a capstone senior project. Through the core, students in the program are exposed to the breadth of faculty interests, and are in a good position to choose an area during the junior year.

Areas

The major is designed to allow a student to explore all three areas of the department in greater depth.

1. *Finance and Decision*: focuses on the design and analysis of financial and strategic plans.
2. *Operations and Analytics*: focuses on algorithms, theory, and the design and analysis of manufacturing, production, and service systems.
3. *Organizations, Technology, and Policy*: focuses on understanding, design, and analysis of organizations and public policy, particularly technology-based issues.

Management Science and Engineering (MS&E)

Completion of the undergraduate program in Management Science and Engineering leads to the conferral of the Bachelor of Science in Management Science and Engineering.

Requirements

Mathematics and Science

All required; see SoE Basic Requirements 1 and 2 ¹		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CME 103	Introduction to Matrix Methods	5
MSE 120	Probabilistic Analysis	5
MSE 121	Introduction to Stochastic Modeling	4
MSE 125	Introduction to Applied Statistics	4
Select one of the following sequences:		8
CHEM 31B & CHEM 33	Chemical Principles II and Structure and Reactivity	
CHEM 31X & CHEM 33	Chemical Principles Accelerated and Structure and Reactivity	

Units

PHYSICS 21 & PHYSICS 22	Mechanics and Heat and Mechanics and Heat Laboratory and Electricity and Optics and Electricity and Optics Laboratory	
PHYSICS 23 & PHYSICS 24	Electricity and Optics Laboratory	
PHYSICS 41 & PHYSICS 43	Mechanics and Electricity and Magnetism	
Electives from SoE approved list or AP/IB credit ¹		13
Technology in Society		
Select one of the following; see SoE Basic Requirement 4		3
COMM 120W	Digital Media in Society	
COMM 169	Computers and Interfaces	
CS 181	Computers, Ethics, and Public Policy	
ENGR 130	Science, Technology, and Contemporary Society	
ENGR 131	Ethical Issues in Engineering	
MSE 181	Issues in Technology and Work for a Postindustrial Economy	
MSE 193	Technology and National Security (WIM)	
MSE 197	Ethics, Technology, and Public Policy (WIM)	
Engineering Fundamentals ²		
Three courses; see SoE Basic Requirement 3		
CS 106A	Programming Methodology ³	5
Select one of the following:		3
ENGR 25B or ENGR 25E	Biotechnology Energy: Chemical Transformations for Production, Storage, and Use	
ENGR 40 or ENGR 40A or ENGR 40M or ENGR 40P	Introductory Electronics An Intro to Making: What is EE Physics of Electrical Engineering	
ENGR 80	Introduction to Bioengineering	
Select one of the following (or ENGR 25, ENGR 40, or ENGR 80 if not used above):		3
ENGR 10	Introduction to Engineering Analysis	
ENGR 14	Intro to Solid Mechanics	
ENGR 15	Dynamics	
ENGR 20	Introduction to Chemical Engineering	
ENGR 30	Engineering Thermodynamics	
ENGR 50 or ENGR 50E or ENGR 50M	Introduction to Materials Science, Nanotechnology Emphasis Introduction to Materials Science, Energy Emphasis Introduction to Materials Science, Biomaterials Emphasis	
ENGR 60	Engineering Economy	
ENGR 90	Environmental Science and Technology	
Engineering Depth ²		
Core Courses (all six required)		25
CS 103 or CS 106B or CS 106X	Mathematical Foundations of Computing Programming Abstractions Programming Abstractions (Accelerated)	
ECON 50	Economic Analysis I	
MSE 108	Senior Project	
MSE 111	Introduction to Optimization ⁴	
MSE 140	Accounting for Managers and Entrepreneurs	

or MSE 140X	Financial Accounting Concepts and Analysis	
MSE 180	Organizations: Theory and Management	
Area Courses (see below)		27
Choose four or five courses (minimum 15 units) from a primary area and two courses (minimum 6 units) from each of the other two areas.		

Depth Areas

	Units
Finance and Decision Area	6-15
Students choosing F&D as their primary area must take at least two of ECON 51, MS&E 145, and MS&E 152	
Introductory (appropriate for freshmen and sophomores)	
MSE 145	Introductory Financial Analysis
MSE 152	Introduction to Decision Analysis (WIM)
Intermediate (appropriate for juniors and seniors)	
MSE 146	Corporate Financial Management
MSE 245G	Finance for Non-MBAs
MSE 252	Decision Analysis I: Foundations of Decision Analysis
Advanced (intended primarily for graduate students)	
MSE 245A	Investment Science
MSE 250A	Engineering Risk Analysis
MSE 250B	Project Course in Engineering Risk Analysis
MSE 245B	Advanced Investment Science
Operations and Analytics Area	6-15
Students choosing O&A as their primary area may also include CS 161, CS 229, and STATS 202 in their selections ⁴	
Introductory (no prerequisites)	
MSE 107	Interactive Management Science
Methods	
MSE 223	Simulation
MSE 226	"Small" Data
MSE 251	Stochastic Control
Applications	
MSE 130	Information Networks and Services
MSE 233	Networked Markets
MSE 260	Introduction to Operations Management
MSE 262	Supply Chain Management
MSE 263	Healthcare Operations Management
MSE 264	Sustainable Product Development and Manufacturing
MSE 268	Operations Strategy
Organizations, Technology, and Policy Area	6-15
Students choosing OT&P as their primary area must take at least two of ENGR 145, MS&E 175, MS&E 181, MS&E 185, PSYCH 70, and SOC 114 (but not both PSYCH 70 and SOC 114) ⁴	
Introductory (no prerequisites)	
ENGR 131	Ethical Issues in Engineering ⁴
MSE 178	The Spirit of Entrepreneurship
MSE 189	Social Networks - Theory, Methods, and Applications
MSE 190	Methods and Models for Policy and Strategy Analysis
MSE 193	Technology and National Security (WIM) ⁴
MSE 197	Ethics, Technology, and Public Policy (WIM) ⁴

Advanced (has prerequisites and/or appropriate for juniors and seniors)	
ENGR 145	Technology Entrepreneurship
MSE 175	Innovation, Creativity, and Change
MSE 177	Engineering Innovation
MSE 181	Issues in Technology and Work for a Postindustrial Economy ⁴
MSE 185	Global Work
MSE 243	Energy and Environmental Policy Analysis
MSE 292	Health Policy Modeling
MSE 294	Climate Policy Analysis
MSE 295	Energy Policy Analysis

- Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Introduction to Social Psychology, and many not repeat material from any other requirement. AP/IB credit for Chemistry, Mathematics, and Physics may be used.
- Engineering fundamentals plus engineering depth must total a minimum of 60 units.
- Students may petition to place out of CS 106A Programming Methodology.
- Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Management Science and Engineering (MS&E) Minor

The following courses are required to fulfill the minor requirements:

	Units	
Background requirements (two courses)		
CME 100	Vector Calculus for Engineers	5
or MATH 51	Linear Algebra and Differential Calculus of Several Variables	
CS 106A	Programming Methodology	5
Minor requirements (seven courses, letter-graded)		
MSE 111	Introduction to Optimization	4
MSE 120	Probabilistic Analysis	5
MSE 121	Introduction to Stochastic Modeling	4
MSE 125	Introduction to Applied Statistics	4
MSE 180	Organizations: Theory and Management	4
Electives (select any two 100- or 200-level MS&E courses)		6
Recommended courses		
In addition to the required background and minor courses, it is recommended that students also take the following courses.		
ECON 50	Economic Analysis I	5
MSE 140	Accounting for Managers and Entrepreneurs (may be used as one of the required electives above)	2-4
or MSE 140X	Financial Accounting Concepts and Analysis	

Master of Science in Management Science and Engineering

The M.S. degree programs require a minimum of 45 units beyond the equivalent of a B.S. degree at Stanford. All programs represent substantial progress in the major field beyond the bachelor's degree.

University requirements for the master's degree are described in the "Graduate Degrees (p. 43)" section of this bulletin.

The master's in Management Science and Engineering prepares engineers for a lifelong career addressing the technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making better decisions, and developing and executing strategies while also leading people who innovate. Unlike an M.B.A., the department's master's program addresses the technical as well as the behavioral challenges of running organizations and complex systems, emphasizing quantitative analytic skills and an entrepreneurial spirit.

MS&E students know math, engineering, as well as behavioral science. They can conduct experiments to design better systems, organizations and work processes. They understand how to analyze data to solve real world problems. They can develop mathematical and computational models to inform action. They know how to surface and examine unarticulated assumptions and root causes. These students can communicate effectively in the team environments found in so many contemporary organizations.

MS&E master's students have breadth as well as depth. All are required to develop competence in optimization and analytics, organizations and decisions, and probability. In addition every student pursues a specialty in one of six areas:

1. *Financial Analytics*: Students who concentrate in Financial Analytics are prepared for careers requiring analytical rigor and the ability to innovate around market challenges. Example career paths include financial services, risk management, investment management, financial technology and data processing, financial regulation and policy, exchanges and clearing houses, and auditing and compliance. The concentration combines the in-depth study of quantitative techniques with practical, hands-on business problem solving. Students learn to use mathematical models and quantitative tools to solve complex problems in finance practice. The concentration exploits the intellectual ties between finance, operations research, computer science, and engineering. It offers a high level of flexibility and a range of elective courses that allow students to tailor the program to their specific career goals. Required courses immerse students in quantitative methods and deepen their understanding of finance fundamentals. Projects courses feature practical, data-driven team projects and case studies, fostering group learning and interaction with peers.
2. *Operations and Analytics*: Students following the Operations and Analytics track become prepared in the fundamentals and applications that are critical to careers in a fields ranging from operations management in the service, health care, production, manufacturing, computer, telecommunications, banking, industries to modern Silicon Valley information technology and data analytics. The program emphasizes a balance between the technical rigor of methodologies with lasting value and insightful modern applications and design challenges in a variety of established and emerging industries and operations environments. It offers a portfolio of courses in probabilistic modeling, optimization, simulation, algorithms, data science, networks, markets, and corresponding applications.
3. *Technology and Engineering Management* -- Students who concentrate in Technology and Engineering Management are prepared for careers including product and project management, management consulting, and entrepreneurship. They acquire skills to manage technical organizations, foster innovation, and deal with rapidly

evolving technologies and dynamic markets. Specialized coursework is flexible, allowing students to explore and gain depth, understanding technical organizations to develop a culture of successful innovation and entrepreneurship, along with methods for decision making under uncertainty, financial analysis, and strategic planning.

4. *Decision and Risk Analysis*: Students who specialize in Decision and Risk Analysis are prepared for careers including management consulting, policy analysis, and risk management, applying engineering systems analysis to tackle complex economic and technical management problems in the private and public sectors. They acquire the skills to identify and develop opportunities in uncertain situations while recognizing and hedging the downside risks. Specialized course work includes the mathematical foundations for modeling in dynamic uncertain environments to value and manage uncertain opportunities and risks, applications to public policy, and an opportunity to work on a client project under faculty guidance.
5. *Energy and Environment*: The Energy and Environment track is designed for students interested in energy and environmental issues from the perspectives of public policy, nongovernmental organizations, or corporations. This track includes core courses; courses in economic analysis, energy resources, and energy/environmental policy analysis; and an individually designed concentration, typically emphasizing policy, strategy, or technology. Seminars provide insights into current corporate strategy, public policy, and research community developments. Energy/environmental project courses give practice in applying methodologies and concepts.
6. *Health Systems Modeling*: The Health Systems Modeling track is designed for students interested in healthcare operations and policy. The courses in this track emphasize the application of mathematical and economic analysis to problems in public health policy and the design and operation of healthcare services.

The master's degree is designed to be a terminal degree program with a professional focus. The M.S. degree can be earned in one academic year (three academic quarters) of full-time work, although most students choose to complete the program in five academic quarters, or eighteen months, and work as an intern in the Summer Quarter.

Background Requirements

Students are expected to have completed both MATH 51 Linear Algebra and Differential Calculus of Several Variables, or an equivalent multivariable differential calculus course, and CS 106A Programming Methodology, or an equivalent general programming course, before beginning graduate study. These courses do not count toward degree requirements.

Degree Requirements

Students must take a minimum of 45 course units as follows:

- Three core courses (9-12 units)
- A primary or specialized concentration (12-24 units)
- One project course or two integrated project courses (0-8 units)
- Elective courses (1-24 units; see restrictions below)

Core Courses (three courses required)

Optimization and Analytics (select one)

		Units
MSE 211	Linear and Nonlinear Optimization	3-4
MSE 226	"Small" Data	3
Relevant 200 or 300 level course in optimization or analytics if a comparable introductory course in optimization or analytics has already been completed.		3-4

Organizations and Decisions (select one)

		Units
MSE 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MSE 280	Organizational Behavior: Evidence in Action	3-4
Relevant 200 or 300 level course in organizations or decisions if a comparable introductory course in organizations or decisions has already been completed.		

Probability (select one)

		Units
MSE 220	Probabilistic Analysis	3-4
MSE 221	Stochastic Modeling	3
Relevant 200 or 300 level course in probability or stochastics if a comparable introductory course in probability or stochastics has already been completed.		

Primary Concentrations

Financial Analytics Concentration (five courses required)

Financial Theory and Modeling (select one):

MSE 245A	Investment Science	3
MSE 245B	Advanced Investment Science	3
MSE 246	Financial Risk Management	3

Quantitative Methods (two required):

Select one (whichever wasn't taken for core):

MSE 211	Linear and Nonlinear Optimization	3-4
MSE 226	"Small" Data	3

Select one:

MSE 322	Stochastic Calculus and Control	3
STATS 207	Introduction to Time Series Analysis	3
STATS 240	Statistical Methods in Finance	3-4
STATS 241	Data-driven financial and risk econometrics	3-4

Financial Applications (select two):

MATH 237	Default and Systemic Risk	3
MSE 347	Credit Risk: Modeling and Management	3
MSE 348	Optimization of Uncertainty and Applications in Finance	3
MSE 445	Projects in Wealth Management	3-4
MSE 447	Systemic and Market Risk : Notes on Recent History, Practice, and Policy	3
MSE 448	Big Financial Data and Algorithmic Trading	3

Operations and Analytics Concentration (four courses required)

		Units
Required Courses		
MSE 211	Linear and Nonlinear Optimization (whichever course wasn't taken for core)	3-4
or MSE 226	"Small" Data	
MSE 221	Stochastic Modeling (or a more advanced course in probability (i.e. MS&E 223 Simulation) if a student has taken an equivalent class in stochastic modeling)	3
MSE 251	Stochastic Control	3
MSE 260	Introduction to Operations Management	3
or MSE 261	Inventory Control and Production Systems	

or MSE 263 Healthcare Operations Management

Recommended Elective Courses:

MSE 223	Simulation	3
MSE 233	Networked Markets	3
MSE 243	Energy and Environmental Policy Analysis	3
MSE 245A	Investment Science	3
MSE 250A	Engineering Risk Analysis	3
MSE 251	Stochastic Control	3
MSE 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MSE 260	Introduction to Operations Management	3
MSE 261	Inventory Control and Production Systems	3
MSE 262	Supply Chain Management	3
MSE 263	Healthcare Operations Management	3
MSE 264	Sustainable Product Development and Manufacturing	3-4
MSE 268	Operations Strategy	3
MSE 270	Strategy in Technology-Based Companies	3-4
MSE 292	Health Policy Modeling	3
MSE 467	Strategic Operations Consulting	3

Technology and Engineering Management Concentration (five courses required)

The course used to satisfy the Organizations and Decisions Core may also be counted here.

		Units
Organizations and Strategy (select at least one):		
MSE 270	Strategy in Technology-Based Companies	3-4
MSE 274	Dynamic Entrepreneurial Strategy	3
MSE 278	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
MSE 280	Organizational Behavior: Evidence in Action	3-4
MSE 282	Transformational Leadership	3
MSE 283	Scaling up Excellence in Organizations	4
MSE 284	Designing Modern Work Organizations	3
Entrepreneurship and Innovation (select at least one):		
MSE 270	Strategy in Technology-Based Companies	3-4
MSE 271	Global Entrepreneurial Marketing	3-4
MSE 272	Startup Boards	3
MSE 273	Technology Venture Formation	3-4
MSE 276	Entrepreneurial Management and Finance	3
MSE 277	Creativity and Innovation	3-4
ENGR 245	The Lean LaunchPad: Getting Your Lean Startup Off the Ground	3-4
Finance and Decisions (select at least one):		
MSE 240	Accounting for Managers and Entrepreneurs	3-4
MSE 245A	Investment Science	3
MSE 245G	Finance for Non-MBAs	3
MSE 250A	Engineering Risk Analysis	3
MSE 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MSE 352	Decision Analysis II: Professional Decision Analysis	3-4

Specialized Concentrations (must have approval of the academic advisor)

Decision and Risk Analysis Concentration (four courses required)

	Units
Core Courses are restricted as follows:	
MSE 211 Linear and Nonlinear Optimization	3-4
MSE 221 Stochastic Modeling	3
MSE 252 Decision Analysis I: Foundations of Decision Analysis	3-4
Required Courses (select two):	
MSE 241 Economic Analysis	3-4
MSE 250A Engineering Risk Analysis	3
MSE 352 Decision Analysis II: Professional Decision Analysis	3-4
Policy Course (select one):	
MSE 243 Energy and Environmental Policy Analysis	3
MSE 292 Health Policy Modeling	3
MSE 293 Technology and National Security	3
MSE 294 Climate Policy Analysis	3
MSE 295 Energy Policy Analysis	3
Project Course (select one):	
MSE 250B Project Course in Engineering Risk Analysis	3
MSE 452 Decision Analysis Projects: Helping Real Leaders Make Real Decisions	3

Energy and Environment Concentration (six courses required)

	Units
Required Courses:	
CEE 207A Energy Resources	3-5
MSE 241 Economic Analysis	3-4
MSE 243 Energy and Environmental Policy Analysis	3
Three additional courses from energy, policy, or strategy areas below.	
Policy:	
EARTHSYS 247	
ECON 251 Natural Resource and Energy Economics	2-5
ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3
GSBGEN 336 Energy Markets and Policy	4
LAW 455 Energy Law	3
MSE 293 Technology and National Security	3
MSE 294 Climate Policy Analysis	3
MSE 295 Energy Policy Analysis	3
Strategy:	
ECON 203N 203 For Non-Economics Ph.D. Students	2-5
ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3
GSBGEN 538 Energy Policy, Markets, and Climate Change	2
MSE 270 Strategy in Technology-Based Companies	3-4
MSE 271 Global Entrepreneurial Marketing	3-4
MSE 272 Startup Boards	3
MSE 273 Technology Venture Formation	3-4
MSE 274 Dynamic Entrepreneurial Strategy	3
MSE 276 Entrepreneurial Management and Finance	3

MSE 277 Creativity and Innovation	3-4
MSE 278 Patent Law and Strategy for Innovators and Entrepreneurs	2-3
Energy:	
ENERGY 102 Renewable Energy Sources and Greener Energy Processes	3
ENERGY 104 Transition to sustainable energy systems	3
ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull	3
ME 370A Energy Systems I: Thermodynamics	3
ME 370B Energy Systems II: Modeling and Advanced Concepts	4
PHYSICS 240 Introduction to the Physics of Energy	3
PHYSICS 241 Introduction to Nuclear Energy	3
Recommended Seminars:	
ECON 341 Public Economics and Environmental Economics Seminar	1-10
ENERGY 301 The Energy Seminar	1
MSE 441 Policy and Economics Research Roundtable	1
MSE 472 Entrepreneurial Thought Leaders' Seminar	1
Recommended Elective Courses:	
ECON 250 Environmental Economics	2-5
ECON 270 Intermediate Econometrics I	2-5
ECON 278 Behavioral and Experimental Economics I	2-5
MGTECON 603 Econometric Methods I	4
MSE 201 Dynamic Systems	3-4
MSE 211 Linear and Nonlinear Optimization	3-4
MSE 244 Economic Growth and Development	3
MSE 251 Stochastic Control	3

Health Systems Modeling Concentration (four courses required)

	Units
Required Courses	
HRP 263 Advanced Decision Science Methods and Modeling in Health	3
HRP 392 Analysis of Costs, Risks, and Benefits of Health Care	4
MSE 263 Healthcare Operations Management	3
MSE 292 Health Policy Modeling	3
Recommended Elective Courses:	
HRP 241 Measuring Global Health	4
HRP 256 Economics of Health and Medical Care	5
HRP 391 Health Law: Finance and Insurance	3
MSE 256 Technology Assessment and Regulation of Medical Devices	3

Projects

Select one project course or two integrated project courses; may double-count as part of the core or concentration.

	Units
Project Courses	
MSE 250B Project Course in Engineering Risk Analysis	3
MSE 348 Optimization of Uncertainty and Applications in Finance	3
MSE 403 Integrative Modeling	3
MSE 445 Projects in Wealth Management	3-4

MSE 447	Systemic and Market Risk : Notes on Recent History, Practice, and Policy	3
MSE 448	Big Financial Data and Algorithmic Trading	3
MSE 452	Decision Analysis Projects: Helping Real Leaders Make Real Decisions	3
MSE 464	Global Project Coordination	3-4
MSE 467	Strategic Operations Consulting	3
Integrated Project Courses		
MSE 201	Dynamic Systems	3-4
MSE 211	Linear and Nonlinear Optimization	3-4
MSE 233	Networked Markets	3
MSE 243	Energy and Environmental Policy Analysis	3
MSE 245A	Investment Science	3
MSE 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MSE 256	Technology Assessment and Regulation of Medical Devices	3
MSE 260	Introduction to Operations Management	3
MSE 262	Supply Chain Management	3
MSE 264	Sustainable Product Development and Manufacturing	3-4
MSE 270	Strategy in Technology-Based Companies	3-4
MSE 271	Global Entrepreneurial Marketing	3-4
MSE 273	Technology Venture Formation	3-4
MSE 274	Dynamic Entrepreneurial Strategy	3
MSE 277	Creativity and Innovation	3-4
MSE 280	Organizational Behavior: Evidence in Action	3-4
MSE 284	Designing Modern Work Organizations	3
MSE 294	Climate Policy Analysis	3
MSE 295	Energy Policy Analysis	3
MSE 311	Optimization	3
MSE 315	Numerical Optimization	3
MSE 331	Introduction to Computational Social Science	3
MSE 337	Spectral Graph Theory and Algorithmic Applications	3
MSE 338	Advanced Topics in Information Science and Technology	3
MSE 347	Credit Risk: Modeling and Management	3
MSE 355	Influence Diagrams and Probabilistic Networks	3

Additional Requirements

1. At least 45 units must be in courses numbered 100 and above.
2. The degree program must be completed with a grade point average (GPA) of 3.0 or higher.
3. At least 27 units must be in courses numbered 200 and above in MS&E, taken for a letter grade and a minimum of two units each.
4. At least 36 letter-graded units must be in MS&E or closely related fields. Closely related fields include any department in the School of Engineering, mathematics, statistics, economics, sociology, psychology, or business.
5. All courses used to satisfy core, concentration, or project requirements must be taken for a letter grade.
6. A maximum of three units of 1-unit courses such as seminars, colloquia, workshops, in any department, including MS&E 208A, B, and C, Curricular Practical Training.
7. A maximum of 18 non-degree option (NDO) units through the Stanford Center for Professional Development (SCPD).

8. Courses in athletics, physical education, and recreation may not be applied toward the degree.

Dual Master's Degree Program

The dual degree program enables a small group of graduate students to obtain two master's degrees simultaneously. Students complete the course requirements for each department. A total of 90 units is required to complete the dual master's degree.

Admission

For the dual degree, admission to two departments is required, but is coordinated by designated members of both admissions committees who make recommendations to the committees of their respective departments. Students may apply to only one department initially. After the first quarter at Stanford, students may apply to be admitted to the second department.

Advising

Every student in the dual degree program has one adviser in each department.

Joint MS&E and Law Degrees

The School of Law and the Department of Management Science and Engineering offer joint degree programs leading to a J.D. degree and an M.S. degree in MS&E, or to a J.D. and Ph.D. in MS&E. These programs are designed for students who wish to prepare themselves for careers in areas relating to both law and to the decision making, policy making, and problem solving knowledge and skills developed in the MS&E program. Students interested in either joint degree program must apply and gain admission separately to the School of Law and the Department of Management Science and Engineering and, as an additional step, must secure consent from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or MS&E may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or MS&E. Students are assigned to a joint program committee composed of at least one faculty member from Law and one from MS&E. This committee plans the student's program jointly with the student. Students must be enrolled full time in the Law School for the first year of law studies, and it is recommended that students devote exclusively one Autumn Quarter to the MS&E M.S. program to initiate their MS&E work. After that time, enrollment may be in MS&E or Law, and students may choose courses from either program regardless of where enrolled. A candidate in the joint J.D./Ph.D. program should spend a substantial amount of full time residency in MS&E. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in this bulletin or by the School of Law. The Law School may approve courses from MS&E or courses in the student's MS&E program from outside of the Department of Management Science and Engineering that may count toward the J.D. degree, and MS&E may approve courses from the Law School that may count toward the M.S. or Ph.D. degree in MS&E. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student's program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in MS&E.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside the Law

School but count toward the law degree, the law credits permitted under Section 17(1) of the Law School Regulations are reduced on a unit-per-unit basis, but not below zero. The maximum number of law school credits that may be counted toward the M.S. in MS&E is the greater of: (a) 18 units in the case of the M.S., or (b) the maximum number of hours from courses outside the department that an M.S. candidate in MS&E is permitted to count toward the applicable degree under general departmental guidelines or under departmental rules that apply in the case of a particular student.

Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

Joint MS&E and Master of Public Policy Degree

MS MS&E students who wish to apply their analytical and management skills to the field of public policy can simultaneously pursue a master degree in MS&E and a master degree in Public Policy. The MPP is a two-year degree program, but MS MS&E students who pursue the joint program can earn both degrees in a minimum of two years, depending on prior preparation and elective choices, by counting up to 45 quarter units of course work toward both degrees. After admission to the Department of Management Science and Engineering, incoming or current MS students request that their application file be forwarded to the MPP program director for review.

Students in the joint program normally will spend most of their first year taking MS&E core courses. The second year is typically devoted to the MPP core, concentration, and practicum. The joint degree requires 90 quarter units. Tuition for the first year of study is paid at the Graduate Engineering rate, the remaining time at the Graduate rate.

Professional Education

The Stanford Center for Professional Development (SCPD) provides opportunities for employees of some local and remote companies to take courses at Stanford.

The Honors Cooperative Program (HCP) provides opportunities for employees of SCPD member companies to earn an M.S. degree, over a longer period, by taking one or two courses per academic quarter. Some courses are only offered on campus; HCP students may attend those courses at Stanford to meet the degree requirements. It is possible to complete this program as a remote HCP student although the remote offerings are limited. Students must apply for a degree program through the standard application process, and must meet the standard application deadlines.

The non-degree option (NDO) allows employees of some local companies to take courses for credit from their company sites before being admitted to a degree program. Students apply to take NDO courses each quarter through the Stanford Center for Professional Development. Up to 18 units taken as an NDO student may be applied toward a degree program. For additional information about the NDO application process and deadlines, see the SCPD web site (<http://scpd.stanford.edu>), or contact SCPD at (650) 725-3000.

Certificate

The department offers a certificate program within the framework of the NDO program. A certificate can be obtained by completing three MS&E core courses, plus one MS&E elective course for a total of four courses. For further information, see <http://scpd.stanford.edu/scpd/programs/certs/managementSci.htm>.

Doctor of Philosophy in Management Science and Engineering

University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

The Ph.D. degree in MS&E is intended for students primarily interested in a career of research and teaching, or high-level technical work in universities, industry, or government. The program requires three years of full-time graduate study, at least two years of which must be at Stanford. Typically, however, students take about four to five years after entering the program to complete all Ph.D. requirements. The Ph.D. is generally organized around the requirement that the students acquire a breadth across some of the eight areas of the department, and depth in one of them. These fields of study are:

- Decision analysis and risk analysis
- Economics and finance
- Information science and technology
- Organization, technology, and entrepreneurship
- Policy and strategy
- Probability and stochastic systems
- Production and operations management
- Systems modeling and optimization

Each student admitted to the Ph.D. program must satisfy a breadth requirement and pass a qualification procedure. The purpose of the qualification procedure is to assess the student's command of the field and to evaluate his or her potential to complete a high-quality dissertation in a timely manner. The student must complete specified course work in one of the eight areas of the department, or the Systems Program which is a combination of several areas. The qualification decision is based on the student's grade point average (GPA), on the one or two preliminary papers prepared by the student, and on the student's performance in an area examination. Considering this evidence, the department faculty votes on advancing the student to candidacy in the department at large. The Ph.D. requires a minimum of 135 units, at least 54 of which must be in courses of 3 units or more. At least 48 course units in courses of 3 units or more must be taken for a letter grade. Finally, the student must pass a University oral examination and complete a Ph.D. dissertation. During the course of the Ph.D. program, students who do not have a master's degree are strongly encouraged to complete one, either in MS&E or in another Stanford department.

Breadth Requirement

1. The breadth requirement is to be satisfied by a choice of four courses spanning four out of the above mentioned eight areas of the department.
2. The Ph.D. candidacy form must contain four courses that satisfy the breadth requirement.
3. Courses chosen to satisfy the breadth requirement must be taken for letter grades.
4. At least one of the four courses chosen to satisfy the breadth requirement must be at the 300 level.

Courses Satisfying the Breadth Requirement:

Choose at least one course from four different areas. Courses used to satisfy the breadth requirement may also be used to satisfy the depth requirement.

Systems Modeling and Optimization:

MSE 201	Dynamic Systems	3-4
MSE 211	Linear and Nonlinear Optimization	3-4

MSE 310	Linear Programming	3
MSE 311	Optimization	3
MSE 312	Advanced Methods in Numerical Optimization	3
MSE 314	Linear and Conic Optimization with Applications	3
MSE 315	Numerical Optimization	3
MSE 316	Discrete Mathematics and Algorithms	3
MSE 317	Algorithms for Modern Data Models	3
MSE 318	Large-Scale Numerical Optimization	3
MSE 319	Approximation Algorithms	3
Probability and Stochastic Systems:		
MSE 220	Probabilistic Analysis	3-4
MSE 221	Stochastic Modeling	3
MSE 223	Simulation	3
MSE 321	Stochastic Systems	3
MSE 322	Stochastic Calculus and Control	3
MSE 335	Queueing and Scheduling in Processing Networks	3
MSE 336	Platform and Marketplace Design	3
MSE 337	Spectral Graph Theory and Algorithmic Applications	3
MSE 338	Advanced Topics in Information Science and Technology	3
Information Science and Technology:		
MSE 233	Networked Markets	3
MSE 335	Queueing and Scheduling in Processing Networks	3
MSE 336	Platform and Marketplace Design	3
MSE 337	Spectral Graph Theory and Algorithmic Applications	3
MSE 338	Advanced Topics in Information Science and Technology	3
Economics and Finance:		
MSE 241	Economic Analysis	3-4
MSE 244	Economic Growth and Development	3
MSE 245A	Investment Science	3
MSE 245B	Advanced Investment Science	3
MSE 347	Credit Risk: Modeling and Management	3
MSE 348	Optimization of Uncertainty and Applications in Finance	3
Decision Analysis and Risk Analysis:		
MSE 250A	Engineering Risk Analysis	3
MSE 251	Stochastic Control	3
MSE 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MSE 351	Dynamic Programming and Stochastic Control	3
MSE 352	Decision Analysis II: Professional Decision Analysis	3-4
MSE 353	Decision Analysis III: Frontiers of Decision Analysis	3
MSE 355	Influence Diagrams and Probabilistics Networks	3
Production and Operations Management:		
MSE 260	Introduction to Operations Management	3
MSE 261	Inventory Control and Production Systems	3
MSE 262	Supply Chain Management	3
MSE 263	Healthcare Operations Management	3
MSE 264	Sustainable Product Development and Manufacturing	3-4
MSE 268	Operations Strategy	3
MSE 365	Advanced Models in Operations Management	3

Organization, Technology, and Entrepreneurship:		
MSE 280	Organizational Behavior: Evidence in Action	3-4
MSE 380	Doctoral Research Seminar in Organizations	3
MSE 381	Doctoral Research Seminar in Work, Technology, and Organization	2-3
MSE 383	Doctoral Seminar on Ethnographic Research	3
MSE 384	Groups and Teams	3
Policy and Strategy:		
MSE 270	Strategy in Technology-Based Companies	3-4
MSE 292	Health Policy Modeling	3
MSE 293	Technology and National Security	3
MSE 294	Climate Policy Analysis	3
MSE 295	Energy Policy Analysis	3
MSE 371	Innovation and Strategic Change	2-3
MSE 372	Entrepreneurship Doctoral Research Seminar	1-3
MSE 374	Dynamic Corporate Strategy	3
MSE 375	Research on Entrepreneurship	3
MSE 376	Strategy Doctoral Research Seminar	3
MSE 389	Seminar on Organizational Theory	5
MSE 390	Doctoral Research Seminar in Health Systems Modeling	1-3
MSE 391	Doctoral Research Seminar in Energy-Environmental Systems Modeling and Analysis	1-3

Qualification Procedure Requirements

The qualification procedure is based both on breadth across the department's disciplines and depth in an area of the student's choice. The qualification process must be completed by the end of the month of May of the student's second year of graduate study in the department. The performance of all doctoral students is reviewed every year at a department faculty meeting at the end of May or beginning of June. Ph.D. qualification decisions are made at that time and individual feedback is provided.

The Ph.D. qualification requirements comprise these elements:

- Grade Point Average:** A student must maintain a GPA of at least 3.4 in the four courses chosen to satisfy the breadth requirements, and a GPA of at least 3.4 in the set of all courses taken by the student within the department. In both cases, the GPA is computed on the basis of the nominal number of units for which each course is offered.
- Paper(s):** A student may choose between two options, either of which is to be completed before the Spring Quarter of the student's second year. The first option involves one paper supervised by a primary faculty adviser and a faculty consultant. This paper should be written in two quarters.
 - The second option involves two shorter sequential tutorials, with two different faculty advisers. Each tutorial should be completed in one quarter. In both options, the student chooses the faculty adviser(s)/consultant with the faculty members' consent.
 - A student may register for up to 3 units per tutorial and up to 6 units for a paper. These paper or tutorial units do not count towards the 54 course units required for the Ph.D., and letter grades are not given.
- Area Qualification:** In addition, during the second year, a student must pass an examination in one of the eight areas of the MS&E department or the Systems Program, a combination of several areas, which is of the student's choice. This area examination is written, oral, or both, at the discretion of the area faculty administering the exam.
- Area Course Requirement:** Students must complete the depth requirements of one of the eight fields of study of the MS&E department or the Systems Program which is a combination of several

areas. Courses used to satisfy depth requirements must be taken for a letter grade. The Ph.D. requirements for the eight areas of the MS&E department are available from the MS&E student services office.

Ph.D. Minor in Management Science and Engineering

Students pursuing a Ph.D. in another department who wish to receive a Ph.D. minor in Management Science and Engineering should consult the MS&E student services office. A minor in MS&E may be obtained by completing 20 units of approved graduate-level MS&E courses, of which at least 6 units must be at the 300-level. Courses approved for the minor must form a coherent program, and must include one course from at least three of the eleven MS&E Master of Science core options. The program must include a minimum of 16 letter-graded units, and a minimum grade point average of 3.3 must be achieved in these courses.

Emeriti: (Professors) James L. Adams, Kenneth J. Arrow, Richard W. Cottle, B. Curtis Eaves, Frederick S. Hillier, Donald L. Iglehart, David G. Luenberger, Michael M. May, William J. Perry, Henry E. Riggs, David A. Thompson

Chair: Peter W. Glynn

Professors: Nicholas Bambos, Stephen R. Barley, Margaret L. Brandeau, Kathleen M. Eisenhardt, Peter W. Glynn, Ashish Goel, Warren H. Hausman, Ronald A. Howard, Riitta Katila, M. Elisabeth Paté-Cornell, Robert I. Sutton, James L. Sweeney, Benjamin Van Roy, Yinyu Ye

Associate Professors: Samuel S. Chiu, Kay Giesecke, Pamela J. Hinds, Ramesh Johari, Amin Saberi, Ross D. Shachter, Edison T. S. Tse

Assistant Professors: Charles E. Eesley, Sharad Goel, Melissa A. Valentine

Professors (Research): Siegfried S. Hecker, Walter Murray, Michael A. Saunders, John P. Weyant

Professors (Teaching): Thomas H. Byers, Robert E. McGinn

Professor of the Practice: Tina L. Seelig

Courtesy Professors: Anat Admati, Stephen P. Boyd, Douglas K. Owens, Sylvia Plevritis, Walter Powell, Balaji Prabhakar, Tim Roughgarden

Lecturers: Daniel Barreto, Ravi Belani, Lisa Borland, David Chang, Toby Corey, Jeff Epstein, Jack Fuchs, Rebeca Hwang, Colin Kessinger, Clint Korver, Arik Lifschitz, Trevor Loy, Mary Morrison, Heidi Roizen, Rosanne Siino, Lynda Kate Smith, Andrew Wong

Consulting Professors: Peter Haas, Gerd Infanger, Thomas Kosnik, Burke Robinson, Sam L. Savage, Behnam Tabrizi

Consulting Associate Professors: Steve Blank, Michael Lyons, Audrey MacLean, Jan Pietzsch, F. Victor Stanton, Peter Woehrmann

Consulting Assistant Professors: Blake E. Johnson

Visiting Professor: Olivier de La Grandville

Director of the Industrial Affiliates Program: Yinyu Ye

Materials Science and Engineering

Courses offered by the Department of Materials Science and Engineering are listed under the subject code MATSCI on the *Stanford Bulletin's* ExploreCourses (<http://explorecourses.stanford.edu/browse>) web site.

The Department of Materials Science and Engineering is concerned with the relation between the structure and properties of materials, factors that

control the internal structure of solids, and processes for altering their structure and properties, particularly at the nanoscale.

Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

Graduate Programs in Materials Science Engineering

Graduate programs lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Graduate students can specialize in any of the areas of materials science and engineering.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course and laboratory work in solid state fundamentals and materials engineering, and further course work in a technical depth area which may include a master's Research Report. Typical depth areas include nanocharacterization, electronic and photonic materials, energy materials, nano and biomaterials.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Materials Science and Engineering and related fields.

Facilities

The department is located in the William F. Durand Building, with extensive facilities in the Jack A. McCullough Building and the Gordon and Betty Moore Materials Research Building. These buildings house offices for the chair, majority of the faculty, administrative and technical staff, graduate students as well as lecture and seminar rooms. The research facilities are equipped to conduct electrical measurements, mechanical testing of bulk and thin film materials, fracture and fatigue of advanced materials, metallography, optical, scanning, transmission electron microscopy, atomic force microscopy, UHV sputter deposition, vacuum annealing treatments, wet chemistry, and x-ray diffraction.

The McCullough/Moore Complex is also the home for the Center for Magnetic Nanotechnology (CMN (http://www.stanford.edu/group/nanomag_center)), Stanford Nanocharacterization Laboratory (SNL (<http://www.stanford.edu/group/snl>)) and Nanoscale Prototyping Laboratory (NPL

(<http://npl-web.stanford.edu>); joint facility with Mechanical Engineering in Building 530). The department maintains a microcomputer cluster for its students, which is linked to the internet.

Depending on the needs of their programs, students and faculty also conduct research in a number of other departments and independent laboratories. Chief among these are the Stanford Nanofabrication Facility (SNF (<http://snf.stanford.edu>)), Geballe Laboratory for Advanced Materials (GLAM (<http://stanford.edu/group/glam>)), and Stanford Synchrotron Radiation Laboratory (SSRL (<http://www-ssrl.slac.stanford.edu>)).

The Stanford Nanofabrication Facility (SNF) is a laboratory joining government and industrially funded research on microelectronic materials, devices, and systems. It houses a 10,000 sq. ft., class 100 clean room for Si and GaAs integrated circuit fabrication, a large number of electronic test, materials analysis, and computer facilities, and office space for faculty, staff, and students. In addition, the Center for Integrated Systems (CIS (<http://cis.stanford.edu>)) provides start-up research funds and maintains a fellow-mentor program with industry.

Bachelor of Science in Materials Science and Engineering

Mission Statement

The mission of the Materials Science and Engineering Program is to provide students with a strong foundation in materials science and engineering. The program's curriculum places special emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of materials structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering and teach them to apply this knowledge analytically to create effective and novel solutions to practical problems. The program prepares students for careers in industry or for further study in graduate school.

The undergraduate program provides training in solid state fundamentals and materials engineering. Students desiring to specialize in this field during their undergraduate period may do so by following the curriculum outlined in the Bachelor of Science in Materials Science and Engineering section of this bulletin as well as the School of Engineering Undergraduate Handbook (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Main_Page). The University's basic requirements for the bachelor's degree are discussed in the Bachelor of Science in Materials Science and Engineering section of this bulletin. Electives are available so that students with broad interests can combine materials science and engineering with work in another science or engineering department.

Students interested in the minor should see the Materials Science and Engineering Minor section of this bulletin.

Materials Science and Engineering (MATSCI)

Completion of the undergraduate program in Materials Science and Engineering leads to the conferral of the Bachelor of Science in Materials Science and Engineering.

Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students' knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

Requirements

	Units
Mathematics	
20 units minimum; see Basic Requirement 1 ¹	
Select one of the following:	5
MATH 51 Linear Algebra and Differential Calculus of Several Variables	
CME 100/ ENGR 154 Vector Calculus for Engineers	
Select one of the following:	5
MATH 52 Integral Calculus of Several Variables	
CME 104/ ENGR 155B Linear Algebra and Partial Differential Equations for Engineers	
Select one of the following:	5
MATH 53 Ordinary Differential Equations with Linear Algebra	
CME 102/ ENGR 155A Ordinary Differential Equations for Engineers	
One additional course	5
Science	
20 units minimum; see Basic Requirement 2 ²	20
Must include a full year of physics or chemistry, with one quarter of study in the other subject.	
Technology in Society	
One course; see Basic Requirement 3 ³	3-5
Engineering Fundamentals	
Three courses minimum; see Basic Requirement 4 ⁴	
Select one of the following:	4
ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis ⁴	
ENGR 50E Introduction to Materials Science, Energy Emphasis ⁴	
ENGR 50M Introduction to Materials Science, Biomaterials Emphasis ⁴	

At least two additional courses	6-9
Materials Science and Engineering Depth	
Materials Science Fundamentals:	
MATSCI 153	Nanostructure and Characterization 4
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies ⁵ 4
MATSCI 155	Nanomaterials Synthesis 4
MATSCI 157	Quantum Mechanics of Nanoscale Materials 4
Two of the following courses:	8
MATSCI 151	Microstructure and Mechanical Properties
MATSCI 152	Electronic Materials Engineering
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 190	Organic and Biological Materials
MATSCI 192	Materials Chemistry
MATSCI 193	Atomic Arrangements in Solids
MATSCI 194	Thermodynamics and Phase Equilibria
MATSCI 195	Waves and Diffraction in Solids
MATSCI 196	Defects in Crystalline Solids
MATSCI 197	Rate Processes in Materials
MATSCI 198	Mechanical Properties of Materials
MATSCI 199	Electronic and Optical Properties of Solids
Engineering Depth	16
One of the following courses:	
MATSCI 161	Nanocharacterization Laboratory (WIM)
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory (WIM)
Three of the following courses:	
MATSCI 160	Nanomaterials Laboratory
MATSCI 162	X-Ray Diffraction Laboratory
MATSCI 163	Mechanical Behavior Laboratory
MATSCI 165	Nanoscale Materials Physics Computation Laboratory
Focus Area Options ⁶	10

¹ Basic Requirement 1 (20 units minimum): see a list of approved Math Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

² Basic Requirement 2 (20 units minimum): see a list of approved Science Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

³ Basic Requirement 3 (one course minimum): see a list of approved Technology in Society Courses (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses).

⁴ Basic Requirement 4 (3 courses minimum): see a list of approved Engineering Fundamentals (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Approved_Courses) Courses. If both ENGR 50 (p. 269) Introduction to Materials Science, Nanotechnology Emphasis, ENGR 50E (p. 269) Introduction to Materials Science - Energy Emphasis, and/or ENGR 50M (p. 269) Introduction to Materials Science, Biomaterials Emphasis are taken, one may be used for the Materials Science Fundamentals requirement.

⁵ ENGR 30 (p. 269) Engineering Thermodynamics may be substituted for MATSCI 154 (p. 269) Thermodynamic Evaluation of Green Energy Technologies as long as the total MATSCI program units total 50 or more.

⁶ Focus Area Options: 10 units from one of the following Focus Area Options below.

Focus Area Options

Bioengineering (10 units minimum)

BIOE 220	Introduction to Imaging and Image-based Human Anatomy
BIOE 281	Biomechanics of Movement
BIOE 284B	Cardiovascular Bioengineering
BIOE 333	Interfacial Phenomena and Bionanotechnology
BIOE 381	Orthopaedic Bioengineering
MATSCI 190	Organic and Biological Materials
MATSCI 380	Nano-Biotechnology
MATSCI 381	Biomaterials in Regenerative Medicine
MATSCI 382	Biochips and Medical Imaging

Chemical Engineering (10 units minimum)

CHEM 171	Physical Chemistry I
CHEMENG 130	Separation Processes
CHEMENG 140	Micro and Nanoscale Fabrication Engineering
CHEMENG 150	Biochemical Engineering
CHEMENG 160	Polymer Science and Engineering

Chemistry (10 units minimum)

CHEM 151	Inorganic Chemistry I
CHEM 153	Inorganic Chemistry II
CHEM 171	Physical Chemistry I
CHEM 173	Physical Chemistry II
CHEM 175	Physical Chemistry III
CHEM 181	Biochemistry I
CHEM 183	Biochemistry II
CHEM 185	Biochemistry III

Electronics & Photonics (10 units minimum)

EE 101A	Circuits I
EE 101B	Circuits II
EE 102A	Signal Processing and Linear Systems I
EE 102B	Signal Processing and Linear Systems II
EE 116	Semiconductor Device Physics
EE 134	Introduction to Photonics
EE 136	Introduction to Nanophotonics and Nanostructures
EE 142	Engineering Electromagnetics (Formerly EE 141)
MATSCI 343	Organic Semiconductors for Electronics and Photonics

Energy Technology (10 units minimum)

EE 293B	Fundamentals of Energy Processes
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 302	Solar Cells
MATSCI 303	Principles, Materials and Devices of Batteries
ME 260	Fuel Cell Science and Technology

Materials Characterization Techniques (10 units minimum)

MATSCI 320	Nanocharacterization of Materials
MATSCI 321	Transmission Electron Microscopy
MATSCI 322	Transmission Electron Microscopy Laboratory
MATSCI 323	Thin Film and Interface Microanalysis
MATSCI 326	X-Ray Science and Techniques

Mechanical Behavior & Design (10 units minimum)

AA 240A	Analysis of Structures
AA 240B	Analysis of Structures
AA 256	Mechanics of Composites
MATSCI 198	Mechanical Properties of Materials
MATSCI 358	Fracture and Fatigue of Materials and Thin Film Structures
ME 80	Mechanics of Materials
or CEE 101A	Mechanics of Materials
ME 203	Design and Manufacturing
ME 294	Medical Device Design
Nanoscience (10 units minimum)	
BIOE 333	Interfacial Phenomena and Bionanotechnology
EE 136	Introduction to Nanophotonics and Nanostructures
ENGR 240	Introduction to Micro and Nano Electromechanical Systems
MATSCI 316	Nanoscale Science, Engineering, and Technology
MATSCI 320	Nanocharacterization of Materials
MATSCI 346	Nanophotonics
MATSCI 347	Introduction to Magnetism and Magnetic Nanostructures
MATSCI 380	Nano-Biotechnology
Physics (10 units minimum)	
PHYSICS 70	Foundations of Modern Physics
PHYSICS 110	Advanced Mechanics
PHYSICS 120	Intermediate Electricity and Magnetism I
PHYSICS 121	Intermediate Electricity and Magnetism II
PHYSICS 130	Quantum Mechanics
PHYSICS 131	Quantum Mechanics II
PHYSICS 134	Advanced Topics in Quantum Mechanics
PHYSICS 170	Thermodynamics, Kinetic Theory, and Statistical Mechanics I
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II

Self-Defined Option (10 units minimum)	
Petition for a self-defined cohesive program.	

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

Materials Science and Engineering (MATSCI) Minor

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:

	Units
Engineering Fundamentals	
Select one of the following:	4
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis
ENGR 50E	Introduction to Materials Science, Energy Emphasis
ENGR 50M	Introduction to Materials Science, Biomaterials Emphasis
Materials Science Fundamentals and Engineering Depth	
Select six of the following:	24
MATSCI 151	Microstructure and Mechanical Properties
MATSCI 152	Electronic Materials Engineering

MATSCI 153	Nanostructure and Characterization
MATSCI 154	Thermodynamic Evaluation of Green Energy Technologies
MATSCI 155	Nanomaterials Synthesis
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MATSCI 157	Quantum Mechanics of Nanoscale Materials
MATSCI 160	Nanomaterials Laboratory
MATSCI 161	Nanocharacterization Laboratory
MATSCI 162	X-Ray Diffraction Laboratory
MATSCI 163	Mechanical Behavior Laboratory
MATSCI 164	Electronic and Photonic Materials and Devices Laboratory
MATSCI 165	Nanoscale Materials Physics Computation Laboratory
MATSCI 190	Organic and Biological Materials
MATSCI 192	Materials Chemistry
MATSCI 193	Atomic Arrangements in Solids
MATSCI 194	Thermodynamics and Phase Equilibria
MATSCI 195	Waves and Diffraction in Solids
MATSCI 196	Defects in Crystalline Solids
MATSCI 197	Rate Processes in Materials
MATSCI 198	Mechanical Properties of Materials
MATSCI 199	Electronic and Optical Properties of Solids

Total Units

28

Master of Science in Materials Science Engineering

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 43)" section of this bulletin. The following are specific departmental requirements.

The Department of Materials Science and Engineering requires a minimum of 45 units for a master's degree to be taken in residence at Stanford. A Master's Program Proposal (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/progpropma.pdf>) form should be filled out, signed by the student's academic adviser, and submitted to the department's student services manager by the end of the student's first quarter of study. Final revisions to the master's program proposal must be submitted no later than one academic quarter prior to the quarter of expected degree conferral. Stanford Materials Science undergraduates who are pursuing or who plan to pursue a Coterminal M.S. degree may have more flexibility in their programs and should consult with their academic advisers regarding appropriate core course and elective choices.

Degree requirements are as follows:

1. A minimum of 30 units of Materials Science and Engineering (MATSCI) course work, including core and lab courses specified below, all taken for a letter grade. Research units, one-unit seminars, MATSCI 299 Practical Training and courses in other departments (i.e., where students cannot enroll in a class with a MATSCI subject code) cannot be counted for this requirement.
2. Of these 30 units Materials Science requirements, students must include a or b.
 - a. three classes from MATSCI 201-210 core courses and three MATSCI 171, 172, 173, 174, 175 laboratory courses. One laboratory requirement may be fulfilled by taking a lab course from another engineering department.
 - b. four classes from MATSCI 201-210 core courses and two MATSCI 171, 172, 173, 174, 175 laboratory courses. One

laboratory requirement may be fulfilled by taking a lab course from another engineering department.

3. 15 units of approved course electives to result in a technically cohesive program. Of the 15 units of elective courses:
 - a. 12 of the 15 units must be taken for a letter grade (except for those submitting a M.S. thesis report).
 - b. a maximum of three units may be seminars.
 - c. if writing a master's thesis report, a minimum of 6 and a maximum of 15 units of MATSCI 200 Master's Research may be counted. Master's research units may be counted only if writing a M.S. thesis report. The final version of the thesis report must be signed off by two faculty and submitted to student services manager by last day of classes of the graduation quarter. See student services manager for details and approval.
 - d. a maximum of three units may be undergraduate units, but not courses below the 100 level offering.
 - e. a maximum of five units may be used for a foreign language course (not including any remedial English or courses in the student's native language if other than English). Students must plan to enroll in an upper level designation of a foreign language course offering.
 - f. the combination of seminar, undergraduate, and language units may not exceed six units total.
 - g. the combination of research, seminar, undergraduate, and language units may not exceed 15 units total.
 - h. activity units may not be counted toward M.S. degree.
4. A minimum grade point average (GPA) of 2.75 for degree course work.

All proposed degree programs are subject to approval by student's academic adviser, and department's student services manager, who has responsibility for assuring that each proposal is a technically cohesive program. The M.S. degree is expected to be completed within two years during the University's candidacy period for completion of a master's degree.

Master's Thesis Report

Students wishing to take this option must consult with a MATSCI faculty member initially. Out of the 45 units M.S. degree requirements, 6-15 units may be taken in Materials Science Master's research by enrolling in MATSCI 200. Students using 15 units of research toward the degree must participate in a more complex and demanding research project than those using lesser units.

The M.S. thesis report must be approved and signed off by two faculty members. In general, one is student's research adviser, if adviser is a non MATSCI faculty member, a second MATSCI faculty is required to sign off on the thesis report. Consult with student services manager about faculty criteria, and requirements. Three copies of M.S. thesis report in final format should be submitted to two faculty advisers, and the department. The report is not an official University thesis but is intended to demonstrate to the department and faculty student's ability to conduct and report a directed research.

As a general guide line, a 6-9 units of master's research is a normal load for most students. The report should reflect the number of units taken. For instance, 3-4 laboratory reports are required for a 3-unit laboratory course. Accordingly, the level expected for 9 units of research would be at least equivalent to three such courses.

Students are advised to submit their thesis draft to faculty adviser readers by the end of fifth week of the quarter in which the units are to be assigned to allow time for faculty comments and revisions. A collated final version of the thesis report should be submitted to faculty and student services manager by last day of classes of student's graduation quarter. The appropriate grade for satisfactory progress in the research project prior to submission of the final report is 'N' (continuing); the 'S' (Satisfactory) final grade is given only when the report is fully approved and signed off by both faculty members.

In cases where students decide to pursue research after the initial program submission deadline, they should submit a revised M.S. Program Proposal at least two quarters before the degree is granted. The total combined units of Materials Science research units, seminars, language courses, and undergraduate courses cannot exceed 15. If a master's thesis report is not submitted, units in MATSCI 200 Master's Research cannot be applied to the department's requirement of 45 units for the conferral of the master's degree.

Honors Cooperative Program

Some of the department's graduate students participate in the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in industry to be part-time graduate students in Materials Science while continuing professional employment. Prospective HCP students follow the same admissions process and must meet the same admissions requirements as full-time graduate students. For information regarding the Honors Cooperative Program, see Graduate Programs in the "School of Engineering (p. 155)" section of this bulletin.

Petition Process for Transfer from M.S. to Ph.D. Degree Program

Students admitted to graduate programs are admitted specifically into either the terminal M.S. or the Ph.D. program. A student admitted to the terminal M.S. program should not assume admission to the Ph.D. program. Admission to the Ph.D. program is required for a student to be eligible to work towards the Ph.D. degree.

A student in the terminal M.S. program may petition to be admitted to the Ph.D. program by filing an M.S. to Ph.D. petition form. Petition must include a one-page statement of purpose explaining why the student wishes to transfer to the Ph.D. program, most recent unofficial transcript, and two letters of recommendation from members of the Stanford faculty, including one from the student's prospective research adviser and at least one from a Materials Science faculty member belonging to the Academic Council. The M.S. to Ph.D. petition to transfer should be submitted to the student services manager by June of the first year in the M.S. program. Students who wish to submit a petition to the Ph.D. degree, should plan to complete at least six of the MATSCI 200 series (including MATSCI 203 Atomic Arrangements in Solids, MATSCI 204 Thermodynamics and Phase Equilibria, MATSCI 207 Rate Processes in Materials) core courses during their first year of admission. A grade point average (GPA) of 3.5 or better in the core courses is requirement.

Transferring to the Ph.D. program is a competitive process and only highly qualified M.S. students may be admitted. Student's original application to the graduate program as well as the materials provided for the transfer petition are reviewed. Students must adhere to requirements for the terminal M.S. degree, and plan to confer the M.S. degree in the event that the Ph.D. petition to transfer is not approved.

Coterminal B.S./M.S. Program in Materials Science and Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in Materials Science and Engineering through the Coterminal program may apply for admission after they have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. Applicants must submit their application no later than eight weeks before the start of the proposed admit quarter. The application must give evidence that student possesses a potential for strong academic

performance at the graduate level. Scores from the Graduate Record Examination (GRE) General Test must be reported before action can be taken on an application.

Materials science is a highly integrated and interdisciplinary subject, therefore students of any engineering or science undergraduate major are encouraged to apply.

Information and other requirements pertaining to the Coterminal program in Materials Science and Engineering may be obtained from the department's student services manager.

University requirements for the Coterminal degree are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University Coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Engineer in Materials Science Engineering

The University's basic requirements for the degree of Engineer are outlined in the "Graduate Degrees" section of this bulletin.

A student wishing to enter the Engineer program must have completed the requirements of the M.S. in Materials Science and Engineering, and must file a petition requesting admission to the program, stating the type of research to be done and the proposed supervising professor. Once approved, the Application for Candidacy must be submitted to the department's student services manager by the end of the second quarter in the Engineer program. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

The 90-unit program must include 9 units of graduate courses in Materials Science with a MATSCI subject code (no research units, seminars, colloquia, and MATSCI 400 Participation in Materials Science Teaching, Participation in Teaching) beyond the requirements for the M.S. degree, and additional research or other units to meet the 90-unit University minimum requirement. A grade point average (GPA) of 3.0 must be maintained for all degree course work taken at Stanford.

The Engineer thesis must be approved and signed off by two Academic Council faculty members, one must be a MATSCI faculty member.

Doctor of Philosophy in Materials Science Engineering

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 43)" section of this bulletin.

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Degree requirements for the department are as follows:

Core Courses ¹	Units
EE 222 Applied Quantum Mechanics I	30
MATSCI 202 Materials Chemistry	
MATSCI 203 Atomic Arrangements in Solids	
MATSCI 204 Thermodynamics and Phase Equilibria	
MATSCI 205 Waves and Diffraction in Solids	
MATSCI 206 Defects in Crystalline Solids	
MATSCI 207 Rate Processes in Materials	
MATSCI 208 Mechanical Properties of Materials	
MATSCI 209 Electronic and Optical Properties of Solids	
MATSCI 210 Organic and Biological Materials	

Five Elective Graduate Technical Courses ²	15
Materials Science Colloquia ³	3
MATSCI 230 Materials Science Colloquium (Autumn 2014)	
MATSCI 230 Materials Science Colloquium (Winter 2015)	
MATSCI 230 Materials Science Colloquium (Spring 2015)	
Research & Electives	87
75 Units of MATSCI 300: Ph.D. Research	
12 Units of Electives ⁴	

- At least six of these courses must be taken during the first year (including MATSCI 203 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering>) Atomic Arrangements in Solids, MATSCI 204 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Thermodynamics and Phase Equilibria, and MATSCI 207 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Rate Processes in Materials). All core courses must be completed for a letter grade, and taken during the first two years in the program.
 - Elective technical courses must be in areas related directly to student's research interest in Materials Science and Engineering, and may not include MATSCI 230 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Materials Science Colloquium, MATSCI 299 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Practical Training, MATSCI 300 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Ph.D. Research or MATSCI 400 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Participation in Materials Science Teaching. All courses must be completed for a letter grade.
 - Materials Science & Engineering Ph.D. students are required to take MATSCI 230 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Materials Science Colloquium during each quarter of their first year. Attendance is required, roll is taken, and more than two absences results in an automatic "No Pass" grade.
 - May include other engineering courses, or MATSCI 400 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Participation in Materials Science Teaching or a maximum of 3 units MATSCI 299 (<http://exploreddegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/>) Practical Training
- Students must consult with their academic adviser on Ph.D. course selection planning. For students with a non-MATSCI research adviser, the MATSCI academic/co-adviser must also approve the list of proposed courses. Any proposed deviations from the requirements can only be considered by petition.
 - Ph.D. students are required to apply for and have conferred a MATSCI M.S. degree normally by the end of their third year of studies. A Graduate Program Authorization Petition (in Axess) and an M.S. Program Proposal (<http://studentaffairs.stanford.edu/sites/default/files/registrar/files/proppropma.pdf>) must be submitted after taking the Ph.D. qualifying examination.
 - A departmental oral qualifying examination must be passed by the end of January of the second year. A grade point average (GPA) of 3.5 in core courses MATSCI 201-210 is required for admission to the Ph.D. qualifying examination. Students who have passed the Ph.D. qualifying examination are required to complete the Application for Candidacy to the Ph.D. degree by June of the second year after passing the qualifying examination. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to the TGR status.
 - Maintain a cumulative GPA of 3.0 in all courses taken at Stanford.

- Students must present the results of their research dissertation at the University Ph.D. oral defense examination.
- Current students subject to either this set of requirements or a prior set must obtain the approval of their adviser before filing a revised program sheet, and should as far as possible adhere to the intent of the new requirements.
- Students may refer the list of "Advanced Specialty Courses and Cognate Courses" provided below as guidelines for their selection of technical elective units. As noted above, academic adviser approval is required.
- At least 90 units must be taken in residence at Stanford. Students entering with an M.S. degree in Materials Science from another university may request to transfer up to 45 units of equivalent work toward the total of 135 Ph.D. degree requirement units.
- Students may propose a petition for exemption from a required core course if they have taken a similar course in the past. To petition, a student must consult and obtain academic and/or research adviser approval, and consent of the instructor of the proposed core course. To assess a student's level of knowledge, the instructor may provide an oral or written examination on the subject matter. The student must pass the examination in order to be exempt from core course requirement. If the petition is approved, the student is required to complete the waived number of units by taking other relevant upper level MATSCI courses.

Advanced Specialty Courses

	Units
Biomaterials	
APPPHYS 292 (Offered previous years, may be counted)	
BIOPHYS 228 Computational Structural Biology	
CHEMENG 260 Polymer Science and Engineering	
CHEMENG 310 Microhydrodynamics	
CHEMENG 355 Advanced Biochemical Engineering	
ME 284A (Offered previous years, may be counted)	
ME 284B (Offered previous years, may be counted)	
ME 381 Orthopaedic Bioengineering	
ME 385 Tissue Engineering Lab	
ME 457 Fluid Flow in Microdevices

Ph.D. Minor in Materials Science and Engineering

The University's basic requirements for the Ph.D. minor are outlined in the "Graduate Degrees (p. 45)" section of this bulletin. A minor requires 20 units of graduate work of quality and depth at the 200-level or higher in the Materials Science and Engineering course offering. Courses must be taken for a letter grade. The proposed list of courses must be approved by department's advanced degree committee. Individual programs must be submitted to the student services manager at least one quarter prior to the quarter of the degree conferral. None of the units taken for the Ph.D. minor may overlap with any M.S. degree units.

Mechanical Engineering

Courses offered by the Department of Mechanical Engineering are listed under the subject code ME on the *Stanford Bulletin's* ExploreCourses web site.

The programs in the Department of Mechanical Engineering (ME) emphasize a mix of applied mechanics, biomechanical engineering, computer simulations, design, and energy science and technology. Since mechanical engineering is a broad discipline, the undergraduate program can be a springboard for graduate study in business, law, medicine, political science, and other professions where understanding technology is important. Both undergraduate and graduate programs provide technical background for work in biomechanical engineering, environmental pollution control, ocean engineering, transportation, and other multidisciplinary problems that concern society. In all programs, emphasis is placed on developing systematic procedures for analysis, communication of work and ideas, practical and aesthetic aspects in design, and responsible use of technology.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. a recognition of the need for and an ability to engage in life-long learning.

10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. the ability to apply advanced mathematics through multivariate calculus and differential equations.
13. the ability to work professionally in both thermal and mechanical systems areas including the design and realization of such systems.

Learning Outcomes (Graduate)

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing depth in one area of specialization and breadth in complementary areas. Areas of specialization range from automatic controls, energy systems, fluid mechanics, heat transfer, and solid mechanics to biomechanical engineering, MEMS, and design.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Mechanical Engineering and related fields.

Graduate Programs in Mechanical Engineering Admission and Financial Assistance

To be eligible for admission to the department, a student must have a B.S. degree in engineering, physics, or a comparable science program. To apply for the Ph.D. degree, applicants must have already completed an M.S. degree. PhD admission is based upon not only the admissions application, but faculty sponsorship within the department, which must be arranged prior to admission. Applications for Ph.D. and HCP (Honors Co-op) programs are accepted each quarter. M.S. applications must be received by the first Tuesday in December, and admitted students must matriculate in Autumn. The department annually awards, on a competitive basis, a limited number of fellowships, teaching assistantships, and research assistantships to incoming graduate students. Research assistantships are used primarily for post-master's degree students and are awarded by individual faculty research supervisors, not by the department.

Mechanical engineering is a varied profession, ranging from primarily aesthetic aspects of design to highly technical scientific research. Disciplinary areas of interest to mechanical engineers include biomechanics, energy conversion, fluid mechanics, materials, nuclear reactor engineering, propulsion, rigid and elastic body mechanics, systems engineering, scientific computing, and thermodynamics, to name a few. No mechanical engineer is expected to have a mastery of the entire spectrum.

A master's degree program leading to the M.S. is offered in Mechanical Engineering, and a master's degree program leading to the M.S. is offered in Engineering with a choice of the following fields of study: Biomechanical Engineering, Product Design, and an individually designed major.

Post-Master's Degree Programs

The department offers two post-master's degrees: Engineer and Doctor of Philosophy. Post-master's research generally requires some evidence that a student has research potential before a faculty member agrees to supervision and a research assistantship appointment. It is most efficient to carry out

preliminary research during the M.S. degree program, if interested in a post-master's degree.

Departmental Groups

The department has five groups: Biomechanical Engineering; Design; Flow Physics and Computation; Mechanics and Computation; and Thermosciences. Each maintains its own labs, shops, and offices.

The Biomechanical Engineering (BME) Group has teaching and research activities which focus primarily on musculoskeletal biomechanics, neuromuscular biomechanics, cardiovascular biomechanics, and rehabilitation engineering. Research in other areas including hearing, ocean, plant, and vision biomechanics exists in collaboration with associated faculty in biology, engineering, and medicine. The group has strong research interactions with the Mechanics and Computation and the Design groups, and the departments of Neurology, Radiology, and Surgery in the School of Medicine.

The Design Group is devoted to the imaginative application of science, technology, and art to the conception, visualization, creation, analysis and realization of useful devices, products, and objects. Courses and research focus on topics such as kinematics, applied finite elements, microprocessors, medical devices, fatigue and fracture mechanics, dynamics and simulation, micro-electromechanical systems (MEMS), rehabilitation, optimization, high-speed devices, product design, vehicle dynamics, experimental mechanics, robotics, creativity, idea visualization, computer-aided design, manufacturing, design analysis, and engineering education.

The Flow Physics and Computational Engineering Group (FPCE) The Flow Physics and Computational Engineering Group (FPCE) blends research on flow physics and modeling with algorithm development, scientific computing, and numerical database construction. FPCE is contributing new theories, models and computational tools for accurate engineering design analysis and control of complex flows (including multi phase flows, micro-fluidics, chemical reactions, acoustics, plasmas, interactions with electromagnetic waves and other phenomena) in aerodynamics, propulsion and power systems, materials processing, electronics cooling, environmental engineering, and other areas. A significant emphasis of research is on modeling and analysis of physical phenomena in engineering systems.

The Mechanics and Computational Group covers biomechanics, continuum mechanics, dynamics, experimental and computational mechanics, finite element analysis, fluid dynamics, fracture mechanics, micromechanics, nanotechnology, and simulation based design. Qualified students can work as research project assistants, engaging in thesis research in association with the faculty director and fellow students. Projects include analysis, synthesis, and control of systems; biomechanics; flow dynamics of liquids and gases; fracture and micro-mechanics, vibrations, and nonlinear dynamics; and original theoretical, computational, and experimental investigations in the strength and deformability of elastic and inelastic elements of machines and structures.

The Thermosciences Group conducts experimental and analytical research on both fundamental and applied topics in the general area of thermal and fluid systems. Research strengths include high Reynolds number flows, microfluidics, combustion and reacting flows, multiphase flow and combustion, plasma sciences, gas physics and chemistry, laser diagnostics, microscale heat transfer, convective heat transfer, and energy systems. Research motivation comes from applications including air-breathing and space propulsion, bioanalytical systems, pollution control, electronics fabrication and cooling, stationary and mobile energy systems, biomedical systems, and materials processing. Emphasis is on fundamental experiments leading towards advances in modeling, optimization, and control of complex systems.

Facilities

The department groups maintain modern laboratories that support undergraduate and graduate instruction and graduate research work.

The Structures and Composites Laboratory, a joint activity with the Department of Aeronautics and Astronautics, studies structures made of fiber-reinforced composite materials. Equipment for fabricating structural elements includes autoclave, filament winder, and presses. X-ray, ultrasound, and an electron microscope are available for nondestructive testing. The lab also has environmental chambers, a high speed impactor, and mechanical testers. Lab projects include designing composite structures, developing novel manufacturing processes, and evaluating environmental effects on composites.

Experimental facilities are available through the interdepartmental Structures and Solid Mechanics Research Laboratory, which includes an electrohydraulic materials testing system, a vehicle crash simulator, and a shake table for earthquake engineering and related studies, together with highly sophisticated auxiliary instrumentation. Facilities to study the micromechanics of fracture areas are available in the Micromechanics/Fracture Laboratory, and include a computer-controlled materials testing system, a long distance microscope, an atomic force microscope, and other instrumentation. Additional facilities for evaluation of materials are available through the Center for Materials Research, Center for Integrated Circuits, and the Ginzton Laboratory. Laboratories for biological experimentation are accessible through the School of Medicine. Individual accommodation is available for the work of each research student.

Major experimental and computational laboratories engaged in bioengineering work are located in the Biomechanical Engineering Group. Other Biomechanical Engineering Group activities and resources are associated with the Rehabilitation Research and Development Center of the Veterans Administration Palo Alto Health Care System. This major national research center has computational and prototyping facilities. In addition, the Rehabilitation Research and Development Center houses the Electrophysiology Laboratory, Experimental Mechanics Laboratory, Human Motor Control Laboratory, Rehabilitation Device Design Laboratory, and Skeletal Biomechanics Laboratory. These facilities support graduate course work as well as Ph.D. student research activities.

Computational and experimental work is also conducted in various facilities throughout the School of Engineering and the School of Medicine, particularly the Advanced Biomaterials Testing Laboratory of the Department of Materials Science and Engineering, the Orthopaedic Research Laboratory in the Department of Functional Restoration, and the Vascular Research Laboratory in the Department of Surgery. In collaboration with the School of Medicine, facilities throughout the Stanford Medical Center and the Veterans Administration Palo Alto Health Care System conduct biological and clinical work.

The Design Group has facilities for lab work in experimental mechanics and experimental stress analysis. Additional facilities, including MTS electrohydraulic materials test systems, are available in the Solid Mechanics Research Laboratory. Design Group students also have access to Center for Integrated Systems (CIS) and Ginzton Lab microfabrication facilities.

The group also maintains the Product Realization Laboratory (PRL), a teaching facility offering students integrated experiences in market definition, product design, and prototype manufacturing. The PRL provides coaching, design manufacturing tools, and networking opportunities to students interested in product development. The ME 310 Design Project Laboratory has facilities for CAD, assembly, and testing of original designs by master's students in the engineering design program. A Smart Product Design Laboratory supports microprocessor application projects. The Center for Design Research (CDR) has an excellent facility for concurrent engineering research, development, and engineering curriculum creation and assessment. Resources include a network of high-performance workstations. For worldwide web mediated concurrent engineering by virtual, non-collocated, design development teams, see the CDR web

site at <http://cdr.stanford.edu>. In addition, CDR has several industrial robots for student projects and research. These and several NC machines are part of the CDR Manufacturing Sciences Lab. The Manufacturing Modeling Laboratory (MML) addresses various models and methods that lead to competitive manufacturing. MML links design for manufacturing (dfM) research at the Department of Mechanical Engineering with supply chain management activities at the Department of Management Science and Engineering. The Rapid Prototyping Laboratory consists of seven processing stations including cleaning, CNC milling, grit blasting, laser deposition, low temperature deposition, plasma deposition, and shot peening. Students gain experience by using ACIS and Pro Engineer on Hewlett Packard workstations for process software development. The Design Group also has a Product Design Loft in which students in the Joint Program in Design develop graduate thesis projects.

The Flow Physics and Computation Group has a 32 processor Origin 2000, 48-node and 85-node Linux cluster with high performance interconnection and an array of powerful workstations for graphics and data analysis. Several software packages are available, including all the major commercial CFD codes. FPC is strongly allied with the Center for Turbulence Research (CTR), a research consortium between Stanford and NASA, and the Center for Integrated Turbulence Simulations (CITS), which is supported by the Department of Energy (DOE) under its Accelerated Strategic Computing Initiative (ASCI). The Center for Turbulence Research has direct access to major national computing facilities located at the nearby NASA-Ames Research Center, including massively parallel super computers. The Center for Integrated Turbulence Simulations has access to DOE's vast supercomputer resources. The intellectual atmosphere of the Flow Physics and Computation Group is greatly enhanced by the interactions among CTR's and CITS's postdoctoral researchers and distinguished visiting scientists.

The Mechanics and Computation Group has a Computational Mechanics Laboratory that provides an integrated computational environment for research and research-related education in computational mechanics and scientific computing. The laboratory houses Silicon Graphics, Sun, and HP workstations and servers, including an 8-processor SGI Origin2000 and a 16-processor networked cluster of Intel-architecture workstations for parallel and distributed computing solutions of computationally intensive problems. Software is available on the laboratory machines, including commercial packages for engineering analysis, parametric geometry and meshing, and computational mathematics. The laboratory supports basic research in computational mechanics as well as the development of related applications such as simulation-based design technology.

The Thermosciences Group has four major laboratory facilities. The Heat Transfer and Turbulence Mechanics Laboratory concentrates on fundamental research aimed at understanding and improved prediction of turbulent flows and high performance energy conversion systems. The laboratory includes two general-purpose wind tunnels, a pressurized high Reynolds number tunnel, two supersonic cascade flow facilities, three specialized boundary layer wind tunnels, and several other flow facilities. Extensive diagnostic equipment is available, including multiple particle-image velocimetry and laser-Doppler anemometry systems.

The High Temperature Gas Dynamics Laboratory includes research on sensors, plasma sciences, cool and biomass combustion and gas pollutant formation, and reactive and non-reactive gas dynamics. Research facilities include diagnostic devices for combustion gases, a spray combustion facility, laboratory combustors including a coal combustion facility and supersonic combustion facilities, several advanced laser systems, a variety of plasma facilities, a pulsed detonation facility, and four shock tubes and tunnels. The Thermosciences Group and the Design Group share the Microscale Thermal and Mechanical Characterization laboratory (MTMC). MTMC is dedicated to the measurement of thermal and mechanical properties in thin-film systems, including microfabricated sensors and actuators and integrated circuits, and features a nanosecond scanning laser thermometry facility, a laser interferometer, a near-field optical microscope, and an atomic force microscope. The activities at MTMC are closely

linked to those at the Heat Transfer Teaching Laboratory (HTTL), where undergraduate and master's students use high-resolution probe stations to study thermal phenomena in integrated circuits and thermally-actuated microvalves. HTTL also provides macroscopic experiments in convection and radiative exchange.

The Energy Systems Laboratory is a teaching and research facility dedicated to the study of energy conversion systems. The lab includes three dynamometers for engine testing, a computer-controlled variable engine valve controller, a fuel-cell experimental station, a small rocket testing facility, and a small jet engine thrust stand.

The Guidance and Control Laboratory, a joint activity of the Department of Aeronautics and Astronautics and the Department of Mechanical Engineering, specializes in construction of electromechanical systems and instrumentation, particularly where high precision is a factor. Work ranges from robotics for manufacturing to feedback control of fuel injection systems for automotive emission control. The faculty and staff work in close cooperation with both the Design and Thermosciences Groups on device development projects of mutual interest.

Many computation facilities are available to department students. Three of the department's labs are equipped with super-minicomputers. Numerous smaller minicomputers and microcomputers are used in the research and teaching laboratories.

Library facilities at Stanford beyond the general library include Engineering, Mathematics, and Physics department libraries.

Bachelor of Science in Mechanical Engineering

Undergraduates seeking to major in Mechanical Engineering should see the curriculum outlined in the "Undergraduate Degree in Mechanical Engineering" section of this bulletin. The University's basic requirements for the bachelor's degree are discussed in the "Undergraduate Degrees" section of this bulletin. Courses taken for the departmental major (mathematics; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if the instructor offers the option.

A Product Design program offered by the Design Group leads to the B.S. in Engineering (Product Design). A major in Biomechanical Engineering offered by the Biomechanical Engineering Group leads to the B.S. in Engineering (Biomechanical Engineering); this may be appropriate for students preparing for medical school or graduate bioengineering studies.

Grade Requirements

To be recommended by the department for a B.S. in Mechanical Engineering, a student must achieve the minimum grade point average (GPA) set by the School of Engineering (2.0 in engineering fundamentals and mechanical engineering depth).

Students interested in the minor should see the "Minor in Mechanical Engineering" section of this bulletin.

Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical

experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

Requirements

Mathematics

24 units minimum; see Basic Requirement 1 ¹		
CME 102/ENGR 155A	Ordinary Differential Equations for Engineers	5
or MATH 53	Ordinary Differential Equations with Linear Algebra	
Select one of the following:		3-5
CME 106/ENGR 155C	Introduction to Probability and Statistics for Engineers	
STATS 110	Statistical Methods in Engineering and the Physical Sciences	
STATS 116	Theory of Probability	
Plus additional courses to total min. 24		16

Science

20 units minimum; see Basic Requirement 2 ¹		
CHEM 31X	Chemical Principles Accelerated	5
or ENGR 31	Chemical Principles with Application to Nanoscale Science and Technology	
Plus additional required courses ¹		15

Technology in Society

One course from approved SoE list; see Basic Requirement 4		3-5
--	--	-----

Engineering Fundamentals

Three courses minimum; see Basic Requirement 3 ²		
ENGR 40	Introductory Electronics	5
ENGR 70A	Programming Methodology (same as CS 106A)	5
Fundamentals Elective ²		3-5

Engineering Depth

Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5		
ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 103D	Engineering Drawing and Design ³	1
ME 112	Mechanical Systems Design ⁴	4
ME 113	Mechanical Engineering Design	4
ME 131A	Heat Transfer	3-5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems ⁴	5
ME 161	Dynamic Systems, Vibrations and Control	4
ME 203	Design and Manufacturing ³	4

- Math and science must total 45 units.
 - Math: 24 units required and must include a course in differential equations (CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra; one of these required) and calculus-based Statistics (CME 106 Introduction to Probability and Statistics for Engineers or STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 116 is required).
 - Science: 20 units minimum and requires courses in calculus-based Physics and Chemistry, with at least a full year (3 courses) in one or the other. CHEM 31A Chemical Principles I/CHEM 31B Chemical Principles II are considered one course because they cover the same material as CHEM 31X Chemical Principles Accelerated but at a slower pace. CHEM 31X Chemical Principles Accelerated or ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology are recommended.
- ME Fundamental elective may not be a course counted for other requirements. Students may opt to use ENGR 14 Intro to Solid Mechanics, ENGR 15 Dynamics, or ENGR 30 Engineering Thermodynamics from the required depth courses as the third fundamental class. However, total units for Engineering Topics (Fundamentals + Depth) must be a minimum of 68 units; additional options courses may be required to meet unit requirements. ENGR 70A (CS 106A) must be taken for 5 units.
- Courses ME 103D and ME 203 must be taken concurrently.
- ME 112, ME 131A and ME 140 together fulfill the WIM requirement.

Options to complete the ME depth sequence: see the list of options in the ME major section of the Handbook for Undergraduate Engineering Programs (<http://ughb.stanford.edu>).

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (<http://ughb.stanford.edu>).

Honors Program

The Department of Mechanical Engineering offers a program leading to a B.S. in Mechanical Engineering with honors. This program offers a unique opportunity for qualified undergraduate engineering majors to conduct independent study and research at an advanced level with a faculty mentor.

Mechanical Engineering majors who have a grade point average (GPA) of 3.5 or higher in the major may apply for the honors program. Students who meet the eligibility requirement and wish to be considered for the honors program must submit a written application to the Mechanical Engineering student services office no later than the second week of Autumn Quarter in the senior year. The application to enter the program can be obtained from the ME student services office, and must contain a one-page statement describing the research topic and include an unofficial Stanford transcript. In addition, the application must be approved by a Mechanical Engineering faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford's Academic Council.

In order to receive departmental honors, students admitted to the program must:

- maintain the 3.5 GPA required for admission to the honors program.
- submit a completed thesis draft to the adviser by April 25. Further revisions and final endorsement by the adviser are to be finished by May 15, when two bound copies are to be submitted to the Mechanical Engineering student services office.
- present the thesis at the Mechanical Engineering Poster Session held in mid-April.

Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

Units

General Minor*

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 101	Visual Thinking	4
Plus two of the following:		8-9
ME 80	Mechanics of Materials	
ME 131A	Heat Transfer	
ME 161	Dynamic Systems, Vibrations and Control	
ME 203	Design and Manufacturing	

Thermosciences Minor**

ENGR 14	Intro to Solid Mechanics	4
ENGR 30	Engineering Thermodynamics	3
ME 70	Introductory Fluids Engineering	4
ME 131A	Heat Transfer	5
ME 131B	Fluid Mechanics: Compressible Flow and Turbomachinery	4
ME 140	Advanced Thermal Systems	5

Mechanical Design Minor***

ENGR 14	Intro to Solid Mechanics	4
ENGR 15	Dynamics	4
ME 80	Mechanics of Materials	4
ME 101	Visual Thinking	4
ME 112	Mechanical Systems Design	4
ME 203	Design and Manufacturing	4
Plus one of the following:		3-4
ME 113	Mechanical Engineering Design	
ME 210	Introduction to Mechatronics	
ME 220	Introduction to Sensors	

Total Units 79-81

* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 41 Calculus, MATH 42 Calculus, and PHYSICS 41 Mechanics.

** Prerequisites: MATH 41 Calculus, MATH 42 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.

*** This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 41 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

Coterminal B.S./M.S. Program in Mechanical Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree. This is normally Winter Quarter (late January) prior to Spring Quarter graduation. The application must provide evidence of potential for strong academic performance as a graduate student. The Mechanical Engineering department graduate admissions committee makes decisions on each application. Typically, a GPA of at least 3.5 in engineering, science, and math is expected. Applicants must have completed two of ME 80 Mechanics of Materials, ME 112 Mechanical Systems Design, ME 131A Heat Transfer, and ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery, and must take the Graduate Record Examination (GRE) before action is taken on the application.

Coterminal information, applications deadlines, and forms can be obtained from the ME Student Services Office.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Master of Science in Mechanical Engineering

The basic University requirements for the M.S. degree are discussed in the "Graduate Degrees (p. 43)" section of this bulletin.

The master's program consists of 45 units of course work taken at Stanford. No thesis is required, although many students become involved in research projects during the master's program, particularly to explore their interests in working towards a Ph.D. degree. Students whose undergraduate backgrounds are entirely devoid of some of the major subject disciplines of engineering (for example, applied mechanics, applied thermodynamics, fluid mechanics, ordinary differential equations) may need to take some undergraduate courses to fill obvious gaps and prepare themselves to take graduate courses in these areas. Such students may require more than three quarters to fulfill the master's degree requirements, as the makeup courses may only be used as unrestricted electives (see item 4 below) in the M.S. degree program. However, it is not the policy to require fulfillment of mechanical engineering B.S. degree requirements to obtain an M.S. degree.

Mechanical Engineering

The master's degree program requires 45 units of course work taken as a graduate student at Stanford. No thesis is required. However, students who want some research experience during the master's program may participate in research through ME 391 Engineering Problems and ME 392 Experimental Investigation of Engineering Problems.

Students are encouraged to refer to the most recent *Mechanical Engineering Graduate Student Handbook* provided by the student services office. The department's requirements for the M.S. in Mechanical Engineering are as follows:

1. *Mathematical Fundamentals*: two mathematics courses for a total of at least 6 units from the following list are required: ME 300A, 300B, 300C, 408; CME 302; EE 261, 263; ENGR 155C/CME106. Only MATH courses with catalog numbers greater than 100 and CME courses with catalog numbers greater than 200 will count towards the math requirement. However, courses must cover two different areas out of the following choices: partial differential equations, linear algebra, numerical analysis and statistics. This excludes programming classes such as CS 106; CME 211, 212, 213, 214, 292. Those classes can counted towards the Approved Electives category. Courses taken for the math requirement must be taken for a letter grade.
2. *Depth in Mechanical Engineering*: a set of graduate-level courses in Mechanical Engineering to provide depth in one area. The faculty have approved these sets as providing depth in specific areas as well as a significant component of applications of the material in the context of engineering synthesis. These sets are outlined in the *Mechanical Engineering Graduate Student Handbook*. Depth courses must be taken for a letter grade.
3. *Breadth in Mechanical Engineering*: two additional graduate level courses (outside the depth) from the depth/breadth charts listed in the *Mechanical Engineering Graduate Student Handbook*. Breadth courses must be taken for a letter grade.
4. *Sufficient Mechanical Engineering Course Work*: students must take a minimum of 24 units of course work in mechanical engineering topics. For the purposes of determining mechanical engineering topics, any course on approved lists for the mathematics, depth, and breadth requirements counts towards these units. In addition, any graduate-

level course with an ME course number is considered a mechanical engineering topic.

5. *Approved Electives* (to bring the total number of units to at least 39): electives must be approved by an adviser. Graduate engineering, mathematics, and science courses are normally approved. Approved electives must be taken for a letter grade. No more than 6 of the 39 units may come from ME 391/392 (or other independent study/research courses), and no more than 3 may come from seminars. Students planning a Ph.D. should discuss with their advisers the option of taking 391 or 392 during the master's program. ME 391/392 (and other independent study courses) may only be taken on a credit/no credit basis.
6. *Unrestricted electives* (to bring the total number of units submitted for the M.S. degree to 45): students are encouraged to take these units outside engineering, mathematics, or the sciences. Students should consult their advisers on course loads and on ways to use the unrestricted electives to make a manageable program. Unrestricted electives may be taken CR/NC.
7. Within the courses satisfying the requirements above, there must be at least one graduate-level course with a laboratory component. Courses which satisfy this requirement are:

		Units
ENGR 206	Control System Design	3-4
ENGR 341	Micro/Nano Systems Design and Fabrication	3-5
ME 203	Design and Manufacturing	4
ME 210	Introduction to Mechatronics	4
ME 220	Introduction to Sensors	3-4
ME 218A	Smart Product Design Fundamentals	4-5
ME 218B	Smart Product Design Applications	4-5
ME 218C	Smart Product Design Practice	4-5
ME 218D	Smart Product Design: Projects	3-4
ME 250	Internal Combustion Engines	3-5
ME 310A	Product-Based Engineering Design, Innovation, and Development	4
ME 310B	Product-Based Engineering Design, Innovation, and Development	4
ME 310C	Project-Based Engineering Design, Innovation, and Development	4
ME 317A	Design Methods: Product Definition	4
ME 317B	Design Methods: Quality By Design	4
ME 318	Computer-Aided Product Creation	4
ME 323	Modeling and Identification of Mechanical Systems for Control	3
ME 324	Precision Engineering	4
ME 348	Experimental Stress Analysis	3
ME 354	Experimental Methods in Fluid Mechanics	4
ME 367	Optical Diagnostics and Spectroscopy Laboratory	4
ME 382A		4
ME 382B		4
ME 385	Tissue Engineering Lab	1-2
ME 391/392	Engineering Problems	1-10
Or other independent study courses may satisfy this requirement if 3 units are taken for work involving laboratory experiments		

Candidates for the M.S. in Mechanical Engineering are expected to have the approval of the faculty; they must maintain a minimum grade point average (GPA) of 3.0 in the 45 units presented for fulfillment of degree requirements (exclusive of independent study courses). All courses used to fulfill mathematics, depth, breadth, approved electives, and lab studies must be taken for a letter grade (excluding seminars, independent study, and courses for which a letter grade is not an option for any student).

Students falling below a GPA of 2.5 at the end of 20 units may be disqualified from further registration. Students failing to meet the complete degree requirements at the end of 60 units of graduate registration are disqualified from further registration. Courses used to fulfill deficiencies arising from inadequate undergraduate preparation for mechanical engineering graduate work may not be applied to the 45 units required for completion of the MS degree.

Engineering

As described in the "School of Engineering" section of this bulletin, each department in the school may sponsor students in a more general degree, the M.S. in Engineering. Sponsorship by the Department of Mechanical Engineering (ME) requires (1) filing a petition for admission to the program by no later than the day before instruction begins, and (2) that the center of gravity of the proposed program lies in ME. No more than 18 units used for the proposed program may have been previously completed. The program must include at least 9 units of graduate-level work in the department other than ME 300A,B,C, seminars, and independent study. The petition must be accompanied by a statement explaining the program objectives and how it is coherent, contains depth, and fulfills a well-defined career objective. The grade requirements are the same as for the M.S. in Mechanical Engineering.

Master of Science in Engineering, Biomechanical Engineering

The Master of Science in Engineering: Biomechanical Engineering (MSE:BME) promotes the integration of engineering mechanics and design with the life sciences. Applicants are expected to have an additional exposure to biology and/or bioengineering in their undergraduate studies. Students planning for subsequent medical school studies are advised to contact Stanford's Premedical Advising Office in Sweet Hall.

Students wishing to pursue this program must complete the Graduate Program Authorization form and get approval from the Student Services Office. This form serves to officially add the field to the student's record. This form must be filled out electronically on Axxess.

Degree Requirements

1. Mathematical competence (minimum 6 units) in two of the following areas: partial differential equations, linear algebra, complex variables, or numerical analysis, as demonstrated by completion of two appropriate courses from the following list: ME300A,B,C; MATH106, 109, 113, 131M/P, 132; STATS110, or ENGR155C; CME108, 302. Students who have completed comparable graduate-level courses as an undergraduate, and who can demonstrate their competence to the satisfaction of the instructors of the Stanford courses, may be waived via petition from this requirement by their adviser and the Student Services Office. The approved equivalent courses should be placed in the approved electives category of the program proposal.
2. Graduate Level Engineering Courses (minimum 21 units), consisting of:
 - a. Biomechanical engineering restricted electives (9 units) to be chosen from:

		Units
ME 239	Mechanics of the Cell	3
ME 280	Skeletal Development and Evolution	3
ME 281	Biomechanics of Movement	3
ME 287	Mechanics of Biological Tissues	3
ME 337	Mechanics of Growth	3
ME 381	Orthopaedic Bioengineering	3-4
ME 382A		4
ME 385	Tissue Engineering Lab	1-2
ME 387	Soft Tissue Mechanics	3

- b. Specialty in engineering (9-12 units): A set of three or four graduate level courses in engineering mechanics, materials, controls, or design (excluding bioengineering courses) selected to provide depth in one area. Such sets are approved by the Mechanical Engineering Faculty. Comparable specialty sets composed of graduate engineering courses outside the Mechanical Engineering Department can be used with the approval of the student's adviser. Examples can be obtained from the Biomechanical Engineering Group Office (Durand 223).
 - c. Graduate engineering electives (to bring the total number of graduate level engineering units to at least 21). These electives must contribute to a cohesive degree program, and be approved by the student's adviser. No units may come from bioengineering courses, mathematics courses, or seminars.
3. Life science approved electives (minimum 6 units): Undergraduate or graduate biological/medical science/chemistry courses which contribute to a cohesive program.
 4. Biomechanical engineering seminar ME 389 Biomechanical Research Symposium.
 5. General approved electives (to bring the total number of units to 39): These courses must be approved by the student's adviser. Graduate level engineering, math, and physical science courses and upper division undergraduate or graduate life science courses are normally approved.
 6. Unrestricted electives (to bring the total number of units to 45): Students without undergraduate biology are encouraged to use some of these unrestricted units to strengthen their biology background. Students should consult their adviser for recommendations on course loads and on ways to use the unrestricted electives to create a manageable program.

All courses except unrestricted electives must be taken for a letter grade unless letter grades are not an option. A minimum cumulative GPA of 3.0 is required for degree conferral.

Master of Science in Engineering, Product Design

The Masters Program in Design focuses on the synthesis of technology with human needs and market viability (both profit and non-profit models) to create innovative products, services and experiences. This program is offered jointly by the departments of Mechanical Engineering and Art and Art History. It provides a design thinking education that seeks to create design leaders who can transform organizations into cultures of creativity and innovation. Students entering the program from the engineering side will earn a Master of Science in Engineering degree with a concentration in Design (MSE-Design); those from the Art side earn a Master of Fine Arts and Design (MFA-Design). Students complete the core product design courses in their first year of graduate study at Stanford before undertaking the master's project in their second year..

Degree Requirements

Students must complete the following courses. Students making unsatisfactory degree progress by the end of the first year, at the faculty's discretion, may not advance to the second year (Masters Project Year). A minimum cumulative GPA of 3.0 and 60 units are required for degree conferral.

		Units
ME 203	Design and Manufacturing	4
ME 277	Graduate Design Research Techniques	3-4
ME 312	Advanced Product Design: Formgiving	3
ME 313	Human Values and Innovation in Design	3

ME 316A/316B/316C	Product Design Master's Project *	2-6
ARTSTUDI 350A/350B	Art & Design I: History and Theory **	3
Approved Electives - including at least one d.School class ***		28

* ME 316A Product Design Master's Project and B/C are taken sequentially for three quarters during the second year. ME316B & C are listed on the d.School website as Design Garage: A Deep Dive in Design Thinking. Students in the Masters of Science program just take this sequence for 4-6 units per quarter.

** ARTSTUDI 350A Art & Design I: History and Theory & B are taken sequentially for two quarters during the first year, starting in the fall quarter.

*** Students may choose classes (at the 200 level or higher) from any of the schools at the University to fulfill their elective requirement. However, electives that are not already pre-approved must be approved by the student's adviser via petition prior to enrollment. Electives should be chosen to fulfill career objectives; students may focus their energy in engineering, entrepreneurship and business, psychology, or other areas relevant to design. Taking a coherent sequence of electives focused on a subject area is recommended. For example, the patent, negotiation, and licensing classes (ME 208 Patent Law and Strategy for Innovators and Entrepreneurs, ME 265 Technology Licencing and Commercialization) constitute a sequence most relevant to potential inventors. Students interested in social entrepreneurship should apply to the d.school course ME 206A Entrepreneurial Design for Extreme Affordability,B, Extreme Affordability.

Note: All required and approved electives must be taken for a letter grade unless prior approval is granted to take a class CR/NC.

Pre-approved electives list

The following courses are pre-approved for fulfilling the elective requirement for the Masters Degree in Engineering - Design. Electives not on this list must be approved via petition prior to enrollment. Electives must be taken for a letter grade unless prior approval is obtained.

		Units
ME 208	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
ME 212	Calibrating the Instrument	1
ME 265	Technology Licencing and Commercialization	3
ME 238	Patent Prosecution	2
ME 297	Forecasting for Innovators:Technology, Tools & Social Change	3
ME 304	The Designer's Voice	1
ME 315	The Designer in Society	3
MSE 273	Technology Venture Formation	3-4
STRAMGT 353	Entrepreneurship: Formation of New Ventures	4
STRAMGT 356/366	The Startup Garage: Design	4

Additional requirements

As part of their Masters Degree program, and in addition to Design Garage (ME316B/C), students are required to take at least one course offered by the Hasso Plattner Institute of Design (the d.School). All d.School courses require applications submitted the quarter prior to the start of class. All d.School classes (with the exception of 'pop-ups') count as pre-approved electives. Suggest classes are found below.

		Units
ME 206A/206B	Entrepreneurial Design for Extreme Affordability ¹	4
ENGR 231	Transformative Design	3-5

ENGR 280	From Play to Innovation	2-4
ENGR 281	d.media 4.0 - Designing Media that Matters	2-3
ME 301	LaunchPad:Design and Launch your Product or Service	4

- ¹ Students who opt to take ME 206A Entrepreneurial Design for Extreme Affordability & ME 206B Entrepreneurial Design for Extreme Affordability as one of their pre-approved electives should take the sequence during the first year. This shifts ME 312 Advanced Product Design: Formgiving from first year to second year (Winter).

Engineer in Mechanical Engineering

The basic University requirements for the degree of Engineer are discussed in the "Graduate Degrees (p. 43)" section of this bulletin.

This degree requires an additional year of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master's degree alone.

Admission standards are substantially the same as indicated under the master's degree. However, since thesis supervision is required and the availability of thesis supervisors is limited, admission is not granted until the student has personally engaged a faculty member to supervise a research project. This most often involves a paid research assistantship awarded by individual faculty members (usually from the funds of sponsored research projects under their direction). Thus, individual arrangement between student and faculty is necessary. Students studying for the M.S. degree at Stanford who wish to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree program. Students holding master's degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include a thesis; up to 18 units of credit are allowed for thesis work (ME 400 Thesis). In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Students who have not fulfilled the Stanford M.S. degree requirements are required to do so, with allowance for approximate equivalence of courses taken elsewhere; up to 45 units may be transferable. A total of 90 units is required for degree conferral.

Candidates for the degree must have faculty approval and have a minimum grade point average (GPA) of 3.0 for all courses (exclusive of thesis credit and other independent study courses) taken beyond those required for the master's degree.

Doctor of Philosophy in Mechanical Engineering

The basic University requirements for the Ph.D. degree are discussed in the "Graduate Degree" section of this bulletin. The Ph.D. degree is intended primarily for students who desire a career in research, advanced development, or teaching; for this type of work, a broad background in mathematics and the engineering sciences, together with intensive study and research experience in a specialized area, are the necessary requisites.

Ph.D. students must have a master's degree from another institution, or must fulfill the requirements for the Stanford M.S. degree in Mechanical Engineering or another discipline.

In special situations dictated by compelling academic reasons, Academic Council members who are not members of the department's faculty may

serve as the principal dissertation adviser when approved by the department. In such cases, a member of the department faculty must serve as program adviser and as a member of the reading committee, and agree to accept responsibility that department procedures are followed and standards maintained.

Admission involves much the same consideration described under the Engineer degree. Since thesis supervision is required, admission is not granted until the student has personally engaged a member of the faculty to supervise a research project. Once a student has obtained a research supervisor, this supervisor becomes thereafter the student's academic adviser. Research supervisors may require that the student pass the departmental qualifying examination before starting research and before receiving a paid research assistantship. Note that research assistantships are awarded by faculty research supervisors and not by the department.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of engineering fundamentals by passing a qualifying examination. The academic level and subject matter of the examination correspond approximately to the M.S. program described above. Typically, the exam is taken shortly after the student completes the M.S. degree requirements. The student is required to have a minimum graduate Stanford GPA of 3.5 to be eligible for the exam (grades from independent study courses are not included in the GPA calculation). Once the student's faculty sponsor has agreed that the exam should be scheduled, the student must submit an application folder containing several items including a curriculum vitae, research project abstract, and preliminary dissertation proposal. Information, examination dates, and deadlines may be obtained from the department's student services office.

Ph.D. candidates must complete a minimum of 27 units (taken for a letter grade) of approved formal course work (excluding research, directed study, and seminars) in advanced study beyond the M.S. degree. The courses should consist primarily of graduate courses in engineering and sciences, although the candidate's adviser may approve a limited number of upper-level undergraduate courses and courses outside of engineering and sciences, as long as such courses contribute to a strong and coherent program. In addition to this 27-unit requirement, all Ph.D. candidates must participate each quarter in one of the following (or equivalent) seminars:

		Units
ME 389	Biomechanical Research Symposium	1
ME 390	Thermosciences Research Project Seminar	1
ME 395	Seminar in Solid Mechanics	1
ME 396	Design and Manufacturing Forum	1
ME 397	Design Theory and Methodology Seminar	1-3
AA 297	Seminar in Guidance, Navigation, and Control	1
ENGR 298	Seminar in Fluid Mechanics	1
ENGR 311A/311B	Women's Perspectives	1

The department has a breadth requirement for the Ph.D. degree. This may be satisfied either by a formal minor in another department (generally 20 units) or by at least 9 units of course work (outside of the primary research topic) which are approved by the principal dissertation adviser. If a minor is taken, 9 units from the minor requirements can be counted towards the depth requirement.

The Ph.D. thesis normally represents at least one full year of research work and must be a substantial contribution to the field. Students may register for course credit for thesis work (ME 500) to help fulfill University academic unit requirements, but there is no minimum limit on registered dissertation units, as long as students are registered in at least 8 units (10 is recommended) per quarter prior to TGR. Candidates should note that only completed course units are counted toward the requirement, so ungraded courses or courses with an "N" grade must be cleared before going TGR. Questions should be directed to the department student services office.

The final University oral examination (dissertation defense) is conducted by a committee consisting of a chair from another department and four faculty members of the department or departments with related interests. Usually, the committee includes the candidate's adviser, reading committee members, plus two more faculty. The examination consists of two parts. The first is open to the public and is scheduled as a seminar talk, usually for one of the regular meetings of a seminar series. The second is conducted in private and covers subjects closely related to the dissertation topic.

Ph.D. Minor in Mechanical Engineering

Students who wish a Ph.D. minor in ME should consult with the ME student services office. A minor in ME may be obtained by completing 20 units of approved graduate-level ME courses. Courses approved for the minor must form a coherent program and must be chosen from those satisfying requirement 2 for the M.S. in Mechanical Engineering.

See the *Mechanical Engineering Graduate Student Handbook* produced by the Mechanical Engineering student services office for more information.

Mechanical Engineering Course Catalog Numbering System

The department uses the following course numbering system:

Number	Level
010-099	Freshman and Sophomore
100-199	Junior and Senior
200-299	Advanced Undergraduate and Beginning Graduate
300-399	Graduate
400-499	Advanced Graduate
500	Ph.D. Thesis

Emeriti: (Professors) James L. Adams, Peter Bradshaw*, Daniel B. DeBra, Robert H. Eustis, Thomas J. R. Hughes, James P. Johnston, Thomas R. Kane, William M. Kays, Joseph B. Keller, Charles H. Kruger, Robert H. McKim, Robert J. Moffat*, M. Godfrey Mungal*, J. David Powell, Charles R. Steele*, Douglass J. Wilde;* (*Professors, Research*) Richard M. Christensen, Sidney A. Self, Kenneth J. Waldron, Felix E. Zajac

Chair: Kenneth E. Goodson

Group Chairs: Mark R. Cutkosky (Design), Scott L. Delp (Biomechanical Engineering), Parviz Moin (Flow Physics and Computational Engineering), Peter M. Pinsky (Mechanics and Computation), Mark A. Cappelli (Thermosciences)

Professors: Thomas P. Andriacchi, David M. Barnett, Craig T. Bowman, Brian J. Cantwell, Mark A. Cappelli, Dennis R. Carter, Mark R. Cutkosky, Scott L. Delp, John K. Eaton, Christopher F. Edwards, Charbel Farhat, Kenneth E. Goodson, Ronald K. Hanson, David M. Kelley, Thomas W. Kenny, Larry J. Leifer, Sanjiva K. Lele, Arun Majumdar, Reginald E. Mitchell, Parviz Moin, Drew V. Nelson, Peter M. Pinsky, Friedrich B. Prinz, Bernard Roth, Juan G. Santiago, Eric S. G. Shaqfeh, Sheri D. Sheppard, Hai Wang

Associate Professors: Wei Cai, Eric F. Darve, J. Christian Gerdes, Gianluca Iaccarino, Ellen Kuhl, Marc E. Levenston, Adrian J. Lew, Allison M. Okamura, Beth L. Pruitt

Assistant Professors: Ovijit Chaudhuri, W. Matthias Ihme, David Lentink, Ali Mani, Sindy K.-Y. Tang, Xiaolin Zheng

Professor (Teaching): David W. Beach

Associate Professor (Teaching): Shilajeet S. Banerjee

Courtesy Professors: Fu-Kuo Chang, Reinhold Dauskardt, Oussama Khatib, Paul Yock

Courtesy Associate Professor: Margot G. Gerritsen, Nicholas Giori

Courtesy Professor (Research): J. Kenneth Salisbury

Courtesy Professor (Teaching): Shelley V. Goldman

Senior Lecturers: Vadim Khayms, J. Craig Milroy

Consulting Professors: Gary S. Beaupré, J. Edward Carryer, David M. Golden, Barry M. Katz, Paul Mitiguy, Johannes Schoonman, Edith Wilson

Consulting Associate Professors: Mehdi Asheghi, Rainer J. Fasching, John A. Howard, Gary O'Brien, R. Matthew Ohline, Sunil Puria, Paul L. Saffo III, Lester K. Su, Marc F. Theeuwes

Consulting Assistant Professors: Michael R. Barry, William R. Burnett, Jonathan Edelman

* Recalled to active duty.

Overseas Studies Courses in Mechanical Engineering

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

OSPFLOR 17	The Evolution of Modern Italian Design	5

School of Humanities and Sciences

The largest of Stanford's seven schools, the School of Humanities and Sciences is the center of the University's liberal arts education. Through exposure to the humanities and arts, undergraduate and graduate students consider the ethical, aesthetic, and intellectual dimensions of the human experience, past and present, and are thereby prepared to make thoughtful and imaginative contributions to the culture of the future. Through the study of social, political, and economic events, they acquire theories and techniques for the analysis of specific societal issues, as well as general cross-cultural perspectives on the human condition. And through exposure to the methods and discoveries of mathematics and the sciences, they become well-informed participants and leaders in today's increasingly technological societies.

The School of Humanities and Sciences is comprised of academic departments, which are organized into three clusters, each with its own distinct character.

- Humanities and Arts
 - Art and Art History
 - Classics
 - Division of Literatures, Cultures, and Languages
 - Comparative Literature
 - French and Italian
 - German Studies
 - Iberian and Latin American Cultures
 - Slavic Languages and Literatures
 - East Asian Languages and Cultures
 - English
 - History
 - Linguistics
 - Music
 - Philosophy
 - Religious Studies
 - Theater and Performance Studies
- Social Sciences
 - Anthropology
 - Communication
 - Economics
 - Political Science
 - Psychology
 - Sociology
- Natural Sciences
 - Applied Physics
 - Biology (including Hopkins Marine Station)
 - Chemistry
 - Mathematics
 - Physics
 - Statistics

The school also includes interdisciplinary degree programs that bridge traditionally disparate fields in the humanities and sciences: African and African American Studies; African Studies; American Studies; Archaeology; Biophysics; Comparative Studies in Race and Ethnicity; East Asian Studies; Ethics in Society; Feminist, Gender, and Sexuality Studies; Human Biology; International Policy Studies; International Relations; Latin American Studies; Mathematical and Computational Science;

Modern Thought and Literature; Public Policy; Russian, East European and Eurasian Studies; Science, Technology, and Society; Symbolic Systems; and Urban Studies.

In addition, the school has diverse programs and research centers that do not currently grant degrees such as the Bill Lane Center for the American West; the Center for Computer Research in Music and Acoustics; the Center for Molecular Analysis; the Confucius Institute; the Center for Medieval and Early Modern Studies; the Michelle R. Clayman Center for Gender Research; the Jasper Ridge Biological Preserve; the Institute for Research in the Social Sciences; and Stanford Global Studies. For more information about the School of Humanities and Sciences and a complete listing of research centers and programs, see the School's web site (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/%20http://humsci.stanford.edu/about>).

Prospective applicants and candidates for the degree of Bachelor of Arts, Bachelor of Science, Bachelor of Arts and Sciences, Master of Arts, Master of Fine Arts, Master of Public Policy, Master of Science, Doctor of Musical Arts, or Doctor of Philosophy should consult the relevant department or program for detailed information about application procedures and degree requirements.

Faculty

Dean: Richard P. Saller

Senior Associate Deans: Ralph L. Cohen, Ellen M. Markman, Debra M. Satz

Senior Associate Dean for Finance and Administration: Adam R. Daniel

Associate Dean for Faculty Affairs: Tina Kass

Associate Dean for Graduate and Undergraduate Studies: Susan J. Weersing

Assistant Dean for Diversity Programs, Data and Technology: Ayodele Thomas

Assistant Dean for Curricular and Academic Support: Beth McKeown

Graduate Diversity Recruitment Officer: Joseph L. Brown

Department Chairs: Lanier Anderson (Philosophy), B. Douglas Bernheim (Economics), Jennifer DeVere Brody (Theater and Performance Studies), Ronald Egan (East Asian Languages and Cultures), Paula Findlen (History), Judith L. Goldstein (Political Science), Ian H. Gotlib (Psychology), Mark Granovetter (Sociology), James T. Hamilton (Communication), Paul M. Harrison (Religious Studies), Keith O. Hodgson (Chemistry), Gavin Jones (English), Dan Jurafsky (Linguistics), Hideo Mabuchi (Applied Physics), Peter F. Michelson (Physics), Stephen Palumbi (Hopkins Marine Station), Gabriella Safran (Division of Literatures, Cultures, and Languages), Stephen Makoto Sano (Music), Walter Scheidel (Classics), Tim Stearns (Biology), Nancy J. Troy (Art and Art History), Guenther Walther (Statistics), Brian White (Mathematics), Sylvia J. Yanagisako (Anthropology)

Lecturer: Ayodele Thomas

African and African American Studies

Undergraduate Program in African and African American Studies

The Program in African and African American Studies (AAAS), established in 1969, was the first ethnic studies program developed at Stanford University and the first African and African American Studies program at a private institution in the U.S. The AAAS program provides an interdisciplinary introduction to the study of peoples of African descent as a central component of American culture, offering a course of study that promotes research across disciplinary and departmental boundaries as well as providing research training and community service learning opportunities for undergraduates. It has developed an extensive network of Stanford scholars who work in race studies specific to AAAS and in concert with the Center for Comparative Studies in Race and Ethnicity.

AAAS encourages an interdisciplinary program of study drawn from fields including anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology. The program emphasizes rigorous and creative scholarship and research, and fosters close academic advising with a faculty adviser, the AAAS Associate Director, and the Director.

AAAS is an interdisciplinary program (IDP) affiliated with the Center for Comparative Studies in Race and Ethnicity (p. 395) (CCSRE) and offers a major independent of it. CCSRE offers additional majors in Asian American Studies, Chicana/o Studies, Comparative Studies in Race and Ethnicity, and Native American Studies.

The Interdisciplinary Program in African and African American Studies (AAAS) provides students the opportunity to structure a major or minor with a core curriculum designed to develop a comparative and multidisciplinary understanding of the experiences and communities on the continent of Africa and African Americans within a broader global, diasporic dialogue. Additionally major or minor can focus their coursework in one of eleven thematic concentrations.

The directors of the program and the advisory board constitute the AAAS curriculum committee, the policy making body for the interdisciplinary program.

Mission Statement for the Undergraduate Program in African and African American Studies

The mission of the undergraduate program in African and African American Studies is to provide students with an interdisciplinary introduction to the study of people of African descent as a central component of American culture. Courses in the major promote research across disciplinary and departmental boundaries as well as provide students with research training and community service learning opportunities. Courses of study are drawn from anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology among

others. The program provides an intellectual background for students considering graduate school or professional careers.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an interdisciplinary understanding of scholarship related to the African diaspora and Africa, drawing on interdisciplinary course work and each student's individualized concentration.
2. the ability to identify and critically assess different disciplinary, methodological, and interpretive approaches to the study of the African Americans, Africans, and/or people of the African diaspora.
3. an understanding of comparative approaches to race
4. skills in disciplinary methods necessary for their study.
5. the ability to express their interpretive and analytical arguments in clear, effective prose.

Bachelor of Arts in African and African American Studies Core Curriculum

All core courses taken for the major must be taken for a letter grade.\

Requirements

Majors must complete a total of 60 units, consisting of the following:

1. AFRICAAM 43 Introduction to African American Literature or AFRICAAM 105 Introduction to African and African American Studies (5 units)
2. One Social Science course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?page=0&catalog=&q=AAAS%3a%3ass&filter-coursestatus-Active=on&view=catalog&academicYear=20142015&collapse=>) (5 units)
3. One Humanities course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=20142015&q=AAAS%3A%3Ah&collapse=>) (5 units)
4. One course in African Studies. (5 units)
5. AFRICAAM 200X Honors Thesis and Senior Thesis Seminar - WIM. (5 units)
6. 35 units of AAAS Core (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=20142015&q=AAAS%3A%3Acore&collapse=>) and Related (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=20142015&q=AAAS%3A%3Arelated&collapse=>) courses
 - At least 10 of the 35 units must be core courses (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=20142015&q=AAAS%3A%3Acore&collapse=>), which are defined as courses that are primarily focused on Africa (<https://explorecourses.stanford.edu/search?q=AAAS%3A%3Aafrica&view=catalog&page=0&academicYear=20142015&collapse=&filter-coursestatus-Active=on>), African American Studies (<http://explorecourses.stanford.edu/CourseSearch/>

search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3African_american&collapse=), the Caribbean (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3acaribbean+&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>), or the African Diaspora. (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3adiaspora&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)

Students also work closely with a faculty adviser, the AAAS associate director, and the AAAS director in developing a coherent thematic emphasis within their major that reflects their scholarly interests in the field.

Thematic Emphasis

AAAS majors select a thematic emphasis, devoting at least 15 units in their major program of study toward their emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize course work taken across various departments and programs into a coherent focus. Emphases offered include:

- Africa (<https://explorecourses.stanford.edu/search?q=AAAS%3A%3Aafrica&view=catalog&page=0&academicYear=20142015&collapse=&filter-coursestatus-Active=on>)
- African Americans (http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3African_american&collapse=)
- Class (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3A%3Aclass&collapse=>)
- Diaspora (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3adiaspora&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)
- Education (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3aeducation&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)
- Gender (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3agender&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)
- Historical Period (https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3ahistorical_period&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015)
- Identities, Diversity, and Aesthetics (IDA) (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3aaida&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)
- Linguistics (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3alanguage+&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)
- Mixed Race (https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3amixed_race&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015)
- Theory (<https://explorecourses.stanford.edu/search?page=0&q=AAAS%3a%3atheory&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>)

All emphases (those listed as well as proposed alternatives) must be approved by the director and a course plan developed and approved by the director, associate director, and faculty adviser within the first year of declaring the major.

Core Courses

		Units
AFRICAAM 16N	African Americans and Social Movements	3
AFRICAAM 19	Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music	3-4
AFRICAAM 21	African American Vernacular English	3-5
AFRICAAM 30	The Egyptians	3-5
AFRICAAM 31	RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 32	The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice	1-5
AFRICAAM 33	From Moments to Movements: New Media, Narrative, and 21st Century Activism	5
AFRICAAM 34	Race, Policing, and Mass Incarceration	1
AFRICAAM 35	On the Meaning of Freedom	5
AFRICAAM 43	Introduction to African American Literature	3-5
AFRICAAM 47	History of South Africa	3
AFRICAAM 48Q	South Africa: Contested Transitions	3
AFRICAAM 50B	19th Century America	3
AFRICAAM 54N	African American Women's Lives	3-4
AFRICAAM 64C	From Freedom to Freedom Now!: African American History, 1865-1965	3
AFRICAAM 75E	Black Cinema	2
AFRICAAM 105	Introduction to African and African American Studies	5
AFRICAAM 116	Education, Race, and Inequality in African American History, 1880-1990	3-5
AFRICAAM 123	Great Works of the African American Tradition	5
AFRICAAM 147	History of South Africa	5
AFRICAAM 152G	Harlem Renaissance	5
AFRICAAM 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
AFRICAAM 166	Introduction to African American History - the Modern Freedom Struggle	3-5
AFRICAAM 181Q	Alternative Viewpoints: Black Independent Film	4

Directed Reading and Research

Directed reading and research allows students to focus on a special topic of interest. In organizing a reading or research plan, the student consults with the director of the major and one or more faculty members specializing in the area or discipline.

Courses that fulfill directed reading and research requirements:

	Units	
AFRICAAM 190	Directed Reading	1-5
AFRICAAM 195	Independent Study	5
AFRICAAM 199	Honors Project	1-5

Senior Seminar

Research and writing of the senior honors thesis or senior paper is under the supervision of a faculty project adviser. All majors in the IDP in AAAS, even those who opt to write honors theses in other departments and programs, must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar, offered in Autumn Quarter. The course takes students through the process of researching an honors thesis, including conceptualization, development of prospectus, development of theses, research, analysis, and finally the process of drafting and writing. This course meets the Writing in the Major requirement (WIM).

Honors Program in African and African American Studies

For Majors in African and African American Studies

The honors program offers an opportunity to do independent research for a senior thesis. It is open to majors who have maintained a grade point average (GPA) of at least 3.5 in the major and 3.3 overall. The honors thesis is intended to enable students to synthesize skills to produce a document or project demonstrating a measure of competence in their specialty.

The application for honors must be submitted by Spring Quarter of the junior year, but students are encouraged to apply earlier. The honors program begins with a proposal describing the project that is approved by the faculty adviser and director of the undergraduate program. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the student's major.

Honors students must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar which fulfills the program's WIM requirement, during Autumn Quarter of the senior year and may take up to an additional 10 units of honors work (AFRICAAM 200Y Honors Thesis and Senior Thesis Research and AFRICAAM 200Z Honors Thesis and Senior Thesis Research) to be distributed across Winter and Spring quarters of senior year to continue their access to peer and faculty support as they write their theses. Students must complete their theses with a grade of 'B+' to receive honors in AAAS.

In May of the senior year, honors students are afforded an opportunity to present their research formally. Prizes for best undergraduate honors thesis are awarded annually by the Program in African & African American Studies.

Applications are available in the AAAS Undergraduate Program office and on the program web site (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/africanandafricanamericanstudies/aaas.stanford.edu>).

Thematic Emphasis

AAAS majors select a thematic emphasis, devoting at least 15 units in their major program of study toward their emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize course work taken across various departments and programs into a coherent focus. Emphases offered include: (For faster navigation click on the links to the right)

Thematic Emphasis in Africa

Students in the African & African American Studies major can choose a concentration in Africa. The Africa Concentration in African & African American Studies is a program designed to investigate how individual African states domestic and foreign policy, law, history, culture, and society are formed within conversations, debates, policies and studies. Issues of immigration, citizenship, empire and expansion, defense, diplomacy, human rights, public welfare, social justice and law, educational rights and other topics are explored.

The concentration is not declared on Axxess; it does not appear on the transcript or diploma. Students interested in the Africa thematic concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Africa concentration.

	Units
AFRICAAM 24 Introduction to Dance in the African Diaspora	4
AFRICAAM 30 The Egyptians	3-5
AFRICAAM 31 RealTalk: Intimate Discussions about the African Diaspora	1
AFRICAAM 47 History of South Africa	3
AFRICAAM 48Q South Africa: Contested Transitions	3
AFRICAAM 115 South African Encounters	1
AFRICAAM 133 Literature and Society in Africa and the Caribbean	4

Thematic Concentration in Identity, Diversity and Aesthetics (IDA)

Students in the African & African American Studies major can choose a concentration in Identity, Diversity and Aesthetics (IDA). The Identity, Diversity, and Aesthetics Concentration in African & African American Studies is a program designed to explore the intersections of culture, race, the arts, and social transformation. In IDA courses taught by Stanford faculty, lecturers, and distinguished Visiting Artists, students learn how the

arts, activism, and the academy interact to produce aesthetic and societal change.

The IDA concentration requires 15 units including two approved AAAS core courses and AFRICAAM 200X: Honors Thesis & Senior Thesis Seminar (WIM), taken Autumn Quarter of the senior year. IDA Thematic courses may focus on artistic practice and performance, art history, creative writing, community arts, art and social change, writing for performance, critical studies in art and performance, and critical arts theory.

Additionally, IDA concentration students must complete a creative senior project. Possible senior projects include a stage production, a set of recorded music, an anthology of creative writing, a curated or solo exhibition, or a community arts workshop. Students who elect to write an honors thesis may incorporate their project as the basis for their thesis.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in the Africa thematic concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Identity, Diversity and Aesthetics (IDA) concentration.

		Units

Minor in African and African American Studies

Students who minor in AAAS complete a minimum of 30 units from the list of AAAS courses. These courses must include:

1. AFRICAAM 43 Introduction to African American Literature or AFRICAAM 105 Introduction to African and African American Studies (5 units)
2. One Social Science course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?page=0&catalog=&q=AAAS%3a%3ass&filter-coursestatus-Active=on&view=catalog&academicYear=20142015&collapse=>) (5 units)
3. One Humanities course from AAAS approved core course list. (<https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=20142015&q=AAAS%3A%3Ah&collapse=>) (5 units)

Students should seek to develop a coherent theme in their course selections in consultation with the program director or associate director. An appointment should be made to discuss the rationale for the minor theme preceding submission of the declaration forms.

Director: Dr. H. Samy Alim (Education)

Associate Director: Dr. Cheryl A. Brown

Advisory Committee: H. Samy Alim (Education), Arnetha Ball (Education), Ralph Richard Banks (Law), Jan Barker-Alexander (Director, Black Community Services Center), Jennifer Brody (Drama), Bryan Anthony Brown (Education), Cheryl Brown (Program in African and African American Studies), James Campbell (History), Clayborne Carson (History), Prudence Carter (Education), Jennifer Eberhardt (Psychology), Harry Elam (Drama), Michele Elam (English), James Ferguson (Anthropology), Corey Fields (Sociology), Shelley Fisher Fishkin (English), Linda Darling-Hammond (Education), Sean Hanretta (History), Allyson Hobbs (History), David Palumbo-Liu (Comparative Literature), Vaughn Rasberry (English), John R. Rickford (Linguistics), José David Saldívar (English), Joel Samoff (African Studies)

African Studies

Courses offered by the Center for African Studies (CAS) are listed under the subject code AFRICAST on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AFRICAST&filter-catalognumber-AFRICAST=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AFRICAST&filter-catalognumber-AFRICAST=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AFRICAST&filter-catalognumber-AFRICAST=on>).

The Center for African Studies coordinates an interdisciplinary program in African Studies for undergraduates and graduate students. The program seeks to enrich understanding of the interactions among the social, economic, cultural, historical, linguistic, genetic, geopolitical, ecological, and biomedical factors that shape and have shaped African societies.

Courses in African Studies are offered by departments and programs throughout the University. Each year CAS sponsors a range of seminars and workshops to demonstrate to advanced undergraduates and graduate students how topics of current interest in African Studies are approached from different disciplinary perspectives.

Course offerings in African languages are also coordinated by the Center for African Studies. Along with regular courses in several levels of Arabic, Swahili, Xhosa, and Zulu, the center arranges with the African and Middle Eastern Languages and Literatures Program in the Stanford Language Center to offer instruction in other African languages; in recent years, it has offered courses in Afrikaans, Amharic, Igbo, Kinyarwanda, Shona, Twi, Wolof, and Yoruba.

The Center for African Studies offers a master of arts degree for graduate students. Undergraduates and graduate students not pursuing the master's degree can specialize in African Studies under the arrangements described under the Undergraduate (p. 302) and Master's (p. 304) tabs.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in African Studies and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

Overseas Studies Courses in African and African American Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPCPTWN 18	Xhosa Language and Culture	2
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B	Targeted Research Project in Community Health and Development	5

Undergraduate Programs in African Studies

Undergraduates may choose an African Studies focus from:

1. A minor in African Studies offers students the ability to combine a focus on Africa with their major in any other discipline. This offers the students a strong regional specialization. For requirements see the "Minor in African Studies (p. 303)" section of this bulletin.
2. A major in a traditionally defined academic department such as Anthropology (p. 311), History (p. 486), or Political Science (p. 584). These departments afford ample opportunity to enroll in courses outside the major, leaving the student free to pursue the interdisciplinary study of Africa.
3. Interdepartmental majors, such as African and African American Studies (p. 287) or International Relations (p. 520), which offer coordinated and comprehensive interdisciplinary course sequences, permitting a concentration in African Studies.

Certificate in African Studies

Students may apply for a certificate in African Studies. Requirements for the certificate are the same as for the minor; however, students may double-count courses applied toward their major or graduate studies. The certificate in African Studies is issued by the Center for African Studies and will not appear on any University record, including the student's transcript. For more information and an application, contact the center.

Minor in African Studies

The Center for African Studies awards a minor in African Studies. Students majoring in any field qualify for this minor by meeting the following requirements:

1. A minimum of 25 units of Africa-related courses. Students may not double-count courses for completing major and minor requirements.
2. At least one quarter's exposure to a sub-Saharan African language. The Center for African Studies and the Special Languages Program may arrange instruction in any of several languages spoken in West, East, Central, and Southern Africa.
3. One introductory course that deals with more than one region of Africa.
4. A minimum 25-page research paper, with a focus on Africa. This paper may be an extension of a previous paper written for an African Studies course.
5. A designated focus of study, either disciplinary or regional, through a three-course concentration.

Upon completion of requirements, final certification of the minor is made by the Center for African Studies and appears on the student's transcript.

Africa-Related Courses

Below is a sample of AFRICAST and related courses that may be counted toward the minor. Other courses may also fulfill the requirements. Please consult your African Studies minor adviser.

Graduate Study in African Studies

For those who wish to specialize in Africa at the graduate level, African Studies can be designated a field of concentration within the master's and doctoral programs of some academic departments. Students in such departments as Anthropology (p. 310), History (p. 485), Political Science (p. 583), and Sociology (p. 629), and in the School of Education (p. 151), may declare African Studies as the area of specialization for their master's and Ph.D. thesis work. Some other departments, programs, and institutes such as the International Comparative Education Program also permit students to specialize in African Studies.

Financial Aid

The Center for African Studies (CAS) does not offer financial aid. However, CAS offers a variety of fellowship opportunities to Stanford graduate students of different levels and disciplines. The following is a partial list:

1. MA Fellowship: Partial funding for two incoming MA students in African Studies.
2. Susan Ford Dorsey Fellowship for Field Research in Africa: 9-12 month dissertation field research fellowship for PhD candidates in H&S.
3. Summer Research and Language Fellowship: Graduate research fellowship; intensive African language fellowship for graduate and undergraduate students.

Coterminal Bachelor's and Master of Arts in African Studies

The one-year master's program in African Studies is designed for students who have experience working, living, or studying in Africa, and little prior course work on the region.

Undergraduates at Stanford may apply for admission to the coterminal master's program in African Studies. Coterminal degree applications will only be accepted from students in their fourth year, meaning that the program must be completed in the fifth year. An exception can only be made for students who completed an honors thesis in their third year. For University coterminal degree program rules and application forms, see the Registrar (<http://registrar.stanford.edu/shared/publications.htm#Coterm>) web site. Requirements for the master's degree are summarized below.

The annual deadline for all applications, including coterminal and master's, is December 9. All applicants must submit an online application, including a 500-word statement of purpose, resume, 15-20 page double-spaced academic writing sample, three letters of recommendation, official transcripts, and Graduate Record Examination scores. TOEFL scores are required of applicants for whom English is not their first language or who did not attend an undergraduate institution where English is the language of instruction. To apply online and for information on graduate admissions, see the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Degree Requirements

University requirements for the master's degree are described in the "Graduate Degrees (p. 43)" section of this bulletin.

The program requires completion of a minimum of 45 graduate units. Upon entering, each student is assigned a faculty adviser who works with the student to develop a customized program of study.

To receive the M.A. degree in African Studies, students must complete:

1. Core Courses (15 units)

Students must complete the core African Studies M.A. course, AFRICAST 301A The Dynamics of Change in Africa, in Autumn Quarter. Students elect two additional graduate courses taught by African Studies academic council members and drawn from a list of approved courses. Students must also complete, AFRICAST 302 Research Workshop, in Spring Quarter, in which they present and discuss their research and research interests.

2. Cognate Courses (10 units)

A minimum of 10 units of graduate-level credit in two cognate courses from the following thematic clusters not chosen as the student's concentration field:

- a. culture and society
- b. health, well-being, and the environment
- c. political economy and security.

3. Concentration Field (15 units)

Students choose one area of specialization:

- a. culture and society
- b. health, well-being, and the environment
- c. political economy and security
 - Students also choose a group of three related elective courses for graduate credit from the cognate course listings or elsewhere in the Stanford curriculum in consultation with the student's adviser and with the approval of the CAS director. With approval, one introductory course may be substituted in a field such as advanced undergraduate biology or statistics for those interested in epidemic

diseases or public health. The academic adviser, in agreement with faculty in the chosen field, guarantees that each set of courses forms part of a coherent program.

4. Language Requirement

Students take one year of training in an African language, usually at least 3 units per quarter, resulting in intermediate-level proficiency as measured by the American Council on the Teaching of Foreign Languages (ACTFL) or comparable language acquisition standards. Students who have advanced proficiency in several African languages may fulfill this requirement by taking another European language spoken in Africa, such as French or Portuguese, or by taking a year-long sequence in Arabic.

5. Seminar Requirement

Students enroll each quarter in AFRICAST 300 Contemporary Issues in African Studies, 1 unit, in which guest scholars present lectures on African themes and topics.

6. Thesis Option

Students may elect to write a master's thesis; they may register for up to 10 units of thesis research under the guidance of an Academic Council member. Thesis units may be counted toward the electives within the concentration field unit requirements.

7. Grade Requirements

Courses to be counted toward the degree, except for AFRICAST 300 Contemporary Issues in African Studies, must be taken for a letter grade and receive a grade of 'B' or higher.

In addition to AFRICAST courses, master's students will take Africa-related courses across departments and schools due to the interdisciplinary nature of the degree. The following list represents a small sample of courses that may be used to fulfill the requirements of the master's degree. To count toward the completion of the master's degree, courses should be taken at the graduate level and approved by the African Studies graduate adviser.

Courses in AFRICAST

		Units
AFRICAST 209	Running While Others Walk: African Perspectives on Development	5
AFRICAST 211	Education for All? The Global and Local in Public Policy Making in Africa	5
AFRICAST 212	AIDS, Literacy, and Land: Foreign Aid and Development in Africa	5
AFRICAST 235	Designing Research-Based Interventions to Solve Global Health Problems	3-4
AFRICAST 238	Conflict and Reconciliation in Africa: International Intervention	3-5
AFRICAST 300	Contemporary Issues in African Studies	1
AFRICAST 301A	The Dynamics of Change in Africa	4-5

Related Courses from Other Departments

		Units
AMELANG 100A	Beginning Amharic, First Quarter	4
AMELANG 106A	First-Year Swahili, First Quarter	5
AMELANG 114A	Beginning Afrikaans, First Quarter	4
AMELANG 134A	First-Year Igbo, First Quarter	4
AMELANG 136A	First-Year Xhosa, First Quarter	4

AMELANG 153A	First-Year Twi, First Quarter	4
AMELANG 156A	First-Year Zulu, First Quarter	4
AMELANG 180A	First-Year Kinyarwanda, First Quarter	4
AMELANG 187A	First-Year Yoruba, First Quarter	4
ANTHRO 201	Introduction to Cultural and Social Anthropology	5
ANTHRO 239	Ethnography of Africa	5
ANTHRO 247	Nature, Culture, Heritage	5
ANTHRO 285	Medical Anthropology of Contemporary Africa	5
ANTHRO 346	The Social Imagination	5
ANTHRO 353	Landscape	5
ANTHRO 372	Urban Ecologies	5
CEE 265D	Water and Sanitation in Developing Countries	1-3
COMPLIT 229	Literature and Global Health	3-5
CS 546	Seminar on Liberation Technologies	1
ECON 214	Development Economics I	2-5
ECON 215	Economic Development II	2-5
ECON 315	Development Workshop	1-10
EDUC 202	Introduction to Comparative and International Education	4-5
EDUC 377C	Strategic Philanthropy	3
FINANCE 381	Private Equity in Frontier Markets: Creating a New Investible Asset Class	4
HISTORY 345B	African Encounters with Colonialism	4-5
HISTORY 383	The New Global Economy, Oil and Origins of the Arab Spring	4-5
HISTORY 448A	Colonial States and African Societies, Part I	4-5
HISTORY 448B	Colonial States and African Societies, Part II	4-5
IPS 213	International Mediation and Civil Wars	3-5
MED 232	Discussions in Global Health	2
MUSIC 286C	Music and the Postcolonial World	3-4
POLISCI 314D	Democracy, Development, and the Rule of Law	5
POLISCI 337T	Designing Liberation Technology	3-4
SURG 250	Global Humanitarian Medicine	1-2

Joint Degree Program in African Studies and Law

This joint degree program grants an M.A. degree in African Studies and a Doctor of Jurisprudence (J.D.) degree. It is designed to train students interested in a career in teaching, research, or the practice of law related to African legal affairs. Students must apply separately to the African Studies M.A. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of training in African languages. A number of approved courses may be counted towards both degrees. For more information, see the "Joint Degree Programs (<http://www.stanford.edu/dept/registrar/bulletin/7376.htm>)" section of this bulletin and the Stanford Law School's web site (<http://www.law.stanford.edu/degrees/joint>). Students who have been accepted by both programs should consult with the departments to determine which courses can be double-counted.

Emeriti: David B. Abernethy, Ellen Jo Baron, John Baugh, Joan Bresnan, Susan Cashion, Sandra E. Drake, Peter Egbert, James L. Gibbs, Jr., William B. Gould, Bruce F. Johnston, William R. Leben, Bruce Lusignan, Elisabeth Mudimbe-Boyi, Mary Polan, Hans N. Weiler, Sylvia Wynter

Director: Grant Parker, Richard Roberts

Professors: H. Samy Alim (Education), Jean-Marie Apostolidès (French), Michele Barry (Medicine), Joel Beinin (History), John Boothroyd (Microbiology and Immunology), James T. Campbell (History), Martin Carnoy (Education), Prudence L. Carter (Education), William H. Durham (Anthropology), Harry Elam (Drama), James Fearon (Political Science), James Ferguson (Anthropology), Shelley Goldman (Education), Terry Lynn Karl (Latin American Studies and Political Science), Richard Klein (Anthropology), David Laitin (Political Science), Yvonne Maldonado (Pediatrics), Lynn Meskell (Anthropology), Julie Parsonnet (Medicine and Health Research and Policy), John Rickford (Linguistics), Richard Roberts (History)

Associate Professors: Vincent Barletta (Comparative Literature and Iberian and Latin American Cultures), Alexandria B. Boehm (Civil and Environmental Engineering), Jenna Davis (Civil and Environmental Engineering), Paulla A. Ebron (Anthropology), Oliver Fringer (Civil and Environmental Engineering), Duana Fulwille (Anthropology), Liisa Malkki (Anthropology), Grant Parker (Classics), Jeremy Weinstein (Political Science)

Assistant Professors: Eran Bendavid (General Internal Medicine), Katherine Casey (Political Economy), Pascaline Dupas (Economics), Vaughn Rasberry (English), Krish Seetah (Anthropology)

Professor (Research): David Katzenstein (School of Medicine), Cheryl Koopman (Psychiatry and Behavioral Sciences)

Professor (Teaching): Robert Siegel (Microbiology and Immunology)

Associate Professor (Clinical): Brian Blackburn (Infectious Diseases), Daryn Reicherter (Psychiatry and Behavioral Sciences), Hugh Brent Solvason (Psychiatry and Behavioral Sciences)

Senior Lecturers: Khalil Barhoum (African and Middle Eastern Languages)

Lecturers: Kwame Assenyoh (African and Middle Eastern Languages), Byron Bland (Law), Jonathan Greenberg (Law), Alvan Ikoku (Comparative Literature), Ronald Jennings (Anthropology), Sarah Mkhonza (African and Middle Eastern Languages), Samuel Mukoma (African and Middle Eastern Languages), Jill Rosenthal (History), Ramzi Salti (African and Middle Eastern Languages), Timothy Stanton (Bing Overseas Studies)

Consulting Professors: Anne Firth-Murray (Human Biology), Joel Samoff (Center for African Studies)

Curators: Karen Fung (African Collection Curator, Green Library), Regina Roberts (Bibliographer, Green Library), Anna Lessenger Soland (Assistant Curator, Arts of Africa and the Americas, Cantor Arts Center)

Senior Research Fellows: Coit Blacker (Freeman Spogli Institute), Larry Diamond (Freeman Spogli Institute, Hoover Institution), Marcel Fafchamps (Freeman Spogli Institute), Helen Stacy (Freeman Spogli Institute), Stephen Stedman (Freeman Spogli Institute, Center for International Security and Cooperation)

Overseas Studies Courses in African Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

OSPCPTWN 18 Xhosa Language and Culture

Units
2

OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B	Targeted Research Project in Community Health and Development	5
OSPCPTWN 33	Southern Africa: from Liberation Struggles to Region-Building	4
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPCPTWN 38	Genocide: African Experiences in Comparative Perspective	3-5

American Studies

Courses offered by American Studies Program are listed under the subject code AMSTUD on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AMSTUD&filter-catalognumber-AMSTUD=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AMSTUD&filter-catalognumber-AMSTUD=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=AMSTUD&filter-catalognumber-AMSTUD=on>).

Mission of the Undergraduate Program in American Studies

The mission of the undergraduate program in American Studies is to provide students with a broad understanding of American culture and society. Building on a foundation of courses in history and institutions, literature and the arts, and race and ethnicity, students learn to analyze and interpret America's past and present, forging fresh and creative syntheses along the way. The program is an interdisciplinary major and, beyond the core requirements of the major, students may define and pursue their own interests from fields such as history, literature, art, communication, theater, African American studies, feminist studies, economics, anthropology, religious studies, Chicana/o studies, law, sociology, education, Native American studies, music, and film. The program is designed to provide students majoring in American Studies with excellent preparation for further study in graduate or professional schools as well as careers in government, business, or other specialized fields.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. higher order, interdisciplinary, historically informed understanding of how to think about American culture and society, drawing on course work in: history and institutions; literature, art, and culture;

comparative race and ethnicity; and each student's individualized thematic focus.

2. ability to identify and critically to assess different disciplinary, methodological, and interpretive approaches to the study of Americans and their past.
3. ability to produce their own persuasive, nuanced, fact-based interpretations reflecting a close critical reading and analysis of relevant primary or secondary sources.
4. ability to express their interpretive and analytical arguments in clear, effective prose.
5. ability to listen actively and to contribute to productive intellectual discussion in class.

Bachelor of Arts in American Studies

The core requirements illustrate how different disciplines approach the study and interpretation of American life and include three courses in each of two main areas: history and institutions; and literature, culture, and the arts. One additional course in comparative race and ethnicity is also required. The required gateway seminar, AMSTUD 160 Perspectives on American Identity, explores the tensions between commonality and difference from a variety of disciplinary perspectives.

Beyond the core requirements of the major, American Studies expects students to define and pursue their own interests in interpreting important dimensions of American life. Accordingly, each student designs a thematic concentration of at least five courses drawn from fields such as history, literature, art, communication, theater, political science, African American studies, feminist studies, economics, anthropology, religious studies, Chicana/o studies, law, sociology, education, Native American studies, music, and film. At least one of the five courses in a student's thematic concentration should be a small group seminar or a colloquium. With program approval, students may conclude the major with a capstone honors research project during their senior year.

Whether defined broadly or narrowly, the thematic focus or concentration should examine its subject from the vantage of multiple disciplines. Examples of concentrations include: race and the law in America; gender in American culture and society; technology in American life and thought; health policy in America; art and culture in 19th-century America; education in America; nature and the environment in American culture; politics and the media; religion in American life; borders and boundaries in American culture; the artist in American society; and civil rights in America.

Completion of the major thus normally requires 13 courses (totaling at least 60 units), all of which must be taken for a letter grade. Not all courses are offered each year; students should consult ExploreCourses (<http://explorecourses.stanford.edu>) for scheduling information for the current academic year.

Degree Requirements

1. Gateway Seminar

AMSTUD 160	Perspectives on American Identity (WIM course for American Studies)	Units 5
------------	---	-------------------

2. History and Institution

Majors are required to complete three courses in American History and Institutions. Specific requirements are:

AMSTUD/ HISTORY 150A	Colonial and Revolutionary America	Units 5
-------------------------	------------------------------------	-------------------

AMSTUD/ HISTORY 150B	19th-Century America	5
Select one of the following:		3-5
AMSTUD/ COMM 1B	Media, Culture, and Society	
AMSTUD/ POLISCI 2	Introduction to American National Government and Politics	
AMSTUD 91	Exploring American Religious History	
AMSTUD 107	Introduction to Feminist Studies	
AMSTUD/ ECON 116	American Economic History	
AMSTUD 121Z	Political Power in American Cities	
AMSTUD 135	Deliberative Democracy and its Critics	
AMSTUD 140	Stand Up Comedy and the "Great American Joke" Since 1945	
AMSTUD/ HISTORY 150C	The United States in the Twentieth Century	
AMSTUD 154	American Intellectual and Cultural History to the Civil War	
AMSTUD 156H	Women and Medicine in US History: Women as Patients, Healers and Doctors	
AMSTUD 157	The Constitution: A Brief History	
AMSTUD/ HISTORY 161	Women in Modern America	
AMSTUD/ EDUC 165	History of Higher Education in the U.S.	
AMSTUD/ HISTORY 166	Introduction to African American History - the Modern Freedom Struggle	
AMSTUD 179/POLISCI 122	Introduction to American Law	
AMSTUD/ HISTORY 201	History of Education in the United States	
AMSTUD/ HISTORY 256	America- China Relations	
AMSTUD/ HISTORY 258	Topics in the History of Sexuality: Sexual Violence in America	
AMSTUD 265	Writing Asian American History	
AMSTUD 281	Asian Religions in America; Asian American Religions	
SOC 155	The Changing American Family	

3. Literature, Culture, and the Arts

Majors are required to take a minimum of three courses in literature, culture, and the arts, broadly understood. Specific requirements are:

	Units
At least one course focusing on the period before the Civil War, normally:	
AMSTUD 150/ ENGLISH 123	5
Select two of the following: ¹	6-10
AMSTUD 32	The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice
AMSTUD/ ENGLISH 68N	Mark Twain and American Culture

AMSTUD 120/COMM 120W	Digital Media in Society
AMSTUD 121	Introduction to American Literature
AMSTUD 124A	The American West
AMSTUD/ ARTHIST 132	American Art and Culture, 1528-1910
AMSTUD/ ENGLISH 139B	American Women Writers, 1850-1920
AMSTUD 140	Stand Up Comedy and the "Great American Joke" Since 1945
AMSTUD 145M/ ARTHIST 145	Culture Wars: Art and Social Conflict in the USA, 1890-1950
AMSTUD/ COMPLIT 146	Asian American Culture and Community
AMSTUD/ ENGLISH 146C	Hemingway, Hurston, Faulkner, and Fitzgerald
AMSTUD 152G	Harlem Renaissance
AMSTUD 154X/ ARTHIST 154	The American Civil War: A Visual History
AMSTUD 159X/ ARTHIST 159	American Photographs, 1839-1971: A Cultural History
AMSTUD 178	Ethnicity and Dissent in United States Art and Literature
AMSTUD 183	Re- Imagining American Borders
AMSTUD/ ENGLISH 186	Tales of Three Cities: New York, Chicago, Los Angeles
AMSTUD/ EDUC 226X	Curating Experience: Representation in and beyond Museums
AMSTUD/ ARTHIST 244	The Visual Culture of the American Home Front, 1941-1945
THINK 31	Reimagining America

4. Comparative Race and Ethnicity

Majors are required to take one course that focuses on the comparative study of race and ethnicity rather than a single racial or ethnic group.

Choose one from the following list:

AMSTUD 51Q	Comparative Fictions of Ethnicity	3-5
AMSTUD 54N	African American Women's Lives	
AMSTUD 114Q	Visions of the 1960s	
AMSTUD 121L	Racial-Ethnic Politics in US	
AMSTUD/ COMPLIT 142	The Literature of the Americas	
AMSTUD 152G	Harlem Renaissance	
AMSTUD/ CSRE 183	Re- Imagining American Borders	
AMSTUD 214	The American 1960s: Thought, Protest, and Culture	

AMSTUD 267E	Martin Luther King, Jr. - His Life, Ideas, and Legacy
AMSTUD 271	Mexicans in the United States
AMSTUD 272E	Theories of Citizenship and Sovereignty in a Transnational Context
AMSTUD 281	Asian Religions in America; Asian American Religions
SOC 149	The Urban Underclass

5. Concentration and Capstone Seminar

Students must design a thematic concentration of at least five courses, with the help of faculty advisers. The courses, taken together, must give the student in-depth knowledge and understanding of a coherent topic in American cultures, history, and institutions. Thematic concentrations should be approved by the end of the registration period of the Autumn Quarter of the junior year, if at all possible. Sample thematic concentrations and courses that allow a student to explore them are available in the American Studies Office in Building 460.

At least one of the courses in the concentration must be designated as the capstone seminar and must require a substantial research paper on a topic related to the thematic concentration. This paper must be filed in the program office prior to degree conferral. The program office has a list of courses that satisfy the capstone requirement, but students are encouraged to propose others that may fit better with their concentrations. An honors project, or an independent study course with a faculty member culminating in a research paper, may also fulfill this requirement with the Director's approval.

Students may choose, but are not limited to, selections for their thematic concentrations from the following list of suggested courses:

		Units
AFRICAAM 16N	African Americans and Social Movements	3
AFRICAAM 105	Introduction to African and African American Studies	5
AMSTUD 101	American Fiction into Film: How Hollywood Scripts and Projects Black and White Relations	3-5
ANTHRO 82	Medical Anthropology	5
ARTHIST 156	American and European Art, 1945-1968	4
ARTHIST 176	Feminism and Contemporary Art	4
ARTHIST 246A	California Dreaming: West Coast Art and Visual Culture, 1848 - present	5
CHILATST 14N	Growing Up Bilingual	3
CHILATST 125S	Chicano/Latino Politics	5
CHILATST 200	Latin@ Literature	3-5
CHILATST 201B	From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era	5
COMM 1A	Mass Media, Society, and Democracy	4-5
COMM 116	Journalism Law	5
COMM 117	Digital Journalism	5
COMM 125	Perspectives on American Journalism	5
COMM 162	Campaigns, Voting, Media, and Elections	5
CSRE 45Q	Understanding Race and Ethnicity in American Society	4
CSRE 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5
CSRE 179G	Indigenous Identity in Diaspora: People of Color Art Practice in North America	3-5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
ECON 153	Economics of the Internet	5

ECON 155	Environmental Economics and Policy	5
ECON 157	Imperfect Competition	5
EDUC 102	Examining Social Structures, Power, and Educational Access	2-3
EDUC 112X	Urban Education	3-4
EDUC 216	Education, Race, and Inequality in African American History, 1880-1990	3-5
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4
ENGLISH 146C	Hemingway, Hurston, Faulkner, and Fitzgerald	5
ENGLISH 151F	Angelheaded Hipsters: Beat Writers of San Francisco and New York	5
HISTORY 41Q	Mad Women: Women and Mental Illness in U.S. History	3
HISTORY 60N	Revolutionaries and Founders	3
HISTORY 64	Racial and Ethnic Diversity in Modern America	5
HISTORY 130A	In Sickness and In Health: Medicine and Society in the United States: 1800-Present	5
HISTORY 166B	Immigration Debates in America, Past and Present	3-5
HISTORY 167A	Martin Luther King, Jr. and the Global Freedom Struggle	3-5
HISTORY 201	Introduction to Public History and Public Service	4-5
HISTORY 260	California's Minority-Majority Cities	4-5
HISTORY 264G	Madness in American Society: The Social History of Mental Illness in the United States	5
HUMBIO 120	Health Care in America: An Introduction to U.S. Health Policy	4
HUMBIO 120A	American Health Policy	3
HUMBIO 121E	Ethnicity and Medicine	1-3
HUMBIO 122S	Social Class, Race, Ethnicity, and Health	4
HUMBIO 123	Obesity in America: Clinical and Public Health Implications	3-4
HUMBIO 125	Current Controversies in Women's Health	2-3
HUMBIO 166	Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context	4
HUMBIO 175	Health Care as Seen Through Medical History, Literature, and the Arts	3
INTNLREL 140C	The U.S., U.N. Peacekeeping, and Humanitarian War	5
MUSIC 8A	Rock, Sex, and Rebellion	3
MUSIC 11Q	Art in the Metropolis	3
MUSIC 17Q	Perspectives in North American Taiko	4
MUSIC 18A	Jazz History: Ragtime to Bebop, 1900-1940	3
MUSIC 18B	Jazz History: Bebop to Present, 1940-Present	3
MUSIC 34N	Performing America: The Broadway Musical	3
NATIVEAM 103S	Native American Women, Gender Roles, and Status	5
NATIVEAM 115	Introduction to Native American History	5
NATIVEAM 240	Psychology and American Indian Mental Health	3-5
POLISCI 110X	America and the World Economy	5
POLISCI 118P	U.S. Relations in Iran	5
POLISCI 120B	Campaigns, Voting, Media, and Elections	5
POLISCI 120C	What's Wrong with American Government? An Institutional Approach	5
POLISCI 121	Political Power in American Cities	5
POLISCI 124R	The Federal System: Judicial Politics and Constitutional Law	5
POLISCI 124S	Civil Liberties: Judicial Politics and Constitutional Law	5
POLISCI 213S	A Post American Century? American Foreign Policy in a Uni-Multi-unipolar World	5
POLISCI 225C	Fixing US Politics: Political Reform in Principle and Practice	5
POLISCI 240T	Democracy, Promotion, and American Foreign Policy	5
PUBLPOL 101	Politics and Public Policy	5
PUBLPOL 125	Law and Public Policy	5
PUBLPOL 132	The Politics of Policy Making	3
PUBLPOL 135	Regional Politics and Decision Making in Silicon Valley and the Greater Bay Area	3
PUBLPOL 154	Politics and Policy in California	3
PUBLPOL 156	Health Care Policy and Reform	4
PUBLPOL 194	Technology Policy	3-4
SOC 135	Poverty, Inequality, and Social Policy in the United States	3
SOC 118	Social Movements and Collective Action	4
SOC 138	American Indians in Comparative Historical Perspective	4
SOC 142	Sociology of Gender	5
SOC 145	Race and Ethnic Relations in the USA	4
SOC 150	Race and Political Sociology	3
TAPS 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
TAPS 180Q	Noam Chomsky: The Drama of Resistance	4
TAPS 248	Family Drama: American Plays about Families	5
URBANST 161	U.S. Urban History since 1920	5
URBANST 166	East Palo Alto: Reading Urban Change	5

¹ Including at least one course outside of literature that emphasizes art, drama, film, music, translation studies, or culture from a different disciplinary or interpretive perspective.

Honors Program

To graduate with honors, American Studies majors must complete a senior thesis and have an overall grade point average of 3.5 in the major, or demonstrated academic competence. Students must apply to enter the honors program no later than the end of registration period in Autumn Quarter of their senior year, and must enroll in 10-15 units of AMSTUD 250 Senior Research, during the senior year. These units are in addition to the units required for the major. The application to enter the program must contain a one-page statement of the topic of the senior thesis, and must be signed by at least one faculty member who agrees to be the student's honors adviser. (Students may have two honors advisers.) The thesis must be submitted for evaluation and possible revision to the adviser no later than four weeks before graduation.

Students are encouraged to choose an honors topic and adviser during the junior year. To assist students in this task, American Studies offers a pre-honors seminar (AMSTUD 240A Pre-Honors Seminar) in which students learn research skills, develop honors topics, and complete honors proposals. Students also may enroll in the American Studies Honors College during September before the senior year. American Studies also provides students the opportunity to work as paid research assistants for faculty members during the summer between their junior and senior year. More information about American Studies honors is available from the program office.

Minor in American Studies

To earn a minor in American Studies, students must complete at least 28 units of course work in the program. Because students may not count courses for both a major and a minor, the specific courses that are used for

an American Studies minor depend on the courses that are used to satisfy the major requirement.

A student must take the following:

	Units
AMSTUD 160 Perspectives on American Identity (The gateway seminar)	5
at least 2 courses from category 2 (History and Institutions)	6-10
at least 2 courses from category 3 (Literature, Culture and the Arts)	6-10
at least 1 course from category 4 (Comparative Race and Ethnicity)	3-5

If the units for these requirements do not total 28, the student must take additional coursework, appropriate to American Studies and approved by the Director or one of the Program Coordinators, to meet the minimum unit requirement. Courses used to satisfy all units taken for the minor must be taken for a letter grade.

Director: Shelley Fisher Fishkin

Program Coordinators: Richard Gillam, Judith Richardson

Committee in Charge: Shelley Fisher Fishkin (English, Chair), Barton J. Bernstein (History, emeritus), Jennifer DeVere Brody (Drama), Scott Bukatman (Art and Art History), James T. Campbell (History), Gordon H. Chang (History), Michele B. Elam (English), James Fishkin (Communication, and by courtesy, Political Science), Estelle Freedman (History), Richard Gillam (American Studies), Leah Gordon (Education), Allyson Hobbs (History), Ari Kelman (Education), Kathryn Gin Lum (Religious Studies), Doug McAdam (Sociology), Richard Meyer (Art and Art History), Ana Minian (History), Clayton Nall (Political Science), Alexander Nemerov (Art and Art History), Hilton Obenzinger (English, American Studies), Jack Rakove (History, Political Science), Vaughn Rasberry (English), Judith Richardson (English), Ramón Saldivar (English, Comparative Literature), Gary Segura (Political Science), Fred Turner (Communication), Caroline Winterer (History), Gavin Wright (Economics), Amy Beth Zegart (Hoover Senior Fellow)

Anthropology

Courses offered by the Department of Anthropology are listed under the subject code ANTHRO on the *Stanford Bulletin's* ExploreCourses web site.

Mission of the Department of Anthropology

The courses offered by the Department of Anthropology are designed to: provide undergraduates with instruction in anthropology; provide undergraduate majors in Anthropology with a program of work leading to the bachelor's degree; and prepare graduate candidates for advanced degrees in Anthropology. Anthropology is devoted to the study of human beings and human societies as they exist across time and space. It is distinct from other social sciences in that it gives central attention to the full time span of human history, and to the full range of human societies and cultures, including those located in historically marginalized parts of the world. It is therefore especially attuned to questions of social, cultural, and biological diversity, to issues of power, identity, and inequality, and to understanding the dynamic processes of social, historical, ecological, and biological change over time. Education in Anthropology provides excellent preparation for living in a multicultural and globally-interconnected world, and helps to equip students for careers in fields including law, medicine, business, public service, research, ecological sustainability, and resource management. Students may pursue degrees in Anthropology at the bachelor's, master's, and doctoral levels.

The Department of Anthropology offers a wide range of approaches to the topics and area studies within the field, including archaeology, ecology,

environmental anthropology, evolution, linguistics, medical anthropology, political economy, science and technology studies, and sociocultural anthropology. Methodologies for the study of micro- and macro-social processes are taught through the use of qualitative and quantitative approaches. The department provides students with excellent training in theory and methods to enable them to pursue graduate study in any of the above mentioned subfields of Anthropology.

Undergraduate Programs in Anthropology

- Bachelor of Arts (B.A.)
- Anthropology Minor

In addition to gaining an excellent foundation for graduate research and study, students majoring in Anthropology can pursue careers in government, international business, international development agencies, international education, law, mass media, nonprofit organizations, and public policy.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the degree program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the Anthropology discipline.
2. the ability to communicate ideas clearly and persuasively in writing.
3. identify analytical problems and make appropriate inferences and analytical arguments.
4. critically evaluate anthropological theory and ethnographic research.

Graduate Programs in Anthropology

Graduate training in Anthropology at Stanford is designed for students who seek the Doctoral (Ph.D.) degree, and for students who seek the Masters of Arts (M.A.) degree only.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Anthropology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses in the primary field, as well as related areas, and through experience with independent work, area specialization and field research.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Anthropology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Anthropology and to interpret and present the results of such research.

Field School and Research Opportunities in Anthropology

Students majoring in Anthropology are encouraged to develop field research projects under the supervision of a department faculty member. The department offers research grants to support individually-designed and other summer field research in Anthropology. The department research grants may be used to support field research as a supplement to other field

research grants such as the UAR research grants. The department also offers opportunities to participate in faculty-led research projects.

Please refer to <http://anthropology.stanford.edu> for information about the department's summer research opportunities, including the following: Beagle II Award, Tambopata, and Franz Boas summer scholars programs, and Michelle Z. Rosaldo Summer Field Research Grant program. Other field school opportunities include the following: Catalhoyuk and Chavin Huanter. *Note:* Required courses for the Franz Boas summer scholars program and the Michelle Z. Rosaldo grant program include:

	Units
ANTHRO 93 Prefield Research Seminar	5
or ANTHRO 93B Prefield Research Seminar: Non-Majors	
ANTHRO 94 Postfield Research Seminar	5

For more information about research opportunities and deadlines, see the department's web site.

Bachelor of Arts in Anthropology

Undergraduate training in the Department of Anthropology is designed for students who seek the Bachelor of Arts (B.A.) degree, only. Students may declare a major in Anthropology and earn the B.A. degree by completing the requirements below. The Department also offers a minor in Anthropology. The Anthropology B.A. degree program usually requires at least five quarters of enrollment. Students interested in majoring in Anthropology are encouraged to declare by the beginning of their junior year and to work closely with a faculty adviser to develop a coherent plan of study.

To declare a major in Anthropology, apply in Axxess for the B.A. in Anthropology, contact the department's student peer adviser(s) or the undergraduate student services specialist to prepare the department major checklist and planning form; submit the required forms to the undergraduate student services specialist; request a faculty adviser assignment and meet with the assigned faculty adviser for approval of the department major checklist and planning form. Students must apply in Axxess for the major in Anthropology by the time junior status is achieved at 85 units.

Degree Requirements

The B.A. degree in Anthropology may be earned by fulfilling the following requirements:

1. A faculty adviser appointed in the Department of Anthropology. A faculty adviser will be assigned based on the students chosen emphasis. Undergraduate Anthropology (ANTHRO) majors should plan to meet with their faculty adviser at least once each quarter.
2. A program of 65 units, passed with an overall minimum grade point average of 'C':
 - of the 65 units, 50 units must be in courses with the ANTHRO subject code. 15 may be approved from related areas of study, overseas studies, and/or transfer units.
 - any related, overseas studies, or transfer units must be approved by the faculty adviser and by petition to the undergraduate committee.
 - of the 65 units, at least 20 units with a minimum grade of 'C' must be in courses with the ANTHRO subject code numbered 100 or above and taught by Anthropology faculty.
 - no more than 10 units of directed reading-style course work may be counted towards the 50 units required for the major in the ANTHRO subject code.
 - no more than 10 units may be taken for a satisfactory/no credit grade: 5 units in ANTHRO courses, and 5 in related or transfer units.

3. A minimum grade of 'B' in the ANTHRO Writing in the Major (WIM) course from the chosen emphasis. This can be fulfilled by completing the ANTHRO Theory course, ANTHRO 90C or ANTHRO 90B, and should be taken within a year of declaring the Major or before the end of the junior year.
4. A minimum grade of 'B' in the ANTHRO Theory course from the chosen emphasis. This should be taken within a year of declaring the major or before the end of the junior year.
5. A minimum grade of 'B' in the ANTHRO Methods course (ANTHRO 91 Method and Evidence in Anthropology). This should be taken within a year of declaring the major or before the end of the junior year.
6. Students must enroll in the senior Capstone course, (ANTHRO 193 Anthropology Capstone: Contemporary Debates in Anthropology) during their senior year.
7. An approved plan of study which includes an emphasis chosen from the list below. Students must complete a minimum of 20 units in their chosen emphasis of which 10 units must be numbered 100 or above.
 - Culture and Society
 - Ecology, Environment, and Evolution
 - Medical Anthropology
 - Self-Designed Emphasis (with faculty adviser and undergraduate committee approval, only)
8. Competence in a foreign language beyond the first-year level. Such competence is usually demonstrated by completing a 5 unit course at the second-year level with a minimum grade of 'B-'. The requirement may be met by special examination administered through the Language Center, or demonstration of superior placement scores.
 - Up to 5 units from a second-year language course can count towards the "Related to Anthro" category of the major requirements.
9. At least five quarters of enrollment in the major. Each candidate for the B.A. in Anthropology should declare a major by the first day of the first quarter of the third year of study.

Advising is an important component of the Anthropology major. Students are encouraged to work closely with their major adviser throughout their pursuit of the B.A. degree. Advising milestones for the major include the following:

1. In the quarter in which the major is declared, students meet with their assigned faculty adviser, create a rigorous plan of study based on topical breadth, obtain adviser approval of an Anthropology emphasis as part of the plan of study, and obtain the major adviser's signature on the Major Checklist form.
2. Undergraduate Anthropology majors should plan to meet with their major faculty adviser at least once each quarter before the final study list deadline. Any revisions to the initial checklist must be approved by the faculty adviser.
3. Undergraduate Anthropology majors must submit an updated major checklist and planning form to the Undergraduate Student Services Specialist in the quarter before graduating.

Required Courses

1. Writing in the Major courses

Undergraduate majors can fulfill the Writing in the major course requirement for the B.A. in Anthropology by taking the ANTHRO theory course designated from a chosen emphasis.

2. Theory courses

Enroll in one of the following theory courses according to the student's chosen emphasis:

Units

Culture and Society/Medical Anthropology:

ANTHRO 90B	Theory of Cultural and Social Anthropology	5
Ecology, Environment, and Evolution:		
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	5

3. Methods courses

The following course fulfills the ANTHRO undergraduate major methods course requirement for all emphases:

ANTHRO 91	Method and Evidence in Anthropology	5
-----------	-------------------------------------	---

4. Capstone Course

The following course fulfills the ANTHRO undergraduate major capstone course requirement for all emphases:

ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5
------------	---	---

Department Courses

Students should complete a minimum of 20 units from the courses listed below within their chosen emphases; 10 of these units must be numbered 100, or above. Departmental courses may fulfill the requirements for more than one emphasis. For example: with approval, an Archaeology course may fulfill a course needed to meet a course requirement in the Medical Anthropology emphasis. Undergraduates may also petition to the undergraduate committee for a self-designed emphasis in the Anthropology major.

Cultural & Society Anthropology Courses

ANTHRO 1	Introduction to Cultural and Social Anthropology	5
ANTHRO 4	Language and Culture	4-5
ANTHRO 30Q	The Big Shift	4
ANTHRO 34	Animals and Us	5
ANTHRO 42	Megacities	5
ANTHRO 49	Violence and Belonging in the Middle East	3-5
ANTHRO 90B	Theory of Cultural and Social Anthropology	5
ANTHRO 91	Method and Evidence in Anthropology	5
ANTHRO 122A	Race and Culture in Mexico and Central America	3-5
ANTHRO 124N	Maya Mythology and the Popol Vuh	3
ANTHRO 126	Urban Culture in Global Perspective	5
ANTHRO 136	The Anthropology of Global Supply Chains	5
ANTHRO 140	Ethnography of Africa	5
ANTHRO 141B	The Anthropology of Bits and Bytes: Digital Media in the Developing World	5
ANTHRO 146G	Paperwork	5
ANTHRO 149	South Asia: History, People, Politics	5
ANTHRO 152	Ritual, Politics, Power	5
ANTHRO 187	Nuclear Cultures	5

Medical Anthropology Courses

ANTHRO 82	Medical Anthropology	3-5
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
ANTHRO 154	Anthropology of Drugs: Experience, Capitalism, Modernity	5
ANTHRO 175	Human Skeletal Anatomy	5
ANTHRO 176	Cultures, Minds, and Medicine	1
ANTHRO 182N	Smoke and Mirrors in Global Health	3
ANTHRO 186	Culture and Madness	5

Ecology, Environment & Evolution Anthropology Courses

ANTHRO 10SC	Darwin, Evolution, and Galapagos	2
ANTHRO 90C	Theory of Ecological and Environmental Anthropology	5
ANTHRO 160	Social and Environmental Sustainability: The Costa Rican Case	3-5
ANTHRO 162	Indigenous Peoples and Environmental Problems	3-5
ANTHRO 163	Conservation and Evolutionary Ecology	5
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	3-5
ANTHRO 169	The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet	3-5

Senior Courses

ANTHRO 95B	Directed Study in Honors and Senior Papers	1-10
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

Senior Paper/Honors & Research Courses

ANTHRO 92A	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 92B	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93	Prefield Research Seminar	5
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 94	Postfield Research Seminar	5
ANTHRO 95	Research in Anthropology	1-10
ANTHRO 96	Directed Individual Study	1-10
ANTHRO 97	Internship in Anthropology	1-10

Emphasis Courses

The following course listing includes courses taught by the Anthropology faculty in Archaeology. These courses may be considered towards the published emphasis requirements in the Anthropology bachelors degree with the culture and society, ecology, environment and evolution, medical, and self-designed emphases in the Anthropology undergraduate major.

Archaeology Courses

		Units
ANTHRO 3	Introduction to Prehistoric Archeology	3-5
ANTHRO 34	Animals and Us	5
ANTHRO 91A	Archaeological Methods	5
ANTHRO 98B	Digital Methods in Archaeology	3-5
ANTHRO 100C		2-5
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 108E	Catalhoyuk and Neolithic Archaeology	3
ANTHRO 113B	Religious Practices in Archaeological Cultures	5
ANTHRO 115	The Social life of Human Bones	3-5
ANTHRO 118	Heritage, Environment, and Sovereignty in Hawaii	4
ANTHRO 119	Zooarchaeology: An Introduction to Faunal Remains	5
ANTHRO 134	Object Lessons	5

Plan of Study (example)

Please see the example Plan of Study grid below designed for an ANTHRO major beginning junior year (from 85 units). This sample course schedule details the courses needed to satisfy the requirements for the Culture & Society emphasis.

Junior	Units		
	Autumn	Winter	Spring
Method and Evidence in Anthropology (ANTHRO 91)		5	
Undergraduate Research Proposal Writing Workshop (ANTHRO 92A)	2-3		
Culture, Narrative, and Medicine (ANTHRO 178A)		5	
Language and Culture (ANTHRO 4)	4-5		
Undergraduate Research Proposal Writing Workshop (ANTHRO 92B)			2-3
Introduction to Cultural and Social Anthropology (ANTHRO 1)			5
Theory of Cultural and Social Anthropology (ANTHRO 90B)			5
Sex and Gender (ANTHRO 15)			3
Prefield Research Seminar (ANTHRO 93)			5
Field School Training Workshop (ANTHRO 98F)			1-3
The Anthropology of Global Supply Chains (ANTHRO 136)			5
Medical Anthropology (ANTHRO 82)			3-5
Year Total:	16-18	15-16	14-18
Senior	Units		
	Autumn	Winter	Spring
Urban Culture in Global Perspective (ANTHRO 126)		5	
Senior and Master's Paper Writing Workshop (ANTHRO 199)	1-2		
Postfield Research Seminar (ANTHRO 94)		5	
Anthropology Capstone: Contemporary Debates in Anthropology (ANTHRO 193)		5	
Ritual, Politics, Power (ANTHRO 152)			5
Ethnography of Africa (ANTHRO 139)			5
Senior and Master's Paper Writing Workshop (ANTHRO 199)			1-2
Directed Study in Honors and Senior Papers (ANTHRO 95B)			1-10
South Asia: History, People, Politics (ANTHRO 149)			5
Year Total:	16-17	11-12	6-15
Total Units in Sequence:			78-96

Course selections may vary depending on the students chosen emphasis. The number of units needed to satisfy the ANTHRO major requirements may also vary depending on the student's current undergraduate status and units accomplished previously before declaration of the ANTHRO major.

Research Courses

Courses listed are recommended for students writing a research paper in the major:

		Units
ANTHRO 92A	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 93	Prefield Research Seminar	5
ANTHRO 94	Postfield Research Seminar	5
ANTHRO 95	Research in Anthropology	1-10
ANTHRO 199	Senior and Master's Paper Writing Workshop	1-2
Total Units		19-30

Senior Courses

		Units
ANTHRO 95B	Directed Study in Honors and Senior Papers	1-10
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

Senior Paper

The senior paper program in Anthropology provides majors with the opportunity to conduct original research under the guidance of an

Anthropology faculty member. All Anthropology majors are encouraged to write a senior paper. Interested Anthropology majors of junior standing may apply to the senior paper program by submitting a senior paper application form, including a research topic/title of the proposed senior paper project, a two page abstract/proposal, and a letter of reference from their faculty adviser to the undergraduate student services specialist on or by February 15 in the junior year. Enrollment in ANTHRO 95 Research in Anthropology is recommended during Autumn and Winter quarters of the senior year. Students must enroll in ANTHRO 95B Directed Study in Honors and Senior Papers in the final quarter of the undergraduate degree program before graduating. The senior paper is submitted in the final quarter before graduation. For more information, see the undergraduate student services specialist.

Honors Program

The honors program in Anthropology provides eligible Anthropology majors with an opportunity to conduct original ethnographic, field, laboratory, or library-based research under the guidance of an Anthropology faculty member. All Anthropology majors are urged to consider applying to the Departmental Honors Program in Anthropology. Interested Anthropology majors of junior standing may apply for admission to the honors program by applying first in Axess, submitting an honors program application form, including a research topic/title of the proposed honors project, a two page abstract/proposal, a transcript, and a letter of reference from the faculty or honors adviser, to the Undergraduate Student Services Specialist on or by February 15 in the junior year.

Department majors are eligible to apply for honors candidacy with a 3.4 GPA in the major, a 3.0 GPA in overall course work, and with no more than one incomplete listed on the transcript at the time of application. Students interested in the honors program are encouraged to apply for Summer Quarter research funding through the Department of Anthropology, Undergraduate Advising and Research, and area studies centers. In most cases, honors students apply for such funding early in the junior year. This process requires advanced planning as the Spring Quarter research deadline falls before the honors application due date.

Students must enroll in ANTHRO 95B (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/anthropology>) Directed Study in Honors and Senior Papers in the final quarter of the undergraduate degree program before graduating. The honors thesis is submitted in the final quarter before graduation. Students must submit the final draft of their Honors Thesis to their honors adviser (first reader), second reader, and the undergraduate student services specialist electronically, or printed, no later than May 13, 2015. Honors advisers must complete a Certificate of Honors Eligibility Form, provided by the student services specialist, to confirm a student's honors status no later than May 20, 2015. If ineligible, students must withdraw their request to graduate with honors via Axess. For more information, see the undergraduate student services specialist.

Minor in Anthropology

To declare a minor in Anthropology, apply in Axess; contact the department's student peer adviser(s) or the undergraduate student services specialist to prepare the minor checklist and the minor planning form; submit the required forms to the undergraduate student services specialist; request a faculty adviser assignment; and meet with the assigned faculty adviser for approval of the minor checklist and planning form. These forms are available at <http://anthropology.stanford.edu>. Students must apply in Axess for the undergraduate minor in Anthropology by the last day of the quarter at least two quarters before degree conferral.

Requirements for the minor in Anthropology include the following:

1. A faculty adviser appointed in the Department of Anthropology.
2. A program of 30 units, with a minimum grade of 'C':
 - Of the 30 units, 10 units may be approved from related areas of study, overseas studies, and transfer units.

- *Note:* Any related, overseas studies, or transfer units must be approved by the faculty adviser and by petition to the Undergraduate Committee.
 - Of the 30 units, a minimum of 15 units must be ANTHRO courses numbered 100 or above.
 - No more than 5 units of directed reading-style course work may be counted towards the minor and may only be included among the 10 related units permitted for the minor.
 - No more than 5 units may be taken for a satisfactory/no credit grade.
3. A self-designed course of study chosen from an Anthropology emphasis listed below and approved by the faculty adviser:
 - Culture and Society
 - Ecology, Environment and Evolution
 - Medical Anthropology
 4. A minimum grade of 'C' in two ANTHRO courses listed at the 100 level or higher and taught by Anthropology faculty.
 5. At least two quarters of enrollment in the minor. Each candidate for the minor in Anthropology should declare by the last day of the quarter at least two quarters before the quarter of degree conferral.

Advising milestones for the minor include the following:

1. In the quarter in which the minor is declared, the student must meet with his or her assigned adviser, create a rigorous course of study based on topical breadth, and obtain adviser approval for the checklist.
2. Any revisions to the initial checklist must be approved by the faculty adviser.
3. Undergraduate Anthropology minors must submit an updated minor checklist and planning form to the undergraduate student services specialist in the quarter before graduating.

Coterminal Bachelor's and Master's Degrees in Anthropology

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 41)" section of this bulletin. For University coterminal degree program rules and University application forms, see the Stanford Undergrad Coterm Guide (<http://undergrad.stanford.edu/advising/student-guides/coterm>).

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is usually required of all candidates for the coterminal M.A. degree. M.A. students in Anthropology must take a minimum of 45 units of Anthropology course work beyond the Undergraduate degree with an overall minimum grade point average of 3.0. For the Masters degree, all courses must be at or above the 100 level, and, at least 23 of the required 45 units must be taken at either the ANTHRO 200 or 300-level.

The M.A. program usually requires more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive calendar quarters after the student's first quarter of master's-level enrollment. The University allows no transfer units into the master's program. To provide a meaningful Master's program within one year, advance planning of course work with a faculty adviser is required. Requirements for the coterminal M.A. program must be completed within three years.

It is highly suggested by this department that a student who accepts an offer of admission to the Anthropology Coterminal Master's program, defers their Undergraduate B.A. conferral until the Graduate M.A degree requirements have been completed. The student can then request to graduate in both

the B.A. and M.A. simultaneously. Please see the Undergraduate Student Services Specialist for details.

For further information about the Department's coterminal M.A. degree program requirements, please consult the Department webpages .

Admission to the Coterminal Master's Degree Program

The deadline for graduate applications to the coterminal M.A. degree program in Anthropology is December 9, 2014. Stanford University Undergraduate Majors are eligible to apply for the coterminal M.A. degree program if they have a 3.4 GPA in their Department Major, a 3.0 GPA in overall course work, and have no more than one incomplete listed on the transcript at the time of application. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. However, the department may consider a request for early deferral of admission in the Spring Quarter by petition. Coterminal M.A. degree applicants are not required to submit their Graduate Record Examination scores. Additional coterminal M.A. degree program application procedures are required by the Department. Please consult the Department webpages.

For University coterminal degree program rules and University application forms, see <http://studentaffairs.stanford.edu/registrar/publications#Coterm>.

Degree Options

Students may pursue one of three possible department tracks in the Anthropology M.A. degree program. The tracks are:

- Archaeology
- Culture and Society
- Ecology and Environment

The tracks are not declarable in Axess.

Master of Arts in Anthropology

University requirements for the terminal M.A. are described in the "Graduate Degrees" section of this bulletin.

The Department of Anthropology offers the terminal M.A. degree to the following:

1. Graduate applicants who apply from outside the University for admission to the terminal M.A. program in Anthropology.
2. Stanford graduate students, taking advanced degrees in other departments or schools at Stanford, who are admitted to the terminal M.A. program in Anthropology.
3. Anthropology Ph.D. students at Stanford University who fulfill the M.A. degree requirements on the way to the Ph.D. degree.

Graduate applicants who apply from outside the University and whose ultimate goal is the Ph.D. degree should apply directly to the Ph.D. degree program. Applicants who are offered admission to the terminal Masters degree program may not transfer to the Ph.D. degree program; they must reapply on the same basis as other Ph.D. applicants and in competition with the Ph.D. applicants.

Graduate applicants, taking an advanced degree in other departments or schools at Stanford, applying for admission to the M.A. in Anthropology should apply via the Department terminal M.A. degree application for current Stanford University graduate students form and via the Registrar electronic graduate authorization petition by December 9, 2014 in consideration of beginning degree matriculation in either the following Spring Quarter or the following Autumn Quarter.

Anthropology Ph.D. students choosing to take the M.A. in Anthropology on the way to the Ph.D. are governed by separate requirements described in the Anthropology Ph.D. Degree Program and Ph.D. Handbook.

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is required of all candidates for the terminal master's degree. M.A. students in Anthropology must take a minimum of 45 units of course work with an overall minimum grade point average of 3.0. For the Masters degree, all courses must be at or above the 100 level, and, at least 23 of the required 45 units must be taken at either the ANTHRO 200 or 300-level.

The M.A. program may require more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive calendar quarters after the student's first quarter of master's-level enrollment. The University allows no transfer units into the master's program. To provide a meaningful master's program within one year, advance planning of course work with an adviser is required. Requirements for the terminal master's program must be completed within three years.

For further information about the Department's M.A. degree program requirements, please consult the Department webpages.

Admission to the Master's Degree Program

The deadline for graduate applications to the M.A. degree program in Anthropology is December 9, 2014. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. M.A. degree applicants must file a report of their Graduate Record Examination score electronically. Additional terminal M.A. degree program application procedures are required by the Department. Please consult the Department webpages.

No financial support is available to students enrolled for the M.A. degree.

Degree Options

Students may pursue one of three possible department tracks in the Anthropology M.A. degree program. The tracks are:

- Archaeology
- Culture and Society
- Ecology and Environment

The tracks are not declarable in Axess.

Degree Requirements

Requirements for the coterminal and terminal master's degree program include the following:

1. A faculty adviser appointed in the Department of Anthropology.
2. A program of 45 units, taken at the 100 level or higher with a minimum grade of 'B'. *Note:* At least 23 of the 45 units must be taken at the 200/300 level.
 - of the 45 units, no more than 15 units may be approved from related areas of study or overseas studies.
 - of the 45 units, no more than 10 units of directed reading-style course work may be counted towards the degree.
 - of the 45 units, no more than 5 units may be taken for a satisfactory/no credit grade.
3. A minimum grade of 'B' in one graduate-level ANTHRO Theory course from the chosen track. Please note that ANTHRO theory courses are usually considered as department review courses.
4. A minimum grade of 'B' in one graduate-level ANTHRO Methods course from the chosen track. Please note that ANTHRO methods courses are not considered as department review course.
5. A minimum grade of 'B' in four ANTHRO Review courses from the chosen track, listed at the 200-level or higher, taught by Anthropology faculty, and taken as a five unit course.
6. A self-designed plan of study chosen from the Anthropology tracks listed below:
 - Archaeology
 - Culture and Society
 - Ecology and Environment

7. Submission of an approved plan of study form and an approved department graduate report of degree progress form, inclusive of a field research, laboratory research or library-based paper proposal, by the last day of the first quarter of the Master's degree program.
8. Submission of an approved Master's degree program proposal form by the last day of the first quarter of the Master's degree program.
9. Presentation of the Master's research project at the Department's Master's (Honors) paper presentation event in Spring Quarter - optional.
10. Submission of the Master's paper reviewed by two faculty members (advisor and reader). For the Culture and Society track, the paper can be a field research or library-based research paper. For the Archaeology and the Ecology and Environment tracks, the paper can also be a laboratory research paper.

Required Courses

Archaeology Track, Required Theory (Review) Course

ANTHRO 303	Introduction to Archaeological Theory	5
------------	---------------------------------------	---

Culture and Society Track, Required Theory (Review) Courses

ANTHRO 301	History of Anthropological Theory, Culture and Society	5
------------	--	---

-or-

ANTHRO 301A	Foundations of Social Theory	5
-------------	------------------------------	---

-or-

ANTHRO 300	Reading Theory Through Ethnography	5
------------	------------------------------------	---

Ecology and Environment Track, Required Theory (Review) Course

ANTHRO 302	History of Anthropological Theory, Ecology and Environment (or comparable, approved course at the 200 level)	5
------------	--	---

Units

Archaeology Track, Required Methods Course

ANTHRO 307	Archaeological Methods	5
------------	------------------------	---

Culture and Society Track, Required Methods Course

ANTHRO 306	Anthropological Research Methods	5
------------	----------------------------------	---

Ecology and Environment Track, Required Methods Course

ANTHRO 305	Research Methods in Ecological Anthropology (or comparable, approved course at the 200 level)	5
------------	---	---

-or-

ANTHRO 255	Research Methods in Ecological Anthropology (or comparable, approved course at the 200 level)	5
------------	---	---

Recommended Courses

For all tracks, attendance at the Departmental colloquium each quarter is recommended for all Master's students. Students may enroll in the following course for additional units.

ANTHRO 444	Anthropology Colloquium	1
ANTHRO 445	Anthropology Brown Bag Series	1

Doctor of Philosophy in Anthropology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 43)" section of this bulletin.

Admission

The deadline for graduate application to the Ph.D. degree program is December 9, 2014. Successful applicants for the Ph.D. program may enter only in Autumn Quarter. It is the Department of Anthropology's policy not to defer graduate admission. Additional Ph.D. application procedures are required by the department. Please consult the department website.

Financial Support

The department endeavors to provide needed financial support (through fellowships, teaching and research assistantships, and tuition grants) to all students admitted to the program who maintain satisfactory degree progress in years one through five of the Ph.D. program. San Francisco Bay Area residency during the Autumn, Winter, and Spring quarters in academic cohort years one through five is required for eligibility to receive department funding.

First year students who have not obtained a graduate degree previous to entering the Ph.D. program, and who have not obtained extramural funding previously before entering the Ph.D. program, are required to submit one extramural funding application in support of graduate doctoral training (for example, funding support for training during the first three years of the Ph.D. program) by the first day of finals week in the Autumn Quarter of the first year. In order to be eligible to apply for the departments exceptional (pre)dissertation research-related funding support, first-year students must submit at least two intramural or extramural summer research funding proposals (deadlines are usually early Winter Quarter and advanced planning is required) as well as the department graduate report of degree progress form inclusive of a research proposal on or by May 15 in the Spring Quarter of the first year of the Ph.D. program.

Note that two summers of predissertation field research funding support are given to qualified Ph.D. students in Anthropology. The first of two summers of predissertation field research funding support, is given in the Summer Quarter of the second year in the Ph.D. program and provided by way of a predoctoral research affiliateship. The second of two summers of predissertation field research funding support may be taken in either the first or third year Summer Quarter in the Ph.D. and is provided by way of a department fellowship. Careful consideration should be given when choosing to take Summer Quarter funding support, either in the first year for a pilot study, survey work, or approved predissertation research, or, in the third year as a bridge to the field to conduct approved dissertation research.

Second-year students are required to complete one or more full time quarterly teaching assistant assignments and be advanced to candidacy. In order to qualify for a predoctoral research affiliateship given in the Summer Quarter of the second year, Ph.D. students are required to submit at least two predissertation research funding proposals for second year Summer Quarter funding support.

Third-year students must pass the department qualifying examinations, inclusive of the oral component, and receive department approval by the dissertation reading committee for the dissertation proposal. Third-year students who have not secured fourth-year field research funding are required to make at least three extramural funding applications to support dissertation research usually by the end of Autumn Quarter of the third year. Advanced planning is required in order to meet approved dissertation research funding application deadlines. If receiving department funding for fourth year field research, third-year students must submit the department Ph.D. funding agreement form before leaving to conduct field research. Finally, the second of two summers of (pre)dissertation field research funding support may be taken as a bridge to the field in the third year Summer Quarter if this support was not taken previously in the first year Summer Quarter. If this support is taken in the third year Summer Quarter, Ph.D. students may qualify to receive these funds by way of successful completion of the department qualifying examinations, inclusive of the oral component, and receive approval for the dissertation proposal by the

dissertation reading committee by the Summer Quarter final study list deadline.

While in the field, fourth-year students make quarterly reports of their dissertation research progress to the dissertation reading committee via email. Fourth-year students returning from the field must submit the department's graduate report of degree progress form to establish eligibility for fifth year funding for degree progress and dissertation writing support, on or by May 15th in the Spring Quarter of the fourth year.

Fifth-year students are required to complete one or more full time quarterly teaching assistantship assignments. Fifth-year students who have not secured extramural funding for the sixth year are required to make at least two dissertation write-up funding applications to secure extramural or intramural funding for dissertation write-up in order to be eligible for consideration of a department teaching affiliateship in the sixth year. A department offer of teaching affiliateship is always dependent on the availability of funds and is given at the discretion of the department curriculum committee. During the fifth year and after returning from field research, students confirm Bay Area residency to be eligible for department fifth-year dissertation writing funds. Eligibility for department support is based on seminar attendance and dissertation chapter production, as well as on Bay Area residency (the Bay Area is defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties)

Program

The Ph.D. in Anthropology allows the student to develop a flexible program reflecting special research interests, under the supervision of a faculty committee, chosen by the student. Students are encouraged to plan for completion of all work for the Ph.D. in five years. Matriculation in the Ph.D. is full-time only. In order to be eligible for department and intramural support, students must reside locally through the Autumn, Winter and Spring Quarters of academic years one through five. The University oral examination may be scheduled in the fifth year or beyond depending upon a student's dissertation completion progress. Ph.D. students in Anthropology must complete a minimum of 135 quarter units with a minimum grade point average (GPA) of 3.0 (B). The maximum allowable number of transfer units is 45.

Degree Options

Students may pursue three different tracks in the Anthropology Ph.D. program. The tracks are not declarable in AxB and do not appear on the transcript or the diploma. The three tracks are:

- Archaeology
- Culture and Society
- Ecology and Environment.

Degree Requirements

For students who matriculate beginning 2014-15, the requirements for the doctoral degree program include the following:

1. Students must submit a department (first year) plan of study form detailing intended courses enrollment and milestone accomplishment to be completed in the first year of the Ph.D. program. The plan of study form should be submitted by the first day of Autumn Quarter. In addition, the plan of study form also confirms the department track: Archaeology, Culture and Society, or Ecology and Environment.
2. Students must pass six graduate level ANTHRO subject code department review courses, with a minimum grade of 'B+', appropriate to the student's chosen track, within the first two years of the degree program. Department review courses are usually those seminar-style courses, taught by tenure-line ANTHRO faculty appointed in the department, at the 300-level.
3. In the first year of the program:

- a. pass with a minimum grade of 'B+' the theory course(s) as required for the chosen track in Archaeology , Culture and Society, and Ecology And Environment:

Units

Archaeology Track, Required Theory (Review) Course

ANTHRO 303	Introduction to Archaeological Theory	5
------------	---------------------------------------	---

Culture and Society Track, Required Theory (Review) Courses

ANTHRO 300	Reading Theory Through Ethnography	5
------------	------------------------------------	---

ANTHRO 301	History of Anthropological Theory, Culture and Society	5
------------	--	---

ANTHRO 301A	Foundations of Social Theory	5
-------------	------------------------------	---

Ecology and Environment Track, Required Theory (Review) Course

ANTHRO 302	History of Anthropological Theory, Ecology and Environment (or comparable, approved course at the ANTHRO 200 level)	5
------------	---	---

- b. pass with a minimum grade of 'B+' one or more methods courses as required for the chosen track in Archaeology and Ecology and Environment:

Units

Archaeology Track, Required Methods Course

ANTHRO 307	Archaeological Methods	5
------------	------------------------	---

(may be taken in either the first or second year of the PhD program)

Ecology and Environment Track, Required Methods Course

In the first year, pass at least one of two required methods courses, or a comparable, approved ANTHRO course at the 200-level:

ANTHRO 304	Data Analysis for Quantitative Research	5
------------	---	---

ANTHRO 305	Research Methods in Ecological Anthropology	5
------------	---	---

or ANTHRO 255 Research Methods in Ecological Anthropology

- c. complete at least 45 units by the end of Spring Quarter in the first year.
- d. as scheduled by the department, attend the department ethics workshop for review of ethics in Anthropology. Submit the department review of ethics in anthropology form on or by May 15th in Spring Quarter.
- e. enroll in ANTHRO 310G Introduction to Graduate Studies during Autumn Quarter (all tracks).
- f. Culture and Society track students only enroll in ANTHRO 311G Introduction to Culture and Society Graduate Studies in Anthropology during Winter and Spring quarters for 1-2 units (no more than 5 units total over two quarters).
- g. attend the department colloquial series each quarter. Enrollment in ANTHRO 444 Anthropology Colloquium is optional.
- h. attend the department brown bag series each quarter. Enrollment in ANTHRO 445 Anthropology Brown Bag Series is optional.
- i. submit the department graduate report of degree progress form inclusive of the research proposal to the faculty adviser and the graduate committee on or by May 15th in Spring Quarter of the first year. Receive final approval for the predissertation research proposal from the adviser and the graduate committee by the first day of finals week in Spring Quarter.
- j. submit at least one extramural funding application within the first year (deadlines are usually early Autumn Quarter and advanced

- planning is required), or, confirm a waiver of the requirement by graduate committee petition.
 - k. to be eligible for exceptional Summer Quarter funding support, submit at least two intramural or extramural summer research funding proposals (deadlines are usually early Winter Quarter and advanced planning is required). If exceptional funding support is needed, submit a request for predissertation first-year Summer Quarter funding support using a department graduate program petition form on or by May 15th in the Spring Quarter. The second of two summers of predissertation field research funding support may be taken in either the first or third year Summer Quarter in the Ph.D. program and is provided by way of a department fellowship. Careful consideration should be given when choosing to use the Summer Quarter funding support in either the first year for a pilot study, survey work, or approved field research or, in the third year as a 'bridge to the field' to conduct approved dissertation field research.
 - l. complete the appropriate CITI tutorial for non-medical human subjects, and, either submit a non-medical human subjects protocol, based on the predissertation research proposal, to the Institutional Review Board before departing for Summer Quarter field research in the first year, or confirm approval for exempt status. Alternately, a notice of determination may be confirmed with the Institutional Review Board for a pilot study proposal that does not require protocol submission.
 - m. complete the appropriate CITI tutorial for Responsible Conduct of Research on or by May 15 in Spring Quarter.
 - n. upon completion of the above requirements, and with recommendation from the faculty adviser and department chair, request the master's degree 'on the way to the Ph.D.' by the first day of finals week in Spring Quarter, if desired.
4. In the second year:
- a. pass with a minimum grade of 'B+' the methods course(s) appropriate for the chosen track in Archaeology, Culture and Society, and Ecology And Environment:

Units

Archaeology Track, Required Methods Course

ANTHRO 307	Archaeological Methods	5
------------	------------------------	---

ANTHRO 370	Advanced Theory and Method in Historical Archaeology	5
------------	--	---

Culture and Society Track, Required Methods Course

ANTHRO 306	Anthropological Research Methods	5
------------	----------------------------------	---

Ecology and Environment Track, Required Methods Course(s)

ANTHRO 305	Research Methods in Ecological Anthropology	5
------------	---	---

or ANTHRO 255 Research Methods in Ecological Anthropology

- b. pass with a minimum grade of 'B+' the proposal writing course appropriate for the chosen track in Archaeology and in Culture and Society:

Units

Archaeology Track, Required Proposal Writing Course

ANTHRO 308A	Proposal Writing Seminar in Archaeology	5
-------------	---	---

Culture and Society Track, Required Proposal Writing Course

ANTHRO 308	Proposal Writing Seminar in Cultural and Social Anthropology	5
------------	--	---

- c. for all tracks, submit the pre-dissertation proposal to the assigned faculty adviser and the graduate committee by the first day of finals week in Spring Quarter. Receive approval for the draft proposal of

- the second year summer pre-dissertation research before departing for field research.
- d. complete at least 40 units of course work in the second year and a total of at least 50 units overall including the Summer Quarter enrollment in ANTHRO 450 Research Apprenticeship (10 units). Students must have completed a total of 95 units overall by the end of the second year.
 - e. pass with a minimum grade of 'B+' any remaining ANTHRO subject code review courses to complete the six review course requirement.
 - f. for the Ecology and Environment track, pass the second of two required methods courses by the end of the second year:

Units**Ecology and Environment Track, Required Methods Courses**

ANTHRO 304	Data Analysis for Quantitative Research (or, comparable approved ANTHRO course at the 200-level)	5
ANTHRO 305	Research Methods in Ecological Anthropology (or, comparable approved ANTHRO course at the 200-level)	5
or ANTHRO 255	Research Methods in Ecological Anthropology	255

- g. as scheduled by the department, attend the teaching assistant training workshop (to be scheduled in the week before the first day of Autumn Quarter).
 - h. complete one or more full time quarterly teaching assistant assignments in the second year.
 - i. submit a second year graduate report of degree progress form inclusive of the research proposal on or by May 15th in Spring Quarter. Receive approvals from the assigned faculty adviser and the graduate committee by the first day of finals week in Spring Quarter.
 - j. by the first day of finals week in Winter Quarter, confirm the qualifying examination committee adviser for each examination committee (i.e. one committee for AREA and one committee for TOPIC) by submitting the department report of qualifying examination form to the department graduate committee.
 - k. by the first day of finals week in Winter Quarter (for those whose native language is English), either pass a foreign research or field language exam, or petition the department's language committee for exemption from a foreign research or field language examination (based on a description of previous field or research language training). For those whose native language is not English, demonstrate satisfactory command of the English language, as evidenced by completion of the first two years of graduate study and a petition to the language committee.
 - l. upon completion of the above requirements and at the recommendation of the Anthropology faculty, petition the University for candidacy by submitting the University application for candidacy for doctoral degree form by the first day of finals week in Winter Quarter. Advancement to candidacy is based on faculty review and approval of the predissertation research proposal demonstrating a capacity for original research submitted on or by May 15th in Spring Quarter of the second year. Failure to advance to candidacy results in the dismissal of the student from the program.
 - m. In order to qualify for a predoctoral research affiliation given in the Summer Quarter of the second year, Ph.D. students are required to submit at least two predissertation research funding proposals for second year Summer Quarter funding support.
5. In the third year, complete the following:
- a. by the last day of the third week of Autumn Quarter, confirm the committee reader for each of the qualifying examination committees (i.e. one committee for AREA and one committee for TOPIC) by submitting the report of qualifying examination form to the department graduate committee.
 - b. by the first day of finals week in Autumn Quarter, submit three dissertation research grant proposals to the faculty adviser for approval. In order to be eligible for fourth year field research funding support, submit approved extramural funding proposals to three funding agencies by the end of the Summer Quarter.
 - c. by the first day of finals week in Autumn Quarter, confirm the dissertation reading committee by submitting the University dissertation reading committee form to the graduate committee.
 - d. by the last day of third week in Winter Quarter, submit the third year department report of qualifying examination status form to the graduate program committee reaffirming committee formulation, and confirming the exam dates, preliminary qualifying bibliographies, and the proposed question set for each examination.
 - e. by the last day of finals week in Winter Quarter, complete the qualifying examinations for area and for topic (two separate examinations to be scheduled one week apart), inclusive of the final bibliographies.
 - f. by the last day of the second week in Spring Quarter, submit a draft of the dissertation proposal to the dissertation reading committee.
 - g. by the last day of the second week in Spring Quarter, confirm a scheduled meeting with the qualifying examination committee/ dissertation reading committee members for the oral component of the qualifying examinations and for approval review of the dissertation proposal.
 - h. meet with the qualifying examination/dissertation reading committee to review the dissertation proposal, inclusive of the oral component of the qualifying examinations, on or by May 15th in Spring Quarter.
 - i. the second of two summers of (pre)dissertation field research funding support provided by way of a fellowship stipend may be taken in either the first or third year Summer Quarters in the Ph.D. program. If not taken in Summer Quarter of the first year, submit the third-year Summer Quarter dissertation bridge to the field funding request via a graduate program petition form on or by May 15th in Spring Quarter.
 - j. by the first day of finals week in Spring Quarter, submit the approved dissertation proposal to the graduate committee.
 - k. before departing for field research, receive approval for the non-medical human subjects protocol from the Institutional Review Board.
 - l. meet with Graduate Program Committee chair to review comments for proposal, all tracks.
6. In the fourth year, complete the following requirements:
- a. by the first day of finals week in the Autumn, Winter and Spring Quarters, submit a quarterly report of dissertation field research via email to the dissertation reading committee.
 - b. to establish eligibility for funding and to confirm Bay Area residency, submit a fourth-year department graduate report of degree progress form to the department graduate committee on or by May 15th in the Spring Quarter.
 - c. submit one or more funding proposals supporting of Summer Quarter in the fourth year.
7. In the fifth year, complete the following requirements:
- a. during the fifth year and after returning from field research, confirm Bay Area residency to be eligible for department fifth year dissertation writing funds. Eligibility for department support is based on seminar attendance as well as on Bay Area residency (the

Bay Area is defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties).

- b. during the fifth year and after returning from field research, complete one or more full time quarterly teaching assistant assignments in the department.
 - c. during Autumn, Winter, Spring Quarters in the fifth year, students attend a minimum of four out of five class meetings of ANTHRO 400 Dissertation Writers Seminar (required of Culture and Society track, only; and, recommended for the Archaeology and the Ecology and Environment tracks). In each quarter and for all tracks, chapter drafts of the dissertation must be handed in to the dissertation reading committee for review.
 - d. submit the fifth year dissertation writers report of degree progress and time to degree completion form by the last day of finals week in the Autumn, Winter and Spring Quarters.
 - e. fifth year students who have not secured funding support from the beginning of the Summer Quarter of the fifth year through the end of Summer Quarter in the sixth year, should submit one or more funding proposals for dissertation writing funding support.
8. In either the fifth year or in the sixth plus year and beyond, complete the following requirements:
- a. submit a penultimate draft of the dissertation by the last day of the first week of the quarter preceding the quarter in which the oral examination (dissertation defense) has been scheduled, and in which the dissertation is to be submitted in partial fulfillment of degree requirements.
 - b. at least four weeks prior to a proposed date for the oral examination, submit the University oral examination schedule form and a final draft of the dissertation, to the department graduate program committee.
 - c. pass the University oral examination, inclusive of an oral presentation held at the beginning of the oral examination period (approximately 30 minutes for the public presentation with a 15 minute public discussion period preceding a closed session with the oral examination committee), prior to the final submission of the dissertation to the University Registrar and the conferral of the doctoral degree in Anthropology.
9. Complete 30 units of ANTHRO subject code courses at the 300 level. The courses dedicated to the Ph.D. minor must be successfully completed with a minimum (GPA) of 3.0 (B). Directed Individual Study units are not approved for the Ph.D. minor in Anthropology.
10. Request a faculty member within the Department of Anthropology who provides written consent to serve as the adviser for the Ph.D. minor and serve on the student's oral examination and dissertation reading committees.
11. With the faculty adviser, determine a coherent plan and submit the department plan of study form for the Ph.D. minor.
12. Pass with a minimum grade of 'B+' three ANTHRO theory courses, and one ANTHRO course in a geographical or theoretical area, for a total of four department Review courses.

Required Courses

Archaeology Track

	Units
ANTHRO 303 Introduction to Archaeological Theory	5
ANTHRO 307 Archaeological Methods	5
ANTHRO 310G Introduction to Graduate Studies	2
ANTHRO 308A Proposal Writing Seminar in Archaeology	5
Total Units	17

Culture and Society Track

	Units
ANTHRO 300 Reading Theory Through Ethnography	5
ANTHRO 301 History of Anthropological Theory, Culture and Society	5
ANTHRO 301A Foundations of Social Theory	5
ANTHRO 306 Anthropological Research Methods	5
ANTHRO 308 Proposal Writing Seminar in Cultural and Social Anthropology	5
ANTHRO 310G Introduction to Graduate Studies	2
ANTHRO 311G Introduction to Culture and Society Graduate Studies in Anthropology	2
Total Units	29

Ecology and Environment Track

	Units
ANTHRO 302 History of Anthropological Theory, Ecology and Environment	5
ANTHRO 304 Data Analysis for Quantitative Research	5
ANTHRO 305 Research Methods in Ecological Anthropology	5
ANTHRO 310G Introduction to Graduate Studies	2
Total Units	17

Recommended Courses

For all tracks, quarterly attendance (during the Autumn, Winter, and Spring quarters) in the departmental colloquium is recommended for all doctoral students and required for all current first-year, second-year, and fifth-year cohort Ph.D. students. Students may enroll in the following course for additional units.

	Units
ANTHRO 444 Anthropology Colloquium	1
ANTHRO 445 Anthropology Brown Bag Series	1

Ph.D. Minor in Anthropology

University requirements for the Ph.D. Minor are described in the Graduate Degrees section of this Bulletin.

To request the Ph.D. Minor in Anthropology, apply to the department graduate program committee at least three quarters before terminal graduate registration status is confirmed with the following materials: the University application for Ph.D. minor form, the department request for Ph.D. minor adviser form, an approved pre-dissertation proposal, confirmation of qualifying status in the Ph.D. (home) department, confirmation of Ph.D. candidacy in the Ph.D. (home) department, proposed dates for the University oral examination and the dissertation defense, and a recommendation for consideration of the Ph.D. minor made by the Ph.D. (Minor) department adviser. Once approved, a HelpSU request to the University Registrar requesting the addition of the Ph.D. minor to the student's academic career will be submitted by the Anthropology student services officer on behalf of the Ph.D. minor applicant.

The requirements for a Ph.D. Minor in Anthropology include the following:

1. Complete 30 units of ANTHRO subject code courses at the 300 level. The courses dedicated to the Ph.D. minor must be successfully completed with a minimum (GPA) of 3.0 (B). Directed Individual Study units are not approved for the Ph.D. minor in Anthropology.
2. Request a faculty member within the Department of Anthropology who provides written consent to serve as the adviser for the Ph.D. minor and serve on the student's oral examination and dissertation reading committees.

3. With the faculty adviser, determine a coherent plan and submit the plan of study form for the Ph.D. minor.
4. Pass with a minimum grade of 'B+' three ANTHRO theory courses, and one ANTHRO course in geographical or theoretical area, for a total of four department Review courses.

For additional information regarding the Ph.D. Minor in Anthropology, consult the department website.

Faculty

Emeriti: (Professors) Clifford R. Barnett, Harumi Befu, George A. Collier, Jane F. Collier, Carol Delaney, Charles O. Frake, James L. Gibbs, Jr., Renato I. Rosaldo

Chair: Sylvia Yanagisako

Professors: Lisa Curran, William H. Durham, James Ferguson, Thomas Blom Hansen, Ian Hodder, Richard G. Klein, Tanya Luhmann, Lynn Meskell, Sylvia J. Yanagisako

Associate Professors: Rebecca Bliege Bird, Paulla Ebron, James A. Fox, Duana Fullwiley (on leave), Miyako Inoue, S. Lochlann Jain, James Holland Jones, Matthew Kohrman, Liisa Malkki, John W. Rick, Barbara Voss (on leave)

Assistant Professors: Angela Garcia, Krish Seetah, Kabir Tambar, Sharika Thiranagama

Associate Professors (Teaching): Michael V. Wilcox

Senior Research Scientist/Lecturers: Douglas W. Bird

Courtesy Professors: H. Samy Alim, Penelope Eckert, Raymond McDermott

Visiting Professors: James Clifford, Jorge Ramos Gonzalez

Visiting Associate Professors: Ewa Domanska

Lecturers: Ayca Alemdaroglu, Sasa Caval, Claudia Engel, Alma Kunanbaeva

Affiliated Faculty: Li Liu, Richard White

Postdoctoral Fellows: Mary-Ashley Hazel, Philip Labo, Nev Jones, Alan Greene

Teaching Affiliates: Stephanie Bautista, Lisa Poggiali, Eleanor Power, Ian Simpson, Anna West

Overseas Studies Courses in Anthropology

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPBER 25	Architecture, Memory, Commemoration	5
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPISTAN 68	Istanbul: Space, Memory, and Protest	5
OSPKYOTO 64	Japanese Popular Culture	4-5

OSPMADRD 25	Politics of "Culture/s" in the Iberian's World: the Multicultural Debate	4
OSPOXFRD 87	The Archaeology of Britain	5
OSPOXFRD 89	Archaeology: Independent Study	5
OSPOXFRD 93	Collecting the World	4

Applied Physics

Courses offered by the Department of Applied Physics are listed under the subject code APPPHYS on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on>).

The Department of Applied Physics offers qualified students with backgrounds in physics or engineering the opportunity to do graduate course work and research in the physics relevant to technical applications and natural phenomena. These areas include accelerator physics, biophysics, condensed matter physics, nanostructured materials, quantum electronics and photonics, quantum optics and quantum information, space science and astrophysics, synchrotron radiation and applications.

Student research is supervised by the faculty members listed above and also by various members of other departments such as Biology, Chemistry, Electrical Engineering, Materials Science and Engineering, Physics, the SLAC National Accelerator Laboratory, and faculty of the Medical School who are engaged in related research fields.

Research activities are carried out in laboratories including the Geballe Laboratory for Advanced Materials, the Edward L. Ginzton Laboratory, the Hansen Experimental Physics Laboratory, the SLAC National Accelerator Laboratory, the Center for Probing the Nanoscale, and the Stanford Institute for Materials and Energy Science.

The number of graduate students admitted to Applied Physics is limited. Applications to the Master of Science and Ph.D. programs should be received by December 16, 2014. M.S. and Ph.D. students normally enter the department only in Autumn Quarter.

Graduate Programs in Applied Physics

The Department of Applied Physics offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Science in Applied and Engineering Physics
- the Master of Science in Applied Physics, either a terminal degree or an en route degree to the Ph.D. for students enrolled in the Applied Physics Department

Admission requirements for graduate work in the Master of Science and Ph.D. programs in Applied Physics include a bachelor's degree in Physics or an equivalent engineering degree. Students entering the program from an engineering curriculum should expect to spend at least an additional quarter of study acquiring the background to meet the requirements for the M.S. and Ph.D. degrees in Applied Physics.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Applied Physics and to prepare students for a professional career

or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Applied Physics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Applied Physics and to interpret and present the results of such research.

Coterminal Master of Science in Applied and Engineering Physics

Stanford undergraduates, regardless of undergraduate major, who are interested in a M.S. degree at the intersection of applied physics and engineering may choose to apply for the coterminal Master of Science program in Applied and Engineering Physics. The program is designed to be completed in a fifth year at Stanford. Students with accelerated undergraduate programs may be able to complete their B.S. and coterminal M.S. in four years.

Application and Admission

Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to B.S. conferral. Applications will be due on the last day of class of the Spring Quarter for Autumn matriculation and at least four weeks before the last day of class in the previous quarter for Winter or Spring matriculation. All application materials must be submitted directly to the Applied Physics department office by the deadlines. To apply for admission to the Applied and Engineering Physics coterminal M.S. program, students must submit the coterminal application which consists of the following:

- Statement of Purpose
- Unofficial Transcript
- Two Letters of Recommendation from members of the Stanford faculty
- Supplemental Form (<http://www.stanford.edu/dept/app-physics/cgi-bin/aep-application-process>)

Program Requirements

Coterminal M.S. students are required to take 45 units of course work during their graduate career. Of these 45 units, the following are required.

Four Breadth Courses (required)

APPPHYS 201	Electrons and Photons	4
APPPHYS 203	Atoms, Fields and Photons	4
APPPHYS 204	Quantum Materials	4
APPPHYS 205	Introduction to Biophysics	4

Three Engineering Depth Courses

9

At least one must be at the 300 level and the other courses must be at the 200 level or above to provide depth in one area. To be approved by the Applied Physics academic adviser.

One Laboratory or Methods Course

3-4

APPPHYS 207	Laboratory Electronics
APPPHYS 208	Laboratory Electronics
APPPHYS 215	Numerical Methods for Physicists and Engineers
APPPHYS 217	Estimation and Control Methods for Applied Physics
APPPHYS 232	Advanced Imaging Lab in Biophysics
APPPHYS 304	Lasers Laboratory

APPPHYS 305	Advanced Nonlinear Optics Laboratory	
EE 234	Photonics Laboratory	
EE 251	High-Frequency Circuit Design Laboratory	
EE 345	Optical Fiber Communication Laboratory	
EE 410	Integrated Circuit Fabrication Laboratory	
ENGR 341	Micro/Nano Systems Design and Fabrication	
ENGR 342	MEMS Laboratory II	
MATSCI 322	Transmission Electron Microscopy Laboratory	
MATSCI 331	Atom-based computational methods for materials	
Seminar ¹		3
Approved Technical Electives ²		6-12
6 units minimum that brings up the total units to 45		
Total Units		45

- ¹ The seminar requirement can be fulfilled by either (i) taking one formal seminar course for credit each term or (ii) attending a minimum of 8 informal or formal research seminars during each of the three terms. Students who attend 8 informal research seminars must submit, with their final M.S. program proposal, a list of the seminars with a paragraph describing the content, signed by their academic adviser.
- ² These include APPPHYS, CS, CME, EE, ME, BIOE, MATSCI, PHYSICS courses (see <http://www.stanford.edu/dept/app-physics/cgi-bin/academic-programs/>) as well as those courses that are formally approved by the Applied Physics Graduate Studies Committee through petition. <http://www.stanford.edu/dept/app-physics/cgi-bin/aep-application-process/>

Of the 45 units required for the coterminal Master of Science program in Applied and Engineering Physics:

- at least 36 units must be letter graded units
- at least 36 units must be at or above the 200 level.
- at least 21 units must be letter graded technical courses at or above the 200 level
- up to 6 units of Directed Studies in Applied Physics (APPPHYS 290) or equivalent independent study course may be counted toward this requirement.
- at least 30 units must be in technical areas. Research, literature, directed studies, and seminar courses may not be included among these 30 units.

Master of Science in Applied Physics

The University's basic requirements for the master's degree are discussed in the "Graduate Degrees (p. 43)" section of this bulletin. The minimum requirements for the degree are 45 units, of which at least 39 units must be graduate-level courses in applied physics, engineering, mathematics, and physics. The required program consists of the following:

	Units
Advanced Mechanics	3
Select one of the following:	
PHYSICS 210	Advanced Mechanics
PHYSICS 211	Continuum Mechanics (approved substitute)
Electrodynamics	3
PHYSICS 220	Classical Electrodynamics
Quantum Mechanics	6
Select two of the following:	
PHYSICS 230	Quantum Mechanics
PHYSICS 231	Quantum Mechanics
EE 222	Applied Quantum Mechanics I (approved substitute)

EE 223	Applied Quantum Mechanics II (approved substitute)
PHYSICS 330	Quantum Field Theory I (approved substitute)
PHYSICS 331	Quantum Field Theory II (approved substitute)
PHYSICS 332	Quantum Field Theory III (approved substitute)

Units

APPPHYS 290	Directed Studies in Applied Physics 1-unit seminar courses
-------------	---

Examples of suitable courses include:

BIO 217	Neuronal Biophysics
EE 222	Applied Quantum Mechanics I
EE 223	Applied Quantum Mechanics II
EE 236C	Lasers
EE 248	Fundamentals of Noise Processes
EE 332	Laser Dynamics
EE 346	Introduction to Nonlinear Optics
PHYSICS 372	Condensed Matter Theory I
PHYSICS 373	Condensed Matter Theory II

1. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
2. Basic graduate courses (letter grade required):
3. 33 units of additional advanced courses in science and/or engineering. May be any combination of APPPHYS 290, any 1-unit course, and regular courses. At least 18 of these 33 units must be taken for a letter grade.
4. A final overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.

There are no department nor University examinations. There is no thesis component. If a student is admitted to the M.S. program only, but later wishes to change to the Ph.D. program, the student must apply to the department's admissions committee.

Doctor of Philosophy in Applied Physics

The University's basic requirements for the Ph.D. including residency, dissertation, and examinations are discussed in the "Graduate Degrees (p. 43)" section of this bulletin. The program leading to a Ph.D. in Applied Physics consists of course work, research, qualifying for Ph.D. candidacy, a research progress report, a University oral examination, and a dissertation as follows:

1. *Course Work:*

Advanced Mechanics**Units**

Select one of the following:		3
PHYSICS 210	Advanced Mechanics	
PHYSICS 211	Continuum Mechanics (approved substitute)	

Statistical Physics**3-4**

Select one of the following:		3-4
APPPHYS 217	Estimation and Control Methods for Applied Physics	
APPPHYS 223	Stochastic and Nonlinear Dynamics	

APPPHYS 285	Physics of Disordered Systems
APPPHYS 315	Methods in Computational Biology
APPPHYS 387	Quantum Optics and Measurements

Electrodynamics 3

PHYSICS 220	Classical Electrodynamics
-------------	---------------------------

Quantum Mechanics 6

Select two of the following:		6
PHYSICS 230	Quantum Mechanics	
PHYSICS 231	Quantum Mechanics	
PHYSICS 330	Quantum Field Theory I (approved substitute)	
PHYSICS 331	Quantum Field Theory II (approved substitute)	
PHYSICS 332	Quantum Field Theory III (approved substitute)	
EE 222	Applied Quantum Mechanics I (approved substitute)	
EE 223	Applied Quantum Mechanics II (approved substitute)	

Laboratory 3-4

Select one of the following:		3-4
APPPHYS 207	Laboratory Electronics	
APPPHYS 208	Laboratory Electronics	
APPPHYS 232	Advanced Imaging Lab in Biophysics	
APPPHYS 304	Lasers Laboratory	
APPPHYS 305	Advanced Nonlinear Optics Laboratory	
BIOE 370	Microfluidic Device Laboratory	
EE 234	Photonics Laboratory	
EE 410	Integrated Circuit Fabrication Laboratory	
MATSCI 171	Nanocharacterization Laboratory	
MATSCI 172	X-Ray Diffraction Laboratory	
MATSCI 173	Mechanical Behavior Laboratory	
PHYSICS 301	Astrophysics Laboratory	

- a. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
- b. *Basic graduate courses:* These requirements may be totally or partly satisfied with equivalent courses taken elsewhere, pending the approval of the graduate study committee. Letter grades required for all courses:
- c. 21 units of additional advanced courses in science and/or engineering. Units from APPPHYS 290, APPPHYS 390, and any 1-unit courses do not count towards this requirement. Examples of suitable courses include:

BIO 217	Neuronal Biophysics	4
EE 222	Applied Quantum Mechanics I	3
EE 223	Applied Quantum Mechanics II	3
EE 236C	Lasers	3

EE 248	Fundamentals of Noise Processes	3
EE 332	Laser Dynamics	3
EE 346	Introduction to Nonlinear Optics	3
PHYSICS 372	Condensed Matter Theory I	3
PHYSICS 373	Condensed Matter Theory II	3

- d. Only 3 units at the 300 or above level may be taken on a satisfactory/no credit basis.
 - e. Additional units of courses as needed to meet the minimum residency requirement of 135. Directed study and research units as well as 1-unit seminar courses can be included.
 - f. A final average overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.
 - g. Students are normally expected to complete the specified course requirements by the end of their third year of graduate study.
2. *Research*: may be conducted in a science/engineering field under the supervision of a member of the Applied Physics faculty or appropriate faculty from other departments.
 3. *Ph.D. Candidacy*: satisfactory progress in academic and research work, together with passing the Ph.D. candidacy qualifying examination, qualifies the student to apply for Ph.D. candidacy, and must be completed before the third year of graduate registration. The examination consists of a seminar on a suitable subject delivered by the student before the faculty academic adviser (or an approved substitute) and two other members of the faculty selected by the department.
 4. *Research Progress Report*: normally before the end of the Winter Quarter of the fourth year of enrollment in graduate study at Stanford, the student arranges to give an oral research progress report of approximately 45 minutes, of which a minimum of 15 minutes should be devoted to questions from the Ph.D. reading committee.
 5. *University Ph.D. Oral Examination*: consists of a public seminar in defense of the dissertation, followed by private questioning of the candidate by the University examining committee.
 6. *Dissertation*: must be approved and signed by the Ph.D. reading committee.

Emeriti: (Professors) Malcolm R. Beasley, Arthur Bienenstock, Alexander L. Fetter, Theodore H. Geballe, Stephen E. Harris, Walter A. Harrison, Peter A. Sturrock, Yoshihisa Yamamoto; (Professors, Research) Calvin F. Quate, Helmut Wiedemann, Herman Winick; (Courtesy) Gordon S. Kino, Douglas D. Osheroff

Chair: Hideo Mabuchi

Professors: Steven M. Block, Philip H. Bucksbaum, Robert L. Byer, Sebastian Doniach, Martin M. Fejer, Daniel S. Fisher, Ian R. Fisher, Tony F. Heinz (effective Winter Quarter), Harold Y. Hwang, Aharon Kapitulnik, Mark A. Kasevich, Young S. Lee, Hideo Mabuchi, Kathryn A. Moler, Vahé Petrosian, Stephen R. Quake, Zhi-Xun Shen, Yuri Suzuki

Associate Professors: David A. Reis, Mark J. Schnitzer

Assistant Professors: Surya Ganguli, Benjamin L. Lev, Amir H. Safavi-Naeini

Professor (Research): Michel J-F. Digonnet

Courtesy Professors: Mark L. Brongersma, Bruce M. Clemens, Shanhui Fan, David Goldhaber-Gordon, James S. Harris, Lambertus Hesselink, David A. B. Miller, W. E. Moerner, Jelena Vuckovic, Shoucheng Zhang

Courtesy Associate Professors: Zhirong Huang, Andrew J. Spakowitz

Courtesy Assistant Professor: William J. Greenleaf

Consulting Professors: Thomas M. Baer, Raymond G. Beausoleil, John D. Fox, Bernardo A. Huberman, Richard M. Martin, Stuart S. P. Parkin, Daniel Rugar

Archaeology

Courses offered by the Archaeology Program are listed under the subject code ARCHLGY on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on>).

Archaeology is the study of the past through its material remains that survive into the present. Archaeology is a discipline that offers direct access to the experiences of a wide range of people in numerous cultures across the globe. Increasingly, archaeology bridges past and present societies through the study of the human heritage and its role in contemporary societies. Stanford's Archaeology Program provides students with an interdisciplinary approach to the material remains of past societies, drawing in equal parts on the humanities, social sciences, and natural sciences.

The Archaeology curriculum draws on faculty from a wide range of University departments and schools. To complete the requirements for the major, students must take courses from the offerings of the program and from the listings of other University departments. The program culminates in a Bachelor of Arts (B.A.) in Archaeology.

Mission of the Undergraduate Program in Archaeology

The mission of the undergraduate program in Archaeology is to provide students with a broad and rigorous introduction to the analysis of the material culture of past societies, drawing on the questions and methods of the humanities, social sciences, and natural sciences. Students in the major learn to relate these analyses to the practice of archaeology in the contemporary world. The program seeks to help each student achieve a high level of understanding through concentrated study of a particular research area. Courses in the major complete a comprehensive curriculum that draws on faculty from a wide range of University departments and programs. Archaeology majors are well prepared for advanced training in professional schools such as education, law, and journalism and, depending upon their choice of upper-division course, graduate programs in the humanities, social sciences, and natural sciences.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. demonstrate an understanding of core knowledge of the history of thought and basic theoretical foundations in archaeology.
2. write clearly and persuasively, communicating ideas about archaeology to multiple audiences and different communities, from the scholarly and to the general public in a variety of formats.
3. learn about the development of archaeology as a discipline and the major trends that have influenced thinking and writing about archaeology today.
4. demonstrate their mastery of the broad historical and theoretical trends in the field through critique of research within archaeology.

Bachelor of Arts in Archaeology

To declare a major in Archaeology, students should apply for the B.A. in Archaeology on Axxess and contact the student services specialist, who provides an application form, answers initial questions, and helps the student choose a faculty adviser. Students should declare by the beginning of their junior year.

All majors must complete 65 units with an overall minimum grade of 'C', which must form a coherent program of study and be approved by the student's faculty adviser and the program director.

Students who plan to pursue graduate work in Archaeology should be aware of the admission requirements of the particular departments to which they intend to apply. These vary greatly. Early planning is advisable to guarantee completion of major and graduate school requirements.

Degree Requirements

The B.A. in Archaeology requires a minimum of 65 units in the major, with an overall minimum grade of 'C', and no more than 10 units may be taken for pass/nopass credit. The major requirements are divided among five components. A course may only be used once to fulfill a component.

1. Core Courses

	Units
20 units must be taken for a letter grade (minimum passing grade of 'B')	
ARCHLGY 1 Introduction to Prehistoric Archeology (Gateway)	5
ARCHLGY 102 Archaeological Methods (Intermediate)	5
ARCHLGY 103 History of Archaeological Thought (Intermediate)	5
ARCHLGY 107A Archaeology as a Profession (Capstone)	5
Total Units	20

ARCHLGY 1 Introduction to Prehistoric Archeology is recommended as a first course. Many upper-level courses in Archaeology require this course as a prerequisite. Students should normally take the capstone course in their final year of course work in the major.

2. Analytical Methods and Computing (5 units)

Quantitative skills and computing ability are indispensable to archaeologists. It is recommended that students take one of the following:

	Units
Select one of the following:	5
ANTHRO 98B Digital Methods in Archaeology (recommended)	
PSYCH 10/ Introduction to Statistical Methods: Precalculus	
STATS 60	
ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists	

3. Archaeological Skills (10 units)

Archaeological skills include archaeological formation processes, botanical analysis, cartography, ceramic analysis, dating methods, faunal analysis, geographic information systems, geology, geophysics, genetics, osteology, remote sensing, soil chemistry, and statistics. With the approval of the instructor and Archaeology director, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).

	Units
ARCHLGY 119 Zooarchaeology: An Introduction to Faunal Remains	5

ARCHLGY 124 Archaeology of Food: production, consumption and ritual	3-5
ARCHLGY 126 Archaeobotany	5
ANTHRO 103A Human Osteoarchaeology	5
ANTHRO 175 Human Skeletal Anatomy	5
EESS 161	4
EESS 164 Fundamentals of Geographic Information Science (GIS)	4
GES 1A Introduction to Geology: The Physical Science of the Earth	5
GES 1B Introduction to Geology	4
GES 1C Introduction to Geology: Dynamic Earth	4
GES 102 Earth Materials: Introduction to Mineralogy	4

4. Theory (at least 10 units)

Topics include archaeological, art-historical, sociocultural, historical, and material culture theory. With the approval of the instructor, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).

	Units
ARCHLGY 151 Ten Things: An Archaeology of Design	3
ANTHRO 90B Theory of Cultural and Social Anthropology	5
ANTHRO 117 Thinking Through Animals	5
ANTHRO 125 Language and the Environment	4-5
ANTHRO 134 Object Lessons	5
ANTHRO 147 Nature, Culture, Heritage	5

5. Electives (20 units)

Select from any of the courses listed below. Courses are arranged around a regional or thematic focus, and therefore, may appear more than once. Students have the option of taking courses around a theme or concentration, and are encouraged to do so by consulting with their faculty adviser(s) to design a course plan. Courses other than those on this list can be used to fulfill this requirement with prior approval of the student's faculty adviser and program director. With the approval of instructor, undergraduates may fulfill part of this requirement from graduate-level courses, typically courses numbered 200 or higher.

• World Archaeology: Mediterranean

	Units
ARCHLGY 118 Engineering the Roman Empire	4-5
ARCHLGY 145 Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	3
CLASSICS 51 Introduction to the Archaeology of Greece	3-5
CLASSICS 52 Introduction to Roman Archaeology	3-5
CLASSICS 169 Archaeology of Britannia	3-4

• World Archaeology: Americas

	Units
ARCHLGY 10 The Archaeology of Home	3-5
ARCHLGY 102B Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 30Q The Big Shift	4
ANTHRO 100C	2-5

• World Archaeology: Asia

	Units
ARCHLGY 111 Emergence of Chinese Civilization from Caves to Palaces	3-4

ARCHLGY 135	Constructing National History in East Asian Archaeology	3-5
-------------	---	-----

• Heritage

ARCHLGY 13	Islamic Routes: Archaeology and Heritage of Muslim Societies	3-5
ARCHLGY 135	Constructing National History in East Asian Archaeology	3-5
ARCHLGY 143	Classical Archaeology Today: Ethical Issues of Excavation, Ownership, and Display	3
ANTHRO 112	Public Archaeology: Market Street Chinatown Archaeology Project	4-5
ANTHRO 112B	Advanced Study in Public Archaeology	2-5
ANTHRO 147	Nature, Culture, Heritage	5
THINK 22	Who Owns the Past? Archaeology, Heritage and Global Conflicts	4

• Urbanism and Cities

ANTHRO 112	Public Archaeology: Market Street Chinatown Archaeology Project	5
ANTHRO 112B	Advanced Study in Public Archaeology	2-5

6. Archaeological Fieldwork

Students must take part in a month-long Stanford Archaeology Center field project directed by a Stanford faculty member, and enroll in any coursework that is required for participation in the field project. Projects are typically offered during summer months and funding may be provided. In summer 2013, field schools were located in: Turkey, Peru, China, Mauritius and Italy.

7. Collateral Language Requirement

All Archaeology majors must demonstrate competence in a foreign language beyond the first-year level. Students can meet this requirement by completing a course beyond the first-year level with a grade of 'B' or better, and are encouraged to choose a language that has relevance to their archaeological region or topic of interest. Students may petition to take an introductory-level course in a second language to fulfill this requirement by demonstrating the connection between the language(s) and their research interest(s).

8. Research and Independent Study

Students may count up to 5 units of research and independent study toward the Archaeology major:

including but not limited to:

ARCHLGY 190	Archaeology Directed Reading/Independent Study	1-5
ARCHLGY 195	Independent Study/Research	1-5
ARCHLGY 199	Honors Independent Study	5

Honors Program

The honors program in Archaeology gives qualified majors the chance to work closely with faculty on an individual research project culminating in an honors thesis. Students may begin honors research from a number of starting points, including topics introduced in the core or upper-division courses, independent interests, research on artifacts in Stanford's collections, or fieldwork experiences.

Interested Archaeology majors of junior standing may apply for admission by submitting an honors application form, including a 4-5 page statement of the project, a transcript, and a letter of recommendation from the faculty

member supervising the honors thesis to the student services specialist, no later than the end of the fourth week of the Spring Quarter. Archaeology majors are eligible to apply for honors candidacy. The thesis is due in early May of the senior year and is read by the candidate's adviser and a second reader appointed by the undergraduate committee.

Overseas Studies Courses in Archaeology

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site or the Bing Overseas Studies (<http://bosp.stanford.edu>) web site. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

Minor in Archaeology

A minor in Archaeology provides an introduction to the study of the material cultures of past societies. It can complement many majors, including but not limited to Anthropology, Applied Physics, Art and Art History, Classics, Earth Systems, Geological and Environmental Sciences, History, and Religious Studies.

Students must complete the declaration process, including the planning form submission and Axxess registration, by the last day of the quarter, two quarters prior to degree conferral; for example, by the last day of Autumn Quarter if Spring graduation is the intended quarter of graduation.

Requirements

To minor in Archaeology, students must complete at least 27 units of relevant course work, including:

1. Core Program (10 units)

ARCHLGY 1	Introduction to Prehistoric Archeology (Gateway Course, Required)	3-5
ARCHLGY 103	History of Archaeological Thought	5
ARCHLGY 107A	Archaeology as a Profession	5

is recommended as a first course, and many of the upper-level courses in Archaeology require this course as a prerequisite. Students have the option to take ARCHLGY 103 History of Archaeological Thought **or** ARCHLGY 107A Archaeology as a Profession to fulfill the rest of the 10 unit core requirement for the minor.

2. Archaeological Skills (2-5 units)

Archaeological skills include dating methods, faunal analysis, botanical analysis, ceramic analysis, geology, geophysics, soil chemistry, remote sensing, osteology, genetics, statistics, cartography, and geographic information systems. The course(s) must be chosen from the list of courses under Archaeological Skills (requirement 3) in the Bachelor's tab of this section.

3. Theory (5 units)

Topics include archaeological, art historical, sociocultural, historical, and material culture theory. The course(s) must be chosen from the list of courses under Theory (requirement 4) in the Bachelor's tab of this section.

4. Electives (10 units)

Select courses from the list of courses under Electives (requirement 5) in the Bachelor's tab of this section. Students have the option of taking

courses around a theme or concentration, and are encouraged to do so by consulting their faculty advisers to design a course plan.

Cognate Courses

Archaeology is an interdisciplinary program. Students should meet with their adviser about degree requirements and the applicability of courses from other University departments to the Archaeology major or minor. Applicable courses are commonly found in Anthropology (ANTHRO) and Classics (CLASSICS), but are not limited to these departments. Please check with your adviser and the program director for course approvals.

Director: Lynn Meskell (Anthropology; on leave, Winter)

Professors: Ian Hodder (Anthropology; on leave, Winter), Mark Lewis (History, Asian Languages), Li Liu (East Asian Languages and Cultures), Gail Mahood (Geological and Environmental Sciences), Mike Moldovan (Geological and Environmental Sciences), Ian Morris (Classics, History), Amos Nur (Geophysics), Michael Shanks (Classics), Peter Vitousek (Biology)

Associate Professors: Giovanna Ceserani (Classics), Jody Maxmin (Art and Art History, Classics), John Rick (Anthropology), Jennifer Trimble (Classics), Barbara Voss (Anthropology) (on leave)

Assistant Professors: Justin Leidwanger (Classics), Krish Seetah (Anthropology)

Assistant Professor (Teaching): Michael V. Wilcox (Anthropology)

Postdoctoral Fellows: Neil Duncan, Alan Greene, Gertjan Plets

Associated Staff: Laura Jones (Campus Archaeologist), Christina Hodge (Collections Manager)

Overseas Studies Courses in Archaeology

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPCPTWN 16	South Africa Sites of Memory	2
OSPCPTWN 17		1
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPAUSTL 40	Australian Studies	3

Art and Art History

Courses offered by the Department of Art & Art History are listed on the Stanford Bulletin's ExploreCourses web site under the subject codes ARTHIST (Art History) (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ARTHIST&filter-catalognumber-ARTHIST=on>), ARTSTUDI (Art Practice) (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=ARTSTUDI&filter-catalognumber-ARTSTUDI=on>), FILMSTUD (Film Studies) (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=FILMSTUD&filter-catalognumber-FILMSTUD=on>), and FILMPROD (Film Practice) (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=FILMPROD&filter-catalognumber-FILMPROD=on>).

view=catalog&catalog=&page=0&q=FILMSTUD&filter-catalognumber-FILMSTUD=on), and FILMPROD (Film Practice) (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=FILMPROD&filter-catalognumber-FILMPROD=on>).

Mission of the Department of Art and Art History

The department offers courses of study in:

1. Art History
2. Art Practice (studio)
3. Design
4. Film and Media Studies
5. Film Production

leading to the following degrees: B.A. degree in Art History; B.A. degree in Art Practice; B.A. degree in Film and Media Studies; M.F.A. degree in Art Practice; M.F.A. degree in Design; M.F.A. degree in Documentary Film and Video; Ph.D. degree in Art History.

The undergraduate program is designed to help students think critically about the visual arts and visual culture. Courses focus on the meaning of images and media, and their historical development, roles in society, and relationships to disciplines such as literature, music, and philosophy. Work performed in the classroom, studio, and screening room is designed to develop a student's powers of perception, capacity for visual analysis, and knowledge of technical processes.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program.

Students in historical studies are expected to demonstrate:

1. knowledge and awareness of art and/or film terminology and concepts;
2. ability to develop effective and nuanced lines of interpretation;
3. improved critical thinking skills using primary and secondary source materials;
4. improvement in analytical writing skills and close reading skills;
5. ability to form and validate their own and others' opinions through knowledge of artistic movements and sociohistorical events.

Students in creative art are expected to demonstrate:

1. enhanced awareness of the role of art in intellectual and cultural life;
2. problem solving skills to organize, analyze and interpret visual information;
3. mastery of techniques and materials of a discipline with awareness of historical and current practices;
4. selection of materials, processes, form, and content to achieve poetic and expressive relationships to artistic media;
5. ability to apply critical analysis to the student's own work and the work of others;
6. effective techniques for the preparation and presentation of work consistent with professional practices in the field.

Learning Outcomes (Graduate)

The purpose of the master's programs is to further develop knowledge and skills in Art and Art History and to prepare students for a professional career or doctoral studies. This is achieved through completion of

courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates in Art History (including Film and Media Studies) who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in their respective disciplines. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to knowledge in their fields and to interpret and present the results of their research.

Iris and B. Gerald Cantor Center For Visual Arts

The Cantor Arts Center at Stanford University is a major resource for the department. The Cantor presents art from around the world in 24 galleries: from Africa to the Americas to Asia, and from ancient to contemporary periods. The Cantor offers changing selections from its 30,000-object collection; the Rodin Sculpture Garden; special exhibitions; and a variety of educational programs. Through collaborations with the teaching program, student internships, and student activities, the Cantor provides a rich resource for Stanford students.

Art History

Undergraduate Program in Art History

The discipline of Art History teaches students how to analyze and interpret works of fine art (paintings, drawings, prints, and sculpture), photography and moving image media (film, video, television, and digital art), material culture (ritual objects, fashion, advertisements, and the decorative, applied, and industrial arts), and the built environment (architecture, urbanism, and design). The department takes it as axiomatic that the skills of visual literacy and analysis are not innate but may be acquired through training and practice. Objects of study are drawn from the cultures of Africa, Asia, the Americas, from the Middle East; from Western, Central, and Eastern Europe; and from antiquity to the present.

Art History is a historical discipline that seeks to reintegrate the work of art into the original context of its making and reception, foregrounding its significant status as both historical document and act of social communication. At the same time, Art History seeks to understand the ways in which the work of art transcends the historical moment of its production, taking on different meanings in later historical periods, including the present. As part of their visual training, students of Art History become proficient in cultural analysis and historical interpretation. Art History thus envisions itself as uniquely well positioned to train students from a variety of disciplines in the light of the dramatic visual turn that has gripped the humanities and the sciences over the course of the last decade, with more and more disciplines becoming vitally interested in visual forms and modes of communication.

Graduate Program in Art History

The doctoral program in Art History at Stanford is relatively small, and affords the graduate student the opportunity to work intensively with individual members of the faculty. The Doctor of Philosophy degree is taken in a particular field, supported by a background in the general history of art. Doctoral candidates also undertake collateral studies in other graduate departments or in one of the University's interdisciplinary programs.

Art Practice (Studio) Undergraduate Program in Art Practice (Studio)

The Art Practice program offers production-based courses founded on the concepts, skills and cultural viewpoints that characterize contemporary art practice. The goal is to educate students, both majors and minors, in the craft, culture, and theory of current fine art practices to prepare them for successful careers as artists. The art practice program is designed to develop in-depth skills in more than one area of the visual arts. It emphasizes the expressive potential of an integration of media, often via a cross-disciplinary, interactive path. Through collaboration and connections with scientists, engineers, and humanities scholars, the program addresses a breadth of topical and artistic concerns central to a vital undergraduate education.

Graduate Program in Painting, Sculpture, New Genres, and Photography

The program provides a demanding course of study designed to challenge advanced students. Participants are chosen for the program on the basis of work that indicates high artistic individuality, achievement, and promise. Candidates should embody the intellectual curiosity and broad interests appropriate to, and best served by, work and study within the University context.

The Graduate Program in Design

Working jointly, the departments of Art & Art History and Mechanical Engineering offer graduate degrees in product and visual design. A large physical environment, the Design Yard, provides professional studio space and well-equipped shops. Flexible programs may include graduate courses in fields such as engineering design, biotechnology, marketing, microcomputers, or the studio and art history curriculum. The program centers on a master's project and may also include work in advanced art and design. The program is structured to balance independent concentration with the use of the University and community, and interaction with the students and faculty of the graduate Design program. Cross-disciplinary interaction is encouraged by a four-person graduate Design faculty.

Film and Media Studies Undergraduate Program in Film and Media Studies

The Bachelor of Arts in Film and Media Studies provides an introduction to film aesthetics, national cinematic traditions, modes of production in narrative, documentary, and experimental films, the incorporation of moving image media by contemporary artists, and the proliferation of new forms of digital media. The program is designed to develop the critical vocabulary and intellectual framework for understanding the role of cinema and related media within broad cultural and historical concepts.

Graduate Program in Documentary Film and Video

The Master of Fine Arts program in documentary production provides a historical, theoretical, and critical framework within which students master the conceptual and practical skills for producing nonfiction film and video. The M.F.A. is a terminal degree program with a two-year, full-time curriculum representing a synthesis of film praxis and film and media history, theory, and criticism. Courses provide an intellectual and theoretical framework within which students' creative work is developed. Students proceed through the program as a cohort. The program does not permit leaves of absence.

The M.F.A. degree is designed to prepare graduate students for professional careers in film, video, and digital media. Graduates are qualified to teach at the university level. The philosophy of the program is predicated on a paradigm of independent media that values artistic expression, social awareness, and an articulated perspective. Students become conversant with the documentary tradition as well as with alternative media and new directions in documentary. Training in documentary production is combined with the development of research skills in film criticism and analysis. Electives in film studies, art history, and studio art provide an intellectual and theoretical framework within which creative work is realized. The parallel focus on production and studies prepares students for an academic position that may require teaching both film studies and production.

Art and Art History Department Course Catalog Numbering System

The first digit of the ARTHIST and FILMSTUD course number indicates its general level of sophistication.

Digit	Area
001-099	Introductory
100-199	Undergraduate level lectures
200-299	Undergraduate seminars/individual work
300-399	Graduate level lectures
400-599	Graduate seminars/individual work

Art History

Digit	Area
001-099	Introductory
100-104	Ancient
105-109	Medieval
110-119	Renaissance
120-139	Early Modern
140-159	Modern
160-179	Contemporary
180-189	Asia
190-195	Africa and the Americas
200-299	Seminars and Colloquia
410-499	Historical Studies
500-599	Critical Studies
600-699	Graduate Research

Art Practice (Studio)

Digit	Area
001-099	Courses for Non-Major (Lower Level)
100-199	Lower Level Undergraduate Courses
200-299	Upper Level Undergraduate Courses
300-399	Graduate Seminars

Film and Media Studies

Digit	Area
004-103	Introductory
111-118	Genre

Bachelor of Arts in Art History Suggested Preparation for the Major

Students considering a major in art history should take either ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval or ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present, during their freshman or sophomore year.

Fields of Study or Degree Options

Students who wish to major in Art History must meet with the undergraduate coordinator. At that time the student selects a faculty adviser and declares the major on AxBSS. Concentrations within the major are approved by the student's major adviser and are not declared on AxBSS. Sample concentrations include:

1. Topical concentrations: art and gender; art, politics, race, and ethnicity; art, science, and technology; urban studies
2. Genre concentrations: architecture; painting; sculpture; film studies; prints and media; decorative arts and material culture
3. Historical and national concentrations: ancient and medieval; Renaissance and early modern; modern and contemporary; America; Africa; Asia; the Americas
4. Interdisciplinary concentrations: art and literature; art and history; art and religion; art and economics; art and medicine (with adviser consent a maximum of two concentration courses may be taken outside the department).

Degree Requirements

All undergraduate majors complete a minimum of 65 units (15 courses that carry 4 or 5 units each). Students are required to complete four core courses, two seminar courses for the major (ARTHIST 294 Writing and the Visual and ARTHIST 296 Junior Seminar: Methods & Historiography of Art History), five Art History foundation courses, three concentration courses, one of which must be a seminar, Art Practice course (4 units). Courses must be taken for a letter grade. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

Required Courses

1. Core Courses (20 units)

	Units
Select four of the following:	20
ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	
ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	
ARTHIST 2 Asian Arts and Cultures (meets WAY A-II)	
ARTHIST 3 Introduction to World Architecture (meets WAY A-II)	
FILMSTUD 4 Introduction to Film Study (meets WAY A-II)	
Total Units	20

2. Foundation Courses (20 units)

In order that students acquire a broad overview of different historical periods and different geographic regions, majors must take five Art History lecture courses, one from each of the following five categories:

	Units
Take one course from each of the following categories:	
Ancient and Medieval	
Select one of the following:	4
ARTHIST 100N The Artist in Ancient Greek Society (meets WAY A-II)	
ARTHIST 101 Archaic Greek Art	
ARTHIST 102 Empire and Aftermath: Greek Art from the Parthenon to Scopas (meets WAY A-II)	
ARTHIST 105B Medieval Journeys: Introduction through the Art and Architecture (meets WAY ED)	
ARTHIST 109 The Book in the Medieval World	
Renaissance and Early Modern	
Select one of the following:	4
ARTHIST 111 Introduction to Italian Renaissance, 1420-1580	
ARTHIST 118N Pagan Mythology and the Making of Modern Europe	
ARTHIST 120 Living in a Material World: Seventeenth-century Dutch and Flemish Painting	
Modern, Contemporary, and the U.S	
Select one of the following:	4
ARTHIST 144 On Looking: Art, Obscenity, and the Ethics of Spectatorship (meets WAY ER)	

ARTHIST 147	MODERNISM AND MODERNITY (meets WAY A-II)
ARTHIST 152	The American West (meets WAY A-II and SI)
ARTHIST 155C	Abstract Expressionism: Painting/Modern/America
ARTHIST 154	The American Civil War: A Visual History (meets WAY A-II)
ARTHIST 156N	Art and the Power of Place: Site, Location, Environment
ARTHIST 160	Intro to Contemporary Art
ARTHIST 164A	Technology and the Visual Imagination
ARTHIST 166	Representing Fashion

Asia, Africa, and the Americas

Select one of the following:	4
ARTHIST 184	Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting
ARTHIST 186	Theme and Style in Japanese Art
ARTHIST 188B	From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art
ARTHIST 189C	Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries
ARTHIST 192B	Art of the African Diaspora

Film & Media Studies

Select one of the following:	4
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)
FILMSTUD 100B	History of World Cinema II, 1930-1959 (meets WAY A-II)
FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)
FILMSTUD 101	Fundamentals of Cinematic Analysis (meets WAY A-II)
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)
FILMSTUD 116	International Documentary
FILMSTUD 164A	Technology and the Visual Imagination

3. Seminar Courses for Majors (10 units)

Writing in the Major (5 units): This course is designed for Art History majors in their junior year, equipping them with the scholarly tools necessary for writing about art in a variety of contexts as they progress through the major. This course fulfills the requirements of Writing in the Major (WIM).

Capstone Junior Seminar (5 units): This course is designed to introduce majors to methods and theories underlying the practice of Art History. The seminar is offered annually, typically during Autumn Quarter.

Units

Take each of the following:	
Writing in the Major	
ARTHIST 294	Writing and the Visual (Required: WIM course) 5

Capstone Junior Seminar

ARTHIST 296 Junior Seminar: Methods & Historiography of Art History 5

4. Seminar Requirement (5 units)

The student needs one additional seminar course within his or her area of concentration.

Select one of the following:

		Units
ARTHIST 203	Greek Art In and Out of Context	4-5
ARTHIST 205	Cairo and Istanbul: Urban Space, Memory, Protest	5
ARTHIST 207C	Phenomenology and Aesthetics in Medieval Art	5
ARTHIST 212	Renaissance Florence, 1440-1540	5
ARTHIST 217B	Architectural Theory from Antiquity to Le Corbusier	5
ARTHIST 225	Cezanne	5
ARTHIST 243C	The Art of Travel	5
ARTHIST 246B	Pop Art	5
ARTHIST 269A	Art and Technology	5
ARTHIST 278	Anatomy of Exhibition	5
ARTHIST 287A	The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime	5

5. Area of Concentration (8-10 units)

The department encourages students to pursue their interests by designing an area of concentration tailored to their own intellectual concerns. This area of concentration provides the student with an in-depth understanding of a coherent topic in Art History and consists of three Art History courses: one must be a seminar, and two of the three courses must be in a single field or concentration constructed by the student in consultation with his or her faculty adviser. Students must submit an area of concentration form, signed by their faculty adviser, during Winter Quarter of the junior year.

6. Art Practice Course (4 units)

Majors are required to complete at least one introductory Art Practice course.

Honors Program in Art History

The purpose of the honors program is to extend and deepen work done in Art History classes. The honors thesis topic typically emerges out of prior course work; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

Admission to the Program

The minimum requirement for admission to the Honors Program is an overall GPA of 3.5, and at least 3.5 in Art History courses. Students must complete at least five Art History courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter; with the adviser's approval, two of these courses may be taken at an overseas campus or Stanford in Washington. Students interested in pursuing Honors should consult a potential thesis adviser on the Art History faculty during the Autumn Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year, and it is recommended that they be in residence throughout the senior year. Students considering honors should contact the Director of the Honors Program in their junior year as soon as they begin to think about writing an honors thesis. Those

wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis adviser (who need not be the student's academic adviser) by February 1 of their junior year.

Submission of the Thesis Proposal Package

Candidates for the honors program must submit a five-page (double-spaced) thesis proposal, including bibliography and illustrations, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about art historical issues. The deadline for submitting the complete package to the department's undergraduate coordinator is the third week of Spring Quarter of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants (<https://undergrad.stanford.edu/opportunities/research>) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of ARTHIST 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Art History. Students are required to register for 2-5 units each quarter during their senior year, for a total of 10 units.

Submission and Approval of the Honors Thesis

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete, final manuscript is submitted to the thesis adviser and the second reader by the beginning of the seventh week of the student's final quarter at Stanford. The thesis adviser assigns a letter grade; both the adviser and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

Bachelor of Arts in Art Practice (Studio) Degree Requirements

All undergraduate majors complete a minimum of 65 units including six lower level courses, six upper level courses, and four art history courses, including the WIM course ARTHIST 294 Writing and the Visual. All courses must be taken for a letter grade. University units earned by placement tests or advanced placement work in secondary school are not counted within the 65 units. The studio requirements are divided into lower level (introductory, 100 level) and upper level (advanced, 200 level) course work. At the lower level, students focus on a range of subject matter from historical motifs (figure, still life, landscape) to contemporary ideas in art. Upper level courses are designed to stretch the student's understanding of materials, techniques, site, and social relevance. Experimental and challenging in nature, these courses cross area boundaries. Independent study supervised by a member of the permanent faculty is also available to the advanced student.

Students are encouraged to move through the requirements for the major in the sequence outlined. Students are exposed to a range of practices early in their development in order to have a good basis of comparison if they choose to focus on a particular medium. This sequence of courses also

broadens the students' skills and enables them to combine materials and methods. In all courses, students are expected to pass mid-term and final reviews and critiques of their work.

To declare the major, students must meet with the undergraduate coordinator. At that time the student selects a faculty adviser. Art Practice majors are required to meet with both their adviser and the undergraduate coordinator during the first two weeks of each quarter to have course work approved and make certain they are meeting degree requirements. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

Required Courses

1. Six lower level courses (24 units)

	Units
Select six of the following:	24
ARTSTUDI 130 Interactive Art: Making it with Arduino	
ARTSTUDI 131 Sound Art I	
ARTSTUDI 140 Drawing I	
ARTSTUDI 141 Plein Air Painting Now	
ARTSTUDI 145 Painting I	
ARTSTUDI 147 Artist's Book	
ARTSTUDI 148 Monotype	
ARTSTUDI 148B Introduction to Printmaking Techniques	
ARTSTUDI 151 Sculpture I	
ARTSTUDI 153N Ecology of Materials	
ARTSTUDI 160 Design I : Fundamental Visual Language	
ARTSTUDI 170 Introduction to Photography	
ARTSTUDI 173E Cell Phone Photography	
ARTSTUDI 174B Creativity in the Age of Facebook: Making Art for and from Networks	
ARTSTUDI 177 Video Art I	
ARTSTUDI 178 Art and Electronics	
ARTSTUDI 179 Digital Art I	
FILMPROD 114 Introduction to Film and Video Production	

2. Six upper level courses (24 units):

- ARTSTUDI 230 Interdisciplinary Art Survey is a required course which focuses on direct experiences of multidisciplinary art and art practices. ARTSTUDI 249 Advanced Undergraduate Seminar (8 units)
- Students select four optional courses from the following list.

	Units
Select four of the following:	12-16
ARTSTUDI 236 Future Media, Media Archaeologies	
ARTSTUDI 245 Painting II	
ARTSTUDI 249 Advanced Undergraduate Seminar	
ARTSTUDI 252 Sculpture II	
ARTSTUDI 254 Kinetic Sculpture	
ARTSTUDI 260 Design II	
ARTSTUDI 262 The Chair	
ARTSTUDI 270 Advanced Photography Seminar	
ARTSTUDI 271 The View Camera: Its Uses and Techniques	
ARTSTUDI 274 Alternative Processes	
ARTSTUDI 275 Introduction to Digital Photography and Visual Images	
ARTSTUDI 276 The Photographic Book	
ARTSTUDI 277 Project class: Digital and Analogue Projects in Photography	
ARTSTUDI 278 Intermediate Black and White Photography	
ARTSTUDI 284 Art and Biology	

3. Four Art History courses (17-20 units)

	Units
ARTHIST 294 Writing and the Visual (Required: WIM course)	5
Three other art history courses, one must be from the modern art series.	12-15
One Film & Media Studies course may satisfy an Art History elective.	

Transfer Credit Evaluation

Upon declaring an Art Practice major, a student transferring from another school must have his or her work evaluated by the Director of Undergraduate Studies (DUS) in Art Practice. A maximum of 13 transfer units are applied toward the 65 total units required for the major. A student wishing to have more than 13 units applied toward the major must submit a petition to the Director of Undergraduate Studies in Art Practice and then have his or her work reviewed by a studio committee.

Overseas Study or Study Abroad

A minimum of 52 of the 65 units required for the Art Practice major and a minimum of 32 of the 36 units required for the Art Practice minor must be taken at the Stanford campus. A student must meet with his or her adviser and with the undergraduate coordinator before planning an overseas campus program.

Honors Program in Art Practice

The purpose of the honors program is to extend and deepen work done in Art Practice classes. The honors thesis exhibition topic typically emerges out of prior course work. Ordinarily, an honors thesis exhibition is not an exploration of an area that the student has never studied before. Completion of the program is noted on the diploma and on the transcript.

Admission to the Program

The honors program is open to art practice majors only. The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Art Practice courses. Students must complete at least five Art Practice courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter. With adviser approval, two of these courses may be taken at an overseas campus.

Students interested in pursuing honors should consult a potential thesis adviser on the Art Practice faculty during the Autumn Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year. Students considering honors should contact the Director of the Honors Program in their junior year. Those wishing to do so must announce their intention to write an honors thesis exhibition proposal by submitting an intent form signed by their thesis adviser, who need not be the student's academic adviser, by March 1 of their junior year.

Submission of the Thesis Proposal Package

The thesis proposal package must include:

1. A two-page Honors Thesis Exhibition Project Proposal description of the artwork/project, including an outline of research and goals signed by the thesis adviser.
2. Artwork Samples: 10 JPEGs of recent work (scaled to 8"x 10", no larger than 1MB each) or 5 minutes of video/audio clips. If video/audio work only is submitted, it may consist of up to 15 minutes of clips.
3. Artwork Sample Descriptions: Printed sheet listing each artwork and descriptions of submitted artwork (title, date, medium, dimensions, length if applicable, explanation if needed)
4. Students may include preparatory sketches (artwork samples of proposed work) on the Slideroom application.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and artwork completion timetable, and enlist one other faculty member, ideally but not necessarily on the Art Practice faculty, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants (<https://undergrad.stanford.edu/opportunities/research/get-funded/apply-uar-student-grants>) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of ARTSTUDI 297 Honors Thesis Exhibition, 5 units of which may count towards the student's concentration in Art Practice. Students are required to register for 2-5 units each quarter during their senior year, for a total of 10 units.

Submission and Approval of the Honors Thesis

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete art exhibition is installed in the first five weeks of Spring Quarter of their senior year with

Liz Celeste (lizceleste@stanford.edu), Museum Curator for the Department of Art and Art History. The student arranges a meeting with the advisers while the exhibition is on display. The thesis adviser assigns a letter grade; both the main adviser and the second adviser must approve the honors thesis in order to qualify the student to graduate with honors.

Bachelor of Arts in Film and Media Studies

Suggested Preparation for the Major

Students considering a major in film and media studies should take FILMSTUD 4 Introduction to Film Study, and are encouraged to take either ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval or ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present, during their freshman or sophomore year. These courses anchor the major through exposure to film language, genre, and visual and narrative structures. Majors are required to take one course in the fundamentals of film and video production.

Suggested or Recommended Courses (all of which meet major requirements)

		Units
ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	4
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	5
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
FILMSTUD 101	Fundamentals of Cinematic Analysis (meets WAY A-II)	4

Fields of Study or Degree Option

Advanced undergraduate courses are offered in five fields of study. These fields are declared on Axxess; they appear on the transcript but they do not appear on the diploma:

- Film History
- Film and Culture
- Film, Media, and Technology
- Writing, Criticism, and Practice
- Aesthetics and Performance

Working with a faculty adviser, students choose five courses in their field from course offerings in Art and Art History and one course from another department in the University.

Degree Requirements

All undergraduate majors complete a minimum of 64 units (16 courses of 3-5 units each), or 15 courses plus an honors thesis. FILMSTUD 101 Fundamentals of Cinematic Analysis (WIM course) is required for all majors. All courses for the major must be taken for a letter grade. To declare the major, students must meet with the undergraduate coordinator. At that time the student selects a faculty adviser. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

Required Courses

		Units
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
FILMSTUD 6	Introduction to Digital Media	5
FILMSTUD 100A	History of World Cinema I, 1895-1929	4
FILMSTUD 100B	History of World Cinema II, 1930-1959 (meets WAY A-II)	4
FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)	4
FILMSTUD 101	Fundamentals of Cinematic Analysis (WIM Course, meets WAY A-II)	4
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
FILMPROD 114	Introduction to Film and Video Production (meets WAY CE)	5
Concentration ¹		
FILMSTUD 290	Movies and Methods: Films of Stanley Kubrick ²	5
Choose one of the following:		
ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval (meets WAY A-II and ED)	5
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present (meets WAY A-II)	5

¹ Concentration - Five courses, four of which must be in a single film and media studies concentration developed by the student in consultation with an adviser. Concentration areas are: film history; film and culture; aesthetics and performance; film, media, and technology; and writing, criticism, and practice. The remaining course must be related, situating the student's concentration in a broader context.

² Capstone Experience - FILMSTUD 290 Movies and Methods: Films of Stanley Kubrick, offered once a year. The Senior Seminar represents the culminating intellectual experience for Film Studies majors choosing not to write an honors thesis. Honors thesis writers may also take the senior seminar. Seniors who may not be in residence in the quarter that the senior seminar is offered may enroll in their junior year. Movies and Methods provides majors with an opportunity to synthesize their previous work in Film Studies and work in an advanced setting with a faculty member.

Electives (20 units)

		Units
Film Studies Concentration Electives		
FILMSTUD 110N	Darkness in Light: The Filmic Imagination of Horror (meets WAY A-II)	3
FILMSTUD 116	International Documentary	4
FILMSTUD 164A	Technology and the Visual Imagination (substitution course for FILMSTUD 6 requirement)	4
FILMSTUD 245B	History and Politics in Russian and Eastern European Cinema	5
FILMSTUD 250B	Bollywood and Beyond: An Introduction to Indian Film	3-5
FILMPROD 101	Screenwriting (must be approved by the faculty adviser)	5
FILMPROD 104	Visual Writing (must be approved by the faculty adviser, meets WAY CE)	4
FILMPROD 105	Script Analysis (must be approved by the faculty adviser)	4

FILMPROD 110 Advanced Screenwriting (must be approved by the faculty adviser) 5

Honors Program in Film and Media Studies

The purpose of the honors program is to extend and deepen work done in Film and Media Studies classes. The honors thesis topic typically emerges out of prior coursework; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

Admission to the Program

The minimum requirement for admission to the honor program is an overall GPA of 3.5, and at least 3.5 in Film and Media Studies courses. Students must complete at least five Film and Media Studies courses at Stanford by the end of their junior year, and four must be completed by the end of winter quarter; with the adviser's approval, two of these courses may be taken at an overseas campus. Students interested in pursuing honors should consult a potential thesis adviser on the Film and Media Studies faculty during the Fall Quarter of junior year. Thesis advisers must be in residence during Autumn Quarter of the student's senior year, and it is highly recommended that they be in residence throughout the senior year. Students considering honors should contact the Director of the Honors Program in their junior year as soon as they begin to think about writing an honors thesis. Those wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis adviser (who need not be the student's academic adviser) by February 1 of their junior year.

Submission of the Thesis Proposal Package

Candidates for the Honors Program must submit a five-page (double-spaced) thesis proposal, including bibliography, a tentative schedule for research and writing, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about film. The deadline for submitting the complete package to the department's undergraduate coordinator is the third week of Spring Quarter of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the Director of the Honors Program and their thesis adviser to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of FILMSTUD 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Film and Media Studies. Students are required to register for two to five units each quarter during their senior year, for a total of ten units.

Submission and Approval of the Honors Thesis

With the guidance of the Director of the Honors Program, students and thesis advisers should plan their work so that a complete, final manuscript is submitted to the thesis adviser and the second reader by the beginning of the

seventh week of the student's final quarter at Stanford. The thesis adviser assigns a letter grade; both the adviser and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

Required Course

FILMSTUD 297 Honors Thesis Writing

Minor in Art History

A student declaring a minor in Art History must complete 25 units of course work in one of the following four tracks: Open, Modern, Asian, or Architecture. Upon declaring the minor, students are assigned a faculty adviser with whom they plan their course of study and electives. A proposed course of study must be approved by the adviser and placed in the student's departmental file. Only one class may be taken for credit outside of the Stanford campus; this includes courses taken in the Overseas Studies Program. Minors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

Degree Requirements

A student with a minor in Art History must complete six Art History courses for a total of 25 units.

Open Track

choose one of the following:

ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval

ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present

Plus five Art History lecture courses or seminars in any field.

Modern Track

choose one of the following:

ARTHIST 1A Introduction to the Visual Arts: Prehistoric through Medieval

ARTHIST 1B Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present

Plus five Art History lecture courses or seminars in any aspect of 19th- to 20th-century art.

Asian Track

ARTHIST 2 Asian Arts and Cultures

Plus five Art History lecture courses or seminars in Asian Art (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).

Architecture Track

ARTHIST 3 Introduction to World Architecture

Plus five Art History lecture courses or seminars in Architectural History (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).

Minor in Art Practice (Studio)

A student declaring a minor in Art Practice must complete 36 units of Art Practice and Art History course work. All minors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the internet. Minors are required to meet with both their adviser and the undergraduate coordinator during the first

two weeks of each quarter to have course work approved and to make certain they are meeting degree requirements.

Degree Requirements

A student with a minor in Art Practice must complete nine courses for a total of 36 units.

1. Three lower level courses (12 units) selected from:
- 2.

Select three of the following:

ARTSTUDI 130 Interactive Art: Making it with Arduino (meets WAY CE)

ARTSTUDI 131 Sound Art I (meets WAY CE)

ARTSTUDI 140 Drawing I (meets WAY CE)

ARTSTUDI 141 Plein Air Painting Now

ARTSTUDI 145 Painting I (meets WAY CE)

ARTSTUDI 147 Artist's Book (meets WAY CE)

ARTSTUDI 148B Introduction to Printmaking Techniques (meets WAY CE)

ARTSTUDI 149C Etching

ARTSTUDI 151 Sculpture I (meets WAY CE)

ARTSTUDI 153N Ecology of Materials (meets WAY CE)

ARTSTUDI 160 Design I: Fundamental Visual Language (meets WAY CE)

ARTSTUDI 170 Introduction to Photography (meets WAY CE)

ARTSTUDI 171 Intro to Digital Photo

ARTSTUDI 173E Cell Phone Photography (meets WAY CE)

ARTSTUDI 174B Creativity in the Age of Facebook: Making Art for and from Networks (meets WAY CE)

ARTSTUDI 177 Video Art I (meets WAY CE)

ARTSTUDI 178 Art and Electronics (meets WAY CE)

ARTSTUDI 179 Digital Art I (meets WAY CE)

FILMPROD 114 Introduction to Film and Video Production (meets WAY CE)

3. Three upper level courses (11 units):

a. ARTSTUDI 230 Interdisciplinary Art Survey **Units** 4

4. Three Art History Courses (13 units):

5.

Units

Select two of the following:

8-10

ARTHIST On Looking: Art, Obscenity, and the Ethics of
144 Spectatorship (meets WAY ER)

ARTHIST MODERNISM AND MODERNITY (meets
147 WAY A-II)

ARTHIST The American West (meets WAY A-II and SI)
152

ARTHIST The American Civil War: A Visual History
154 (meets WAY A-II)

ARTHIST Abstract Expressionism: Painting/Modern/
155C America

ARTHIST Art and the Power of Place: Site, Location,
156N Environment

ARTHIST Intro to Contemporary Art
160

ARTHIST Technology and the Visual Imagination
164A

ARTHIST Representing Fashion
166

One other art history course

ARTHIST The Artist in Ancient Greek Society (meets
100N WAY A-II)

ARTHIST Archaic Greek Art
101

ARTHIST Empire and Aftermath: Greek Art from the
102 Parthenon to Scopas (meets WAY A-II)

ARTHIST Medieval Journeys: Introduction through the Art
105B and Architecture (meets WAY ED)

ARTHIST The Book in the Medieval World
109

ARTHIST Introduction to Italian Renaissance, 1420-1580
111

ARTHIST Pagan Mythology and the Making of Modern
118N Europe

ARTHIST Living in a Material World: Seventeenth-century
120 Dutch and Flemish Painting

ARTHIST Aristocrats, Warriors, Sex Workers, and
184 Barbarians: Lived Life in Early Modern Japanese
Painting

ARTHIST Theme and Style in Japanese Art
186

ARTHIST From Shanghai Modern to Global Contemporary:
188B Frontiers of Modern Chinese Art

ARTHIST Global Currents: Early Modern Art Enterprises,
189C Economies, and Imaginaries

ARTHIST Art of the African Diaspora
192B

ARTHIST Greek Art In and Out of Context
203

ARTHIST Cairo and Istanbul: Urban Space, Memory,
205 Protest

ARTHIST Phenomenology and Aesthetics in Medieval Art
207C

ARTHIST Renaissance Florence, 1440-1540
212

ARTHIST Architectural Theory from Antiquity to Le
217B Corbusier

ARTHIST Cezanne
225

ARTHIST The Art of Travel
243C

ARTHIST Pop Art
246B

ARTHIST Art and Technology
269A

ARTHIST Anatomy of Exhibition
278

ARTHIST The Japanese Tea Ceremony: The History,
287A Aesthetics, and Politics Behind a National
Pastime

Courses may not be offered every year and are subject to change.

Minor in Film and Media Studies

A minor in Film Studies requires four core courses and three elective courses for a total of seven courses. Courses must focus on film and use the method of film study towards completion of the minor; courses that use film to illustrate a cultural topic are not eligible. Film Production and Studio Art courses may not be used towards the requirements.

Upon declaring the minor, students are assigned an adviser with whom they plan their course of study and electives. A proposed course of study must be approved by the adviser and placed in the student's departmental file. Only one class may be taken for credit outside the Stanford campus, including Stanford Overseas Studies programs. Minors are required to attend an orientation session presented by the professional staff of the Art Library, which introduces the many tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

Degree Requirements

The minor in Film Studies requires seven courses for a minimum of 29 units.

Required Courses for the Minor

		Units
FILMSTUD 4	Introduction to Film Study (meets WAY A-II)	5
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
Select one of the following:		4
FILMSTUD 100B	History of World Cinema II, 1930-1959 (meets WAY A-II)	
FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)	
One course in a national cinema or an additional course in film history		4-5

Elective Courses for the Minor

Three elective courses, which may include only one film production course. An elective can be chosen from courses in other departments only if approved by the Film Studies coordinator and core faculty for their stress on methods of film analysis. These may include courses in national cinemas, film genres, experimental and documentary film, or film theory.

Elective Courses	Units
FILMSTUD 110N Darkness in Light: The Filmic Imagination of Horror (meets WAY A-II)	12-15
FILMSTUD 114 Introduction to Comics	
FILMSTUD 116 International Documentary	
FILMSTUD 164A Technology and the Visual Imagination	
FILMSTUD 245B History and Politics in Russian and Eastern European Cinema	
FILMSTUD 250B Bollywood and Beyond: An Introduction to Indian Film	
FILMPROD 101 Screenwriting	
FILMPROD 104 Visual Writing (meets WAY CE)	
FILMPROD 105 Script Analysis	
FILMPROD 110 Advanced Screenwriting	
FILMPROD 114 Introduction to Film and Video Production (meets WAY CE)	

Master of Arts in Art History

University requirements for the M.A. are described in the "Graduate Degrees (p. 43)" section of this bulletin.

Admission

The department offers M.A. and Ph.D. degrees, although the M.A. is only granted as a step toward fulfilling requirements for the Ph.D. The department does not admit students who wish to work only toward the M.A. degree. Please see the Ph.D. section for admissions information.

Degree Requirements

1. Units

Completing a total of at least 45 units of graduate work at Stanford in the history of art in courses at the 200 level and above, including a seminar in art historiography/visual theory.

2. Languages

Reading knowledge of at least one foreign language, preferably German, French or Italian. Students in Chinese and Japanese art are ordinarily expected to demonstrate reading competence in modern and classical Chinese or Japanese, depending on the student's area of focus. Final determination of which foreign languages will fulfill the requirement is made in consultation with the student's primary adviser.

3. Papers

Submission of one paper from among those written during the year that demonstrates depth of research and capacity to build an argument. The paper should be perfected under the supervision of a member of the department faculty.

4. Area Coverage

Demonstration to the faculty, by course work and/or examination, that the student has adequate knowledge of the major areas of the history of art represented in the department curriculum.

Master of Fine Arts in Art Practice (Studio)

University requirements for the M.F.A. are described in the "Graduate Degrees (p. 43)" section of this bulletin.

Admission

The applicant must have a B.A., B.F.A., or B.S. from an accredited school. It is expected that the applicant will have a strong background in art practice, either an undergraduate degree or at least three years of independent studio practice. Students accepted to the program are admitted for the beginning of the following Autumn Quarter. No applicants for mid-year entrance are considered.

Portfolio Specifications—See the department's Graduate Admission (<https://art.stanford.edu/academics/graduate-programs/masters-program/how-apply>) web site for portfolio requirements.

Fields of Study or Degree Options

Fields of study for the M.F.A. degree are offered in Painting, Sculpture, New Genres, and Photography. These fields of study are not declared on ACESS; they are not printed on the transcript or the diploma.

Degree Requirements

1. Residency

Completing a minimum of two years (six quarters) of graduate work in residence at Stanford.

2. Units

The student must complete 48 units of study. Students must discuss their programs of study with their academic adviser and the department's student services administrator to ensure that an appropriate program of study is chosen.

3. Seminar Requirement

Six quarters (36 units) of , which includes two weekly seminars (the Object Seminar and the Concept Seminar) and Studio Practice, which is an individual tutorial with a selected member of the faculty.

Units

First Year Seminar Requirements

ARTSTUDI 361	MFA First Year Seminar: Context	2
ARTSTUDI 342A	MFA: Object Seminar (2 units per quarter-Autumn and Winter)	4
ARTSTUDI 342B	MFA: Concept Seminar (2 units per quarter-Autumn and Winter)	4
ARTSTUDI 342C	M.F.A Seminar	2
ARTSTUDI 342	MFA Project: Tutorial (1 unit per quarter)	3
Second-Year Seminar Requirements		
ARTSTUDI 342A	MFA: Object Seminar (4 units per quarter-Autumn and Winter)	8
ARTSTUDI 342B	MFA: Concept Seminar (4 units per quarter-Autumn and Winter)	8
ARTSTUDI 342C	M.F.A Seminar	2
ARTSTUDI 342	MFA Project: Tutorial (1 unit per quarter)	3

4. Elective Requirement

Three courses of academic electives (12 units) are required in the first year. These courses can be chosen from a large variety of disciplines in consultation with the Director of Graduate Studies.

5. Faculty Reviews

The student is expected to pass four faculty reviews. The purpose of these reviews is to evaluate development and to assess the progress of the student.

- At the end of the first quarter; any student judged to be making inadequate progress is placed on probation and requires an additional review at the end of the second quarter
- At the end of the third quarter, at which time recommendation to proceed to the second year is determined.
- At the start of the fifth quarter. If the review is not satisfactory the student is placed on probation and an additional review is scheduled at the end of the 5th quarter.
- At the time of the M.F.A. exhibition.

6. Thesis

The thesis consists of two portions: an exhibition at the end of the final quarter, and a written paper addressing the development of their work over the two-year period at Stanford, to be completed during the fifth quarter. Both the written portion and participation in the M.F.A. exhibition at the end of the year are required.

7. Graduate Student Teaching

Regardless of their source of funding, students are required to assist with the department's teaching program for a minimum of eight hours per week over the period of six quarters; the particulars of this assignment are at the department's convenience.

The studio faculty reserves the right to make use of graduate paintings, sculptures, and photographs in exhibitions serving the interests of the graduate program.

Graduate students must remain in residence at Stanford for the duration of the program.

Master of Fine Arts in Design

University requirements for the M.F.A. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Admission

- The applicant must have a B.A., B.F.A., or B.S. from an accredited school. It is expected that the applicant will have a strong background in studio art, either an undergraduate degree or at least three years of independent studio practice.
- Students accepted to the program are admitted for the beginning of the following Autumn Quarter. No applicants for mid-year entrance are considered.
- Portfolio Specifications—See the department's Graduate Admission (<https://art.stanford.edu/academics/graduate-programs/mfa-design/mfa-design-admission>) web site for portfolio requirements.

Fields of Study or Degree Options

Fields of study for the M.F.A. degree are offered in Design.

Degree Requirements

Residency

- The student must complete a minimum of two years (six quarters) of graduate work in residence at Stanford.

2. Units

The student must complete a minimum of 57 units of course work chosen in consultation with the Director of Graduate Studies in Design. Typically, students working for the M.F.A. degree are encouraged to take full advantage of both sides of the Joint Program in Design, as well as courses that tap the broader resources of the University.

3. Required Courses

Required Courses		Units
ARTSTUDI 350A	Art & Design I: History and Theory	3
ARTSTUDI 350B	Art & Design II: Personal Practice	3
ARTSTUDI 361	MFA First Year Seminar: Context (ARTSTUDI 361 must be taken for 3 units, not 1-3 as listed in Explore Courses)	3
ME 203	Design and Manufacturing	4
ME 277	Graduate Design Research Techniques	3-4
ME 312	Advanced Product Design: Formgiving	3
ME 313	Human Values and Innovation in Design	3
Total Units		22-23

4. Thesis Requirements (18 units)

		Units
ME 316A	Product Design Master's Project	2-6
ME 316B	Product Design Master's Project	2-4
ME 316C	Product Design Master's Project	2-4
ARTSTUDI 360A	Design Masters Project I	4
ARTSTUDI 360B	Design Masters Project II	4

*students must take ME316 A-C for 3-4 credits, not 2-6 as listed in explore courses

Total Units (minimum 18 units required)

17-20

5. Elective Course Distributions

Students are required to take six elective courses, which meet the following distributions and approvals:

- All electives must be approved by the student's adviser prior to enrollment and are expected to form a coherent trajectory with a focus on Design.
- All elective courses must be taken for a letter grade unless a letter grade is not offered.
- At least two electives must be ARTSTUDI courses (200 level or higher) and are taken in addition to the required ARTSTUDI courses.
- The remaining four electives may be chosen from any the schools at the University (200 level or higher).
- ARTSTUDI 260 Design II is a recommended elective, and may be designated as a required course by your adviser on a case by case basis. ARTSTUDI 260 is required if your portfolio and prior experience do not illustrate significantly proficient conceptual and aesthetic problem solving. This requirement is determined during your second quarter in consultation with your adviser. Whether taken voluntarily or as a requirement ARTSTUDI 260 counts towards the two course Art Studio elective distribution requirement.

6. Other Requirements:

- a. Design MFA candidates must participate in the faculty curated Design Show held during the second year of their studies.
- b. Students are expected to pass two faculty reviews. The purpose of these reviews is to evaluate and assess student participation and progress. These reviews are held in the spring quarter of the first year, and in the winter quarter of the second year. Anyone judged to be making inadequate progress will be placed on probation and require an additional review at the end of the next quarter, or any time during that quarter the faculty deems necessary. Failure to pass the probationary review will result in dismissal from the program.
- c. All students are expected to earn a grad of 'B' or better in each course and are required to maintain a GPA of 3.0 in all courses required for the degree. Failure to do so may result in probation or dismissal from the program.

Master of Fine Arts in Documentary Film and Video

University requirements for the M.F.A. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Admission

The program requires residency for two consecutive years. The admissions committee seeks applicants who have some work experience beyond their undergraduate years and can articulate why they want to learn documentary film and video production. The committee looks for evidence of the likelihood of success in a rigorous academic program that emphasizes creative work. The conceptual and technical skills required for documentary work are sufficiently different from fictional narrative to make the Stanford program inappropriate for students interested in narrative filmmaking. The program does not allow for deferred admission or a mid-year enrollment.

Portfolio

The department requires a film or video work for which the applicant has had creative control. The sample work must be well labeled and accompanied by a brief synopsis, running time of the clips, the circumstances of production, and the applicant's role. Total running time for the work sample should not exceed 15 minutes and may consist of more than one project. Work on which the applicant had only a production assistant role is not appropriate for submission. Student work, however, is appropriate for consideration. Applicants who have had only minimal film or video production experience should submit an example of their best creative work in any medium.

Portfolio Specifications—See the department's Graduate Admission (<https://art.stanford.edu/academics/graduate-programs/mfa-documentary-film-and-video/mfa-documentary-film-and-video-admissions>) web site for portfolio requirements.

Fields of Study or Degree Options

Fields of study for the M.F.A. degree are offered in Documentary Film.

Degree Requirements

Residency

Completing two years (six quarters) of graduate work in residence at Stanford.

Units

A minimum of 80 units is required for the M.F.A. degree. In the production core, students are required to conceptualize and visualize their ideas in a series of writing and producing courses that focus on documentary story structure. These courses are taken in tandem with project-based production courses that provide training in the technical and conceptual aspects of cinematography, sound recording, and editing. Discussion of form and content is a signature component of the writing and production courses. The production core is complemented by a series of required film studies courses in documentary plus elective courses in the history, aesthetics, ideology, and theory of all genres of moving image media. All courses must be taken for a letter grade.

M.F.A. Thesis Project

In the second year of the program, each student produces a 15-20 minute documentary that constitutes the thesis project. In FILMPROD 405 Producing Practicum, students choose a topic, research and develop their project, and write a proposal for submission. A project may not begin production until the final proposal has been approved. Most of the production and post-production occurs (in Winter and Spring quarters) in:

		Units
1.	FILMPROD 406A Documentary M.F.A. Thesis Seminar I	4
	FILMPROD 406B Documentary M.F.A. Thesis Seminar II	4

2. Required Courses

- a. Core Production courses (32 units)
Core courses must be taken in sequence.

		Units
	FILMPROD 400 Film/Video Writing and Directing	4
	FILMPROD 401 Nonfiction Film Production	4
	FILMPROD 402 Digital Video	4

FILMPROD 403	Advanced Documentary Directing	4
FILMPROD 404	Advanced Video Production	4
FILMPROD 405	Producing Practicum	4
FILMPROD 406A	Documentary M.F.A. Thesis Seminar I	4
FILMPROD 406B	Documentary M.F.A. Thesis Seminar II	4

b. Core Film Studies courses (25 units)

		Units
FILMSTUD 302	Theories of the Moving Image	4
FILMSTUD 315	Documentary Issues and Traditions	4
FILMSTUD 316	International Documentary	4
FILMSTUD 410A	Documentary Perspectives I	4
FILMSTUD 410B	Documentary Perspectives II	4

c. Electives

To be chosen in consultation with the student's adviser.

d.

	Units
Art History—one course	4
Studio Art and/or Communications—two courses	8
Film Studies—three courses	12
Choice Elective—one course	4

Doctor of Philosophy in Art History

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 43)" section of this bulletin. An expanded explanation of department requirements is given in the Art History Graduate Student Handbook.

Admission

In addition to University requirements, the department requires a research paper of approximately 15-20 pages demonstrating the student's capacity to pursue independent investigation of an art historical problem as part of the application. All applicants must have been awarded a B.A., B.F.A., or B.S. from an accredited university.

Degree Requirements

To be eligible for the doctoral degree, the student must complete a minimum of three years of full-time graduate work in Art History, at least two years of which must be in residence at Stanford. Doctoral students must complete a minimum of 135 units. Of these 135, the student must complete at least 100 units of graduate course work at the 200 level or above, including all required courses, with a minimum of 62 units in Art History lecture courses and seminars.

1. Collateral Studies

The student is required to take at least three courses in supporting fields of study (such as anthropology, classics, history, literature, or philosophy), determined in consultation with the department advisers.

These courses are intended to strengthen the student's interdisciplinary study of art history.

2. Distribution Requirements

There are seven areas of distribution: 1) Pre-Modern (Ancient & Medieval), 2) Early Modern (Renaissance/Baroque), 3) 18th Century & 19th Century, 4) Modern/Contemporary, 5) Film, 6) Non-Western: Asia, Africa & Oceania, 7) Architectural History. Students must take at least one course in five different areas. The five courses must be taken outside of the student's area of concentration. Students are encouraged to fulfill the distribution requirement in graduate seminars. If students have entered the Stanford program with an M.A., they may transfer courses taken at the graduate level to fulfill up to two areas of the distribution requirement.

3. Language Requirement

Students in Western Art must demonstrate reading knowledge of two foreign languages. Students in Asian Art are required to demonstrate competence in one Asian language (equivalent to three years of study) and at least one year of study in a second (which may be a classical version of Chinese or Japanese). One of the language requirements should be satisfied by the end of the first year while the second should be fulfilled by the end of the second year. Students entering with a M.A. should already have satisfied one language requirement prior to admission. Foreign language requirements for the Ph.D. are fulfilled by taking the reading examination given each quarter by the various language departments.

4. Graduate Student Teaching

As a required part of their training, graduate students in Art History, regardless of their source of funding, must participate in the department's teaching program.

- Students are required to take ARTHIST 405A: Graduate Pedagogy.
- Students are required to serve as a teaching assistant for a minimum of four quarters. Further opportunities for teaching may be available.
- At least one, one-quarter assignment in a course from the following list:

		Units
ARTHIST 1A	Introduction to the Visual Arts: Prehistoric through Medieval	5
ARTHIST 1B	Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present	5
ARTHIST 2	Asian Arts and Cultures	5
ARTHIST 3	Introduction to World Architecture	5
FILMSTUD 4	Introduction to Film Study	5

5. Admission to Candidacy

A graduate student's progress is formally reviewed at the end of Spring Quarter of the second year. The applicant for candidacy must assemble a candidacy file showing that he/she has completed the requirements governing the M.A. program in the History of Art (see above), and an additional 18-24 units by the end of Winter Quarter of the second year. The graduate student does not become a formal candidate for the Ph.D. degree until he/she has fully satisfied these requirements and has been accepted as a candidate by the department faculty.

6. Area Core Examination (ACE)

All graduate students conceptualize an area core and bibliography in consultation with their primary adviser and two other Stanford faculty members, one of whom is drawn from a field other than Art History, or, if in Art History, has expertise outside of the student's main area of interdisciplinary concentration. Students are required to pass an area

core examination, in either written or oral form, during (or before) Winter Quarter of the third year of study. To prepare for the exam, students may enroll in the 5-unit reading course:

ARTHIST 620 Area Core Examination Preparation

7. Dissertation Colloquium

The dissertation colloquium provides an opportunity for the PhD student to share an aspect of her/his dissertation project with the departmental community at large. Colloquium talks should be presented during the early stages of researching and writing, allowing students to incorporate useful feedback from professors and colleagues into their completed dissertation. The colloquium consists of a 30-minute presentation followed by 30 minutes devoted to questions and answers. The presentation should give some attention to the broader issues of the dissertation topic along with a substantial treatment of one part of the project. At least two members of the student's Reading Committee must attend.

8. Dissertation and Oral Defense Requirements

- a. *Reading Committee:* After passing the Area Core Examination (ACE), each student is responsible for the formation of a dissertation reading committee consisting of a principal adviser, who chairs the reading committee, and three readers. Normally, at least two of the three readers are drawn from the department and one may come from outside the department.
- b. *Dissertation Proposal:* By the beginning of Autumn Quarter in the fourth year, students should have identified a dissertation subject and written a proposal in consultation with their principal adviser. To prepare the proposal, students may take:
 - i one 5-unit independent study course:
 - ii ARTHIST 640 Dissertation Proposal Preparation
 - iii and apply for a funded Summer Quarter to research and write the proposal. The proposal is submitted for approval by the Art History faculty at the beginning of the fourth year for comments. In the event that a proposal is not approved, the faculty establishes conditions for its resubmission and reconsideration at a later date.
- c. *Dissertation:* The final draft of the dissertation must be in all the readers' hands at least four weeks before the date of the oral defense. The dissertation must be completed within five years from the date of the student's admission to candidacy for the Ph.D. degree. A candidate taking more than five years must apply for an extension of candidacy.
- d. *Oral Defense Examinations:* The student arranges an oral examination with the four members of the reading committee and a chair of the oral defense chosen from outside the department. The oral examination consists mainly of a defense of the dissertation but may range, at the committee's discretion, over a wider field. The student is expected to discuss research methods and findings at some length and to answer all questions and criticisms put by members of the examining committee. At the end of the defense, the committee votes to pass or fail the student on the defense. The committee may make recommendations for changes in the dissertation manuscript before it is submitted to the University as the final requirement for the granting of the Ph.D. degree in the History of Art. After these changes have been incorporated, the manuscript is given a final review and approval by the student's principal adviser.

Ph.D. Minor in Art History

Units For a minor in Art History, a candidate is required to complete 24 units of graduate-level Art History courses (300 level or above).
5

Emeriti: (Professors) Keith Boyle, Kristina Branch, Wanda M. Corn, David Hannah, Joel Leivick, Suzanne Lewis, Dwight C. Miller, Kristine Samuelson, Michael Sullivan, Paul V. Turner, Bryan Wolf

Chair: Nancy J. Troy

Area Director for Art History: Nancy J. Troy

Area Director for Film and Media Studies: Pavle Levi

Area Director for Art Practice: Gail Wight

Director of Undergraduate Studies in Art History: Jody Maxmin

Director of Undergraduate Studies in Art Practice: Terry Berlier

Director of Undergraduate Studies in Film and Media Studies: Scott Bukatman

Director of Graduate Studies in Art History: Jean Ma

Director of Graduate Studies in Art Practice: Paul DeMarinis

Director of Graduate Studies in Documentary Film: Jamie Meltzer

Academic Director for Stanford Graduate Design Program: Camille Utterback

Director of Honors Program: Adam Tobin

Writing Specialist: Gabrielle Ann Moyer (Lecturer, Program in Writing and Rhetoric)

Professors: Scott Bukatman (Film Studies), Enrique Chagoya (Painting/Drawing/Printmaking), Paul DeMarinis (Electronic Media), Jan Krawitz (Documentary Film), Pamela M. Lee (Contemporary Art), Michael Marrinan (18th- and 19th-century European Art), Richard Meyer (American Art), Alexander Nemerov (American Art), Nancy J. Troy (Modern Art), Richard Vinograd (Chinese Art), Xiaoze Xie (Painting/Drawing)

Associate Professors: Terry Berlier (Sculpture), Pavle Levi (Film Studies), Jean Ma (Film Studies), Jody Maxmin (Ancient Art), Jamie Meltzer (Documentary Film), Bissera Pentcheva (Medieval Art), Gail Wight (Electronic Media)

Assistant Professors: Fabio Barry (Architectural History), Morten Steen Hansen (Renaissance Art), Camille Utterback (Design)

Senior Lecturer: Adam Tobin (Screenwriting)

Lecturers: Elizabeth L. Bennett (Art History), Robert Dawson (Photography), John Edmark (Design), Lukas Felzmann (Photography), Elizabeth Kessler (Art History), Beatrice Kitzinger (Art History).

Affiliated Professor: John H. Merryman (Law, emeritus)

Overseas Studies Courses in Art History

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPBER 17	Split Images: A Century of Cinema	3-4
OSPFLOR 34	The Virgin Mother, Goddess of Beauty, Grand Duchess, and the Lady: Women in Florentine Art	4
OSPFLOR 48	Sharing Beauty in Florence: Collectors, Collections and the Shaping of the Western Museum Tradition	4
OSPFLOR 54	High Renaissance and Mannerism: the Great Italian Masters of the 15th and 16th Centuries	5
OSPFLOR 58	Space as History: Social Vision and Urban Change	4
OSPFLOR 111Y	From Giotto to Michelangelo: The Birth and Flowering of Renaissance Art in Florence	4
OSPFLOR 115Y	Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization	4
OSPMADRD 45	Women in Art: Case Study in the Madrid Museums	4
OSPOXFRD 221Y	Art and Society in Britain	4-5
OSPPARIS 54	The Artist's World: The Workshop, Patronage and Public in 19th and 20th Century France	4
OSPPARIS 60	Representations of Women in Christian Art: Boldness and Virtue	4
OSPPARIS 72	The Ceilings of Paris	4
OSPPARIS 92	Building Paris: Its History, Architecture, and Urban Design	4

Overseas Studies Courses in Art Practice

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPFLOR 41	The Florentine Sketchbook: A Visual Arts Practicum	3-5
OSPFLOR 55	Academy of Fine Arts: Studio Art	1-5
OSPFLOR 71	A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence	4

Astronomy

Astronomy courses are offered primarily through the Physics department, with subject code PHYSICS (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=PHYSICS&filter-catalognumber-PHYSICS=on>) on the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=PHYSICS&filter-catalognumber-PHYSICS=on>) website.

Although Stanford University does not have a degree program in astronomy or astrophysics, teaching and research in various branches of these disciplines are ongoing activities in the departments of Applied Physics, Electrical Engineering, and Physics.

For the convenience of students interested in astronomy, astrophysics, and cosmology, a course program for undergraduate and graduate study is listed in the "Astronomy Cognate Courses (p. 343)" section of this bulletin. The list includes introductory courses for the student who wishes to be informed about the fields of astronomy without the need for prerequisites beyond high school algebra and physics. Courses in astronomy numbered below 100 are designed to serve this group of students. Astronomy courses numbered 100-199 serve the student interested in an initial scientific study of astronomy. The courses numbered 200 and above are for graduate students and advanced undergraduates, subject to prior approval by the course instructor.

Undergraduate Programs in Astronomy

The University does not offer a separate undergraduate major in Astronomy. Students who intend to pursue graduate study in astronomy or space science are encouraged to major in physics, following the advanced sequence if possible, or in electrical engineering if the student has a strongly developed interest in radioscience. The course descriptions for these basic studies are listed under the appropriate department sections of this bulletin. Students desiring guidance in developing an astronomy-oriented course of study should contact the chair of the Astronomy Program Committee. The following courses are suitable for undergraduates and are recommended to students considering advanced study in astronomy or astrophysics:

		Units
PHYSICS 100	Introduction to Observational and Laboratory Astronomy	4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Extragalactic Astrophysics and Cosmology	3
GES 222	Planetary Systems: Dynamics and Origins	3-4

Students planning study in astronomy beyond the B.S. are urged to take:

PHYSICS 260	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 262	Introduction to Gravitation	3

The above-mentioned courses are required for physics majors who choose the curriculum with a concentration in astrophysics (see the "Physics (p. 577)" section of this bulletin).

Stanford Student Observatory

The student observatory, located in the hills to the west of the campus, is equipped with a 24-inch and other small reflecting telescopes. It is used for instruction of the observation-oriented courses, PHYSICS 50 Astronomy Laboratory and Observational Astronomy and PHYSICS 100 Introduction to Observational and Laboratory Astronomy.

The Department of Physics offers a minor in Physics with a concentration in Astronomy.

Minor in Physics with Concentration in Astronomy

Students wishing to pursue advanced work in astrophysical sciences should major in Physics (p. 579) and concentrate in astrophysics. However, students outside of Physics with a general interest in astronomy may organize their studies by completing one of the following Physics minor concentration programs.

Students who take the 20, 40, or 60 series at Stanford in support of their major may count those units towards the minor.

An undergraduate Physics minor with a concentration in Astronomy requires the following courses:

Non-Technical

For students whose majors do not require the PHYSICS 40 or 60 series:

		Units
PHYSICS 21	Mechanics and Heat	3
PHYSICS 23	Electricity and Optics	3
PHYSICS 25 & PHYSICS 26	Modern Physics and Modern Physics Laboratory	4
PHYSICS 50 or PHYSICS 100	Astronomy Laboratory and Observational Astronomy Introduction to Observational and Laboratory Astronomy	3-4
Select two of the following:		6
PHYSICS 15	The Nature of the Universe	
PHYSICS 16	Cosmic Horizons	
PHYSICS 17	Black Holes	

Total Units **19-20**

Technical

For students whose majors require the PHYSICS 40 or 60 series:

Select one of the following Series:
Series A

PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45 & PHYSICS 46	Light and Heat and Light and Heat Laboratory	
PHYSICS 70	Foundations of Modern Physics	

Series B

PHYSICS 61	Mechanics and Special Relativity	
PHYSICS 63	Electricity, Magnetism, and Waves	
PHYSICS 65	Quantum and Thermal Physics	
PHYSICS 67	Introduction to Laboratory Physics	

And take the following three courses:

PHYSICS 100	Introduction to Observational and Laboratory Astronomy	4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3-4
PHYSICS 161	Introduction to Extragalactic Astrophysics and Cosmology	3

Total Units **24-28**

Students are also encouraged to take the electricity and magnetism/optics lab of the appropriate PHYSICS series, PHYSICS 24, PHYSICS 44 or PHYSICS 64 for 1 additional unit.

Graduate Programs in Astronomy

Graduate programs in astronomy and astrophysics and related topics are carried out primarily in the Department of Physics but also the departments of Applied Physics and Electrical Engineering. Students should consult the course listings, degree requirements, and research programs of these departments for more detailed information.

Graduate research opportunities are available in many areas of theoretical and observational astronomy, including research projects using the Hobby Eberly telescope, a 10-meter-class telescope located at McDonald Observatory in Texas. Other observational and experimental opportunities are in ground-based observations of CMB and space-based gamma-ray observations with Fermi and in the future, X-ray observations with NuSTAR.

For further information on graduate research opportunities, see the "Center for Space Science and Astrophysics (p. 712)" section of this bulletin and the Kavli Institute of Particle Astrophysics and Cosmology (<http://kipac.stanford.edu>).

Students planning to conduct research in astronomy and astrophysics are required to take:

Select one of the following:		3
PHYSICS 361	Advanced Topics in Radiative Processes and Stellar Astrophysics	
PHYSICS 362	Advanced Extragalactic Astrophysics and Cosmology	

Students lacking a background in astrophysics, gravitation, and plasma physics should take:

PHYSICS 260	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 262	Introduction to Gravitation	3
PHYSICS 312	Basic Plasma Physics (Not offered 2014-15)	3

Students with special interests in gravitation should take:

PHYSICS 364	Advanced Gravitation (Not offered 2014-15)	3
-------------	--	---

Students interested in research programs in space physics involving spacecraft studies of the planets, their satellites, and their near-space environments should see the "Center for Space Science and Astrophysics (p. 712)" section of this bulletin.

Emeriti: (Professors) Von R. Eshleman, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

Committee in Charge: Vahé Petrosian (Director), Roger W. Romani, Sarah Church

Professors: Roger Blandford (Physics, SLAC), Blas Cabrera (Physics), Sarah Church (Physics), Steven Kahn (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Bruce Macintosh (Physics), Peter Michelson (Physics, SLAC), Vahé Petrosian (Physics, Applied Physics), Roger W. Romani (Physics)

Associate Professors: Steve Allen (Physics, SLAC), Tom Abel (Physics, SLAC), Risa Wechsler (Physics, SLAC)

Professor (Research): Philip H. Scherrer (Physics)

Astronomy Cognate Courses Elementary Lectures

The following courses provide a descriptive knowledge of astronomical objects and astrophysics. PHYSICS 15, PHYSICS 16, and PHYSICS 17 are for students not majoring in the sciences and are taught in different quarters by different instructors, and may be taken individually or in any order.

		Units
PHYSICS 15	The Nature of the Universe	3
PHYSICS 16	Cosmic Horizons	3
PHYSICS 17	Black Holes	3

Observatory

The following courses allow students to use the on-campus Stanford Student Observatory, and are intended to familiarize students with observational methods and analysis of astronomical data. PHYSICS 50 is for general students, while PHYSICS 100 involves more advanced observations and is intended for students with a college level background in physics.

		Units
PHYSICS 50	Astronomy Laboratory and Observational Astronomy	3
PHYSICS 100	Introduction to Observational and Laboratory Astronomy	4

Advanced Undergraduate

The following courses are for students with a more advanced knowledge of basic physics and mathematics, and form the core courses for a concentration in astrophysics for Physics majors.

		Units
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Extragalactic Astrophysics and Cosmology	3

Graduate

		Units
GES 222	Planetary Systems: Dynamics and Origins	3-4

PHYSICS 260	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 261	Introduction to Extragalactic Astrophysics and Cosmology	3
PHYSICS 262	Introduction to Gravitation	3
PHYSICS 301	Astrophysics Laboratory (Not offered 2014-15)	3
PHYSICS 312	Basic Plasma Physics (Not offered 2014-15)	3
PHYSICS 361	Advanced Topics in Radiative Processes and Stellar Astrophysics (Not offered 2014-15)	3
PHYSICS 362	Advanced Extragalactic Astrophysics and Cosmology (Not offered 2014-15)	3

Athletics, Physical Education, and Recreation

Courses offered through the Department of Athletics, Physical Education, and Recreation are listed under the subject code ATHLETIC (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=ATHLETIC&filter-departmentcode-ATHLETIC=on&filter-coursestatus-Active=on>), OUTDOOR (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=OUTDOOR&filter-departmentcode-OUTDOOR=on&filter-coursestatus-Active=on>), PE (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=PE&filter-departmentcode-PE=on&filter-coursestatus-Active=on>), and WELLNESS (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=WELLNESS&filter-departmentcode-WELLNESS=on&filter-coursestatus-Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site. Most courses are activity classes and carry 1 unit of credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other University activity classes) may be applied toward undergraduate graduation requirements. See the "Credit (p. 32)" tab of the "Undergraduate Degrees (p. 23)" section of this bulletin for complete information. Course fees, as applicable, are posted to the student's University account.

Department of Athletics, Physical Education, & Recreation Mission

From its founding in 1891, Stanford University's leaders have believed that physical activity is valuable for its own sake and that vigorous exercise is complementary to the educational purposes of the University. Within this context for human development, it is the mission of Stanford's Department of Athletics, Physical Education, and Recreation to offer a wide range of high quality programs which will encourage and facilitate all participants to realize opportunities for championship athletic participation, physical fitness, health, and well being.

The mission of Stanford Recreation is to provide a balanced and holistic approach to the growth and wellness of our students, faculty, and staff by delivering best-in-class co-curricular programs and resources.

The department's classes and programs aim to promote understanding of the value and role of physical activity as an important dimension of the human condition, to develop performance skills in sport, to develop the habit of participation, and to provide leadership opportunities in aquatics,

sports, and other physical activities. To this end, the program encompasses a diversity of learning and participating opportunities from informal recreation through organized intramural competition, basic instructional classes, and theoretical study to, and including, intercollegiate athletic competition.

There are no degree programs currently offered in Athletics, Physical Education, and Recreation.

Facilities

Athletic facilities are located throughout campus. They include, but are not limited to Arrillaga Center for Sport and Recreation (Squash, Fencing, fitness & physical education facility for students, faculty, & staff), Arrillaga Family Sports Center (Home to DAPER), Arrillaga Outdoor Education & Recreation Center (Outdoor Education, Avery Recreation Pool, fitness & Physical Education facility for students, faculty & staff), Avery Aquatic Center (Swimming & Diving, Water Polo, Synchronized Swimming), Bill & Joyd Smith Family Stadium (Softball), Burnham Pavillion & Ford Center (Gymnastics, Volleyball), Cobb Track and Angell Field (Track & Field), Klein Field at Sunken Diamond (Baseball), Laird Q. Cagan Stadium at Maloney Field (Soccer, Lacrosse), Maples Pavillion (Basketball, Volleyball), Red Barn (Equestrian), Siebel Varsity Golf Training Complex (Golf), Stanford Campus Recreation Association (Stanford's community center for faculty, senior staff and their families), Stanford Golf Course (Golf, Cross Country), Stanford Rowing & Sailing Center (Rowing, Sailing, Lightweight Rowing), Stanford Stadium (Football), Steuber Rugby Stadium & Doyle Family Clubhouse (Rugby), Taube Family Tennis Center (Tennis), West Campus Tennis Courts, Varsity Field Hockey Turf (Field Hockey), Sand Hill Intramural Fields, Roble Field, Tresidder Fitness Center, Manzanita Basketball Court and Field.

Lockers

Lockers are available for rent to faculty/staff and students at the Arrillaga Outdoor Education Recreation Center, Arrillaga Family Sports Center, and the Ford Center.

Courses offered by Athletics are listed under the subject code ATHLETIC (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=ATHLETIC&filter-departmentcode-ATHLETIC=on&filter-coursestatus-Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site.

Athletics Programs

Intercollegiate Athletics

In keeping with American university tradition, Stanford offers a broad intercollegiate athletic program. The objectives are to provide the opportunity to compete at the highest possible level without jeopardizing the integrity of the individual or the institution; to adhere strictly to all University, association, and conference rules governing athletic participation; and to encourage effectively the achievement of academic goals by student athletes at the same rate as other University students.

As a member of the National Collegiate Athletic Association (NCAA), Stanford fields both men's and women's varsity teams. Those for men are baseball, basketball, crew, cross country, fencing, football, golf,

gymnastics, sailing, soccer, swimming and diving, tennis, track and field, volleyball, water polo, and wrestling. Those for women are basketball, crew, cross country, fencing, field hockey, golf, gymnastics, lacrosse, sailing, soccer, softball, squash, swimming and diving, synchronized swimming, tennis, track and field, volleyball, sand volleyball and water polo. Both men's and women's teams are affiliated with the Pacific Twelve Conference. Additional or alternative intercollegiate athletic competition is available for all teams.

Club Sports Program

Stanford Club Sports supports intercollegiate competition for non-varsity Club Sports teams at the highest level by providing opportunities for student leadership development as well as appropriate resources to support team and individual success in development, training, and competition. The program is actively supervised by the Associate Director for Recreation Sports and Physical Education, along with the Coordinator for Club Sports and Intramural Sports but the emphasis is for team operations to be student-driven. Students who are returning and committed members of teams that meet the criteria for inclusion in the formal curriculum may register for units of credit, subject to the University's Activity unit (p. 32) policy, for Athletics, Physical Education & Recreation.

Martial Arts Program

The Stanford Martial Arts Program (SMAP) is an umbrella organization that supports the various member martial arts groups on campus. Its main goals are to educate the Stanford community through outreach programming about the variety of martial arts instruction on campus, serve as a centralized communications network among the different groups, and preserve the martial arts as a vital and distinctive component of Stanford life. Academic credit, subject to the University's Activity unit (p. 32) policy, is offered for participation in SMAP classes in accordance with the department's Physical Education guidelines.

Directors

Director, Academic Services Student Athletes: Austin D. Lee

Associate Director for Recreation Sports and Physical Education: Pam Mahlow

Stanford Martial Arts Program: Tim Ghormley

Courses offered by Physical Education are listed under the subject code PE (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=PE&filter-departmentcode-PE=on&filter-coursestatus-Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site.

Physical Education Mission

The goal of the Physical Education program is to improve the overall well-being of undergraduates and graduate students by providing opportunities to learn new skills and concepts. The department aims to achieve this through course offerings such as fitness, aquatics, racquet sports, dance, team sports, golf, outdoor education, martial arts, wellness, and special interest courses such as horsemanship and fencing. Physical Education courses are designed to help students learn and develop their physical fitness and motor skills and a positive attitude toward wellness and physical activity to facilitate a lifelong healthy lifestyle.

Learning Outcomes

Physical Education offers courses applicable to a variety of environments and experiences across campus and in life and pair well with academic and group work. Learning outcomes include:

- Understanding of appropriate warm-up and cool-down routines
- Identify health related components of fitness (cardiovascular endurance, muscular strength and endurance, and flexibility)
- Understanding of basic anatomical terminology and proper stretching technique
- Make intelligent choices that contribute to a healthy, active lifestyle

Directors

Associate Director for Recreation Sports and Physical Education: Pam Mahlow

Assistant Director of Physical Education: Tia Lillie

Wellness Education: Tia Lillie

Teaching Specialists (Activity Class Instructors)

Nanci Conniff (Yoga, Fitness), Michelle Gable (Lifeguarding), Terry Gingell (Golf), Ken Greer (Social Dance), Casey Hall (Golf), Andrew Ho (Golf), Rosa Kheyrkhah (Indoor cycling / Fitness), Lacey Kitch (Dance), Stacie Lonaker (Swimming), Michele Mandell (Fitness), Monica Mark (Dance) Phil Marrone (Golf), Kathryn Imrie (Golf), Tia Lillie (Fitness), Bobbie McWherter (Fitness), Ann Merlo (Yoga), Jim Miller (Golf), Mary O'Connell (Dance/Fitness), Greer Murphy (Fitness), Alejandra Picollo (Dance), Andy Price (Volleyball), Tom Sarsfield (Tennis), Haliel Selig (Yoga), Don Shaw (Sand Volleyball), Shashin Shodhan (Table Tennis), Matt Thornton (Team Sports), Kurt Uchiyama (Golf), Todd Vas Dias (Sailing), Mei Zhang (Tai Chi)

Teaching Specialists (also Athletics/Varsity Coaches)

Craig Amerkhanian (Rowing), Scott Armstrong (Swim Conditioning), Megan Azebu (Synchronized Swimming), Jon Barnea (Waterpolo), Vanessa Bartsch (Horsemanship), Ray Blake (Wrestling), Amy Bokker (Swimming), Frankie Brennan (Tennis & Weight Training), Avery Brown (Horsemanship), Rebecca Carlton (Rowing), Pat Cota (Futsal & Field Hockey), Brandon Coupe (Tennis) Steve Danielson (Futsal & Field Hockey) Lauren Dobashi (Golf), Brooke Eubanks (Total Body Workout), Yasmine Farooq (Rowing), Thom Glielmi (Gymnastics), Mike Graczyk (Indoor Soccer Int/adv.), Scott Green (Gymnastics) Clinton Hayes (Sailing), Nick Kirchof (Soccer), Ted Knapp (Swimming/Diving), Alex Lepeshinski (Fencing), Sarah Lowe (Synchronized Swimming), Greg Meehan (Swimming & Aqua Boot Camp), Lisa Milgram (Fencing), Susan Ortwein (Water Polo), Conrad Ray (Golf), Philip Rowe (Golf), Ken Shibuya (Volleyball/Sand volleyball), John Smith (Indoor Soccer Int/adv.), Chris Swircek (Gymnastics), Mark Talbott (Squash), John Tanner (Water Polo), Alex Tirapelle (Wrestling & Weight Training), Nicole Van Dyke (Indoor Soccer beg. & adv. women), John Vargas (Water Polo), Joe Wagstaffe (Cross Training Fitness), Anne Walker (Golf), Tabitha Yim (Gymnastics), Karl Zhiehn (Gymnastics)

Office: Arrillaga Outdoor Education & Recreation Center
Mail Code: 94305-6151
Phone: (650) 736-7768
Web Site: <http://outdoored.stanford.edu>

Email: outdoored@stanford.edu

Courses offered by Outdoor Education are listed under the subject code OUTDOOR (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=OUTDOOR&filter-departmentcode=OUTDOOR=on&filter-coursestatus=Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site.

Outdoor Education Mission

Outdoor Education's purpose is to provide outcome-based learning and adventure opportunities through the intentional use of risk, challenge, and experience as well as advise outdoor education experiences for the Department of Athletics, Physical Education, and Recreation (DAPER), Student Activities and Leadership (SAL), Stanford School of Medicine (SURG), and other formal campus partners.

Facilities

Courses and experiential education take place in the Arrillaga Outdoor Education and Recreation Center, and the outdoors. The Outdoor Center (AOERC) hosts access to equipment, class and lecture area, a resource library, Climbing Center & indoor climbing facility, meeting and trip-planning space. Arrillaga Center for Sports and Recreation hosts a Bouldering Center. Field experiences facilitate a variety of outdoor and adventure disciplines, and vary in locale both near and far from campus.

Learning Outcomes

Outdoor Education offers co-curricular courses applicable to a variety of environments and experiences across campus and in life. Outdoor Education expects student exposure to the following learning outcomes:

- Introduction to the environment through outdoor recreation activities
- Empowerment to move beyond self-imposed limitations
- Development of effective team building and leadership skills
- Education about the environment and sustainability
- Training for critical thinking, and the ability to identify risks and make sound decisions
- Exploration and attainment of new skills which merge outside of the classroom

Directors

Associate Director of Outdoor Education: Chris Pelchat

Coordinator of Outdoor Education: Antja Thompson

Teaching Specialists

Teaching Specialists: Peter Wright, Phil Sandlin, Chris Pelchat, Kelsey McCabe, Antja Thompson, Joel Reid, Mary Stuessy, Erika Halm

Contacts

Office: Arrillaga Center for Sports and Recreation
Mail Code: 94305-6150
Phone: (650) 723-7686
Web Site: <http://cardinalrec.stanford.edu/pe-classes>
Email: tlillie@stanford.edu

Courses offered by Wellness Education are listed under the subject code WELLNESS (<https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=WELLNESS&filter-departmentcode=WELLNESS=on&filter-coursestatus=Active=on>) on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/browse>) web site.

Wellness Education Mission

Stanford WellnessEd is the student wellness education program at Stanford. The WellnessEd curriculum is designed to inspire students to be the healthiest versions of themselves possible in the cognitive, emotional, social, and physical realms of wellness. The hallmark of the WellnessEd methodology for individual and community change is embodied in its motto: "Learn, Apply, Transform." Program instructors teach students the latest research-based wellness ideas and strategies. Resourced with this learning, students are supported in applying these practical wellness strategies to their own lives, thereby transforming their quality of living and impacting their social spheres in positive ways. In short, WellnessEd trains wellness change agents who change themselves in order to impact the world around them in meaningful ways.

Wellness Certificate

WellnessEd offers a Wellness Certificate that students can earn as part of their Stanford University experience. The certificate requires five classes, including three mind/body wellness courses in theory, practice, and application (WELLNESS 201 Flourishing, WELLNESS 202 Wellness: Mind, Body, Spirit, and WELLNESS 220 Applying Wellness Practicum). Students also take one physical wellness course (WELLNESS 193 Lifestyle Fitness Challenge or WELLNESS 187 Analysis of Human Movement) and one elective course (any WellnessEd course or qualifying wellness course from other programs). Upon completion, students receive a Wellness Certificate from the department and may put this distinction on their resumes or CVs.

		Units
Take 3 mind/body wellness courses in theory, practice, and application		
WELLNESS 195	Wellness: Mind, Body, Spirit	2
WELLNESS 201	Flourishing	2
WELLNESS 220	Applying Wellness Practicum	2
Take one physical wellness course from:		2-4
WELLNESS 193	Lifestyle Fitness Challenge	
WELLNESS 187	Analysis of Human Movement	
Take one elective course (any WellnessEd course or qualifying wellness course from other programs)		1
Total Units		9-11

Learning Outcomes

WellnessEd offers a range of research-based theory and practice classes in the areas of wellness and flourishing. These courses teach ideas and skills that enhance cognitive, emotional, and social wellness across the full variety of environments that students experience. Though we do not offer a degree program, for students who want to deepen their wellness education, we also offer a Wellness Certificate with a 5 course curriculum.

- Understanding of appropriate warm-up and cool-down routines
- Identify health related components of fitness (cardiovascular endurance, muscular strength and endurance, and flexibility)
- Understanding of basic anatomical terminology and proper stretching technique
- Make intelligent choices that contribute to a healthy, active lifestyle

Directors

Associate Director for Recreation Sports and Physical Education: Pam Mahlow

Assistant Director of Physical Education: Tia Lillie

Wellness Education: Tia Lillie

Teaching Specialists:

Teaching Specialists: Aneel Chima, Marlene Bjornsrud, Monica Hanson, Carley Hauck, Tia Lillie, Fred Luskin, Brandon Marcello, Carole Pertofsky, Shani Robins, Rev. Joanne Sanders, Sonya Soohoo, Janelle Spanier, Clyde Wilson

Directors

Athletic Director: Bernard Muir

Senior Associate Athletic Director /Senior Woman Administrator: Beth Goode

Senior Associate Athletic Director, External Relations: Kevin Blue

Senior Associate Athletic Director, Intercollegiate Sports: Earl Koberlein

Senior Associate Athletic Director, Physical Education, Recreation, and Wellness: Eric Stein

Senior Associate Athletic Director, CFO: Brian Talbott

Biology, Hopkins Marine Station

Courses offered by the Hopkins Marine Station are listed under the subject code BIOHOPK on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIOHOPK&filter-catalognumber-BIOHOPK=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on>).

The Hopkins Marine Station, located 90 miles from the main University campus in Pacific Grove, was founded in 1892 as the first marine laboratory on the west coast of North America. The modern laboratory facilities on the 11-acre campus on Cabrillo Point house nine faculty, all members of the Department of Biology. The Miller Library has a collection of literature in marine science. The Hopkins faculty offers undergraduate and graduate courses in biology which focus on the marine realm and involve topics including oceanography, environmental and comparative physiology, molecular evolution, biomechanics, cellular biology, conservation biology, and neurobiology and behavior. Most courses have laboratory sections that exploit the potential of working with readily available marine plants and animals. Small class sizes encourage close student-faculty interactions. Undergraduates have opportunities to carry out research projects with Hopkins faculty during the academic year or summer months.

Courses at Hopkins Marine Station can satisfy many requirements, from the Natural Sciences GER to major and minor requirements in departments housed in the Schools of Engineering, Humanities and Sciences, and Earth Sciences. Students are encouraged to check with their department's student services office to see which courses at Hopkins may be used to fulfill major or minor requirements.

Summer Program at Hopkins Marine Station

The summer program is open to advanced undergraduate, graduate students, and postdoctoral students, and to teachers whose biological backgrounds, teaching, or research activities can benefit from a summer's study of marine

life. Applications, deadlines, and further information are available at the Hopkins Marine Station (<http://hopkins.stanford.edu>) web site.

Emeriti Professors: David Epel, George N. Somero

Director: Stephen R. Palumbi

Professors: Barbara A. Block, Larry Crowder, Giulio De Leo, Mark W. Denny, William F. Gilly, Fiorenza Micheli, Stephen R. Palumbi, Stuart H. Thompson

Associate Professor: Christopher Lowe

Assistant Professor: Jeremy A. Goldbogen

Lecturer: James Watanabe

Biology

Courses offered by the Department of Biology are listed under the subject code BIO on the (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on>) Stanford Bulletin's (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on>) ExploreCourses web site (<http://explorecourses.stanford.edu/CourseSearch/search?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on>).

The department provides:

- a major program leading to the B.S. degree
- a minor program
- a coterminal program leading to the M.S. degree
- a doctoral program leading to the Ph.D. degree, and
- courses designed for the non-major.

Mission of the Undergraduate Program in Biology

The mission of the undergraduate program in Biology is to provide students with in-depth knowledge in the discipline, from molecular biology to ecology. Students in the program learn to think and analyze information critically, to draw connections among the different areas of biology, and to communicate their ideas effectively to the scientific community. The major exposes students to the scientific process through a set of core courses and electives from a range of subdisciplines. The Biology major serves as preparation for professional careers, including medicine, dentistry, veterinary sciences, teaching, consulting, research, and field studies.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to use discipline-specific tools and content knowledge to analyze and interpret scientific data, to evaluate the significance of the data, and to articulate conclusions supportable by the data.
2. the ability, independently and collaboratively, to formulate testable scientific hypotheses and to design approaches to obtain data to test the respective hypotheses.
3. the ability to communicate content understanding and research outcomes effectively using various media.

Mission of the Graduate Program in Biology

For graduate-level students, the department offers resources and experience learning from and working with world-renowned faculty involved in research on ecology, neurobiology, population biology, plant and animal physiology, biochemistry, immunology, cell and developmental biology, genetics, and molecular biology.

The M.S. degree program offers general or specialized study to individuals seeking biologically oriented course work, and to undergraduate science majors wishing to increase or update their science background or obtain advanced research experience.

The training for a Ph.D. in Biology is focused on learning skills required to be a successful research scientist and teacher, including how to ask important questions and then devise and carry out experiments to answer these questions. Students work closely with an established adviser and meet regularly with a committee of faculty members to ensure that they understand the importance of diverse perspectives on experimental questions and approaches. Students learn how to evaluate critically pertinent original literature in order to stay abreast of scientific progress in their areas of interest. They also learn how to make professional presentations, write manuscripts for publication, and become effective teachers.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Biology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Biology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Biology and to interpret and present the results of such research.

Facilities

The offices, labs, and personnel of the Department of Biology are located in the Gilbert Biological Sciences, Herrin Laboratories, Herrin Hall, James H. Clark Center, Lorry I. Lokey Laboratory, and Jerry Yang and Akiko Yamazaki Environment and Energy (Y2E2) buildings. Along with the Carnegie Institution of Washington all are on the main campus. Jasper Ridge Biological Preserve (JRBP) is located near Stanford University's campus in the eastern foothills of the Santa Cruz Mountains. Hopkins Marine Station is on Monterey Bay in Pacific Grove.

Jasper Ridge Biological Preserve encompasses geologic, topographic, and biotic diversity within its 1,189 acres and provides a natural laboratory for researchers from around the world, educational experiences for students and docent-led visitors, and refuge for native plants and animals. See the JRBP (<http://jrpb.stanford.edu>) web site.

Hopkins Marine Station, located 90 miles from the main University campus in Pacific Grove, was founded in 1892 as the first marine laboratory on the west coast of North America. For more information, including courses taught at Hopkins Marine Station with the subject code BIOHOPK, see the "Hopkins Marine Station (<http://exploreddegrees.stanford.edu/schoolofhumanitiesandsciences/biology/%20/schoolofhumanitiesandsciences/biologyhopkinsmarinestation>)" section of this bulletin.

The department's large collections of plants (Dudley Herbarium), fish, reptiles, and amphibians, as well as smaller collections of birds, mammals,

and invertebrates, are housed at the California Academy of Sciences in San Francisco, where they, and extensive collections of the Academy, are available to those interested in the systematics of these groups. Entomological collections, restricted to those being used in particular research projects, are housed in the Herrin Laboratories. No general collections are maintained except for teaching purposes.

The Falconer Biology Library (<http://library.stanford.edu/falconer>) in Herrin Hall contains over 1,200 current subscriptions and an extensive collection of monographs and reference works. A specialized library is maintained at Hopkins Marine Station.

Biology Course Numbering System

The department uses the following course numbering system:

Number	Level
000-099	Introductory and Core
100-199	Undergraduate
200-299	Advanced Undergraduate, Coterminal and PhD
300+	PhD

Bachelor of Science in Biology

The undergraduate major in Biology can serve as a stepping-stone for a wide variety of career opportunities. For students planning to attend medical, dental, or veterinary school, or graduate school in biological and applied sciences, the biology major provides a strong foundation in the basic life sciences. This foundation of knowledge, plus laboratory experience, also prepares students well for research and technical positions in universities, government, and industry.

While a major in Biology provides an excellent background for these technical careers, it can also serve as a valuable and satisfying focus of a liberal arts education for those not planning careers in science-related fields. An understanding of basic biological principles is of increasing importance in today's world. A knowledgeable and concerned citizenry is the best guarantee that these issues will be resolved most effectively. Finally, an understanding of the processes of life can heighten our perception and appreciation of the world around us, in terms of its beauty, variety, and uniqueness.

Advising

Members of the Biology faculty are available for advising on such academic matters as choice of courses, research, suggested readings, and career plans. The student services office maintains a current list of faculty advisers, advising availability, and research interests.

The student services staff and BioBridge (<http://www.stanford.edu/group/biobridge>), the department's peer advising group, are prepared to answer questions on administrative matters, such as requirements for the major, approved out-of-department electives, transfer course evaluations, and petition procedures. This office also distributes the department's Bachelor of Science Handbook (http://biology.stanford.edu/sites/all/files/BS_Handbook.pdf), which delineates policies and requirements, as well as other department forms and informational handouts.

Each undergraduate interested in the Biology major is required to select a department faculty adviser as part of the major declaration process.

Degree Requirements

Candidates for the general Biology B.S. degree must complete the following, which range from 90-105 total units. There is also an option

to add honors to the general major. Honors requirements are explained in detail below.

Core Courses

(must be taken for a letter grade when available):

		Units
BIO 41	Genetics, Biochemistry, and Molecular Biology	5
BIO 42	Cell Biology and Animal Physiology	5
BIO 43	Plant Biology, Evolution, and Ecology	5
or BIOHOPK 43	Plant Biology, Evolution, and Ecology	
BIO 44X	Core Molecular Biology Laboratory	5
BIO 44Y	Core Plant Biology & Eco Evo Laboratory ¹	5
or BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution	

¹ BIO 44Y Core Plant Biology & Eco Evo Laboratory not required if completing honors program. Failure to complete honors program results in student being required to complete BIO 44Y Core Plant Biology & Eco Evo Laboratory.

Required Foundational Breadth Courses

(two courses may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31X	Chemical Principles Accelerated	
CHEM 33	Structure and Reactivity	4-5
or CHEM 1	Structure and Reactivity	
CHEM 35	Synthetic and Physical Organic Chemistry	4-5
or CHEM 2	Organic Monofunctional Compounds	
CHEM 36	Organic Chemistry Laboratory I ¹	3-4
or CHEM 1L & CHEM 2L	Introduction to Organic Chemistry Lab and Organic Chemistry Lab I	
CHEM 130	Organic Chemistry Laboratory ²	3-4
or CHEM 2L & CHEM 3L	Organic Chemistry Lab I and Organic Chemistry Lab II	
CHEM 131	Organic Polyfunctional Compounds	3-4
or CHEM 3	Organic Polyfunctional Compounds	
CHEM 135	Physical Chemical Principles	3
or CHEM 171	Physical Chemistry I	
Physics		
Select one of the following Series:		8-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics and Heat	
PHYSICS 22	Mechanics and Heat Laboratory	
PHYSICS 23	Electricity and Optics	
PHYSICS 24	Electricity and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Mathematics		
Select one of the following Series:		5-10
3-Quarter Calculus Series		

MATH 19	Calculus
MATH 20	Calculus
MATH 21	Calculus
2-Quarter Calculus Series	
MATH 41	Calculus
MATH 42	Calculus
Advanced Calculus and Linear Algebra	
MATH 51	Linear Algebra and Differential Calculus of Several Variables (or beyond) ³
Additional Foundational Breadth Course	
Select one of the following: 3-5	
BIOHOPK 174H	Experimental Design and Probability ⁴
BIO/STATS 141	Biostatistics ⁴
CS 106A or CS 106X	Programming Methodology Programming Abstractions (Accelerated)
MATH 51	Linear Algebra and Differential Calculus of Several Variables ³
STATS 60/ PSYCH 10	Introduction to Statistical Methods: Precalculus

Total Units 41-62

- ¹ Not required if Chem 35 was taken Autumn 2014 or later.
- ² May be substituted with upper-division, above 100-level quantitative or computational course from this list: BIO 102, 182, 183, 220, 221; BIOMEDIN 212, 214, 217, 231, 262, 366, 374; CS courses above 106A (may not fulfill both the CHEM 130 and additional foundational breadth requirement); GENE 212, 214, 244; MATH courses above 102; STATS 116, 166, 215.
- ³ May be counted either toward the math requirement or foundational breadth, but not both.
- ⁴ If taken to fulfill the foundational breadth requirement, these courses do not count toward the 24 elective unit requirement.

Electives

24 units required, distributed as follows:

- Biology (BIO) or Hopkins Marine Station (BIOHOPK) courses numbered 100 or above.
- Approved out-of-department electives (http://biology.stanford.edu/sites/all/files/out_of_dept_electives.pdf) (list also available in the student services office).
- No more than 6 units from any combination of these courses may be applied toward the total number of elective units:

	Units
BIO 196A	Biology Senior Reflection 3
BIO 196B	Biology Senior Reflection 3
BIO 196C	Biology Senior Reflection 3
BIO 197WA	Senior Writing Project: The Personal Essay in Biology 3
BIO 198	Directed Reading in Biology 1-15
BIO 198X	Out-of-Department Directed Reading 1-15
BIO 199	Advanced Research Laboratory in Experimental Biology 1-15
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research 3
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology 1-15
BIO 290	Teaching of Biology 1-5

BIO 291	Development and Teaching of Core Experimental Laboratories 1-2
BIOHOPK 198H	Directed Instruction or Reading 1-15
BIOHOPK 199H	Undergraduate Research 1-15
BIOHOPK 290H	Teaching of Biological Science 1-15

- One course from at least three of the four central menu areas listed below. The purpose of the central menu is to expose students to a wide range of topics studied within the field of biology and is intended to give students a breadth of knowledge. Please note—this requirement is only for the general major. Students pursuing a specialized field of study should consult the specific degree requirements listed in the "Fields of Study" section below.
- No more than 6 units applied toward the elective unit requirement may be taken CR/NC.

Central Menu Areas

The four Central Menu Areas are:

- Area 1 (Molecular)
- Area 2 (Cell/Developmental)
- Area 3 (Organismal)
- Area 4 (Ecology and Evolution)

Units

1. Molecular (Area 1)	
BIO 104	Advanced Molecular Biology
BIO 110	DNA Replication and Genomic Maintenance
BIO 113	Fundamentals of Molecular Evolution ³
BIO 118	Genetic Analysis of Biological Processes ¹
BIO 160A	Developmental Biology I ¹
BIO 160B	Developmental Biology II ¹
BIO 188	Biochemistry I
BIO 189	Biochemistry II
BIO 230	Molecular and Cellular Immunology ¹
CBIO/PATH 101	Cancer Biology ¹
CEE 274A/ CHEMENG 174/274	Environmental Microbiology I ⁵
2. Cell/Developmental (Area 2)	
BIO 118	Genetic Analysis of Biological Processes ¹
BIO 129A	Cellular Dynamics I: Cell Motility and Adhesion
BIO 129B	Cellular Dynamics II: Building a Cell
BIO 137	Plant Genetics
BIO 154	Molecular and Cellular Neurobiology ²
BIO 158	Developmental Neurobiology ²
BIO 160A	Developmental Biology I ¹
BIO 160B	Developmental Biology II ¹
BIO 171	Principles of Cell Cycle Control
BIO 230	Molecular and Cellular Immunology ¹
CBIO/PATH 101	Cancer Biology ¹
CEE 274A/ CHEMENG 174/274	Environmental Microbiology I ⁵
3. Organismal (Area 3)	
BIO 112	Human Physiology

BIO 153	Cellular Neuroscience: Cell Signaling and Behavior
BIO 154	Molecular and Cellular Neurobiology ²
BIO 158	Developmental Neurobiology ²
BIO 163	Neural Systems and Behavior
BIOHOPK 161H	Invertebrate Zoology
BIOHOPK 162H	Comparative Animal Physiology
BIOHOPK 167H	Nerve, Muscle, and Synapse
MI 185	Topics in Microbiology
4. Ecology and Evolution (Area 4)	
BIO 101	Ecology
BIO 113	Fundamentals of Molecular Evolution ³
BIO 121	Biogeography
BIO 136	Evolutionary Paleobiology
BIO 143	Evolution
BIO 144	Conservation Biology: A Latin American Perspective
BIO 145	Ecology and evolution of animal behavior
BIO 182	Modeling Cultural Evolution
BIOHOPK 163H	Oceanic Biology
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities
BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems
CEE 274A/CHEMENG 174/274	Environmental Microbiology I ⁵

1. May be used to satisfy either area I or area II requirement.
2. May be used to satisfy either area II or area III requirement.
3. May be used to satisfy either area I or area IV requirement.
4. May be used to satisfy either area III or area IV requirement.
5. May be used to satisfy area I, area II, or area IV requirement.

Writing in the Major

Select one of the following:

BIO 44Y	Core Plant Biology & Eco Evo Laboratory ¹
BIO 107	Human Physiology Laboratory ²
BIO 137	Plant Genetics ²
BIO 168	Explorations in Stem Cell Biology ^{1,2}
BIO 196A	Biology Senior Reflection ²
BIO 197WA	Senior Writing Project: The Personal Essay in Biology ²
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research ²
BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution
BIOHOPK 184H	Holistic Biology ²

¹ If taken during academic year 2014-15.

² This course can also be used to count toward the elective requirement.

Typical Schedule for a Four-Year Program

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles Accelerated (CHEM 31X) ¹		5	
Calculus (MATH 19)	3		
Freshman requirements, seminars, or GERS/WAYS	8		
Structure and Reactivity (CHEM 33)			5
Calculus (MATH 20)			3
Freshman requirements, seminars, or GERS/WAYS			8
Synthetic and Physical Organic Chemistry (CHEM 35)			5
Organic Chemistry Laboratory I (CHEM 36)			3
Calculus (MATH 21)			4
Freshman requirements, seminars, or GERS/WAYS			6
Year Total:		16	16
			18
Second Year	Units		
	Autumn	Winter	Spring
Genetics, Biochemistry, and Molecular Biology (BIO 41)		5	
Organic Chemistry Laboratory (CHEM 130)	3		
GERS/WAYS	6		
Cell Biology and Animal Physiology (BIO 42)			5
Core Molecular Biology Laboratory (BIO 44X)			5
Organic Polyfunctional Compounds (CHEM 131)			3
GERS/WAYS			5
Plant Biology, Evolution, and Ecology (BIO 43) or Plant Biology, Evolution, and Ecology (BIOHOPK 43)			5
Core Plant Biology & Eco Evo Laboratory (BIO 44Y) or Core Laboratory in Plant Biology, Ecology and Evolution (BIOHOPK 44Y)			5
GERS/WAYS			8
Year Total:		14	18
			18
Third Year	Units		
	Autumn	Winter	Spring
Mechanics and Heat (PHYSICS 21)		3	
Mechanics and Heat Laboratory (PHYSICS 22)		1	
GERS/WAYS or Electives		10	
Electricity and Optics (PHYSICS 23)			3
Electricity and Optics Laboratory (PHYSICS 24)			1
GERS/WAYS or Electives			10
Physical Chemical Principles (CHEM 135) ²			3
GERS/WAYS or Electives			12
Year Total:		14	14
			15
Fourth Year	Units		
	Autumn	Winter	Spring
General Education/WAYS requirements and/or electives		13	
General Education/WAYS requirements and/or electives			13
General Education/WAYS requirements and/or electives			13
Year Total:		13	13
			13
Total Units in Sequence:			182

¹ This schedule varies slightly if the student takes CHEM 31A Chemical Principles I, CHEM 31B Chemical Principles II

² Or take CHEM 171 Physical Chemistry in autumn

Fields of Study (Subplans)

In addition to the undergraduate major program described above, the department offers the following six fields of study (also known as subplans) for students wishing to concentrate their studies in particular areas of biology:

- Biochemistry and Biophysics
- Ecology and Evolution
- Marine Biology
- Microbes and Immunity
- Molecular, Cellular, and Developmental Biology
- Neurobiology

These fields of study are declared on Axess at the time of the major declaration; they appear on both the transcript and on the diploma. Candidates for the B.S. degree in Biology with a field of study are required to complete the departmental honors program as well as the set of requirements outlined below.

Biochemistry and Biophysics

Candidates for the Biochemistry and Biophysics field of study must complete the following, which range from 101-110 total units:

Core Courses (must be taken for a letter grade when available):

	Units
BIO 41 Genetics, Biochemistry, and Molecular Biology	5
BIO 42 Cell Biology and Animal Physiology	5
BIO 43 Plant Biology, Evolution, and Ecology	5
or BIOHOPK 43 Plant Biology, Evolution, and Ecology	
BIO 44X Core Molecular Biology Laboratory	5

Required Foundational Breadth Courses

Two courses may be taken credit/no credit.

	Units
Chemistry	
The following CHEM courses are required:	
CHEM 31A Chemical Principles I & CHEM 31B and Chemical Principles II or CHEM 31X Chemical Principles Accelerated	5-10
CHEM 33 Structure and Reactivity or CHEM 1 Structure and Reactivity	4-5
CHEM 35 Synthetic and Physical Organic Chemistry or CHEM 2 Organic Monofunctional Compounds	4-5
CHEM 36 Organic Chemistry Laboratory I ¹ or CHEM 1L Introduction to Organic Chemistry Lab & CHEM 2L and Organic Chemistry Lab I	3-4
CHEM 130 Organic Chemistry Laboratory or CHEM 2L Organic Chemistry Lab I & CHEM 3L and Organic Chemistry Lab II	3-4
CHEM 135 Physical Chemical Principles or CHEM 171 Physical Chemistry I	3
Physics	
PHYSICS 41 Mechanics	4
PHYSICS 43 Electricity and Magnetism	4
PHYSICS 45 Light and Heat	4
Mathematics	
MATH 51 Linear Algebra and Differential Calculus of Several Variables	5
MATH 52 Integral Calculus of Several Variables	5
Additional Foundational Breadth Course	
STATS 60 Introduction to Statistical Methods: Precalculus or BIO 141 Biostatistics	5
Total Units	49-58

¹ Not required if Chem 35 was taken Autumn 2014 or later.

Required Biology Courses

Must be taken for a letter grade.

	Units
BIO 104 Advanced Molecular Biology	5
BIO 118 Genetic Analysis of Biological Processes	4
BIO 129A Cellular Dynamics I: Cell Motility and Adhesion or BIO 129B Cellular Dynamics II: Building a Cell	4
BIO 188 Biochemistry I	3

Approved Biochemistry and Biophysics Courses

Must be taken for a letter grade.

	Units
Select three of the following:	8-14
APPPHYS/ BIO 236 Biology by the Numbers	
APPPHYS 293 Theoretical Neuroscience	
APPPHYS 294 Cellular Biophysics	
BIO 132/232/ APPPHYS/ BIOPHYS/ GENE 232 Advanced Imaging Lab in Biophysics	
BIO 152/MCP 222 Imaging: Biological Light Microscopy	
BIO 154/254/ NBIO 254 Molecular and Cellular Neurobiology	
BIO 189/289/ CHEM 183/ CHEMENG 183/283 Biochemistry II	
BIO 214/BIOC 224 Advanced Cell Biology	
BIO 217 Neuronal Biophysics	
BIOE 101 Systems Biology	
BIOE 103 Systems Physiology and Design	
BIOE/RAD 220 Introduction to Imaging and Image-based Human Anatomy	
BIOMEDIN 210 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	
BIOMEDIN/ BIOE/GENE 214/CS 274 Representations and Algorithms for Computational Molecular Biology	
BIOMEDIN 231 Computational Molecular Biology	
BIOPHYS/ SBIO 228 Computational Structural Biology	
BIOPHYS/ SBIO 241 Biological Macromolecules	
CHEM 184 Biological Chemistry Laboratory	
CHEM 185 Biochemistry III	
EE 236A Modern Optics	
MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	
PHYSICS 105 Intermediate Physics Laboratory I: Analog Electronics	

Electives

7 units required. Electives must be 100-level or above and chosen from the offerings in the Department of Biology, Hopkins Marine Station, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

Writing in the Major

Select one of the following:

	Units
BIO 44Y	3-16
Core Plant Biology & Eco Evo Laboratory ¹	
BIO 107	
Human Physiology Laboratory ²	
BIO 137	
Plant Genetics ²	
BIO 168	
Explorations in Stem Cell Biology ^{1,2}	
BIO 196A	
Biology Senior Reflection ²	
BIO 197WA	
Senior Writing Project: The Personal Essay in Biology ²	
BIO 199W	
Senior Honors Thesis: How to Effectively Write About Scientific Research ²	
BIOHOPK 44Y	
Core Laboratory in Plant Biology, Ecology and Evolution	
BIOHOPK 184H	
Holistic Biology ²	

¹ If taken during academic year 2014-15.

² This course can also be used to count toward the elective requirement.

Honors Requirements

1. Approved Honors Proposal
2. 10 units of research from the same lab; only research units from BIO or BIOHOPK are permitted as follows:

	Units
BIO 199	5
Advanced Research Laboratory in Experimental Biology	
BIO 199X	5
Out-of-Department Advanced Research Laboratory in Experimental Biology	
BIOHOPK 199H	5
Undergraduate Research	

3. Poster/oral presentation at annual honors symposium
4. Approved Honors Thesis
5. 3.0 GPA in all courses taken for the major with the exception of research and/or teaching units

Ecology and Evolution

Candidates for the Ecology and Evolution field of study must complete the following, which range from 99-116 total units:

Core Courses

Must be taken for a letter grade when available.

	Units
BIO 41	5
Genetics, Biochemistry, and Molecular Biology	
BIO 42	5
Cell Biology and Animal Physiology	
BIO 43	5
Plant Biology, Evolution, and Ecology	
or BIOHOPK 43	
Plant Biology, Evolution, and Ecology	
BIO 101	4
Ecology ¹	
or BIOHOPK 172H	
Marine Ecology: From Organisms to Ecosystems	
Select one of the following:	5
BIO 44X	
Core Molecular Biology Laboratory	

BIO 44Y	Core Plant Biology & Eco Evo Laboratory
BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution

¹ This course cannot also be used to count toward the elective requirement.

Required Foundational Breadth Courses

Two courses may be taken credit/no credit.

	Units
Chemistry	
The following CHEM courses are required:	
CHEM 31A & CHEM 31B or CHEM 31X	5-10
Chemical Principles I and Chemical Principles II Chemical Principles Accelerated	
CHEM 33 or CHEM 1	4-5
Structure and Reactivity Structure and Reactivity	
CHEM 35 or CHEM 2	4-5
Synthetic and Physical Organic Chemistry Organic Monofunctional Compounds	
CHEM 36 or CHEM 1L & CHEM 2L	3-4
Organic Chemistry Laboratory I ¹ Introduction to Organic Chemistry Lab and Organic Chemistry Lab I	
Physics	
Select one of the following Series:	8-12
PHYSICS 20 Series	
PHYSICS 21	5
Mechanics and Heat	
PHYSICS 22	5
Mechanics and Heat Laboratory	
PHYSICS 23	5
Electricity and Optics	
PHYSICS 24	5
Electricity and Optics Laboratory	
PHYSICS 40 Series	
PHYSICS 41	5
Mechanics	
PHYSICS 43	5
Electricity and Magnetism	
PHYSICS 45	5
Light and Heat	
Mathematics	
Select one of the following Series:	5-10
3-Quarter Calculus Series	
MATH 19	5
Calculus	
MATH 20	5
Calculus	
MATH 21	5
Calculus	
2-Quarter Calculus Series	
MATH 41	5
Calculus	
MATH 42	5
Calculus	
Advanced Calculus and Linear Algebra	
MATH 51	5
Linear Algebra and Differential Calculus of Several Variables	
Total Units	29-46

¹ Not required if Chem 35 was taken Autumn 2014 or later.

Required Evolutionary Biology Course

Must be taken for a letter grade.

	Units
Select one of the following:	3-5
BIO 113	3
Fundamentals of Molecular Evolution	
BIO 136	3
Evolutionary Paleobiology	
BIO 143	5
Evolution	

BIOHOPK 166H Molecular Ecology

Required Quantitative Methods Course

Must be taken for a letter grade.

	Units
Select one of the following:	3-5
BIO 141 Biostatistics	
BIOHOPK 174H Experimental Design and Probability	
CS 106A Programming Methodology	
or CS 106X Programming Abstractions (Accelerated)	
STATS 60 Introduction to Statistical Methods: Precalculus (or beyond)	

Electives (30 units required)

Only one course can be taken credit/no credit. Electives must be from this approved list:

	Units
BIO 101 Ecology	4
BIO 102 Demography: Health, Development, Environment	3
BIO 116 Ecology of the Hawaiian Islands	4
BIO 117 Biology and Global Change	4
BIO 118 Genetic Analysis of Biological Processes	4
BIO 121 Biogeography	3
BIO 131 Complex Systems Lab	1
BIO 139 Biology of Birds	3
BIO 144 Conservation Biology: A Latin American Perspective	3
BIO 145 Ecology and evolution of animal behavior	3
BIO 146 Population Studies	1
BIO 147	3
BIO 164 Biosphere-Atmosphere Interactions	4
BIO 166 Faunal Analysis: Animal Remains for the Archaeologist	5
BIO 182 Modeling Cultural Evolution	3
BIO 183 Theoretical Population Genetics	3
BIO 186 Natural History of the Vertebrates	4
BIO 216 Terrestrial Biogeochemistry	3
BIO 220 Essential Mathematics for Research in Life and Social Sciences	2
BIO 227 Foundations of Community Ecology	2
BIO 274S Hopkins Microbiology Course	3-12
BIOHOPK 161H Invertebrate Zoology	5
BIOHOPK 162H Comparative Animal Physiology	5
BIOHOPK 163H Oceanic Biology	4
BIOHOPK 166H Molecular Ecology	5
BIOHOPK 172H Marine Ecology: From Organisms to Ecosystems	5
BIOHOPK 173H Marine Conservation Biology ¹	4
BIOHOPK 174H Experimental Design and Probability	3
BIOHOPK 182H Stanford at Sea ³	16
BIOHOPK 184H Holistic Biology ³	16
BIOHOPK 185H Ecology and Conservation of Kelp Forest Communities ³	10-12
BIOHOPK 187H Sensory Ecology	4
BIOHOPK 264H POPULATION GENOMICS	1-2

BIOHOPK 275H Synthesis in Ecology	2
CHEM 130 Organic Chemistry Laboratory	3
CHEM 131 Organic Polyfunctional Compounds	3
EARTHSYS 144/ EESS 164 Fundamentals of Geographic Information Science (GIS)	4
EESS 134	
EESS 158 Geomicrobiology	3
GES 123 Paleobiology	4
GES 240 Geostatistics	2-3
OSPAUSTL 10 Coral Reef Ecosystems ²	3
OSPAUSTL 25 Freshwater Systems ²	3
OSPAUSTL 30 Coastal Forest Ecosystems ²	3

- 1 Only 1 unit can count.
- 2 Only 2 units can count.
- 3 Only 6 units can count.

Writing in the Major

	Units
Select one of the following:	3-16
BIO 44Y Core Plant Biology & Eco Evo Laboratory ¹	
BIO 107 Human Physiology Laboratory ²	
BIO 137 Plant Genetics ²	
BIO 168 Explorations in Stem Cell Biology ^{1,2}	
BIO 196A Biology Senior Reflection ²	
BIO 197WA Senior Writing Project: The Personal Essay in Biology ²	
BIO 199W Senior Honors Thesis: How to Effectively Write About Scientific Research ²	
BIOHOPK 44Y Core Laboratory in Plant Biology, Ecology and Evolution	
BIOHOPK 184H Holistic Biology ²	

- 1 If taken during academic year 2014-15.
- 2 This course can also be used to count toward the elective requirement.

Honors Requirements

1. Approved Honors Proposal
2. 10 units of research from the same lab; only research units from BIO or BIOHOPK are permitted as follows:

	Units
BIO 199 Advanced Research Laboratory in Experimental Biology	
BIO 199X Out-of-Department Advanced Research Laboratory in Experimental Biology	
BIOHOPK 199H Undergraduate Research	

3. Poster/oral presentation at annual honors symposium
4. Approved Honors Thesis
5. 3.0 GPA in all courses taken for the major with the exception of research and/or teaching units

Marine Biology

Candidates for the Marine Biology field of study must complete the following, which range from 92-140 total units:

Core Courses

Must be taken for a letter grade when available.

		Units
BIO 41	Genetics, Biochemistry, and Molecular Biology	5
BIO 42	Cell Biology and Animal Physiology	5
BIO 43	Plant Biology, Evolution, and Ecology	5
or BIOHOPK 43	Plant Biology, Evolution, and Ecology	
Select one of the following:		5
BIO 44X	Core Molecular Biology Laboratory	
BIO 44Y	Core Plant Biology & Eco Evo Laboratory	
BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution	

Required Foundational Breadth Courses

Two courses may be taken credit/no credit.

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31X	Chemical Principles Accelerated	
CHEM 33	Structure and Reactivity	4-5
or CHEM 1	Structure and Reactivity	
CHEM 35	Synthetic and Physical Organic Chemistry	4-5
or CHEM 2	Organic Monofunctional Compounds	
CHEM 36	Organic Chemistry Laboratory I ¹	3-4
or CHEM 1L & CHEM 2L	Introduction to Organic Chemistry Lab and Organic Chemistry Lab I	
CHEM 130	Organic Chemistry Laboratory ²	3-4
or CHEM 2L & CHEM 3L	Organic Chemistry Lab I and Organic Chemistry Lab II	
CHEM 131	Organic Polyfunctional Compounds	3-4
or CHEM 3	Organic Polyfunctional Compounds	
Physics		
Select one of the following Series:		8-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics and Heat	
PHYSICS 22	Mechanics and Heat Laboratory	
PHYSICS 23	Electricity and Optics	
PHYSICS 24	Electricity and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Mathematics		
Select one of the following Series:		5-10
3-Quarter Calculus Series		
MATH 19	Calculus	
MATH 20	Calculus	
MATH 21	Calculus	
2-Quarter Calculus Series		
MATH 41	Calculus	
MATH 42	Calculus	
Advanced Calculus and Linear Algebra		
MATH 51	Linear Algebra and Differential Calculus of Several Variables	

Additional Foundational Breadth Course 3-5

Select one of the following:

STATS 60	Introduction to Statistical Methods: Precalculus	
BIO 141	Biostatistics	
BIOHOPK 174H	Experimental Design and Probability	
Total Units		38-59

¹ Not required if Chem 35 was taken Autumn 2014 or later.² May be substituted with upper-division, above 100-level quantitative or computational course from this list: BIO 102, 182, 183, 220, 221; BIOMEDIN 212, 214, 217, 231, 262, 366, 374; CS courses above 106A (may not fulfill both the CHEM 130 and additional foundational breadth requirement); GENE 212, 214, 244; MATH courses above 102; STATS 116, 166, 215.**Required Biology Courses**

Must be taken for a letter grade.

		Units
BIO 101	Ecology ¹	4
or BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems	
BIO 118	Genetic Analysis of Biological Processes	4
BIO 143	Evolution	3

¹ If BIOHOPK 172H is taken to fulfill this requirement, it cannot also count below.**Approved courses**

Must be taken for a letter grade.

		Units
Select four of the following:		15-52
BIO/ EARTHSYS 116	Ecology of the Hawaiian Islands	
BIOHOPK 161H	Invertebrate Zoology	
BIOHOPK 162H	Comparative Animal Physiology	
BIOHOPK 163H	Oceanic Biology	
BIOHOPK 166H	Molecular Ecology	
BIOHOPK 167H	Nerve, Muscle, and Synapse	
BIOHOPK 172H	Marine Ecology: From Organisms to Ecosystems ¹	
BIOHOPK 173H	Marine Conservation Biology ((must be take for 3 units))	
BIOHOPK 182H	Stanford at Sea	
BIOHOPK 184H	Holistic Biology	
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities	
OSPAUSTL 10	Coral Reef Ecosystems ²	
OSPAUSTL 25	Freshwater Systems ²	

OSPAUSTL Coastal Forest Ecosystems ²
30

¹ May not also fulfill the required Biology course above.

² These three courses as a whole count as one of the four required courses in this section.

Writing in the Major

Select one of the following:

BIO 44Y	Core Plant Biology & Eco Evo Laboratory ¹
BIO 107	Human Physiology Laboratory ²
BIO 137	Plant Genetics ²
BIO 168	Explorations in Stem Cell Biology ^{1,2}
BIO 196A	Biology Senior Reflection ²
BIO 197WA	Senior Writing Project: The Personal Essay in Biology ²
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research ²
BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution
BIOHOPK 184H	Holistic Biology ²

¹ If taken during academic year 2014-15.

² This course can also be used to count toward the elective requirement.

Honors Requirements

- Approved Honors Proposal - one Hopkins Marine Station faculty member must be a reader on the thesis
- 10 units of research from the same lab; only research units from BIO or BIOHOPK are permitted as follows:

BIO 199	Advanced Research Laboratory in Experimental Biology
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology
BIOHOPK 199H	Undergraduate Research

- Poster/oral presentation at annual honors symposium
- Approved Honors Thesis; one Hopkins Marine Station faculty member must be a reader on the thesis
- 3.0 GPA in all courses taken for the major with the exception of research and/or teaching units

Microbes and Immunity

Candidates for the Microbes and Immunity field of study must complete the following, which range from 89-116 total units:

Core Courses

Must be taken for a letter grade when available.

	Units
BIO 41	Genetics, Biochemistry, and Molecular Biology
BIO 42	Cell Biology and Animal Physiology
BIO 43	Plant Biology, Evolution, and Ecology
or BIOHOPK 43	Plant Biology, Evolution, and Ecology
Select one of the following:	5
BIO 44X	Core Molecular Biology Laboratory

BIO 44Y	Core Plant Biology & Eco Evo Laboratory
BIOHOPK 44Y	Core Laboratory in Plant Biology, Ecology and Evolution

Required Foundational Breadth Courses

Two courses may be taken credit/no credit.

	Units
Chemistry	
The following CHEM courses are required:	
CHEM 31A & CHEM 31B or CHEM 31X	Chemical Principles I and Chemical Principles II Chemical Principles Accelerated
CHEM 33 or CHEM 1	Structure and Reactivity
CHEM 35 or CHEM 2	Synthetic and Physical Organic Chemistry Organic Monofunctional Compounds
CHEM 36 or CHEM 1L & CHEM 2L	Organic Chemistry Laboratory I ¹ Introduction to Organic Chemistry Lab and Organic Chemistry Lab I
CHEM 130 or CHEM 2L & CHEM 3L	Organic Chemistry Laboratory ² Organic Chemistry Lab I and Organic Chemistry Lab II
CHEM 131 or CHEM 3	Organic Polyfunctional Compounds
Physics	
Select one of the following Series:	8-12
PHYSICS 20 Series	
PHYSICS 21	Mechanics and Heat
PHYSICS 22	Mechanics and Heat Laboratory
PHYSICS 23	Electricity and Optics
PHYSICS 24	Electricity and Optics Laboratory
PHYSICS 40 Series	
PHYSICS 41	Mechanics
PHYSICS 43	Electricity and Magnetism
PHYSICS 45	Light and Heat
Mathematics	
Select one of the following Series:	5-10
3-Quarter Calculus Series	
MATH 19	Calculus
MATH 20	Calculus
MATH 21	Calculus
2-Quarter Calculus Series	
MATH 41	Calculus
MATH 42	Calculus
Advanced Calculus and Linear Algebra	
MATH 51	Linear Algebra and Differential Calculus of Several Variables
Additional Foundational Breadth Course	
BIO 141 or BIOHOPK 174H	Biostatistics ³ Experimental Design and Probability
Total Units	39-59

- ¹ Not required if Chem 35 was taken Autumn 2014 or later.
- ² May be substituted with upper-division, above 100-level quantitative or computational course from this list: BIO 102, 182, 183, 220, 221; BIOMEDIN 212, 214, 217, 231, 262, 366, 374; CS courses above 106A (may not fulfill both the CHEM 130 and additional foundational breadth requirement); GENE 212, 214, 244; MATH courses above 102; STATS 116, 166, 215.
- ³ This course cannot also be used to count toward the elective requirement.

Required Courses in Microbiology, Immunology, Molecular Evolution

Must be taken for a letter grade.

Select four of the following:

	Units
BIO 177	12-24
BIO 230	
BIO 232	
BIOHOPK 274	
CEE 177	
CEE 274A	
CEE 274B	
CEE 274D	
EESS 158	
HUMBIO 152	
HUMBIO 155H	
IMMUNOL 201	
IMMUNOL 202	
IMMUNOL 209	
IMMUNOL 260	
IMMUNOL 275	
MI 104	
MI 120	
MI 209	
MI 210	
MI 211	

Required Course in Reading Scientific Literature

Must be taken for a letter grade.

Select one of the following or students may petition for other courses in reading scientific literature: Units 3

BIO 178	Microbiology Literature
MI 185	Topics in Microbiology

Electives

12 units required. Electives must be 100-level or above and selected from the offerings in the Department of Biology, Hopkins Marine Station, or from the list of approved out-of-department electives. Up to 6 units of

teaching and research are allowed. Only one course can be taken credit/no credit.

Writing in the Major

Select one of the following:

	Units
BIO 44Y	3-16
BIO 107	
BIO 137	
BIO 168	
BIO 196A	
BIO 197WA	
BIO 199W	
BIOHOPK 44Y	
BIOHOPK 184H	

¹ If taken during academic year 2014-15.

² This course can also be used to count toward the elective requirement.

Honors Requirements

- Approved Honors Proposal
- 10 units of research from the same lab; only research units from BIO or BIOHOPK are permitted as follows:

	Units
BIO 199	5
BIO 199X	5
BIOHOPK 199H	5

- Poster/oral presentation at annual honors symposium
- Approved Honors Thesis
- 3.0 GPA in all courses taken for the major with the exception of research and/or teaching units

Molecular, Cellular, and Developmental Biology

Candidates for the Molecular and Cell Biology field of study must complete the following, which range from 99-113 total units:

Core Courses

Must be taken for a letter grade when available.

	Units
BIO 41	5
BIO 42	5
BIO 43	5
or BIOHOPK 43	5
Select one of the following:	5
BIO 44X	5
BIO 44Y	5
BIOHOPK 44Y	5

Required Foundational Breadth Courses

Two courses may be taken credit/no credit.

Chemistry

The following CHEM courses are required:

		Units
CHEM 31A & CHEM 31B or CHEM 31X	Chemical Principles I and Chemical Principles II Chemical Principles Accelerated	5-10
CHEM 33 or CHEM 1	Structure and Reactivity	4-5
CHEM 35 or CHEM 2	Synthetic and Physical Organic Chemistry Organic Monofunctional Compounds	4-5
CHEM 36 or CHEM 1L & CHEM 2L	Organic Chemistry Laboratory I ¹ Introduction to Organic Chemistry Lab and Organic Chemistry Lab I	3-4
CHEM 130 or CHEM 2L & CHEM 3L	Organic Chemistry Laboratory ² Organic Chemistry Lab I and Organic Chemistry Lab II	3-4
CHEM 131 or CHEM 3	Organic Polyfunctional Compounds	3-4
CHEM 135 or CHEM 171	Physical Chemical Principles Physical Chemistry I	3

Physics

Select one of the following Series:

		Units
PHYSICS 20 Series		8-12
PHYSICS 21	Mechanics and Heat	
PHYSICS 22	Mechanics and Heat Laboratory	
PHYSICS 23	Electricity and Optics	
PHYSICS 24	Electricity and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	

Mathematics

Select one of the following Series:

		Units
3-Quarter Calculus Series		5-10
MATH 19	Calculus
